

ABANDONED OR INACTIVE URANIUM
MINES IN NEW MEXICO

A report of investigation carried out
between August 1979 and May 1980 under
contract with the New Mexico Energy and
Minerals Department.

by

Orin J. Anderson

New Mexico Bureau of Mines and
Mineral Resources
Open-File Report 148

INTRODUCTION

During the course of this investigation approximately 200 uranium mine sites were visited. Although these sites are distributed throughout 20 counties the majority are in McKinley, San Juan, and Valencia Counties, along the western and southern margin of the San Juan Basin. Other counties with an appreciable number of sites are Grant, Rio Arriba, Sandoval, Sierra, and Socorro.

Field work commenced in August, 1979 and extended although not continuously, into May, 1980. Information obtained during the on-site visits included location, type and size of mine, condition of mine, host formation, dimensions of remaining structures, proximity to residences or villages, water quality data, and radiation levels, although a gamma ray scintillometer was not obtained for the project until October 20, 1979. An effort was made to contact landowners whenever and wherever possible, however, no systematic attempt was made to determine land and mineral ownership during this phase of the investigation.

Mine operation data has been included where available. This consists of information on ore grades, production history mineralogy, and mine operator. Old publications of the U.S. AEC and the State Mine Inspectors office were helpful in this area.

The mine reports are arranged alphabetically by county with each county having its own index. A NM- or AZ-mine identification number is given with each mine name in the index. It is an AML numbering system devised by Don Baker, Jr. The first part of this

identification number is based on a U.S. Soil Conservation Service numbering system of 15' quadrangles beginning with 1 in the northwest corner of the state to 24 in the northeast corner, then returning to the western border to start a new tier. The second part refers to a 7½' quad within the 15' quad; these are numbered counterclockwise from 1 in the NE quadrant to 4 in the SE. The last part of the number refers to a particular mine within the 7½' quad. An AZ- prefix indicates the 15' quadrangle is an Arizona quad that overlaps the New Mexico state boundary.

Acknowledgments - The writer wishes to thank the following people for their valuable assistance in the field: Lars (Skip) Skotte, Richard Chamberlin, JoAnne Osburn, Mary Ann Anderson, and Cheryl Kyllonen.

A special thanks is extended to Mr. William Chenoweth of the U.S. Department of Energy, both for his time in the field as well as the claim maps and A.E.C. mine production records he provided. Mr. John Blagbrough provided helpful information about the Chuska district. The editorial assistance of Wyatt Brewster and Lars (Skip) Skotte is gratefully acknowledged.

The help and cooperation of the Navajo Tribe Office in Window Rock, Arizona permitted a statewide investigation to be completed; a note of thanks goes to Mr. R. Zaman and Mr. William Armstrong of that office.

Date visited 12/12/79

Mine name(s) Yucca #2 County McKinley

Section SW $\frac{1}{4}$ NW $\frac{1}{4}$ 28 Twنش. 14 N R. 11 W

Quadrangle sheet Thoreau NE 7 $\frac{1}{2}$ '

Mining district Smith Lake (Prewitt subdistrict)

Elevation 7,110'

Nearest city and/or dwellings Prewitt, 3 $\frac{1}{2}$ airmiles southwest, by road 8 $\frac{1}{2}$ miles.

The Yucca #2 is located in the SW $\frac{1}{4}$ NW $\frac{1}{4}$ sec. 28 on the mesa just east of the N-S drainage line. It may be reached by traveling 5 miles N, 2 $\frac{1}{2}$ miles E, and 1 mile south, from Prewitt.

The mine consists of a 100' x 230' area of surface workings no more than 4' deep (see photo a). Area is elongate N-S and is slightly kidney shaped. Scintillometer readings ranged up to 950 cps, more generally in the 750-800 cps range. A small amount of household type garbage is strewn about.

Deposit is in Todilto limestone; secondary oxidized uranium minerals were noted on limestone rock fragments. The deposit may be an extension of the T 2 or T 10 of Hilpert (1969). The mine was registered with the State Mine Inspector's Office in July 1955, with Yucca Uranium, Inc., as the owner/operator.
