- Excavating and Trenching 29 CFR 1926.650 Subpart P Competent Person
- LDAR

Profile

Monica focuses on spill remediation and air compliance in southern New Mexico and Texas. Monica has considerable experience both in the oil and gas industry as well as working with local agricultural producers in the Carlsbad, NM area. Monica has invaluable experience working with oilfield equipment as in her early career, she was involved with maintenance and repair of equipment. Monica comes from an agricultural background which allows her to understand environmental remediation and restoration end points from the perspective of landowner stakeholders. Monica has worked with most of the major E&P companies in New Mexico and is working toward a science degree through New Mexico State University.

Key Experience & Achievements

- **Environmental Spill Response:** Executes all stages of spill response and remediation from initial contact, first response evaluation, coordinating containment, receptor identification, directing equipment and excavation operations, soil and water monitoring and sampling, laboratory submission, data analysis, technical reporting, client communications, and site follow up; assists project managers in the coordination of subcontractors, site analysis, and project planning
- **Phase 1 Environmental Site Assessments:** Responsible for visiting oil and gas sites and/or commercial sites to identify areas of potential environmental concerns across west Texas and southeast New Mexico, and completing technical reports.
- **Phase 2 Environmental Site Assessments and Remediation:** Responsible for supervision of multiple contractors, soil sampling, contaminant sampling and delineations. Scope of work also includes, interpretation of electromagnetic surveys and aerial photographs.
- **Groundwater and Surface Water Monitoring:** Responsible for organizing field equipment and laboratory supplies to execute groundwater monitoring, sampling and testing.
- **LDAR Inspections:** Certified in infrared camera use to conduct inspections on all essential equipment on oil and gas sites to identify leaks, tag for repair, verify reparations and report on the process and inspection details.
