McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1110123*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/7/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1110123

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1110123-001 Selenium
1110123-006 Iron
1110123-009 Iron
1110123-020 Potassium
The reporting limits have been adjusted accordingly.

Due to a laboratory oversight the analysis for Total Dissolved Solids (TDS) on samples 1110123-002, 010, and 018 was performed past the EPA recommended holding time. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1109159*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/9/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1109159

General Comments

On Sample 1109159017 the result for Sulfate (as analyzed using EPA 300.0) was unexpectedly high when compared to the TDS results. Because of this, the results for Sulfur have been used to calculate a theoretical Sulfate result.

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1109159-002 Iron
1109159-004 Aluminum
1109159-007 Cadmium
1109159-016 Arsenic, Selenium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1108216*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/12/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1108216

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1108216-007 Cadmium
1108216-017 Nitrite Nitrogen, Chloride, All metals
The reporting limits have been adjusted accordingly.

Due to a laboratory reanalysis requirement the analysis for Total Dissolved Solids (TDS) on sample 1108216-015 was performed past the EPA recommended holding time. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

WETLAB
WESTERN ENVIRONMENTAL TESTING LABORATORY
Specializing in Soil, Hazardous Waste and Water Analysis.
475 E. Greg Street #119 | Sparks, Nevada 89431
tel (775) 355-0202 | fax (775) 355-0817 | www.WETLaboratory.com

Lab Number 1108216
Report Due Date: 8/26/11
Page 1 of 2

Client: McClelland Laboratories, Inc.
Address: 1016 Greg Street
City, State & Zip: Sparks, NV 89431
Contact: Gene McClelland
Phone: 775-356-1300
Collector's Name: Robert
Fax: 775-356-8917
Project Name:
P.O. Number:
Project Number: 3438
Email: mli@mettest.com

Turnaround Time: Standard ___ 5-Day ___ Other ___

Billing Address (if different than Client Address):
Company ___
Address ___
City, State & Zip ___
Contact ___

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1107281*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 7/15/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1107281

General Comments

On Sample 1107281-017 the result for Sulfate (as analyzed using EPA 300.0) was unexpectedly high when compared to the TDS results. Because of this, the results for Sulfur have been used to calculate a theoretical Sulfate result.

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1107281-017 Nitrite Nitrogen, Chloride
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1106342*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 6/17/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1106342

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1106342-013 Nitrite Nitrogen, Chloride
1106342-014 Molybdenum
1106342-015 Aluminum
1106342-017 Nitrite Nitrogen, Chloride, Cadmium
1106342-018 Potassium
1106342-021 Iron
The reporting limits have been adjusted accordingly.

Due to a laboratory oversight the analysis for Total Dissolved Solids (TDS) on samples 1106342-009, 015, 018, and 019 was performed past the EPA recommended holding time. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SA – Reported value was calculated using the method of Standard Additions.

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1105313*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 5/20/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1105313

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1105313-001,010,011 Vanadium
1105313-004,020 Molybdenum
1105313-017 Cadmium, Arsenic, Selenium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SA – Reported value was calculated using the method of Standard Additions.

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1104345*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 4/22/2011. Additional comments are located on page 2 of this report.

This is an amended report that includes results for Uranium as requested by the client. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1104345

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on samples 1104345-011 and 021 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

The cation/anion balance for sample 1104345-013 was ontside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

Due to the sample matrix it was necessary to analyze the following at a dilution:
1104345-017 Cadmium
1104345-018 Molybdenum
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SA – Reported value was calculated using the method of Standard Additions.

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1103402*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 3/25/2011. Additional comments are located on page 2 of this report.

This is an amended report that includes results for Uranium as requested by the client. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1103402

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on samples 1103402-001 and 011 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

The result for the continuing calibration verification (CCV) sample during the analysis for Fluoride was outside WETLAB acceptance criteria. Reanalysis was performed and the same issue was encountered. The reported data for Fluoride on all samples should be considered estimates. We apologize for any inconvenience this may have caused.

The following is a synopsis of the reanalysis of Total Alkalinity, Bicarbonate, Carbonate and Hydroxide:
Sample 1103402-018 reanalysis results for Total Alkalinity, Bicarbonate, Carbonate and Hydroxide have been reported.
This reanalysis was performed past the EPA recommended holding time due to an unacceptable cation/anion balance using data obtained within the holding time. We apologize for any inconvenience this may cause.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample beld beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SA – Reported value was calculated using the method of Standard Additions.

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1102331*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/25/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1102331

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on sample 1102331-010 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

Due to the sample matrix it was necessary to analyze the following at a dilution:
1102331-001 Iron
1102331-002 Aluminum, Arsenic, Selenium
1102331-009 Nitrite Nitrogen, Vanadium
1102331-010 Iron
1102331-014 Nitrite Nitrogen, Iron
1102331-016 Iron
1102331-018 Nitrite Nitrogen
1102331-019 Nitrite Nitrogen, Cadmium
The reporting limits have been adjusted accordingly.

The result for the continuing calibration verification (CCV) sample during the analysis for Fluoride was outside WETLAB acceptance criteria.The reported data for Fluoride on all samples should be considered estimates. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SA – Reported value was calculated using the method of Standard Additions.

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1102168*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/11/2011. Additional comments are located on page 2 of this report.

This is an amended report that includes the results for Uranium as requested by the client. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1102168

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on sample 1102168-012 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

Due to the sample matrix it was necessary to analyze the following at a dilution:
1102168-011 Nitrite Nitrogen
1102168-014 Nitrite Nitrogen, Chloride
1102168-018 Nitrite Nitrogen, Chloride, Iron
1102168-019 Nitrite Nitrogen, Chloride, Cadmium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SA – Reported value was calculated using the method of Standard Additions.

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1102063*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/4/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
Laboratory Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1102063

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on samples 1102063-002 and 013 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

Due to the sample matrix it was necessary to analyze the following at a dilution:
1102063-001,014,015,019 Nitrite Nitrogen, Chloride
1102063-010 Manganese
1102063-018 Nitrite Nitrogen
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B	-- Blank contamination; Analyte detected above the method reporting limit in an associated blank
HT	-- Sample held beyond the accepted holding time
J	-- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	-- Reported value is estimated; The sample matrix interfered with the analysis
N	-- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	-- Not calculated due to matrix interference
Q	-- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
SA	-- Reported value was calculated using the method of Standard Additions.
SC	-- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1101435*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/28/2011. Additional comments are located on page 2 of this report.

This is an amended report that includes the results for Uranium as requested by the client. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on sample 1101435-004 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

Due to the sample matrix it was necessary to analyze the following at a dilution:
1101435-003 Vanadium
1101435-004 Selenium, Vanadium
1101435-007 Arsenic, Molybdenum
1101435-008 Arsenic
1101435-009 Manganese
1101435-012 Aluminum, Arsenic
1101435-013 Selenium
1101435-014 Arsenic, Selenium, Vanadium
1101435-015 All metals
1101435-016 All metals
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SA – Reported value was calculated using the method of Standard Additions.

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Mike Medina

OrderID: *1211395*

Dear: Mike Medina

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 11/21/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1211395

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on sample 1211395-001 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Mike Medina

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/25/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

McClelland Laboratory - 1210537

General Comments

None

Specific Comments

None

Data Qualifier Legend

B	-- Blank contamination; Analyte detected above the method reporting limit in an associated blank
HT	-- Sample held beyond the accepted holding time
J	-- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	-- Reported value is estimated; The sample matrix interfered with the analysis
N	-- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	-- Not calculated due to matrix interference
Q	-- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
S	-- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
SC	-- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1209549*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/27/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1209549

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1209549-001 Arsenic, Selenium
1209549-002 Arsenic, Selenium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1208599*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/30/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney
QA Specialist

Report Comments

McClelland Laboratory - 1208599

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1208599-001 Cadmium
1208599-001 Iron
1208599-001 Arsenic
1208599-001 Selenium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B	– Blank contamination; Analyte detected above the method reporting limit in an associated blank
HT	– Sample held beyond the accepted holding time
J	– The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	– Reported value is estimated; The sample matrix interfered with the analysis
N	– There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	– Not calculated due to matrix interference
Q	– Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
S	– Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
SC	– Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1208040*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/2/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1208040

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1208040-001 Iron
1208040-002 Iron
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B	-- Blank contamination: Analyte detected above the method reporting limit in an associated blank
HT	-- Sample held beyond the accepted holding time
J	-- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	-- Reported value is estimated; The sample matrix interfered with the analysis
N	-- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	-- Not calculated due to matrix interference
Q	-- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
S	-- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
SC	-- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 7/5/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1207066

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1207066-001 Iron
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 6/7/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney
QA Specialist

Report Comments

McClelland Laboratory - 1206157

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 5/24/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1205478

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 5/17/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1205362

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1205220*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 5/10/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney
QA Specialist

Report Comments

McClelland Laboratory - 1205220

General Comments

None

Specific Comments

None

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

WetLab Laboratory Reports

4/11/2012

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1203592*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 3/30/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1203051*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 3/2/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1203051

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/3/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1202066

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on sample 1202066-001 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

The result for the continuing calibration verification (CCV) sample during the analysis for Fluoride was outside WETLAB acceptance criteria. Lab Fortified Blank (LFB/LCS) data was however acceptable. The reported data for Fluoride on all samples should be considered estimates. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1201095*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/6/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1201095

General Comments

None

Specific Comments

None

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1112182*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/9/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Diggs
QA Specialist

Report Comments

McClelland Laboratory - 1112182

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 11/11/2011. Additional comments are located on page 2 of this report.

This is an amended report. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Diggs
QA Specialist

Report Comments

McClelland Laboratory - 1111214

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1110250*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/14/2011. Additional comments are located on page 2 of this report.

This is an amended report that includes the result for Uranium. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1110250

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

OrderID: *1110122*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/7/2011. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1110122

General Comments

None

Specific Comments

None

Data Qualifier Legend

B – Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT – Sample held beyond the accepted holding time

J – The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M – Reported value is estimated; The sample matrix interfered with the analysis

N – There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC – Not calculated due to matrix interference

Q – Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC – Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

McClelland Laboratory
1016 Greg Street
Sparks, NV 89431
Attn: Gene McClelland

OrderID: *1109542*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/30/2011. Additional comments are located on page 2 of this report.

This is an amended report. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Diggs
QA Specialist

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1109542

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1109542-001 Vanadium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B	-- Blank contamination; Analyte detected above the method reporting limit in an associated blank
HT	-- Sample held beyond the accepted holding time
J	-- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	-- Reported value is estimated; The sample matrix interfered with the analysis
N	-- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	-- Not calculated due to matrix interference
Q	-- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
SC	-- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1109409*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/23/2011. Additional comments are located on page 2 of this report.

This is an amended report. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Diggs
QA Specialist

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1109409

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1109409-001 Nitrite Nitrogen
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1109289*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/16/2011. Additional comments are located on page 2 of this report.

This is an amended report. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Diggs
QA Specialist

Western Environmental Testing Laboratory
Report Comments

McClelland Laboratory - 1109289

General Comments

None

Specific Comments

Due to a laboratory oversight the analysis for Nitrite Nitrogen on sample 1109289-001 was performed past the EPA recommended holding time. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

OrderID: *1301048*

Dear: Mike Medina

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/3/2013. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1301048

General Comments

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Fluoride on sample 1301048-001 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

Due to a laboratory reanalysis requirement the analysis for Total Dissolved Solids (TDS) on sample 1301048-001 was performed past the EPA recommended holding time. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Mike Medina

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/6/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1212123

General Comments

None

Specific Comments

Due to a laboratory oversight the analysis for Total Dissolved Solids (TDS) on samples 1212123-006 and 007 was performed past the EPA recommended holding time. We apologize for any inconvenience this may have caused.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Mike Medina

OrderID: *1211156*

Dear: Mike Medina

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 11/8/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney
QA Specialist

Report Comments

McClelland Laboratory - 1211156

General Comments

None

Specific Comments

None

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Mike Medina

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/11/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney
QA Specialist

Report Comments

McClelland Laboratory - 1210284

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1210284-001 Antimony
1210284-001 Arsenic
1210284-001 Selenium
1210284-003 Mercury
The reporting limits have been adjusted accordingly.

The following is a synopsis of the reanalysis of Total Dissolved Solids:
• Sample 1210284-001 reanalysis results for Total Dissolved Solids have been reported.
This reanalysis was performed past the EPA recommended holding time due to an unacceptable cation/anion balance using data obtained within the holding time. We apologize for any inconvenience this may cause.

Data Qualifier Legend

B	-- Blank contamination; Analyte detected above the method reporting limit in an associated blank
HT	-- Sample held beyond the accepted holding time
J	-- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	-- Reported value is estimated; The sample matrix interfered with the analysis
N	-- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	-- Not calculated due to matrix interference
Q	-- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
S	-- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
SC	-- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Mike Medina

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/13/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1209232

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1209232-001 Iron
1209232-003 Antimony, Arsenic, Selenium
1209232-007 Molybdenum
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B	-- Blank contamination; Analyte detected above the method reporting limit in an associated blank
HT	-- Sample held beyond the accepted holding time
J	-- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	-- Reported value is estimated; The sample matrix interfered with the analysis
N	-- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	-- Not calculated due to matrix interference
Q	-- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
S	-- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
SC	-- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

OrderID: *1208332*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/16/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1208332

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1208332-001 Iron, Antimony, Arsenic, Selenium
1208332-002 Aluminum, Iron
1208332-004 Iron
1208332-006 Iron
1208332-008 Iron
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1207417*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 7/19/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1207417

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1207417-002 Mercury
1207417-006 Vanadium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 7/5/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith
QA Manager

Report Comments

McClelland Laboratory - 1207080

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1207080-001 Arsenic, Manganese, Selenium
1207080-002 Arsenic, Selenium
1207080-003 Arsenic, Selenium
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 6/28/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney
QA Specialist

Report Comments

McClelland Laboratory - 1206646

General Comments

None

Specific Comments

Due to the sample matrix it was necessary to analyze the following at a dilution:
1206646-003 Vanadium
1206646-005 Iron
1206646-008 Iron
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B	-- Blank contamination; Analyte detected above the method reporting limit in an associated blank
HT	-- Sample held beyond the accepted holding time
J	-- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
M	-- Reported value is estimated; The sample matrix interfered with the analysis
N	-- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
NC	-- Not calculated due to matrix interference
Q	-- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy
SC	-- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Attn: Gene McClelland

OrderID: *1206505*

Dear: Gene McClelland

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, 18th & 19th editions, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 6/21/2012. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney
QA Specialist

None

Specific Comments

The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of Sulfate on sample 1206505-004 were outside laboratory acceptance criteria; however, the relative percent difference (RPD) value was acceptable, indicating probable matrix interference. The reported result should be considered an estimate.

Due to the sample matrix it was necessary to analyze the following at a dilution:
1206505-001 Aluminum
1206505-003 Nitrite Nitrogen
1206505-007 Nitrite Nitrogen
1206505-008 Nitrite Nitrogen
The reporting limits have been adjusted accordingly.

Data Qualifier Legend

B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank

HT -- Sample held beyond the accepted holding time

J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit

M -- Reported value is estimated; The sample matrix interfered with the analysis

N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.

NC -- Not calculated due to matrix interference

Q -- Reported value is estimated; The value failed to meet QC criteria for either precision or accuracy

SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.

Appendix I
Scaling of Laboratory Data to Field Conditions

Appendix I

Scaling of Laboratory Data to Field Conditions

Background

Predictions of chemical leaching from mine waste are typically undertaken in column leach testwork in a laboratory (Kul'tin, 1997; Bowell, 2001; Antonijevic and Bogdanvic, 2004; Lizama et al., 2005; Sapsford et al., 2009). Such environments have a narrow range of environmental parameters such as temperature and liquid-solid ratio and material grain size, unlike the natural or field environment and as such results are not directly applicable and require some form of modification or "scaling" to represent the "real world" scenario. It widely recognised that laboratory data must be scaled for prediction of solute release at field scale (Li et al, 2005; Maest and Kuipers, 2005). For example, the inability of heap leach operations to reproduce high rates of laboratory metal leaching from column tests in full scale leach piles has been well documented (Kul'tin, 1997; Bowell, 2001; Antonijevic and Bogdanvic, 2004; Lizama et al., 2005).

Although many different approaches have been taken to address scaling factors when applying laboratory leachate data to field scale models, the fundamental factors and processes that lead to these differences are universal. The rate of oxidation, and subsequent solute release via dissolution or desorption, from weathering rock is directly related to several factors, which include the:

- Duration of rock-water interaction (residence time of water);
- Ratio of rock to water;
- Surface area of the minerals (grain size);
- Ambient temperature of rock / water system;
- Chemistry of the lixiviant leaching solution; and
- Reactivity of the minerals present in the rock (minerals which will oxidize or dissolve).

Static and kinetic laboratory tests are not designed to predict field chemistry, but rather to optimise or accelerate the natural rates of oxidation reactions in a controlled environment and to compare the relative kinetics of acid generating and neutralising processes. By design, laboratory tests consistently show higher release rates for various solutes than field conditions, because a test simulating actual release rates at actual time scales could not be completed expediently in order to facilitate predictive studies. The reactivity of minerals present in the rock is the principal unknown in laboratory tests. The duration of rock-water interaction, the ratio of rock to water, the surface area of the minerals, and the chemistry of the leach solution are all fixed by the method (or can be determined), and can be used to correct solute release for scale when these parameters are also known for the field conditions. Less is quantitatively known about these parameters at the field scale, however, although approximations can be made by mapping fracture densities, doing sieve analyses to determine in situ particle gradation, and measuring in situ water flow. Precipitation falling onto an outcrop contacts rock surfaces for variable amounts of time, for example, and the ratio of rock to water is determined by the intensity and duration of the event. In contrast, contact time and the ratio are relatively more constant in groundwater, but for both groundwater and surface water, the relative

surface area exposed to reaction per unit time will vary significantly on site depending upon the site-specific characteristics of fracture density, fracture permeability and geometry that control water flux.

In spite of these challenges, kinetic test data are often the best source of information available for prediction of future solute release as a result of weathering in mined rock (Sapsford et al., 2009). In the absence of kinetic data, scaled static data may be utilised. The difficulty for most modelling efforts is to determine a practical way to scale down laboratory test results so that they approximate future field conditions, because the non-classical behaviour of scaling effects cannot be readily predicted using existing theory or models. Where no current mine pit exists, current methods of relating field weathering factors (such as correcting for exposed surface areas) to laboratory results are problematic. The method for relating laboratory to field rates in such a case must rely on observations of field scale surface area and water flux performed at analogous sites.

Simple calculations which scale HCT leachate data based on surface area and rock-water ratio can be used to address at least a portion of the scale related differences, as has been done for waste rock and tailings studies. For example, the evaluation of backfilled waste rock at Turquoise Ridge operations in Nevada (Warrender et al., 2012). In a model currently being developed for Round Mountain, Nevada, USA, the characteristics of the weathered pit rind has been conservatively estimated using particle size analysis of run-of-mine rock from the existing mine site. Unfortunately, the way rock breaks defines the site specific surface area and the extent to which fracture flow controls the rock-water leaching ratio is highly variable and strongly dependent upon the characteristics of the individual ore deposit. The extent to which any of the data collected at sites with existing mine pits will be similar to the Copper Flat deposit is however, unclear. There are particle size and porosity data for a range of materials available in reference literature, and on Infomine, but again, their applicability to site-specific conditions at Copper Flat must be considered limited.

Although there are existing facilities on site, only limited in situ data is available. In the absence of such data, the best alternative may be to evaluate bounding scenarios based on published estimates of the relative order of magnitude of error associated with the application of lab data to field scale. Several published studies describing the differences between lab and field solute release rates, as discussed in the following section, were reviewed for the current modelling effort. Many of these studies used laboratory methods that were designed to mimic field conditions as closely as possible, unlike the more standardised methods typically used for mine site evaluation (e.g. HCT using ASTM protocols), and therefore may actually under predict the differences between laboratory and field scale leaching.

Literature Review of Scaling Factors

Sverdrup and Warfvinge (1995) have suggested that a 2 to 5 order of magnitude difference between field and laboratory release rates is caused by:

- Generation of inhibiting weathering products in the field (such as Al hydroxides) which cause field rates to be 2 to 5 orders of magnitude slower than lab rates.
- Lower ambient field temperatures (compared to typical laboratory temperatures that are approximately 25^{o}C) can cause field rates to be 2 to 10 orders of magnitude slower than lab rates.

- Partial or incomplete wetting of field materials, which can reduce field rates to values that are 4 to 10 orders of magnitude slower than laboratory rates.

Drever and Clow (1995) have described additional factors relating to the scaling discrepancies between field and laboratory release rate determinations. They report field rates that are 2 to 8 orders of magnitude slower than laboratory or theoretical rates, which they attribute to:

- Formation of secondary layers on mineral surfaces in field conditions, such as aluminium or ferric hydroxide coatings.
- Presence of inhibiting solutes (such as Al ions) under field conditions, which are not present in laboratory lixiviants.
- The influence of saturated geochemical conditions on critical mineral phase kinetics during laboratory kinetics which are not present under variably saturated conditions in the field.

Schnoor (1990), described field rates that are typically one to two orders of magnitude slower than laboratory rates, even when using laboratory methods designed to eliminate the factors discussed above. Ritchie (1994), suggested that sulfide oxidation rates under “optimised conditions” (e.g. laboratory columns) are three orders of magnitude (or greater) faster than field values. Smith and Beckie (2003) report field weathering rates that are several times to several orders of magnitude slower for field rates.

Bennett et. al. (2000) suggested that the discrepancy between field and laboratory rates can be eliminated if laboratory testing is well designed to closely mimic field conditions, including grain sizes. This suggestion was also put forth by Sverdrup and Warfvinge (1995) and both authors demonstrate that accurate weathering rates can be simulated in the laboratory if site conditions can be duplicated. However, accurate field conditions cannot be measured for pit wall conditions at on site, because the proposed pit has not yet been constructed. Further, work by others (for example, Li et al, 2005; 2008) demonstrate that the scaling affect is based on changes in kinetic processes (reaction rates, diffusion, advection) between the pore and field scale, which could not be adequately simulated through most testing laboratories and are very difficult to simulate mathematically.

Li et. al. (2005 and 2008) describe “chemical, physical, and microbiological heterogeneity that results in the formation of concentration gradients [which]….can lead to a scale dependence of the rates and thus potentially to discrepancies between laboratory and field rates.” In complex systems with multiple species that flow in single pores and fractures under the influence of both diffusion and advection, significant flow and concentration gradients result in rate discrepancies between the lab and field scale. Of particular importance is the need to scale rate of mass release per unit reactive surface area and volume of leachate, because of the influence these factors have on the scale dependent gradients. Efforts by Li et al. (2005) to upscale geochemical reaction rates using pore scale network modelling to study anorthite and kaolinite reactions associated with changing carbon dioxide concentrations indicate that pore-scale concentrations of reactive species and reaction rates vary spatially by up to four orders of magnitude when reactant concentrations are high.

A non-peer reviewed article by Morin and Hutt (2005) proposes various approaches to the issue of scaling laboratory leachate data and uses a generic conceptual model at the microscale, mesoscale, and full scale to demonstrate that physical factors like water flowpaths, sequences of minerals, and sampling location affect drainage chemistry. In this study, increases in scaling factors (e.g., volume, kinetic rate, residence time, and solid: liquid ratio) cause aqueous concentrations to increase until a

maximum equilibrium level is attained. Morin and Hutt point out that equilibrium can be attained if the leaching rate of a particular element is sufficiently high which is more common under acidic pH conditions. In this case, the concentrations are direct predictors of full-scale chemistry and scale correction is unnecessary. The “scale transition” represents the general break between kinetically-determined and equilibrium-determined concentrations in mg/L. Morin and Hutt provide equations for calculating scale transition. These Empirical Drainage Chemistry Models (EDCMs) show that full-scale equilibrium concentration is not constant throughout the year and these seasonal variations are unique for each element at each mine site. Unfortunately, due to the lack of detail needed to develop an EDCM’s, it is not possible to directly apply this approach. Furthermore, the element by element approach does not take into account the common-ion effect or aqueous interference of elements in solution that leads to saturation and precipitation, ion-exchange or adsorption-desorption reactions. Therefore, this approach has not been utilized.

Maest and Kuipers (2005) discuss the need to scale data as well, and suggest that laboratory oxidation and weathering rates are two to three orders of magnitude greater than in the field, requiring correction for differences in surface area and rock-water ratio for proper modelling application.

Implications for Copper Flat Geochemical Modeling

The above literature review of scaling factors for predictive modelling shows differences between laboratory and field release rates range between one and five orders of magnitude. In order to maintain a conservative approach, in this study a factor of 10 or one order of magnitude has been applied in scaling laboratory data to field conditions for predictions of geochemical reaction rates.
