

Drinking Water State Revolving Loan Fund Priority List Annual List FY2025

Projects Recommended to NMFA for Funding

This list will be updated with each funding cycle- Updated 07/11/2024

Rank	Public Water System Name and Number	Score	Population	County	Disadvantaged Status	Project Title	Project	Requested Funding	Terms of Financial Assistance
1	Ojo Caliente MDWCA, NM3506621	45	226	Taos	Yes, Severely	Water Storage Tank	New Water Storage Tank	\$669,333	To be determined by NMFA
2	City of Gallup NM3508317	43	21,253	McKinley	Yes	Gallup Water Wells	Gallup Water Wells	\$16,000,000	To be determined by NMFA
3	Santa Fe Water System, NM3505126	37	90,810	Santa Fe	Yes	Flocculation & Sedimentation Improvements	The City of Santa Fe Plans to construct upgrades to the flocculation and sedimentation process at the Canyon Road Water Treatment Plant to continue providing citizen water service with clean drinking water. The elements being improved are nearing the end of their ability to continue functioning as necessary. A 2020 Comprehensive Performance Evaluation and Facility Optimization Evaluation identified flocculation and sedimentation basin upgrades as high priorities and well-suited to be combined into a single project.	\$17,000,000	To be determined by NMFA
4	City of Gallup NM3508317	24	21,253	McKinley	Yes	Cast Iron Lines Replacement	Cast Iron Lines Replacement	\$30,000,000	To be determined by NMFA
5	Enchanted Forest MDWCA, NM3563814	22	536	Lincoln	Yes, Severely	Infrastructure	*Amendment to existing project to fund all phases of the waterline replacements for the system and additional tank	\$1,250,000	To be determined by NMFA
Total:								\$64,250,000	

Notes:

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY22 Q4	Fawn Ridge Mutual Domestic Water Users Association, NM3559014	224	Lincoln	Fawn Ridge Drinking Wtr Well Phase 1	Plan, design, construction management, construction of a new deep community water well and piping for the Fawn Ridge Property Owner's Association	\$150,000
FY22 Q4	Paakweree Village Mutual Domestic Water Consumers Association, NM3501901	126	Bernalillo	Water System Improvements	Water System Improvements	\$750,000
FY22 Q4	Canada de los Alamos Mutual Domestic Water Consumers Association, NM3504026	68	Santa Fe	Water Improvement Project	This water improvement project is to connect Santa Fe County Water via a new booster pump and waterline to the existing Canada de los Alamos MDWCA 50,000-gallon storage tank. Water will be wheeled through the Sunlit Hills Water System from Santa Fe County's Rancho Viejo Storage Tank, and then will be transported through the new waterline from a booster pump at Two Trails Road and Old Las Vegas Hwy through a 3.5 mile waterline to our tank. This project supports the County regionalization goal to connect utilities to its Surface water source thereby preserving Ground water for future use and for those unable to access County water.	\$5,200,000
FY22 Q4	Espanola Water System, NM3501921	12012	Rio Arriba	Prince 2 Municipal Supply Well	The project will include construction of a new municipal water supply well (approximately 460-foot deep) to supplement the City's existing wells. The project also includes construction of approximately 810 linear feet of 6-inch PVC waterline, a new well building, site piping, and electrical and controls. Ancillary work will include an overhead power extension, site grading, fencing, and basecourse. The amount we are requesting for funding is for engineering services during construction (including bid, construction administration, and construction observation), and construction of all improvements.	\$2,466,425
FY22 Q4	Whispering Cedars Domestic Water Association, NM3510517	425	Mckinley	Water well	Water Well	\$80,000
FY22 Q4	Whispering Cedars Domestic Water Association, NM3510518	425	Mckinley	Meter upgrades, sending units, readers and tablet	Up grade meters with new sending units per meter, meter reading tool, tablet to compile readings	\$50,000
FY22 Q4	Canon Mutual Domestic Water Consumers & Sewage Works Association, NM3535223	320	Sandoval	Gilman Extension	Drill a well, build a pumphouse and storage tank with distribution lines to serve approximately 14 families without potable water due to wells drying up. This project will be connected to the existing Canon system to provide a secondary source of water for the current 135 members.	\$1,500,000
FY23 Q1	Village of Capitan, NM3512514	2162	Lincoln	Water Department Building	Construct building to store water department parts and equipment. The engineering has already been completed.	\$600,000

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY23 Q1	Albuquerque Water System, NM3510701	659736	Bernalillo	Northwest Capacity Improvement and Expansion Project	This expansion will create approximately 700 new high-paying jobs at Intel and is expected to indirectly create another 2,500 jobs in the local economy. One of the requirements for this expansion is additional water to support production. Intel recently reached out to the Albuquerque Bernalillo County Water Utility Authority (Water Authority) to provide water service. In order to provide this service, substantial infrastructure is required to convey water to Intel, while continuing to provide uninterrupted service to current customers. Intel is required to install a \$31M dedicated non-potable water transmission line and equip two existing high arsenic wells. The drinking water infrastructure in this part of the system was obtained through the acquisition of New Mexico Utilities which lacks water transmission capacity and redundancy. In order to make the requested water available to Intel, the Water Authority requires approximately \$34M in water treatment and transmission improvements, including a new arsenic treatment plant and drinking water pump station improvements, transmission pipelines and reservoir. The Water Authority's water resources strategy (Water 2120) supports full utilization of surface water when available, while storing and preserving groundwater to be used in times of drought. Expanding service to Intel is supportive of multiple Water 2120 policies. Intel will be utilizing high arsenic impaired groundwater. Intel returns over 80 percent of water delivered in the form of wastewater, which serves as a source of supply for reuse water. By providing additional water service to Intel they will not need to acquire native pre-1907 (i.e. agricultural) water rights to expand their process. The arsenic treatment plant will also provide drought resiliency, putting five existing high arsenic wells back in service.	\$20,000,000
FY23 Q1	Albuquerque Water System, NM3510702	659736	Bernalillo	Aquifer Storage and Recovery	Aquifer Storage and Recovery (ASR) is an important water resources management tool that provides the ability store San Juan-Chama water in the aquifer for droughts. ASR is a vital part of the Water Authority's 100-year Water Plan (Water 2120). This request would fund permitting and design for the next phase of the direct injection or an infiltration project on the eastside of Albuquerque.	\$5,000,000
FY23 Q1	Albuquerque Water System, NM3510703	659736	Bernalillo	Carnuel Water and Wastewater Project	The Water System Improvements will provide an extension of the water system that consists of an eight-phase project which could connect about 800 existing households in the Carnuel community. A Preliminary Engineering Report (PER), Environmental Report, and Supplemental Engineering Reports have been completed for all phases of the project. The Wastewater System Improvements will provide the design of a low-pressure sewer system for residents located between NM 333 and I-40. Once completed the new sewer system will include approximately 16,300 linear feet of small diameter sewer lines and serve approximately 139 single family households. A PER was completed in December 2010, received NMED approval in August 2012. The Environment Document was completed in May 2013, received NMED approval in August 2013. An additional Design Analysis Report (DAR) was performed in 2019 to further analyze study area C as identified in the 2010 PER. It was concluded that a low-pressure sewer would be the best option for area C between NM 333 and I-40. Design for the Phase 1 sewer system is currently funded and underway.	\$10,000,000

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY23 Q1	Cottonwood Rural Water Association, NM3555008	1685	Eddy	Cottonwood RWA Water System Improvements	Funds will be used to improve the Association's water system by replacing approximately 7,100 linear feet of existing distribution lines on Compress Road between 13th Street and Pecos Avenue with 8" PVC pipe. The pipe will be upgraded to 6" PVC pipe on Compress Road between Pecos Avenue and Haldeman Road. The existing distribution lines on Bolton Road, Mill Road, and Haldeman Road will be replaced with 6" PVC pipe. Approximately 28,700 linear foot of new 6" PVC pipe will be installed along the project corridor. In addition, installing a tripod mixer at the bottom of the Firehouse Tank.	\$2,220,652
FY23 Q1	Timberon Water and Sanitation District, NM3546419	1502	Otero	Potable Water Tank 3 90,000 Gallon Tank Replacement	Tank 3 was inspected yesterday August 23rd 2022; consequently the tank is too structurally damaged to repair or put back in service without impacting adversely the water system.	\$350,000
FY23 Q1	Catalpa Water Association, Yet to be determined	less than 500	McKinley	New Water Supply	To plan, design, construct, and equip a new waterline system, including essential equipment and materials. The project will entail developing a new waterline that will be connected to the City of Gallup's distribution system. This is based on cost estimates for Alternative #4 of the Catalpa WA Preliminary Engineering Report (PER). The distribution line will be equipped with valves, meters, and fire hydrants to ensure access to safe drinking water and for fire suppression.	\$4,500,000
FY23 Q1	Glorieta Camps, NM3504626	2700	Santa Fe	Well #5 Rehabilitation	Glorieta 2.0 is a Christian outdoor adventure camp that hosts 35,000 guests annually and houses our 60 full-time staff members and their families. Our water system supports our residents, guests, and the Glorieta, New Mexico residents. Our Well #5 was one of our primary wells that could provide drinking water to our entire facility and provide redundancy for our other primary Well #8. Well #5 had a collapse in 2015 that we were able to repair, but the well started producing water with trace amounts of uranium which continued to be a problem for the community. In 2020, the well was taken off the drinking water system per NMDWB and has since been used as an irrigation well. The goal of this project is to rehabilitate Well #5 by repairing the broken casing, plugging the source of uranium, and bringing the well back onto drinking water by itself or via blending with Well #8. This will provide our community with needed drinking water and allow us to not pull from one source which has been an issue during the past years of drought.	\$500,000
FY23 Q1	EVWA-Ilfeld MDWCA, NM3500125	400	San Miguel	Ilfeld Tank Replacement	To Replace the existing 25,000 gallon tank with a 55,000 gallon tank.	\$50,000
FY23 Q1	EMWT Regional Water Association, NM3501230	less than 500	Torrance	EMWT Regional Water - McIntosh Water System	The development of a new public water system to serve the unincorporated community of McIntosh in Torrance County, New Mexico. The project approved PER identifies a new well, storage tank, disinfection system, transmission piping, distribution piping, valves, hydrants, meter, and associated improvements to serve approximately 161 existing developed lots with drinking water and become an initial component in the EMWT regional water system serving the Estancia Basin	\$12,000,000

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY23 Q1	EMWT Regional Water Association, NM3501230	less than 500	Torrance	EMWT Regional Water - Private Water Systems Acquisition (Sunset Acres Water System and Homestead Estates Water System)	The EMWT Regional water System has been approached by two water systems seeking EMWT to acquire, improve and operate each water system as a component in the EMWT Regional Water System. EMWT is in final negotiations with the Homestead Estates Water System to convey the ownership of the fully functional private water system to EMWT at no cost. EMWT does however intend to make some immediate improvements to the system upon acquisition to improve the system and ensure regulatory compliance. EMWT is in negotiations with the Sunset Acres Water System to purchase the full system with water rights and make improvements to the source wells to insure regulatory compliance. Both systems are in Torrance County, near Moriarty and in very close proximity to each other within the EMWT's approved masterplan service area. Technical memos have been completed for both systems by the association Engineer, Bohannon Huston, Inc.	\$2,000,000
FY23 Q2	Cloudcroft Water System, NM3513519	2865	Otero	Corona Ave. Sugar Pine Waterline Replacement	Replace Approximately 10,000' of old lead pack joints and a mixture of C-900 and P.V.C. Replace approximately 80-3/4" water services new saddles, corpstops, curbstops, meter cans, meter risers, 13- Fire Hydrants, and gate valves.	\$4,000,000
FY23 Q3	Truth or Consequences, NM3514327	7640	Sierra	Emergency Waterline Replacement	Replacement of deteriorated and failing distribution waterlines and associated appurtenances throughout the City to reduce operation and maintenance costs, number of reoccurring leaks, breaks and overall water loss.	\$20,262,864
FY23 Q3	Timberon Water and Sanitation District, NM3546419	1502	Otero	Distribution Line Replacement Project	To design and construct water system improvements. These improvements can be phased to begin to mitigate the 84% potable water losses to the districts potable water distribution system. The metrics used to determine which areas are the best candidates for line replacement are the following: the past 10 years of line leak repair data for the entire distribution system, Historical system flow data from the SCADA (supervisory control and data acquisition), and also utilizing data set conclusions from the Preliminary Engineering Report "Master Water Plan" product produced by Bohannon and Huston Engineering, Inc. The work, materials and equipment required to begin to mitigate the 70-80% water losses will include the following; valves, adapters, fire hydrants, pumps, relief valves, tanks and associated piping connectors in 4" and 6" HDPE piping systems and other water related system improvements. Potable water mass balancing indicates that the rate of water losses are growing due primarily to accelerating rates of water losses in the distribution system overall. Data from 2018-2019 indicated ~70% water losses which have grown to 84% losses in just 3 years. Currently to keep up with maintaining storage tank levels and adequate line pressure due to the accelerating water losses 2 sources of potable water are now required to maintain the required tank levels. Additional Community Information: The water distribution system is nearing full depreciation and beginning to show signs of catastrophic failure as the district has logged over 319 water line distribution system repairs since 2013 records show. This project once completed will allow the district to replace water distribution lines, which will in turn begin to reduce the districts water losses as well as a reduction in operating cost associated with repairing leaks.	\$2,250,000
FY23 Q3	Socorro County Water Hauler, NM3500828	100	Socorro	Water tanker	emergency water source	\$10,000
FY23 Q3	Tyrone Water and Wastewater Association, NM3500309	70	Grant	Water system improvements	The Tyrone domestic water system is over 50 years old and all system components are aging. The fire hydrants are not repairable as parts are not available. The water valves at each intersection are inoperable, and the 4+ miles of buried are transite (asbestos) pipes and are deteriorating. The elevated water tank needs rehabilitation and repairs.	\$8,000,000

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY23 Q3	Jemez Springs Domestic Water Association, NM3509123	1157	Sandoval	Waterline and system upgrades	We have roughly one mile remaining of a main distribution line we have been replacing. The funding we currently have has allowed us to do the project in phases. We want to finish the last phase of construction of the line. Once the line is finished we want to upgrade the remaining meters on our system to be newer, radio read meters to help us more quickly locate and repair leaks as well as have more reliable and accurate readings, over the last year we have upgraded 70 meters to radio read meters.	\$300,000
FY23 Q3	Ranchos De Placitas Sanitation District, NM3509423	374	Sandoval	Well #2 Well House Renovation	Renovation of Well #2 well house, including new piping, electrical and SCADA upgrades, and well house structure improvements	\$250,000
FY23 Q3	Whispering Cedars Domestic Water Association, NM3510517	425	Mckinley	Upgrade on Meters	Meter upgrades	\$70,000
FY23 Q3	Vallecitos MDWCA, NM3503521	92	Rio Arriba	Vallecitos MDWCA Upgrade	We need to fix valves in our treatment plant to control water flow, automate backwash, add some reporting to operators	\$150,000
FY23 Q3	Miami Domestic Water Users Association, NM3526504	135	Colfax	Water Meter Upgrades	Replacement of water meters that the majority have been online over 50 years and have rolled over a couple of times. All meter would be replaced with radio/remote read meters with associated hardware and software.	\$78,750
FY23 Q3	Nogal MDWCA, NM3513014	94	Lincoln	Back-up Water Well	Drill and equip back-up well	\$50,000

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY23 Q3	Village of Taos Ski Valley, NM3533329	1025	Taos	Projects are captured in the annual ICIP	recommended upstream and downstream clear distances are satisfied. By installing these new master meters, the distribution waterline between the CS and Green Tank (~4,600 LF) can be isolated. As identified in Section 3.2.2.1, the meter readings from existing mechanical meters indicate an apparent average unaccounted-for water of 80,000 gpd (60% of the total documented unaccounted-for water).5.2.2 PRIORITY NO. 2Install a new master meter at the intersection of Twining Road and Pioneer Glade, prior to the branch line to Pioneer Glade. The installation of this meter along with the installation of the master meter on the Green Tank outlet and customer meters will isolate approximately 3,200 LF of 8-inch ductile iron waterline, 1,600 LF of 6-inch ductile iron waterline, 1,400 LF of 8-inch PVC waterline, and 1,200 LF of 4-inch PVC waterline. All waterlines isolated were installed prior to 2010 and are likely to contribute to unaccounted-for water. It is important to prioritize this segment as it not only provides water to residential lots but is the only water main that provides water from the Green Tank to the Pioneer Glade Tank and the remainder of the Core Village Base Area and Commercial/ Business Base Area.5.2.3 PRIORITY NO. 3 Install four (4) new master meters. One master meter should be installed on the 4-inch inlet to the Pioneer Glade Tank in a separate valve vault. This meter along with customer meters will isolate approximately 400 LF of 8-inch ductile iron waterline and 800 LF of 4-inch ductile iron waterline. All waterlines in this isolated segment were installed after 2010 and are unlikely sources of unaccounted-for water; however, it is necessary to isolate these waterlines in order to evaluate the remainder of the isolated segment.5.2.4 PRIORITY NO. 4Install a new master meter on the 6-inch ductile iron waterline installed in 2017 near the Children’s Center. This meter, along with customer meters, will isolate approximately 750 LF of 6-inch PVC waterline and 2,200 LF of 2-inch PVC waterline. All waterlines isolated in this segment were installed prior to 2010 and are likely to contribute to unaccounted-for water. The primary users for this isolated segment are those located along Firehouse Rd. and VTSV’s wastewater treatment facility. 5.2.5 PRIORITY NO. 5 As noted in Section 3.2.3.1, there are locations within the distribution system where 4-inch water mains are utilized for fire protection. There is approximately 1,200 LF of 4-inch PVC water mains in the segment isolated by the master meters identified in Priority No. 3 and 4,400 LF of 4-inch PVC water mains in the segment isolated by the master meters identified in Priority No. 4 utilized for fire protection. These water mains should be thoroughly evaluated to determine fire protection capabilities. If it is determined that these 4-inch water mains are unable to provide adequate fire protection, these water mains should be immediately replaced with adequately sized water mains to satisfy water protection needs.5.2.6 PRIORITY NO. 6 Based on available mapping, there are approximately 1,200 LF of 2-inch galvanized water lines within the distribution systems. Galvanized waterlines are subject to corrosion	\$3,000,000,000
FY23 Q3	Watrous MDWCA, NM3516719	66	Mora	WMDWCA construction and replacement of tank and address the new lead and copper rule.	WMDWCA existing storage tank was not manufactured for potable water and does not meet AWWA criteria for public water tank. The road to the water tank needs to be repaired. The new water storage tank will resolve the deficiencies identified in the 2018 Sanitary Survey Report. To be compliant with the new lead and copper rule by installing new distribution line upgrades	\$294,200
FY23 Q3	Mosquero Water System, NM3526811	293	Harding	Mosquero Water Project	To plan, design, construct much needed upgrades to current water distribution pipes estimated 2 miles in length, install new water pipes for incoming residential sites, and upgrade water meter system to radio frequency meters to better increase water use efficiency within the village limits.	\$5,000,000
FY23 Q3	National Solar Observatory, NM3564119	26	Otero	Interior coating of 2 ground water storage tanks and interior coating of elevated water tank	blast cleaning of interior tank surfaces and coating of the interiors of the 3 water storage tanks	\$87

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY23 Q3	Tucumcari, NM3528020	7124	Quay	City of Tucumcari West Rt. 66 water line replacement	Replacement of old 3" AC water lines on the South side of West Rt 66 from Mile Marker 334 to 334 with 6" C-900.	\$1,200,000
FY23 Q3	Elida Water System, NM3528322	419	Roosevelt	Elida Lead and Cooper Project	Upgrade water system, SCADA upgrade, lines within municipal, storage tanks, refurbish wells. end user for regionalized project.	\$2,000,000
FY23 Q3	Madrid Water System, NM3504826	315	Santa Fe	Replace pipes	Replace iron pipes	\$1,000,000
FY23 Q3	Grady Water System, NM3564119	207	Curry	Grady Water Improvements	Planning and designing of additional fire hydrants and lines, replace distribution lines and install updated water meters and rehab our storage tank.	\$500,000
FY23 Q3	Fort Sumner Municipal Water System, NM3527706	1911	De Baca	Grizzle Well, Tank, and Transmission Line	Replace 10" asbestos cement water line with C-900 PVC pipe from the Grizzle Well to the Grizzle storage tank to the Village.	\$10,000,000
FY23 Q4	Aztec Domestic Water System	5960	San Juan	WATER TANK UPGRADE/REPLACEMENT	BLADDER WATER STORAGE TANK COVER EVALUATION AND REPLACEMENT. ALTERNATIVELY, MAY HAVE TO REPLACE WITH NEW TANK	\$2,300,000
FY23 Q4	Tierra Monte Water Users Inc	78	Bernalillo	water meter equipment upgrade, coating of water storage tanks, water line upgrades	Replace existing water meters and re-coat interior of water storage tanks, replace old water lines	\$150,000
FY23 Q4	Pojoaque Terraces Manufactured Housing Community, NM3572126	160	Santa Fe	Pojoaque Terraces Water System	Engineering studies to determine effectiveness of iron and manganese systems, addition of uranium treatment system	\$75,000
FY23 Q4	La Joya Mutual Domestic Water Community Association, NM3552728	246	Socorro	Emergency Tank Replacement	New Tank Install replacement of old tank, and refurbish of old tank as secondary storage,	\$125,000
FY23 Q4	Village of Taos Ski Valley, NM3533329	1025	Taos	Taos Ski Valley Water System Water Loss Redress Project	The Water Master Plan shows up to 85% leakage with an average of 74% water loss, creating serious concerns for residents and visitors to the area. We plan to use NM Drinking Water Funds to provide infrastructure rehabilitation and operational improvements to address water use management and water pressure issues. The proposed project would reduce water loss by replacing brittle and failing distribution lines and providing customer meters that offer accurate readings throughout the year which will notify the Public Works Department of any future leaks. VTSV will need to replace a total of 25,630 linear feet of pipe which have been pinpointed as the sources of leakage within the system, and install 31 gate valves, 25 fire hydrants, and 436 coil pits.	\$3,000,000
FY24 Q1	San Luis-Cabezon MDWCA, NM3501823	200	Sandoval	Loan Refinance	Refinancing Water Improvements Loan from 2007 covering 12 miles of distribution, new booster pumps and a tank	\$323,000

Comprehensive -Eligible Projects Submitted Not Recommended for Funding at This Time

*Projects on this list have submitted a pre-application for funding but have not been reviewed or ranked for final eligibility

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
	Santo Domingo Pueblo, PWS #063500120	>1,000	Sandoval	Santo Domingo Pueblo Transmission Water Line Replacement Project	Santo Domingo Pueblo Transmission Water Line Replacement Project aims to plan, design, construct, and repair drinking water related infrastructure improvements for Santo Domingo Pueblo, NM. The immediate need identified is to replace the transmission waterline with larger diameter pipe and implement flow control measures to resolve the system hydraulic issues. Additional needed improvements include increasing water storage and supply capacity to meet the projected demand and fulfill the system goals to provide clean drinking water to residential community members and meet commercial demands, which are all on the same water line system. PER has been completed. Funding request is for design and construction. Upon award design can start immediately.	\$14,586,000
FY24 Q3	Caballo Lake MDWA, NM3510027	95	Sierra	Galvanized replacement	Analyze and replace two-inch lead distribution lines and service lines.	\$75,000.00
FY24 Q3	Tyrone Townsite, NM3500309	740	Grant	Elevated Water Tank Rehabilitation	The 200,000 gallon elevated water tank, constructed in 1967 was last inspected in 2019. Rust was identified in the interior of the tank, considerable sediment was vacuumed out of the floor of the tank, and screening of overflow pipe was recommended. There is some corrosion on the exterior surfaces of the tank and a lead-based sampling of the interior and exterior paint is scheduled for February 2024. The concrete foundations for the four legs are spalling and there is visible rust on the tower legs. The main valves that provide water to the tank and townsite are original and have not been operated for years. The altitude valve that fills the tank failed last month resulting in a flooded vault. The exterior access ladder is not OSHA compliant	\$750,000
FY24 Q3	Timberon Water and Sanitation District, NM3546419	590	Otero	Water Line Replacement/System Improvements	Due to the high rate of water loss in the distribution system (greater than 75%), the proposed project will replace leaking and broken pipes	\$250,000
FY24 Q3	Whiskey Creek Properties	97	Grant	Water System Improvements - Whiskey Creek Mobile Estates	Project will involve getting new water system storage tanks installed, metering all water connections, and improving distribution lines.	\$150,000
FY24 Q3	Cedar Creek Water Cooperative	120	Sandoval	Storage Tank Addition	Adding additional 33,000 gallon water tank storage	\$175,000
FY24Q3	Village of Floyd Water, NM3528422	122	Roosevelt	Auto-Read Water Meters	Replace all meters with auto-read meters so leaks will be detected at an early stage.	\$125,000
FY24 Q4	Sky Country Estates MDWCA, NM3502519	71	Otero	Sky Country Estates MDWCA Water System Improvements Project	this project includes design and construction of a supplemental water supply well, water storage tank, with necessary waterline, disinfection, and appurtenances to meet current and future demands and to address sanitary survey issues with the water storage tank.	\$1,700,000.00
FY24 Q4	Clayton Municipal Water System, NM3527031	3,250	Union	Pump station upgrades	Replace booster pumps, valves and miscellaneous parts. Replace electrical panel, Replace roof	\$400,000.00

Quarter Submitted	Public Water System Name and Number	Population	County	Project Title	Project Description	Requested Funding
FY24 Q4	Pendaries Village MDWCA, NM3574125	592	San Miguel	Water System Improvements	This project includes the construction of new PVC C900 waterline including all appurtenances and disinfection systems. A significant portion of the existing water system comprises aging waterline and substandard piping that has been exacerbated by the recent Hermit's Peak Fire that significantly impacted the Association. This damaged waterline leaks, which not only increases operation and maintenance costs, but results in water losses that, for a water Association, translate to lost revenue. The project will benefit members of the community by ensuring continued and reliable access to potable water. It will also ensure that the Association is not losing water due to system leaks.	\$7,000,000.00
FY24 Q4	Village of Des Moines, NM3527131	218	Union	Des Moines water system upgrade and renovation	plan, design, renovate, construct, purchase and equip Des Moines Water System	\$2,700,000.00
FY24 Q4	Carlsbad Municipal Water System, NM3520608	33,626	Eddy	Double Eagle Waterline Replacement	To plan, design, construct, and replace existing water lines in the Double Eagle water well field in Carlsbad, NM. The lines to be replaced serve as gathering lines and transmission lines from the two well fields. This project is being phased.	\$3,000,000.00
FY24 Q4	Carlsbad Municipal Water System, NM3520609	33,626	Eddy	Double Eagle Waterline Improvements - Connection to Tatum Well Field	To plan (including environmental Studies), design and construct a new water line from the Tatum Wells area to the existing Double Eagle Water System. Also included in this project will be the drilling of up to 21 additional permitted wells in the Tatum Well Field area. Phase 1 includes design and construction of the waterline to connect the two water fields and the drilling and equipping of new wells.	\$8,010,973.00
FY24 Q4	Carlsbad Municipal Water System, NM3520610	33,627	Eddy	East Greene St. Waterline	The project involves repurposing approximately 9,750 LF of existing water line and installing 4,040 LF of new waterline to increase fire flow capacities to the industrial park areas along E. Greene St. The length of line that will be impacted is approximately 13,790 LF (approximately 2.6 miles). The project scope includes planning, design, and construction. Phase 1 of this project has a budgetary cost of \$1,526,000, which includes engineering, construction, 20% contingency, and NMGRT.	\$1,554,000.00
FY24 Q4	Carlsbad Municipal Water System, NM3520611	33,628	Eddy	Sheep's Draw Reservoir #5	To plan, design, and construct a new 5 million gallon reservoir tank in the Sheep's Draw water well field in Carlsbad, NM, Eddy County.	\$6,000,000.00
FY24 Q4	Camino Real Regional Utility Authority, NM3502507	19,766	Dona ana	Replace Wells 31 and 8A	The project consists of replacing Wells 31 and 8A. Both wells have been out of service for over 5 years and need to be re-drilled and equipped with new well pumps. Replacement of Well 31 would also include a new control building and disinfection system.	\$7,000,000.00
FY24 Q4	Carlsbad Municipal Water System, NM3520611	33,628	Eddy	Water System Improvements	To plan, design and construct improvements to the Municipal Water System including waterline extensions as identified in projects section below, waterline replacement, minor repairs to booster and pressure reducing stations, repairs to reservoirs, fire lines and dead end lines.	\$5,000,000.00
FY24 Q4	Los Alamos Municipal Water System, NM3500115	19,000	Los Alamos	Los Alamos Waterline Replacement Projects	Downtown 14" Transmission Line Replacement Project. Replace 75 year-old steel water transmission line which is located beneath commercial shopping center buildings in Los Alamos. The project will construct 1,800 feet of new 14" waterline. Denver Steels Waterline Replacement Project. Replace 3,300 feet of 70 year-old lead jointed cast iron waterlines and 78 water services in Denver Steels residential neighborhood.	\$2,500,000.00
FY24 Q4	Carlsbad Municipal Water System, NM3520611	33,628	Eddy	Water System Improvements	To plan, design and construct improvements to the Municipal Water System including waterline extensions as identified in projects section below, waterline replacement, minor repairs to booster and pressure reducing stations, repairs to reservoirs, fire lines and dead end lines.	\$5,000,000.00
Total:						\$3,128,825,978
