Ms. Nancy McDuffie
New Mexico Environment Department
Ground Water Quality Bureau
Remediation Oversight Section
121 Tijeras Avenue NE, Suite 1000
Albuquerque, NM 87102-3421

Dear Ms. McDuffie:

On behalf of Doña Ana Dairies, Inc., EA Engineering, Science, and Technology, Inc., PBC is submitting this Quarterly Groundwater Monitoring Report for Doña Ana Dairies located in Mesquite, Vado, and Anthony, New Mexico. The report discusses the quarterly groundwater sampling event conducted to fulfill requirements of the Stage 2 Abatement Plan for Doña Ana Dairies.

Please let me know if you have any questions regarding the information provided in this report.

Sincerely,

A handwritten signature in blue ink that reads "Gina Mullen".

1.0 INTRODUCTION

On behalf of Doña Ana Dairies (Dairies), EA Engineering, Science, and Technology, Inc., PBC (EA) has prepared this Quarterly Monitoring Report for Doña Ana Dairies located south of Las Cruces, New Mexico (Figure 1). The report was completed in accordance with the *Stage 2 Abatement Plan* and the *Sampling and Analysis Plan, Doña Ana Dairies, Doña Ana County, New Mexico* dated November 7, 2013 and August 11, 2008, respectively, and the Conceptual Work Plan (CWP) dated February 1, 2008. All were prepared to satisfy requirements stated in the New Mexico Administrative Code (NMAC), Title 20, 6.2 §4106 through §4110. The Sampling and Analysis Plan was approved by the New Mexico Environment Department (NMED) Ground Water Quality Bureau (GWQB) on September 25, 2008. On March 25, 2015, the stipulated agreement to additional requirements to the Dona Ana Dairies Stage 2 Abatement Plan was agreed upon by NMED, Dona Ana Dairies, and the Rio Valle Concerned Citizens. On April 10, 2015 the Stage 2 Abatement Plan was approved by NMED by Final Order.

1.1 Objective and Monitoring Scope

The objective of this monitoring program is to satisfy the requirements set forth in the Stage 2 Abatement Plan and the Stipulated Agreement and to satisfy the requirements set forth in NMAC 20.6.2 §4110.

The following work was performed to meet the objective of the monitoring program:

- Representatives from D&H Petroleum and Environmental Services, Inc. (D&H) gauged discharge plan (DP) and abatement plan (AP) monitoring wells from November 6 through November 7, 2017. Anthony Waste Water Treatment Plant monitoring wells were gauged on November 9, 2017.
- From November 8 through December 4, 2017, D&H representatives collected groundwater samples from all AP and DP wells that contained sufficient water. AP well DAD-06 was the only AP well that was dry. The sampling event lasted approximately four weeks. The samples were analyzed for nitrate, chloride, total dissolved solids (TDS), and total Kjeldhal nitrogen (TKN). Field parameters including specific conductance, pH, temperature, oxidation reduction potential (ORP), and dissolved oxygen were monitored and recorded during sampling.
- The most recent groundwater gauging and analytical results were compiled into this Quarterly Groundwater Monitoring Report.

1.2 Background

In correspondence dated April 7, 2006, NMED required a Stage 1 Abatement Plan for 13 dairies in Doña Ana County, based on analytical results from DP monitoring of on-site compliance monitoring wells that showed concentrations of nitrate, chloride and TDS exceeding ground water standards promulgated in New Mexico Water Quality Control Commission (NMWQCC) Regulations (20 NMAC 6.2 §3103). On October 30, 2006, the Dairies notified NMED that they

had reached an agreement to work as a group and submit a joint response to NMED's request (Doña Ana Dairies, 2006).

On December 11, 2006, on behalf of the Doña Ana Dairies, Golder Associates (Golder) submitted a Stage 1 and 2 Abatement Plan Proposal to address impacts to groundwater in the area of the Dairies (Golder 2006). The first major deliverable in the Abatement Plan Proposal was an Existing Data Report (EDR) to bring together in one document historical data and practices of the constituent dairies.

The EDR, submitted on February 1, 2008, (Golder 2008a) was intended to satisfy the Dairies commitment for compilation and submission of existing data identified in the Doña Ana Dairies response (2006) to the NMED requirement for Stage I Abatement Plans. Section 9 of the EDR outlined data gaps identified during the preparation of the report, as well as the actions recommended. To facilitate the discussion of the path forward after the submittal of the EDR and concurrent with the EDR submission, a conceptual work plan (CWP) was prepared. (Golder 2008b).

On July 15, 2008, the Dairies, Golder and NMED met (Golder 2008c). During that meeting, plume maps presented in the EDR (Golder 2008a), new monitoring data, and knowledge of well locations and groundwater chemistry results at adjacent DP-regulated facilities were used to identify data gaps with respect to ground water flow direction and plume delineation. The agreed upon data gaps yielded well locations (including contingency locations) recorded in the meeting minutes (Golder 2008c) and depicted in the Sampling and Analysis Plan (SAP) dated August 8, 2008 (Golder 2008d). The SAP outlined the details of the field operations to be implemented for completion of data gaps, such that a Site Investigation Report (§4106.C.6) and Stage 2 Abatement Plan (§4106.D) could be prepared.

Groundwater gauging was conducted concurrent to discussions with NMED at the Dairies for four quarters, February 2008, June 2008, September 2008, and December 2008, to determine the current and historical site groundwater gradient.

In May 2009, field work was conducted as outlined in the SAP and ten (10) AP monitoring wells (DAD-01 through DAD-10) were installed. In July 2009, the Site Investigation Report was submitted to the NMED.

On February 9, 2012, the Final Site Investigation Report was submitted to NMED. The report summarized field activities that occurred from October 10 through October 14, 2011, and November 10 through 18, 2011, during which eleven soil borings were advanced at the site and converted into monitoring wells DAD-12 through DAD-14, DAD-16 through DAD-22, and DP well 177-03A.

On August 16, 2012, soil boring/monitoring well DAD-15 was installed and on August 20, 2012, well DAD-15 was sampled. An addendum to the Final Site Investigation Report was submitted to NMED on September 7, 2012, which summarized DAD-15 field activities.

A Stage 2 Abatement Plan was submitted to NMED on March 13, 2013. Based on an NMED response in August 2013, a Revision to the Stage 2 Abatement Plan was submitted on November 7, 2013.

On March 25, 2015, the stipulated agreement to additional requirements to the Dona Ana Dairies Stage 2 Abatement Plan was agreed to by NMED, Dona Ana Dairies, and the Rio Valle Concerned Citizens. On April 10, 2015 the Stage 2 Abatement Plan with the stipulated agreement was approved by NMED by Final Order.

EA began implementation of the Stage 2 Abatement Plan and stipulated agreement as directed by the Final Order in December 2015. In order to meet objectives, four monitoring wells were installed (DAD-23 through DAD-26) and Del Oro Dairy discharge plan (DP) well 692-01 was plugged and abandoned. Details on implementation of these tasks are included *Stage 2 Implementation and Quarterly Groundwater Monitoring Report*, July 2016.

In accordance with the Stage 2 Abatement Plan and stipulated agreement, a baseline compound specific isotope analysis (CSIA) for nitrogen 14 and nitrogen 15 ($^{15}\text{N}/^{14}\text{N}$ [$\delta^{15}\text{N}$]) and total organic carbon (TOC) was completed for 16 wells in spring of 2016. Additionally, background concentrations were recalculated for the contaminants of concern. Results of these analyses are presented in the *Stage 2 Implementation and Quarterly Groundwater Monitoring Report*, July 2016. These tasks will be completed every five years and are scheduled to occur in spring of 2021.

Contaminant concentration trend analysis as well as geospatial analysis to evaluate changes in plume behavior are required on an annual basis and were last provided in the 2017 Annual Report (EA 2017a). As part of the annual performance assessment, results of sampling irrigation and supply wells and concentration graphs of DP wells were presented in the August 2017 Quarterly Groundwater Monitoring Report (EA 2017b).

2.0 GROUNDWATER MONITORING ACTIVITIES

Groundwater monitoring activities conducted by D&H included gauging DP and AP monitoring wells as well as Anthony Waste Water Treatment Plant monitoring wells. Groundwater samples were collected from DP and AP monitoring wells. Groundwater samples were analyzed for nitrate, chloride, TDS, and TKN. The resulting data from this groundwater monitoring event are compiled and presented herein.

2.1 Well Gauging

From November 6 through November 7, 2017, representatives from D&H gauged the DP and AP with an electronic water level indicator. Anthony Waste Water Treatment Plant monitoring wells were gauged on November 9, 2017. Sunset Dairy well 257/260-01 was inaccessible due to the presence of tall crops. Table 1 provides a summary of the groundwater gauging data collected from the monitoring network. Locations of monitoring wells are shown on Figures 2, 3, 4, and 5. Well gauging field forms are available in Appendix A.

2.2 Groundwater Sampling

From November 20 through November 29, 2017, D&H sampled all AP monitoring wells with sufficient water. Well DAD-06 was dry and could not be sampled. Groundwater sampling was accomplished with disposable bailers. Three well casing volumes were purged unless the well contained insufficient water.

D&H sampled the DP wells from November 8 through December 4, 2017. Due to a declining water table, several wells were dry or contained insufficient water for sampling. Additionally, Sunset Dairy well 257/260-01 could not be sampled due to the presence of tall crops. Prior to sampling, the DP wells were purged of three well casing volumes, if practicable, by (1) hand-bailing with new disposable bailers and twine, (2) pumping with a submersible pump and new polyethylene tubing, or (3) pumping with a dedicated pump and tubing.

The wells were sampled from clean to dirty to the extent possible to minimize cross-contamination potential. All non-dedicated or disposable equipment was decontaminated between wells with an Alconox™ solution to further ensure sample quality. All meters were calibrated and/or checked with standards in accordance with manufacturer's specifications prior to daily use. Purge water was ground discharged.

When sufficient water was available, field parameters including specific conductance, temperature, pH, and dissolved oxygen were monitored using a YSI 556 MPS and recorded on field forms. ORP was measured using an Ultrameter® II. Dissolved oxygen and ORP were only measured in the first set of readings. Field parameters from August 2015 to present are summarized in Table 2. The sampling field forms are presented in Appendix A.

All groundwater samples were collected immediately after purging. Sampling was either accomplished by carefully pouring groundwater from the bailer into the sample containers or by pumping groundwater through polyethylene tubing into the sample container. Sample containers were provided by Xenco Laboratories. Container size, type, sample preservatives, analytical methods, and holding times are specified in Table 3. All samples were preserved in accordance

with method requirements, labeled, then immediately cooled to $<6^{\circ}\text{C}$ with ice and delivered under chain-of-custody to Xenco Laboratories in El Paso, Texas. All analytical laboratory reports are provided in Appendix B.

3.0 GROUNDWATER MONITORING RESULTS

3.1 Hydraulic Gradient and Direction of Groundwater Flow

This quarter, groundwater was present beneath the site at depths ranging from 10.05 feet below top-of-casing (ft btoc) in Sunset Dairy well 257-03 to 133.64 ft btoc in Dominguez #2 well 42-12. Groundwater was encountered at shallower depths near the Mesquite Drain and at greater depths near I-10 where the topographic elevation increases.

AP monitoring well DAD-25 may have been completed in a perched aquifer. Groundwater elevations have consistently measured approximately 10 feet higher than groundwater elevations in surrounding wells; as a result, this groundwater elevation has not been used in contouring for the central potentiometric surface map.

Potentiometric surface maps were completed using the monitoring well gauging data for the northern, central, and southern portions of the Dairies. Groundwater elevation data are provided in Table 1 and potentiometric surface maps are provided as Figures 2, 3, 4, and 5. Hydrographs were completed for select monitoring wells and are provided in Appendix C. On average, groundwater levels increased in all areas since the previous monitoring event. However, the long-term trend of decreasing water levels has resulted in many wells becoming dry.

The groundwater flow direction in northern, central, and southern portions of the regional aquifer was to the southeast. Groundwater flow in the southern portion of the perched aquifer was to the southwest. The hydraulic gradient across the Dairies is approximately 0.001 ft/ft.

3.2 Groundwater Field Parameters

Field parameters from the most recent monitoring event including specific conductance, pH, temperature, ORP, and dissolved oxygen were recorded on the sampling field forms (Appendix A) and are summarized in Table 2. Specific conductance, dissolved oxygen, and ORP trends for select wells are presented in Appendix D. Though dissolved oxygen and ORP measurements from wells containing a dedicated pump were recorded, these measurements are not considered representative of aquifer conditions.

3.3 Groundwater Analytical Results

3.3.1 Abatement Plan Well Results

Groundwater analyte concentrations were above the NMWQCC standard for nitrate (10 mg/L) in 16 of the 25 AP monitoring wells sampled. The AP wells that had nitrate concentrations above standards are DAD-02, DAD-07, DAD-08, DAD-09, DAD-10, DAD-12 (vertical delineation well), DAD-13, DAD-14, DAD-18 (vertical delineation well), DAD-19 (vertical delineation well), DAD-20, DAD-21, DAD-22, DAD-23, and DAD-26.

Nitrate concentrations decreased in AP wells DAD-01, DAD-05, DAD-11, DAD-12, DAD-14, DAD-16, DAD-17, DAD-18, DAD-19, DAD-22, DAD-23, and DAD-25. The largest decrease was observed in DAD-25 which decreased from 20.1 mg/L in Aug 2017 to 6.78 mg/L. Nitrate concentrations in the AP wells ranged from 0.222 mg/L in well DAD-03 to 70.7 mg/L in well DAD-21 for this sampling event.

Both chloride and TDS concentrations exceeded their respective NMWQCC standards in all AP wells sampled, with the exception of wells DAD-04, DAD-17, and DAD-22. Chloride was below the standard of 250 mg/L in these three wells with concentrations of 32.3 mg/L, 65.4 mg/L, and 4.03 mg/L, respectively. However, the chloride results for DAD-04 and DAD-22 were suspect for this event. TDS remained below the standard of 1,000 mg/L in wells DAD-04 and DAD-17 with concentrations of 900 mg/L and 690 mg/L, respectively. The TDS result for DAD-04 is anomalous and is considered suspect.

Chloride concentrations in the AP wells ranged from 65.4 mg/L in well DAD-10 to 1,580 mg/L in well DAD-08 for this event. Chloride concentrations of 4.03 mg/L and 32.3 mg/L were detected in DAD-22 and DAD-04, respectively, but the results are suspect and not used to assess the range of concentrations at the site. TDS ranged from 690 mg/L in well DAD-17 to 4,290 mg/L in well DAD-08.

Table 4 and Figures 6 through 9 present the analytical results for AP monitoring wells. Analytical laboratory reports are provided in Appendix B. Nitrate, chloride, and TDS concentration trends for select AP wells are presented by area in Appendix E.

3.3.2 Results by Areas at the Dairies

DP groundwater analytical results are summarized in Table 5. Nitrate, chloride, and TDS concentration trends for the AP wells by area are presented in Appendix E. These data were combined with the analytical data collected from the sampled AP monitoring wells and are plotted on Figures 6, 7, 8, and 9. Analytical laboratory reports are included in Appendix B. The following discussions summarize the results by area at the Dairies.

Note that TDS samples from Dominguez Dairy well 624-01 and Buena Vista Dairy II wells 74-01, 74-04, and 74-05 were analyzed outside of the recommended hold time. The results are consistent with historical data and therefore were not noted as ‘suspect’ in the data table. Due to repeated hold time violations and numerous suspect results, a new laboratory has been selected to analyze samples for the next monitoring event.

Northern Portion

Nitrate concentrations in the down gradient wells DAD-02 and DAD-23 remained above the NMWQCC of 10 mg/L at concentrations of 11.7 mg/L and 18.2 mg/L, respectively. Upgradient wells 86/340-01 and 70/86/340-01 (Northern Land Application wells) also remained above standard nitrate concentrations with concentrations of 10.5 mg/L and 19.6 mg/L, respectively. Eastern cross-gradient wells 42-10, 42-11, and 42-12 had nitrate concentrations below the standard. Eastern cross-gradient AP well DAD-01 decreased to below the standard for this event at a concentration of 9.46 mg/L. Eastern cross-gradient well DAD-13 remained above standards at a concentration of 21.5 mg/L. The western delineating cross-gradient well Dominguez 624-05

had a nitrate concentration of 6.72 mg/L in February 2013, however, the well has remained dry since that time. Dominguez #2 well 42-02 is approximately 1,000 feet east of Dominguez 624-05 and is the nearest well. Concentrations in Dominguez #2 well 42-02 has been just above NMWQCC standards for the last year; in August 2017, the nitrate concentration in the sample collected from this well was 10.2 mg/L. The highest nitrate concentration in the northern portion was observed in Dominguez Dairy #2 well 42-06 with a concentration of 129 mg/L.

The chloride concentrations were generally above the standard in wells sampled within the northern portion of the Dairies. Exceptions include chloride detected below the standard at Dominguez 2 well 42-08, Gonzalez well 177-02, and Organ wells 126-09 and 126-12; chloride concentrations were 135 mg/L, 247 mg/L, 66.7 mg/L, and 24.5 mg/L, respectively. Note that chloride concentrations detected in wells 177-02 and 126-12 are anomalously low and have been deemed suspect. TDS concentrations were above the standard in wells sampled within the northern portion of the Dairies with the exception of Organ Dairy well 126-09. TDS was detected at well 126-09 at a concentration of 555 mg/L. The highest concentrations of chloride and TDS were observed at Northern Land Application area well 70-03 with concentrations of 3,320 mg/L and 7,940 mg/L, respectively.

Central Portion

The highest nitrate concentration in the central portion was observed in Big Sky Dairy well 833-07 with a concentration of 68.2 mg/L. The upgradient extent of the nitrate plume is defined in the central portion by Buena Vista Dairy II well 74-03 which was below NMWQCC standards for nitrate with a concentration of 1.21 mg/L. Sunset Dairy well 257-02 has historically defined the downgradient extent of the plume, however, the nitrate concentration has been at or above the standard for the last several sampling events; during the most recent sampling event nitrate was detected at a concentration of 14.0 mg/L. AP well DAD-25 is downgradient and slightly to the east in the central portion. The nitrate concentration in DAD-25 decreased to below the standard for this event with a concentration of 6.78 mg/L, however, this well is thought to be completed in a perched aquifer. The eastern cross-gradient extent of the plume is defined by wells DAD-07 and DAD-15. The nitrate concentration was below the standard in AP well DAD-15, but above the standard for the second consecutive event in AP well DAD-07 with a concentration of 12.3 mg/L. The western extent is defined by wells DAD-04, DAD-16, 167-02, 167-03, 167-05, 167-08, and 833-10; nitrate concentrations remain below standards in these wells.

Chloride and TDS concentrations were generally above standards in wells within the central portion of the Dairies. Chloride was below the standard in River Valley well 167-07 and AP well DAD-17 with concentrations of 130 mg/L and 65.4 mg/L, respectively. TDS was below the standard in AP well DAD-17 with a concentration of 690 mg/L. Chloride and TDS were also below standard at DAD-04, though these results are anomalously low and have been deemed suspect. The highest chloride and TDS concentrations were observed at well DAD-08 at 1,580 mg/L and 4,290 mg/L, respectively. Well DAD-08 is located east of Sunset Dairy, adjacent to an irrigation well that is no longer in use.

Southern Portion

Nitrate is present within both the regional and perched aquifers in the southern portion of the

Dairies. All of the wells in the regional aquifer were below the NMWQCC standard with the exception of Del Oro Dairy well 692-05 and AP well DAD-10, which were above standard with nitrate concentrations of 11.9 mg/L and 14.5 mg/L, respectively.

Nitrate was above the standard in all the monitoring wells in the perched aquifer. The sample with the highest nitrate concentration in the shallow perched aquifer was from AP well DAD-21 with a concentration of 70.7 mg/L. The nitrate concentrations in AP wells DAD-09, DAD-20, DAD-21, DAD-22, and DAD-26 remained above the standard for this event at 49.0 mg/L, 36.6 mg/L, 70.7 mg/L, 16.2 mg/L and 65.1 mg/L, respectively.

In the regional aquifer, chloride concentrations were above the NMWQCC standard and ranged from 405 mg/L in Del Oro Dairy well 692-09 to 576 mg/L in Del Oro Dairy well 692-07. TDS ranged from 970 mg/L in Del Oro Dairy well 692-09 to 1,540 mg/L in AP well DAD-10; well 692-09 was the only location with a TDS concentration below the standard. Upgradient well Del Oro well 692-08 had a chloride concentration of 420 mg/L and a TDS concentration of 1,280 mg/L, both of which are above standard.

In the perched aquifer, chloride was detected below the standard at AP well DAD-22, which had a suspect concentration of 4.03 mg/L. Excluding the suspect concentration of 4.03 mg/L at DAD-22, chloride concentrations in the perched aquifer ranged from 746 mg/L in Del Oro well 692-02 to 1,160 mg/L in AP well DAD-26. TDS in the perched aquifer ranged from 2,250 mg/L in AP well DAD-22 to 3,110 mg/L in AP well DAD-26.

4.0 CONCLUSION AND RECOMMENDATIONS

This groundwater monitoring event included the gauging of all accessible DP and AP wells and sampling of all accessible wells that contained sufficient water. Based on the data collected, the following conclusions and recommendations are presented:

- Depth to groundwater ranged from 10.05 ft btoc to 133.64 ft btoc.
- On average, water levels in the northern, central, and southern portions have increased when compared to the previous monitoring event.
- The groundwater flow direction of the regional aquifer is to the southeast in the northern, central, and southern portions of the Dairies. The hydraulic gradient in the regional aquifer is 0.001 ft/ft.
- The perched aquifer at Del Oro Dairy has a groundwater flow direction toward the southwest.
- Nitrate was below the NMWQCC standard of 10 mg/L in 9 of the 25 groundwater samples collected from the AP wells.
- Chloride was above the NMWQCC standard of 250 mg/L in all but 8 monitoring wells, though chloride results from 4 of these wells are anomalously low and are considered suspect.
- TDS was above the NMWQCC standard of 1,000 mg/L in all but 4 monitoring wells. The TDS concentration at one of the wells is anomalously low and is considered suspect.
- Chloride and TDS remain above standards in wells upgradient of the northern, central, and southern portions of the plume at the Dairies.

Notes:

^a Horizontal control to NM State Plane Coordinates Central NAD83 Grid Coordinates (in feet)

^b Vertical Control to NAVD88 Datum in feet above mean sea level

^c Measured in feet below the top of casing at survey point on north side of well

^d Measured in feet

Wells were gauged on a different date by Magee and Associates Inc.

Wells were gauged on a different date by EnviroCompliance Inc.

Measured data were suspect and corrected to reflect appropriate trends in accordance with surrounding wells

NOTES:

* = Well contains a pump; as a result, DO and ORP values are not representative of aquifer conditions.

°C = Degrees celsius

DO = Dissolved oxygen

mg/L = Milligrams per liter

mV = Millivolts

NM = Not measured

ORP = Oxidation-reduction potential

SpC = Specific conductance

Temp = Temperature

uS/cm = Microsiemens per centimeter

**TABLE 3. SUMMARY OF GROUNDWATER SAMPLE ANALYTICAL METHODS AND SAMPLING REQUIREMENTS
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

Target Analytes	Analytical Method	Sample Container	Preservative	Holding Time
Nitrate - N	EPA 300.0	250 mL HDPE Bottle	Cool to <6°C,	48 Hours
Total Kjeldhal Nitrogen	SM 4500 NORG C	250 mL HDPE Bottle	H ₂ SO ₄ to pH <2, Cool to <6°C	28 Days
Chloride	EPA 300.0	250 mL HDPE Bottle	Cool to <6°C	28 Days
Total Dissolved Solids	SM 2540 C MOD	250 mL HDPE Bottle	Cool to <6°C	28 Days
Total Organic Carbon	EPA 415.1	2 - 40 mL Glass VOA Vial	H ₂ SO ₄ to pH <2, Cool to <6°C	28 Days
CSIA - ¹⁵ N/ ¹⁴ N	¹⁵ N/ ¹⁴ N (δ ¹⁵ N)	1 - 1 liter Plastic Poly Bottle	Cool to <6°C	-

NOTES:
 °C = Degree Celsius
¹⁴N = Nitrogen 14
¹⁵N = Nitrogen 15
 CSIA = Compound-specific isotope analysis
 EPA = U.S. Environmental Protection Agency
 HDPE = High-density polyethylene
 mL = milliliter
 MOD = Modified
 N = Nitrogen
 SM= Standard method
 VOA = Volatile organic analysis

- LEGEND:**
- Abatement Plan Monitoring Well
 - Discharge Plan Monitoring Well
 - Abatement Plan Vertical Delineation Monitoring Well
 - Interstate Highway
 - State Highway
 - Other Road
 - Land Owned by Dairies
 - Land Application on Non-Dairy Property
 - Stage 2 Abatement Plan Area
 - Public Land Survey System

NOTES:
 Units are in milligrams per liter.
 Cl = Chloride
 NO₃ = Nitrate as N
 TDS = Total Dissolved Solids
