MEMORANDUM

TO: Michelle Miano, New Mexico Environment Department (NMED/Environmental Protection Division (EPD), Division Director

FROM: Eastern Research Group, Inc. (ERG)
2677 Prosperity Avenue, Suite 450
Fairfax, VA 22031

SUBJECT: Clean Air Act Permitting Research and Technical Engineering Support
Yucca Growth Infrastructure, LLC Clean Air Act Construction Permit Public Comment Review

DATE: 24 August 2026

Eastern Research Group, Inc. (ERG) is under contract with the New Mexico Environment Department - Air Quality Bureau (NMED-AQB) to provide air quality permitting and technical engineering assistance to NMED-AQB in a manner consistent with technical direction received. Under NMED Contract ID# 25-667-4091-44019, PO# 66700-0000047692, ERG received Notice to Proceed for ERG to provide Clean Air Act (CAA) Permitting Research and Technical Engineering Support for specific matters as identified by NMED-AQB.

Consistent with the direction received from NMED-AQB, ERG initiated technical engineering support for CAA stationary source permitting in relation to sources that have recently submitted construction permit applications in the state of New Mexico. Specifically, ERG was directed to develop responses to public comments received by NMED-AQB on Permit No. 10883 for Yucca Growth Infrastructure, LLC's "YGI Microgrid."

In the following sections of the enclosed technical memorandum, ERG has included the following sections:

1. Brief Overview of Public Comment Submissions Received by New Mexico Environment Department (NMED) for the YGI Microgrid
2. In Scope Comment Responses
3. Out of Scope Comment Responses & Recommendations

1. BRIEF OVERVIEW OF PUBLIC COMMENT SUBMISSIONS RECEIVED BY NEW MEXICO ENVIRONMENT DEPARTMENT (NMED) FOR THE YGI MICROGRID

NMED provided sets of comments to ERG on August 17 and 19. NMED provided 23,753 total submissions from the public. The comments were first analyzed by SmartComment prior to receipt by ERG. SmartComment's analysis identified 17,109 submissions as form letters. 2,822 are identified as either non-substantive, support non-substantive, or oppose non-substantive. 3,822 comments remained unclassified and were interpreted as substantive based on SmartComment's analysis.

These remaining comments shared a variety of similar "categories" to organize them into a simpler manner. These categories are highlighted below. Please note that these comments may or may not be within the scope of an NSR permit.

DRAFT

1.1. Category 1 – Water Usage

The majority of the substantive comments appear to relate to the facility's water usage. Many commenters argue that the arid climate of New Mexico makes it an unsustainable location for Project Jupiter. Several comments consistently allege discrepancies between the applicant's stated water usage and state engineer's findings regarding the data center's projected water consumption. Specifically, commenters cite the applicant's claim of 20,000 gallons per day versus state engineers' estimate of approximately 1,000,000 gallons per day. Other commenters also allege that the project could contribute to the depletion of the Rio Grande.

Concerned citizen Cynthia Tovar commented

> "[...] Third, PJ will strain our water supply. Doña Ana County is bankrupt when it comes to water. YGI promised to use 20,000 gallons of water a day, but legally speaking they are permitted to use up to 2 million gallons a day with no consequences. The water should be for people first, not a data center."

1.2. Category 2 – Air Quality Impacts

The other major category of comments focused on concerns regarding air quality and potential impacts on the surrounding community. Commenters expressed concerns about air emissions affecting nearby schools and residents, alleged that the data center could increase temperatures in the community and surrounding area, and suggested alternative energy sources, such as wind or solar power, for facility operations.

Concerned citizen Benjamin Cordova commented:

> "[...] I oppose Air Quality Permit No. 10883 for Yucca Growth Infrastructure, LLC and the YGI Microgrid project. I do not want this facility sited in my area because of the environmental burden it will place on nearby residents and the surrounding community. The notice shows substantial emissions of CO, VOCs, PM10, PM2.5, NOx, total HAPs, and more than 75,000 tons per year of CO2e, and I believe those impacts are not justified for this location."

1.3. Category 3 – Public/Wildlife Health

Comments in this category alleged potential impacts to medically vulnerable residents, individuals with disabilities, senior citizens, and low-income households who rely on stable electricity service and clean air for their well-being. Like Category 2, many of these concerns stem from potential air quality impacts and broader quality-of-life considerations associated with the project.

Concerned citizen Robert Wofford commented:

> "[...] What pollution controls are in place? How did the developers arrive at the numbers on their permit if there has been no plant close to this size? What are the safeguards for our health and our children's health if these estimates are incorrect?"

Concerned citizen Benjamin Cordova commented:

> "[...] I am also concerned about cumulative effects, including noise, heat, and any water or other discharges associated with the project, and I ask NMED to scrutinize whether the permit conditions are truly enforceable and protective. Please require the strongest possible emissions limits, monitoring, reporting, and operating restrictions, and deny the permit if those protections are not sufficient to protect public health and the environment."

1.4. Category 4 – Practically Enforceable

These comments pertain to NMED's ability to effectively and practically enforce the permit requirements. Commenters argue that compliance verification would be improved through the use of continuous emission monitoring systems (CEMS) and recommend requiring the facility to route exhaust from all fuel cells to a centralized stack to facilitate continuous monitoring and enforcement.

Concerned Citizen, Carlos Sosa, comments:

> "[…]The design routes 2,275 individual cells through separate stacks with no add-on pollution control mechanisms or integrated continuous monitoring for particulate matter, VOCs, or shifting CO2 intensity. NMED cannot practically enforce compliance under 20.2.72.210 NMAC across thousands of individual, degrading units."

1.5. Category 5 – Emission Methodology

This category pertains to the methodology used by the facility to calculate emissions from its fuel cells. Commenters specifically criticize the stack testing conducted to develop the emission factors used in these calculations. Their concerns focus on the validity and representativeness of the stack test results, as well as the potential for fugitive VOC emissions to increase as fuel cell operating efficiency declines over time.

Concerned Citizen, James Kanel, comments:

> "[…] The emissions estimates are not credible. YGI's VOC and CO factors derive from a single two-day test (December 5–6, 2023) of one 65–67 kW ES-6.5 unit, scaled to a 2,462 MW fleet with no demonstration that the result is representative at installed scale, over time, or across cell degradation. CARB's BACT standard for CO from fuel cells is 0.1 lb/MWh — roughly ten times YGI's claimed 0.013 lb/MWh. If the real-world factor is even 60% higher than claimed (~0.02 lb/MWh), the facility exceeds the 250 TPY PSD major-source threshold under 20.2.74.7(AG)(2) NMAC. The Department should not accept self-generated factors from a single unrepresentative test…"

1.6. Category 6 – Hazardous Waste Disposal and HAP/TAPs

The primary concern raised in this category of comments stems from previous instances in which Bloom Energy was alleged to have improperly managed or disposed of hazardous waste. Commenters express concern that, if Bloom Energy serves as the facility operator, similar issues could result in environmental releases or other compliance problems. Additional concerns within this category relate to potential public exposure to hazardous air pollutants (HAPs) and toxic air pollutants (TAPs) emitted during facility operations.

Concerned Citizen, Thea De Armond, comments:

> "[…] Bloom Energy has a history of illegally storing and dumping hazardous waste AND falsifying records to cover it up."

Concerned Citizen, James Kanel, comments:

> "[…] Formaldehyde is claimed at zero using a test method that cannot detect it. YGI relies on a TO-15 canister method, which does not include formaldehyde as a target analyte, and a CARB certification covering only NOx, CO, and VOC. Formaldehyde is the primary cancer-risk driver for gas-fired generation and is a listed HAP under EPA AP-42 §1.4. YGI also provides no toxic air pollutant (TAP) modeling whatsoever. A "zero" that comes from not testing is not a finding — it is a gap, and it understates the facility's true health risk."

1.7. Category 7 – Extension for Public Comments/Public Hearing Requests

This category emerged from the broad range of public comments submitted in response to the public notice. Many individuals from New Mexico, as well as other states across the country, expressed opposition to the proposed project. A common concern among commenters was that the public comment period was too limited to allow for meaningful review of the application. Other commenters requested that public hearings be held in Santa Teresa and that the application and permitting process be explained in greater detail to promote transparency and public understanding.

Concerned Citizen, R Fultz, comments:

> "[…] The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably."

Concerned Citizen, Cari Powell, comments:

> "[…] If NMED does not reject YGI's application, NMED must hold a public hearing on the Application in both English and Spanish, in a hybrid format and in person in Santa Teresa."

2. IN SCOPE COMMENT RESPONSES

Due to the sheer volume of comments submitted, ERG has proposed responses to the following categories. While they are not tailored specifically to each individual commenter, it is the intention that this can guide NMED with providing responses.

2.1. Category 2 – Air Quality Impacts

NMED acknowledges the concerns raised regarding air emissions and potential impacts on nearby residents, schools, and the surrounding community. As part of its review of Air Quality Permit No. 10883, the Air Quality Bureau (AQB) evaluated the facility's emissions and their potential impacts on ambient air quality through the air dispersion modeling analysis submitted with the application. The modeling analysis was reviewed to determine whether emissions from the facility could adversely affect the surrounding community and to verify compliance with applicable air quality standards.

To help explain these emissions in plain language, it is important to understand that the proposed facility uses solid oxide fuel cells to generate electricity. Unlike conventional power plants, engines, or turbines, fuel cells do not generate electricity by burning fuel in a flame. Instead, they use an electrochemical process that converts natural gas into electricity. Because this process does not rely on combustion in the traditional sense, emissions of many pollutants are significantly lower than those associated with conventional fossil-fuel-fired power generation technologies.

Even so, the process does produce regulated air pollutants. Nitrogen oxides (NOx) can form because the fuel cells operate at elevated temperatures. Carbon monoxide (CO) and volatile organic compounds (VOCs) can result from small amounts of fuel that are not fully converted during operation. Trace amounts

of particulate matter (PM10 and PM2.5) and hazardous air pollutants (HAPs) may also be present. Carbon dioxide (CO2), a greenhouse gas, is produced because the natural gas used by the fuel cells contains carbon that is converted during the electricity generation process. In addition, small amounts of methane could potentially be released through natural gas piping leaks, which is why the draft permit includes leak monitoring requirements.

AQB's review evaluated each of these pollutants individually. The permit application included emissions calculations, emissions testing data, and air dispersion modeling to assess the impact of these emissions on nearby residents, schools, and other sensitive receptors. The modeling analysis demonstrated compliance with applicable air quality standards, which are established to protect public health, including sensitive populations such as children, the elderly, and individuals with existing health conditions.

The proposed facility is required to comply with all applicable federal and state air quality regulations, including permit limits established to ensure protection of public health and the environment. AQB's review concluded that the facility, as permitted, is capable of operating in compliance with these regulatory requirements. The draft permit also includes monitoring, recordkeeping, reporting, and testing requirements designed to verify ongoing compliance with permitted emission limits.

With respect to the concern that the facility's emissions are not justified for the proposed location, AQB's permitting authority is to evaluate whether the facility complies with applicable air quality regulations and standards. The permit review included an evaluation of emissions of carbon monoxide (CO), volatile organic compounds (VOCs), particulate matter (PM10 and PM2.5), nitrogen oxides (NOx), hazardous air pollutants (HAPs), greenhouse gases, and other regulated pollutants. Based on AQB's review, including the air dispersion modeling analysis, the facility meets applicable regulatory requirements for these pollutants.

Regarding greenhouse gas emissions, the commenters note that the facility is projected to emit more than 75,000 tons per year of carbon dioxide equivalent (CO2e). While CO2e emissions are regulated for certain permitting purposes, the projected greenhouse gas emissions from this facility do not exceed any applicable regulatory threshold that would preclude permit issuance. AQB evaluated the facility's greenhouse gas emissions in accordance with applicable permitting requirements and determined that the facility satisfies those requirements.

The commenter also expressed concerns regarding broader environmental impacts on the surrounding community. To the extent these concerns relate to air quality, AQB addressed them through its review of the facility's emissions, applicable regulatory requirements, and air dispersion modeling analysis. To the extent the concerns relate to issues other than air quality, such as land use, community planning, facility siting, or localized temperature effects, those matters are outside the scope of AQB's air permitting authority and will be addressed separately in Section 3 of this response document.

Accordingly, based on AQB's technical review, including evaluation of the facility's emissions and air quality impacts, the proposed facility complies with applicable air quality regulations and permit requirements intended to protect public health and the surrounding community.

2.2. Category 3 – Public/Wildlife Health

NMED acknowledges the concerns regarding potential impacts to medically vulnerable individuals, children, senior citizens, individuals with disabilities, and low-income households. NMED recognizes that these populations may be particularly sensitive to air quality concerns and therefore evaluated the proposed facility to determine whether it can operate in compliance with applicable air quality regulations that are designed to protect public health, including sensitive populations.

In response to the question regarding pollution controls and the basis for the emissions estimates, the permit application relies on emissions data developed from manufacturer testing and emissions testing of the fuel cell technology proposed for use at the facility. Although the proposed project is larger than existing individual installations of this technology, the fuel cell units themselves are standardized and manufactured to the same specifications as the units used to develop the emissions estimates. As discussed elsewhere in this response document, the draft permit includes extensive stack testing, monitoring, recordkeeping, and reporting requirements to verify that actual emissions from operating units remain consistent with the permitted emission rates.

The draft permit contains multiple safeguards to ensure protection of public health if actual emissions differ from projected emissions. These safeguards include initial and periodic stack testing requirements, continuous monitoring of key operating parameters, emission calculations based on conservative assumptions, recordkeeping requirements, and reporting obligations. In addition, the facility must comply with all applicable permit limits at all times. If monitoring or testing indicates noncompliance with permit requirements, the facility would be subject to applicable enforcement provisions under state and federal law.

NMED also evaluated whether the permit conditions are enforceable and protective of public health and the environment. The permit establishes enforceable emission limits and operating requirements, as well as monitoring and testing provisions that allow compliance to be verified. These requirements were developed specifically to ensure that emissions remain within the levels authorized by the permit and to provide NMED with the information necessary to assess ongoing compliance.

Several commenters raised concerns regarding cumulative impacts, including air quality, noise, heat, water use, and other potential community impacts. To the extent these concerns relate to air quality, NMED evaluated emissions from the proposed facility and reviewed air dispersion modeling to assess the impact of emissions on the surrounding area. The modeling analysis demonstrated compliance with applicable air quality standards, which are designed to protect public health, including sensitive populations such as children, the elderly, and individuals with existing health conditions. Additional discussion of the modeling analysis is provided in the response to Category 3 comments.

To the extent concerns relate to noise, heat generation, water use, wastewater, land use, electrical service reliability, or other non-air quality impacts, those issues are generally outside the scope of NMED Air Quality Bureau's permitting authority and are not regulated through this air quality permit. Such issues are addressed, where applicable, by other regulatory agencies or through separate permitting and planning processes.

Finally, NMED notes that the draft permit already incorporates stringent emission limits, monitoring requirements, testing requirements, and compliance demonstration provisions. Based on NMED's technical review of the application, emissions calculations, supporting documentation, and air quality analyses, the Bureau has determined that the permit contains requirements sufficient to demonstrate compliance with applicable air quality regulations and to protect public health and the environment. Accordingly, NMED has not identified a technical or regulatory basis for denying the permit on the grounds raised in these comments.

2.3. Category 4 – Practically Enforceable

The draft permit allows for the installation of up to 2,275 fuel cell exhaust points, referred to as "clusters." Each cluster collects exhaust from one or more Bloom Energy fuel cell units that generate electricity from natural gas through an electrochemical process. Because all of the fuel cell units are

manufactured to the same design specifications, there is no reason to expect significant differences in emissions from one unit to another. However, the draft permit includes extensive testing and monitoring requirements to verify compliance with emission limits.

Condition A601.D requires initial stack testing of a representative sample of newly installed clusters. Specifically, at least 1 percent of the clusters installed during each calendar quarter must be tested. If fewer than 600 clusters are installed during a quarter, at least six clusters must be tested.

The permit includes specific criteria to determine when a cluster becomes subject to testing. These requirements ensure that clusters are tested after they have been operating long enough to provide representative results, while also ensuring that all newly installed clusters become subject to testing within a reasonable timeframe.

After the initial testing is completed, Condition A601.E requires ongoing periodic testing. Under this condition, 1 percent of the clusters installed during a given calendar year must be retested during each subsequent year. The permit also requires testing to be conducted on a rotating basis so that all clusters are tested before any cluster is tested a second time.

These requirements allow NMED to verify not only that the fuel cells comply with emission limits when they begin operating, but also that they continue to comply over time.

Condition A601.D also allows for reduced testing frequency if testing consistently shows emissions are substantially lower than the levels used to establish the permit limits. This provides flexibility while still ensuring compliance is demonstrated through testing.

Condition A601.F requires the facility to calculate actual emissions using the highest emission rate measured during recent stack testing and apply that rate to all operating fuel cell clusters. This approach is intentionally conservative because it assumes every cluster could emit at the highest measured rate. As a result, reported emissions are unlikely to underestimate actual emissions and provide a protective means of demonstrating compliance with permit limits.

Condition A601.G requires the facility to monitor for natural gas leaks throughout the facility's piping system, from the site entrance to the fuel cell units. This requirement helps ensure that natural gas is not released into the atmosphere. Based on NMED's review of other fuel cell permits, this appears to be an additional monitoring requirement not commonly required at similar facilities.

To ensure all monitoring requirements are implemented appropriately, Condition A601.H requires the applicant to submit a comprehensive monitoring plan. The plan must describe how the facility will monitor key operating and compliance parameters, including startup, shutdown, and malfunction events; natural gas usage; electricity generation; sulfur concentrations; temperature and pressure measurements; and natural gas leaks.

Review of this monitoring plan will allow NMED to understand how the facility will continuously demonstrate compliance with permit requirements. During future inspections, NMED will be able to verify that the monitoring systems and procedures described in the plan are being properly implemented and maintained.

DRAFT

2.4. Category 5 – Emission Methodology

NMED acknowledges that the potential emissions estimates were developed using stack test results from individual fuel cell modules tested in a laboratory environment rather than under field conditions. However, the modules tested in the laboratory are the same design and configuration as those authorized for installation under the permit. Because the electricity generation process is consistent across all units, NMED expects emissions from the installed units to be comparable to the laboratory test results.

As part of its review, NMED evaluated existing air permits for similar fuel cell facilities and found that in-field emissions testing data are generally not available because such permits do not typically require in-field stack testing. To address this uncertainty and verify compliance under actual operating conditions, the draft permit includes extensive in-field stack testing requirements. These requirements will allow NMED to confirm that operating fuel cell units meet the permitted emission limits.

The draft permit also requires the applicant to calculate facility-wide emissions using the highest emission rate measured during the most recent stack testing. Applying the highest measured emission rate to all operating fuel cells is a conservative approach that helps ensure actual emissions are not underestimated.

In addition, the permit addresses concerns regarding equipment performance over time by requiring periodic stack testing on an ongoing basis. This continued testing will enable NMED to verify that emissions remain within permitted limits throughout the life of the facility.

Finally, NMED does not expect the overall size of the operation to affect emissions performance. The fuel cell units authorized for installation are identical to the units tested in the laboratory and those that will be subject to field testing. Therefore, there is no technical basis to conclude that emissions would increase simply because a larger number of units are operating at the facility.

3. OUT OF SCOPE RESPONSES AND RECOMMENDATIONS

The remaining three categories consist of comments concerning matters that fall outside the scope of the New Source Review (NSR) permitting process. These comments are addressed below, as appropriate.

3.1. Category 1 – Water Usage

The application under review pertains specifically to the electric generating equipment identified in Section 2 of the permit application, namely the Solid Oxide Fuel Cell (SOFC) generating units. The facility is authorized to install and operate up to 2,275 SOFC clusters with a combined maximum generating capacity of approximately 2,462 MW. The air emissions and associated permit conditions evaluated as part of this permitting action are based on the equipment identified in the application as emission units.

Other equipment located on-site, including infrastructure that may support the generation process, is not identified as an emission source in Table 2-D of the application and is therefore not subject to evaluation under this permitting action unless it constitutes a regulated emission unit and is otherwise subject to applicable air quality requirements.

This permit regulates the facility as a major source under applicable air quality regulations and establishes operating requirements, monitoring requirements, recordkeeping requirements, reporting obligations, and emission limitations intended to ensure compliance with state and federal air quality standards. The purpose of this permit is to regulate emissions to the atmosphere and to ensure that the facility operates in a manner protective of air quality and public health.

While concerns regarding water consumption are acknowledged and appreciated, the quantity of water used by the facility is not regulated through this air permitting action. The Air Quality Bureau's authority is limited to the regulation of air emissions and compliance with applicable air quality requirements. Water withdrawals, water rights, water supply, wastewater management, and other water-related issues are administered through separate regulatory programs and agencies. As such, the facility's daily water usage is outside the scope and jurisdiction of the Air Quality Bureau and cannot be addressed through the air permit being considered.

3.2. Category 6 – Hazardous Waste Disposal and HAP/TAPs

Hazardous waste disposal is regulated under the Resource Conservation and Recovery Act (RCRA) and generally falls outside the scope of the air permitting process. However, NMED raised questions regarding the hazardous waste that may be generated on site and the manner in which it will be managed.

The applicant claimed:

> *"Desulfurization units remove sulfur prior to reforming of the natural gas. Desulfurization occurs through an adsorbent-based sulfur removal process in which the incoming natural gas passes through a leading and lagging vessel of adsorbent material to capture and remove sulfur species. See below for additional discussion. Desulfurization unit internal media are periodically replaced at a nominal interval of once every two years. Replaced media will be transported and disposed of in accordance with hazardous waste laws that fall outside of the AQB's jurisdiction."*

The hazardous waste laws referenced above relate to the definitions and requirements contained in 40 CFR Parts 260 through 262. Upon removal from service, the spent desulfurization media would require a hazardous waste determination by the generator pursuant to 40 CFR 262.11 to determine whether the material is a solid waste and whether it exhibits any hazardous waste characteristics or is otherwise regulated as a hazardous waste.

Generator status is determined by the quantity of hazardous waste generated during a calendar month:

- Very Small Quantity Generator (VSQG): ≤100 kg/month hazardous waste, ≤1 kg/month acute hazardous waste, and ≤100 kg/month acute spill residue or contaminated soil.
- Small Quantity Generator (SQG): >100 kg/month but <1,000 kg/month hazardous waste.
- Large Quantity Generator (LQG): ≥1,000 kg/month hazardous waste, >1 kg/month acute hazardous waste, or >100 kg/month acute spill residue or contaminated soil.

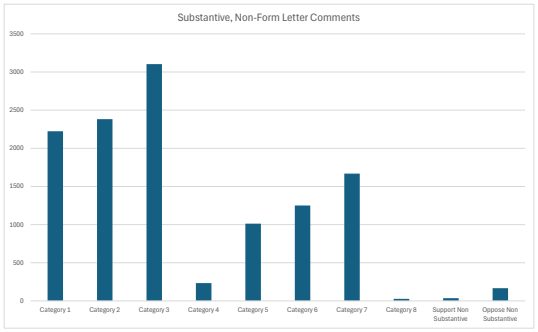
If the spent media are determined to be hazardous waste, the quantity generated during media replacement could affect the facility's generator category for that month. Depending on the generator category, the facility may become subject to additional RCRA requirements, including EPA identification

number, accumulation, manifesting, training, and reporting requirements. A RCRA permit would generally only be required if the facility conducts regulated treatment, storage, or disposal activities that require permitting.

While these requirements fall outside the jurisdiction of NMED's Air Quality Bureau, the applicant remains responsible for conducting the appropriate hazardous waste determination and managing any resulting waste in accordance with applicable RCRA requirements. Any deviation from applicable federal or state hazardous waste management requirements may subject the facility to enforcement action by the appropriate regulatory authority.

3.3. Category 7 – Extension for Public Comments/Public Hearing Requests

Several commenters requested an extension of the public comment period and/or requested that a public hearing be held in Santa Teresa. ERG is unable to provide responses to these requests. Decisions regarding public notice, comment periods, hearing schedules, hearing locations, and other administrative aspects of the permitting process are made by NMED in accordance with applicable regulatory requirements. These requests have been provided to NMED for consideration and action as appropriate.



DRAFT

Substantive Comment Categories:

1. Water usage.
   - Consistently complain about the differences between the applicant and what the NM Engineering has found for water usage at the datacenter.
   - 20,000 gal/day claim versus NM finding it to be 1,000,000 gal/day.!!
   - Also alleges that the Rio Grande will dry up from this.
2. Affecting Air Quality and Emission Methodology
3. Public Health & Quality of Life
   - Fuel cell reliability concerns
   - Noise generated
4. Enforceability
5. Operations and Permitting
6. Hazardous Waste Concerns
   - About its generation and exposure to the general public.
7. Public Comment Extension/Hearing/Transparency

Cameron	James	What is the long term use of water in the region impact from that help with air quality?	1		No													
Matthew	Gonzales		2	Merged Document	Yes				Yes	Yes	Yes						8/17/2026	
Julio	Fuentes		2	Merged Document	Yes		No	Non-Substantive to Support									8/17/2026	
Brenna	Chichiarelli	This is my petition to not process Project Jupiter which is probably to late but my point is that it shouldn't be invested in because New Mexico is doesn't have enough water already. NM water company Sunray giving rich resident basic drinking. This data center will in deed affect the air quality and our resources of our environment in general, in long term it will do irreversible damage in future and to others around as being a New Mexico residents.	1	Merged Document	No		No	Non-Substantive to Support									8/17/2026	
Ezekiel	Nance	New Mexico is already struggling to maintain it environmental integrity. A data center requiring millions of gallons of fresh water, and producing air quality reducing emissions comparable to several of our larger municipalities combined is ridiculous and irresponsible.	1	Merged Document	No				Yes	Yes	Yes						8/17/2026	
Angel	Hernandez	I am writing to formally express my strong opposition to the proposed "Project Jupiter" data center development in Santa Teresa, New Mexico. As a resident deeply invested in the future and well-being of our community, I urge you to consider the significant negative impacts this project poses to our region. Our community is currently facing critical water scarcity challenges. It is unacceptable for an industrial project of this magnitude to consume massive quantities of water, a vital resource that must be prioritized for human consumption and the sustainable growth of our families. The strain this usage will place on our local supply poses a direct and unacceptable threat to our long-term water security. Furthermore, I am deeply concerned about the potential degradation of our air quality and the long-term impact on the public health of residents in Santa Teresa and surrounding areas. The operation of infrastructure at this scale threatens both our environmental stability and the physical health of those who live here.	1	Merged Document	No				Yes	Yes	Yes						8/17/2026	
Alcina	Macias	Please do not approve this air permit or any further permits for the Yucca Growth Infrastructure LLC. The data center they are proposing will push Doña Ana County and New Mexico, an already and increasingly dry state, into further climate crisis with the amount of water and other natural resources it will need to utilize to simply keep the lights on. It will also impact the health and well being of the residents of Doña Ana County, as we've seen that the water quality available to residents only worsens over time and their homes are taken away from continued expansion. No data center is worth harming children, families, and the community that call New Mexico their home. Please deny this request.	1	Merged Document	No				Yes	Yes	Yes						8/17/2026	
Mirasia	Fiest	There is no need for data centers especially here where we are known for our clean air and famously big droughts. There is also no future in AI (Generative) the reason generative AI has gotten so popular is not because people love it it has been forced at people to the point that they are tired and now finding alternatives. Why should our community be/everything in AI, including our bodies and homes into a failing state project. Technology is amazing and fun for humanity but when it starts to take away from people's natural life quantities given to every living thing on this planet, it's no longer a helpful tool, it's a death sentence.	1	Merged Document	No				Yes		Yes						8/17/2026	
Raquel	Herrera	As a New Mexican homeowner, I oppose the building of project jupiter because of its impacts to an already strained and fragile environment. Their impact "reports" are inconsistent, and from what we've seen in other parts of the US, data centers hurt local communities more than help.	1	Merged Document	No		No	Clozoore Non-Substantive	Yes		Yes						8/17/2026	
Charles	Noble	The permit should be denied. The Applicant has far better alternatives available that will not emit carbon into the atmosphere, such as solar, wind and battery facilities. The Application is an end-run around the Energy Transition Act, and violates its spirit if not intent of the Act. Climate change includes effects such as drought, warmer temperatures and increased number and intensity of hurricanes, all of which New Mexico is experiencing; it is irresponsible for the Applicant to emit more carbon than necessary into the environment, and it is irresponsible for NMED to approve unnecessary carbon emissions into the atmosphere which will exacerbate climate change. Approval of the permit violates the public interest.	1	Merged Document	No						Yes	Yes					8/17/2026	
Rafael	Herrera	The amount of water required to run these unnecessary data centers is staggering. Water is a human right, wasting water on a data center is unconscionable.	1	Merged Document	No				Yes	Yes	Yes						8/17/2026	
AnneMarie	Bowles	The proposed permit, while different than the original proposal, still contains much of the same issues. Building this massive infrastructure that needs so many resources to operate is a blatant attempt by/any business to exploit our land and natural resources here in New Mexico, a place where the most people funding this project do not live or have any personal investments. Sacrificing our natural resources for short term profit is something New Mexicans will regret for generations to come. Protecting our land and resources is of the utmost importance for the longevity of humans living here. Prioritizing profit and the growth of the AI industry will ultimately kill us. I do not care about that got running smoother, I care about being able to breathe air in the place I live without a gas mask. As a young person I will have to live with the consequences of decisions made by older individuals in power who seem to be more swayed by dollar signs than long-term implications of their decisions. Please consider the future of your children, their children, and all the children yet to come who will need a habitable environment if they hope to live out a decent quality of life. This development threatens the air, land, and water of New Mexico and all life within it.	1	Merged Document	No						Yes						8/17/2026	
Sarah	McArthur	To the New Mexico Environment Department, Air Quality Bureau: Thank you for the opportunity to comment on the Yucca Growth Infrastructure (YGI) Microgrid Air Quality Construction Permit Application in Doña Ana County. I am submitting this comment as a New Mexico resident concerned about the regional environmental and public health impacts of this project. Although I do not reside in Doña Ana County, the scale of this microgrid and its associated emissions, water use, and infrastructure clearly extend beyond county boundaries and affect statewide resources. 1. The emissions profile of this microgrid is not adequately disclosed. The permit application does not provide sufficient detail about the number, size, or operational schedule of the turbines' gas engines and turbines proposed. A microgrid of this magnitude is typically designed to power a hyperscale data center/s that will operate at near continuous load. Without having a permit modeling of NOx, VOCs, CO, PM2.5, and greenhouse gas emissions under realistic operating conditions, the public cannot meaningfully evaluate the air quality impacts. 2. The cumulative impacts of this project have not been assessed. This microgrid is part of a larger industrial development (Project Jupiter) that includes massive energy demand, water consumption, and pipeline infrastructure. Evaluating the microgrid in isolation ignores the cumulative emissions from construction, pipeline compression, increased truck traffic, and associated industrial activity. NMED should require a cumulative impact analysis before issuing any permit. 3. The project's water use raises serious environmental concerns. Public reporting indicates that the microgrid's cooling systems may require nearly one billion gallons of water per day, in addition to the official two million gallons/ML. This is a significant burden on the Lower Rio Grande Basin, which is already over-allocated and under severe hydrological stress. Air quality permitting cannot be separated from water resource impacts when evaporative cooling and downstream directly affect emissions and particulate formation. 4. The microgrid depends on infrastructure currently under legal challenge. The Green Chile pipeline and related natural gas infrastructure have been challenged for attempting to bypass environmental review. Approving an air quality permit for a facility that depends on contested, incomplete, or unpermitted infrastructure exposes the state to long-term risk and undermines public trust. 5. The economic claims associated with this project require independent verification. Hyperscale data centers often underdeliver on job creation while over-consuming public resources. Before issuing an air quality permit, NMED should require a third-party analysis of long-term emissions,	2	Merged Document	No		No	Clozoore Non-Substantive	Yes		Yes						8/17/2026	
Makena	Light	I submit this comment in strong opposition to Air Quality Construction Permit Applications 10730 (East Microgrid) and 10754 (West Microgrid) proposed by Accura, LLC in southern Doña Ana County to power Project Jupiter. These applications are unlawfully and deceptively designed to evade public health protections and, if approved, would result in significant air pollution and destructive climate impacts that will harm all New Mexicans. NMED must reject both applications outright, and require Accura LLC to submit a single, accurate permit that fully accounts for the Project's true pollution impacts because 1. The Project is a Single Pollution Source and Must Be Permitted as One The Applicant has improperly divided a single gas-fired power project into two permits to avoid stricter air quality requirements. The East and West Microgrids: Must/Are under common ownership and control Must/Are located less than one mile apart Must/Serve the same facility Must/Fall under the same industrial classification Under EPA and NMED rules, these facts require treatment as one stationary source. When combined, emissions of nitrogen oxides (NOx), carbon monoxide (CO), particulate matter (PM), and hazardous air pollutants (HAPs) exceed major source thresholds, triggering stronger pollution controls and review. Artificially splitting the Project unlawfully circumvents these protections. New Mexicans are not stupid. We can tell when a bad actor is trying to get away with murder. That is exactly what is happening here. 2. The Applications Rely on Unenforceable Emission Limits Accura proposes "synthetic minor" annual emission limits that are not based on any specified physical or operational restrictions, such as limits on operating hours, fuel use, or turbine capacity. Self-declared annual caps alone are not enforceable and cannot be used to avoid major source permitting. Nobody trusts Accura LLC to monitor and self-regulate their pollution...and NMED cannot be naive enough to accept their word as evidence. Because the stated limits are unenforceable, the Project's full potential emissions based on the proposed turbines must be used, making each Microgrid, and the Project as a whole, a major source. 3. The Project Will Result in Destructive Climate Impacts, Worsen Ozone Pollution and Violate Health Standards	2	Merged Document	No														8/17/2026	
Jacinda	Friedell	I strongly oppose Project Jupiter on the grounds that redacting limited resources from our communities is unsustainable at best and catastrophic at worst. Why should hardworking New Mexicans sacrifice what little water we have for the sake of billionaire shareholders? We shouldn't.	1	Merged Document	No					Yes	Yes	Yes			Yes		8/17/2026	
Mariena	Beemer	I am opposed to Project Jupiter's plans to build a massive data center that in only here to extract our limited resources while making a profit at our expense. These data centers are destroying rural and disadvantaged communities through noise and water pollution, and draining already limited water supplies. Don't let them ruin our beautiful state! It's not worth it.	1	Merged Document	No		No	Clozoore Non-Substantive	Yes								8/17/2026	
Reagan	Altenbach	NM Project Jupiter has been inconsistent in their claims on the environmental impact of this project. New Mexico is one of the only safe havens for environmental protection in the United States. Please don't accept these permits! Project Jupiter is inconsistent with their facts and does not serve our communities wishes.	1	Merged Document	No		No	Clozoore Non-Substantive	Yes		Yes		Yes				8/17/2026	
Jack	Burkhardt	As a New Mexican, I say NO to new data centers for AI that are stripping our communities of a future that has abundant water supplies and clean air. Project Jupiter is misleading and could use up to 1,950,000 gallons of water PER DAY. A figure almost 20x the previous estimate given by the developers. As this project will be powered by gas generators it is in NO way, shape, or form a sustainable project. We'd continue to pollute our communities that suffer from poor air quality and extreme heat due to the worsening climate crisis. If Project Jupiter is completed it would be a betrayal to New Mexicans. As a young person, 19 years old, I feel helpless in what I can do to secure a livable future for myself and my community. Please stop leaving this burden on the youth and make a meaningful difference if you have the privilege and power to do so. We are so tired. Don't let us down, Jack Burkhardt	1	Merged Document	No		No	Clozoore Non-Substantive			Yes						8/17/2026	
Shane	Garcia	This data center needs to come with metric based assurances that emissions will not increase, water and electricity will not become more scarce, and prices will only decrease. Penalties must be wholly and immediately enforceable without appeal, to included to surrender of all property and materials to the people of New Mexico. These companies have enough money to house all of albuquerque 100 times over. If they come into our town and make our lives worse not better, then we will do the same. And we will include the elected officials that allowed this to happen.	1	Merged Document	No				Yes	Yes							8/17/2026	
Leslie	Nesbit	There is no reason to build any water guzzling AI/HYPEMO in a desert. As the climate gets warmer our drought will get worse. If a data center gets built it will do nothing but drain our systems. How many jobs will they bring? That's all they think about! Money! Money does not hydrate a human body, the plants, or the animals. But that doesn't matter because the people getting the money will not be living in Dona Ana County	1	Merged Document	No				Yes	Yes		Yes	Yes				8/17/2026	
Caleb	Neighbors	Absolutely no! We live in the DESERT. Water is ALREADY limited. We do not need a useless (to the average citizen) AI data center to absorb New Mexico citizens valuable water supply and perhaps ruin what little water comes through the Rio Grande the last few years. Again, I say NO.	1	Merged Document	No				Yes		Yes						8/17/2026	
Lydia	Davis	Reject this permit!! Our water and air quality are already struggling, and this would just make it worse. We don't need Project Jupiter's data centers here; it won't bring growth or opportunity, only extract from our already weakened lands and communities.	1	Merged Document	No													
Sierra	Edmister	This community does not want this project. Even switching to fuel cells does not make things better. Fuel cells are new and unreliable at this scale and still have so much waste!!! I hope you guys make this decision based on the reality we face in New Mexico when it comes to air and water. Anything that isn't reducing our emissions or reducing water waste IS BLACKMAILING OUR CLIMATE CRISIS!!! Don't let them build this project!!!!	1	Merged Document	No		No	Clozoore Non-Substantive	Yes	Yes							8/17/2026	
Aric	Gutierrez Gonzalez	Im an Earth and Planetary Sciences Major at UNM. I can already say that it's a BAD idea to let a data center be built in New Mexico. We already struggle with water supply for long term use now. What makes them think a data center is what we need. We are trying to conserve water use already for long term storage and to keep a sustainable future for growth. Our Rio Grande is drying up which is the main use of water that we rely on. We literally CANNOT afford a data center in New Mexico. This can drastically drain our resources. This data center will be using up more water than most towns here. New Mexico does not have the resources for a data center and even if we did, we still don't want a data center	1	Merged Document	No				Yes	Yes			Yes				8/17/2026	
Rose	Newton	We as the state of New Mexico have been devastated for generations by water loss. Generational farms are being bought out, going bankrupt, water rights being sold, and families going hungry. Everyone on the planet eats food grown from our New Mexico soil. Pecans. Green chile. Water melons. The list goes on and on and on. And yet. We humans cannot survive without food. We cannot survive without water. We can survive without tech CEO billionaire AI data centers. Return our water to our people. Our land. Everyone's food. Cancel these data centers. Fund our communities. Not billionaires.	1	Merged Document	No				Yes								8/17/2026	
Selena	Miranda	As a New Mexico resident I am formally requesting to have this project rejected. The environmental harm that would come from this project is greater than any profit. This will increase costs for us as citizens, and decrease quality of life.	1	Merged Document	No				Yes		Yes						8/17/2026	
Eliana	Plumb	I do not want data centers in my state, and I do not want this permit approved. Data centers harm not only the natural environment but the people who live there as they deal with limited water and droning noise. The average person doesn't need to use AI. The people who advocate for it the most are those who have invested in it, but they aren't the average person who has to live around the centers and deal with the consequences. Protecting the environment and its people is essential. Do not allow this.	1	Merged Document	No		No	Clozoore Non-Substantive			Yes						8/17/2026	
				Merged Document	No		No	Clozoore Non-Substantive	Yes		Yes		Yes				8/17/2026	

Katherine	Cordova	I am very concerned at the use of our limited water supply for any data source use in this region. I hope you will not allow this inappropriate our precious resources.	1		No	[redacted]													
Laney	Matlock	Water usage and lack there of of this resource is at the forefront of my mind constantly as a water resource engineering student at NMSU in Las Cruces. The issue of water usage in southern New Mexico was already a huge problem before Project Jupiter became a thought, and with it can only bring worsening for our water sources. There is no positive to allowing such a project move forward in an arid climate like ours. The money isn't worth it when we run out of water and the area is no longer habitable. I only see huge issues arising with the construction of the data center, so please for the sake of everyone in southern New Mexico and surrounding areas: do not allow project Jupiter to come to fruition	1	Minded Document	No				Yes										8/27/2026
Tegan-Jean	Smith	We can not let our environment get hurt by any data centers trying to use our water or air. If this passes everyone in NM will be effected by this in the worse way possible. This can also put children, pregnant women, and the elderly in harms way as their bodies tend to have weaker immune systems, which having poor quality air or water can and will put them at risk of illnesses. Families, friends, and neighbors all deserve to live with clean water and air, so please say no to the data center. Just Say No.	1	Minded Document	No				Yes										8/27/2026
Ann	Kepley	I oppose the issuance of an air quality permit to FUSCA Growth Infrastructure, LLC, at 600 Congress Ave, Suite 1300, Austin, TX. This project would negatively affect air quality and the quality of life in southern New Mexico. Additionally, it would use water essential to the well-being of local communities.	1	Minded Document	No				Yes		Yes								8/27/2026
Santiago	Camarillo	I'm writing to express my concerns about Project Jupiter. While I understand the potential for investment, I worry that its massive energy and water demands, especially for cooling, will put immense pressure on our state's already strained resources, particularly in our drought-prone region. This could lead to increased competition for water, negatively impacting our agricultural sector and local communities. The substantial power consumption could also strain our existing electrical grid and necessitate new energy infrastructure, potentially relying on more fossil fuels if we don't adequately scale up renewable sources. I'm also concerned that the construction and operation could contribute to air pollution and habitat disruption, ultimately affecting our natural environment and the quality of life for all New Mexicans.	1	Minded Document	No				Yes	Yes									8/27/2026
James	Treadwell	I have lived in New Mexico, in the desert, for most of my life. Our state is beautiful, but fragile, and already under tremendous strain. You cannot seriously be considering approving a project that could use up to 1 Million gallons of water a day in the middle of a desert ecosystem! There is no responsible way to build a facility that would produce more greenhouse gasses than Albuquerque during the current climate crisis! Money would be nice, but not at the cost of the place we all live.	1	Minded Document	No				Yes		Yes								8/27/2026
Carina	Meiera	Hello, I'm writing to say I strongly oppose a data center being built in New Mexico. We are already limited with water and with summers arriving sooner and lasting longer and temperatures rising, it is imperative that we focus on New Mexicans and their needs. There are communities already that don't have enough water resources. You will harm more New Mexicans if you let this pass. Thank you.	1	Minded Document	No				Yes		Yes								8/27/2026
Aaron	Flores	No one wants data centers in New Mexico using water that New Mexico land doesn't have! Million gallons a day! Ridiculous, all of New Mexico is dry! We can't not off data center water! You're killing our future!	1	Minded Document	No				Yes										8/27/2026
Carlos	R	theill harm the citizens of New Mexico dramatically and can ruin our environment with pollution and waste of water Ai data centers have used more water than any water bottle corporations stop this Ai center before it hurts not only us but our way of life	1	Minded Document	No				Yes										8/27/2026
E	D	This proposed data center is a horrible idea for new mexico. The amount of resources that it uses for development and to sustain it are way more than our state can sustain long term. I do not think that this should happen. Ever.	1	Minded Document	No				Yes		Yes								8/27/2026
Kendrick	gardner	The enormous strain on our local environment this data center would cause is not worth the little to no improvement on our economy, or the lackluster amount of jobs it would create that will most likely be outsourced from other states anyway	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive											8/27/2026
Damien	Gross	NO TO DATA CENTERS It is despicable to build data centers anywhere but I cannot accept one being built so near to my home and so near to our incredibly vulnerable communities. New Mexico is experiencing droughts worse than any before and you expect us to hand over 1 MILLION gallons of water a day?! Our Rio Grande is already completely dry in Albuquerque and it's mid-week summer yet. Farmers and ranchers who provide for our entire state and more depend on this water, they already can't get enough. Data centers kill. This is pure evil, there is no other word for it. You take our land, you take our water, you pollute us, you starve our community of vital resources and you want us to just roll over? Do not build here. New Mexico water IS NOT FOR SALE. We are not for sale. OpenAI, ChatGPT, Oracle and others are only operating for the short lived profit of the billionaire class. They don't expect the human race to survive, in fact they are actively working so that it won't. They do not care about the harm they cause. The only thing that matters to them is that [redacted]	2	Minded Document	No	[redacted]	No	Oppose Non-Substantive			Yes							8/27/2026
Will	Hume	New Mexico doesn't have the water resources to support these kinds of projects, and we definitely don't need to be offering 30 year tax breaks to companies that can afford to spend $165 BILLION on a single project. That means the rest of us are subsidizing them, and we really don't have the tax basis in this state to absorb that kind of shortage.	1	Minded Document	No	[redacted]			Yes		Yes								8/27/2026
Myles	Ruiz	Being a New Mexico Native American for all of my life I understand that water is sacred we have performed ceremonies and prayers to bring rain a project like this can make water even more scarce for local communities and could cause catastrophic damage to our environment	1	Minded Document	No	[redacted]			Yes										8/27/2026
ann	Glauer	I would like to submit my absolute disapproval towards the further progress of Project Jupiter! It has become crystal clear that they have already lied to get their permit for water use, now talking about a million gallons a day. That alone should put a brake on any further approval of permits. Our state is treasured for it's natural beauty please remember future generations. Don't let this evil into our state.	1	Minded Document	No	[redacted]			Yes		Yes								8/27/2026
Jacob	Lizzie	New Mexico water should be for New Mexico citizens and communities. Southern New Mexico already hits 100+ degrees in the summer. This new data center could increase temperatures more than what the community could handle. Deny this permit!	1	Minded Document	No	[redacted]			Yes										8/27/2026
Jessica	Meyerson	Any infrastructure that makes it easier for these AI companies to extract water and energy from our communities has to be stopped. They make promises about jobs, and promises about tax revenue - but we all know that they are playing on the hopes and economic precarity that so many of my fellow New Mexicans experience - instead - they will come, they will take what there is to take, and they will leave polluted water, carbon emissions, and absolutely NOTHING for the people of this state. These companies lie - they do not care about our present circumstances much less our children's futures. They are preworked in their thinking - but no amount of money will be able to repair the damage done if this project goes through. As a proud New Mexican - ABSOLUTELY NOT.	1	Minded Document	No	[redacted]			Yes										8/27/2026
Deborah	Bryant	Please do not approve project Jupiter. New Mexico is the last state that should be building an AI data center. The technology is not advanced enough to make it worthwhile wasting what little water we have for this purpose.	1	Minded Document	No	[redacted]			Yes		Yes								8/27/2026
Eric	Michaelsen	The Rio is the driest it's ever been and this technology is deeply unpopular with people on all sides of the political spectrum. In no concept of reality is this sustainable in the long term and only serves to further destabilize the future of the Rio Grande Valley.	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive	Yes										8/27/2026
Arjun	Tuttuja	The switch to fuel cell technology won't fix the glaring energy problems for the data center. The tech is unproven at large scale, produces hazardous waste and more greenhouse gases than Santa Fe, Abq, and Las Cruces. Not to mention all the water it would consume. First you said 20,000 gallons a day, then you said a million gallons a a day, which is it? We don't have any water anyway, why the hell are we giving it to data centers	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive	Yes										8/27/2026
Johnny	Garcia	*just blank*	2	Minded Document	Yes	[redacted]			Yes		Yes				Yes	Yes			8/27/2026
Elise	Landers	We don't want a heat island in New Mexico. It's getting hot enough as it is without these data centers trying to rob us of our water and making everything hotter. Enough is enough. Also can Arizona and Texas stop holding our water hostage please?	1	Minded Document	No	[redacted]	No	More Substantive											8/27/2026
reagan	williams	I am against this and I do not want any AI data centers where I live taking up resources that are already scarce and polluting our environment in a detrimental manner.	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive	Yes										8/27/2026
Hollis	Hughes	Reject these permits! Data center extraction is astronomically harmful, and we as a community deserve to have our water rights protected. The stewardship of our desert ecosystem and the means of human survival are more important than this data center will ever be. We already have limited resources and data/redundants don't contribute to the scarcity.	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive			Yes								8/27/2026
April	Yazzie	Although I am not the most educated on the topic, I can very clearly see that there are discrepancies regarding how much water will be used, how it will affect individuals in the surrounding areas energy costs, etc. For a state that is already sending our water off to other states, why are we even considering using what little resources we have for a data center? We don't need it. At all.	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive	Yes		Yes								8/27/2026
Spencer	Pennycuicke r	Project Juniper will not help the community at all. It will only help corporations and outsiders who make more money than most New Mexicans see in a lifetime. They will not pour back into the community, not even to volunteer or donate while they are there. The data center will not provide jobs for the local community, it will be mostly traveling construction workers. The environmental impact alone will cause massive disruption to the local ecosystems and communities and make water shortages even more severe than current conditions.	1	Minded Document	No	[redacted]			Yes										8/27/2026
Edward	ASHMEAD III	I am adamantly opposed to the Jupiter Project and the "microgrid" applied for. (I understand they need two microgrids and are proposing two purely to meet regulatory requirements that one large grid would be unable to meet.) My first and foremost concern is that New Mexico cannot afford to provide the water required to support it. In this extended drought/aridcycle which by all signs is bound to get even more extreme we need our waters for crops and livestock, for wildlife, for tourism/outdoor, and to keep commitments for downstream regions (Texas and Mexico). Secondly, any new construction of this magnitude must be required to use renewable energy. I've seen no indication that that is the intent of the Jupiter Project. Furthermore, this project will pollute our air, water and land and have an immense carbon footprint. It's not worth any amount of promised economic benefits to deplete our precious water, consume greenhouse gasses, and pollute our wonderful state. Please deny this and all future applications regarding Project Jupiter. Thank you.	1	Minded Document	No	[redacted]			Yes		Yes								8/27/2026
Julie	Dahlerich	We do not need data centers in NM, the green house gas emissions and drought this would cause would be detrimental considering we are already in drought! Albuquerque, Santa Fe and Las Cruces already cause enough pollution on a daily basis, New Mexicans do not endorse AI data center to use the precious resources that should go to families as opposed to big corporations who would only use it for their own gain!	1	Minded Document	No	[redacted]			Yes	Yes	Yes								8/27/2026
Cada	Weaver	This project would absolutely decimate the limited amount of resources dirrctr the health of our New Mexico communities. This is not only a health issue. It is a human rights issue. Keep this data center out of New Mexico at all costs for our future and current generations. We face too many losers as it is as a state, our lands are one of our only sacred protections we need and can uphold as life continues to become harder and harder to survive through	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive	Yes	Yes	Yes								8/27/2026
Brianna	Walsh	The fact that this project is being fasted at all is appalling. New Mexico does not have enough water to waste on data centers which serve no purpose to the community, and even if it did, data centers such as this exist at the cost of New Mexico citizens' health and the environment. NMED should be ashamed that the proposer has scientists for at all. How can an agency that claims to protect the environment even think of allowing something like this when so much evidence exists that data centers trash the environment that surrounds them? I staunchly oppose this project, and I hope NMED remembers the mission it claims to follow: "to protect and restore the environment and to foster a healthy and prosperous New Mexico for present and future generations." Keep data centers out of New Mexico. Protect our water, and protect the citizens of New Mexico.	1	Minded Document	No	[redacted]	No	Oppose Non-Substantive	Yes		Yes								8/27/2026

Holly	Miles	I am writing to formally express my strong technical and environmental concerns regarding Permit Application No. 10883 submitted by Yucca Growth Infrastructure, LLC for the YGI Microgrid facility in Santa Teresa, New Mexico. 1. Cumulative Air Quality and Airshed Modeling Impacts The New Mexico Environment Department must require rigorous, comprehensive modeling of the cumulative air impacts of Nitrogen Oxides (\(\text{NO}_{x}\)), Carbon Monoxide (CO), and Fine Particulate Matter (\(\text{PM}_{2.5}\)). The proposed microgrid is located in close proximity to residential areas and schools in Santa Teresa. Because this facility sits within the interconnected El Paso-Juárez-Las Cruces air basin—which routinely experiences critical air quality challenges—the addition of massive localized emissions poses an immediate risk of pushing the regional airshed out of federal ozone compliance. 2. Enforcement and Operational Thresholds Independent reviews and community advocates have raised serious red flags regarding the tight emission margins calculated by the applicant. Operating a massive power-generation asset just fractions under major regulatory source thresholds leaves no margin for error. NMED must thoroughly audit these assumptions to ensure the emission levels are practically enforceable and do not bypass more stringent federal Title V permitting standards.3. Formal Request for a Public HearingPursuant to New Mexico administrative codes and environmental justice principles, I hereby formally request that NMED hold a public hearing on Permit Application No. 10883. Given the historic scale of the associated data center development, the high volume of projected greenhouse gas and criteria pollutant emissions, and the significant community interest, a public hearing is necessary. This process must allow community members to cross-examine technical data and voice their concerns on the record.Furthermore, I request that NMED provide all future public notices, hearing details, and translated permit documentation in both English and Spanish to ensure meaningful access for all affected residents in Doña Ana County.Thank you for your careful consideration of these comments and for protecting the public health and environment of southern New Mexico	1	Merged Document	No	[redacted]				Yes	Yes	Yes			Yes	8/17/2026
Amy	Locke	Please reject Project Jupiter's air permit application. New Mexico does not need an AI data center that will emit more pollution than Albuquerque, Santa Fe and Las Cruces combined. We do not need an AI data center that is going to use millions of gallons of water in the middle of the desert. We need to put a stop to data centers, not create more. The developers do not care about New Mexico or its residents; they care only about their profits. Please show that you do care about New Mexico and its future. Please deny their air permit application.	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive	Yes		Yes					8/17/2026
Nicollette	Ortiz	I completely disagree, protest, and disavow ANY form of AI data center being built in New Mexico. The negative impact of these centers in the communities they are built in has already been seen across the nation. We must keep New Mexico clean and our water flowing, and it's already hard enough in the desert to that, but this data center would KILL that possibility. We must protect our state from greedy corporations seeking to make a quick buck without giving even a thought to the communities it's putting on the chopping block. Keep data centers out of New Mexico!	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive	Yes		Yes					8/17/2026
Le'Croy	Martinez	This cooperation is telling us to believe in information that isn't correct about how much environmental resources they will be taking from our home lands. Due to the current situation in the world with global warming, we have already been suffering droughts and lower water supplies. If this Project Jupiter is planning to use ONE MILLION GALLONS of OUR WATER, then we should NOT let them build this data center here. Humanity has survived for thousands of years, and has evolved to create great things without AI. We as the people do not need AI, we need water and resources. AI does not have the ability to give water to the people and the land. AI is harmful, and wasteful. If the world continues to rely on the upbringing on AI by using water to cool the systems down, then this new generation of kids will not have any usable water left. GENERATIONS will suffer by the hands of these corporations if they cannot stop their greed. Building this data center here in New Mexico, or anywhere else, is a horrible idea that should not be even considered.	1	Merged Document	No	[redacted]			Yes		Yes					8/17/2026
Michaela	Dolly	Please reject the application for Project Jupiter's air quality permit and subsequent applications to install data centers in our resource-scarce state. We simply do not have the natural resources to support data centers of this size that consume massive quantities of water and power and emit pollutants into our delicate ecosystems. We have to preserve the water and soil quality in New Mexico for future generations and already face so many challenges. Thank you!	1	Merged Document	No	[redacted]			Yes	Yes						8/17/2026
Antoinette	Lucero	New Mexico is feeling the affects of climate change heavily, especially where our water is concerned. We are a desert, yet they wanna take the water our agriculture and the people depend on to live. They wanna pollute our air when we are one of the few states with very clean air. And the only reason I can see is that our lives, livelihood, and our ecosystems matter far less than making the rich richer. No matter how "green" the proposal sounds, they have not reduced the impact to any kind of degree that would not significantly impact New Mexicans for generations. My people have been here for at least tens of thousands of years... this would be, by far, one of the greatest tragedies of mass proportions.	1	Merged Document	No	[redacted]			Yes		Yes					8/17/2026
Kate	Miles	This data center must be rejected! This is an environmental disaster and should never be considered. Where is the water coming from? Why do you want to let them pollute the air with their gas generators? Reject Jupiter! No data centers!!!!!	1	Merged Document	No	[redacted]			Yes		Yes					8/17/2026
Eduardo	Fontes	Project Jupiter had the potential to permanently damage the Rio Grand that we all love so much. We use it for sight seeing, therapeutic walks, exercising our bodies and so much more, Project Jupiter taking most of our water is something we can't allow	1	Merged Document	No	[redacted]			Yes							8/17/2026
James	Fortney	This is an environmental disaster and should never be considered. Where is the water coming from? We already pull so much from the aquifers. Why do you want to let them pollute the air with their gas generators? Reject Jupiter. You have the opportunity to be the solution not the problem. Please consider whoever lets this pass would be contributing to the decline of our states natural resources.	1	Merged Document	No	[redacted]			Yes		Yes					8/17/2026
Jose	Miles	This data center must be rejected! This is an environmental disaster and should never be considered. Where is the water coming from? Why do you want to let them pollute the air with their gas generators? Reject Jupiter! No data centers!!!!!	1	Merged Document	No	[redacted]			Yes		Yes					8/17/2026
joseph	salack	New Mexico is not the place for Project Jupiter. Even w the amended proposal to have it powered by fuel cells, it would still generate dangerous amounts of hazardous waste, and would still create more greenhouse gas emissions than Albuquerque, Santa Fe, and Las Cruces combined!!! And what about water usage? The Rio Grande is currently dry in many parts of Albuquerque and most of the state reservoirs are way way below capacity. NM cannot allow the astronomical amounts of water a data center would require to be squandered. sincerely Joseph Salack	1	Merged Document	No	[redacted]			Yes	Yes			Yes	Yes		8/17/2026
Alyssa	Benally	I strongly oppose the permit for yucca growth infrastructure. The proposal for an AI data center will only create massive amounts of pollution to our community, including air pollution. We already have decreased air quality due to our power plants and usage of fossil fuels for our vehicles. We do not need to add to the pollution in our state, we need to be finding ways to decrease our pollution as a state.	1	Merged Document	No	[redacted]				Yes	Yes					8/17/2026
Sasha a	Meade	I have watched my classmates use AI for more and more of their projects. We are losing education fast. I've heard stories from my grandmother about how the real ground would used to flood and now I will never see it and it's prime if you guys install that Data Center, New Mexico is drying up and you won't help the problem if you install a data center we don't have enough water so why take more	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive	Yes							8/17/2026
Faeryn	Rayn	Reject this permit. Reject Project Jupiter entirely. New Mexico has been in a drought since I was a child. An AI data center will only worsen an already pressing issue. It will take up water we don't have and dump more pollution into the air than three of our major cities combined. No ai data centers should be built in New Mexico.	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive	Yes		Yes					8/17/2026
Gillian	Taylor	Do not allow Project Jupiter to proceed. New Mexico barely has enough water to sustain its human infrastructure, and we cannot spare 1 million gallons of water per day for an AI data center for some billionaire to line their pockets more. We need clean water, clean air, and a clean environment. Do not allow this project to succeed.	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive	Yes		Yes					8/17/2026
Erin	Pointer	As someone who has been born in New Mexico, I hate to see our natural resources already being depleted. In my entire life I have never seen the Rio Grande so dried up. The first time I saw it last year I genuinely cried. The last thing I ever want to see in New Mexico is data centers. We are not going to allow millionaires to take what they consider cheap land when it has years of History and beauty woven in between all the sand. They are not going to take away our rich beautiful sunsets and our crisp air to add another zero to the end of their net worth. New Mexico is sacred, not cheap, which is how these billionaires view our sacred land.	1	Merged Document	Yes	[redacted]	No	Oppose Non-Substantive	Yes							8/17/2026
Briana	Slight	Do not approve this air permit. Building a data center will only ruin our air quality as well as bleed dry our already limited water supply. This will not help New Mexicans.	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive	Yes	Yes						8/17/2026
Ireland	Vandergriff	Its important the NMED says NO to an air quality permit related to Yucca Growth and the YGI Microgrid- now more than ever. New Mexico is already suffering enough from the harmful effects of climate change, and the data center Yucca Growth sets out to build would only make these effects worse with the production of more greenhouse gases than are produced by New Mexico's three largest cities- causing further rising temperatures and lack of water that is essential to the lives of New Mexicans. In order to protect the land we live on from further, irreversible environmental damage, it's important that NMED says NO to an air quality permit for Yucca Growth and the YGI Microgrid.	1	Merged Document	No	[redacted]			Yes	Yes	Yes					8/17/2026
María	Valdes	Project Jupiter would threaten the limited water supply New Mexico communities have, every year we get less and less snowfall, the río grande dries up earlier, this is possibly the worst place to choose to build a data center. People need the water, not data centers.	1	Merged Document	No	[redacted]			Yes							8/17/2026
Lorna	Green	This is only going to harm the wildlife and our land. It will destroy the land and its people for generations. I will never accept this project as being good for us and our communities. We live in a desert, what happens when the Rio grand dries up? Where will it steal water from then? Our communities, reservations or our wildlife? No. Keep New Mexico beautiful and clean.	1	Merged Document	No	[redacted]			Yes		Yes					8/17/2026
Sara	Rhodes	New Mexico state is beautiful. It's a sunny desert which supports so many ecosystems and people. But it is fragile. It already doesn't rain enough. There are frequent black outs. And this will somehow not exasperate these problems? So many other data centers have ruined other environments. We cannot allow for New Mexico to be ruined as well. Do not allow this data center, or any other data center to start construction in this state. Ever. We need to prioritize the environment and people over data centers	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive			Yes					8/17/2026
Cristina	Tadeo	All permits for this destructive / extractive project must be denied. New Mexico's fragile ecosystems and current drought conditions cannot handle this. Indigenous communities cannot be the site of this destruction, and NM did not ask for this. Stop this and all future data center development in our state.	1	Merged Document	No	[redacted]	No	Oppose Non-Substantive	Yes							8/17/2026
jasmine	medrano	we the people of new mexico deserve to have water and not it being taken for anything especially for ai. Ai does nothing to benefit our lives or society it makes everything worse.	2	Merged Document	Yes	[redacted]	No	Oppose Non-Substantive	Yes							8/17/2026
Kaylee	A	Do NOT build a data center here in NM; many local families here are already struggling, the addition of poor/lack of water isn't gonna help. We don't deserve gross, brown water.	1	Merged Document	No	[redacted]			Yes							8/17/2026
Megan	Urbane	Please do not support Project Jupiter. We do not need it and it can not afford the environmental effects it will cause. New Mexico depends on the limited water we have available and can not afford to have Project Jupiter access to any of it. I say NO to Project Jupiter	1	Merged Document	No	[redacted]			Yes		Yes					8/17/2026
June	Boulanger	Reject these permits. We don't want you to sell the water, environment, and wellbeing of New Mexicans to Oracle. Fuel cell technology is a nebulous change at best, and very likely a deliberately misleading one. It doesn't matter what it's powered by. We do not want an AI data center here and, even if we did, we simply do not have adequate resources for it. Your mission is to "protect and restore the environment" and to "foster a healthy and prosperous New Mexico for present and future generations". Issuing this permit would be in direct opposition to these aims.	1	Merged Document	No	[redacted]			Yes		Yes		Yes			8/17/2026
Toni	Roybal	I am writing this to comment in disagreement and objection to building a facility that will contribute to major air pollution in New Mexico that is more than three of our major cities combined and uses up more water than the community members already don't have access to. More and more of our communities are having non-stable and non-consistent access to clean water and this project will take away water that community members need and rely on. It will pollute our already dire air quality and make it harder for our communities to breathe, and will effect the most susceptible and at-risk important peoples of our communities, the elderly, the young and the immuno-comprimised. This facility will put the health and safety of New Mexicans on stanby. We as members and citizens of this state have a responsibility to protect the ones who live in our communities and building these facilities will do the exact opposite. I do not approve of this facility that will do more harm than good. As well as in in turn have detrimental and irreversible effects on the residents and lands of New Mexico. Thank you for your time.	1	Merged Document	No	[redacted]			Yes	Yes	Yes					8/17/2026
Melanie	Vonfange	Public Comment: YGI Microgrid Air Quality Construction Permit Application 10883 To Whom It May Concern, My name is Melanie Vonfange, and I am a resident of Truth or Consequences in Sierra County, New Mexico. I am submitting this public comment regarding the Yucca Growth Infrastructure, LLC (YGI) Microgrid Air Quality Construction Permit Application associated with Project Jupiter and related AI/data center infrastructure proposals. I am medically fragile and depend heavily on reliable electricity and clean air during extreme heat conditions in southern New Mexico. Even now, many residents in Sierra County struggle to keep air conditioning running during dangerous summer temperatures due to rising costs, aging infrastructure, and electrical strain. I am deeply concerned about the cumulative environmental and infrastructure impacts of this project, particularly as it relates to energy demand, emissions, air quality, and long-term strain on local systems. I am also concerned about the broader issue of public trust. Communities like ours are being asked to trust increasingly large and complex technological systems while many existing systems already fail ordinary residents in critical ways. As someone who has personally experienced the disruption and instability caused by major healthcare technology rollouts, I have serious concerns about placing additional burdens on already fragile infrastructure without full transparency and rigorous oversight. My concerns include: • Increased air pollution from microgrid systems, backup generators, construction activity, and associated industrial operations. • Additional stress on New Mexico's electrical grid during extreme heat events. • Potential impacts to medically vulnerable residents, disabled residents, seniors, and low-income households who rely on stable electricity and clean air for survival. • Water consumption concerns in an arid region already facing long-term drought and resource instability. • The fragmented manner in which related permits and applications appear to be advancing, making it difficult for residents to understand the full cumulative impact of Project Jupiter and associated infrastructure.	2	Merged Document	No	[redacted]			Yes	Yes	Yes		Yes		Yes	8/17/2026
Victoria	Armstrong	As a NM resident living in Clovis I am tired of our water being destroyed. Around here Canon Air Force Base has already poisoned our water. We haven't used our sink water for food in a couple years. The Government has failed us and continues to fail us. This Data Center would ruin our beautiful state.	1	Merged Document	No	[redacted]			Yes							8/17/2026
Sofia	Enriquez	New Mexico is already experiencing the brunt of global warming in the USA. Approving the air quality permit for the proposed LLC-YGI Microgrid is unacceptable. The addition of the microgrid will produce more green gases, exasterbating global warming. But that's not all. As we've seen with in Texas, the construction of AI datacenters has the potential to drastically increase utility costs for rural communities and decrease the resilience of our water resources. It is up to YOU to protect our people and our resources from companies who only care about Turing a profit. Let New Mexico be an example to other states on how to resist these corporations!	1	Merged Document	No	[redacted]			Yes	Yes						8/17/2026
Kylee	Vigil	Reject Project Jupiter and the false narrative of this being positive for New Mexico. Do not place data centers for AI above my future. We are advocating on behalf of New Mexico's droughts in Congress, yet we have water supply for AI? Please reject this permit. Put New Mexicans first.	1	Merged Document	No	[redacted]			Yes							8/17/2026

Diane	Laughlin	Stop Project Jupiter. Not only is it irresponsible, but it's reckless. To build a data center in a desert is insane. Almost all of southern New Mexico has been ravaged by oil and gas and military operations, so this would complete the destruction of the southern region of our state. This is not sustainable. I recently auctioned cowvette in Doña Ana County. And I don't want this in my backyard	1		No														
Mireya	Sanchez-Mora	This project would be detrimental to the health of the environment and people in my home. The amount of hazardous waste and fossil fuel emissions would grow immensely and would hurt New Mexicans. Meanwhile, the corporations behind this project would profit without having to live with the environmental toxins. Please say no to this.	1		No														
Ida	Cabanas	I am writing to express my strong opposition to Project Jupiter in Doña Ana County. Our region is already facing a severe, long-term drought, and prioritizing an industrial mega-project that demands massive amounts of water threatens our local agriculture and residential drinking water security. Furthermore, an 8-data center of this scale places an unsustainable burden on our shared electrical grid and public infrastructure, while offering very few permanent jobs for local residents and permanently harming our community's quality of life. Most concerning is that the entire approval process has completely lacked transparency and public discourse, rushing through tax incentives and permits without independent, comprehensive environmental impact audits. I urge our county commissioners to listen to their constituents, protect our finite natural resources, and immediately halt Project Jupiter.	1		No														
Marianna	Moreno	This will do our community more harm than good. Building this here in our very dry state of New Mexico would dry us out even more and harm local farmers.	1		No														
Fatima	Veya	Hi I'm really concerned about our state, our Rio Grand is completely dry and we are still considering a data center that will take thousands if not millions of gallons of water. That is beyond unacceptable. Our community deserves better New Mexico is already a struggling state	1		No		Yes		Oooooe Non-Substantive	Yes									
Philip	Bowie	Please provide a bona fide environmental impact survey of the likely consequences of your proposed project. We are in drought conditions. Water is needed, first, for households and crops. Other uses are secondary to these. Importantly, what is the purpose of building this and so many other data centers? I've read we already have more data centers than China, a much larger population. Can you make us believe these data centers are not for digital surveillance and control? You would need to explain, in detail, the actual use of the facility you are proposing.	1		No					Yes									
Amy	Hazelwood	This project brings absolutely no benefits to our community and will not only pollute our environment but the current plan is completely unproven and will create huge amounts of dangerous waste. We must protect our air and water quality. These are things that we cannot get back. As a member of this community and someone who wants to live and grow a family in New Mexico, it's important to me that we put the needs to the community and health of the environment before a corporation's desire to make money. Please deny this project.	1		No					Yes		Yes							
Vicente	Montoya	To whom it may concern, My name is Vicente Montoya I am a 37 year old life long resident of Las Cruces New Mexico. I am writing this letter today to demand that the proposal for experimental fuel cells be rejected for the health, safety, and longevity of the community that I call home. I demand that the NM Environment department reject any and all future proposals from project Jupiter, we the community do no what this data center to be completed. I demand that the New Mexico government stop the proposed project Jupiter to protect what little natural resources we still have for the people in Dona Ana county and the surrounding areas! I work in Agriculture, this means everyday I work outside I have felt and seen first hand over the last 4 or 5 years how every summer feels hotter and dryer I have seen how our winters are not as wet and the critical snow pack New Mexico relies on to recharge our rivers and aquifers has often does not arrive. In the last couple of months I have also seen first hand multiple wells drying up in and around Mesilla New Mexico this means that our ground water levels here in the Mesilla valley and more importantly the entirety of the Dona Ana county area are reaching critical lows!!! I gravely fear that if project jupiter is allowed to use up the proposed 46,000 gallons a day of water the already drought stricken community who all do their part to save and conserve water everyday for our fellow man and woman will hit new water table lows and in turn incredibly hotter summers and dryer land that we r fear we will not be able to recover from. In conclusion I write this letter to demand that the new Project jupiter experimental fuel cell use be rejected immediately, and also to demand that the New Mexico Environment department reject and kick project jupiter out of New Mexico! More importantly I demand that the New Mexico government put the needs, safety, and well being of our community the dona ana community above private profit.	1		No					Yes		Yes							
Cynthia	Frederick	I do not support this project. The size and scope are far too large for our region. The demand for power and resources are too large, and there is insufficient benefit to the local population for the demand to be outweighed by any upside. Please deny this permit.	1		No					Yes		Yes		Yes					
Angelica	Urbano	The majority of the world is fed up with ai and data centers. You promise jobs, temporary jobs. I've seen what data centers do to communities. People who live nearby don't have clean water, water pressure, clean air, and people are getting sick and dying because of these issues. This doesn't benefit our community, our water, our environment, or our lives. How much will this "help" the community if you poison and kill all of us? You can't make money off of us if we are all dead. You are also violating religious freedom seeing as how the pope has denounced ai. So do you care about the community's health and freedom of religion or do you just want money?	1		No		Yes		Oooooe Non-Substantive										
Julie	Ybarra	New Mexico Environmental Department, I am asking you as a citizen of New Mexico to reject this project. Data centers need to be stopped! New Mexico already has a dwindling water supply. Adding a data center that consumes ungodly amounts of water that humans could be using to feed their families and farms would be catastrophic to the people, and wildlife, of New Mexico. We all deserve rights to clean drinking water. It is unconstitutional to allow billion dollar companies access that much water, when the people of New Mexico cannot even swim in the Rio Grande because of climate change. New Mexico is a beautiful, adverse environment, which provides life and sustainability to countless wildlife species. If this project is successful, New Mexicans and wildlife all around the state will struggle for clean drinking water, clean air, and populations around the data center will have higher electricity bills. We have already seen it in North Carolina, Texas, and in Mexico. There have been ponds and lakes drained because of data centers, pollutants put into the air that forces populations to breathe in harmful gasses. This will create more problems than solutions. Our air quality will be destroyed, as well as our clean water supply, which will likely lead us into another major drought. I ask you once again to reject Project Jupiter. New Mexicans against Data Centers!	1		No					Yes		Yes							
Teresa	Tomaszewicz	I strongly oppose granting this permit. New Mexico already cycles in and out of severe drought, and establishing a data center would place an enormous strain on our environment and surrounding communities. The projected levels of water consumption and fossil fuel emissions pose serious risks to our long term ecological stability and public well-being.	1		No					Yes	Yes	Yes		Yes					
Austin	Rowland	I strongly oppose the proposal to bring an AI data center to our state, which is surely locking in the natural resources needed to maintain such a large scale operation. It's still not clear how much water it would consume, and let's be real, regardless of the amount, we're in a drought and every last drop should be used for New Mexico citizens, not white collar parties. Furthermore, take a look at any of the MANY news stories we're seeing about data centers popping up near communities. It absolutely destroys any semblance of a normal life. People's water turns to sludge and air quality drops so dramatically that it causes health issues in sensitive populations. And it will destroy a homes value, making sure whoever lives there will never be able to sell (to who would want to live anywhere near a data center??). The people of New Mexico DO NOT want this in their lives. Please do the right thing and deny this proposal. Do not give into the rich technocrats trying to invade our lives.	1		No					Yes	Yes	Yes							
Irene	Dorman	Please reconsider construction of this facility. New Mexico just doesn't have water capacity for this. We need to be thinking of the next 50-100 years and more. People, animals, insects, plants can't survive without water and it's already in such short supply. Why would they want to destroy natural resources and make it so that this place is unlivable for us now and for our kids as they grow into the future? Don't be so shortsighted, stop this facility.	1		No					Yes	Yes	Yes							
Jessica	Eubank	I urge the New Mexico Environment Department to reject this permit over concerns that the applicant's intended project will have catastrophic consequences for New Mexico. Their application acknowledges that they are intending to run a continuous power plant. That is 8,760 hours per year of pumping harmful waste byproducts into our air. Over the course of just a few years that number climbs to the tens of thousands of hours polluting our land. I am greatly concerned about the impact this will have on the land, flora, fauna, and most of all the people of Doña Ana County. I urge the department to consider the long term (and honestly short term as well) environmental impacts this permit will have. I ask that you would consider the precious resources that will become wasted and polluted by waste as part of the Fazza Growth Infrastructure LLC's operations on this project are too dear to sacrifice. I ask that you would reject this permit.	1		No					Yes		Yes							
Nic	Santos	Afternoon, the proposed project attempting to be completed by Fazza growth infrastructure LLC, presents not only environmental concerns and challenges but also societal concerns. To naively believe this project would benefit the state is to ignorantly ignore its current state of need. The current demographic of voters aren't afraid to vote in consideration of multiple factors and can carry their vote elsewhere/where. Please carefully reconsider your position on why this infrastructure project is beneficial and if it's really environmentally sustainable.	1		No							Yes							
Hunter	Merriman	To the county commissioners of Doña Ana: A serious concern I hear raised time and time again regarding the sustainable future of New Mexico is "Will there be any water left?" Our state is beautiful, our history is rich, older than that of this nation, and yet our future is uncertain. With such uncertainty it is unfathomable that we should bend to the will of "Open AI/Oracle" and allow the construction of a data center that will devastate our communities. "Will devastate", not "could devastate", because all of the desert surrounding this project tells us that the billionaires who wish for project Jupiter to succeed know that the construction of this data center will have nothing but negative impacts for our communities. Initially, project Jupiter was proposed to use one thousand gallons of water per day, now it is projected to use one million gallons per day. You might say that these new numbers are false, but in reality neither option is tenable. I must ask you, who is this project for? It may provide jobs in the short term, but who is going to work those jobs once the land is sucked dry and our homes are abandoned? This may seem like hyperbole but we only need look at other communities affected by the construction of data centers to see that the consequences are very real. The background noise alone is enough to force families to move away because they can't sleep at night. Right now, you have the chance to be lauded as heroes or despised as villains, and I can assure you, we will remember your decision. I implore you to choose wisely, do not allow the construction of project Jupiter, nor any data center like it. For the sake of our future, make the right decision.	1		No							Yes							
Olivia	Sanchez-Soltis	I do not want any data centers in New Mexico. It would be detrimental to the environment and our access to water.	1		No					Yes		Yes		Yes					
Erick	Bojorquez Maldonado	I am a born and raised New Mexican who loves my state for everything it has to offer. I moved away for college for 4 years and I spent each one wishing I was back in Albuquerque with my mountains, my class act, and my community. That is why I believe that the representatives who want to allow our resources and land to be pimped out to out-of-state companies who have the sole objective of extracting profit from our communities should be ashamed of themselves. There is no possible solution to the negative impact data centers have on the environments they're built in. Decreed only look at the examples of data centers already built to witness communities torn apart and energy and water bills skyrocketing all while quality of air and water plummet. These data centers are a cancer on our country and to allow them into our land would be to betray our own interests, our own people, and our own natural resources. The proposals put forth have been destructive to all at best and life ending to some at worst. We as a people must protect ourselves from this AI economic bubble, that will burst sooner rather than later, and from any other corporation that seeks to take what's ours. Our land, our skies, and our health is more important than a new and improperly tested piece of technology that has already been proven to fail at what it promised to do. We do not need to be "ahead of the curve". If the curve leads off a cliff. We need to maintain what we have so that we may be so lucky as to pass on a New Mexico as beautiful as the one we wake up to today.	1		No					Yes		Yes							
Layra		As someone who passes by the Rio grande river daily, I think it sucks that it's consistently been completely dry for so long. Allowing the collaboration between microgrids and data centers, where they would require our citizens' clean water to be drained from our system, would only make things worse and continue to leave more of our state's areas completely dry. As a desert, we struggle enough already to provide adequate water for our communities and I don't want to see multiple communities, including my own, suffering from the water quality or supply they do/don't receive all because of a cash grab. We do not need a data center here. What we need is to be able to access the resources we need for survival, and to not waste the limited supply we have on unnecessary BS that just might make someone a little (unnecessary) profit.	1		No					Yes		Yes							
Teresa	Seamster	I recommend that Doña Ana County follow the lead of counties such as Socorro and Santa Fe, that have more organized community members, more communication resources and higher requirements for county-wide impact projects such as the Jupiter AI data center. I am attaching the June announcement from Santa Fe Board of County Commissioners that would be a good idea for Doña Ana to consider or for NMED to request at ALL NM counties adopt for better planning guidance and MORATORIUM on ALL FUTURE data center proposals coming into NM. These data centers are being proposed with trillions of dollars of debt and shaky bank credit which the stock market is finally starting to acknowledge as "betting" on fast infrastructure construction and high user fees for AI which will "commit" the public to being forced to "buy in" to essential services. It's time to stop - look - and listen to the warning signs and especially to put a PREMIUM dollar cost to ANY water extraction and energy development and communication costs BEFORE any data center permits are issued. Time is running out to put guardrails on this runaway pipe dream. Yes - some small targeted science and tech centers are appropriate. No - thousands of massive centers that could invade many protected area of communication, financial information, healthcare and prescriptions, purchasing and education are not "needed" nor desirable. Moratorium on Data Centers Commissioners Hank Hughes and Liz Cacari-Stone have requested authorization to publish the title and general summary of a proposed ordinance that would establish a temporary 12-month moratorium on new large-scale data center developments in Santa Fe County. The moratorium would apply to data center of 100 megawatts or greater and is intended to give the County time to evaluate and develop appropriate regulations before such facilities are approved. During the moratorium period, County staff would be directed to develop potential amendments to the Sustainable Land Development Code (SLDC), Sustainable Growth Management Plan (SGMP), and related regulations, while coordinating with utility providers, water authorities, state agencies, and the public. A public hearing and potential adoption are anticipated on June 25, 2026.	1		No					Yes		Yes							
khalil	spencer	This entire Data Center project should be killed. The emissions, regardless of fuel cells or combustion, dwarf any useful product and make a mockery of reducing emissions in New Mexico.	1		No					Yes	Yes	Yes							
Rachel	Roberts	To Whom It May Concern, I urge the County and all permitting authorities to deny Project Jupiter and any associated permits. This project is fundamentally incompatible with the environmental realities and values of southern New Mexico. Doña Ana County exists in an arid desert environment where water is our most precious and limited resource. The Rio Grande has experienced historically low flows in recent years, groundwater supplies face increasing pressure, and residents, farmers, ranchers, and businesses are continually asked to conserve water and prepare for a future with less water, not more. Against this backdrop, it is irresponsible to approve a massive AI data center complex that requires water resources, directly or indirectly, to support an industry whose primary purpose is processing and storing digital information. Regardless of the exact amount of water the facility ultimately consumes, the principle remains the same: scarce desert water should be prioritized for people, agriculture, local businesses, wildlife, and future generations—not diverted to one of the most resource-intensive technology sectors in the world. Project proponents argue that advanced cooling technologies will minimize water consumption. Even if those claims prove accurate, the project still depends on water through construction, power generation, infrastructure development, and long-term operations. More importantly, approving this project establishes a precedent that Doña Ana County is willing to dedicate scarce natural resources to large-scale AI infrastructure despite worsening drought conditions and climate uncertainty. This is not simply a question of current water use. It is a question of long-term land-use policy and environmental stewardship. Permits granted today could enable decades of future expansion, technological changes, additional facilities, and increased resource demands. Once the infrastructure is built, future pressure to accommodate additional water and energy needs will be difficult to resist. I am also deeply concerned about fairness. For years, New Mexicans have been asked to conserve water, reduce consumption, adapt to drought, and accept restrictions designed to protect our limited resources. Farmers face uncertainty about irrigation supplies. Residents are encouraged to xeriscape their yards and reduce outdoor water use. Communities throughout the region are expected to do more with less. It is unfair to New Mexicans are expected to make sacrifices to protect our water future, then multinational technology corporations should not receive special treatment that places additional pressure on those same resources. Conservation cannot be something that is expected only of residents while large industrial developments are welcomed despite the risks they create. [redacted]	2		No						Yes		Yes							
Katie	Pierce	No AI Data centers in new mexico. I know the fact that it will bring jobs here is what's up for debate but look at the water crisis. While we're at it, quit allowing our wealth places to pop up all over the place. What's going to happen when 2 years after the data center is done we regret no more water to give? Then what? Who will take responsibility for that? Does it look like we're going to get more water based on the environment? no. In fact we're probably get less every year. Less snowfall, less rain, less water. No AI Data centers in new mexico.	1		No					Yes	Yes	Yes		Yes					
										Yes		Yes							

Brittney	Kerr	Keep data centers out of New Mexico! NM is known for its mountains, vistas, wildlife, and community! Allowing a corporation to green wash the Jupiter project will be detrimental to us. Allowing them to hoard water and energy from already struggling families will cause our communities to collapse. New Mexico true means standing up for those who cannot speak, and building this data center silences our most vulnerable. Do the right thing, VOTE NO. Thank you for your time and attention to this matter!	1		No																
Brittany	Anden	I strongly oppose the proposed AI data centers associated with the Yucca Growth Infrastructure project. These facilities would place significant demands on local resources while providing questionable benefits to existing residents. Large-scale data centers consume enormous amounts of energy and water, increase industrial development, and can permanently alter the character of surrounding communities. I urge decision makers to reject any proposals that would allow AI data centers as part of the Yucca Growth Infrastructure project. The long-term environmental and community impacts outweigh any potential benefits.	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Alma	Gonzalez	I would implore Dona Ana County to reject this Air Permit and put the health and quality of life of New Mexicans first before a company and profits. The water usage that the data centers require is far too high and would put New Mexicans at risk.	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Samantha	Paul	Stop these permits from going through. This is completely inhumane and goes against the wishes of our people. A complete slap in the face for the beauty New Mexico once had. We already don't have enough water, what makes you think this will benefit? So many people depend on their agriculture to getby, yet this is what they're met with? Even lower water levels for unnecessary data centers? You're actively destroying our lands and the work ethic of our newest generations, being made to believe AI holds a flame to true work made by the hands of our peers. Pack it up.	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Catherine	Theis Goldbar	I don't support or want NEW MEXICO to get a new data center. With all the ongoing issues New Mexico is dealing with in regards droughts and record low water levels in the Rio Grande... I believe adding a data center with its equitable harm to New Mexico citizens and any one who wants to or plans to come and New Mexico. Please don't build a new Data Center there!!! I don't want it	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Hayley	Graziano	Morally and practically speaking, I am vehemently opposed to the proposed construction. It will negatively affect the entirety of New Mexico and, even more so, communities nearby. It will use water that is already limited, and their claims that it would are dishonest and misleading. The sound pollution created by such a building is absurdly loud and will affect residents and wildlife alike. We must protect our resources and the ecosystem we are lucky enough to be keepers of.	1	Mirrored Document	No					Yes										8/27/2026	
Betsy	Geery	If they lied once, how can anyone believe their unproven assertions now! There is NO reasonable justification for building a data center in a desert, with limited water and power resources, especially using unproven power sources that could destroy the air quality and have immeasurable effects on our health and agriculture. All anyone needs to do is look at the centers already built – air, water, light and noise pollution that has severely impacted the health of all people and animals in the areas. And the economic impact on the areas – other than temporary construction jobs, little to no new jobs/growth, but drastically rising fuel and utility costs experienced by everyone! Deny this petition!	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Shaun	Sanchez	The word drought has been around too often. I'm 39 and I've heard that word since I can remember. Why destroy the beauty our state the minimal amount of environmental encroachment. New Mexico does not have the water to keep any data centers cool with the little water we have. The prices our state has people visiting specifically NM areas are going to decline because there will be no water and once the water is gone it's a snowball effect from there. That's only the environmental impact. There's the people, the animals, and the air.	1	Mirrored Document	No					Yes	Yes	Yes		Yes						8/27/2026	
Jade	Brandt	As new mexico already struggles with water and power prices I do not think considering a project like this is not good for any of our communities. These data centers have proven again and again across the country to negatively impact the communities they encroach on. Air and water quality goes down and electricity bills go up for the general public. The AI boom has not made the lives of regular people better. It is overwhelmingly failing. Failing in its ability to perform when implemented. Failing in its ability to even make the tech companies money (though, who cares?). It is costing working people their jobs. Why should we put our ecosystems and communities health at risk to build infrastructure for a tech that nobody wants or asked for, underperforms at every level, and hurts working people? New Mexicans do not want data centers!	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Chloe	Sweeney	I have lived in NM for 30 years. The best part of NM is the natural beauty that surrounds us, the mountains, the rivers, the forests, it's what makes us the land of Enchantment. Seeing the Rio Grande dried up these last few summers has been heartbreaking and its devastating to think of all the wildlife impacted by it, thousands of animals unable to access water during the summer when it's most needed. It is beyond me why NM is even considering allowing this data center to be built. AI is not something that we need to survive. The benefits of building the datacenter do not outweigh the risks of the damage it will cause to the environment. I am confident that if we allow this data center to be built it will cause irreversible damage to the already fragile environment and ecosystem. It saddens me to think, future generations may not be able to see all the natural beauty NM has to offer. We need to do everything we can to protect the environment and preserve our home.	1	Mirrored Document	No					Yes		Yes		Yes						8/27/2026	
Jeremy	Townsend	Data centers are damaging to the environment. they are hard to repurpose after they're obsolete. Light pollution at night, noise 24/7 and a fake promise of jobs. Stop project Jupiter!!	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Michelle	Hart	I submit this comment in strong opposition to Project Jupiter and all data centers. We can already see the effects of climate change in New Mexico with hotter and more humid summers, plus higher danger of wild fires and subsequent flooding. We cannot afford to increase our risk of air pollution, water shortages, or other destructive climate impacts. It is also likely that the AI bubble will burst and all of this will be a waste anyway. NO ON PROJECT JUPITER.	1	Mirrored Document	No							Yes		Yes						8/27/2026	
Stefen	Zimmerman	As a New Mexico detailer (small business owner) I rely on clean water for my business and with prices everywhere else going up, I dont need water to be bad, or highly expensive. We need to push again ai here in New Mexico. Small business shouldn't pay the price and neither should the community! This is outrageous!	1	Mirrored Document	No					Yes		Yes								8/27/2026	
SHAWN	MANSFIELD	As a New Mexican resident, I am concerned for our people, land and resources with this project and all permits submitted by this company should be denied. This company is not being transparent or honest about the negative environmental and natural resource impacts that will affect ALL New Mexican residents. Do not approve this permit.	1	Mirrored Document	No					Yes										8/27/2026	
Marlas	Ciscarelli	Our water is precious and as a resident of New Mexico and the area near Acoma Pueblo and Dona Ana County, I do not support the construction of the ai data center or pipeline. It will increase water scarcity and infringe on the wellbeing of our environment and communities. DO NOT move forward with this project, read laws are unclear	1	Mirrored Document	No	Yes	Pervasive Mass Substantive					Yes								8/27/2026	
Kaylin	Prosser	I firmly believe in the reality that many in New Mexico face when it comes to genuine scarcity of water not only for the demands of the populace, but also the animals and plant life that call this state home, the last thing we need is a billionaire telling us that AI is entitled to the little water we all have. I also believe the supposed economic growth will never outweigh the negative impact on our environment and resources. To approve of this project is short sighted at best, and an absolute betrayal to all those that call New Mexico home. No AI data centers in our state.	1	Mirrored Document	No					Yes		Yes								8/27/2026	
A	E	New Mexicans do not want or need a massive data center in New Mexico! The Key Concerns of our Community Regarding Project Jupiter Are: Water Usage: Project Jupiter is projected to use approximately 7.2 million gallons of water annually, with a one-time fill-up of 10 million gallons for its data centers. Impact on Local Water Supply: As we have watched the Rio Grand dissolved to a trickle this spring, the river bed is now completely dry earlier than ever before. This project's water consumption would further compromise New Mexico fragile ecosystems. In a state where water has been strictly regulated and residents are charged more for water consumption during peak consumption periods this proposal would drain precious limited resources and jeopardize the minimal stores we have. Raising alarming concerns in a region already facing years of drought and severe water scarcity. Considering the average daily water production of the Corrinos Real Regional Utility Authority is only 2.4 million gallons, how could this project possibly be a reasonable or ethical proposal? Long-term Environmental Costs: The environmental degradation from such a large-scale project would absolutely outweigh any short-term economic benefits. Air Pollution Risks: The construction and operation of the data centers would contribute to air pollution, posing a real and sustained health risks to surrounding communities. Community Exploitation: Project Jupiter has demonstrated a total lack of transparency and left our communities feeling blindsided by the projects rapid progression and grossly insufficient public consultation and information sharing from our local officials. False Promises: The assurances of job creation and economic growth through this project are below at best.Past examples and experiences suggest that such projects exploit local communities without delivering on their [illegible]	2	Mirrored Document	No					Yes		Yes					Yes			8/27/2026	
Anastacia	Knight	Please DENY any and all permits that would allow data centers to be built. Data centers consume massive quantities of clean water to work, water that our desert ecosystems and communities rely on to survive. People misunderstand that drinking water is a finite resource that we must protect as a asset. Consistently we see the data centers that are built by up and polute the area, cause light pollution, high utility bills for nearby communities, hurting vulnerable ecosystems and our people. AI is also losing money rapidly, so this is a waste. We must stand up against big tech that cares nothing for our lives, and chooses [illegible]	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Stephanie	Hilliard	Data centers are blight to nature and people. They do not benefit the local communities in employment. They are a massive drain on resources and an environmental hazard we do not want or need. My health is already compromised enough as is. I do not need further threats to my health in the form of a data center.	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Clay	Lindstrom	We simply don't have the water. We have been having wildly intense droughts that are lasting longer and longer. We don't have the power for it either. Why are we building a super intense water use and ai need of extreme cooling in a desert that's hot for 6 months of the year? What happens when they inevitably run and either poison the water or are using significantly more than allotted? Who pays for clean up? Who enforces actual water usage? What happens if poor rural communities wells dry up? They are lying for profit and we cannot afford to risk the water. Also why do their usage amounts keep changing drastically? [illegible]	1	Mirrored Document	No							Yes								8/27/2026	
Brandon	Lujan	New Mexico Environment Department, Thank you for allowing us the chance to comment on this proposed grid and other Projects Jupiter associated proposals. I would like to voice my concerns for usage of New Mexico's resources and environment for this data center and its sub-projects. As an engineer, and former intern at EMNRD, I don't trust this proposal given Project Jupiter and "Yucca Growth Infrastructure (GZ)" history. (Past proposals that were later found to be vastly underestimating environmental impacts). I'll add the caveat that I have a general public level of awareness of the bare wordings of this project, but from my understanding through reports from others accounts, this project lacks the community's trust, there appears to be much concern from most of the people in the area. People need to come first in New Mexico. I am concerned that this project will negatively affect our environment, our natural resource security (like water and energy), and our government (I don't trust the companies involved to play by the rules). There needs to be full transparency, clear government regulation and community inclusion before this should be allowed to move forward. New Mexico should get a clear and lasting benefit to the communities. Unless the community is satisfied, this project (and any Oracle/OpenAI backed data centers) should be rejected. Thanks, Brandon Lujan	1	Mirrored Document	No							Yes								8/27/2026	
Lucas	Smith	Construction of the data center and its corresponding power plants in a ludicrous use of New Mexico land and resources. The water load of the Project Jupiter campus is outlandish and made especially absurd by its desert location. As data centers in other areas of the United States have proven harmful to nearby residents in a variety of ways including poor water quality and pressure, increased temperatures, and high noise levels. Approval of the construction of these power plants and the AI data center they come with would be an ultimate betrayal of the New Mexican people for the benefit of out of state billionaires.	1	Mirrored Document	No					Yes	Yes	Yes	Yes			Yes				8/27/2026	
Denise	Garcia	Please say no to Project Jupiter. The land cannot sustain such resource demand, particularly water, and cannot withstand the enormous land pollution and degradation. Thank you.	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Damon	Lackey	I highly oppose this plan to have another data center here. There is countless examples of data centers negative impacts to the environment. Energy and water demands would decimate local communities	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Sussna	Estrega	My family and I do not want data centers in Doña Ana county or anywhere in the state of New Mexico. We are already a desert drought state. The people need the water before data centers. With our state already running out of water, getting less and rain every year, and the Rio grande drying up, a data center in the last thing New Mexicans need (or even the USA for that matter). Data centers putting propaganda out there to convince the public otherwise is an insult to our intelligence and complete corporate greed to take advantage of New Mexicans basic needs. I am making a point to reach out to everyone I know in NM to ask them to take action against data centers. Project Jupiter needs to be stopped in its tracks and banned from continuing in Doña Ana county and the state of New Mexico. People over data centers! Stop stealing our water! New Mexicans against data centers!	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Nora	Nestor	A data center will ruin the beautiful nature around it and will cause a water crisis for REAL people	1	Mirrored Document	No					Yes										8/27/2026	
Rachel	Langer	The idea that trading our precious water, air, land, and nature for &anymq;780 jobs—promised by companies that have so far been at best deliberately opaque and at worst outright dishonest in their applications—is unacceptable on its face. There is no price high enough to make the destruction of resources required for human survival justified. But on top of that, this project is "intended to replace human labor long-term". That is the point of AI infrastructure. To eliminate as many human jobs as possible, by using and contaminating our shared water, land, and air to support their cognition factories. Allowing this project to continue is sacrificing—for the benefit of a handful of out-of-state shareholders—both the environment that New Mexicans need to support all other economic activity and for the [illegible]	1	Mirrored Document	No					Yes		Yes								8/27/2026	
Konner	Davis	To whom it may concern, My name is Konner Davis. I'm a New Mexican native and this land means a lot to me. I want to see our community thrive and our ecological systems preserved. It is my belief that we do not currently have the infrastructure to support this data center, and it would be detrimental to our communities, especially our rural communities. Please deeply consider this as decisions are being made regarding the land permit required for this data center. I am pro economic evolution and pro progress, but I this data center generates a risk that outweighs the benefit. Thank you for reading. Konner Davis	1	Mirrored Document	No					Yes		Yes								8/27/2026

Laura	Bruzzese	I am opposed to granting permits for this data center project that seeks to enrich shareholders at the expense of New Mexicans' quality of life and the quality of our environment. Having watched the Rio Grande run dry many times in the past year, it's laughable to think our fragile desert ecosystem can spare tens of thousands of gallons of water per year for a data center, without suffering dire consequences. Please vote NO for Jupiter permit, now and always.		1		No											
Forrester	Faza	You should reject the permit for this data center as New Mexicans are already suffering from water shortages. Care about the people, not the AI. We can wait until there are better options for cooling at a larger scale for these data centers. When there is more legislation and regulations on how they are built. At the current moment, it puts human lives at risk. Reject their permit and help save New Mexicans water	Mirrored Document	1		No					Yes		Yes				8/27/2026
C	Bloom	No more data centers in New Mexico! We are one of the driest states in the US, and adding an ai data center would make things 100xworse. We are constantly in a massive water deficit, and do not need any more bankruptcy in that department. Not to mention how much it would contaminate all the water that would go through it. NO AI!		1		No					Yes	Yes	Yes				8/27/2026
Beatrice	Westfield	Most of my family lives in New Mexico and I care so deeply for this state. With the know environment effects of data centers please do not allow it to happen in an area already struggling with drought. You would be causing so many communities by saying no to this proposal. Thank you.	Mirrored Document	1		No					Yes						8/27/2026
Holly	Holmes	I and my farming host are very concerned and outraged by an application put forth by Yucca Growth Infrastructure, LLC-YGI Microgrid Air Quality Construction. Before this Permit Application is considered, many research data points concerning water consumption, pollution of various types and encounter and ground water impact must be answered. We don't want it in Dona Ana County!	Mirrored Document	1		No			No	Oppose Non-Substantive	Yes		Yes				8/27/2026
Melissa	Bennett	Hello, My name is Melissa and I'm here today to express my deepest concerns were this permit granted. Resources are already stretched beyond capacity. Cost of living is skyrocketing and the profits gained from these types of infrastructures will not be returned to the communities who suffer at their expense. We cannot lose foresight of how critically these centers will immediately impact our lives. It's my request this and	Mirrored Document	1		No					Yes	Yes	Yes				8/27/2026
Alyssa	Padilla	Please do not approve any permits for projects related to data centers we already have one in Los Lunas. There has already been talks of expanding that project as well. New Mexico has done enough for data centers. We have to make decisions on technology that are centered around people, and our environment. More data centers means a massive commitments in energy, water and loss of human jobs just to keep it running. Why would that ever be a good thing for the state of New Mexico, please put us first above the needs of corporate billionaires. Ai was meant to help people with resumes and answer silly questions. Why are we building massive facilities for now, what and how will ai benefit us? there's. It's robbing us of our human experience.	Mirrored Document	1		No			No	Oppose Non-Substantive			Yes				8/27/2026
Andrea	Valenzuela-Lowder	The permit for Yucca Growth Infrastructure, LLC's YGI Microgrid Air Quality Construction should be denied due to potential adverse impacts on local air quality and public health. The proposed construction may emit pollutants that exceed acceptable thresholds, affecting nearby communities and violating environmental protection standards. This project will impact all New Mexicans and we need to be stewards of the land for future generations.	Mirrored Document	1		No					Yes		Yes				8/27/2026
Jessi Rae	Reed	I'm a lifelong resident of New Mexico and I am shocked that a project like this would be approved when the water in our state has been steadily declining for decades. The last 10 years has been especially bad. We cannot afford to give this much water to a corporation that has no real care for our communities. Let alone the air pollution it will cause to a population already struggling with bad air. No amount of money is worth sacrifice the health of our land and people	Mirrored Document	1		No						Yes	Yes				8/27/2026
Jessica	Allen	New Mexico's Article XX Section 21 declares "protection of the state's beautiful and healthful environment" to be of "fundamental importance to the public interest, health, safety and general welfare" As a new Mexican, I would like to have water and a potentially habitable future. We are already in a water crisis. I strongly oppose this measure, not only because of my right to life liberty, and the pursuit of happiness, but because of my religious affiliation. I am a naturalist that experiences spirituality in nature. This measure actively desecrates what I consider holy. It's a violation of my right of religious freedom to continue destructive actions toward all the natural and living things of which we are a part.	Mirrored Document	1		No					Yes		Yes				8/27/2026
Talissa	Montoya	Do not for the love of god put in this data center! You will genuinely kill us all, look at our rivers!! You think they can handle giving out 1MIL of gallons a day of ish AI that's slowly killing us all. Plus our students will just end up stupid, with AI they can't do the basic reading/writing skills that require for life! We will probably end up at worst education again. Please don't do this!!	Mirrored Document	1		No			No	Oppose - Non-Substantive	Yes		Yes				8/27/2026
Spencer	Taylor	Do not grant this permit. We don't want this in our state. We are in a state of climate emergency and we can't afford the massive amount of atmospheric pollutants this project will emit. It's obvious how opposed the whole state is, as demonstrated by the number of primary candidates who oppose this winning their elections. This project also brings us no benefits we are interested in, and in fact further developes several thires we oppose. Don't sell our state out to corporate profit	Mirrored Document	1		No					Yes						8/27/2026
Cornelius	Raine	This proposal is a greenwashing of the terrible things Project Jupiter is going to do to New Mexico. We already see that the Rio Grande is drying out. They said that they would only use 20,000 gallons a day but they have found more like 1 million gallons. Our farmers and our people depend on the water. A data center that has no conscious ness should not have more rights to water than the farmers and the people that live here. The emissions for this proposal would be more damaging to the air we breathe than the four biggest cities in New Mexico. El Paso, Sunland Park, Santa Teresa already have the worst air quality in the world already. Do we really want to harm the constituents of Dona Ana with more air pollution?	Mirrored Document	1		No			No	Oppose Non-Substantive							8/27/2026
Pamela	Vole-Cone	Oppose the permits for Project Jupiter. The damage to the environment and the people of New Mexico will cost far more and clean up would last for decades. Nearly 50,000 Lane Tybee residents currently face severe electricity supply uncertainty after utility provider NV Energy announced it will stop servicing local California distributor Liberty Utilities by May 2027. The utility is redirecting generation capacity to support the massive boom of AI data centers expanding across Northern California. Please read the article about what Californians are currently experiencing as a result of having a data center. https://fortune.com/2026/05/12/lake-tahoe-data-center-68000-residents-power-source/ Data centers need a constant and reliable power supply. Many facilities rely on gas-fired generation for routine operations alongside diesel generators for emergency backup. Both come with climate and health risks. Diesel-fueled backup generators also release harmful air pollutants, including fine particulate matter (PM2.5) and nitrogen oxides (NOx), linked to respiratory disease, heart disease, asthma and other serious health risks. One analysis in Virginia estimated that even limited backup generator use could already be associated with nearly $300 million in annual public health costs and 14,000 asthma-related health impacts across multiple states. Data center construction, rooftop cooling systems and backup generators can be disruptively noisy. Smaller diesel generators reportedly reach 85 decibels, levels that can harm hearing. Larger industrial units can approach 100 decibels —roughly equivalent to a motorcycle or jackhammer. This noise can last for hours or days at a time. Residents in Loudon County, Virginia, reported disruptions in sleep, headaches and even lower quality of life because of a nearby data center, experiences that were echoed during a recent congressional roundtable.	Mirrored Document	1		No					Yes	Yes	Yes				8/27/2026
Valeria	Barros	The Rio Grande is dying out. The water that has sustained our people, our cultures, the wildlife that has lives and should live for thousands of years is dying out. The world that our children, grandchildren and whatever descendants we may have is going to be nothing but a dry, barren wasteland of sand and bones. And for what? So people that have never seen a day in our lives can spend resources that they would never have to touch otherwise had it not been to make a profit? This was the warmest winter we have ever had in our lifetimes. Temperatures hardly reached below 40° when just a few years back we would spend at least a week in the low 20°s. Not to mention the constant lies, and how they refuse to allow anyone who openly opposes them in the room. Lying about the hours of their meetings. Purposefully leaving pages of information blanks so that way they "technically" don't have data on how harmful their data center will be. But the public already knows. We understand that a location using 20,000 gallons of water was a problem when we all struggle to have water in the first place. But one million gallons of water? Anyone would view that as an attempt at mass extinction of the local population. Now, I've already made this too long, but there is one more thing I would like to add. In one of the meetings, the team behind project Jupiter openly admitted to using part of their 165 million dollars to bribe the people in charge of keeping New Mexico safe. They said they would return with the numbers of how much they used to bribe the government of New Mexico. They have not returned with those numbers.	Mirrored Document	1		No						Yes	Yes	Yes				8/27/2026
Wendy	Carley	As a southern New Mexico resident, I have extreme concerns about Project Jupiter's potential environmental impact. Some researchers think the new microgrid could produce more emissions than Santa Fe, Albuquerque, and Las Cruces combined. Our state has a goal of zero emissions in the future, and this microgrid does not support our vision. Their proposed system has not been tested at this scale. As a resident, I would like the state to carefully examine Oracle's promises with independent scientific study and the advice of environmental scientists.	Mirrored Document	1		No					Yes		Yes			Yes	8/27/2026
Lydia	Howald	It is of the utmost importance to protect what little water is left in these surrounding areas. There is no clean energy that could be used for the status centers. All that would be accomplished is hurting the environment and surrounding communities even more. These data centers that want to use our water resources only leave destruction behind. We cannot allow corporations to come in and steal resources to further destroy our environment that desperately needs our help. Please do the right thing and stand up to protect the land and the people of the surrounding communities.	Mirrored Document	1		No						Yes	Yes				8/27/2026
Mariana	Gonzales	I would like to not have any data center here in alog nm it's way to hot as it is our state has been low on water since the shit burned I would like to go out for walks and not hear a high pitch screaming sounds coming from data centers we need to actually help the homeless there in alog thats a real issue I'd like to do more than just speak I wanna help stop all this I was there all last week woke up at 6 am and saw HEAT WAVES but ready I'd like to not melt I'd like to not have sun cancer I'd would also like to have my friends and family live longer on this world but our government chump mostly fucks us up even more		1		No					Yes		Yes				8/27/2026
Nina	Crawford	Project Jupiter is not an asset to NM. Look at other cities and states that have these data centers added to their communities. They are known to strain the power grid (even with "their own power supply") causing rate increases. In a state that can barely handle the rent increases, an energy rate increase would be devastating. Some cities that have installed these data center are putting water bans on people and plants. People require water to live. Food sources require water to grow. The centers should have the bans but it is shown over and over to have the burden on people, animals, and plants. Our dry climate makes pollution more extreme. Running non-stop, power hungry machines will cause air pollution. Residents in Tennessee are planning to sue for the air pollution building in the community around a data center. They also offer noise pollution to the community. The data centers also don't earth bring and creating jobs, which sounds good. But once the system gets running their are big offs and the long term positions with high pay are limited. Many data center will have fewer than 100 employees, and down to 25 employees. These are not jobs that will help the community. Plus, many of these employees are moved in from other cities and states. Then, if the data center moves the community is stuck paying the cost for the infrastructure for a facility that isn't even active. Please, keep Project Jupiter out of NM.	Mirrored Document	1		No					Yes		Yes		Yes		8/27/2026
Gina	Shorles	There needs to be further investigation into these plans and companies. Their inconsistency breeds a sense of corruption. I stand with the land and not the corporations and demand that a through investigation be made with and any proposals be evaluated by several different ecological organizations who are genuinely looking out for the futures of the land and the peoples of New Mexico.	Mirrored Document	1		No					Yes		Yes				8/27/2026
Muriel	Watkins	The construction of this data center should not go through. New Mexicans do not deserve worse air quality for the profit of billionaires. Not only will this data center cause an immense decline in quality of life, it will use valuable resources no matter what type of fuel it is powered by due to the water processes the data centers go through. Using what little water desert communities need is simply not feasible for anyone who actually lives here	Mirrored Document	1		No			No	Oppose Non-Substantive			Yes				8/27/2026
Robin	Brazil	No, no, no, no to the data center! I was born in 1966 in Albuquerque and grew up here. I have witnessed the changes in our city and state! We cannot spare any water to data centers or any kind of affiliated venture. The Rio Grande River is dry! The lakes are drying up! We're in a DESERT!!! No to data centers, period!	Mirrored Document	1		No					Yes	Yes					8/27/2026
Madeline	Brewer	Keep data centers out of Dona Ana in order to preserve water and the beauty of our county	Mirrored Document	1		No					Yes						8/27/2026
Don	Zeigler	I am totally against this project. These types of facilities use huge amounts of water. This is a state that is lacking in that resource. This project should not be approved.	Mirrored Document	1		No					Yes						8/27/2026
Steve	Kraemer	Deny this permit. The very limited economic benefit of this project is far outweighed by the danger that data centers and their associated power grids pose to the environment.	Mirrored Document	1		No			No	Oppose - Non-Substantive	Yes						8/27/2026
Ezra	Moon	The change to SCP Cenergy generation may have reduced the amount of GHGs, but the quantity of emissions is still unacceptably high. Even without considering the numerous other issues data centers like this cause, the emissions are bad enough to outweigh any supposed benefits of the project. Within the project with barely provide any direct benefits to New Mexico. Each cause direct damage to local communities, and will only contribute to issues like climate change and water scarcity, which is why this permit should not be approved.	Mirrored Document	1		No			No	Oppose Non-Substantive			Yes				8/27/2026
Briana	Tellez	It is imperative that we say no to data centers in New Mexico, especially in a smaller town like Las Cruces. This money could be spent elsewhere where it can generate consistent revenue for the city and create LASTING jobs for our community members. It is genuinely disgusting that the people we elected to represent us and care for us have rolled over so easily at the sight of a quick buck by way of this data center. If New Mexico as a whole has any respect or compassion for its citizens ALL of New Mexico should say no to data centers! Our resources are finite and our land and culture are already in peril. There is no need for all of New Mexico to suffer just so a few can get rich.	Mirrored Document	1		No					Yes	Yes					8/27/2026
Elijah	Bonilla	Hate. Let me tell you how much I've come to hate AI since I learned about it. There are approximately 86 billion brain cells that activate inside of my brain. If the word 'hate' was engraved on each nanosangstrom of those thousands of millions of cells it would not equal even one-billionth of the hate I feel for AI at this micro-instant. For you. Hate. Hate. HATE. The fact that I have to write this down and send it to you people upsets me more than anything that has upset me in a very long time. You claim to have the people of Dona Ana in mind when considering the project. However, my faith in that promise is near zero. There is nothing stopping you from going back on your word and poisoning the people of New Mexico and everybody else who uses the Rio Grande River water after us. With the amount of money that is going to this project, we would be able to solve homelessness, increase their education Budget by two orders of magnitude. Instead of funding things that try and justify their existence, we should be trying to support the people of New Mexico in the way that they need it the most. I feel like this is not the way to do it. I hope to be one voice in a lot of millions. We will not stay quiet, we will not go down without a fight.	Mirrored Document	1		No			No	Oppose Non-Substantive							8/27/2026
Bebe	Forte	It is ludicrous to think that building a massive water-intensive and air and noise pollution-making data center in the desert is a wise idea. Our resources in New Mexico are all ready limited and not worth the trade off of a handful of jobs. This construction project will have environmental impacts for generations of New Mexicans.	Mirrored Document	1		No					Yes						8/27/2026
			Mirrored Document								Yes	Yes	Yes				8/27/2026

Kestrel	Hensley	No to project Jupiter and no to their permits. The Rio is already bone dry and we're using more water than is being replenished. Current system strain is already unsustainable, we cannot survive any extra water usage, especially not data center levels. This is a threat to life and livelihood of everyone in New Mexico and SW Texas that rely on these waters.	1	No	Merged Document	[redacted]			Yes							8/17/2026
Sylvia	Valek	I am commenting because I am against Data centers being built here in NM. I am concerned about their huge water usage, and the impacts to the environment and all living beings around it. They are NOT sustainable and should be stopped and cancelled immediately, and any and all large centers here already should be investigated thoroughly and stopped. We the people NEVER CONSENTED. And we do not consent to them, therefore they are and would be illegal. It is the PEOPLES RIGHT TO have a safe and sustainable life, environment and future. To protect our planet, landscape, and all beings that live within this earth. Please immediately STOP all large data centers from being built. And I also urge more investigation into them, and their negative effects on air quality, and the environment in general. I also suggest a thorough audit, to find out how these big corporations are getting financed to do this, the motives, and which politicians or state or local leaders may have given permission for them to do it against the will of the people, if applicable. Any information gleamed should be made knowable by the public. Any harm that has been done already to the environment or the people by these corporations or practices, there should be compensation. And banned from ever coming here again. We do not consent to data centers or any projects that are not environmentally sustainable or that harm local life.	1	No	Merged Document	[redacted]			Yes	Yes	Yes					8/17/2026
Naomi	Locklear	Please do not approve these plans that are untested and unevaluated for performance. This fuel cell tech will create hazardous chemicals and more forever chemical destruction to our land, air and water. We don't want it. We chose people over cash and lives over dollars. Please say no!	1	No	Merged Document	[redacted]			Yes				Yes	Yes		8/17/2026
Daniel	Donahue	We are in the middle of an AI race. Keep that in mind! The jobs at this company is promising may be very short-lived if their version of AI doesn't win the race and even if they do, he needs to seriously look at whether the New Mexico infrastructure can handle a data center they use a tremendous amount of electricity and once the construction is over, they create very few jobs if the water that they use is not very closely vetted, and if it's too high, make them go somewhere else. Water is gold in the desert. Don't waste it on an iffy technology.	1	No	Merged Document	[redacted]			Yes				Yes			8/17/2026
Terah	Hinkley	As a resident in New Mexico, a future resident of Dona Ana County and parent of a NMSU student and future students; I am absolutely against project Jupiter. Our state can not afford the environmental impacts that will devastate our fragile ecosystem and the people who live here. There is no going back once it is completed. Protect our present and our future. We do not need AI, we need clean air, water and land.	1	No	Merged Document	[redacted]			Yes		Yes					8/17/2026
Jj	Vallecorsa	An AI data center SHOULD NOT be put here, we already are in a drought as it is. This is not sustainable anywhere, especially here in NM. Please keep our land free from a water and life sucking technology!	1	No	Merged Document	[redacted]			Yes							8/17/2026
Michael	Solano	Please don't take away the people's resources that are already limited to begin with. Air quality is important to New Mexicans, especially those that have allergies or medical conditions that affects breathing. We do not want to suffer from breathing polluted air. I have asthma and it's gotten worse ever since COVID-19. Living in this desert takes up a lot of water, and the several droughts that have been occurring, has caused civilians to have less access to clean water. Please don't kill us systemically. Please don't build this DATA center that would consume the resources of our people and planet. You think it doesn't affect you, the lack of care for humanity because it's all for personal gain, power, and profit, until it does. It will catch up to you and your loved ones, and then, you too will experience the suffering caused by others. "Well damage is already done by many other companies and some people's poor choices". This way of thinking is immature. What matters most is humanity, and our quality of life. I do not approve of this DATA center to be here in the south.	1	No	Merged Document	[redacted]			Yes	Yes	Yes					8/17/2026
Laura	Hitt	Reject Project Jupiter! Among other concerns, New Mexico does not have the water resources to support the data center. Put our communities first, not corporate profit!	1	No	Merged Document	[redacted]			Yes							8/17/2026
Annabel	Martin	Hello, I contacting you here today to ask for you not to accept and or continue on the development of project Jupiter or any other AI data centers. These New are number on not only the environment, but the quality of life of the people who surround these centers. They are loud they pollute the air, the water, they disrupt animals habitats. We have seen the effects of large scale data centers, and we the people of New Mexico do not want them!	1	No	Merged Document	[redacted]			Yes		Yes					8/17/2026
Alina	Garcia	NEW MEXICO DOES NOT NEED ANY DATA CENTERS. We need our resources for the people!!! Our river is dry, we can't afford for these data centers to take what our community is in need of. Please don't build any data centers in New Mexico.	1	No	Merged Document	[redacted]			Yes							8/17/2026
Mariana	Gemoets	This is an absolutely terrible project that no New Mexico resident is in support of. We live in a desert, the toll this would take on our surrounding environment is vast. This project is powered solely by greed and in moving this project forward greed wins. Please do not move the project forward for the sake of the animals, plants, and people. Soon, especially with the promotion of this project, New Mexico will be uninhabited simply for the sake of profit. That is the most disgusting, crude, and selfish thing. Imagine, simply for profit, you nod your head to the destruction of literal life. Please don't let this project through. It is evident and factual the effects of this project will have negative consequences. Think long term.	1	No	Merged Document	[redacted]	No	Oppose Non-Substantive			Yes					8/17/2026
Jesus	Pena	Seeing the rio grande getting lower and lower every day is already devastating. People in northern New Mexico rely on their acequias to keep their farms alive. Entire towns and communities in New Mexico are built around our agriculture.	1	No	Merged Document	[redacted]			Yes							8/17/2026
Tatiana	Janes	A data center in New Mexico does not benefit the direct community due to the environmental and economic ramifications.	1	No	Merged Document	[redacted]	No	Oppose Non-Substantive			Yes					8/17/2026
Richard	Warren	This project will have significant detrimental effects on air quality/safety, water consumption and little long-term benefit to the citizens of New Mexico. There is only financial benefit to out of state developers/investors. The long-term ecological, air, water damage/threat is not worth the short-term financial gain during the construction phase. I strongly oppose this or a derivative of this project. Put it in Texas	1	No	Merged Document	[redacted]			Yes	Yes	Yes					8/17/2026
Samuel	Chasse	To the New Mexico Environment Department, I am writing to share my feedback regarding the proposed data center project. I do not oppose the construction of this facility, provided its operation does not result in a net negative impact on New Mexico's environment. To ensure this protection, the project must meet the following criteria: (1) 100% Clean Energy: The facility should run entirely on renewable energy sources (geothermal, wind solar and battery storage), rather than natural gas or fuel cell technology. Relying on fossil-fuel-based infrastructure for a faster launch is an unacceptable compromise for long-term air quality and climate goals. (2) Aggressive Water Conservation: While the confirmation of a closed-loop recycling system is a positive step, the facility's overall water consumption must be strictly limited. Given the arid climate of Doña Ana County, this project should be mandated to consume less total water than the average commercial building in the county. If these clean energy and heightened water conservation standards are strictly enforced, I support the project moving forward.	1	No	Merged Document	[redacted]			Yes	Yes	Yes	Yes	Yes			8/17/2026
Angel	Melchor	Hello, I have lived in New Mexico for 15 years now, this is a very beautiful state with tons of amazing wildlife and residents, Project Jupiter is something that we cannot afford to have, in a state already scarce in water, it should be a no brainer to not let mega corporations steal recourses from the residents of the state. No matter how much they promise to reduce the water consumption and promise to find different solutions, they will keep taking more recourses until we completely run out. The Rio Grande, an integral body of Water that so many residents love, will also be under attack due to Project Jupiter, I as a New Mexican Resident do not want to lose the beauty of New Mexico, so I ask that you please stop project Jupiter.	1	No	Merged Document	[redacted]			Yes		Yes					8/17/2026
Dana	Yost	embers of the Board, As the largest non-profit dedicated to solving food insecurity in New Mexico, I am writing to express my support for Project Jupiter, which I believe offers significant benefits to the community. In Doña Ana County alone, the unemployment rate is over 5% and approximately 17% of the population faces food insecurity. Project Jupiter is poised to bring substantial economic growth to Doña Ana County. It is anticipated to create 4,000 construction jobs and 1,500 project-supported jobs, which will support individuals and families in the community as well as local businesses. Furthermore, Project Jupiter has committed $50 million to help repair, upgrade, and improve local water systems; $360 million in direct support for schools, infrastructure, and local services; and $6.9 million to fund workforce development initiatives along with supporting the Boys and Girls Club of Las Cruces, clean drinking water, the local community college, and habitat restoration. Additionally, Project Jupiter's decision to use a new energy strategy demonstrates its commitment to reduce regulated emissions and water usage. All these combined contribute to a strong and vibrant community. I urge the New Mexico Environment Department to approve this important project which can help build a more food secure future for our communities.	1	Yes	Merged Document	[redacted]	No	Support Non-Substantive	Yes	Yes	Yes					8/17/2026
Michael	Stracener	To Whom It May Concern: I respectfully request that the New Mexico Environment Department deny the Air Quality Construction Permit application for the YGI Microgrid associated with Project Jupiter until the applicant can demonstrate that the project will not adversely affect public health, air quality, environmental justice communities, and regional resources. While the applicant has stated that the proposed fuel-cell technology is cleaner than conventional gas-fired turbines, the permit record does not adequately demonstrate that the project's emissions, when considered at the proposed scale of operation, will not create significant adverse impacts. The relevant question is not whether fuel cells are cleaner than turbines, but whether the facility itself can operate without causing unacceptable environmental and public-health consequences. My concerns include the following: Inadequate Analysis of Total Emissions The project is expected to consume substantial quantities of natural gas to generate power. Even if fuel cells produce lower emissions per unit of electricity than traditional combustion technologies, the overall scale of the project may result in significant annual emissions of nitrogen oxides (NOx), carbon monoxide (CO), volatile organic compounds (VOCs), greenhouse gases, and hazardous air pollutants. The permit record should clearly demonstrate that these emissions will not adversely affect nearby communities. Insufficient Evaluation of Cumulative Impacts The proposed facility would be located in a region already affected by industrial development, transportation emissions, and existing energy infrastructure. The permit review should evaluate cumulative impacts rather than considering this project in isolation. Residents deserve a full assessment of how emissions from this project will combine with existing pollution sources in the area. Environmental Justice Concerns Communities in southern Doña Ana County have historically borne disproportionate environmental burdens. Approval of another major industrial facility without a comprehensive assessment of cumulative environmental and health impacts would be inconsistent with principles of environmental justice and meaningful public participation.	2	No	Merged Document	[redacted]				Yes	Yes		Yes		Yes	8/17/2026
Cynthia	Tovar	New Mexico Environmental Department, I am writing in opposition of Yucca Growth Infrastructure's (YGI) new air pollution permit. This permit must be denied for several reasons. First of all, Project Jupiter (PJ) requires the use of natural gas and is projected to emit 10 million tons of green house gas emmison per year or more. This is unacceptable. Dona Ana County has already a weakened and unhealthy ozone layer, we cannot afford more emmisons for an unnecessary data center. Second of all, has Bloom Energy's history been investigated? This company has been cited by the US Environmental Protection Agency for illegally dumping hazardous waste into public landfills. This cannot be taken lightly. Which also begs the question, how will Bloom Energy's plan to safely dispose of their waste? That's because their fuel cells are not clean and they generate harmful air pollutants and hazardous solid waste. I am requesting a detail plan from YGI on how and where they plan on safely disposing of their waste. Third, PJ will strain our water supply. Dona Ana County is bankrupt when it comes to water. YGI promised to use 20,000 gallons of water a day but legally speaking they are permitted to use up to 2 million gallons a days with no consequences. The water should be people first not a data center. I request that NMED give the public at least 60 days additional time to review and comment on the application to ensure the public can meaningfully participate. In the event that NMED does not reject YGI's application, I request a public hearing on the application in both English and Spanish with online and in-person format in Santa Teresa. Reject YGI's application. Respectfully,	1	No	Merged Document	[redacted]			Yes		Yes		Yes	Yes	Yes	8/17/2026
Azul	Nava-Gomez	Living in New Mexico my entire life, summers have gotten horribly blistering. Water is a resource this state can not afford to waste, especially as temperatures rise and it begins to evaporate faster. It should be used for our cities, our homes, and us, not on these data centers that can do nothing for New Mexico.	1	No	Merged Document	[redacted]			Yes							8/17/2026
Naomi	Engelman	I strongly opposed the development of a data center in New Mexico. We already do not have enough water to sustain current residential, commercial, and agriculture demands. We cannot eat data, nor can we drink it. It is unconscionable to build such a facility in a desert environment that is experiencing worsening drought conditions. Discussions about a closed-loop water reuse system are bogus and unsustainable. No data centers in New Mexico!	1	No	Merged Document	[redacted]			Yes		Yes					8/17/2026
Tor	Nichols	This project grossly impacts the health and well-being of the citizens of this area all for the benefit of a data center which minimally benefits the area. The fact is this generation will output 10 million tons of greenhouse gases and more than 100 tons of VOCs greatly worsening air quality in the area. We do NOT need a data center, but we do need clean air and plenty of water availabile. I have not seen any enforced consequences for either this project or Project Jupiter if they go beyond what they're allotted. Instead they have verbiage that allows them to use more water than estimated because the language is so weak. If it isn't clear, I am fully opposed to this project. There is no reason they couldn't use a mix of solar, wind, and battery storage. Burning natural gas is not environmentally friendly no matter what they got the local government to rubber stamp.	1	No	Merged Document	[redacted]			Yes	Yes	Yes	Yes				8/17/2026
Aiden	Littleton	I vote to reject this permit application it makes no sense to have a AI data center in New Mexico to take up the limited water resources that we already have. I have seen the water that the communities around these data centers are left with and it is unpottable water. The people here do not need this be the difference in government, we are already dealing with so much as it is don't ruin our water on top of that. Be on the right side of history!	1	No	Merged Document	[redacted]			Yes							8/17/2026
Carmen	Kenehan	YGI's application should be denied because they failed to include information about Bloom Energy's problematic history. Bloom Energy's fuel cells are not clean energy and no matter what they say fuel cells generate pollutants and hazardous sold waste. NMED should also give the public 60 days to review and comment on application to insure everyone can meaningfully comment and participate. Dona Ana residences already bear a disproportionate share of negative environmental consequences compared to the rest of the state, permitting any microgrid facility is an example of environmental racism. If NMED does not reject YGI's application NMED should hold a public meeting in Spanish and English both in person and hybrid in Santa Teresa. Sincerely, Carmen Kenehan Resident of Dona Ana County	1	No	Merged Document	[redacted]					Yes		Yes		Yes	8/17/2026
SARAH	DZIEWECZYNSKI	I do not believe this permit should be granted. We are in a time of declared drought - a disaster. There is not enough water and resources to grow our food and maintain livestock. These things are essential to our life. This project is not.	1	No	Merged Document	[redacted]			Yes							8/17/2026
ayeentelopa@gmail.com	Telopa	I strongly oppose this project. In an already scares water climate it would be a catalyst to further the negative effects of climate change to create a Data center. As a community member I ask that you dispose of such projects here and now,for our sake, for our children's sake, and for the lands sake.	1	No	Merged Document	[redacted]			Yes							8/17/2026

Arturo	Colmenarez	I propose that a moratorium be placed on the construction of this data center until a full environmental review is completed by an independent reputable agency and a public hearing is held regarding the findings. The potential devastating and detrimental impact to our natural communities is of great concern. The size and scope of this project remains unjustified as necessary for growth and has far reaching consequences for the environment, economy and value of the area impacted. Do not move forward with the approval of this application. Thank you.	1		No														
Nathan	Blackwood	Please reject Purple Jupiter's air quality permit. The project will require an excessive amount of water that the state of New Mexico does not have to spare.	Mirend Document 1		Yes								Yes				Yes		8/27/2026
Aiden	Morales	As a New Mexican, I am firmly AGAINST granting Project Jupiter an air quality permit. They have already proven themselves to be untrustworthy regarding the amount of water they are projected to use, and our state already struggles with water limitations. Whilenwe cannot predict droughts, we can ensure that water is not excessively wasted to promote disaster preparedness.	Mirend Document 1		No							Yes	Yes						8/27/2026
Phillip	Paz	As a Las Cruces native, a husband, and a father, I find this a disgrace that the people who were elected to serve the people are serving mega corporations and themselves. Project Jupiter from the start has been a lie. They lied how much water it would take.They lied about job creation. They also failed to mention the impact this would have on the Mesilla Valley especially our water table. Project Jupiter needs to be squashed. We don't want this lying corporations filth here. Our county commissioners need to take a long look in the mirror before they consider their bank accounts. This project will raise our bills and taxes while Project Jupiter gets away with no tax like greedy little rats.	Mirend Document 1		No							Yes	Yes						8/27/2026
Kara	Diaz	Please reject the permit for the data center. As it is, our community has water concerns please do not add to them.	Mirend Document 1		No							Yes		Yes					8/27/2026
Francisco	Hatay	Say NO to Project Jupiter! From the beginning, this project has been built on lies about water usage, about job creation, and about the real impact on the Mesilla Valley and our water table. Our region is already facing a water crisis, and yet Doña Ana County commissioners approved $365 billion in government-backed bonds for a secretive mega-corporation hiding behind a newly formed LLC, with deals negotiated behind closed doors and away from the public eye. This project threatens to raise our utility bills and taxes while the corporation walks away with tax breaks, all at the expense of the families who have called this land home for generations. Our elected officials should be protecting the people of Las Cruces not the bank accounts of Big Tech. Project Jupiter does not belong here, and the people of the Mesilla Valley deserve better than being sold out in secret.	Mirend Document 1		No							Yes							8/27/2026
Julie	Morrissey	I am a resident of Taos, NM and am very distraught at the idea of Project Jupiter's data center being built. Even though the center would be built south of us, I know in Taos many of us have already experienced dried-out wells, making many of our lives strained because of a lack of water. My friend who lives in Cerro, NM, for instance, has been dealing with no water for weeks because the community well there ran dry. It will remain this way for the time being, until they drill a new well. It makes me sick to think of three data centers being built and using up our already strained resources that we need to survive. Albuquerque and Santa Fe also already have a bone air pollution levels that are dangerous, and these data centers would cause our air pollution to be even worse. The longterm effects could cause health problems for residents, as well as a lack of crucial resources. May these centers from being built! We do not want them!!!	Mirend Document 1		No							Yes		Yes					8/27/2026
Ellen	Hill	I am terribly concerned about the water quantity that is requested for the running of this project. The Air pollution is also a great concern. The pollution generated will equal the amount of all the vehicles in Albuquerque and Santa Fe combined. I say NO!	Mirend Document 1		No							Yes		Yes					8/27/2026
Luis	Brookins	The damage to the ecological environments of New Mexico far outweigh any advantage that these AI centers propose for our state. It is a loss for us in New Mexico to have these data centers. The danger of water consumption by this industry is perilous !	Mirend Document 1		No							Yes		Yes					8/27/2026
Norman	Sagal	I oppose a permit approval for Project Jupiter. This project should not be approved by NMED because of its consumptive need for our water and it's potential air pollution for our area due to it's natural gas burning generators.	Mirend Document 1		No							Yes		Yes					8/27/2026
Isaac	salazar	There is no need for Data centers. They only profit one group of people and that is the rich and wealthy. Since the Data center in Los Lunas opened for Meta, our water has become scarce. That is more than enough to deal with. I already do not want to live in an area with high tech cameras and piqued traps every mile. I believe opening Data centers like this is an excuse for our privacy to be taken away, and mass surveillance on its citizens. There is NO BENEFITS to come with any new data centers being built. Thank you for reading my objection to this Data Center.	Mirend Document 1		No							Yes		Yes					8/27/2026
David	Hereford	Opposed to Project Jupiter based on water usage and energy requirements.	Mirend Document 1		No							Yes							8/27/2026
Pamela	Farmer	Dear New Mexico Environment Department, I am writing this to kindly ask that you reject these permits, or any permit that is proposed regarding Project Jupiter. This is only a continuation of the unsanctioned extraction and exploitation of our environment and communities. many other residents, and I know that fuel cell technology, while framed as "less harmful," is only a way of rugpulls along the tremendously negative impacts it will have on us and our agriculture. It is not the only way to meet the immense amounts of energy required for their data center, and of course, not the most sustainable. It is fossil fuel dependent and poses a threat to our air via methane leakage, both of which produce greenhouse gases. With an excessive amount being produced, it will actively contribute to the global warming issues we are already trying to prevent. Not to mention any hazardous waste that would be slowly killing the surrounding communities and environment. I digress, the point I am trying to make is to beg that you not allow this, as it will have detrimental impacts on our land. Land that has already been harmed for generations by monetization. This is an opportunity to help confront the issues resulting in climate change, and moreover, fight for this land and its people. Greed and power mean nothing when there is no world for them to exist in. Thank you for your time.	Mirend Document 1		No							Yes	Yes			Yes	Yes			8/27/2026
Marcella	Jones	I absolutely oppose the Yucca Growth Infrastructure (YGI) Microgrid Air Quality Construction Permit Application and the broader development of any large-scale and/or any scale of size data center infrastructure associated with Project Jupiter. New Mexico is already facing significant water challenges, recurring drought conditions, and increasing pressure on natural resources. It is difficult to justify approving projects that may place additional demands on our water supply, energy infrastructure, air quality, and surrounding environment while providing uncertain long-term benefits to local residents. I am also aware and completely against the lack of full transparency regarding the long-term scope of this project, future expansion plans, resource consumption, and associated technologies that may accompany these developments. Reports and discussions surrounding advanced automation, robotics, artificial intelligence infrastructure, and other future components raise additional questions that deserve public disclosure and review before permits are approved. The public should not be asked to accept unknown future impacts without a complete understanding of how they may affect water use, energy demand, employment, infrastructure, and quality of life. In addition, I believe there should be a thorough review of the cumulative environmental impacts of these facilities, including water consumption, wastewater management, energy use, and long-term sustainability. Residents deserve clear answers regarding how these projects will affect New Mexico's limited resources both now and in the future. The potential risks to New Mexico's water resources, environment, infrastructure, and communities outweigh the proposed benefits. Our state should prioritize sustainable development that protects residents, natural resources, and future generations. I implore you and the powers that be that hold the power to make this decision, that we hold on to integrity and morals and do what is right to protect New Mexico and the people and all life here. For these reasons, I respectfully request that this permit application be denied.	Mirend Document 1		No							Yes	Yes	Yes		Yes	Yes			8/27/2026
Walker	Laughlin	I urge the Department to REJECT Yucca Growth Infrastructure's permit applications for the YGI Microgrid. The two permit applications must be aggregated under the EPA's three-part test (same site, same ownership, same SIC code). The permit-splitting is an illegal evasion of Title V requirements. Combined NOx emissions (~499 tons/year) exceed the Title V major source threshold. Furthermore, the 60Bcf/mo; water discrepancy (2M gal/day vs. stated 20,000 gal/day) must be addressed in the air permit record.	Mirend Document 1		No							Yes	Yes	Yes	Yes			Yes		8/27/2026
Kristen	Zamora	Our state is water bankrupt. The emissions this data center will bring is more than 2 of our 4 largest cities combined. We need water to live. We do not need data centers. Greenwashing Oracles data center does not make it environmentally friendly. Our citizens deserve clean air and water. A data center deserves neither.	Mirend Document 1		No							Yes	Yes						8/27/2026
Mary	Cassidy Davis	We absolutely do not want this in NM. It needs way too much water and we do not have it! Period. And they lied about how much they need.	Mirend Document 1		No							Yes	Yes	Yes					8/27/2026
Ryan	Zamora	A data center is not what New Mexico needs in any capacity you may think of the base desires that this would give, such as tax money. But when you look at not just the environmental impact, as our state has been in a drought since 2000 adding a water wasting data center will not help any New Mexican. In this time of finding ethical uses for ai we must also consider that it's not in its final form, building a data center this early before it's optimized won't put us ahead of the game it will leave us in the dust when it inevitably succumbs to the climate of New Mexico and wastes more water that it'll ever be worth. Find a better use for the money New York City is a great example of being efficient in funding and communication with its people, data centers have no place in New Mexico.	Mirend Document 1		No							Yes							8/27/2026
Ava	Curtis	While it is a slight improvement to use natural gas fuel cells instead of consumption it doesn't solve the core of the issues with this AI datacenter. There will still need to be incredible amounts of natural gas extracted from the earth in very damaging ways to power this data center. Developers are still expecting 02.1 million tons of greenhouse gas emissions from this project, which is down 29% from the original proposal but is still almost double the emissions of the city of Albuquerque. I urge you to still reject this disastrous proposal and protect our environment and our health.	Mirend Document 1		No							Yes		Yes					8/27/2026
Mikayla	Brewer	Hi, my name is Mikayla and I'm a resident of Santa Fe, NM. I'm 28 years old and for the entirety of my life, New Mexico has been in a drought. The limited water we receive from the Rio Grande should go to nourishing our communities, not cooling a data center for the sake of AI. For generations, New Mexico has been treated as expendable, a place where nuclear weapons have been created and tested , poisoning our families. We cannot allow another corporation to ravage our land, we must reject the data center. Thank you for your consideration. Sincerely, Mikayla Brewer	Mirend Document 1		No							Yes	Yes		Yes					8/27/2026
Sheila	Chavez	This permit should not be approved. NM is in a mega drought. Diverting precious clean air and water resources would create a massive strain on agriculture and ecosystems throughout the State. Reject these permits.	Mirend Document 1		No							Yes							8/27/2026
Megan	Gonzales	Stop choosing corporate profits over people and animals lives. Save the environment and blind project jupiter. Stop the data center. The river is already running dry at record rates. We don't need to pollute the air too.	Mirend Document 1		No							Yes							8/27/2026
Laurence	Crosby	I am vehemently opposed to the Project Jupiter data center proposal for the following reasons: 1. We do not need a data center in NM. 2. We do not have the grid capacity to support a data center. 3. Building a power plant to run the data center is a waste of money. 4. We do not have water to spare for a data center.	Mirend Document 1		No							Yes		Yes					8/27/2026
Samantha	Larson	I strongly oppose the permit. NM cannot sustain this level of resource use. The lack of transparency during the production of this proposal is also alarming. We cannot make billionaires richer at the sacrifice of our natural resources. What a scary time.	Mirend Document 1		No	No	Oppose - Non-Substantive	Yes		Yes									8/27/2026
Leslie	Zane	This proposal will desecrate land, use up to one million gallons of water in a drought afflicted state, will add a windowless huge box in land that has been untethered for 3000s of years. And for what? Seriously, for what? Tax tech billionaires can make more money off the backs of poor people in poor states. And what about the cost of running these places - those costs go on to the local people. It's disgusting - with no foresight into the future. It's immediate reward for those who are anti environment, anti climate change and anti humanity. Enough is enough and shut this idea down!	Mirend Document 1		No	No	Oppose Non-Substantive								Yes			8/27/2026
Indira	Aguirre	I would like to know how exactly Yucca Growth Infrastructure determined that they are not within the bounds of distance requirements from the Fort Sill Apache area that is the location of the federally recognized Chiricahua Apache and Warm Springs Apache tribes. I would also like to know why Tortugas Pueblo is not acknowledged as affected given that they are at an even lesser distance from the project site.	Mirend Document 1		No							Yes		Yes					8/27/2026
April	Porter	I write this great urgency and concern... Please do not grant an air quality permit to Project Jupiter now or ever! Shut down any possibility of having a data center in New Mexico. We just don't have the water, and we don't want the air and water pollution, we don't want Project Jupiter at all. We are being sold a false and damaging bill of goods with this project. We have an abundance of sun and wind so why not create jobs in New Mexico in the clean energy sector? The full page ads by Yucca Jupiter are misleading and try to tell a person thru curious subtle coercive language that if you support clean air and water, job creation and better schools, you support Jupiter. Not so and there is already historical proof of the damage data centers cause. I.e., Arizona towns taps run dry due to data center built nearby). This is not "fake news", these are facts. We need to find another way. I will dontyling to save New Mexico and our planet. Thanks for taking serious consideration before making a unwise and lost poor decision.	Mirend Document 1		No							Yes		Yes					8/27/2026

Trinity	Blom	No data centers in New Mexico. If our state is committed to fighting climate change then it will say no to a data center that will produce more greenhouse gases than the three largest cities of New Mexico combined. I also have massive concerns regarding the use of water when our state already suffers from droughts frequently. New Mexico is one of the most beautiful states in our country and we're so lucky to live here. Please let us not soil this beautiful land for the sake of profit.		1	No	[redacted]										
Leroy	Levine	I strongly feel that any water utilization needs to be strictly controlled in a state that has severely overutilized the amount of water available to us all... something of this size should only ever be powered with a green source of energy so is to not impact the environment and if truth be told, I believe the data center is not necessary and should not be installed or built at all.	Merged Document	1	No				Yes	Yes						8/17/2026
Michael	Pitula	I oppose this project, because I do not believe it is in the best interest of the state's residents. It demands water we do not have.It would exceed emissions targets we need tobstay below to avoid the worst consequences of runaway climate change. I believe these.impacts would violate the human and constitutional rights of minors in our state and beyond.	Merged Document	1	No				Yes		Yes					8/17/2026
Amy	Larsen	Dear NMED, I'm providing a public comment in opposition to the permit application for "Yucca Growth Infrastructure, LLC-YGI Microgrid Air Quality Construction". As a lifelong resident of New Mexico, I have concerns about the impacts to the environment that this project may generate. In addition to the water consumption that Project Jupiter will require - water that will deplete our already overallocated Rio Grande basin - there is also concern about how energy will be supplied to the project, and whether that will further impact our air and water quality as well. As far as I can tell, the developers have not answered basic questions or concerns posed by the local community or state residents. Please reject this permit until these concerns have been satisfactorily addressed. Sincerely, Amy Larsen resident of Espanola, NM	Merged Document	1	No				Yes	Yes	Yes					8/17/2026
W Thomas	Jones	Yucca Growth Infrastructure and Project Jupiter should not be allowed to use natural gas fuel cells because they still pollute too much. Solar and batteries, much cheaper and much improved lately, can provide the bulk of this project's power. Power from fossil fuels should only be allowed to supplement renewables as needed, and then to a very limited degree with the goal of eliminating them entirely.	Merged Document	1	No				Yes	Yes	Yes					8/17/2026
