Hazardous Waste Bureau
New Mexico Environment Department
2905 Rodeo Park Drive East, Building 1
Santa Fe, NM 87505-6303

Dear Mr. Kieling:

Subject: Request for a Class 1 Permit Modification to the Los Alamos National Laboratory (LANL) Hazardous Waste Facility Permit, Attachment K EPA ID No. NM0890010515

The purpose of this letter is to request the New Mexico Environment Department- Hazardous Waste Bureau's (NMED-HWB) approval for a Class 1 Permit Modification (requiring prior approval by the NMED-HWB) to the Los Alamos National Laboratory (LANL) Hazardous Waste Facility Permit (Permit) issued to the Department of Energy and Los Alamos National Security, LLC (DOE/LANS) in November 2010. DOE/LANS, collectively known as the Permittees, request to revise Attachment K (*Listing of Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs)*), Table K-1 to include two newly identified AOCs, AOC 54-023 and AOC 54-024.

Based on review of waste characterization information for both low-level waste disposal pits and also based on the recent disposal of decontamination water containing hazardous waste constituents at Pit 38, both pits will be added to Table K-1 of the Permit as required by the NMED-HWB.

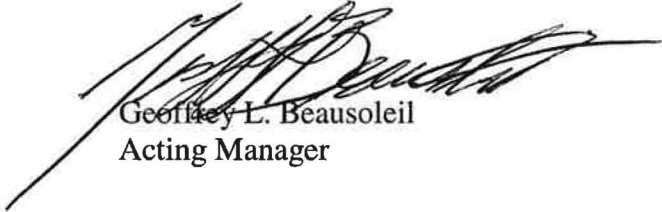

The proposed modification has been prepared in accordance with the Code of Federal Regulations (CFR), Title 40 § 270.42(a), revised March 1, 2009. This modification meets the requirements set forth in 40 CFR, §270.42 Appendix I, Item A.5 and is hereby being submitted as a Class 1 modification requiring prior approval by the NMED-HWB.

The permit modification request includes this letter and an enclosure containing a description of the proposed permit modification, text edits of Table K-1 (Attachment 1 of the enclosure) and figures depicting the specific change to the SWMU boundary. Accordingly, a signed certification page is also included (Attachment 3 of the enclosure). Three hardcopies and one electronic copy of this submittal will be delivered to the NMED-HWB.

MAY 10 2013

Dear Mr. Kieling:

Subject: Request for a Class 1 Permit Modification to the Los Alamos National Laboratory (LANL) Hazardous Waste Facility Permit, Attachment K EPA ID No. NM0890010515

The purpose of this letter is to request the New Mexico Environment Department- Hazardous Waste Bureau's (NMED-HWB) approval for a Class 1 Permit Modification (requiring prior approval by the NMED-HWB) to the Los Alamos National Laboratory (LANL) Hazardous Waste Facility Permit (Permit) issued to the Department of Energy and Los Alamos National Security, LLC (DOE/LANS) in November 2010. DOE/LANS, collectively known as the Permittees, request to revise Attachment K (*Listing of Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs)*), Table K-1 to include two newly identified AOCs, AOC 54-023 and AOC 54-024.

Based on review of waste characterization information for both low-level waste disposal pits and also based on the recent disposal of decontamination water containing hazardous waste constituents at Pit 38, both pits will be added to Table K-1 of the Permit as required by the NMED-HWB.

The proposed modification has been prepared in accordance with the Code of Federal Regulations (CFR), Title 40 § 270.42(a), revised March 1, 2009. This modification meets the requirements set forth in 40 CFR, §270.42 Appendix I, Item A.5 and is hereby being submitted as a Class 1 modification requiring prior approval by the NMED-HWB.

The permit modification request includes this letter and an enclosure containing a description of the proposed permit modification, text edits of Table K-1 (Attachment 1 of the enclosure) and figures depicting the specific change to the SWMU boundary. Accordingly, a signed certification page is also included (Attachment 3 of the enclosure). Three hardcopies and one electronic copy of this submittal will be delivered to the NMED-HWB.

ENCLOSURE 1

**Request for Class 1 Permit Modification to the Los Alamos
National Laboratory (LANL) Hazardous Waste Facility
Permit, Attachment K West, EPA ID No. NM0890010515**

LAUR-13-22880

Date: _____ MAY 10 2013

Permit Modification Request Summary

The following submittal has been prepared by the U.S. Department of Energy and Los Alamos National Security, LLC (collectively the Permittees) to request a modification to the November 2010 Los Alamos National Laboratory (LANL) Hazardous Waste Facility Permit (Permit). This modification has been prepared as a Class 1 permit modification requiring prior approval by the New Mexico Environment Department-Hazardous Waste Bureau (NMED-HWB) (also known as a Class 1* permit modification) as described in the New Mexico Administrative Code, Title 20, Chapter 4, Part 1 (20.4.1.900 NMAC) [incorporating Code of Federal Regulations (CFR), Title 40 §§ 270.42 (a)]. LANL's Environmental Protection Agency (EPA) identification number is EPA ID No. NM0890010515.

The permit modification includes revisions to Table K-1, *SWMUs (Solid Waste Management Units) and AOCs (Areas of Concern) Requiring Corrective Action*, which is included in Permit Attachment K, *Listings of SWMUs and AOCs*. The following summary describes the proposed modification and rationale behind the modification and contains a revised version of the relevant page of Table K-1 incorporating the modification (Attachment 1). The Permittees request that the revised Table K-1 be included in the Permit by the NMED-HWB upon approval of this permit modification request.

Pits 38 (AOC 54-023) and 39 (AOC 54-024) were recently designated as areas of concern (AOCs) and shall be included in Table K-1 of Attachment K, *Listings of SWMUs and AOCs*.

Rationale for Proposed Modification

Pits 38 and 39 are disposal units located at the Los Alamos National Laboratory. The Permittees use these two pits for the permanent disposal of low level waste (LLW). The two pits are located within Area G at TA-54, which is situated on Mesita del Buey, an east-west trending mesa bounded by Pajarito Canyon to the South and Cañada de Buey to the North.

Pits 38 and 39 were excavated directly into the Bandelier Tuff. The dimensions for Pit 38 (see Figure 1 of Attachment 2) are approximately 182.8 meters (m) x 24.384m x 10.668m. In 2012 an extension to the pit was constructed along the eastern boundary to provide for future disposal capacity. The approximate dimensions of the extension are 76.200m x 18.288m x 10.668m. LLW disposal began in 1994 and continues to the present day; however, the pit extension has not been used. The existing LLW inventory in Pit 38 includes demolition debris, soil, and a wide range of operational LLW. Based on waste profile forms and associated documentation for all wastes placed in Pit 38 through 2009, it was determined that one waste stream originally characterized as LLW may have been a mixed waste. This particular waste stream contained a water pump, plastic, soil, cement, personal protective equipment, and absorbent generated during the excavation of the pump. Further review of the analytical data attached to the original waste profile form indicated the potential for total mercury and total chromium to exceed the toxicity characteristic threshold, thereby resulting in the potential disposal of a mixed low level waste (MLLW) stream (LANL 2013 232357). Additionally, more recent disposal practices for decontamination water containing hazardous constituents were documented. In accordance with the *Response to Solid Waste Management Unit Assessment Report for the Pit 38 Newly Identified Area of Concern*, letter dated January 11, 2013 from the New Mexico Environment Department; Pit 38 will be added to Table K-1.

Pit 39 is an irregularly shaped pit approximately 88m x 69m x 14m (see Figure 2 of Attachment 2). Disposal of LLW occurred in Pit 39 between August of 1993 and October of 2006. An operational cover was placed over the pit in November 2009. The existing LLW inventory in Pit 39 includes laboratory trash, contaminated soil, building debris, and scrap metal. Based on a review conducted in 2009, it was determined that two potentially MLLW packages from one waste stream that was originally characterized as LLW may have been a mixed waste. In 1997, a secondary containment pallet was disposed of in Pit 39. The waste profile for the pallet indicates the pallet collected material from a leaking drum. The pallet was emptied and the remaining absorbent was disposed of, potentially resulting in mixed waste disposal (LANL 2013 239224).

Finally, it should be noted that the potentially MLLW stream packages placed in pits 38 and 39 contained hazardous constituents other than those identified in 2005.
