STATE OF NEW MEXICO
BEFORE THE ENVIRONMENTAL IMPROVEMENT BOARD

IN THE MATTER OF PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – *OPERATING PERMIT EMISSIONS FEES* AND 20.2.75 NMAC – *CONSTRUCTION PERMIT FEES*

No. EIB 25-77(R)

New Mexico Environment Department,

Petitioner.

NEW MEXICO ENVIRONMENT DEPARTMENT'S NOTICE OF INTENT TO PRESENT TECHNICAL TESTIMONY PETITION FOR REGULATORY CHANGE TO REPEAL AND REPLACE 20.2.71 NMAC, *OPERATING PERMIT EMISSIONS FEES*, AND 20.2.75 NMAC, *CONSTRUCTION PERMIT FEES*

The New Mexico Environment Department ("Department"), pursuant to 20.1.1.302 NMAC, respectfully submits this Notice of Intent to Present Technical Testimony in support of the Department's Petition to repeal and replace 20.2.71 NMAC, *Operating Permit Emissions Fees,* and 20.2.75 NMAC, *Construction Permit Fees* ("Petition"). The Department's Notice of Intent to Present Technical Testimony is based on the Petition and the Department's proposal to repeal and replace of 20.2.71 NMAC, *Operating Permit Emissions Fees*, **NMED Exhibit 1** (clean) and **NMED Exhibit 2** (redline to current rule) ("Revised Part 71") and 20.2.75 NMAC, *Construction Permit Fees*, **NMED Exhibit 4** (clean) and **NMED Exhibit 5** (redline to current rule), which are the text of the Department's recommended modifications for the Board's adoption in place of the regulatory changes proposed in the Petition as 20.2.71 NMAC (Petition Exhibits B and D) and 20.2.75 NMAC (Petition Exhibits C and D) (filed Dec. 2, 2025).[1] Filed separately but

[1] The Department's recommended modifications from the Petition draft rules to the Notice of Intent to Present Technical Testimony rules are **NMED Exhibit 3** for Part 71 and **NMED Exhibit 6** for Part 75.

simultaneously with the Department's Notice of Intent to Present Technical Testimony is the Department's Statement of Reasons with Findings of Fact & Conclusions of Law in Support of Regulatory Change to Repeal and Replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*. See 20.1.1.302(A)(6) NMAC (requiring submission of a statement of reasons with the notice of intent).

Although 20.1.1.402(A) NMAC requires an original and nine copies of each document be filed in paper form for the Board's use, general practice is to only file one copy for the Hearing Officer. The Department will promptly deliver to the Board Administrator one copy of each document filed and any additional copies requested by the Board and its counsel.

I. PERSON FOR WHOM TECHNICAL WITNESSES WILL TESTIFY

Witnesses will testify for the Department.

II. NAME AND QUALIFICATIONS OF TECHNICAL WITNESSES

A. James C. Kenney, Secretary of the Department, will testify for the Department in support of Revised Part 71 and Revised Part 75. Secretary Kenney's written narrative direct testimony is attached as **NMED Exhibit 8**. Secretary Kenney has held his position since January 2019. Secretary Kenney's resume describing his educational and work background is attached as **NMED Exhibit 9**, and his qualifications to testify are summarized at the beginning of his written narrative direct testimony (**NMED Exhibit 8**).

B. Alternatively, Michelle Miano, Division Director of the Department's Environmental Protection Division, will testify for the Department in support of Revised Part 71 and Revised Part 75 instead of Secretary Kenney, providing the written narrative direct testimony attached as **NMED Exhibit 8**. Deputy Division Director Miano is qualified to provide such testimony, as she oversees the Air Quality Bureau, Climate Change Bureau, and Radiation Control Bureau, with a focus on advancing the Department's strategic priorities; assisting with complex

projects, including rulemakings before the Environmental Improvement Board ("Board"); and ensuring sufficient program resources for each bureau within the Environmental Protection Division. Deputy Division Director Miano has held her position since January 2023. Deputy Division Director Miano's resume further describing her educational and work background is attached as **NMED Exhibit 78**.

C. Cindy Hollenberg, Chief of the Department's Air Quality Bureau, will testify for the Department in support of Revised Part 71 and Revised Part 75. Bureau Chief Hollenberg's written narrative direct testimony is attached as **NMED Exhibit 16**. Bureau Chief Hollenberg's resume describing her educational and work background is attached as **NMED Exhibit 17**, and her qualifications to testify are summarized at the beginning of her written narrative direct testimony (**NMED Exhibit 16**).

D. Bret Anderson, Chief of the Department's Environmental Protection Compliance and Enforcement Bureau, will testify for the Department in support of Revised Part 71 and Revised Part 75. Bureau Chief Anderson's written narrative direct testimony is attached as **NMED Exhibit 57**. Bureau Chief Anderson's resume describing his educational and work background is attached as **NMED Exhibit 58**, and his qualifications to testify are summarized at the beginning of his written narrative direct testimony (**NMED Exhibit 57**).

E. Brian Polgar, Section Chief of the Department's Air Quality Bureau Planning Section, will testify for the Department in support of Revised Part 71 and Revised Part 75. Mr. Polgar's written narrative direct testimony is attached as **NMED Exhibit 65**. Mr. Polgar's resume describing his educational and work background is attached as **NMED Exhibit 66**, and his qualifications to testify are summarized at the beginning of his written narrative direct testimony (**NMED Exhibit 65**).

III. HEARING LOCATIONS AND PRESENTATION OF TESTIMONY

The hearing on the Petition will be in a hybrid format, including an in-person location and a virtual platform for participating. The Department intends to call its witnesses to testify in-person but reserves the right to have a witness testify on the virtual platform should circumstances necessitate such accommodation. The Department may call its witnesses individually or as a panel in accordance with permissive general practice before the Board. If the Department presents its witnesses in a panel format, the Department reserves the right to object to cross-examination that exceeds the scope of direct testimony, or that would result in harassment, intimidation, needless expenditure of time, or undue repetition, consistent with 20.1.1.401(C) NMAC. The Department requests it present its witnesses first, as is common practice and there is no order stating otherwise. See 20.1.1.400(B)(3) NMAC.

The Department's technical witnesses will orally summarize their written narrative direct testimony in place of reading their testimony into the record at the hearing, subject to the requirement that each technical witness properly authenticates their testimony at the hearing.

The Department estimates the oral presentations with demonstrative presentations will take the following amount of time:

Secretary Kenney – 60 minutes

Bureau Chief Hollenberg – 60 minutes

Bureau Chief Anderson – 30 minutes

Mr. Polgar – 60 minutes

Thus, the Department respectfully requests the aforementioned amount of time to present its witnesses.

Additionally, the Department requests the Board allows its counsel at least 20 minutes for an oral opening statement prior to presenting its witnesses. See 20.1.1.400(B)(2) NMAC.

Lastly, the Department requests the Board allows its counsel at least 20 minutes for an oral closing statement after all evidence has been presented in the matter. See 20.1.1.400(B)(6) NMAC.

IV. TEXT OF PROPOSED RULE CHANGES

The Department's recommended modifications to the proposed regulatory changes to repeal and replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, **NMED Exhibit 1** (clean) **NMED Exhibit 2** (redline to current rule) and 20.2.75 NMAC, *Construction Permit Fees*, **NMED Exhibit 4** (clean) and **NMED Exhibit 5** (redline to current rule), all attached to this filing.

V. LIST AND DESCRIPTION OF EXHIBITS

The Department intends to introduce during the hearing the following exhibits, which are identified in the respective written testimony exhibits:

NMED Exhibit #	File Name	Exhibit Description
NMED Exhibit 1	NMED Exhibit 1_Revised Proposed 20.2.71 NMAC_Clean	Revised Proposed Replacement Rule 20.2.71 NMAC, *Operating Permit Emissions Fees* (Clean)
NMED Exhibit 2	NMED Exhibit 2_Revised Proposed 20.2.71 NMAC_Redline v Current	Revised Proposed Replacement Rule 20.2.71 NMAC, *Operating Permit Emissions Fees* (Redline showing changes versus the current rule)
NMED Exhibit 3	NMED Exhibit 2_Revised Proposed 20.2.71 NMAC_Redline v Petition	Revised Proposed Replacement Rule 20.2.71 NMAC, *Operating Permit Emissions Fees* (Redline showing changes versus the proposed rule attached to the Department's petition as Exhibit B)
NMED Exhibit 4	NMED Exhibit 4_Revised Proposed 20.2.75 NMAC_Clean	Revised Proposed Replacement Rule 20.2.75 NMAC, *Construction Permit Fees* (Clean)
NMED Exhibit 5	NMED Exhibit 5_Revised Proposed 20.2.75 NMAC_Redline v Current	Revised Proposed Replacement Rule 20.2.75 NMAC – *Construction Permit Fees* (Redline showing changes versus the current rule)
NMED Exhibit 6	NMED Exhibit 6_Revised Proposed 20.2.75 NMAC_Redline v Petition	Revised Proposed Replacement Rule 20.2.75 NMAC – *Construction Permit Fees* (Redline showing changes versus the proposed rule attached to the Department's petition as Exhibit C)

VI. RESERVATION OF RIGHTS

The Department reserves the right to object to questioning that seeks legal argument, policy positions, or general comments from technical witnesses, as such matters fall outside the scope of technical testimony as defined in 20.1.1.7(S) NMAC.

The Department reserves the right to object to exhibits or testimony that are incompetent

or unduly repetitious pursuant to 20.1.1.401(B) NMAC.

The Department reserves the right to object to the admission of technical testimony or exhibits offered by any person for whom a timely notice of intent was not filed in accordance with 20.1.1.302 NMAC.

The Department reserves the right to submit written responses or any post-hearing submission authorized pursuant to 20.1.1.404 NMAC, or to object to the allowance of such submissions where appropriate.

The Department reserves the right to call any other witnesses necessary to authenticate exhibits introduced by the Department.

If other notices of intent to present technical testimony are filed, the Department reserves the right to call any person identified in such other notice.

The Department reserves the right to call any other person not already identified but who is necessary to present rebuttal testimony or offer a rebuttal exhibit, to respond to other notices of intent to present technical testimony, public comment, and any testimony or exhibit offered at the public hearing.

The Department does not anticipate offering any other technical testimony from other Department witnesses for direct testimony, as of the date of this filing. However, several Department staff members will be available at the hearing should the Board request additional information.

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 71 OPERATING PERMIT EMISSIONS FEES

20.2.71.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.71.1 NMAC - Rp, 20.2.71.1 NMAC, 6/1/2026]

20.2.71.2 SCOPE: This Part applies to all persons required to obtain a permit under 20.2.70 NMAC (Operating Permits).
[20.2.71.2 NMAC - Rp, 20.2.71.2 NMAC, 6/1/2026]

20.2.71.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph (7) of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.71.3 NMAC - Rp, 20.2.71.3 NMAC, 6/1/2026]

20.2.71.4 DURATION: Permanent.
[20.2.71.4 NMAC - Rp, 20.2.71.4 NMAC, 6/1/2026]

20.2.71.5 EFFECTIVE DATE: June 1, 2026, unless a later date is cited at the end of a section.
[20.2.71.5 NMAC - Rp, 20.2.71.5 NMAC, 6/1/2026]

20.2.71.6 OBJECTIVE: The objective of this Part is to establish a schedule of operating permit emissions fees.
[20.2.71.6 NMAC - Rp, 20.2.71.6 NMAC, 6/1/2026]

20.2.71.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part, the following definitions apply.

A. "Allowable emission rate" means the maximum emission allowed by the more stringent emission limitation applicable to the source contained in:

(1) any New Mexico air quality control regulation;

(2) any federal standard of performance, emission limitation, or emission standard adopted pursuant to 42 U.S.C. Section 7411 or 7412; or

(3) any condition within a construction or operating permit issued by the department.

B. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any fee pollutant.

C. "Fee pollutant" means:

(1) sulfur dioxide, nitrogen dioxide, carbon monoxide, PM10, PM2.5, and volatile organic compounds; and

(2) any hazardous air pollutant that is subject to any standard promulgated pursuant to Section 112 of the federal act.

D. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

E. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to Section 112 of the federal act.

F. "Operator" means the person or persons responsible for the overall operation of a facility.

G. "Owner" means the person or persons who own a facility or part of a facility.

H. "Stationary source" means any building, structure, facility, or installation that emits or may emit any air pollutant.

[20.2.71.7 NMAC - Rp, 20.2.71.7 NMAC, 6/1/2026]

20.2.71.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 771 - Operating Permit Emission Fees, filed November 15, 1993, as amended.

A. All references to AQCR 771 in any other rule shall be construed as a reference to this Part.

NMED Exhibit 1_000001

B. The amendment and supersession of AQCR 771 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 771.

[20.2.71.8 NMAC - Rp, 20.2.71.8 NMAC, 6/1/2026]

20.2.71.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico environment department, air quality bureau. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505].

[20.2.71.9 NMAC - Rp, 20.2.71.9 NMAC, 6/1/2026]

20.2.71.10 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.71.10 NMAC - N, 6/1/2026]

20.2.71.11 to 20.2.71.108 [RESERVED]

20.2.71.109 [RESERVED]

[20.2.71.109 NMAC – Rp, 20.2.71.109 NMAC, 6/1/2026]

20.2.71.110 FEE REQUIREMENT:

A. An annual emissions fee shall be paid to the department by each owner or operator subject to this Part.

B. The annual emissions fee shall be assessed:

(1) for a major source as defined in 20.2.70 NMAC (Operating Permits), for all emissions units;

(2) for all other stationary sources, for emissions units which cause the source to be subject to 20.2.70 NMAC; and

(3) for emissions above annual allowable emission limits for the source categories in Paragraphs (1) and (2) of this Subsection.

C. The annual emissions fee shall be calculated in conformance with 20.2.71.111 NMAC.

[20.2.71.110 NMAC - Rp, 20.2.71.110 NMAC, 6/1/2026]

20.2.71.111 FEE DETERMINATION:

A. Annual emissions fee calculation.

(1) The annual emissions fee shall be calculated by taking the product of the allowable emission rate for each fee pollutant expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) The allowable emission rate which shall be used in the fee calculation for this Subsection is the allowable emission rate which exists on December 31 for each year.

(3) Allowable emission rates shall be calculated to the tenth of a ton for each emissions unit and then summed to determine the tons per year for the facility. Total facility tons per year quantities shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(4) Emissions from those operations determined to be insignificant activities by the department under 20.2.70 NMAC shall not be included in the fee calculation for this Subsection.

(5) Fugitive emissions which have an allowable emission rate shall be included in the fee calculation for this Subsection.

(6) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(7) A maximum of 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(8) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has the higher allowable emission rate.

NMED Exhibit 1_000002

(9) The failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.

B. Source shutdown.

(1) The annual emissions fee shall not be reduced due to lack of operation of any emissions unit, except when:

(a) the discontinued operation is accounted for in an allowable emission rate contained within a construction or operating permit issued by the department;

(b) a construction or operating permit issued by the department has been discontinued or terminated and the source ceased operation; or

(c) the emissions unit is located at a stationary source which meets the criteria of Paragraph (2) of this Subsection.

(2) The annual emissions fee shall be reduced when all operations at a stationary source have been shut down for a period greater than 60 consecutive days within a calendar year. In this case, the annual emissions fee calculation shall be adjusted by reducing the annualized allowable emission rate for each day the stationary source was shut down.

C. Annual emissions fee for emissions above annual allowable emission limits.

(1) The annual emissions fee for emissions above annual allowable emission limits shall be based on all emissions above annual allowable emission limits of fee pollutants reported or required to be reported by a stationary source through December 31 in accordance with Subsection E of 20.2.70.302 NMAC. The fee shall be calculated by taking the product of the emissions above annual allowable emission limits for each fee pollutant above and beyond the allowable annual emission limit per unit expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) Total facility tons per year quantities of emissions above annual allowable emission limits shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(3) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(4) A maximum of 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(5) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has higher emissions above annual allowable emission limits.

[20.2.71.111 NMAC - Rp, 20.2.71.111 NMAC, 6/1/2026]

20.2.71.112 EMISSIONS FEE:

A. The fee for each fee pollutant shall be $85 per ton on an annual basis, except as provided for in Subsection B of this Section.

B. The fee for each hazardous air pollutant shall be $258 per ton on an annual basis for any stationary source which is only a major source, as defined in 20.2.70 NMAC, for any hazardous air pollutant.

C. The fee per ton of emissions above annual allowable emission limits shall be identical to the fee per ton of allowable emissions.

D. Beginning in 2028, the fees referenced in this Section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI) in accordance with Section 502(b)(3)(B)(v) of the federal act. In the event there is a decrease or absence of change in the CPI, fees shall remain the same until the next increase in the CPI.

[20.2.71.112 NMAC - Rp, 20.2.71.112 NMAC, 6/1/2026]

20.2.71.113 NOTIFICATION, PAYMENT, LATE FEE AND ENFORCEMENT:

A. Schedule.

(1) The department shall by April 1 of each year provide to each owner or operator subject to this Part notification, which shall contain:

(a) the annual emissions fee based on the requirements of this Part which is currently due; and

(b) a summary of the basis for the required annual emissions fee.

NMED Exhibit 1_000003

(2) Upon discovery of an error in any past notification of annual emissions fees due, the department shall promptly notify the owner or operator and provide credit for overcharges or require payment for undercharges.

(3) Each owner or operator shall pay by June 1 the annual emissions fee contained in the department's notification required under Paragraph (1) of this Subsection. Failure to remit the full annual emissions fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual emissions fee or $5,000, whichever is less. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, which shall state the late fee and unpaid annual emissions fee balance currently due. The owner or operator shall pay the amount stated in the department's notification within 30 days of the date of the notification. If the amount stated in the notification is not timely paid, the late fee shall increase to one hundred percent of the annual emissions fee or $10,000, whichever is less, and shall be due immediately without further notification from the department, along with the unpaid annual emissions fee balance.

(4) Each owner or operator shall pay invoices based on notices of errors in past notifications within 60 days of the invoice date.

B. Payment.

(1) Annual emissions fees shall be remitted in the form of a certified check or money order made payable to the environment department, electronic payment, or other method as allowed by the state. Annual emissions fees remitted in the form of a certified check or money order shall be submitted to the air quality bureau at the address specified in the notice.

(2) Upon receipt of the annual emissions fee payment, it shall be deposited in the state air quality permit fund.

(3) Annual emissions fees shall be paid in U.S. dollars.

C. Nonpayment. Failure to remit the full annual emissions fee, including any late fees, required by the due date specified in Subsection A of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes suspension or revocation of any permit.

[20.2.71.113 NMAC - Rp, 20.2.71.113 NMAC, 6/1/2026]

HISTORY OF 20.2.71 NMAC:

Pre NMAC History: The material in this Part was derived from that previously filed with the commission of public records - state records center and archives.

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93.

History of Repealed Material:

20.2.71 NMAC, Operating Permit Emissions Fees, effective 10/31/02, repealed, effective 6/1/26.

Other History:

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93, was **renumbered** into first version of the New Mexico Administrative Code as 20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95;

20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95, was **renumbered, reformatted and replaced** by 20.2.71 NMAC, Operating Permit Emission Fees, effective 10/31/02.

20.2.71.7 DEFINITIONS. In addition to the terms defined in 20.2.2 NMAC (definitions), as used in this part, the following definitions apply.

A. "Allowable emission rate" means the maximum emission allowed by the more stringent emission limitation applicable to the source contained in:

(1) any New Mexico air quality control regulation;

(2) any federal standard of performance, emission limitation, or emission standard adopted pursuant to 42 U.S.C. Section 7411 or 7412; or

(3) any condition within a construction or operating permit issued by the department.

B. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any fee pollutant.

C. "Fee pollutant" means:

(1) sulfur dioxide, nitrogen dioxide, carbon monoxide, [~~total suspended particulate matter~~] PM10, PM2.5, and volatile organic compounds[~~, and mercury~~]; and

(2) any hazardous air pollutant that is subject to any standard promulgated pursuant to section 112 of the federal act.

D. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

E. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to section 112 of the federal act.

F. "Operator" means the person or persons responsible for the overall operation of a facility.

G. "Owner" means the person or persons who own a facility or part of a facility.

[~~**H. "Part"** means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.~~]

[~~**I**~~] **H. "Stationary source"** means any building, structure, facility, or installation that emits or may emit any air pollutant.

[[~~11/30/95;~~] 20.2.71.7 NMAC - [~~Rn, 20 NMAC 2.71.107 10/31/02; A, 12/15/04; A, 06/15/07~~] Rp, 20.2.71.7 NMAC, 6/1/2026]

NMED Exhibit 2_000001

20.2.71.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 771 - Operating Permit Emission Fees, filed November 15, 1993, as amended.

A. All references to AQCR 771 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 771 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 771.

[[~~11/30/95;~~] 20.2.71.8 NMAC - [~~Rn, 20 NMAC 2.71.106 10/31/02~~] Rp, 20.2.71.8 NMAC, 6/1/2026]

20.2.71.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau [~~, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505]~~]. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505].

[[~~11/30/95;~~] 20.2.71.9 NMAC - [~~Rn, 20 NMAC 2.71.108 10/31/02~~] Rp, 20.2.71.9 NMAC, 6/1/2026]

20.2.71.10 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.71.10 NMAC - N, 6/1/2026]

20.2.71.109 [~~APPLICABILITY: Each owner or operator required to obtain an operating permit under 20.2.70 NMAC (Operating Permits) shall be subject to the requirements of this Part.~~] [RESERVED]

[[~~11/30/95;~~] 20.2.71.109 NMAC - [~~Rn, 20 NMAC 2.71.109 10/31/02~~] Rp, 20.2.71.109 NMAC, 6/1/2026]

20.2.71.110 FEE REQUIREMENT

A. An annual [~~operating permit emission~~] emissions fee shall be paid to the department by each owner or operator subject to this part.

B. The annual emissions fee shall be assessed:

(1) for a major source as defined in 20.2.70 NMAC (Operating Permits), for all emissions units;

(2) for all other stationary sources, for emissions units which cause the source to be subject to 20.2.70 NMAC; and

(3) for emissions above annual allowable emission limits for the source categories in Paragraphs (1) and (2) of this Subsection [~~B of Section 20.2.71.110 NMAC~~].

C. The annual emissions fee shall be calculated in conformance with 20.2.71.111 NMAC.

[[~~11/30/95;~~] 20.2.71.110 NMAC - [~~Rn, 20 NMAC 2.71.110 10/31/02; A, 12/15/04~~] Rp, 20.2.71.110 NMAC, 6/1/2026]

20.2.71.111 FEE DETERMINATION

A. Annual emissions fee calculation.

(1) The annual emissions fee shall be calculated by taking the product of the allowable emission rate for each fee pollutant expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) The allowable emission rate which shall be used in the fee calculation for this Subsection is

[~~**(a)**~~] the allowable emission rate which exists on December 31 for each year. [~~; and~~

~~**(b)** the failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.~~]

(3) Allowable emission rates shall be calculated to the tenth of a ton for each [~~emission~~] emissions unit and then summed to determine the tons per year for the facility. Total facility tons per year quantities

NMED Exhibit 2_000002

shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(4) Emissions from those operations determined to be insignificant activities by the department under 20.2.70 NMAC shall not be included in the fee calculation for this Subsection.

(5) Fugitive emissions which have an allowable emission rate shall be included in the fee calculation for this Subsection.

(6) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(7) A maximum of [~~six thousand~~] 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(8) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has the higher allowable emission rate.

(9) The failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.

B. Source shutdown.

(1) The annual emissions fee shall not be reduced due to lack of operation of any emissions unit, except when:

(a) the discontinued operation is accounted for in an allowable emission rate contained within a construction or operating permit issued by the department;

(b) a construction or operating permit issued by the department has been discontinued or terminated and the source ceased operation; or

(c) the emissions unit is located at a stationary source which meets the criteria of Paragraph (2) of this Subsection [~~B of 20.2.71.111 NMAC~~].

(2) The annual emissions fee shall be reduced when all operations at a stationary source have been [~~shutdown~~] shut down for a period greater than 60 consecutive days within a calendar year. In this case, the annual emissions fee calculation shall be adjusted by reducing the annualized allowable emission rate[~~, or potential to emit if applicable,~~] for each day the stationary source was [~~shutdown~~] shut down.

C. Annual emissions fee for emissions above annual allowable emission limits.

(1) The annual emissions fee for emissions above annual allowable emission limits shall be based on all emissions above annual allowable emission limits of fee pollutants reported or required to be reported by a stationary source through December 31 in accordance with Subsection E of 20.2.70.302 NMAC. The fee shall be calculated by taking the product of the emissions above annual allowable emission limits for each fee pollutant above and beyond the allowable annual emission limit per unit expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) Total facility tons per year quantities of emissions above annual allowable emission limits shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(3) Any quantity of a pollutant which is assessed a fee pursuant to this [~~section~~] Subsection because it is a hazardous air pollutant shall not be assessed additional fees [~~pursuant to this section~~].

(4) A maximum of [~~six thousand~~] 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this [~~section~~] Subsection.

(5) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has higher emissions above annual allowable emission limits.

[[~~11/30/95;~~] 20.2.71.111 NMAC - [~~Rn, 20 NMAC 2.71.111 10/31/02; A, 12/15/04~~] Rp, 20.2.71.111 NMAC, 6/1/2026]

20.2.71.112 [~~EMISSION~~] EMISSIONS FEE

A. The fee for each fee pollutant shall be [~~$20.00~~] $85 per ton on an annual basis, except as provided for in Subsection B of [~~20.2.70.112 NMAC~~] this Section. [~~This fee shall increase by $2.00 per ton on an annual basis beginning on January 1, 2010 through the fees due on June 1, 2012.~~]

B. The fee for each hazardous air pollutant shall be [~~$165.00~~] $258 per ton on an annual basis for any stationary source which is only a major source, as defined in 20.2.70 NMAC, for any hazardous air pollutant.

NMED Exhibit 2_000003

[~~C. Fees for mercury emissions.~~

~~(1) For the calendar years 2010 through 2017, the fee for mercury emissions from stationary sources subject to 20.2.85 NMAC shall be $8.88 per ounce annually.~~

~~(2) For the calendar years 2018 and thereafter, the fee for mercury emissions] from stationary sources subject to 20.2.85 NMAC shall be $22.51 per ounce annually.]~~

[~~D~~] **C.** The fee per ton of emissions above annual allowable emission limits shall be identical to the fee per ton of allowable emissions.

[~~E~~] **D.** Beginning [~~on January 1, 2009~~] in 2028, the fees referenced in this section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI) in accordance with Section 502(b)(3)(B)(v) of the federal [~~Clean Air~~] Act. In the event there is a decrease or absence of change in the CPI, fees shall remain the same until the next increase in the CPI.

[[~~11/30/95;~~] 20.2.71.112 NMAC - [~~Rn, 20 NMAC 2.71.112 10/31/02; A, 12/15/04; A, 06/15/07; A, 01/09/09~~] Rp, 20.2.71.112 NMAC, 6/1/2026]

20.2.71.113 NOTIFICATION, [~~FEE~~] PAYMENT, LATE FEE AND ENFORCEMENT

A. Schedule.

(1) The department shall by April 1 of each year provide to each owner or operator subject to this part notification, which shall contain:

(a) the annual emissions fee based on the requirements of this part which is currently due; and

(b) a summary of the basis for the required annual missions fee.

(2) Upon discovery of an error in any past notification of annual emissions fees due, the department shall promptly notify the owner or operator and provide credit for overcharges or require payment for undercharges.

(3) Each owner or operator shall pay by June 1 the annual emissions fee contained in the department's notification required under Paragraph (1) of this Subsection [~~A of Section 20.2.71.113 NMAC~~]. Failure to remit the full annual emissions fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual emissions fee or $5,000, whichever is less. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, which shall state the late fee and unpaid annual emissions fee balance currently due. The owner or operator shall pay the amount stated in the department's notification within 30 days of the date of the notification. If the amount stated in the notification is not timely paid, the late fee shall increase to one hundred percent of the annual emissions fee or $10,000, whichever is less, and shall be due immediately without further notification from the department, along with the unpaid annual emissions fee balance.

(4) Each owner or operator shall pay invoices based on notices of errors in past notifications within 60 days of the invoice date.

[~~**(5)** The department shall commence invoicing for fees for emissions above annual allowable emission limits reported by the method specified by the department in calendar year 2007.~~]

B. Payment.

(1) Annual emissions fees shall be remitted in the form of a certified check or money order made payable to the environment department [~~and~~] , electronic payment, or other method as allowed by the state. Annual emissions fees remitted in the form of a certified check or money order shall be submitted to the air quality bureau at the address specified in the notice.

(2) Upon receipt of the [~~check or money order~~] annual emissions fee payment, it shall be deposited in the state air quality permit fund.

(3) Annual emissions fees shall be paid in U.S. dollars.

C. Nonpayment. Failure to remit the full annual emissions fee, including any late fees, required by the due date specified in Subsection A of this section is a violation of this part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 for each day of noncompliance as provided for in the [~~New Mexico~~] Air Quality Control Act, section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the [~~New Mexico~~] Air Quality Control Act, section 74-2-12 NMSA 1978, which includes suspension or revocation of any permit.

[[~~11/30/95;~~] 20.2.71.113 NMAC - [~~Rn, 20 NMAC 2.71.113 10/31/02; A, 12/15/04~~] Rp, 20.2.71.113 NMAC, 6/1/2026]

PART 71 OPERATING PERMIT EMISSIONS FEES

20.2.71.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.71.1 NMAC - Rp, 20.2.71.1 NMAC, 6/1/2026]

20.2.71.2 SCOPE: This Part applies to all persons required to obtain a permit under 20.2.70 NMAC (Operating Permits).
[20.2.71.2 NMAC - Rp, 20.2.71.2 NMAC, 6/1/2026]

20.2.71.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph (7) of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.71.3 NMAC - Rp, 20.2.71.3 NMAC, 6/1/2026]

20.2.71.4 DURATION: Permanent.
[20.2.71.4 NMAC - Rp, 20.2.71.4 NMAC, 6/1/2026]

20.2.71.5 EFFECTIVE DATE: June 1, 2026, unless a later date is cited at the end of a section.
[20.2.71.5 NMAC - Rp, 20.2.71.5 NMAC, 6/1/2026]

20.2.71.6 OBJECTIVE: The objective of this Part is to establish a schedule of operating permit emissions fees.
[20.2.71.6 NMAC - Rp, 20.2.71.6 NMAC, 6/1/2026]

20.2.71.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part, the following definitions apply.

A. "Allowable emission rate" means the maximum emission allowed by the more stringent emission limitation applicable to the source contained in:

(1) any New Mexico air quality control regulation;

(2) any federal standard of performance, emission limitation, or emission standard adopted pursuant to 42 U.S.C. Section 7411 or 7412; or

(3) any condition within a construction or operating permit issued by the department.

B. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any fee pollutant.

C. "Fee pollutant" means:

(1) sulfur dioxide, nitrogen dioxide, carbon monoxide, PM10, PM2.5, and volatile organic compounds; and

(2) any hazardous air pollutant that is subject to any standard promulgated pursuant to Section 112 of the federal act.

D. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

E. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to Section 112 of the federal act.

F. "Operator" means the person or persons responsible for the overall operation of a facility.

G. "Owner" means the person or persons who own a facility or part of a facility.

H. "Stationary source" means any building, structure, facility, or installation that emits or may emit any air pollutant.

[20.2.71.7 NMAC - Rp, 20.2.71.7 NMAC, 6/1/2026]

20.2.71.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 771 - Operating Permit Emission Fees, filed November 15, 1993, as amended.

A. All references to AQCR 771 in any other rule shall be construed as a reference to this Part.

NMED Exhibit 3_000001

B. The amendment and supersession of AQCR 771 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 771.

[20.2.71.8 NMAC - Rp, 20.2.71.8 NMAC, 6/1/2026]

20.2.71.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico environment department, air quality bureau. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505].

[20.2.71.9 NMAC - Rp, 20.2.71.9 NMAC, 6/1/2026]

20.2.71.10 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.71.10 NMAC - N, 6/1/2026]

20.2.71.11 to 20.2.71.108 [RESERVED]

20.2.71.109 [RESERVED]

[20.2.71.109 NMAC – Rp, 20.2.71.109 NMAC, 6/1/2026]

20.2.71.110 FEE REQUIREMENT:

A. An annual emissions fee shall be paid to the department by each owner or operator subject to this Part.

B. The annual emissions fee shall be assessed:

(1) for a major source as defined in 20.2.70 NMAC (Operating Permits), for all emissions units;

(2) for all other stationary sources, for emissions units which cause the source to be subject to 20.2.70 NMAC; and

(3) for emissions above annual allowable emission limits for the source categories in Paragraphs (1) and (2) of this Subsection.

C. The annual emissions fee shall be calculated in conformance with 20.2.71.111 NMAC.

[20.2.71.110 NMAC - Rp, 20.2.71.110 NMAC, 6/1/2026]

20.2.71.111 FEE DETERMINATION:

A. Annual emissions fee calculation.

(1) The annual emissions fee shall be calculated by taking the product of the allowable emission rate for each fee pollutant expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) The allowable emission rate which shall be used in the fee calculation for this Subsection is the allowable emission rate which exists on December 31 for each year.

(3) Allowable emission rates shall be calculated to the tenth of a ton for each emissions unit and then summed to determine the tons per year for the facility. Total facility tons per year quantities shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(4) Emissions from those operations determined to be insignificant activities by the department under 20.2.70 NMAC shall not be included in the fee calculation for this Subsection.

(5) Fugitive emissions which have an allowable emission rate shall be included in the fee calculation for this Subsection.

(6) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(7) A maximum of 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(8) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has the higher allowable emission rate.

NMED Exhibit 3_000002

(9) The failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.

B. Source shutdown.

(1) The annual emissions fee shall not be reduced due to lack of operation of any emissions unit, except when:

(a) the discontinued operation is accounted for in an allowable emission rate contained within a construction or operating permit issued by the department;

(b) a construction or operating permit issued by the department has been discontinued or terminated and the source ceased operation; or

(c) the emissions unit is located at a stationary source which meets the criteria of Paragraph (2) of this Subsection.

(2) The annual emissions fee shall be reduced when all operations at a stationary source have been shut down for a period greater than 60 consecutive days within a calendar year. In this case, the annual emissions fee calculation shall be adjusted by reducing the annualized allowable emission rate for each day the stationary source was shut down.

C. Annual emissions fee for emissions above annual allowable emission limits.

(1) The annual emissions fee for emissions above annual allowable emission limits shall be based on all emissions above annual allowable emission limits of fee pollutants reported or required to be reported by a stationary source through December 31 in accordance with Subsection E of 20.2.70.302 NMAC. The fee shall be calculated by taking the product of the emissions above annual allowable emission limits for each fee pollutant above and beyond the allowable annual emission limit per unit expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) Total facility tons per year quantities of emissions above annual allowable emission limits shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(3) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(4) A maximum of 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(5) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has higher emissions above annual allowable emission limits.

[20.2.71.111 NMAC - Rp, 20.2.71.111 NMAC, 6/1/2026]

20.2.71.112 EMISSIONS FEE:

A. The fee for each fee pollutant shall be $85 per ton on an annual basis, except as provided for in Subsection B of this Section.

B. The fee for each hazardous air pollutant shall be $258 per ton on an annual basis for any stationary source which is only a major source, as defined in 20.2.70 NMAC, for any hazardous air pollutant.

C. The fee per ton of emissions above annual allowable emission limits shall be identical to the fee per ton of allowable emissions.

D. Beginning in 2028, the fees referenced in this Section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI) in accordance with Section 502(b)(3)(B)(v) of the federal act. In the event there is a decrease or absence of change in the CPI, fees shall remain the same until the next increase in the CPI.

[20.2.71.112 NMAC - Rp, 20.2.71.112 NMAC, 6/1/2026]

20.2.71.113 NOTIFICATION, PAYMENT, LATE FEE AND ENFORCEMENT:

A. Schedule.

(1) The department shall by April 1 of each year provide to each owner or operator subject to this Part notification, which shall contain:

(a) the annual emissions fee based on the requirements of this Part which is currently due; and

(b) a summary of the basis for the required annual emissions fee.

NMED Exhibit 3_000003

(2) Upon discovery of an error in any past notification of annual emissions fees due, the department shall promptly notify the owner or operator and provide credit for overcharges or require payment for undercharges.

(3) Each owner or operator shall pay by June 1 the annual emissions fee contained in the department's notification required under Paragraph (1) of this Subsection. Failure to remit the full annual emissions fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual emissions fee or $5,000, whichever is less. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, which shall state the late fee and unpaid annual emissions fee balance currently due. The owner or operator shall pay the amount stated in the department's notification within 30 days of the date of the notification. If the amount stated in the notification is not timely paid, the late fee shall increase to one hundred percent of the annual emissions fee or $10,000, whichever is less, and shall be due immediately without further notification from the department, along with the unpaid annual emissions fee balance.

(4) Each owner or operator shall pay invoices based on notices of errors in past notifications within 60 days of the invoice date.

B. Payment.

(1) Annual emissions fees shall be remitted in the form of a certified check or money order made payable to the environment department, electronic payment, or other method as allowed by the state. Annual emissions fees remitted in the form of a certified check or money order shall be submitted to the air quality bureau at the address specified in the notice.

(2) Upon receipt of the annual emissions fee payment, it shall be deposited in the state air quality permit fund.

(3) Annual emissions fees shall be paid in U.S. dollars.

C. Nonpayment. Failure to remit the full annual emissions fee, including any late fees, required by the due date specified in Subsection A of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes suspension or revocation of any permit.

~~[**D.** Non-compliance with Chapter 2, Title 20 NMAC or the Air Quality Control Act subjects each owner or operator to administrative compliance costs for enforcement of Chapter 2, Title 20 NMAC.]~~

[20.2.71.113 NMAC - Rp, 20.2.71.113 NMAC, 6/1/2026]

HISTORY OF 20.2.71 NMAC:

Pre NMAC History: The material in this Part was derived from that previously filed with the commission of public records - state records center and archives.

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93.

History of Repealed Material:

20.2.71 NMAC, Operating Permit Emissions Fees, effective 10/31/02, repealed, effective 6/1/26.

Other History:

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93, was **renumbered** into first version of the New Mexico Administrative Code as 20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95;

20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95, was **renumbered, reformatted and replaced** by 20.2.71 NMAC, Operating Permit Emission Fees, effective 10/31/02.

NMED Exhibit 3_000004

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 75 CONSTRUCTION PERMIT FEES

20.2.75.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.75.1 NMAC - Rp, 20.2.75.1 NMAC, 6/1/2026]

20.2.75.2 SCOPE: This Part applies to all persons who apply for a permit to construct or modify a source, apply to register under a general construction permit, apply for a permit revision, or request a technical review of an existing permit under 20.2.72 NMAC, and all persons who file a notice of intent under 20.2.73 NMAC. Annual emissions fees for sources required to obtain a permit under 20.2.70 NMAC (Operating Permits) are covered under 20.2.71 NMAC.
[20.2.75.1 NMAC - Rp, 20.2.75.2 NMAC, 6/1/2026]

20.2.75.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph (6) of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.75.1 NMAC - Rp, 20.2.75.3 NMAC, 6/1/2026]

20.2.75.4 DURATION: Permanent.
[20.2.75.4 NMAC - Rp, 20.2.75.4 NMAC, 6/1/2026]

20.2.75.5 EFFECTIVE DATE: June 1, 2026, except where a later date is cited at the end of a section.

A. For applications received prior to the effective date of this Part, the provisions in 20.2.75 NMAC, as effective as of the date of the receipt of the application, remain effective, and application review fees (formerly permit fees) shall be so determined.

B. For applications received following the effective date of this Part, application review fees shall be based on the current regulation.

[20.2.75.5 NMAC - Rp, 20.2.75.5 NMAC, 6/1/2026]

20.2.75.6 OBJECTIVE: The objective of this Part is to establish a schedule of fees for the construction permit program, including notices of intent, construction permits, registrations under general construction permits, permit revisions, and technical reviews of existing permits.
[20.2.75.6 NMAC - Rp, 20.2.75.6 NMAC, 6/1/2026]

20.2.75.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions) or 20.2.72 NMAC (Construction Permits), as used in this Part, the following definitions apply.

A. "**Air toxics review"** means the required review of a permit application for the potential emission of an air toxic regulated by 20.2.72.400 NMAC - 20.2.72.499 NMAC. As used in this Part, a level I air toxics review consists of modeling to determine whether one one-hundredth of the occupational exposure limit, as defined in 20.2.72.401 NMAC, is met; a level II air toxics review consists of either a health assessment or best available control technology (BACT) determination, whichever is required by 20.2.72.400 NMAC - 20.2.72.499 NMAC.

B. **"Applicable regulations"** means, for the purpose of assessing application review fee points, those regulations that are applicable to the source and not the review to determine whether the regulation is applicable. Applicable regulations do not include 20.2.1 NMAC (General Provisions), 20.2.2 NMAC (Definitions), 20.2.3 NMAC (Ambient Air Quality Standards), 20.2.5 NMAC (Source Surveillance), 20.2.7 NMAC (Excess Emissions), 20.2.8 NMAC (Emissions Leaving New Mexico), 20.2.60 NMAC (Open Burning), 20.2.70 NMAC (Operating Permits), 20.2.71 NMAC (Operating Permit Emissions Fees), 20.2.72 NMAC (Construction Permits), 20.2.73 NMAC (Notice Of Intent And Emissions Inventory Requirements), 20.2.74 NMAC (Permits - Prevention Of Significant Deterioration (PSD)), 20.2.75 NMAC (Construction Permit Fees), 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards For Hazardous Air Pollutants), 20.2.79 NMAC (Permits - Nonattainment Areas), 20.2.80 NMAC (Stack Heights), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards For Source Categories Of Hazardous Air Pollutants). All other Title 20, Chapter 2 NMAC parts and all new source performance standards (excluding Subpart A) and national emission standards for hazardous air pollutants/maximum achievable control technology (NESHAP/MACT) (excluding 40 CFR Part 61

NMED Exhibit 4_000001

Subparts A and M and 40 CFR Part 63 Subpart A) regulations that are applicable to the source shall be counted and shall result in additional points for application review fee purposes, in accordance with the fee schedule in this Part.

C. "Fee unit" means any equipment or process which generates, creates, or is the source of a regulated air contaminant, which is listed or identified in a construction permit application or application to revise a permit and which requires review and evaluation against state and federal regulations and standards. This definition does not include sources which are exempt under 20.2.72.202 NMAC or sources for which no applicable requirements are identified in the permit. In the case of a permit modification, revision or technical review of an existing permit, the requirements of Subsection A of 20.2.75.11 NMAC apply only to the equipment or process involved in such modification, revision or review.

D. "Fugitive emissions fee unit" means sources of fugitive emissions for which applicable requirements are identified in the permit. A maximum of one fugitive emissions fee unit shall be applied to any given application.

E. "Revision" means any change requested by an applicant to any term or condition of a permit including emission limitations, control technology, operating conditions and monitoring requirements. For the purposes of this Part, revision does not include administrative revision as used in 20.2.72 NMAC.

F. "Small business" means a company that employs no more than 10 employees at any time during the calendar year. Employees include part-time, temporary, or limited service workers. For the purposes of this Part, small business does not include:

(1) any source which may emit more than 50 tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or 75 tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and

(2) any major source for hazardous air pollutants under 20.2.70 NMAC.

G. "Technical review of an existing permit" means the department's technical review of new information submitted by a permittee as required by an existing permit condition and in conjunction with proposed changes at the source that do not involve any changes to the existing permit. The review must be necessary to demonstrate that all applicable state and federal regulations and standards will continue to be met and that the existing permit will continue to be valid. For the purposes of this Part, technical review of an existing permit does not include the department's review of required periodic reports.

[20.2.75.7 NMAC - Rp, 20.2.75.7 NMAC, 6/1/2026]

20.2.75.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 700 - Filing and Permit Fees, filed November 20, 1989, as amended.

A. All references to AQCR 700 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 700 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 700.

[20.2.75.8 NMAC - Rp, 20.2.75.8 NMAC, 6/1/2026]

20.2.75.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico environment department, air quality bureau. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505.]

[20.2.75.9 NMAC - Rp, 20.2.75.9 NMAC, 6/1/2026]

20.2.75.10 FILING FEE:

A. A filing fee of $500 shall be submitted with each filing of an application for a permit to construct or modify a source or permit revision. The filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC.

B. For applications submitted under 20.2.72.221 NMAC, an accelerated review filing fee of $1,000 shall be submitted in lieu of any other filing fees under this Section. One-half of the accelerated review filing fee shall be applied to the cost of the accelerated review submitted by the qualified outside firm. In the event that:

(1) there are no qualified outside firms on contract with the department, or if all of the qualified outside firms have a conflict of interest, the entire accelerated review filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC;

NMED Exhibit 4_000002

(2) no qualified outside firm submits a proposal for the accelerated review, one-half of the accelerated review filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(3) one or more qualified outside firms submit a proposal but all such proposals are rejected by the applicant, the accelerated review filing fee shall be forfeited and retained by the department; or

(4) the applicant withdraws the application for any reason, the accelerated review filing fee shall be forfeited and retained by the department.

[20.2.75.10 NMAC - Rp, 20.2.75.10 NMAC, 6/1/2026]

20.2.75.11 APPLICATION REVIEW FEE AND ANNUAL FEE:

A. The application review fee shall be based on the following point-based fee schedule.

ACTION	# OF POINTS	
1. CONSTRUCTION PERMIT/TECHNICAL REVIEW OF EXISTING PERMIT		
Technical Complexity		
1-5 Fee Units	5	
6-15 Fee Units	1	point per fee unit
>15 Fee Units	15	
Fugitive Emissions Fee Unit	5	
Portable Source Relocation (Paragraph (3) of Subsection D of 20.2.72.202 NMAC)	1	
Non-Attainment Area (20.2.79 NMAC)	75	
Each Modeling Review	30	
Air Toxics Review (20.2.72.400 NMAC – 20.2.72.499 NMAC)		
Level I	8	
Level II		
Best Available Control Technology (BACT) Analysis	60	
Health Assessment	100	
Applicable Regulations		
20.2.X NMAC (per each)	3	
NSPS (per each)	5	
NESHAP/MACT (per each)	5	
Case-by-Case MACT (20.2.83 NMAC)	100	
PSD netting only (no additional PSD analysis is required)	20	
PSD review (including netting) (20.2.74 NMAC)	75	
2. OTHER PERMITTING ACTIONS		
Notices of Intent (20.2.73.200 NMAC)	10	
General Permit Registrations other than GCP-Oil & Gas (20.2.72.220 NMAC)	10	
GCP-Oil & Gas Registrations (20.2.72.220 NMAC)	30	
Streamline (each site) (20.2.72.300 NMAC – 20.2.72.399 NMAC)	10	

B. The application review fee shall be the sum of all of the points that are applicable to the application as determined by the department, multiplied by $585.

C. The department may, at its discretion, assess additional points and fees each time the department is required to repeat an action listed in Subsection A of this Section because the applicant updated the application after submission.

NMED Exhibit 4_000003

D. For sources that satisfy the definition of "small business" as defined in Subsection F of 20.2.75.7 NMAC, the application review fee determined by Subsection B of this Section, additional fees (if any) assessed pursuant to Subsection C of this Section, and annual fee assessed pursuant to Subsection F of this Section shall be reduced by half. To qualify for the small business fee reduction, sources must submit a small business certification form to the department certifying that the company employs no more than 10 employees at any time during the calendar year, or for new sources, that the company does not expect to employ any more than 10 employees in the first year of operations.

E. For applications processed by an outside firm under 20.2.72.221 NMAC, the application review fee determined by Subsection B of this Section shall be reduced by half and shall be in addition to the cost of the accelerated review bid.

F. Sources that have been issued a construction permit or registered under a general construction permit under 20.2.72 NMAC shall be assessed an annual fee of $2,800. Sources that have filed a notice of intent under 20.2.73 NMAC and received a written determination by the department that a permit is not required shall be assessed an annual fee of $700. The applicable annual fee shall be assessed if the construction permit, general construction permit registration or notice of intent was in active status as of December 31 of the preceding year, regardless of the source's operational status. The annual fee required by this Subsection shall not apply to sources which are assessed an annual emissions fee in accordance with 20.2.71 NMAC.

G. Beginning in 2028, the cost per point and annual fees in Subsections B and F of this Section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI). The adjusted cost per point and annual fees shall be determined by multiplying the current cost per point and annual fees by the increase in the CPI for the most recent calendar year and rounding the result to the nearest dollar. The CPI for any calendar year is the average of the CPI for all urban consumers published by the United States department of labor, as of the close of the twelve-month period ending on August 31 of that year. In the event there is a decrease or absence of change in the CPI, the cost per point and annual fees shall not be changed and shall remain the same until the next increase in the CPI.

[20.2.75.11 NMAC - Rp, 20.2.75.11 NMAC, 6/1/2026]

20.2.75.12 INVOICING, PAYMENT, LATE FEE AND ENFORCEMENT:

A. The department shall refuse to accept any application for a permit to construct or modify a source or permit revision without payment of the filing fee at the time the application is submitted to the department. The filing fee and the accelerated review filing fee are non-refundable. The department shall refuse to accept any notice of intent or application to register under a general construction permit without payment of the application review fee at the time the notice or application is submitted to the department.

B. For an application for a permit to construct or modify a source or permit revision other than a technical permit revision, an invoice for the application review fee, minus the filing fee, shall be mailed, or transmitted electronically or as otherwise allowed by the state, to the applicant at the time the department finds the application administratively complete pursuant to 20.2.72.207 NMAC. The department shall deny any application for a permit to construct or modify a source or permit revision other than a technical permit revision if the application review fee has not been paid within 30 days of the date of the invoice, unless the department has granted an extension. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, the department shall mail another invoice to the applicant along with its grant or denial of the permit or permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

C. For an application for a technical permit revision, an invoice for the application review fee, minus the filing fee, and any additional fees the department determines are due pursuant to Subsection C of 20.2.75.11 NMAC upon completion of the application review, shall accompany the department's grant or denial of the technical permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

D. For a notice of intent or application to register under a general construction permit, the application review fee shall be paid at the time of filing. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, an invoice shall accompany the department's notification of its determination that an air quality permit is not required or its grant or denial of the registration. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

NMED Exhibit 4_000004

E. An invoice for a request for technical review of an existing permit shall accompany the department's response if any fees are due. The applicant or permittee shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

F. Except for the refund of excess fees paid, all fees paid under this Part shall be non-refundable.

G. All fees paid pursuant to this Part shall be remitted in the form of a corporate or certified check or money order made payable to the environment department at the address specified in the notice, electronic payment, or other method as allowed by the state. Upon receipt of the fee payment, it shall be deposited in the state air quality permit fund established by Section 74-2-15 NMSA 1978.

H. Owners or operators shall pay annual fees assessed pursuant to Subsection F of 20.2.75.11 NMAC within 30 days of the date of the invoice. Failure to remit the full annual fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual fee. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, accompanied by an invoice for the late fee and unpaid annual fee balance. The owner or operator shall pay this invoice within 30 days of the date of the invoice. If the invoice is not timely paid, the late fee shall increase to one hundred percent of the annual fee and shall be due immediately without further notification from the department, along with the unpaid annual fee balance.

I. All fees shall be paid in U.S. dollars.

J. Failure to remit the full annual fee, including any late fees, required by the due date specified in Subsection H of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 per day for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes the suspension or revocation of any permit.

[20.2.75.12 NMAC - Rp, 20.2.75.12 NMAC, 6/1/2026]

20.2.75.13 PERIODIC REVIEW: The Department shall prepare a review of the construction permit fees and construction permit program costs annually. The review shall include information on the budgets, expenditures, fund balance, and related projections. The review shall be presented to the Board within six months following the end of the fiscal year.

[20.2.75.13 NMAC - Rp, 20.2.75.13 NMAC, 6/1/2026]

20.2.75.14 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.75.14 NMAC - N, 6/1/2026]

HISTORY OF 20.2.75 NMAC:

Pre-NMAC History: The material in this Part was derived from that previously filed with the commission of public records - state records center and archives:

AQCR 700, Air Quality Control Regulation 700 - Filing and Permit Fees, filed 11/20/89.

History of Repealed Material:

20 NMAC 2.75, Construction Permit Fees, filed 10/30/95, repealed, effective 03/02/01;

20.2.75 NMAC, Construction Permit Fees, effective 03/02/01, repealed, effective 6/1/26.

NMED Exhibit 4_000005

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 75 CONSTRUCTION PERMIT FEES

20.2.75.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.75.1 NMAC - Rp, [~~20 NMAC 2.75.100, 03/02/01~~] 20.2.75.1 NMAC, 6/1/2026]

20.2.75.2 SCOPE:
[~~A.~~]This Part applies to all persons who apply for a permit to construct or modify a source, apply to register under a general construction permit, [~~or revise a permit~~] apply for a permit revision, or [~~who~~] request a technical review of an existing permit under 20.2.72 NMAC, and all persons who file a notice of intent under 20.2.73 NMAC. [~~Part 70 (20.2.70 NMAC) operating permit emission~~] Annual emissions fees for sources required to obtain a permit under 20.2.70 NMAC (Operating Permits) are covered under 20.2.71 NMAC.
[~~B. The requirements concerning the payment of an annual fee shall apply to sources with an air quality construction permit for which the application to either revise, modify or for a new permit was received following the effective date of this regulation.~~]
[20.2.75.1 NMAC - Rp, [~~20 NMAC 2.75.101, 03/02/01~~] 20.2.75.2 NMAC, 6/1/2026]

20.2.75.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph 4 of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, [~~Chapter 74, Article 2~~] Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph 6 of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.75.1 NMAC - Rp, [~~20 NMAC 2.75.102, 03/02/01~~] 20.2.75.3 NMAC, 6/1/2026]

20.2.75.4 DURATION: Permanent.
[20.2.75.4 NMAC - Rp, [~~20 NMAC 2.75.103, 03/02/01~~] 20.2.75.4 NMAC, 6/1/2026]

20.2.75.5 EFFECTIVE DATE: [~~March 2, 2001~~] June 1, 2026, except where a later date is cited at the end of a section.

A. For applications received prior to the effective date of this [~~regulation~~] Part, the provisions in 20.2.75 NMAC, as effective as of the date of the receipt of the application, remain effective, and application review fees (formerly permit fees) shall be so determined.

B. For applications received following the effective date of this [~~regulation~~] Part, application review fees shall be based on the current regulation.

[20.2.75.5 NMAC - Rp, [~~20 NMAC 2.75.104, 03/02/01; A, 12/01/03~~] 20.2.75.5 NMAC, 6/1/2026]
[~~[The latest effective date of any section in this Part is 12/01/03.]~~]

20.2.75.6 OBJECTIVE: The objective of this Part is to establish a schedule of fees for the construction permit program, including notices of intent, construction permits, registrations under general construction permits, permit revisions, and technical reviews of existing permits.
[20.2.75.6 NMAC - Rp, [~~20 NMAC 2.75.105, 03/02/01~~] 20.2.75.6 NMAC, 6/1/2026]

20.2.75.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (definitions) or 20.2.72 NMAC (construction permits), as used in this Part, the following definitions apply.

A. "air toxics review" means the required review of a permit application for the potential emission of an air toxic regulated by 20.2.72.400 NMAC - 20.2.72.499 NMAC. As used in this Part, a level I air toxics review consists of modeling to determine whether one one-hundredth [~~(1/100)~~] of the occupational exposure limit, as defined in 20.2.72.401 NMAC, is met; a level II air toxics review consists of either a health assessment or best available control technology (BACT) determination, whichever is required by 20.2.72.400 NMAC - 20.2.72.499 NMAC.

B. "applicable regulations" means, for the purpose of assessing [~~permit~~] application review fee points, [~~mean~~] those regulations that are applicable to the source and not the review to determine whether the regulation is applicable. Applicable regulations do not include 20.2.1 NMAC (general provisions), 20.2.2 NMAC (definitions), 20.2.3 NMAC (ambient air quality standards), 20.2.5 NMAC (source surveillance), 20.2.7 NMAC (excess emissions [~~during malfunctions, startup, shutdown, or scheduled maintenance~~]), 20.2.8 NMAC (emissions leaving New Mexico), 20.2.60 NMAC (open burning), 20.2.70 NMAC (operating permits), 20.2.71 NMAC

NMED Exhibit 5_000001

(operating permit emissions fees), 20.2.72 NMAC (construction permits), 20.2.73 NMAC (notice of intent and emissions inventory requirements), 20.2.74 NMAC (Permits - prevention of significant deterioration (PSD)), 20.2.75 NMAC (construction permit fees), 20.2.77 NMAC (new source performance standards), 20.2.78 NMAC (emission standards for hazardous air pollutants), 20.2.79 NMAC (permits - nonattainment areas), 20.2.80 NMAC (stack heights), and 20.2.82 NMAC (maximum achievable control technology standards for source categories of hazardous air pollutants). All other Title 20, Chapter 2 NMAC Parts and all new source performance standards (excluding Subpart A) and national emission standards for hazardous air pollutants/maximum achievable control technology (NESHAP/MACT) (excluding 40 CFR Part 61 Subparts A and M and 40 CFR Part 63 Subpart A) regulations that are applicable to the source shall be counted and shall result in additional points for [~~permit fees~~] application review fee purposes, in accordance with the [~~permit~~] fee schedule in this Part.

C. "fee unit" means any equipment or process which generates, creates, or is the source of a regulated air contaminant, which is listed or identified in a construction permit application or application to revise a permit and which requires review and evaluation against state and federal regulations and standards. This definition does not include sources which are exempt under 20.2.72.202 NMAC or sources for which no applicable requirements are identified in the permit. In the case of a permit modification, revision or technical review of an existing permit, the requirements of Subsection A of 20.2.75.11 NMAC apply only to the equipment or process involved in such modification, revision or review.

D. "fugitive emissions fee unit" means sources of fugitive emissions for which applicable requirements are identified in the permit. A maximum of one fugitive emissions fee unit shall be applied to any given application.

E. "revision" means any change requested by an applicant to any term or condition of a permit including [~~but not limited to~~] emission limitations, control technology, operating conditions and monitoring requirements. For the purposes of this [~~regulation~~] Part, revision does not include administrative revision as used in 20.2.72 NMAC.

F. "small business" means[~~, for the purposes of this Part,~~] a company that employs no more than [~~ten (10)~~] 10 employees at any time during the calendar year. Employees include part-time, temporary, or limited service workers. [~~For new sources, the responsible company official shall certify that the source does not expect to employ any more than ten (10) employees in the first year of operations. In addition, "small business"~~] For the purposes of this Part, small business does not include

(1) any source which may emit more than [~~fifty (50)~~] 50 tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or [~~seventy-five (75)~~] 75 tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and

(2) any major source for hazardous air pollutants under 20.2.70 NMAC.

G. "technical review of an existing permit" means the department's technical review of new information submitted by a permittee as required by an existing permit condition and in conjunction with proposed changes at the source that do not involve any changes to the existing permit. The review must be necessary to demonstrate that all applicable state and federal regulations and standards will continue to be met and that the existing permit will continue to be valid. [~~This~~] For the purposes of this Part, technical review of an existing permit does not include the department's review of required periodic reports.

[20.2.75.7 NMAC - Rp, [~~20 NMAC 2.75.107, 03-02-01; A, 12/01/03~~] 20.2.75.7 NMAC, 6/1/2026]

20.2.75.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 700 - Filing and Permit Fees, filed November 20, 1989, as amended [~~(AQCR 700)~~].

A. All references to AQCR 700 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 700 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 700.

[20.2.75.8 NMAC - Rp, [~~20 NMAC 2.75.106, 03/02/01~~] 20.2.75.8 NMAC, 6/1/2026]

20.2.75.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau [~~, Santa Fe, NM~~]. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505.]

[20.2.75.9 NMAC - Rp, [~~20 NMAC 2.75.108, 03/02/01~~] 20.2.75.9 NMAC, 6/1/2026]

NMED Exhibit 5_000002

20.2.75.10 FILING FEE:

A. A filing fee of [~~five hundred dollars ($500)~~] $500 shall be submitted with each filing of [~~a notice of intent,~~] an application for a permit to construct or modify a source or permit revision [~~of a permit~~]. The filing fee shall be applied to the [~~total permit fee~~] application review fee determined from the fee schedule in 20.2.75.11 NMAC.

B. For applications submitted under 20.2.72.221 NMAC[~~, accelerated review~~], an accelerated review filing fee of [~~one thousand dollars ($1,000)~~] $1,000 shall be submitted in lieu of any other filing fees under this section. One-half of the accelerated review filing fee shall be applied to the cost of the accelerated review submitted by the qualified outside firm. In the event that:

(1) There are no qualified outside firms on contract with the department, or if all of the qualified outside firms have a conflict of interest, the entire accelerated review filing fee shall be applied to the [~~total permit fee~~] application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(2) No qualified outside firm submits a proposal for the accelerated [~~permit~~] review, one-half of [~~this~~] the accelerated review filing fee shall be applied to the [~~total permit fee~~] application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(3) One or more qualified outside firms submit a proposal but all such proposals are rejected by the applicant, the accelerated review filing fee shall be forfeited and retained by the department; or

(4) The applicant withdraws the application for any reason, the accelerated review filing fee shall be forfeited and retained by the department.

[20.2.75.10 NMAC - Rp, [~~20 NMAC 2.75.109, 03/02/01; A, 12/01/03~~] 20.2.75.10 NMAC, 6/1/2026]

20.2.75.11 [~~PERMIT~~] APPLICATION REVIEW FEE AND ANNUAL FEE:

A. The [~~permit fee~~] application review fee shall be based on the following point-based fee schedule.

ACTION	# OF POINTS	
1. CONSTRUCTION PERMIT/TECHNICAL REVIEW OF EXISTING PERMIT		
Technical Complexity		
1-5 Fee Units	5	
6-15 Fee Units	1	point per fee unit
>15 Fee Units	15	
Fugitive Emissions Fee Unit	5	
Portable Source Relocation (Paragraph 3 of Subsection D of 20.2.72.202 NMAC)	1	
Non-Attainment Area (20.2.79 NMAC)	75	
Each Modeling Review	[~~15~~] 30	
Air Toxics Review (20.2.72.400 NMAC – 20.2.72.499 NMAC)		
Level I	8	
Level II		
Best Available Control Technology (BACT) Analysis	60	
Health Assessment	100	
Applicable Regulations		
20.2.X NMAC (per each)	3	
NSPS (per each)	5	
NESHAP/MACT (per each)	5	
Case-by-Case MACT (20.2.83 NMAC)	100	
PSD netting only (no additional PSD analysis is required)	20	
PSD review (including netting) (20.2.74 NMAC)	75	

NMED Exhibit 5_000003

2. OTHER PERMITTING ACTIONS

Notices of Intent (20.2.73.200 NMAC)	10
General [~~Permits~~] Permit Registrations other than GCP-Oil & Gas (20.2.72.220 NMAC)	10
GCP-Oil & Gas Registrations (20.2.72.220 NMAC)	30
Streamline (each site) (20.2.72.300 NMAC – 20.2.72.399 NMAC)	10

B. The application review fee shall be the sum of all of the points that are applicable to the [~~permitting action~~] application as determined by the department, multiplied by [~~three hundred fifteen dollars ($315)~~] $585.

C. The department may, at its discretion, assess additional points and fees each time the department is required to repeat an action listed in Subsection A of this Section because the applicant updated the application after submission.

[~~C~~] **D.** For sources that satisfy the definition of "small business" as defined in Subsection F of 20.2.75.7 NMAC, the [~~permit~~] application review fee determined by [~~Subsections~~] Subsection B [~~and E~~] of [~~20.2.75.11 NMAC~~] this Section, additional fees (if any) assessed pursuant to Subsection C of this Section, and annual fee assessed pursuant to Subsection F of this Section shall be [~~divided by two~~] reduced by half. To qualify for the small business fee reduction, sources must submit a small business certification form to the department certifying that the company employs no more than 10 employees at any time during the calendar year, or for new sources, that the company does not expect to employ any more than 10 employees in the first year of operations.

[~~D~~] **E.** For applications processed by an outside firm under 20.2.72.221 NMAC[~~, Accelerated Review~~], the [~~permit~~] application review fee determined by Subsection B of [~~20.2.75.11 NMAC~~] this Section shall be [~~divided by two~~] reduced by half and shall be in addition to the cost of the accelerated review bid[~~, as described in 20.2.72.221 NMAC~~].

[~~E~~] **F.** Sources that have been issued a construction permit or registered under a general construction permit under 20.2.72 NMAC shall be assessed an annual fee of [~~one thousand five hundred dollars ($1,500)~~] $2,800. Sources that have filed a notice of intent under 20.2.73 NMAC and received a written determination by the department that a permit is not required shall be assessed an annual fee of $700. The applicable annual fee shall be assessed if the construction permit, general construction permit registration or notice of intent was in active status as of December 31 of the preceding year, regardless of the source's operational status. [~~This fee~~] The annual fee required by this subsection shall not apply to sources which are assessed an annual emissions fee in accordance with 20.2.71 NMAC.

[~~F~~] **G.** Beginning in [~~2005~~] 2028, the cost per point [~~in Subsection B of this section~~] and [~~the~~] annual [~~fee~~] fees in [~~Subsection E~~] Subsections B and F of this section shall be [~~adjusted each year on January 1 to reflect the increase~~] changed annually on January 1 by the percentage, if any, [~~by which the consumer price index for the most recent year exceeds the consumer price index for the year 2004~~] of any annual increase in the consumer price index (CPI). The [~~amount of the change in the fee~~] adjusted cost per point and annual fees shall be determined by multiplying the [~~existing fee~~] current cost per point and annual fees by the [~~change~~] increase in the [~~consumer price index~~] CPI for the most recent calendar year and rounding the result to the nearest dollar. The [~~consumer price index~~] CPI for any calendar year is the average of the [~~consumer price index~~] CPI for all urban consumers published by the United States department of labor, as of the close of the twelve-month period ending on August 31 of that year. In the event there is a decrease or absence of change in the CPI, the cost per point and annual fees shall not be changed and shall remain the same until the next increase in the CPI.

[20.2.75.11 NMAC - Rp, [~~20 NMAC 2.75.110, 03/02/01; A, 12/01/03~~] 20.2.75.11 NMAC, 6/1/2026]

20.2.75.12 [~~PAYMENT OF FEES~~] INVOICING, PAYMENT, LATE FEE AND ENFORCEMENT:

A. The Department shall refuse to accept any [~~permit~~] application for a permit to construct or modify a source or permit revision without payment of the filing fee at the time the application is [~~received by~~] submitted to the Department. The filing fee and the accelerated review filing fee are non-refundable. The department shall refuse to accept any notice of intent or application to register under a general construction permit without payment of the application review fee at the time the notice or application is submitted to the department.

B. For an application for a permit to construct or modify a source or permit revision other than a technical permit revision, an invoice for [~~permit fees~~] the application review fee, minus the filing fee, shall be mailed, or transmitted electronically or as otherwise allowed by the state, to the applicant at the time the Department finds the application administratively complete pursuant to [~~20.2.72.203 NMAC~~] 20.2.72.207 NMAC. The Department shall deny any [~~permit~~] application [~~or request for permit revision~~] for a permit to construct or modify a

NMED Exhibit 5_000004

source or permit revision other than a technical permit revision if the [~~required permit~~] application review fee has not been paid within [~~thirty (30)~~] 30 days of [~~invoicing~~] the date of the invoice, unless the Department has granted an extension. If, upon completion of the [~~permit~~] application review, the Department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, the Department shall mail [~~an~~] another invoice to the applicant along with [~~the signed permit~~] its grant or denial of the permit or permit revision. The [~~permittee~~] applicant shall pay this invoice within [~~thirty (30)~~] 30 days of [~~invoicing~~] the date of the invoice, unless the Department has granted an extension. [~~In the event excess fees were paid, the department shall issue a refund for excess fees and mail the refund to the applicant.~~]

C. For an application for a technical permit revision, an invoice for the application review fee, minus the filing fee, and any additional fees the department determines are due pursuant to Subsection C of 20.2.75.11 NMAC upon completion of the application review, shall accompany the department's grant or denial of the technical permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

D. For a notice of intent or application to register under a general construction permit, the application review fee shall be paid at the time of filing. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, an invoice shall accompany the department's notification of its determination that an air quality permit is not required or its grant or denial of the registration. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

[~~C~~] **E.** An invoice for a request for technical review of an existing permit shall accompany the Department's response if any fees are due. The applicant or permittee shall pay [~~for the review~~] this invoice within [~~thirty (30)~~] 30 days of [~~invoicing~~] the date of the invoice, unless the department has granted an extension.

[~~D~~] **F.** Except for the refund of excess fees paid, all fees paid under this Part shall be non-refundable.

[~~E~~] **G.** All fees paid pursuant to this Part shall be remitted in the form of a corporate or certified check or money order made payable to the Environment Department at the address specified in the notice, electronic payment, or other method as allowed by the state. Upon receipt of the [~~check~~] fee payment, it shall be deposited in the state air quality permit fund established by [~~NMSA 1978, 74-2-15 (1992)~~] Section 74-2-15 NMSA 1978.

[~~F~~] **H.** [~~Permittees~~] Owners or operators shall pay annual fees assessed pursuant to Subsection F of 20.2.75.11 NMAC within [~~thirty (30)~~] 30 days of [~~receipt of an invoice~~] the date of the invoice [~~for annual fees for a permitted facility~~]. Failure to remit the full annual fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual fee. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, accompanied by an invoice for the late fee and unpaid annual fee balance. The owner or operator shall pay this invoice within 30 days of the date of the invoice. If the invoice is not timely paid, the late fee shall increase to one hundred percent of the annual fee and shall be due immediately without further notification from the department, along with the unpaid annual fee balance.

[~~G~~] **I.** All fees shall be paid in U.S. dollars.

J. Failure to remit the full annual fee, including any late fees, required by the due date specified in Subsection H of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 per day for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes the suspension or revocation of any permit.

[20.2.75.12 NMAC - Rp, [~~20 NMAC 2.75.111, 03/02/01~~] 20.2.75.12 NMAC, 6/1/2026]

20.2.75.13 PERIODIC REVIEW: The Department shall prepare a review of the construction permit fees and construction permit program costs annually. The review shall include information on the budgets, expenditures, fund balance, and related projections. The review shall be presented to the Board within six months following the end of the fiscal year.

[20.2.75.13 NMAC - [~~N, 03/02/01~~] Rp, 20.2.75.13 NMAC, 6/1/2026]

20.2.75.14 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.75.14 NMAC - N, 6/1/2026]

CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 75 CONSTRUCTION PERMIT FEES

20.2.75.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.75.1 NMAC - Rp, 20.2.75.1 NMAC, 6/1/2026]

20.2.75.2 SCOPE: This Part applies to all persons who apply for a permit to construct or modify a source, apply to register under a general construction permit, apply for a permit revision, or request a technical review of an existing permit under 20.2.72 NMAC, and all persons who file a notice of intent under 20.2.73 NMAC. Annual emissions fees for sources required to obtain a permit under 20.2.70 NMAC (Operating Permits) are covered under 20.2.71 NMAC.
[20.2.75.1 NMAC - Rp, 20.2.75.2 NMAC, 6/1/2026]

20.2.75.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph (6) of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.75.1 NMAC - Rp, 20.2.75.3 NMAC, 6/1/2026]

20.2.75.4 DURATION: Permanent.
[20.2.75.4 NMAC - Rp, 20.2.75.4 NMAC, 6/1/2026]

20.2.75.5 EFFECTIVE DATE: June 1, 2026, except where a later date is cited at the end of a section.

A. For applications received prior to the effective date of this Part, the provisions in 20.2.75 NMAC, as effective as of the date of the receipt of the application, remain effective, and application review fees (formerly permit fees) shall be so determined.

B. For applications received following the effective date of this Part, application review fees shall be based on the current regulation.

[20.2.75.5 NMAC - Rp, 20.2.75.5 NMAC, 6/1/2026]

20.2.75.6 OBJECTIVE: The objective of this Part is to establish a schedule of fees for the construction permit program, including notices of intent, construction permits, registrations under general construction permits, permit revisions, and technical reviews of existing permits.
[20.2.75.6 NMAC - Rp, 20.2.75.6 NMAC, 6/1/2026]

20.2.75.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions) or 20.2.72 NMAC (Construction Permits), as used in this Part, the following definitions apply.

A. "**Air toxics review"** means the required review of a permit application for the potential emission of an air toxic regulated by 20.2.72.400 NMAC - 20.2.72.499 NMAC. As used in this Part, a level I air toxics review consists of modeling to determine whether one one-hundredth of the occupational exposure limit, as defined in 20.2.72.401 NMAC, is met; a level II air toxics review consists of either a health assessment or best available control technology (BACT) determination, whichever is required by 20.2.72.400 NMAC - 20.2.72.499 NMAC.

B. **"Applicable regulations"** means, for the purpose of assessing application review fee points, those regulations that are applicable to the source and not the review to determine whether the regulation is applicable. Applicable regulations do not include 20.2.1 NMAC (General Provisions), 20.2.2 NMAC (Definitions), 20.2.3 NMAC (Ambient Air Quality Standards), 20.2.5 NMAC (Source Surveillance), 20.2.7 NMAC (Excess Emissions), 20.2.8 NMAC (Emissions Leaving New Mexico), 20.2.60 NMAC (Open Burning), 20.2.70 NMAC (Operating Permits), 20.2.71 NMAC (Operating Permit Emissions Fees), 20.2.72 NMAC (Construction Permits), 20.2.73 NMAC (Notice Of Intent And Emissions Inventory Requirements), 20.2.74 NMAC (Permits - Prevention Of Significant Deterioration (PSD)), 20.2.75 NMAC (Construction Permit Fees), 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards For Hazardous Air Pollutants), 20.2.79 NMAC (Permits - Nonattainment Areas), 20.2.80 NMAC (Stack Heights), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards For Source Categories Of Hazardous Air Pollutants). All other Title 20, Chapter 2 NMAC parts and all new source performance standards (excluding Subpart A) and national emission standards for hazardous air pollutants/maximum achievable control technology (NESHAP/MACT) (excluding 40 CFR Part 61

NMED Exhibit 6_000001

Subparts A and M and 40 CFR Part 63 Subpart A) regulations that are applicable to the source shall be counted and shall result in additional points for application review fee purposes, in accordance with the fee schedule in this Part.

C. "Fee unit" means any equipment or process which generates, creates, or is the source of a regulated air contaminant, which is listed or identified in a construction permit application or application to revise a permit and which requires review and evaluation against state and federal regulations and standards. This definition does not include sources which are exempt under 20.2.72.202 NMAC or sources for which no applicable requirements are identified in the permit. In the case of a permit modification, revision or technical review of an existing permit, the requirements of Subsection A of 20.2.75.11 NMAC apply only to the equipment or process involved in such modification, revision or review.

D. "Fugitive emissions fee unit" means sources of fugitive emissions for which applicable requirements are identified in the permit. A maximum of one fugitive emissions fee unit shall be applied to any given application.

E. "Revision" means any change requested by an applicant to any term or condition of a permit including emission limitations, control technology, operating conditions and monitoring requirements. For the purposes of this Part, revision does not include administrative revision as used in 20.2.72 NMAC.

F. "Small business" means a company that employs no more than 10 employees at any time during the calendar year. Employees include part-time, temporary, or limited service workers. For the purposes of this Part, small business does not include:

(1) any source which may emit more than 50 tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or 75 tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and

(2) any major source for hazardous air pollutants under 20.2.70 NMAC.

G. "Technical review of an existing permit" means the department's technical review of new information submitted by a permittee as required by an existing permit condition and in conjunction with proposed changes at the source that do not involve any changes to the existing permit. The review must be necessary to demonstrate that all applicable state and federal regulations and standards will continue to be met and that the existing permit will continue to be valid. For the purposes of this Part, technical review of an existing permit does not include the department's review of required periodic reports.

[20.2.75.7 NMAC - Rp, 20.2.75.7 NMAC, 6/1/2026]

20.2.75.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 700 - Filing and Permit Fees, filed November 20, 1989, as amended.

A. All references to AQCR 700 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 700 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 700.

[20.2.75.8 NMAC - Rp, 20.2.75.8 NMAC, 6/1/2026]

20.2.75.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico environment department, air quality bureau. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505.]

[20.2.75.9 NMAC - Rp, 20.2.75.9 NMAC, 6/1/2026]

20.2.75.10 FILING FEE:

A. A filing fee of $500 shall be submitted with each filing of an application for a permit to construct or modify a source or permit revision. The filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC.

B. For applications submitted under 20.2.72.221 NMAC, an accelerated review filing fee of $1,000 shall be submitted in lieu of any other filing fees under this Section. One-half of the accelerated review filing fee shall be applied to the cost of the accelerated review submitted by the qualified outside firm. In the event that:

(1) there are no qualified outside firms on contract with the department, or if all of the qualified outside firms have a conflict of interest, the entire accelerated review filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC;

NMED Exhibit 6_000002

(2) no qualified outside firm submits a proposal for the accelerated review, one-half of the accelerated review filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(3) one or more qualified outside firms submit a proposal but all such proposals are rejected by the applicant, the accelerated review filing fee shall be forfeited and retained by the department; or

(4) the applicant withdraws the application for any reason, the accelerated review filing fee shall be forfeited and retained by the department.

[20.2.75.10 NMAC - Rp, 20.2.75.10 NMAC, 6/1/2026]

20.2.75.11 APPLICATION REVIEW FEE AND ANNUAL FEE:

A. The application review fee shall be based on the following point-based fee schedule.

ACTION	**# OF POINTS**	
1. CONSTRUCTION PERMIT/TECHNICAL REVIEW OF EXISTING PERMIT		
Technical Complexity		
1-5 Fee Units	5	
6-15 Fee Units	1	point per fee unit
>15 Fee Units	15	
Fugitive Emissions Fee Unit	5	
Portable Source Relocation (Paragraph (3) of Subsection D of 20.2.72.202 NMAC)	1	
Non-Attainment Area (20.2.79 NMAC)	75	
Each Modeling Review	30	
Air Toxics Review (20.2.72.400 NMAC – 20.2.72.499 NMAC)		
Level I	8	
Level II		
Best Available Control Technology (BACT) Analysis	60	
Health Assessment	100	
Applicable Regulations		
20.2.X NMAC (per each)	3	
NSPS (per each)	5	
NESHAP/MACT (per each)	5	
Case-by-Case MACT (20.2.83 NMAC)	100	
PSD netting only (no additional PSD analysis is required)	20	
PSD review (including netting) (20.2.74 NMAC)	75	
2. OTHER PERMITTING ACTIONS		
Notices of Intent (20.2.73.200 NMAC)	10	
General [~~Permits~~] Permit Registrations other than GCP-Oil & Gas (20.2.72.220 NMAC) [~~for non-Oil and Gas Facilities~~]	10	
[~~General Permits~~] GCP-Oil & Gas Registrations (20.2.72.220 NMAC) [~~for Oil and Gas Facilities~~]	30	
Streamline (each site) (20.2.72.300 NMAC – 20.2.72.399 NMAC)	10	

B. The application review fee shall be the sum of all of the points that are applicable to the application as determined by the department, multiplied by $585.

NMED Exhibit 6_000003

C. The department may, at its discretion, assess additional points and fees each time the department is required to repeat an action listed in Subsection A of this Section because the applicant updated the application after submission.

D. For sources that satisfy the definition of "small business" as defined in Subsection F of 20.2.75.7 NMAC, the application review fee determined by Subsection B of this Section, additional fees (if any) assessed pursuant to Subsection C of this Section, and annual fee assessed pursuant to Subsection F of this Section shall be reduced by half. To qualify for the small business fee reduction, sources must submit a small business certification form to the department certifying that the company employs no more than 10 employees at any time during the calendar year, or for new sources, that the company does not expect to employ any more than 10 employees in the first year of operations.

E. For applications processed by an outside firm under 20.2.72.221 NMAC, the application review fee determined by Subsection B of this Section shall be reduced by half and shall be in addition to the cost of the accelerated review bid.

F. Sources that have been issued a construction permit or registered under a general construction permit under 20.2.72 NMAC shall be assessed an annual fee of $2,800. Sources that have filed a notice of intent under 20.2.73 NMAC and received a written determination by the department that a permit is not required shall be assessed an annual fee of $700. The applicable annual fee shall be assessed if the construction permit, general construction permit registration or notice of intent was in active status as of December 31 of the preceding year, regardless of the source's operational status. The annual fee required by this Subsection shall not apply to sources which are assessed an annual emissions fee in accordance with 20.2.71 NMAC.

G. Beginning in 2028, the cost per point and annual fees in Subsections B and F of this Section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI). The adjusted cost per point and annual fees shall be determined by multiplying the current cost per point and annual fees by the increase in the CPI for the most recent calendar year and rounding the result to the nearest dollar. The CPI for any calendar year is the average of the CPI for all urban consumers published by the United States department of labor, as of the close of the twelve-month period ending on August 31 of that year. In the event there is a decrease or absence of change in the CPI, the cost per point and annual fees shall not be changed and shall remain the same until the next increase in the CPI.

[20.2.75.11 NMAC - Rp, 20.2.75.11 NMAC, 6/1/2026]

20.2.75.12 INVOICING, PAYMENT, LATE FEE AND ENFORCEMENT:

A. The department shall refuse to accept any application for a permit to construct or modify a source or permit revision without payment of the filing fee at the time the application is submitted to the department. The filing fee and the accelerated review filing fee are non-refundable. The department shall refuse to accept any notice of intent or application to register under a general construction permit without payment of the application review fee at the time the notice or application is submitted to the department.

B. For an application for a permit to construct or modify a source or permit revision other than a technical permit revision, an invoice for the application review fee, minus the filing fee, shall be mailed, or transmitted electronically or as otherwise allowed by the state, to the applicant at the time the department finds the application administratively complete pursuant to 20.2.72.207 NMAC. The department shall deny any application for a permit to construct or modify a source or permit revision other than a technical permit revision if the application review fee has not been paid within 30 days of the date of the invoice, unless the department has granted an extension. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, the department shall mail another invoice to the applicant along with its grant or denial of the permit or permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

C. For an application for a technical permit revision, an invoice for the application review fee, minus the filing fee, and any additional fees the department determines are due pursuant to Subsection C of 20.2.75.11 NMAC upon completion of the application review, shall accompany the department's grant or denial of the technical permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

D. For a notice of intent or application to register under a general construction permit, the application review fee shall be paid at the time of filing. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, an invoice shall accompany the department's notification of its determination that an air quality permit is not required or its grant or denial of the

registration. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

E. An invoice for a request for technical review of an existing permit shall accompany the department's response if any fees are due. The applicant or permittee shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

F. Except for the refund of excess fees paid, all fees paid under this Part shall be non-refundable.

G. All fees paid pursuant to this Part shall be remitted in the form of a corporate or certified check or money order made payable to the environment department at the address specified in the notice, electronic payment, or other method as allowed by the state. Upon receipt of the fee payment, it shall be deposited in the state air quality permit fund established by Section 74-2-15 NMSA 1978.

H. Owners or operators shall pay annual fees assessed pursuant to Subsection F of 20.2.75.11 NMAC within 30 days of the date of the invoice. Failure to remit the full annual fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual fee. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, accompanied by an invoice for the late fee and unpaid annual fee balance. The owner or operator shall pay this invoice within 30 days of the date of the invoice. If the invoice is not timely paid, the late fee shall increase to one hundred percent of the annual fee and shall be due immediately without further notification from the department, along with the unpaid annual fee balance.

I. All fees shall be paid in U.S. dollars.

J. Failure to remit the full annual fee, including any late fees, required by the due date specified in Subsection H of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 per day for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes the suspension or revocation of any permit.

~~[**K.** Non-compliance with Chapter 2, Title 20 NMAC or the Air Quality Control Act subjects each owner or operator to administrative compliance costs for enforcement of Chapter 2, Title 20 NMAC.]~~

[20.2.75.12 NMAC - Rp, 20.2.75.12 NMAC, 6/1/2026]

20.2.75.13 PERIODIC REVIEW: The department shall prepare a review of the construction permit fees and construction permit program costs annually. The review shall include information on the budgets, expenditures, fund balance, and related projections. The review shall be presented to the Board within six months following the end of the fiscal year.

[20.2.75.13 NMAC - Rp, 20.2.75.13 NMAC, 6/1/2026]

20.2.75.14 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.75.14 NMAC - N, 6/1/2026]

HISTORY OF 20.2.75 NMAC:

Pre-NMAC History: The material in this Part was derived from that previously filed with the commission of public records - state records center and archives:

AQCR 700, Air Quality Control Regulation 700 - Filing and Permit Fees, filed 11/20/89.

History of Repealed Material:

20 NMAC 2.75, Construction Permit Fees, filed 10/30/95, repealed, effective 03/02/01;

20.2.75 NMAC, Construction Permit Fees, effective 03/02/01, repealed, effective 6/1/26.

Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-3

§ 74-1-3. Definitions

Effective: May 15, 2024

Currentness

As used in the Environmental Improvement Act:

A. "board" means the environmental improvement board;

B. "carbon intensity" means the quantity of fuel lifecycle greenhouse gas emissions per unit of fuel energy, expressed in grams of carbon dioxide equivalent per megajoule;

C. "department" or "environmental improvement department" means the department of environment;

D. "fuel lifecycle" means an assessment of the aggregate greenhouse gas emissions based on science-based models or protocols, including direct emissions and significant indirect emissions from indirect land use change, all stages of fuel and feedstock production and distribution, feedstock generation or extraction through the distribution, delivery and use of the finished fuel by the consumer, including consideration of storage, transportation and combustion;

E. "on-site liquid waste system" means a liquid waste system, or part thereof, serving a dwelling, establishment or group, and using a liquid waste treatment unit designed to receive liquid waste followed by either a soil treatment or other type of disposal system. "On-site liquid waste system" includes holding tanks and privies but does not include systems or facilities designed to receive or treat mine or mill tailings or wastes;

F. "person" means the state or any agency, institution or political subdivision thereof, any public or private corporation, individual, partnership, association or other entity and includes any officer or governing or managing body of any political subdivision or public or private corporation;

G. "residential on-site liquid waste system" means an on-site liquid waste system serving up to four dwelling units;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

H. “secretary” means the secretary of environment; and

I. “transportation fuel” means electricity or a liquid, gaseous or blended fuel, including gasoline, diesel, liquefied petroleum gas, natural gas and hydrogen, sold, supplied, used or offered for sale to power vehicles or equipment for the purposes of transportation.

Chapter 74. Environmental Improvement
Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-4

§ 74-1-4. Environmental improvement board; creation; organization

Currentness

A. There is created the "environmental improvement board". The board shall consist of seven members appointed by the governor, by and with the advice and consent of the senate. The members of the board shall be appointed for overlapping terms, with no term exceeding five years. No more than four members shall be appointed from any political party. At least a majority of the membership of the board shall be individuals who represent the public interest and do not derive any significant portion of their income from persons subject to or who appear before the board on issues related to the federal Clean Air Act[1] or the Air Quality Control Act [Chapter 74, Article 2 NMSA 1978]. Any vacancy occurring in the membership of the board shall be filled by appointment by the governor for the unexpired term.

B. The members of the board shall be reimbursed as provided in the Per Diem and Mileage Act [10-8-1 to 10-8-8 NMSA 1978].

C. The board shall elect from its membership a chairman, vice chairman and secretary and shall establish the tenure of these offices. The board shall convene upon the call of the chairman or a majority of its members. Four members shall constitute a quorum.

N. M. S. A. 1978, § 74-1-6

§ 74-1-6. Department; powers

Effective: June 19, 2009

Currentness

The department shall have power to:

A. sue and be sued;

B. make contracts to carry out its delegated duties;

C. enter into agreements with environmental and consumer protection agencies of other states and the federal government pertaining to duties of the department;

D. enter into investigation and remediation agreements with persons potentially responsible for sites within New Mexico subject to the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980,[1] and such agreements shall not duplicate or take any authority from the oil conservation commission;

E. serve as agent of the state in matters of environmental management and consumer protection not expressly delegated by law to another department, commission or political subdivision in which the United States is a party;

F. enforce the rules, regulations and orders promulgated by the board and environmental management and consumer protection laws for which the department is responsible by appropriate action in courts of competent jurisdiction;

G. collect civil penalties pursuant to law, including reduction or elimination of penalties for violations from persons that:

(1) within sixty days of the discovery of a potential violation, voluntarily report to the department potential violations of

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

law enforced by the department;

(2) initiate corrective action for the potential violation;

(3) have not previously violated the same provision of law; and

(4) do not present an imminent and substantial endangerment to health or the environment by the potential violation.

H. on the same basis as any other person, recommend and propose regulations for promulgation by the board;

I. on the same basis as any other person, present data, views or arguments and examine witnesses and otherwise participate at all hearings conducted by the board or any other administrative agency with responsibility in the areas of environmental management or consumer protection, but shall not be given any special status over any other party; and

J. have such other powers as may be necessary and appropriate for the exercise of the powers and duties delegated to the department.

N. M. S. A. 1978, § 74-1-7

§ 74-1-7. Department; duties

Effective: May 15, 2024

Currentness

A. The department is responsible for environmental management and consumer protection programs. In that respect, the department shall maintain, develop and enforce rules and standards in the following areas:

(1) food protection;

(2) water supply, including implementing a capacity development program to assist water systems in acquiring and maintaining technical, managerial and financial capacity in accordance with Section 1420 of the federal Safe Drinking Water Act of 1974[1] and establishing administrative penalties for enforcement;

(3) liquid waste, including exclusive authority to collect on-site liquid waste system fees that are no more than the average charged by the contiguous states to New Mexico for similar permits and services and to implement and administer an inspection and permitting program for on-site liquid waste systems;

(4) air quality management as provided in the Air Quality Control Act [Chapter 74, Article 2 NMSA 1978];[2]

(5) radiation control and collection of license, registration and other related fees as provided in the Radiation Protection Act [Chapter 74, Article 3 NMSA 1978];[3];

(6) noise control;

(7) nuisance abatement;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(8) vector control;

(9) occupational health and safety as provided in the Occupational Health and Safety Act [50-9-1 to 50-9-25 NMSA 1978];[4]

(10) sanitation of public swimming pools and public baths;

(11) plumbing, drainage, ventilation and sanitation of public buildings in the interest of public health;

(12) medical radiation, health and safety certification and standards for radiologic technologists as provided in the Medical Imaging and Radiation Therapy Health and Safety Act [Chapter 61, Article 14E NMSA 1978];[5]

(13) hazardous wastes and underground storage tanks as provided in the Hazardous Waste Act [Chapter 74, Article 4 NMSA 1978];[6]

(14) solid waste as provided in the Solid Waste Act [74-9-1 to 74-9-42 NMSA 1978];[7] and

(15) carbon intensity of transportation fuels as provided in Section 4 [74-1-18 NMSA 1978] of this 2024 act, including registration and related fees.

B. Nothing in Subsection A of this section imposes requirements for the approval of subdivision plats in addition to those required elsewhere by law. Nothing in Subsection A of this section preempts the authority of any political subdivision to approve subdivision plats.

Chapter 74. Environmental Improvement
Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-7.1

§ 74-1-7.1. Green zia program; business sensitive information confidential

Currentness

A. The department may develop and administer a pollution prevention program to be known as the "green zia program". The department may enter into contracts with the federal government, promulgate rules and take other actions appropriate and necessary to produce an efficient and effective program.

B. Information provided to the department in accordance with the green zia program may be subject to confidentiality if the person furnishing the information demonstrates to the department that the information would divulge confidential methods or processes entitled to protection as trade secrets. If the department determines that the information is subject to confidentiality, the secretary shall promulgate a determination of confidentiality with an order of confidentiality. Confidential information may be disclosed to employees or authorized representatives of the department, but they shall not disclose the information to any other person.

C. A person who violates an order of confidentiality by disclosing confidential information pursuant to this section is guilty of a misdemeanor and upon conviction shall be punished by a fine of not more than one thousand dollars ($1,000) per violation or by imprisonment for a definite term of one year or both.

N. M. S. A. 1978, § 74-1-8.1

§ 74-1-8.1. Legal advice

Currentness

A. In the exercise of any of its powers or duties, the board shall act with independent legal advice. The manner in which such advice is provided shall be determined by the board, but from among one of the following:

(1) the office of the attorney general;

(2) independent counsel hired by the board, whether full- or part-time; or

(3) another state agency whose function is sufficiently distinct from the department of environment to assure independent, impartial advice.

B. Notwithstanding the provisions of Subsection A of this section, attorneys from the department may act for the board in lawsuits filed against or on behalf of the board, and the attorney general may, at the request of the board, file and defend lawsuits on behalf of the board.

N. M. S. A. 1978, § 74-1-9

§ 74-1-9. Adoption of regulations; notice and hearing; appeal

Currentness

A. Any person may recommend or propose regulations to the board for promulgation. The board shall determine whether or not to hold a hearing within sixty days of submission of a proposed regulation.

B. No regulation shall be adopted until after a public hearing by the board. As used in this section, "regulation" includes any amendment or repeal thereof. Hearings on regulations of nonstatewide application shall be held within that area which is substantially affected by the regulation. Hearings on regulations of statewide application may be held at Santa Fe or within any area of the state substantially affected by the regulation. In making its regulations, the board shall give the weight it deems appropriate to all relevant facts and circumstances presented at the public hearing, including but not limited to:

(1) character and degree of injury to or interference with health, welfare, animal and plant life, property and the environment;

(2) the public interest, including the social, economic and cultural value of the regulated activity and the social, economic and cultural effects of environmental degradation; and

(3) technical practicability, necessity for and economic reasonableness of reducing, eliminating or otherwise taking action with respect to environmental degradation.

C. The standards for regulations set forth in Subsection A [Subsection B] of this section do not apply to the promulgation of regulations under the Air Quality Control Act [Chapter 74, Article 2 NMSA 1978];[1] or any other act in which specific standards are set forth for the board's consideration.

D. Notice of the hearing shall be given at least sixty days prior to the hearing date and shall state the subject, the time and the place of the hearing and the manner in which interested persons may present their views. The proposed language amending any existing regulation or any proposed new regulation shall be made available to the public as of the date the notice of the hearing is given. The notice shall also state where interested persons may secure copies of any proposed amendment or new

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

regulation. The notice shall be published in a newspaper of general circulation in the area affected. Reasonable effort shall be made to give notice to all persons who have made a written request to the board for advance notice of hearings.

E. At the hearing, the board shall allow all interested persons reasonable opportunity to submit data, proposed changes to the proposed regulation, views or arguments orally or in writing and to examine witnesses testifying at the hearing. Any person heard or represented at the hearing shall be given written notice of the action of the board.

F. The board may designate a hearing officer to take evidence in the hearing. A transcript shall be made of the entire hearing proceedings.

G. No regulation or amendment or repeal thereof adopted by the board shall become effective until thirty days after its filing under the State Rules Act [Chapter 14, Article 4 NMSA 1978].[2]

H. Any person who is or may be affected by a regulation adopted by the board may appeal to the court of appeals for further relief. All such appeals shall be upon the transcript made at the hearing and shall be taken to the court of appeals within thirty days after filing of the regulation under the State Rules Act.

I. The procedure for perfecting an appeal to the court of appeals under this section consists of the timely filing of a notice of appeal with a copy attached to the regulation from which the appeal is taken. The appellant shall certify in his notice of appeal that arrangements have been made with the board for preparation of a sufficient number of transcripts of the record of the hearing on which the appeal depends to support his appeal to the court, at the expense of the appellant, including three copies which he shall furnish to the board.

J. Upon appeal, the court of appeals shall set aside the regulation only if found to be:

(1) arbitrary, capricious or an abuse of discretion;

(2) not supported by substantial evidence in the transcript; or

(3) otherwise not in accordance with law.

West's New Mexico Statutes Annotated
Chapter 74. Environmental Improvement
Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-10

§ 74-1-10. Penalty

Currentness

A. A person who violates any regulation of the board is guilty of a petty misdemeanor. This section does not apply to any regulation for which a criminal penalty is otherwise provided by law.

B. Whenever, on the basis of any information, the secretary determines that a person has violated, is violating or threatens to violate any provision of Paragraph (2) or (3) of Subsection A of Section 74-1-8 NMSA 1978 or any rule, regulation or permit condition adopted and promulgated thereunder, the secretary may:

(1) issue a compliance order stating with reasonable specificity the nature of the violation or threatened violation, requiring compliance immediately or within a specified time period and assessing a civil penalty for any past or current violation, or both; or

(2) commence a civil action in district court for appropriate relief, including a temporary or permanent injunction.

C. An order issued pursuant to Subsection B of this section may include suspension or revocation of any permit issued by the department. Any penalty assessed in the order, except for residential on-site liquid waste systems, shall not exceed one thousand dollars ($1,000) for each violation. Any penalty assessed in the order for a residential on-site liquid waste system shall not exceed one hundred dollars ($100) for each violation. A penalty imposed for violation of drinking water regulations 20 NMAC 7.1 or permit conditions shall not exceed one thousand dollars ($1,000) per violation per day. In assessing the penalty, the secretary shall take into account the seriousness of the violation and any good-faith efforts to comply with the applicable requirements.

D. If a violator fails to take corrective actions within the time specified in the compliance order, the secretary shall:

(1) assess civil penalties of not more than one thousand dollars ($1,000) for each noncompliance with the order; and

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(2) suspend or revoke any permit issued to the violator pursuant to Paragraph (3) of Subsection A of Section 74-1-8 NMSA 1978.

E. An order issued pursuant to this section shall become final unless, no later than thirty days after the order is served, the person named in the order submits a written request to the secretary for a hearing. Upon such a request, the secretary shall conduct a hearing. The secretary shall appoint an independent hearing officer to preside over the hearing. The hearing officer shall make and preserve a complete record of the proceedings and forward his recommendation based on the record to the secretary, who shall make the final decision.

F. In connection with any proceeding pursuant to this section, the secretary may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books and documents and may adopt and promulgate rules for discovery procedures.

G. Penalties collected pursuant to violations of rules, regulations or permit conditions adopted pursuant to Paragraph (3) of Subsection A of Section 74-1-8 NMSA 1978 shall be deposited in the state treasury to be credited to the general fund.

H. Penalties collected pursuant to violations of drinking water regulations 20 NMAC 7.1 or permit conditions pursuant to Paragraph (2) of Subsection A of Section 74-1-8 NMSA 1978 shall be deposited in the state treasury to the credit of the water conservation fund.

N. M. S. A. 1978, § 74-1-10.1

§ 74-1-10.1. False statements to the department; penalties

Effective: May 16, 2018

Currentness

A. It is unlawful for an owner or operator of a public water system subject to the Environmental Improvement Act and applicable rules or an owner's or operator's agent to:

(1) knowingly make a false statement, representation, certification or omission of fact material to the protection of public health as related to a public water system in an application, record, report, plan or other document filed with or submitted to the department, or required by rule to be maintained by an owner or operator of a public water system;

(2) knowingly falsify, tamper with or render inaccurate any device, method or record to be relied upon by the department to monitor or track information related to a public water system;

(3) knowingly falsify or conceal a fact material to the protection of public health as related to a public water system; or

(4) make or use a document with the knowledge that the document contains false statements or representations material to the protection of public health as related to a public water system.

B. A person who violates or knowingly causes or allows another person to violate Subsection A of this section is guilty of a misdemeanor and shall be sentenced in accordance with the provisions of Section 31-19-1 NMSA 1978.

Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-12

§ 74-1-12. Compliance with the federal Safe Drinking Water Act; purpose

Currentness

The purpose of this section and Section 74-1-13 NMSA 1978 is to provide:

A. an incentive for conservation of water, the state's most precious resource; and

B. funding for certain locations in the state to comply with the federal Safe Drinking Water Act[1] in which the United States congress mandated that the United States environmental protection agency establish drinking water standards for contaminants, require filtration and disinfection for all public water supply systems, increase enforcement authority, establish public notification requirements, implement a lead ban and implement a capacity development program for existing and newly created water systems.

N. M. S. A. 1978, § 74-1-13

§ 74-1-13. Water conservation fee; imposition; definitions

Effective: July 1, 2025

Currentness

A. There is imposed on every person who operates a public water supply system a water conservation fee in an amount equal to three cents ($.03) per thousand gallons of water produced on which the fee imposed by this subsection has not been paid.

B. The "water conservation fund" is created in the state treasury and shall be administered by the department. The fund shall consist of water conservation fees collected pursuant to this section. Balances in the fund at the end of any fiscal year shall not revert to the general fund but shall accrue to the credit of the fund. Earnings on the fund shall be credited to the fund.

C. Money in the water conservation fund is appropriated to the department for administration of a public water supply program to:

(1) test public water supplies for the contaminants required to be tested pursuant to the provisions of the federal Safe Drinking Water Act,[1] as amended, and collect chemical compliance samples as required by those provisions of the federal act;

(2) perform vulnerability assessments that will be used to assess a public water supply's susceptibility to those contaminants; and

(3) implement new requirements of the Utility Operators Certification Act[2] and provide training for all public water supply operators.

D. The taxation and revenue department shall provide by regulation for the manner and form of collection of the water conservation fee. All water conservation fees collected by the taxation and revenue department shall be deposited in the water conservation fund.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

E. The fee imposed by this section shall be administered in accordance with the provisions of the Tax Administration Act[3] and shall be paid to the taxation and revenue department by each person who operates a public water supply system in the manner required by the department on or before the twenty-fifth day of the month following the month in which the water is produced.

F. Each operator of a public water supply system shall register and comply with the provisions of Section 7-1-12 NMSA 1978 and furnish such information as may be required by the taxation and revenue department.

G. The department shall compile a list of the contaminants that require testing pursuant to Paragraph (1) of Subsection C of this section. The list shall be compiled no less than once every twelve months and include the contaminants that will be tested in the subsequent twelve months. The department shall establish by rule procedures to compile the list and to determine which contaminants that require testing will be tested in the subsequent twelve months. The determination of which contaminants will be tested shall include consideration of the availability of funds in the water conservation fund, the needs of the public water supplies being tested for additional contaminants and public health and safety.

H. As used in this section:

(1) “person” means any individual or legal entity and also means, to the extent permitted by law, any federal, state or other governmental unit or subdivision or an agency, department or instrumentality thereof; and

(2) “public water supply system” means a system that provides piped water to the public for human consumption and that has at least fifteen service connections or regularly services an average of at least twenty-five individuals at least sixty days per year.

N. M. S. A. 1978, § 74-1-13.1

§ 74-1-13.1. Nontransient noncommunity public water systems; definition; testing and notice requirements

Currentness

A. The department of environment shall test nontransient noncommunity water systems for arsenic, fluoride and radionuclides and adopt rules for reporting and public notification for those contaminants comparable to reporting and notification requirements for community water systems. Money in the water conservation fund may be used to fulfill the requirements of this subsection.

B. As used in this section:

(1) "community water system" means a public water system that serves at least fifteen service connections used by year-round residents or regularly serves at least twenty-five year-round residents; and

(2) "nontransient noncommunity water system" means a public water system that is not a community water system and that regularly serves at least twenty-five of the same persons over six months per year including but not limited to schools and factories.

N. M. S. A. 1978, § 74-1-15.1

§ 74-1-15.1. Liquid waste disposal system assistance fund; created; purpose

Effective: May 20, 2020

Currentness

A. The "liquid waste disposal system assistance fund" is created in the state treasury. The department shall administer the fund. The fund may be composed of appropriations and transfers of money earned from investment of the fund and otherwise accruing to the fund and transfers of money from the environmental health fund not to exceed two hundred thousand dollars ($200,000) from the unexpended balance in the fund. Balances remaining in the fund at the end of a fiscal year shall remain to the credit of the fund. Disbursements from the fund shall be drawn on warrant of the secretary of finance and administration pursuant to vouchers signed by the secretary of environment or the secretary's authorized representative. Money in the fund is appropriated to the department for the sole purpose of assisting indigent individuals or households that qualify for funding to accomplish one of the following purposes where there is a real or potential negative impact to public health or water quality from on-site liquid waste disposal system effluent:

(1) to pay for a liquid waste disposal system to replace a cesspool or other failed or improper on-site liquid waste disposal system;

(2) to purchase, install or maintain an advanced treatment system as required by the Environmental Improvement Act or regulations issued pursuant to that act;

(3) to pay for the decommissioning and removal of a cesspool or other failed or improper on-site liquid waste disposal system; or

(4) to pay for all or a portion of the connection fees in order to connect an individual or household to a centralized wastewater collection and treatment system.

B. Construction activities sponsored by the fund shall be performed by licensed contractors selected through competitive bid by the department and shall be managed by the department.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

C. No more than five percent of the fund shall be used by the department on an annual basis to pay for the department costs associated with management and implementation of fund activities.

D. As used in this section:

(1) “advanced treatment system” means an on-site liquid wastewater treatment system that removes a greater amount of contaminants than is accomplished by a primary treatment system;

(2) “connection fee” means the fee paid directly to a public water or wastewater system or other wastewater management organization and does not include other fees, such as legal fees, related to connecting an individual or household to a centralized wastewater collection and treatment system; and

(3) “indigent individuals or households” means individuals or households whose annual incomes do not exceed the federal poverty guidelines.

N. M. S. A. 1978, § 74-1-15.2

§ 74-1-15.2. Environmental health fund; created

Effective: May 20, 2020

Currentness

A. The "environmental health fund" is created in the state treasury. The fund consists of fees collected from the regulation of on-site liquid waste systems and water recreation facilities pursuant to the Environmental Improvement Act, food establishments pursuant to the Food Service Sanitation Act [Chapter 25, Article 1 NMSA 1978] and hemp pursuant to the Hemp Manufacturing Act [Chapter 76, Article 24 NMSA 1978]. Money in the fund is subject to appropriation by the legislature to the department for the administration of regulations pertaining to liquid waste, water recreation facilities, food service sanitation and hemp. Disbursements from the fund shall be by warrant drawn by the secretary of finance and administration pursuant to vouchers signed by the secretary of environment or the secretary of environment's designee. Any unexpended or unencumbered balance in the environmental health fund remaining at the end of any fiscal year shall not revert to the general fund.

B. Up to two hundred thousand dollars ($200,000) from unexpended and unencumbered money in the environmental health fund may be transferred to the liquid waste disposal system assistance fund on an annual basis.

Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-18

§ 74-1-18. Clean transportation fuel standard program; rules

Effective: May 15, 2024

Currentness

A. The board shall promulgate rules to implement a clean transportation fuel standard program no later than July 1, 2026.

B. Prior to the board promulgating rules pursuant to this section, the secretary shall convene an advisory committee composed of stakeholders from in-state and out-of-state producers of transportation fuels, transportation fuel distributors, local governments, utilities, tribal governments, environmental protection groups, environmental justice groups and other individuals or entities with relevant expertise to provide input and periodically review program rules.

C. The clean transportation fuel standard program rules shall:

(1) establish a statewide technology-neutral clean transportation fuel standard based on a schedule for annually decreasing the carbon intensity of transportation fuels used in the state;

(2) apply the clean transportation fuel standard to account for the fuel lifecycle in order to reduce the carbon intensity of transportation fuels used in the state by at least twenty percent below 2018 carbon intensity levels by 2030 and at least thirty percent below 2018 carbon intensity levels by 2040;

(3) establish technology-neutral mechanisms for generating, obtaining, trading, selling and retiring credits among transportation fuel producers, fuel distributors and other individuals or entities in the transportation fuel market, including additional credit opportunities from activities and projects that support the reduction or removal of greenhouse gas emissions associated with transportation in the state;

(4) establish mechanisms, including cost-containment measures and credit holding limits, to allow credits to be banked for future compliance periods to stabilize and incentivize investment in the transportation fuel credit market, verify the validity of compliance obligations, maximize savings and limit consumer costs, ensure program compliance, trade credits and allow for market participation by persons who register in the market to facilitate credit generation;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(5) require a utility that elects to participate in the program to invest all revenues from the sale of credits, not including administrative program costs, into distribution, grid modernization, infrastructure and other projects that support transportation decarbonization, with at least fifty percent of such revenues supporting low-income and underserved communities and with investor-owned utilities receiving regulatory treatment consistent with Section 62-8-12 NMSA 1978;

(6) consider similar programs in other jurisdictions, allow for coordination with other jurisdictions to promote regional reductions or removal of greenhouse gas emissions and allow market participants to generate credits under any overlapping current and future federal transportation fuel regulations;

(7) not discriminate against fuels solely on the basis of having originated in another state or jurisdiction;

(8) establish a periodic review process that includes input from the advisory committee convened pursuant to Subsection B of this section to provide input on program rules and performance and determine potential adjustments if deemed necessary after review, including the superseding of the state program by federal legislation;

(9) allow for a deferral of the program based on emergency or forecasted conditions; and

(10) establish fees for the cost of the department's administration and enforcement of the program; provided that any fees are deposited in the state air quality permit fund.

D. As used in this section:

(1) "low-income" means annual household adjusted gross income, as defined in the Income Tax Act [Chapter 7, Article 2 NMSA 1978], of equal to or less than two hundred percent of the federal poverty level; and

(2) "underserved community" means an area in this state, including a county, municipality or neighborhood, or subset of such area where the median income of the area is low-income.

N. M. S. A. 1978, § 74-2-2

§ 74-2-2. Definitions

Currentness

As used in the Air Quality Control Act:

A. "air contaminant" means a substance, including any particulate matter, fly ash, dust, fumes, gas, mist, smoke, vapor, micro-organisms, radioactive material, any combination thereof or any decay or reaction product thereof;

B. "air pollution" means the emission, except emission that occurs in nature, into the outdoor atmosphere of one or more air contaminants in quantities and of a duration that may with reasonable probability injure human health or animal or plant life or as may unreasonably interfere with the public welfare, visibility or the reasonable use of property;

C. "department" means the department of environment;

D. "director" means the administrative head of a local agency;

E. "emission limitation" or "emission standard" means a requirement established by the environmental improvement board or the local board, the department, the local authority or the local agency or pursuant to the federal act that limits the quantity, rate or concentration, or combination thereof, of emissions of air contaminants on a continuous basis, including any requirements relating to the operation or maintenance of a source to assure continuous reduction;

F. "federal act" means the federal Clean Air Act,[1] its subsequent amendments and successor provisions;

G. "federal standard of performance" means a standard of performance, emission limitation or emission standard adopted pursuant to 42 U.S.C. Section 7411 or 7412;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

H. “hazardous air pollutant” means an air contaminant that has been listed as a hazardous air pollutant pursuant to the federal act;

I. “local agency” means the administrative agency established by a local authority pursuant to Paragraph (2) of Subsection A of Section 74-2-4 NMSA 1978;

J. “local authority” means any of the following political subdivisions of the state that have, by following the procedure set forth in Subsection A of Section 74-2-4 NMSA 1978, assumed jurisdiction for local administration and enforcement of the Air Quality Control Act:

(1) a county that was a class A county as of January 1, 1980; or

(2) a municipality with a population greater than one hundred thousand located within a county that was a class A county as of January 1, 1980;

K. “local board” means a municipal, county or joint air quality control board created by a local authority;

L. “mandatory class I area” means any of the following areas in this state that were in existence on August 7, 1977:

(1) national wilderness areas that exceed five thousand acres in size; and

(2) national parks that exceed six thousand acres in size;

M. “modification” means a physical change in, or change in the method of operation of, a source that results in an increase in the potential emission rate of a regulated air contaminant emitted by the source or that results in the emission of a regulated air contaminant not previously emitted, but does not include:

(1) a change in ownership of the source;

(2) routine maintenance, repair or replacement;

(3) installation of air pollution control equipment, and all related process equipment and materials necessary for its

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

operation, undertaken for the purpose of complying with regulations adopted by the environmental improvement board or the local board or pursuant to the federal act; or

(4) unless previously limited by enforceable permit conditions:

(a) an increase in the production rate, if such increase does not exceed the operating design capacity of the source;

(b) an increase in the hours of operation; or

(c) use of an alternative fuel or raw material if, prior to January 6, 1975, the source was capable of accommodating such fuel or raw material or if use of an alternate fuel or raw material is caused by a natural gas curtailment or emergency allocation or an other lack of supply of natural gas;

N. “nonattainment area” means for an air contaminant an area that is designated “nonattainment” with respect to that contaminant within the meaning of Section 107(d) of the federal act;

O. “person” includes an individual, partnership, corporation, association, the state or political subdivision of the state and any agency, department or instrumentality of the United States and any of their officers, agents or employees;

P. “potential emission rate” means the emission rate of a source at its maximum capacity to emit a regulated air contaminant under its physical and operational design, provided any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its physical and operational design only if the limitation or the effect it would have on emissions is enforceable by the department or the local agency pursuant to the Air Quality Control Act or the federal act;

Q. “regulated air contaminant” means an air contaminant, the emission or ambient concentration of which is regulated pursuant to the Air Quality Control Act or the federal act;

R. “secretary” means the secretary of environment;

S. “significant deterioration” means an increase in the ambient concentrations of an air contaminant above the levels allowed by the federal act or federal regulations for that air contaminant in the area within which the increase occurs;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

T. “source” means a structure, building, equipment, facility, installation or operation that emits or may emit an air contaminant;

U. “standard of performance” means a requirement of continuous emission reduction, including any requirement relating to operation or maintenance of a source to assure continuous emission reduction;

V. “state implementation plan” means a plan submitted by New Mexico to the federal environmental protection agency pursuant to 42 U.S.C. Section 7410; and

W. “toxic air pollutant” means an air contaminant, except a hazardous air pollutant, classified by the environmental improvement board or the local board as a toxic air pollutant.

N. M. S. A. 1978, § 74-2-3

§ 74-2-3. Environmental improvement board

Currentness

A. In taking any action under the Air Quality Control Act, a majority of the environmental improvement board constitutes a quorum, but any action, order or decision of the environmental improvement board requires the concurrence of three members present at a meeting.

B. Except as provided in the Air Quality Control Act, the jurisdiction of the environmental improvement board extends to all areas of the state except within the boundaries of a local authority.

N. M. S. A. 1978, § 74-2-4

§ 74-2-4. Local authority

Effective: July 1, 2021

Currentness

A. A county or municipality meeting the qualifications set forth in Paragraph (1) or (2) of Subsection J of Section 74-2-2 NMSA 1978 may assume jurisdiction as a local authority by adopting an ordinance providing for the local administration and enforcement of the Air Quality Control Act. The ordinance shall:

(1) create a local board to perform, within the boundaries of the local authority, those functions delegated to the environmental improvement board under the Air Quality Control Act, except any functions reserved exclusively for the environmental improvement board;

(2) create a local agency to administer and enforce the provisions of the Air Quality Control Act within the boundaries of the local authority that shall, within the boundaries of the local authority, perform all of the duties required of the department and exert all of the powers granted to the department, except for those duties and powers reserved exclusively for the department; and

(3) provide for the appointment of a director who shall perform for the local authority the same duties as required of the secretary under the Air Quality Control Act, except the duties and powers reserved exclusively for the secretary.

B. At least a majority of the members of a local board shall be individuals who represent the public interest and do not derive any significant portion of their income from persons subject to or who appear before the local board on issues related to the federal act or the Air Quality Control Act.

C. Prior to adopting any ordinance regulating air pollution, public hearings and consultations shall be held as directed by the local authority adopting the ordinance. The provisions of any ordinance shall be consistent with the substantive provisions of the Air Quality Control Act and shall provide for standards and regulations not lower than those required by regulations adopted by the environmental improvement board.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

D. Notwithstanding the provisions of Subsection A of this section, the environmental improvement board and the secretary shall retain jurisdiction and control for the administration and enforcement of the Air Quality Control Act as determined in that act with respect to any act or failure to act, governmental or proprietary, of any local authority that causes or contributes to air pollution, including proceeding against a local authority as provided in Section 74-2-12 NMSA 1978. "Failure to act", as used in this section, includes failure to act against any person violating the applicable ordinance or regulation adopted pursuant thereto.

E. Any local authority that is located within a transportation-related pollutant nonattainment area or maintenance area may provide for a vehicle emission inspection and maintenance program for vehicles registered at an address within the jurisdiction of the local authority and under twenty-six thousand pounds gross vehicle weight rating powered by an internal combustion engine, which program shall be at least as stringent as that required under the federal act or under federal air quality standards. Any two or more local authorities may adopt identical rules and regulations necessary to implement the vehicle emission inspection and maintenance program, including examining the alternatives of public or private operation of the program.

F. Any local authority that has implemented a vehicle emission inspection and maintenance program may extend the enforcement of that program by entering into joint powers agreements with any municipality or county within the designated airshed or with the department.

G. No tax shall be imposed to fund any vehicle emission inspection and maintenance program until the local authority has submitted the question of imposition of a tax to the registered voters of the local authority and those registered voters have approved the imposition of the tax.

H. A local authority having a vehicle emission inspection and maintenance program shall conduct the vehicle emission inspection and maintenance program through a decentralized privately owned and operated system unless air quality emissions result in automatic implementation of another type of program under the terms of a contingency plan required and approved by the United States environmental protection agency. The local authority shall set the emission inspection fee by ordinance.

I. A local authority having a vehicle emission inspection and maintenance program is authorized to adopt rules, regulations and guidelines governing the establishment of private vehicle emission inspection and maintenance stations. No private vehicle emission inspection and maintenance station shall test vehicles unless the station possesses a valid permit issued by the local agency. Permit fees shall be determined by ordinance of the local authority and shall not exceed two hundred dollars ($200) per year per station. Additionally, a local authority may charge a permit fee of up to thirty-five dollars ($35.00) per year for each vehicle emissions mechanic and for each vehicle emissions inspector. The imposition of permit fees does not require a vote of the registered voters of the local authority.

J. Before a local authority adopts an ordinance that is more stringent than the federal act or applicable federal regulations, or that applies to sources not subject to regulation pursuant to the federal act or regulations, the local authority shall make a determination, based on substantial evidence and after notice and public hearing, that the proposed ordinance will be more protective of public health and the environment.

West's New Mexico Statutes Annotated
Chapter 74. Environmental Improvement
Article 2. Air Pollution

N. M. S. A. 1978, § 74-2-5

§ 74-2-5. Duties and powers; environmental improvement board; local board

Effective: July 1, 2021

Currentness

A. The environmental improvement board or the local board shall prevent or abate air pollution.

B. The environmental improvement board or the local board shall:

(1) adopt, promulgate, publish, amend and repeal rules and standards consistent with the Air Quality Control Act to attain and maintain national ambient air quality standards and prevent or abate air pollution, including:

(a) rules prescribing air standards within the geographic area of the environmental improvement board's jurisdiction or the local board's jurisdiction or any part thereof; and

(b) standards of performance that limit carbon dioxide emissions to no more than one thousand one hundred pounds per megawatt-hour on and after January 1, 2023 for a new or existing source that is an electric generating facility with an original installed capacity exceeding three hundred megawatts and that uses coal as a fuel source; and

(2) adopt a plan for the regulation, control, prevention or abatement of air pollution, recognizing the differences, needs, requirements and conditions within the geographic area of the environmental improvement board's jurisdiction or the local board's jurisdiction or any part thereof.

C. If the environmental improvement board or the local board determines that emissions from sources within the environmental improvement board's jurisdiction or the local board's jurisdiction cause or contribute to ozone concentrations in excess of ninety-five percent of the primary national ambient air quality standard for ozone promulgated pursuant to the federal act, the environmental improvement board or the local board shall adopt a plan, including rules, to control emissions of oxides of nitrogen and volatile organic compounds to provide for attainment and maintenance of the standard. Rules adopted pursuant to this subsection shall be limited to sources of emissions within the area of the state where the ozone concentrations exceed ninety-five percent of the primary national ambient air quality standard.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

D. Rules adopted by the environmental improvement board or the local board may:

(1) include rules to protect visibility in mandatory class I areas to prevent significant deterioration of air quality and to achieve national ambient air quality standards in nonattainment areas; provided that the rules shall be at least as stringent as required by the federal act and federal regulations pertaining to visibility protection in mandatory class I areas, pertaining to prevention of significant deterioration and pertaining to nonattainment areas;

(2) prescribe standards of performance for sources and emission standards for hazardous air pollutants that shall be at least as stringent as required by federal standards of performance;

(3) include rules governing emissions from solid waste incinerators that shall be at least as stringent as any applicable federal emission limitations;

(4) include rules requiring the installation of control technology for mercury emissions that removes the greater of what is achievable with best available control technology or ninety percent of the mercury from the input fuel for all coal-fired power plants, except for coal-fired power plants constructed and generating electric power and energy before July 1, 2007;

(5) require notice to the department or the local agency of the intent to introduce or permit the introduction of an air contaminant into the air within the geographical area of the environmental improvement board's jurisdiction or the local board's jurisdiction; and

(6) require any person emitting any air contaminant to:

(a) install, use and maintain emission monitoring devices;

(b) sample emissions in accordance with methods and at locations and intervals as may be prescribed by the environmental improvement board or the local board;

(c) establish and maintain records of the nature and amount of emissions;

(d) submit reports regarding the nature and amounts of emissions and the performance of emission control devices; and

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(e) provide any other reasonable information relating to the emission of air contaminants.

E. Any rule adopted pursuant to this section shall be at least as stringent as federal law, if any, relating to control of motor vehicle emissions.

F. In making its rules, the environmental improvement board or the local board shall give weight it deems appropriate to all facts and circumstances, including:

(1) character and degree of injury to or interference with health, welfare, visibility and property;

(2) the public interest, including the social and economic value of the sources and subjects of air contaminants; and

(3) technical practicability and economic reasonableness of reducing or eliminating air contaminants from the sources involved and previous experience with equipment and methods available to control the air contaminants involved.

G. Before the environmental improvement board or local board adopts a rule that is more stringent than the federal act or federal regulations, or that applies to sources not subject to regulation pursuant to the federal act or regulations, the environmental improvement board or local board shall make a determination, based on substantial evidence and after notice and public hearing, that the proposed rule will be more protective of public health and the environment.

West's New Mexico Statutes Annotated
Chapter 74. Environmental Improvement
Article 2. Air Pollution

N. M. S. A. 1978, § 74-2-5.1

§ 74-2-5.1. Duties and powers of the department and the local agency

Currentness

The department and the local agency for their respective jurisdictions shall:

A. develop facts and make investigations and studies consistent with the Air Quality Control Act and, as required for enforcement of that act, enter at all reasonable times in or upon any private or public property, except private residences, that the department or the local agency has reasonable cause to believe is or will become a source contributing to air pollution and require the production of information relating to emissions that cause or contribute to air pollution. The results of any such investigations shall be reduced to writing if any enforcement action is contemplated, and a copy shall be furnished to the owner or occupants of the premises before the action is filed;

B. institute legal proceedings to compel compliance with the Air Quality Control Act or any regulation of the environmental improvement board or the local board;

C. encourage and make every reasonable effort to obtain voluntary cooperation by the owner or occupants to preserve, restore or improve air purity;

D. consult with any person proposing to construct, install or otherwise acquire an air contaminant source, device, system or control mechanism concerning the efficiency of the device, system or mechanism or the air pollution problem that may be related to the source, device, system or mechanism; provided that consultation shall not relieve any person from compliance with the Air Quality Control Act, regulations in force pursuant to that act or any other provision of law;

E. establish a small business stationary source technical and environmental compliance assistance program, consistent with the provisions of Section 507 of the federal act;

F. accept, receive and administer grants or other funds or gifts from public and private agencies, including the federal government, or from any person;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

G. classify and record air contaminant sources that, in its judgment, may cause or contribute to air pollution, according to levels and types of emissions and other characteristics that relate to air pollution; provided, classifications may be for application to the entire geographical area of the department's responsibility or the local authority's responsibility or to any designated portion of that area and shall be made with special reference to the effects on health, economic and social factors and physical effects on property; and

H. develop and present to the environmental improvement board or the local board a plan for the regulation, control, prevention or abatement of air pollution, recognizing the differences, needs, requirements and conditions in the different portions of the geographical area of the department's responsibility or the local authority's responsibility.

§ 74-2-5.2. State air pollution control agency; specific duties and powers of the department

Currentness

The department is the state air pollution control agency for all purposes under federal legislation relating to air pollution. The department shall:

A. take all action necessary to secure for the state and its political subdivisions the benefits of federal legislation;

B. advise, consult, contract with and cooperate with local authorities, other states, the federal government and other interested persons or groups in regard to matters of common interest in the field of air quality control and initiate cooperative action between a local authority and the department, between one local authority and another or among any combination of local authorities and the department for control of air pollution in areas having related air pollution problems that overlap the boundaries of political subdivisions; and

C. enter into agreements and compacts with adjoining states and Indian tribes, where appropriate.

N. M. S. A. 1978, § 74-2-6

§ 74-2-6. Adoption of regulations; notice and hearings

Currentness

A. Any person may recommend or propose regulations to the environmental improvement board or the local board for adoption. The environmental improvement board or the local board shall determine whether to hold a hearing within sixty days of submission of a proposed regulation.

B. No regulations or emission control requirement shall be adopted until after a public hearing by the environmental improvement board or the local board. As used in this section, "regulation" includes any amendment or repeal thereof. Hearings on regulations of nonstatewide application shall be held within that area that is substantially affected by the regulation. Hearings on regulations of statewide application may be held in Santa Fe or within any area of the state substantially affected by the regulation.

C. Notice of the hearing shall be given at least thirty days prior to the hearing date and shall state the subject, the time and the place of the hearing and the manner in which interested persons may present their views. The notice shall also state where interested persons may secure copies of any proposed regulation or air quality standard. The notice shall be published in a newspaper of general circulation in the area affected. Reasonable effort shall be made to give notice to all persons who have made a written request to the environmental improvement board or the local board for advance notice of its hearings.

D. At the hearing, the environmental improvement board or the local board shall allow all interested persons reasonable opportunity to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing. Any person heard or represented at the hearing shall be given written notice of the action of the environmental improvement board or the local board.

E. The environmental improvement board or the local board may designate a hearing officer to take evidence in the hearing.

F. No regulations or emission control requirement adopted by the environmental improvement board or the local board shall become effective until thirty days after its filing under the State Rules Act [Chapter 14, Article 4 NMSA 1978].

N. M. S. A. 1978, § 74-2-7

§ 74-2-7. Permits; permit appeals to the environmental improvement board or the local board; permit fees

Effective: June 18, 2021

Currentness

A. By regulation, the environmental improvement board or the local board shall require:

(1) a person intending to construct or modify any source, except as otherwise specifically provided by regulation, to obtain a construction permit from the department or the local agency prior to such construction or modification; and

(2) a person intending to operate any source for which an operating permit is required by the 1990 amendments to the federal act, except as otherwise specifically provided by regulation, to obtain an operating permit from the department or the local agency.

B. Regulations adopted by the environmental improvement board or the local board shall include at least the following provisions:

(1) requirements for the submission of relevant information, including information the department or the local agency deems necessary to determine that regulations and standards under the Air Quality Control Act or the federal act will not be violated;

(2) specification of the deadlines for processing permit applications; provided that the deadline for a final decision by the department or the local agency on a construction permit application may not exceed:

(a) ninety days after the application is determined to be administratively complete, if the application is not subject to requirements for prevention of significant deterioration, unless the secretary or the director grants an extension not to exceed ninety days for good cause, including the need to have public hearings; or

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(b) one hundred eighty days after the application is determined to be administratively complete, if the application is subject to requirements for prevention of significant deterioration, unless the secretary or the director grants an extension not to exceed ninety days for good cause, including the need to have public hearings;

(3) that if the department or local agency fails to take final action on a construction permit application within the deadlines specified in Paragraph (2) of this subsection, the department or local agency shall notify the applicant in writing that an extension of time is required to process the application and specify in detail the grounds for the extension;

(4) a description of elements required before the department or local agency shall deem an application administratively complete;

(5) specification of the public notice, comment period and public hearing, if any, required prior to the issuance of a permit; provided that the permit regulations adopted:

(a) by the environmental improvement board shall include provisions governing notice to nearby states; and

(b) by any local board shall include provisions requiring that notice be given to the department of all permit applications by any source that emits, or has a potential emission rate of, one hundred tons per year or more of any regulated air contaminant, including any source of fugitive emissions of each regulated air contaminant, at least sixty days prior to the date on which construction or major modification is to commence;

(6) a schedule of construction permit fees sufficient to cover the reasonable costs of:

(a) reviewing and acting upon any application for such permit; and

(b) implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action;

(7) a schedule of emission fees consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal act;

(8) a method for accelerated permit processing that may be requested at the sole discretion of the applicant at the time the applicant submits a construction permit application and that:

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(a) allows the department or local agency to contract with qualified outside firms to assist the department or local agency in its accelerated review of the construction permit application; provided that the department or local agency can contract with a qualified firm that does not have a conflict of interest; and

(b) establishes a process for the department or local agency to account for the expenditure of the accelerated permit processing fees;

(9) allowance for additional permit application fees, sufficient to cover the reasonable costs of an accelerated permit application review process. Before the applicant is notified that the permit application has been determined to be complete, the department or local agency shall give the applicant a reasonable estimate of costs of an accelerated permit application review process;

(10) specification of the maximum length of time for which a permit shall be valid; provided that for an operating permit such period may not exceed five years; and

(11) for an operating permit only:

(a) provisions consistent with Sections 502(b) and 505(b) of the federal act providing: 1) notice to and review and comment by the United States environmental protection agency; and 2) that if the department or local agency receives notice of objection from the United States environmental protection agency before the operating permit is issued, the department or the local agency shall not issue the permit unless it is revised and issued under Section 505(c) of the federal act;

(b) provisions governing renewal of the operating permit; and

(c) specification of the conditions under which the operating permit may be terminated, modified or revoked and reissued prior to the expiration of the term of the operating permit.

C. Except as provided in Subsection O of this section, the department or the local agency may deny any application for:

(1) a construction permit if it appears that the construction or modification:

(a) will not meet applicable standards, rules or requirements of the Air Quality Control Act or the federal act;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(b) will cause or contribute to air contaminant levels in excess of a national or state standard or, within the boundaries of a local authority, applicable local ambient air quality standards; or

(c) will violate any other provision of the Air Quality Control Act or the federal act; and

(2) an operating permit if the source will not meet the applicable standards, rules or requirements pursuant to the Air Quality Control Act or the federal act.

D. The department or the local agency may specify conditions to any permit granted under this section, including:

(1) for a construction permit:

(a) a requirement that such source install and operate control technology, determined on a case-by-case basis, sufficient to meet the standards, rules and requirements of the Air Quality Control Act and the federal act;

(b) individual emission limits, determined on a case-by-case basis, but only as restrictive as necessary to meet the requirements of the Air Quality Control Act and the federal act or the emission rate specified in the permit application, whichever is more stringent;

(c) compliance with applicable federal standards of performance;

(d) reasonable restrictions and limitations not relating to emission limits or emission rates; or

(e) any combination of the conditions listed in this paragraph; and

(2) for an operating permit, terms and conditions sufficient to ensure compliance with the applicable standards, rules and requirements pursuant to the Air Quality Control Act and the federal act.

E. This section does not authorize the department or the local agency to require the use of machinery, devices or equipment from a particular manufacturer if the federal standards of performance, state regulations and permit conditions may be met by machinery, devices or equipment otherwise available.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

F. The issuance of a permit does not relieve any person from the responsibility of complying with the provisions of the Air Quality Control Act and any applicable regulations of the environmental improvement board or the local board. Any conditions placed upon a permit by the department or the local agency shall be enforceable to the same extent as a regulation of its board.

G. A person who participated in a permitting action before the department or the local agency shall be notified by the department or the local agency of the action taken and the reasons for the action. Notification of the applicant shall be by certified mail.

H. A person who participated in a permitting action before the department or the local agency and who is adversely affected by such permitting action may file a petition for hearing before the environmental improvement board or the local board. The petition shall be made in writing to the environmental improvement board or the local board within thirty days from the date notice is given of the department's or the local agency's action. Unless a timely petition for hearing is made, the decision of the department or the local agency shall be final.

I. If a timely petition for hearing is made, the environmental improvement board or the local board shall hold a hearing within sixty days after receipt of the petition. The environmental improvement board or the local board shall notify the petitioner and the applicant or permittee, if other than the petitioner, by certified mail of the date, time and place of the hearing. If the subject of the petition is a permitting action deemed by the environmental improvement board or the local board to substantially affect the public interest, the environmental improvement board or the local board shall ensure that the public receives notice of the date, time and place of the hearing. The public in such circumstances shall also be given a reasonable opportunity to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing. Any person submitting data, views or arguments orally or in writing shall be subject to examination at the hearing.

J. The environmental improvement board or the local board may designate a hearing officer to take evidence in the hearing. All hearings shall be recorded.

K. The burden of proof shall be upon the petitioner. Based upon the evidence presented at the hearing, the environmental improvement board or the local board shall sustain, modify or reverse the action of the department or the local agency respectively.

L. Notwithstanding any other provision of law and subject to the provisions of Section 74-2-4 NMSA 1978, a final decision on a permit by the department, the environmental improvement board, the local agency, the local board or the court of appeals that a source will or will not meet applicable local, state and federal air pollution standards and regulations shall be conclusive and is binding on every other state agency and as an issue before any other state agency shall be deemed resolved in accordance with that final decision.

M. Subject to the provisions of Section 74-2-4 NMSA 1978, if the local board has adopted a permit regulation pursuant to this section, persons constructing or modifying any source within the boundaries of the local authority shall obtain a permit from the local agency and not from the department.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

N. Fees collected pursuant to this section shall be deposited in:

(1) the state air quality permit fund created by Section 74-2-15 NMSA 1978 if collected by the department; or

(2) a fund created pursuant to Section 74-2-16 NMSA 1978 if collected by a local agency pursuant to a permit regulation adopted by the local board pursuant to this section.

O. The department may not deny an application for a construction permit for a cotton gin if the applicant proposes use of the best system of emissions reduction currently in use by cotton gins in the United States, as specified by regulation of the environmental improvement board, and the cotton gin has a potential emission rate, considering the use of the proposed emissions reduction system and the proposed hours of operation, of not more than fifty tons per year of any regulated air contaminant for which there is a national ambient air quality standard. The construction permit shall require that the applicant use the proposed emission reduction system and limit the hours of operation to the hours specified in the application. For purposes of this subsection, "best system of emissions reduction" for cotton gins means a system that will result in emissions reduction equal to or greater than that obtained by the use of condenser screens, seventy-mesh screen or equivalent on low-pressure exhausts and high-efficiency cyclone dust collectors on high-pressure exhausts.

P. The department or local agency may deny any permit application or revoke any permit issued pursuant to the Air Quality Control Act if, within ten years immediately preceding the date of submission of the permit application, the applicant or permittee has:

(1) knowingly misrepresented a material fact in an application for a permit;

(2) refused to disclose the information required by the provisions of the Air Quality Control Act;

(3) been convicted in any court of any state or the United States of:

(a) a felony related to environmental crime; or

(b) a crime defined by state or federal statute as involving or being in restraint of trade, price fixing, bribery or fraud;

(4) constructed or operated a facility for which a permit is sought without a permit required by the Air Quality Control Act, except when such an unpermitted facility is discovered after acquisition in the course of a timely environmental audit authorized by department or local board policy and except if:

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(a) the operator of the facility using good engineering practices and established approved calculation methodologies estimated that the facility's emissions would not require a permit pursuant to the Air Quality Control Act; and

(b) upon discovery of the discrepancy between the calculated pre-construction maximum facility emissions and the calculated post-construction maximum facility emissions, the operator of the facility applies for the appropriate permit within thirty calendar days; or

(5) had any permit revoked or permanently suspended for cause under the environmental laws of any state or the United States.

Q. In making a finding under Subsection P of this section, the department or local agency may consider aggravating and mitigating factors.

R. If an applicant or permittee whose permit is being considered for denial or revocation on any basis provided by Subsection P of this section has submitted an action plan that has been approved in writing by the secretary or director, and plan approval includes a period of operation under a conditional permit that will allow the applicant or permittee a reasonable opportunity to demonstrate its rehabilitation, the secretary or director may issue a conditional permit for a reasonable period of time.

S. An applicant for a permit pursuant to the Air Quality Control Act shall file a disclosure statement with the department or local agency with the information listed in Subsection P of this section, and on a form developed by the department. An existing permit holder shall provide such disclosure upon request by the department or local agency.

Article 2. Air Pollution

N. M. S. A. 1978, § 74-2-7.1

§ 74-2-7.1. Local governing body authority; construction permits; electric generation facilities

Currentness

A. A local governing body may receive a construction permit for a gas-fired electric generation facility with a one hundred megawatt or less generating capacity in accordance with the Air Quality Control Act and may transfer the permit to the owner or operator of a facility that meets the specifications of the permit.

B. A facility that receives a construction permit transferred from a local governing body shall notify the department within thirty days of receiving the transferred construction permit. The permit shall be effective for that facility when the department receives notification of the transfer. The local governing body that transfers the construction permit shall notify the owner or operator of the local electric distribution company and the public regulation commission of the permitted project, including its net capacity rating and intended date of service.

C. As used in this section, "local governing body" means the council or other executive body charged with governing a municipality or county.

D. The department may cooperate with and lend assistance to any Indian nation, tribe or pueblo located in the state in developing permitting procedures that fulfill federal environmental protection agency standards and that parallel the state permitting procedures described in Subsections A and B of this section.

Article 2. Air Pollution

N. M. S. A. 1978, § 74-2-8

§ 74-2-8. Variances

Currentness

A. The environmental improvement board or the local board may grant an individual variance from the limitations prescribed under the Air Quality Control Act, any regulation of the environmental improvement board or the local board or any permit condition imposed by the department or the local agency whenever it is found, upon presentation of adequate proof:

(1) that compliance with any part of that act, any regulation of the environmental improvement board or the local board or any permit condition will:

(a) result in an arbitrary and unreasonable taking of property; or

(b) impose an undue economic burden upon any lawful business, occupation or activity; and

(2) that the granting of the variance will not:

(a) result in a condition injurious to health or safety; or

(b) cause or contribute to an air contaminant level in excess of any primary national ambient air quality standards.

B. No variance shall be granted pursuant to this section until the environmental improvement board or the local board has considered the relative interests of the applicant, other owners of property likely to be affected by the discharges and the general public.

C. Any variance or renewal thereof shall be granted within the requirements of Subsection A of this section and for time

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

periods and under conditions consistent with the reasons therefor and within the following limitations:

(1) if the variance is granted on the ground that there are no practicable means known or available for the adequate prevention, abatement or control of the air pollution involved, it shall be only until the necessary means for prevention, abatement or control become known and available;

(2) if the variance is granted on the ground that compliance with the particular requirement from which variance is sought will necessitate the taking of measures that because of their extent or cost, must be spread over a considerable period of time, it shall be for a period not to exceed such reasonable time as, in the view of the environmental improvement board or the local board, is requisite for the taking of the necessary measures. A variance granted on the ground specified in this paragraph shall contain a timetable for the taking of action in an expeditious manner and shall be conditioned on adherence to the timetable; or

(3) if the variance is granted on the ground that it is justified to relieve or prevent hardship of a kind other than that provided for in Paragraphs (1) and (2) of this subsection, it shall be for not more than one year.

D. Any person seeking a variance shall do so by filing a petition for variance with the secretary or the director charged with implementation of the Air Quality Control Act at the site where the variance will apply. The secretary or the director shall promptly investigate the petition and make recommendation to his respective board as to the disposition of the petition.

E. Upon receiving the recommendation of the secretary or the director on the variance, the environmental improvement board or the local board shall:

(1) if the secretary or the director favors a variance, hold a public hearing prior to the granting of any variance; and

(2) if the secretary or the director is opposed to the granting of the variance, hold a hearing only upon the request of the petitioner.

F. In the hearing, the burden of proof shall be upon the petitioner.

N. M. S. A. 1978, § 74-2-9

§ 74-2-9. Judicial review; administrative actions

Currentness

A. Any person adversely affected by an administrative action taken by the environmental improvement board, the local board, the secretary or the director may appeal to the court of appeals. All appeals shall be upon the record made at the hearing and shall be taken to the court of appeals within thirty days following the date of the action.

B. For appeals of regulations, the date of the action shall be the date of the filing of the regulation by the environmental improvement board or the local board pursuant to the State Rules Act [Chapter 14, Article 4 NMSA 1978].

C. Upon appeal, the court of appeals shall set aside the action only if found to be:

(1) arbitrary, capricious or an abuse of discretion;

(2) not supported by substantial evidence in the record; or

(3) otherwise not in accordance with law.

D. After a hearing and a showing of good cause by the appellant, a stay of the action being appealed may be granted:

(1) by the environmental improvement board, the local board, the department or the local agency, whichever took the action being appealed; or

(2) by the court of appeals if the environmental improvement board, the local board, the department or the local agency denies a stay or fails to act upon an application for a stay within sixty days after receipt of the application.

N. M. S. A. 1978, § 74-2-10

§ 74-2-10. Emergency powers of the secretary and the director

Currentness

A. Notwithstanding any other provision of the Air Quality Control Act, if the secretary or the director determines that a source or combination of sources presents an imminent and substantial endangerment to the public health or welfare or to the environment, he may bring suit in the district court for the county in which the source is located to restrain immediately any person causing or contributing to the alleged air pollution to stop the emission of air contaminants causing or contributing to such air pollution or to take such other action as may be necessary.

B. If it is not practicable to assure prompt protection of the public health or welfare or the environment by commencement of a civil action, the secretary or the director may issue orders necessary to protect the public health or welfare or the environment. An order shall be effective for a period of not more than twenty-four hours, unless the secretary or the director brings a civil action before the expiration of twenty-four hours. If the secretary or the director brings an action within that time, the order shall be effective thereafter for forty-eight hours or for such longer period as may be authorized by the court pending litigation.

§ 74-2-11. Confidential information

Currentness

A. Any records, reports or information obtained under the Air Quality Control Act by the department, the environmental improvement board, the local board or the local agency shall be available to the public, except that upon a satisfactory showing to the secretary, the director, the environmental improvement board, the local board or the local agency, as applicable, by any person that records, reports or information, or particular parts thereof, except emission data, to which the department, the local agency, the environmental improvement board or the local board has access under the Air Quality Control Act, if made public, would divulge confidential business records or methods or processes entitled to protection as trade secrets of that person, the secretary, the director, the environmental improvement board or the local board, as applicable, shall consider such record, report or information, or particular portion thereof, confidential in accordance with the provisions of Section 14-2-1 NMSA 1978 and 18 U.S.C. Section 1905, except that such record, report or other information may be disclosed:

(1) to other officers, employees or authorized representatives of the department, the local agency, the environmental improvement board or the local board concerned with carrying out the Air Quality Control Act;

(2) to officers, employees or authorized representatives of the United States environmental protection agency concerned with carrying out the federal act; or

(3) when relevant, in any proceeding under the Air Quality Control Act or the federal act.

B. The environmental improvement board or the local board shall adopt regulations to implement this section, including regulations specifying those business records entitled to treatment as confidential records.

N. M. S. A. 1978, § 74-2-11.1

§ 74-2-11.1. Limitations on regulations

Currentness

The Air Quality Control Act does not:

A. authorize the environmental improvement board or the local board to make any regulation with respect to any condition or quality of the outdoor atmosphere if the condition or air quality level and its effect are confined entirely within the boundaries of the industrial or manufacturing property within which the air contaminants are or may be emitted and public access is restricted within such boundaries;

B. grant to the environmental improvement board or the local board any jurisdiction or authority affecting the relation between employers and employees with respect to or arising out of any condition of air quality; or

C. supersede or limit the applicability of any law relating to industrial health, safety or sanitation.

West's New Mexico Statutes Annotated
Chapter 74. Environmental Improvement
Article 2. Air Pollution

N. M. S. A. 1978, § 74-2-12

§ 74-2-12. Enforcement; compliance orders; field citations

Currentness

A. When, on the basis of any information, the secretary or the director determines that a person has violated or is violating a requirement or prohibition of the Air Quality Control Act, a regulation promulgated pursuant to that act or a condition of a permit issued under that act, the secretary or the director may:

(1) issue a compliance order within one year after the violation becomes known by the department or the local agency stating with reasonable specificity the nature of the violation and requiring compliance immediately or within a specified time period or assessing a civil penalty for a past or current violation, or both; or

(2) commence a civil action in district court for appropriate relief, including a temporary or permanent injunction.

B. An order issued pursuant to Subsection A of this section may include a suspension or revocation of the permit or portion thereof issued by the secretary or the director that is alleged to have been violated. Any penalty assessed in the order shall not exceed fifteen thousand dollars ($15,000) per day of noncompliance for each violation.

C. An order issued pursuant to Subsection A of this section shall become final unless, no later than thirty days after the order is served, the person named therein submits a written request to the secretary or the director for a public hearing. Upon such request, the secretary or the director shall promptly conduct a public hearing. The secretary or the director shall appoint an independent hearing officer to preside over the public hearing. The hearing officer shall make and preserve a complete record of the proceedings and forward the hearing officer's recommendation based thereon to the secretary or the director, who shall make the final decision.

D. The environmental improvement board or the local board may implement a field citation program through regulations establishing appropriate minor violations for which field citations assessing civil penalties not to exceed one thousand dollars ($1,000) per day of violation may be issued by officers or employees of the department or the local agency as designated by the secretary or the director.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

E. A person to whom a field citation is issued pursuant to Subsection D of this section may, within a reasonable time as prescribed by regulation by the environmental improvement board or the local board, elect to pay the penalty assessment or to request a hearing by the issuing agency on the field citation. If a request for hearing is not made within the time specified in the regulation, the penalty assessment in the field citation shall be final.

F. Payment of a civil penalty required by a field citation issued pursuant to Subsection D of this section shall not be a defense to further enforcement by the department or the local agency to correct a violation or to assess the maximum statutory penalty pursuant to other authorities in the Air Quality Control Act if the violation continues.

G. In determining the amount of a penalty to be assessed pursuant to this section, the secretary, the director or the person issuing a field citation shall take into account the seriousness of the violation, any good-faith efforts to comply with the applicable requirements and other relevant factors.

H. In connection with a proceeding under this section, the secretary or the director may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books and documents and may adopt rules for discovery procedures.

I. If a person fails to comply with an administrative order, the secretary or director may initiate an action to suspend or revoke the permit, or portion thereof, alleged to have been violated or to commence a civil action in district court to enforce the order, or to suspend or revoke the permit, or both.

J. If a person fails to pay an assessment of a civil penalty, the secretary or director may commence a civil action in district court to collect the civil penalties assessed in the order.

K. Penalties collected pursuant to this section shall be deposited in the:

(1) municipal or county general fund, as applicable, if the administrative order or field citation was directed to a source located within a local authority; or

(2) state general fund if the administrative order or field citation was directed to any other source.

N. M. S. A. 1978, § 74-2-12.1

§ 74-2-12.1. Civil penalty; representation of department or local authority; limitation of actions

Currentness

A. A person who violates a provision of the Air Quality Control Act or a regulation, permit condition or emergency order adopted or issued pursuant to that act may be assessed a civil penalty not to exceed fifteen thousand dollars ($15,000) for each day during any portion of which a violation occurs.

B. A person who fails to comply with an administrative order issued pursuant to Section 74-2-12 NMSA 1978 may be assessed, pursuant to a court order, a civil penalty of not more than twenty-five thousand dollars ($25,000) for each day of noncompliance with the order.

C. In an action to enforce the provisions of the Air Quality Control Act or an ordinance, regulation, permit condition or order, adopted, imposed or issued pursuant to that act:

(1) the department shall be represented by the attorney general;

(2) a local authority that is a municipality shall be represented by the attorney of the municipality; and

(3) a local authority that is a county shall be represented by the district attorney within whose judicial district the county lies.

D. No action for civil penalty shall be commenced more than five years from the date the violation was known by the department or the local agency.

Chapter 74. Environmental Improvement
Article 2. Air Pollution

N. M. S. A. 1978, § 74-2-14

§ 74-2-14. Criminal penalties

Currentness

A. Notwithstanding any other provision of the Air Quality Control Act, a local authority may prescribe penalties for violations of an ordinance:

(1) regulating open-fire burning or residential incineration; or

(2) prohibiting the removal of motor vehicle emission control devices installed as required by law and requiring the maintenance of such devices in operating condition.

B. Notwithstanding any other provision of the Air Quality Control Act, it is a petty misdemeanor to violate any regulations of the environmental improvement board:

(1) regulating open-fire burning or residential incineration; or

(2) prohibiting the removal of motor vehicle emission control devices installed as required by law or requiring the maintenance of such devices in operating condition.

C. Except as provided in Subsection D of this section, any person who knowingly commits any of the following acts is guilty of a fourth degree felony and shall be sentenced in accordance with the provisions of Section 31-18-15 NMSA 1978:

(1) violation of any regulation relating to commercial or industrial incineration;

(2) violation of any regulation adopting any federal standard of performance;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(3) violation of any regulation relating to control of hazardous air pollutants; or

(4) violation of any regulation relating to control of toxic air pollutants.

D. At any source required to have an operating permit pursuant to Section 502 of the federal act, any person who knowingly commits any violation of any applicable standard, regulation or requirement under the Air Quality Control Act or the federal act, any term or condition of an operating permit or any emission fee or filing requirement in any operating permit regulation of the environmental improvement board or the local board is guilty of a fourth degree felony and shall, upon conviction, be punished by a fine of not more than ten thousand dollars ($10,000) per day per violation or by imprisonment of not more than eighteen months, or both.

E. Any person who knowingly commits any violation of a regulation of the environmental improvement board or the local board not listed in Subsection B, C or D of this section is guilty of a misdemeanor and shall be sentenced in accordance with the provisions of Section 31-19-1 NMSA 1978.

F. Any person who knowingly:

(1) makes any false statement, representation or certification in any application, record, report, plan or other document filed or required to be maintained under the Air Quality Control Act, any permit issued pursuant to the Air Quality Control Act or any regulation adopted pursuant to that Act; or

(2) falsifies, tampers with or knowingly renders inaccurate any monitoring device or method required to be maintained under the Air Quality Control Act, any permit issued pursuant to the Air Quality Control Act or any ordinance or regulation adopted pursuant to that act is guilty of a misdemeanor and shall, upon conviction, be punished by a fine of not more than ten thousand dollars ($10,000) per day per violation or by imprisonment for not more than twelve months, or by both.

G. Any person who knowingly releases into the ambient air any hazardous air pollutant or extremely hazardous substance listed pursuant to Section 302(a)(2) of the Superfund Amendments and Reauthorization Act of 1986, 42 U.S.C. 1102(a)(2) that is not listed in Section 112 of the federal act and who knows at the time of the release that he creates a substantial danger of death or serious bodily injury to another person is guilty of a second degree felony and, upon conviction, shall be sentenced to a term of imprisonment not to exceed nine years or a fine not to exceed one hundred thousand dollars ($100,000), or both. Any person, other than an individual or a governmental entity, who commits such violation is guilty of a second degree felony and shall be fined in an amount not to exceed two hundred fifty thousand dollars ($250,000). If a conviction of any person under this subsection is for a second or subsequent violation, the maximum punishment shall be doubled with respect to both the fine and the imprisonment.

Chapter 74. Environmental Improvement
Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-3

§ 74-1-3. Definitions

Effective: May 15, 2024

Currentness

As used in the Environmental Improvement Act:

A. "board" means the environmental improvement board;

B. "carbon intensity" means the quantity of fuel lifecycle greenhouse gas emissions per unit of fuel energy, expressed in grams of carbon dioxide equivalent per megajoule;

C. "department" or "environmental improvement department" means the department of environment;

D. "fuel lifecycle" means an assessment of the aggregate greenhouse gas emissions based on science-based models or protocols, including direct emissions and significant indirect emissions from indirect land use change, all stages of fuel and feedstock production and distribution, feedstock generation or extraction through the distribution, delivery and use of the finished fuel by the consumer, including consideration of storage, transportation and combustion;

E. "on-site liquid waste system" means a liquid waste system, or part thereof, serving a dwelling, establishment or group, and using a liquid waste treatment unit designed to receive liquid waste followed by either a soil treatment or other type of disposal system. "On-site liquid waste system" includes holding tanks and privies but does not include systems or facilities designed to receive or treat mine or mill tailings or wastes;

F. "person" means the state or any agency, institution or political subdivision thereof, any public or private corporation, individual, partnership, association or other entity and includes any officer or governing or managing body of any political subdivision or public or private corporation;

G. "residential on-site liquid waste system" means an on-site liquid waste system serving up to four dwelling units;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

H. “secretary” means the secretary of environment; and

I. “transportation fuel” means electricity or a liquid, gaseous or blended fuel, including gasoline, diesel, liquefied petroleum gas, natural gas and hydrogen, sold, supplied, used or offered for sale to power vehicles or equipment for the purposes of transportation.

Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-4

§ 74-1-4. Environmental improvement board; creation; organization

Currentness

A. There is created the "environmental improvement board". The board shall consist of seven members appointed by the governor, by and with the advice and consent of the senate. The members of the board shall be appointed for overlapping terms, with no term exceeding five years. No more than four members shall be appointed from any political party. At least a majority of the membership of the board shall be individuals who represent the public interest and do not derive any significant portion of their income from persons subject to or who appear before the board on issues related to the federal Clean Air Act[1] or the Air Quality Control Act [Chapter 74, Article 2 NMSA 1978]. Any vacancy occurring in the membership of the board shall be filled by appointment by the governor for the unexpired term.

B. The members of the board shall be reimbursed as provided in the Per Diem and Mileage Act [10-8-1 to 10-8-8 NMSA 1978].

C. The board shall elect from its membership a chairman, vice chairman and secretary and shall establish the tenure of these offices. The board shall convene upon the call of the chairman or a majority of its members. Four members shall constitute a quorum.

N. M. S. A. 1978, § 74-1-6

§ 74-1-6. Department; powers

Effective: June 19, 2009

Currentness

The department shall have power to:

A. sue and be sued;

B. make contracts to carry out its delegated duties;

C. enter into agreements with environmental and consumer protection agencies of other states and the federal government pertaining to duties of the department;

D. enter into investigation and remediation agreements with persons potentially responsible for sites within New Mexico subject to the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980,[1] and such agreements shall not duplicate or take any authority from the oil conservation commission;

E. serve as agent of the state in matters of environmental management and consumer protection not expressly delegated by law to another department, commission or political subdivision in which the United States is a party;

F. enforce the rules, regulations and orders promulgated by the board and environmental management and consumer protection laws for which the department is responsible by appropriate action in courts of competent jurisdiction;

G. collect civil penalties pursuant to law, including reduction or elimination of penalties for violations from persons that:

(1) within sixty days of the discovery of a potential violation, voluntarily report to the department potential violations of

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

law enforced by the department;

(2) initiate corrective action for the potential violation;

(3) have not previously violated the same provision of law; and

(4) do not present an imminent and substantial endangerment to health or the environment by the potential violation.

H. on the same basis as any other person, recommend and propose regulations for promulgation by the board;

I. on the same basis as any other person, present data, views or arguments and examine witnesses and otherwise participate at all hearings conducted by the board or any other administrative agency with responsibility in the areas of environmental management or consumer protection, but shall not be given any special status over any other party; and

J. have such other powers as may be necessary and appropriate for the exercise of the powers and duties delegated to the department.

N. M. S. A. 1978, § 74-1-7

§ 74-1-7. Department; duties

Effective: May 15, 2024

Currentness

A. The department is responsible for environmental management and consumer protection programs. In that respect, the department shall maintain, develop and enforce rules and standards in the following areas:

(1) food protection;

(2) water supply, including implementing a capacity development program to assist water systems in acquiring and maintaining technical, managerial and financial capacity in accordance with Section 1420 of the federal Safe Drinking Water Act of 1974[1] and establishing administrative penalties for enforcement;

(3) liquid waste, including exclusive authority to collect on-site liquid waste system fees that are no more than the average charged by the contiguous states to New Mexico for similar permits and services and to implement and administer an inspection and permitting program for on-site liquid waste systems;

(4) air quality management as provided in the Air Quality Control Act [Chapter 74, Article 2 NMSA 1978];[2]

(5) radiation control and collection of license, registration and other related fees as provided in the Radiation Protection Act [Chapter 74, Article 3 NMSA 1978];[3];

(6) noise control;

(7) nuisance abatement;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(8) vector control;

(9) occupational health and safety as provided in the Occupational Health and Safety Act [50-9-1 to 50-9-25 NMSA 1978];[4]

(10) sanitation of public swimming pools and public baths;

(11) plumbing, drainage, ventilation and sanitation of public buildings in the interest of public health;

(12) medical radiation, health and safety certification and standards for radiologic technologists as provided in the Medical Imaging and Radiation Therapy Health and Safety Act [Chapter 61, Article 14E NMSA 1978];[5]

(13) hazardous wastes and underground storage tanks as provided in the Hazardous Waste Act [Chapter 74, Article 4 NMSA 1978];[6]

(14) solid waste as provided in the Solid Waste Act [74-9-1 to 74-9-42 NMSA 1978];[7] and

(15) carbon intensity of transportation fuels as provided in Section 4 [74-1-18 NMSA 1978] of this 2024 act, including registration and related fees.

B. Nothing in Subsection A of this section imposes requirements for the approval of subdivision plats in addition to those required elsewhere by law. Nothing in Subsection A of this section preempts the authority of any political subdivision to approve subdivision plats.

N. M. S. A. 1978, § 74-1-7.1

§ 74-1-7.1. Green zia program; business sensitive information confidential

Currentness

A. The department may develop and administer a pollution prevention program to be known as the "green zia program". The department may enter into contracts with the federal government, promulgate rules and take other actions appropriate and necessary to produce an efficient and effective program.

B. Information provided to the department in accordance with the green zia program may be subject to confidentiality if the person furnishing the information demonstrates to the department that the information would divulge confidential methods or processes entitled to protection as trade secrets. If the department determines that the information is subject to confidentiality, the secretary shall promulgate a determination of confidentiality with an order of confidentiality. Confidential information may be disclosed to employees or authorized representatives of the department, but they shall not disclose the information to any other person.

C. A person who violates an order of confidentiality by disclosing confidential information pursuant to this section is guilty of a misdemeanor and upon conviction shall be punished by a fine of not more than one thousand dollars ($1,000) per violation or by imprisonment for a definite term of one year or both.

N. M. S. A. 1978, § 74-1-8.1

§ 74-1-8.1. Legal advice

Currentness

A. In the exercise of any of its powers or duties, the board shall act with independent legal advice. The manner in which such advice is provided shall be determined by the board, but from among one of the following:

(1) the office of the attorney general;

(2) independent counsel hired by the board, whether full- or part-time; or

(3) another state agency whose function is sufficiently distinct from the department of environment to assure independent, impartial advice.

B. Notwithstanding the provisions of Subsection A of this section, attorneys from the department may act for the board in lawsuits filed against or on behalf of the board, and the attorney general may, at the request of the board, file and defend lawsuits on behalf of the board.

N. M. S. A. 1978, § 74-1-9

§ 74-1-9. Adoption of regulations; notice and hearing; appeal

Currentness

A. Any person may recommend or propose regulations to the board for promulgation. The board shall determine whether or not to hold a hearing within sixty days of submission of a proposed regulation.

B. No regulation shall be adopted until after a public hearing by the board. As used in this section, "regulation" includes any amendment or repeal thereof. Hearings on regulations of nonstatewide application shall be held within that area which is substantially affected by the regulation. Hearings on regulations of statewide application may be held at Santa Fe or within any area of the state substantially affected by the regulation. In making its regulations, the board shall give the weight it deems appropriate to all relevant facts and circumstances presented at the public hearing, including but not limited to:

(1) character and degree of injury to or interference with health, welfare, animal and plant life, property and the environment;

(2) the public interest, including the social, economic and cultural value of the regulated activity and the social, economic and cultural effects of environmental degradation; and

(3) technical practicability, necessity for and economic reasonableness of reducing, eliminating or otherwise taking action with respect to environmental degradation.

C. The standards for regulations set forth in Subsection A [Subsection B] of this section do not apply to the promulgation of regulations under the Air Quality Control Act [Chapter 74, Article 2 NMSA 1978];[1] or any other act in which specific standards are set forth for the board's consideration.

D. Notice of the hearing shall be given at least sixty days prior to the hearing date and shall state the subject, the time and the place of the hearing and the manner in which interested persons may present their views. The proposed language amending any existing regulation or any proposed new regulation shall be made available to the public as of the date the notice of the hearing is given. The notice shall also state where interested persons may secure copies of any proposed amendment or new

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

regulation. The notice shall be published in a newspaper of general circulation in the area affected. Reasonable effort shall be made to give notice to all persons who have made a written request to the board for advance notice of hearings.

E. At the hearing, the board shall allow all interested persons reasonable opportunity to submit data, proposed changes to the proposed regulation, views or arguments orally or in writing and to examine witnesses testifying at the hearing. Any person heard or represented at the hearing shall be given written notice of the action of the board.

F. The board may designate a hearing officer to take evidence in the hearing. A transcript shall be made of the entire hearing proceedings.

G. No regulation or amendment or repeal thereof adopted by the board shall become effective until thirty days after its filing under the State Rules Act [Chapter 14, Article 4 NMSA 1978].[2]

H. Any person who is or may be affected by a regulation adopted by the board may appeal to the court of appeals for further relief. All such appeals shall be upon the transcript made at the hearing and shall be taken to the court of appeals within thirty days after filing of the regulation under the State Rules Act.

I. The procedure for perfecting an appeal to the court of appeals under this section consists of the timely filing of a notice of appeal with a copy attached to the regulation from which the appeal is taken. The appellant shall certify in his notice of appeal that arrangements have been made with the board for preparation of a sufficient number of transcripts of the record of the hearing on which the appeal depends to support his appeal to the court, at the expense of the appellant, including three copies which he shall furnish to the board.

J. Upon appeal, the court of appeals shall set aside the regulation only if found to be:

(1) arbitrary, capricious or an abuse of discretion;

(2) not supported by substantial evidence in the transcript; or

(3) otherwise not in accordance with law.

West's New Mexico Statutes Annotated
Chapter 74. Environmental Improvement
Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-10

§ 74-1-10. Penalty

Currentness

A. A person who violates any regulation of the board is guilty of a petty misdemeanor. This section does not apply to any regulation for which a criminal penalty is otherwise provided by law.

B. Whenever, on the basis of any information, the secretary determines that a person has violated, is violating or threatens to violate any provision of Paragraph (2) or (3) of Subsection A of Section 74-1-8 NMSA 1978 or any rule, regulation or permit condition adopted and promulgated thereunder, the secretary may:

(1) issue a compliance order stating with reasonable specificity the nature of the violation or threatened violation, requiring compliance immediately or within a specified time period and assessing a civil penalty for any past or current violation, or both; or

(2) commence a civil action in district court for appropriate relief, including a temporary or permanent injunction.

C. An order issued pursuant to Subsection B of this section may include suspension or revocation of any permit issued by the department. Any penalty assessed in the order, except for residential on-site liquid waste systems, shall not exceed one thousand dollars ($1,000) for each violation. Any penalty assessed in the order for a residential on-site liquid waste system shall not exceed one hundred dollars ($100) for each violation. A penalty imposed for violation of drinking water regulations 20 NMAC 7.1 or permit conditions shall not exceed one thousand dollars ($1,000) per violation per day. In assessing the penalty, the secretary shall take into account the seriousness of the violation and any good-faith efforts to comply with the applicable requirements.

D. If a violator fails to take corrective actions within the time specified in the compliance order, the secretary shall:

(1) assess civil penalties of not more than one thousand dollars ($1,000) for each noncompliance with the order; and

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(2) suspend or revoke any permit issued to the violator pursuant to Paragraph (3) of Subsection A of Section 74-1-8 NMSA 1978.

E. An order issued pursuant to this section shall become final unless, no later than thirty days after the order is served, the person named in the order submits a written request to the secretary for a hearing. Upon such a request, the secretary shall conduct a hearing. The secretary shall appoint an independent hearing officer to preside over the hearing. The hearing officer shall make and preserve a complete record of the proceedings and forward his recommendation based on the record to the secretary, who shall make the final decision.

F. In connection with any proceeding pursuant to this section, the secretary may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books and documents and may adopt and promulgate rules for discovery procedures.

G. Penalties collected pursuant to violations of rules, regulations or permit conditions adopted pursuant to Paragraph (3) of Subsection A of Section 74-1-8 NMSA 1978 shall be deposited in the state treasury to be credited to the general fund.

H. Penalties collected pursuant to violations of drinking water regulations 20 NMAC 7.1 or permit conditions pursuant to Paragraph (2) of Subsection A of Section 74-1-8 NMSA 1978 shall be deposited in the state treasury to the credit of the water conservation fund.

Article 1. General Provisions (Refs & Annos)

N. M. S. A. 1978, § 74-1-10.1

§ 74-1-10.1. False statements to the department; penalties

Effective: May 16, 2018

Currentness

A. It is unlawful for an owner or operator of a public water system subject to the Environmental Improvement Act and applicable rules or an owner's or operator's agent to:

(1) knowingly make a false statement, representation, certification or omission of fact material to the protection of public health as related to a public water system in an application, record, report, plan or other document filed with or submitted to the department, or required by rule to be maintained by an owner or operator of a public water system;

(2) knowingly falsify, tamper with or render inaccurate any device, method or record to be relied upon by the department to monitor or track information related to a public water system;

(3) knowingly falsify or conceal a fact material to the protection of public health as related to a public water system; or

(4) make or use a document with the knowledge that the document contains false statements or representations material to the protection of public health as related to a public water system.

B. A person who violates or knowingly causes or allows another person to violate Subsection A of this section is guilty of a misdemeanor and shall be sentenced in accordance with the provisions of Section 31-19-1 NMSA 1978.

Currentness

The purpose of this section and Section 74-1-13 NMSA 1978 is to provide:

A. an incentive for conservation of water, the state's most precious resource; and

B. funding for certain locations in the state to comply with the federal Safe Drinking Water Act[1] in which the United States congress mandated that the United States environmental protection agency establish drinking water standards for contaminants, require filtration and disinfection for all public water supply systems, increase enforcement authority, establish public notification requirements, implement a lead ban and implement a capacity development program for existing and newly created water systems.

N. M. S. A. 1978, § 74-1-13

§ 74-1-13. Water conservation fee; imposition; definitions

Effective: July 1, 2025

Currentness

A. There is imposed on every person who operates a public water supply system a water conservation fee in an amount equal to three cents ($.03) per thousand gallons of water produced on which the fee imposed by this subsection has not been paid.

B. The "water conservation fund" is created in the state treasury and shall be administered by the department. The fund shall consist of water conservation fees collected pursuant to this section. Balances in the fund at the end of any fiscal year shall not revert to the general fund but shall accrue to the credit of the fund. Earnings on the fund shall be credited to the fund.

C. Money in the water conservation fund is appropriated to the department for administration of a public water supply program to:

(1) test public water supplies for the contaminants required to be tested pursuant to the provisions of the federal Safe Drinking Water Act,[1] as amended, and collect chemical compliance samples as required by those provisions of the federal act;

(2) perform vulnerability assessments that will be used to assess a public water supply's susceptibility to those contaminants; and

(3) implement new requirements of the Utility Operators Certification Act[2] and provide training for all public water supply operators.

D. The taxation and revenue department shall provide by regulation for the manner and form of collection of the water conservation fee. All water conservation fees collected by the taxation and revenue department shall be deposited in the water conservation fund.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

E. The fee imposed by this section shall be administered in accordance with the provisions of the Tax Administration Act[3] and shall be paid to the taxation and revenue department by each person who operates a public water supply system in the manner required by the department on or before the twenty-fifth day of the month following the month in which the water is produced.

F. Each operator of a public water supply system shall register and comply with the provisions of Section 7-1-12 NMSA 1978 and furnish such information as may be required by the taxation and revenue department.

G. The department shall compile a list of the contaminants that require testing pursuant to Paragraph (1) of Subsection C of this section. The list shall be compiled no less than once every twelve months and include the contaminants that will be tested in the subsequent twelve months. The department shall establish by rule procedures to compile the list and to determine which contaminants that require testing will be tested in the subsequent twelve months. The determination of which contaminants will be tested shall include consideration of the availability of funds in the water conservation fund, the needs of the public water supplies being tested for additional contaminants and public health and safety.

H. As used in this section:

(1) “person” means any individual or legal entity and also means, to the extent permitted by law, any federal, state or other governmental unit or subdivision or an agency, department or instrumentality thereof; and

(2) “public water supply system” means a system that provides piped water to the public for human consumption and that has at least fifteen service connections or regularly services an average of at least twenty-five individuals at least sixty days per year.

N. M. S. A. 1978, § 74-1-13.1

§ 74-1-13.1. Nontransient noncommunity public water systems; definition; testing and notice requirements

Currentness

A. The department of environment shall test nontransient noncommunity water systems for arsenic, fluoride and radionuclides and adopt rules for reporting and public notification for those contaminants comparable to reporting and notification requirements for community water systems. Money in the water conservation fund may be used to fulfill the requirements of this subsection.

B. As used in this section:

(1) "community water system" means a public water system that serves at least fifteen service connections used by year-round residents or regularly serves at least twenty-five year-round residents; and

(2) "nontransient noncommunity water system" means a public water system that is not a community water system and that regularly serves at least twenty-five of the same persons over six months per year including but not limited to schools and factories.

N. M. S. A. 1978, § 74-1-15.1

§ 74-1-15.1. Liquid waste disposal system assistance fund; created; purpose

Effective: May 20, 2020

Currentness

A. The "liquid waste disposal system assistance fund" is created in the state treasury. The department shall administer the fund. The fund may be composed of appropriations and transfers of money earned from investment of the fund and otherwise accruing to the fund and transfers of money from the environmental health fund not to exceed two hundred thousand dollars ($200,000) from the unexpended balance in the fund. Balances remaining in the fund at the end of a fiscal year shall remain to the credit of the fund. Disbursements from the fund shall be drawn on warrant of the secretary of finance and administration pursuant to vouchers signed by the secretary of environment or the secretary's authorized representative. Money in the fund is appropriated to the department for the sole purpose of assisting indigent individuals or households that qualify for funding to accomplish one of the following purposes where there is a real or potential negative impact to public health or water quality from on-site liquid waste disposal system effluent:

(1) to pay for a liquid waste disposal system to replace a cesspool or other failed or improper on-site liquid waste disposal system;

(2) to purchase, install or maintain an advanced treatment system as required by the Environmental Improvement Act or regulations issued pursuant to that act;

(3) to pay for the decommissioning and removal of a cesspool or other failed or improper on-site liquid waste disposal system; or

(4) to pay for all or a portion of the connection fees in order to connect an individual or household to a centralized wastewater collection and treatment system.

B. Construction activities sponsored by the fund shall be performed by licensed contractors selected through competitive bid by the department and shall be managed by the department.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

C. No more than five percent of the fund shall be used by the department on an annual basis to pay for the department costs associated with management and implementation of fund activities.

D. As used in this section:

(1) "advanced treatment system" means an on-site liquid wastewater treatment system that removes a greater amount of contaminants than is accomplished by a primary treatment system;

(2) "connection fee" means the fee paid directly to a public water or wastewater system or other wastewater management organization and does not include other fees, such as legal fees, related to connecting an individual or household to a centralized wastewater collection and treatment system; and

(3) "indigent individuals or households" means individuals or households whose annual incomes do not exceed the federal poverty guidelines.

N. M. S. A. 1978, § 74-1-15.2

§ 74-1-15.2. Environmental health fund; created

Effective: May 20, 2020

Currentness

A. The "environmental health fund" is created in the state treasury. The fund consists of fees collected from the regulation of on-site liquid waste systems and water recreation facilities pursuant to the Environmental Improvement Act, food establishments pursuant to the Food Service Sanitation Act [Chapter 25, Article 1 NMSA 1978] and hemp pursuant to the Hemp Manufacturing Act [Chapter 76, Article 24 NMSA 1978]. Money in the fund is subject to appropriation by the legislature to the department for the administration of regulations pertaining to liquid waste, water recreation facilities, food service sanitation and hemp. Disbursements from the fund shall be by warrant drawn by the secretary of finance and administration pursuant to vouchers signed by the secretary of environment or the secretary of environment's designee. Any unexpended or unencumbered balance in the environmental health fund remaining at the end of any fiscal year shall not revert to the general fund.

B. Up to two hundred thousand dollars ($200,000) from unexpended and unencumbered money in the environmental health fund may be transferred to the liquid waste disposal system assistance fund on an annual basis.

N. M. S. A. 1978, § 74-1-18

§ 74-1-18. Clean transportation fuel standard program; rules

Effective: May 15, 2024

Currentness

A. The board shall promulgate rules to implement a clean transportation fuel standard program no later than July 1, 2026.

B. Prior to the board promulgating rules pursuant to this section, the secretary shall convene an advisory committee composed of stakeholders from in-state and out-of-state producers of transportation fuels, transportation fuel distributors, local governments, utilities, tribal governments, environmental protection groups, environmental justice groups and other individuals or entities with relevant expertise to provide input and periodically review program rules.

C. The clean transportation fuel standard program rules shall:

(1) establish a statewide technology-neutral clean transportation fuel standard based on a schedule for annually decreasing the carbon intensity of transportation fuels used in the state;

(2) apply the clean transportation fuel standard to account for the fuel lifecycle in order to reduce the carbon intensity of transportation fuels used in the state by at least twenty percent below 2018 carbon intensity levels by 2030 and at least thirty percent below 2018 carbon intensity levels by 2040;

(3) establish technology-neutral mechanisms for generating, obtaining, trading, selling and retiring credits among transportation fuel producers, fuel distributors and other individuals or entities in the transportation fuel market, including additional credit opportunities from activities and projects that support the reduction or removal of greenhouse gas emissions associated with transportation in the state;

(4) establish mechanisms, including cost-containment measures and credit holding limits, to allow credits to be banked for future compliance periods to stabilize and incentivize investment in the transportation fuel credit market, verify the validity of compliance obligations, maximize savings and limit consumer costs, ensure program compliance, trade credits and allow for market participation by persons who register in the market to facilitate credit generation;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(5) require a utility that elects to participate in the program to invest all revenues from the sale of credits, not including administrative program costs, into distribution, grid modernization, infrastructure and other projects that support transportation decarbonization, with at least fifty percent of such revenues supporting low-income and underserved communities and with investor-owned utilities receiving regulatory treatment consistent with Section 62-8-12 NMSA 1978;

(6) consider similar programs in other jurisdictions, allow for coordination with other jurisdictions to promote regional reductions or removal of greenhouse gas emissions and allow market participants to generate credits under any overlapping current and future federal transportation fuel regulations;

(7) not discriminate against fuels solely on the basis of having originated in another state or jurisdiction;

(8) establish a periodic review process that includes input from the advisory committee convened pursuant to Subsection B of this section to provide input on program rules and performance and determine potential adjustments if deemed necessary after review, including the superseding of the state program by federal legislation;

(9) allow for a deferral of the program based on emergency or forecasted conditions; and

(10) establish fees for the cost of the department's administration and enforcement of the program; provided that any fees are deposited in the state air quality permit fund.

D. As used in this section:

(1) "low-income" means annual household adjusted gross income, as defined in the Income Tax Act [Chapter 7, Article 2 NMSA 1978], of equal to or less than two hundred percent of the federal poverty level; and

(2) "underserved community" means an area in this state, including a county, municipality or neighborhood, or subset of such area where the median income of the area is low-income.

42 U.S.C.A. § 7661a

§ 7661a. Permit programs

Currentness

(a) Violations

After the effective date of any permit program approved or promulgated under this subchapter, it shall be unlawful for any person to violate any requirement of a permit issued under this subchapter, or to operate an affected source (as provided in subchapter IV-A), a major source, any other source (including an area source) subject to standards or regulations under section 7411 or 7412 of this title, any other source required to have a permit under parts[1] C or D of subchapter I, or any other stationary source in a category designated (in whole or in part) by regulations promulgated by the Administrator (after notice and public comment) which shall include a finding setting forth the basis for such designation, except in compliance with a permit issued by a permitting authority under this subchapter. (Nothing in this subsection shall be construed to alter the applicable requirements of this chapter that a permit be obtained before construction or modification.) The Administrator may, in the Administrator's discretion and consistent with the applicable provisions of this chapter, promulgate regulations to exempt one or more source categories (in whole or in part) from the requirements of this subsection if the Administrator finds that compliance with such requirements is impracticable, infeasible, or unnecessarily burdensome on such categories, except that the Administrator may not exempt any major source from such requirements.

(b) Regulations

The Administrator shall promulgate within 12 months after November 15, 1990, regulations establishing the minimum elements of a permit program to be administered by any air pollution control agency. These elements shall include each of the following:

(1) Requirements for permit applications, including a standard application form and criteria for determining in a timely fashion the completeness of applications.

(2) Monitoring and reporting requirements.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(3)(A) A requirement under State or local law or interstate compact that the owner or operator of all sources subject to the requirement to obtain a permit under this subchapter pay an annual fee, or the equivalent over some other period, sufficient to cover all reasonable (direct and indirect) costs required to develop and administer the permit program requirements of this subchapter, including section 7661f of this title, including the reasonable costs of--

(i) reviewing and acting upon any application for such a permit,

(ii) if the owner or operator receives a permit for such source, whether before or after November 15, 1990, implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action),

(iii) emissions and ambient monitoring,

(iv) preparing generally applicable regulations, or guidance,

(v) modeling, analyses, and demonstrations, and

(vi) preparing inventories and tracking emissions.

(B) The total amount of fees collected by the permitting authority shall conform to the following requirements:

(i) The Administrator shall not approve a program as meeting the requirements of this paragraph unless the State demonstrates that, except as otherwise provided in subparagraphs[2] (ii) through (v) of this subparagraph, the program will result in the collection, in the aggregate, from all sources subject to subparagraph (A), of an amount not less than $25 per ton of each regulated pollutant, or such other amount as the Administrator may determine adequately reflects the reasonable costs of the permit program.

(ii) As used in this subparagraph, the term "regulated pollutant" shall mean (I) a volatile organic compound; (II) each pollutant regulated under section 7411 or 7412 of this title; and (III) each pollutant for which a national primary ambient air quality standard has been promulgated (except that carbon monoxide shall be excluded from this reference).

(iii) In determining the amount under clause (i), the permitting authority is not required to include any amount of regulated pollutant emitted by any source in excess of 4,000 tons per year of that regulated pollutant.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(iv) The requirements of clause (i) shall not apply if the permitting authority demonstrates that collecting an amount less than the amount specified under clause (i) will meet the requirements of subparagraph (A).

(v) The fee calculated under clause (i) shall be increased (consistent with the need to cover the reasonable costs authorized by subparagraph (A)) in each year beginning after 1990, by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year exceeds the Consumer Price Index for the calendar year 1989. For purposes of this clause--

(I) the Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the 12-month period ending on August 31 of each calendar year, and

(II) the revision of the Consumer Price Index which is most consistent with the Consumer Price Index for calendar year 1989 shall be used.

(C)(i) If the Administrator determines, under subsection (d), that the fee provisions of the operating permit program do not meet the requirements of this paragraph, or if the Administrator makes a determination, under subsection (i), that the permitting authority is not adequately administering or enforcing an approved fee program, the Administrator may, in addition to taking any other action authorized under this subchapter, collect reasonable fees from the sources identified under subparagraph (A). Such fees shall be designed solely to cover the Administrator's costs of administering the provisions of the permit program promulgated by the Administrator.

(ii) Any source that fails to pay fees lawfully imposed by the Administrator under this subparagraph shall pay a penalty of 50 percent of the fee amount, plus interest on the fee amount computed in accordance with section 6621(a)(2) of Title 26 (relating to computation of interest on underpayment of Federal taxes).

(iii) Any fees, penalties, and interest collected under this subparagraph shall be deposited in a special fund in the United States Treasury for licensing and other services, which thereafter shall be available for appropriation, to remain available until expended, subject to appropriation, to carry out the Agency's activities for which the fees were collected. Any fee required to be collected by a State, local, or interstate agency under this subsection shall be utilized solely to cover all reasonable (direct and indirect) costs required to support the permit program as set forth in subparagraph (A).

(4) Requirements for adequate personnel and funding to administer the program.

(5) A requirement that the permitting authority have adequate authority to:

(A) issue permits and assure compliance by all sources required to have a permit under this subchapter with each

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

applicable standard, regulation or requirement under this chapter;

(B) issue permits for a fixed term, not to exceed 5 years;

(C) assure that upon issuance or renewal permits incorporate emission limitations and other requirements in an applicable implementation plan;

(D) terminate, modify, or revoke and reissue permits for cause;

(E) enforce permits, permit fee requirements, and the requirement to obtain a permit, including authority to recover civil penalties in a maximum amount of not less than $10,000 per day for each violation, and provide appropriate criminal penalties; and

(F) assure that no permit will be issued if the Administrator objects to its issuance in a timely manner under this subchapter.

(6) Adequate, streamlined, and reasonable procedures for expeditiously determining when applications are complete, for processing such applications, for public notice, including offering an opportunity for public comment and a hearing, and for expeditious review of permit actions, including applications, renewals, or revisions, and including an opportunity for judicial review in State court of the final permit action by the applicant, any person who participated in the public comment process, and any other person who could obtain judicial review of that action under applicable law.

(7) To ensure against unreasonable delay by the permitting authority, adequate authority and procedures to provide that a failure of such permitting authority to act on a permit application or permit renewal application (in accordance with the time periods specified in section 7661b of this title or, as appropriate, subchapter IV-A) shall be treated as a final permit action solely for purposes of obtaining judicial review in State court of an action brought by any person referred to in paragraph (6) to require that action be taken by the permitting authority on such application without additional delay.

(8) Authority, and reasonable procedures consistent with the need for expeditious action by the permitting authority on permit applications and related matters, to make available to the public any permit application, compliance plan, permit, and monitoring or compliance report under section 7661b(e) of this title, subject to the provisions of section 7414(c) of this title.

(9) A requirement that the permitting authority, in the case of permits with a term of 3 or more years for major sources, shall require revisions to the permit to incorporate applicable standards and regulations promulgated under this chapter after the issuance of such permit. Such revisions shall occur as expeditiously as practicable and consistent with the procedures established under paragraph (6) but not later than 18 months after the promulgation of such standards and regulations. No such revision shall be required if the effective date of the standards or regulations is a date after the

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

expiration of the permit term. Such permit revision shall be treated as a permit renewal if it complies with the requirements of this subchapter regarding renewals.

(10) Provisions to allow changes within a permitted facility (or one operating pursuant to section 7661b(d) of this title) without requiring a permit revision, if the changes are not modifications under any provision of subchapter I and the changes do not exceed the emissions allowable under the permit (whether expressed therein as a rate of emissions or in terms of total emissions:[3] *Provided,* That the facility provides the Administrator and the permitting authority with written notification in advance of the proposed changes which shall be a minimum of 7 days, unless the permitting authority provides in its regulations a different timeframe for emergencies.

(c) Single permit

A single permit may be issued for a facility with multiple sources.

(d) Submission and approval

(1) Not later than 3 years after November 15, 1990, the Governor of each State shall develop and submit to the Administrator a permit program under State or local law or under an interstate compact meeting the requirements of this subchapter. In addition, the Governor shall submit a legal opinion from the attorney general (or the attorney for those State air pollution control agencies that have independent legal counsel), or from the chief legal officer of an interstate agency, that the laws of the State, locality, or the interstate compact provide adequate authority to carry out the program. Not later than 1 year after receiving a program, and after notice and opportunity for public comment, the Administrator shall approve or disapprove such program, in whole or in part. The Administrator may approve a program to the extent that the program meets the requirements of this chapter, including the regulations issued under subsection (b). If the program is disapproved, in whole or in part, the Administrator shall notify the Governor of any revisions or modifications necessary to obtain approval. The Governor shall revise and resubmit the program for review under this section within 180 days after receiving notification.

(2)(A) If the Governor does not submit a program as required under paragraph (1) or if the Administrator disapproves a program submitted by the Governor under paragraph (1), in whole or in part, the Administrator may, prior to the expiration of the 18-month period referred to in subparagraph (B), in the Administrator's discretion, apply any of the sanctions specified in section 7509(b) of this title.

(B) If the Governor does not submit a program as required under paragraph (1), or if the Administrator disapproves any such program submitted by the Governor under paragraph (1), in whole or in part, 18 months after the date required for such submittal or the date of such disapproval, as the case may be, the Administrator shall apply sanctions under section 7509(b) of this title in the same manner and subject to the same deadlines and other conditions as are applicable in the case of a determination, disapproval, or finding under section 7509(a) of this title.

(C) The sanctions under section 7509(b)(2) of this title shall not apply pursuant to this paragraph in any area unless the failure to submit or the disapproval referred to in subparagraph (A) or (B) relates to an air pollutant for which such area has

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

been designated a nonattainment area (as defined in part D of subchapter I).

(3) If a program meeting the requirements of this subchapter has not been approved in whole for any State, the Administrator shall, 2 years after the date required for submission of such a program under paragraph (1), promulgate, administer, and enforce a program under this subchapter for that State.

(e) Suspension

The Administrator shall suspend the issuance of permits promptly upon publication of notice of approval of a permit program under this section, but may, in such notice, retain jurisdiction over permits that have been federally issued, but for which the administrative or judicial review process is not complete. The Administrator shall continue to administer and enforce federally issued permits under this subchapter until they are replaced by a permit issued by a permitting program. Nothing in this subsection should be construed to limit the Administrator's ability to enforce permits issued by a State.

(f) Prohibition

No partial permit program shall be approved unless, at a minimum, it applies, and ensures compliance with, this subchapter and each of the following:

(1) All requirements established under subchapter IV-A applicable to "affected sources".

(2) All requirements established under section 7412 of this title applicable to "major sources", "area sources," and "new sources".

(3) All requirements of subchapter I (other than section 7412 of this title) applicable to sources required to have a permit under this subchapter.

Approval of a partial program shall not relieve the State of its obligation to submit a complete program, nor from the application of any sanctions under this chapter for failure to submit an approvable permit program.

(g) Interim approval

If a program (including a partial permit program) submitted under this subchapter substantially meets the requirements of this subchapter, but is not fully approvable, the Administrator may by rule grant the program interim approval. In the notice of final rulemaking, the Administrator shall specify the changes that must be made before the program can receive full approval. An interim approval under this subsection shall expire on a date set by the Administrator not later than 2 years after such approval, and may not be renewed. For the period of any such interim approval, the provisions of subsection (d)(2), and the

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

obligation of the Administrator to promulgate a program under this subchapter for the State pursuant to subsection (d)(3), shall be suspended. Such provisions and such obligation of the Administrator shall apply after the expiration of such interim approval.

(h) Effective date

The effective date of a permit program, or partial or interim program, approved under this subchapter, shall be the effective date of approval by the Administrator. The effective date of a permit program, or partial permit program, promulgated by the Administrator shall be the date of promulgation.

(i) Administration and enforcement

(1) Whenever the Administrator makes a determination that a permitting authority is not adequately administering and enforcing a program, or portion thereof, in accordance with the requirements of this subchapter, the Administrator shall provide notice to the State and may, prior to the expiration of the 18-month period referred to in paragraph (2), in the Administrator's discretion, apply any of the sanctions specified in section 7509(b) of this title.

(2) Whenever the Administrator makes a determination that a permitting authority is not adequately administering and enforcing a program, or portion thereof, in accordance with the requirements of this subchapter, 18 months after the date of the notice under paragraph (1), the Administrator shall apply the sanctions under section 7509(b) of this title in the same manner and subject to the same deadlines and other conditions as are applicable in the case of a determination, disapproval, or finding under section 7509(a) of this title.

(3) The sanctions under section 7509(b)(2) of this title shall not apply pursuant to this subsection in any area unless the failure to adequately enforce and administer the program relates to an air pollutant for which such area has been designated a nonattainment area.

(4) Whenever the Administrator has made a finding under paragraph (1) with respect to any State, unless the State has corrected such deficiency within 18 months after the date of such finding, the Administrator shall, 2 years after the date of such finding, promulgate, administer, and enforce a program under this subchapter for that State. Nothing in this paragraph shall be construed to affect the validity of a program which has been approved under this subchapter or the authority of any permitting authority acting under such program until such time as such program is promulgated by the Administrator under this paragraph.

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter C. Air Programs
Part 70. State Operating Permit Programs (Refs & Annos)

40 C.F.R. § 70.9

§ 70.9 Fee determination and certification.

Effective: October 23, 2015

Currentness

(a) Fee requirement. The State program shall require that the owners or operators of part 70 sources pay annual fees, or the equivalent over some other period, that are sufficient to cover the permit program costs and shall ensure that any fee required by this section will be used solely for permit program costs.

(b) Fee schedule adequacy.

(1) The State program shall establish a fee schedule that results in the collection and retention of revenues sufficient to cover the permit program costs. These costs include, but are not limited to, the costs of the following activities as they relate to the operating permit program for stationary sources:

(i) Preparing generally applicable regulations or guidance regarding the permit program or its implementation or enforcement;

(ii) Reviewing and acting on any application for a permit, permit revision, or permit renewal, including the development of an applicable requirement as part of the processing of a permit, or permit revision or renewal;

(iii) General administrative costs of running the permit program, including the supporting and tracking of permit applications, compliance certification, and related data entry;

(iv) Implementing and enforcing the terms of any part 70 permit (not including any court costs or other costs associated with an enforcement action), including adequate resources to determine which sources are subject to the program;

(v) Emissions and ambient monitoring;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(vi) Modeling, analyses, or demonstrations;

(vii) Preparing inventories and tracking emissions; and

(viii) Providing direct and indirect support to sources under the Small Business Stationary Source Technical and Environmental Compliance Assistance Program contained in section 507 of the Act in determining and meeting their obligations under this part.

(2)(i) The Administrator will presume that the fee schedule meets the requirements of paragraph (b)(1) of this section if it would result in the collection and retention of an amount not less than $25 per year [as adjusted pursuant to the criteria set forth in paragraph (b)(2)(iv) of this section] times the total tons of the actual emissions of each regulated pollutant (for presumptive fee calculation) emitted from part 70 sources and any GHG cost adjustment required under paragraph (b)(2)(v) of this section.

(ii) The State may exclude from such calculation:

(A) The actual emissions of sources for which no fee is required under paragraph (b)(4) of this section;

(B) The amount of a part 70 source's actual emissions of each regulated pollutant (for presumptive fee calculation) that the source emits in excess of four thousand (4,000) tpy;

(C) A part 70 source's actual emissions of any regulated pollutant (for presumptive fee calculation), the emissions of which are already included in the minimum fees calculation; or

(D) The insignificant quantities of actual emissions not required in a permit application pursuant to § 70.5(c).

(iii) "Actual emissions" means the actual rate of emissions in tons per year of any regulated pollutant (for presumptive fee calculation) emitted from a part 70 source over the preceding calendar year or any other period determined by the permitting authority to be representative of normal source operation and consistent with the fee schedule approved pursuant to this section. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and in-place control equipment, types of materials processed, stored, or combusted during the preceding calendar year or such other time period established by the permitting authority pursuant to the preceding sentence.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(iv) The program shall provide that the $25 per ton per year used to calculate the presumptive minimum amount to be collected by the fee schedule, as described in paragraph (b)(2)(i) of this section, shall be increased each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year exceeds the Consumer Price Index for the calendar year 1989.

(A) The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the 12–month period ending on August 31 of each calendar year.

(B) The revision of the Consumer Price Index which is most consistent with the Consumer Price Index for the calendar year 1989 shall be used.

(v) GHG cost adjustment. The amount calculated in paragraph (b)(2)(i) of this section shall be increased by the GHG cost adjustment determined as follows: For each activity identified in the following table, multiply the number of activities performed by the permitting authority by the burden hours per activity, and then calculate a total number of burden hours for all activities. Next, multiply the burden hours by the average cost of staff time, including wages, employee benefits and overhead.

Activity	Burden hours per activity
GHG completeness determination (for initial permit or updated application)	43
GHG evaluation for a permit modification or related permit action	7
GHG evaluation at permit renewal	10

(3) The State program’s fee schedule may include emissions fees, application fees, service-based fees or other types of fees, or any combination thereof, to meet the requirements of paragraph (b)(1) or (b)(2) of this section. Nothing in the provisions of this section shall require a permitting authority to calculate fees on any particular basis or in the same manner for all part 70 sources, all classes or categories of part 70 sources, or all regulated air pollutants, provided that the permitting authority collects a total amount of fees sufficient to meet the program support requirements of paragraph (b)(1) of this section.

(4) Notwithstanding any other provision of this section, during the years 1995 through 1999 inclusive, no fee for purposes of title V shall be required to be paid with respect to emissions from any affected unit under section 404 of the Act.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(5) The State shall provide a detailed accounting that its fee schedule meets the requirements of paragraph (b)(1) of this section if:

(i) The State sets a fee schedule that would result in the collection and retention of an amount less than that presumed to be adequate under paragraph (b)(2) of this section; or

(ii) The Administrator determines, based on comments rebutting the presumption in paragraph (b)(2) of this section or on his own initiative, that there are serious questions regarding whether the fee schedule is sufficient to cover the permit program costs.

(c) Fee demonstration. The permitting authority shall provide a demonstration that the fee schedule selected will result in the collection and retention of fees in an amount sufficient to meet the requirements of this section.

(d) Use of Required Fee Revenue. The Administrator will not approve a demonstration as meeting the requirements of this section, unless it contains an initial accounting (and periodic updates as required by the Administrator) of how required fee revenues are used solely to cover the costs of meeting the various functions of the permitting program.

West's New Mexico Statutes Annotated
Chapter 9. Executive Department
Article 7a. Department of Environment (Refs & Annos)

N. M. S. A. 1978, § 9-7A-6

§ 9-7A-6. Secretary; duties and general powers

Currentness

A. The secretary is responsible to the governor for the operation of the department. It is his duty to manage all operations of the department and to administer and enforce the laws with which he or the department is charged.

B. To perform his duties, the secretary has every power expressly enumerated in the laws, whether granted to the secretary, the department or any division of the department, except where authority conferred upon any division is explicitly exempt from the secretary's authority by statute. In accordance with these provisions, the secretary shall:

(1) except as otherwise provided in the Department of Environment Act, exercise general supervisory and appointing authority over all department employees, subject to any applicable personnel laws and regulations;

(2) delegate authority to subordinates as he deems necessary and appropriate, clearly delineating that delegated authority and the limitations thereto;

(3) organize the department into those organizational units he deems will enable it to function most efficiently, subject to any provisions of law requiring or establishing specific organizational units;

(4) within the limitations of available appropriations and applicable laws, employ and fix the compensation of those persons necessary to discharge his duties;

(5) take administrative action by issuing orders and instructions, not inconsistent with the law, to assure implementation of and compliance with the provisions of law for which administration or execution he is responsible and to enforce those orders and instructions by appropriate administrative action or actions in the courts;

(6) conduct research and studies that will improve the operations of the department and the provision of services to the

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

citizens of the state;

(7) provide courses of instruction and practical training for employees of the department and other persons involved in the administration of programs with the objective of improving the operations and efficiency of administration;

(8) prepare an annual budget of the department;

(9) appoint, with the governor's consent, a "director" for each division. These appointed positions are exempt from the provisions of the Personnel Act [Chapter 10, Article 9 NMSA 1978].[1] Persons appointed to these positions shall serve at the pleasure of the secretary;

(10) give bond in the penal sum of twenty-five thousand dollars ($25,000) and require directors to each give bond in the penal sum of ten thousand dollars ($10,000) conditioned upon the faithful performance of duties, as provided in the Surety Bond Act [10-2-13 to 10-2-16 NMSA 1978].[2] The department shall pay the costs of those bonds; and

(11) require performance bonds of department employees and officers as he deems necessary, as provided in the Surety Bond Act. The department shall pay the costs of those bonds.

C. The secretary may apply for and receive, with the governor's approval and in the name of the department, any public or private funds, including, but not limited to, United States government funds, available to the department to carry out its programs, duties or services.

D. The secretary may make and adopt such reasonable and procedural rules and regulations as may be necessary to carry out the duties of the department and its divisions. No rule or regulation promulgated by the director of any division in carrying out the functions and duties of the division shall be effective until approved by the secretary unless otherwise provided by statute. Unless otherwise provided by statute, no procedural regulation affecting any person or agency outside the department shall be adopted, amended or repealed without a public hearing on the proposed action before the secretary or a hearing officer designated by the secretary. The public hearing shall be held in Santa Fe unless otherwise permitted by statute. Notice of the subject matter of the regulation, the action proposed to be taken, the time and place of the hearing, the manner in which interested persons may present their views and the method by which copies of the proposed regulation, proposed amendment or repeal of an existing regulation may be obtained shall be published once at least thirty days prior to the hearing date in a newspaper of general circulation and mailed at least thirty days prior to the hearing date to all persons who have made a written request for advance notice of hearing. All rules and regulations shall be filed in accordance with the State Rules Act [Chapter 14, Article 4 NMSA 1978].[3]

Chapter 9. Executive Department
Article 7a. Department of Environment (Refs & Annos)

N. M. S. A. 1978, § 9-7A-9

§ 9-7A-9. Bureaus; chiefs

Currentness

The secretary shall establish within each division such "bureaus" as he deems necessary to carry out the provisions of the Department of Environment Act. He shall employ a "chief" to be the administrative head of each bureau. The chief and all subsidiary employees of the department shall be covered by the Personnel Act [Chapter 10, Article 9 NMSA 1978][1] unless otherwise provided by law.

West's New Mexico Statutes Annotated
Chapter 9. Executive Department
Article 7a. Department of Environment (Refs & Annos)

N. M. S. A. 1978, § 9-7A-11

§ 9-7A-11. Cooperation with the federal government; authority of secretary; single state agency status

Currentness

A. The department is authorized to cooperate with the federal government in the administration of environmental programs in which financial or other participation by the federal government is authorized or mandated under state or federal laws, regulations, rules or orders. The secretary may enter into agreements with agencies of the federal government to implement environmental programs subject to availability of appropriated state funds and any provisions of state laws applicable to such agreements or participation by the state.

B. The governor or the secretary may by appropriate order designate the department or any organizational unit of the department as the single state agency for the administration of any environmental program when that designation is a condition of federal financial or other participation in the program under applicable federal law, regulation, rule or order. Whether or not a federal condition exists, the governor may designate the department or any organizational unit of the department as the single state agency for the administration of any environmental program. No designation of a single state agency under the authority granted in this section shall be made in contravention of state law.

Chapter 9. Executive Department
Article 7a. Department of Environment (Refs & Annos)

N. M. S. A. 1978, § 9-7A-15

§ 9-7A-15. Technical advisory committee created; duties and powers of the committee

Currentness

A. The "wastewater technical advisory committee" is created. The committee shall consist of five members to be appointed by and to serve at the pleasure of the secretary of environment. The members shall include:

(1) a wastewater treatment system engineer with at least ten years of experience in wastewater system design and construction;

(2) a faculty member from a university or college located within New Mexico with a minimum of a master's degree in biological science, microbiology, soil science or engineering, and with a minimum of ten years of work or academic experience with wastewater treatment or wastewater treatment facility management;

(3) a representative from the New Mexico state university water utilities technical assistance program;

(4) a class IV certified wastewater operator with at least ten years of experience; and

(5) a representative from the New Mexico home builders association.

B. The term of appointed members shall be three years. Members shall serve until their successors are appointed. Vacancies occurring in the membership of an appointed member shall be filled by the secretary for the remainder of the unexpired term.

C. The committee shall conduct open meetings as needed, but not less than quarterly.

D. The department of environment shall provide technical and legal assistance to the committee as needed.

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

E. The committee shall:

(1) establish procedures, practices and policies governing the committee's activities;

(2) provide standardized objective evaluation of wastewater treatment and disposal technologies for both large- and small-flow domestic, commercial and agricultural wastewater systems and submit its findings to the secretary for final approval by the secretary, who shall add the wastewater treatment and disposal technologies to the list of approved technologies maintained by the department, including the ground water quality bureau and the liquid waste program of the field operations division of the department of environment and their constituent agencies; and

(3) maintain a current list of approved wastewater technologies accessible by the public on the department's internet site.

F. Members of the committee shall receive reimbursement for expenses incurred in the performance of their duties pursuant to the Per Diem and Mileage Act [10-8-1 to 10-8-8 NMSA 1978] and shall receive no other compensation, perquisite or allowance. Expenditures for this purpose shall be made from the budgeted funds of the department.

Chapter 9. Executive Department
Article 7a. Department of Environment (Refs & Annos)

N. M. S. A. 1978, § 9-7A-16

§ 9-7A-16. Uranium mining reclamation; department of environment; duties

Effective: May 18, 2022

Currentness

A. The department of environment shall:

(1) coordinate efforts across the state to clean up and reclaim former uranium mine and mill sites. The energy, minerals and natural resources department; the Indian affairs department; the office of natural resources trustee; the state land office; the department of game and fish; the cultural affairs department; the department of health; the workforce solutions department; the economic development department; and the department of transportation shall work in conjunction with the department of environment to support the department's duties as they relate to the purposes of the respective departments and agencies;

(2) develop a strategic plan for the cleanup of uranium mine and mill sites throughout the state, including reclamation goals, time lines for the completion of cleanup activities at specific sites and anticipated funding requirements. The department of environment shall consult with the departments and agencies enumerated in Paragraph (1) of this subsection in the development of the strategic plan and include in the strategic plan the respective agencies' and departments' input;

(3) establish an effective mechanism for consultation and coordination with the federal government; Indian nations, tribes and pueblos; communities impacted by uranium mining; and other states on uranium mine and mill reclamation activities;

(4) work with the economic development department, workforce solutions department and industry to establish uranium mine and mill reclamation as a target economic development industry in New Mexico, including the creation, coordination and promotion of worker training and business development programs for reclamation activities;

(5) develop, maintain and update on a regular basis a centralized repository of uranium mine and mill sites and reclamation activities. The repository shall include, at minimum, the location of uranium mine and mill sites, information about the ownership and legal jurisdiction of each site and each site's cleanup status and shall use any information currently maintained or possessed by the energy, minerals and natural resources department relating to uranium mine and mill sites; and

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(6) on an annual basis, report to the radioactive and hazardous materials committee on the department of environment's activities in the preceding year. The department of environment shall consult with the departments and agencies enumerated in Paragraph (1) of this subsection and include in the report the activities undertaken by the respective departments and agencies in the preceding year that are related to uranium mine and mill site reclamation.

B. The secretary of environment shall create a uranium mine reclamation coordinator position and employ additional staff as needed for the department of environment to carry out the provisions of this section.

N. M. S. A. 1978, § 9-7A-17

§ 9-7A-17. Uranium mining reclamation revolving fund; created

Effective: May 18, 2022

Currentness

A. The "uranium mining reclamation revolving fund" is created in the state treasury. The uranium mining reclamation revolving fund consists of appropriations, gifts, grants, donations and money received by the department of environment or the energy, minerals and natural resources department from the federal government or other state agencies and other sources for conducting uranium mine and mill reclamation activities. Money recovered for the state by or on behalf of the department of environment or the energy, minerals and natural resources department from uranium mine or mill reclamation related litigation or settlements shall be deposited in the uranium mining reclamation revolving fund.

B. The uranium mining reclamation revolving fund shall be administered by the department of environment. Money in the fund is subject to appropriation by the legislature. Expenditures may be made from the fund for the department of environment or the energy, minerals and natural resources department to undertake projects to reclaim uranium mine and mill sites, including the acquisition of tools and equipment; expenses incurred by the department of environment or the energy, minerals and natural resources department in planning, supervising and completing uranium mine and mill reclamation projects; and expenses incurred in litigation involving uranium mine or mill sites; provided that money in the fund shall not be used for the operational expenses of the department of environment or the energy, minerals and natural resources department. Disbursements from the fund shall be made by warrant of the secretary of finance and administration pursuant to vouchers signed by the secretary of environment or the secretary of energy, minerals and natural resources or their designees.

C. Money in the uranium mining reclamation revolving fund shall not revert to the general fund at the end of a fiscal year.

N. M. S. A. 1978, § 6-3-6

§ 6-3-6. State budget division; periodic allotments

Effective: July 1, 2012

Currentness

A. The state budget division, subject to the approval of the secretary of finance and administration, is authorized to provide rules for the periodic allotment of funds that may be expended by any state agency.

B. The expenditures of any state agency as defined in Section 6-3-1 NMSA 1978, for the first six-month period of each odd-numbered fiscal year shall be limited to one-half of the appropriation or approved budget, whichever is less, for that fiscal year. This restriction does not apply to those agencies whose operations are more efficiently measured by periods other than a fiscal year, including but not limited to the New Mexico legislative council, legislative committees, the intertribal ceremonial and the New Mexico state fair. Expenditures of the intertribal ceremonial office [intertribal Indian ceremonial association] and the New Mexico state fair shall be governed by regulation of the department of finance and administration. The department of finance and administration may also allow expenditure of more than one-half of the appropriation or approved budget for those agencies planning major expenditures for capital outlay in the first six months of the fiscal year, which would result in over-expenditure of the first six-month allocation.

C. Upon the direction of the secretary of finance and administration pursuant to Section 9-6-5.2 NMSA 1978, the state budget division shall temporarily withhold an allotment to a state agency or state institution that has failed to submit an audit report required by the Audit Act [12-6-1 to 12-6-14 NMSA 1978]. The amount withheld and the number of periodic allotments subject to the withholding shall be as directed by the secretary.

§ 6-3-10. Budget defined

Currentness

The budget means a complete statement as to the financial operation of all state agencies for the fiscal year last completed, the current fiscal year and a financial plan for the operation of all state agencies for the succeeding fiscal year.

The budget for the succeeding fiscal year shall set forth in detail the following:

A. all proposed expenditures for the administration, operation and maintenance of all state agencies;

B. all interest and debt redemption charges;

C. all expenditures for capital projects to be undertaken and executed;

D. all anticipated revenues; and

E. means of financing proposed expenditures.

N. M. S. A. 1978, § 6-3-11

§ 6-3-11. Parts of the budget

Currentness

The budget shall contain the following parts:

A. the governor's budget message;

B. summary statements showing the following:

(1) financial condition of the state government at the beginning and at the end of the fiscal year last completed;

(2) financial condition of the state government at the beginning of the current fiscal year and condition anticipated at the end of the current fiscal year;

(3) anticipated financial condition of the state government at the beginning and end of the succeeding fiscal year;

(4) condition of all funds for the fiscal year last completed, the current fiscal year and the succeeding fiscal year, as follows:

(a) balance or anticipated balance at the beginning of the fiscal year;

(b) balance or anticipated balance at the end of the fiscal year;

(c) revenue or anticipated revenue during the fiscal year;

 © 2026 Thomson Reuters. No claim to original U.S. Government Works.

(d) source of revenue or anticipated revenue during the fiscal year; and

(e) expenditures or anticipated expenditures during the fiscal year;

(5) the bonded indebtedness, debts authorized, debts redeemed, interest requirements and the condition of sinking funds;

(6) appropriations recommended by the governor compared with appropriations for the fiscal year last completed and the current fiscal year. Any increase or decrease in the recommended appropriation shall be explained;

(7) anticipated revenue for the succeeding fiscal year, classified according to source of revenue and compared with revenues for the fiscal year last completed and anticipated revenue for the current fiscal year;

(8) other information necessary to make known in practicable detail the financial operation of the state government; and

(9) if anticipated revenue is less than the total of all appropriations recommended in any fiscal year, recommendations as to how the deficit shall be met;

C. a summary statement of requested appropriations by state agencies and recommendations of the state budget division concerning such requested appropriations; and

D. an appropriation bill recommended by the governor. Such bill shall follow budget classification and shall be stated in lump sums according to function or purpose of each agency.

TITLE 1 GENERAL GOVERNMENT ADMINISTRATION
CHAPTER 4 STATE PROCUREMENT
PART 1 PROCUREMENT CODE REGULATIONS

1.4.1.1 ISSUING AGENCY: General Services Department - State Purchasing Division.
[1.4.1.1 NMAC - Rp, 1.4.1.1 NMAC, 6/21/2022]

1.4.1.2 SCOPE: All executive branch state agencies.

A. Except as otherwise provided in the Procurement Code, Sections 13-1-28 through 13-1-199 NMSA 1978, the code applies to every expenditure by state agencies and local public bodies for the procurement of items of tangible personal property, services and construction.

B. General: Except as otherwise provided in this section, this rule applies to every agency and to every transaction to which the Procurement Code applies except the following:

(1) procurement of highway construction or reconstruction by the department of transportation;

(2) procurement by the judicial branch of state government;

(3) procurement by the legislative branch of state government;

(4) procurement by the boards of regents of state educational institutions named in Article 12 Section 11 of the constitution of New Mexico;

(5) procurement by the state fair commission of tangible personal property, services and construction under twenty thousand dollars ($20,000);

(6) purchases from the instructional material fund;

(7) procurement by all local public bodies;

(8) procurement by regional education cooperatives;

(9) procurement by charter schools;

(10) procurement by each state health care institution that provides direct patient care and that is, or a part of which is, medicaid certified and participating in the New Mexico medicaid program; and

(11) procurement by the public school facilities authority.

[1.4.1.2 NMAC - Rp, 1.4.1.2 NMAC, 6/21/2022]

1.4.1.3 STATUTORY AUTHORITY: Section 9-17-5 NMSA 1978, Laws of 1983, Chapter 301, Section 5; and 13-1-95, Laws of 1984, Chapter 65, Section 68 (Repl. Pamp. 1997). Subject to the authority of the secretary of the general services department, Section 13-1-95 NMSA 1978 designates the state purchasing agent as both the administrator and chief executive of the state purchasing division. The cite further designates the state purchasing agent and purchasing division shall be responsible for the procurement of items of tangible personal property, services and construction for all state agencies except as otherwise provided in the Procurement Code, Sections 13-1-28 through 13-1-199 NMSA 1978, and shall administer the code for those state agencies not excluded from the requirement of procurement through the state purchasing agent. Among the statutory duties and responsibilities afforded the state purchasing agent is to recommend procurement regulations to the secretary of the general services department.
[1.4.1.3 NMAC - Rp, 1.4.1.3 NMAC, 6/21/2022]

1.4.1.4 DURATION: Permanent.
[1.4.1.4 NMAC - Rp, 1.4.1.4 NMAC, 6/21/2022]

1.4.1.5 EFFECTIVE DATE: June 21, 2022, unless a later date is cited at the end of a section.
[1.4.1.5 NMAC - Rp, 1.4.1.5 NMAC, 6/21/2022]

1.4.1.6 OBJECTIVE: Subsection C of Section 13-1-29 NMSA 1978 states that, the purposes of the Procurement Code are to provide for the fair and equal treatment of all persons involved in public procurement, to maximize the purchasing value of public funds and to provide safeguards for maintaining a procurement system of quality and integrity. The objective of this rule is to have the force and effect of law to implement, interpret or make statute specific as it applies to the Procurement Code, Sections 13-1-28 through 13-1-199 NMSA 1978 and the purposes stated therein.
[1.4.1.6 NMAC - Rp, 1.4.1.6 NMAC, 6/21/2022]

NMED Exhibit 7-G_000001

1.4.1.7 DEFINITIONS:

A. Most of the terms which appear in this rule are defined in the Procurement Code.

B. In these rules and regulations the following definitions apply.

(1) "Anti-poverty program businesses" means small businesses, cooperatives, community self-determination corporations or other such enterprises designed and operated to alleviate poverty conditions and aided by state or federal antipoverty programs or through private philanthropy.

(2) "Best obtainable price" means that price at which services or goods can be purchased which is most advantageous to the purchasing entity; best obtainable price can be found by obtaining quotes or other appropriate methods; where there is only one vendor available for such a purchase utilizing a direct purchase order in accordance with statute (such as an entity requiring dues, for example), the price would be the best obtainable price since it is the only possible price for that particular procurement.

(3) "Bidding time" means the period of time between the date the invitation to bid notice is published and the date and time set for receipt of bids.

(4) "Bidder" means one who submits a bid in response to an invitation for bid.

(5) "Competitive process" means an invitation for bid or request for proposals. Three quotes does not constitute a competitive process as the vendors from whom the quotes are received are singled out and specifically chosen. Increasing the number of quotes does not invalidate this lack of fairness, transparency, and competitiveness.

(6) "Competitive sealed bid" means the response from a bidder to an invitation to bid (ITB).

(7) "Competitive sealed proposal" means the response from an offeror to a request for proposals (RFP).

(8) "Contract" means any written, binding agreement for the procurement of items of tangible personal property, services or construction. A purchase order alone can be a binding contract.

(9) "Invitation for bid (IFB)" means all documents, including those attached or incorporated by reference, used for soliciting competitive sealed bids. Also sometimes referred to as an invitation to bid (ITB).

(10) "Offeror" means one who submits a proposal in response to a request for proposals.

(11) "Sealed" means, in terms of a non-electronic submission, that the bid or proposal is enclosed in a package which is completely fastened in such a way that nothing can be added or removed. Open packages submitted will not be accepted except for packages that may have been damaged by the delivery service itself. The state reserves the right, however, to accept or reject packages where there may have been damage done by the delivery service itself. Whether a package has been damaged by the delivery service or left unfastened and should or should not be accepted is a determination to be made by the procurement manager of any particular procurement. In terms of electronic submission, the entire required information and accompanying documents for the bid or proposal must be submitted via the electronic system being used by the state and by the deadline specified in the procurement. The deadline is that minute as stated in the procurement. That is, if a submission is due by 3:00 p.m., on a particular day, that deadline means 3:00:00 p.m., and does not mean 3:00:59 p.m.

[1.4.1.7 NMAC - Rp, 1.4.1.7 NMAC, 6/21/2022]

1.4.1.8 CENTRALIZATION OF PROCUREMENT ACTIVITY (1.4.1.8 - 1.4.1.13 NMAC):

A. State purchasing agent. All procurement for state agencies shall be performed by the state purchasing agent except the following:

(1) professional services;

(2) small purchases having a value not exceeding one thousand five hundred dollars ($1,500);

(3) emergency procurements; and

(4) the types of procurement specified in Subsection B of 1.4.1.2 NMAC.

B. Central purchasing offices. All procurement for state agencies excluded from the requirement of procurement through the state purchasing agent shall be performed by a central purchasing office designated by statute, the governing authority of that state agency or as otherwise provided in the Procurement Code.

C. Cooperative procurement. Nothing in this section should be interpreted as limiting the ability of state agencies to make procurements under existing contracts or enter into cooperative procurement agreements in accordance with Sections 13-1-29, 13-1-135 and 13-1-136 NMSA 1978.

[1.4.1.8 NMAC - Rp, 1.4.1.8 NMAC, 6/21/2022]

1.4.1.9 INSPECTION OF PUBLIC RECORDS: The inspection of public records is governed by the Inspection of Public Records Act, Sections 14-2-1 through 14-2-12 NMSA 1978. To the extent that any provision of this rule conflicts with the Inspection of Public Records Act, as interpreted by the courts of this state, that act shall control. Furthermore, no obligation to keep data confidential which is contained in this rule is intended to create any liability that would not otherwise exist under state law.
[1.4.1.9 NMAC - Rp, 1.4.1.9 NMAC, 6/21/2022]

1.4.1.10 DOLLAR AMOUNTS: Whenever a dollar amount appears in this rule, such amount is exclusive of applicable gross receipts and local option taxes as the term is defined in Subsection Q of Section 7-9-3 NMSA 1978.
[1.4.1.10 NMAC - Rp, 1.4.1.10 NMAC, 6/21/2022]

1.4.1.11 INDEMNIFICATION AND INSURANCE:

A. Tort liability. Except as provided for in the Tort Claims Act, Section 41-4-1 through 41-4-27 NMSA 1978, no contract governed by this rule shall contain any provision whereby a state agency agrees to indemnify or provide tort liability insurance for any contractor.

B. Other risks. No contract governed by this rule shall contain any provision whereby a state agency agrees to indemnify a contractor or provide a contractor with a limitation of liability or provide a contractor with insurance for non-tort risks.

C. Contract provisions void. Any indemnification or insurance provision in any contract executed in violation of this section shall be void and of no effect.
[1.4.1.11 NMAC - Rp, 1.4.1.11 NMAC, 6/21/2022]

1.4.1.12 [RESERVED]

1.4.1.13 SEVERABILITY: If any provision of this rule, or any application thereof, to any person or circumstance, is held invalid, such invalidity shall not affect any other provision or application of this rule which can be given effect without the invalid provision or application.
[1.4.1.13 NMAC - Rp, 1.4.1.13 NMAC, 6/21/2022]

1.4.1.14 APPLICATION (COMPETITIVE SEALED BIDS; 1.4.1.14 -1.4.1.28 NMAC): The provisions of 1.4.1.14 through 1.4.1.28 NMAC apply to every procurement made by competitive sealed bids.
[1.4.1.14 NMAC - Rp, 1.4.1.14 NMAC, 6/21/2022]

1.4.1.15 COMPETITIVE SEALED BIDS REQUIRED: All procurement performed pursuant to the procurement code shall be achieved by competitive sealed bids except procurement achieved pursuant to the following methods:

A. competitive sealed proposals;

B. small purchases;

C. sole source procurement;

D. emergency procurement;

E. procurement under existing contracts; and

F. purchases from anti-poverty program businesses.
[1.4.1.15 NMAC - Rp, 1.4.1.15 NMAC, 6/21/2022]

1.4.1.16 INVITATION FOR BIDS ("IFB"):

A. General: The invitation for bids ("IFB"), also sometimes referred to as the invitation to bid (ITB), is used to initiate a competitive sealed bid procurement. The IFB shall include the following:

(1) the specifications for the services, construction or items of tangible personal property to be procured, except that professional services and a design and build project delivery system cannot be procured with an IFB pursuant to Section 13-1-111 NMSA 1978;

(2) all contractual terms and conditions applicable to the procurement including any requirements for complying with applicable preferences provided in law;

(3) the term of the contract and conditions of renewal or extension, if any;

(4) instructions and information to bidders, including the location where bids are to be received and the date, time and place of the bid opening;

NMED Exhibit 7-G_000003

(5) a notice that the IFB may be canceled and that any and all bids may be rejected in whole or in part when it is in the best interest of the state of New Mexico; and

(6) a notice that reads substantially as follows: The Procurement Code, Section 13-1-28 through Section 13-1-199 NMSA 1978, imposes civil, misdemeanor and felony criminal penalties for its violation. In addition, the New Mexico criminal statutes impose felony penalties for bribes, gratuities and kick-backs.

B. Incorporation by reference: The IFB may incorporate documents by reference, provided that the IFB specifies where such documents can be obtained.

C. Evaluation criteria: The IFB shall set forth the evaluation criteria that will be used to determine acceptability such as inspection, testing, quality, workmanship, delivery and suitability for a particular purpose. Those criteria such as discounts, transportation costs and total or life-cycle costs that will affect the bid price shall be objectively measurable. No criteria may be used in bid evaluation that are not set forth in the IFB.

D. Bid form: The IFB shall provide a form which shall include space in which the bid price shall be inserted and which the bidder shall affirm, certify, or sign and submit along with all other necessary submissions. This may be an entirely electronic process if required by the procurement.

E. Bid samples and descriptive literature:

(1) "Descriptive literature" means information available in the ordinary course of business that shows the characteristics, construction, or operation of an item.

(2) "Bid sample" means a sample furnished by a bidder that shows the characteristics of an item offered in the bid.

(3) Bid samples or descriptive literature may be required when it is necessary to evaluate required characteristics of the item bid.

(4) Bid samples, when required, shall be furnished free of expense to the state and prior to the time set for the opening of bids. Samples not destroyed or mutilated in testing will be returned upon request by mail, express or freight, collect. Each sample must be labeled to clearly show the bid number and the bidder's name.

F. Bidding time: Bidding time is the period of time between the date of distribution of the IFB and the time and date set for receipt of bids. In each case bidding time shall be set to provide bidders a reasonable time to prepare their bids. In no case shall the bidding time be shorter than the time required for publication under 1.4.1.17 NMAC of this rule.

[1.4.1.16 NMAC - Rp, 1.4.1.16 NMAC, 6/21/2022]

1.4.1.17 PUBLIC NOTICE INVITATION FOR BID: Publication. The IFB or notice thereof shall be published not less than ten calendar days prior to the date set for the opening of bids. The IFB or notice must be published in accordance with statute.

A. These requirements of publication are in addition to any other procedures that may be adopted by the state purchasing agent to notify prospective bidders that bids will be received, including but not limited to publication in trade journals, if available.

B. Bidder lists. The state purchasing agent shall send copies of the notice or IFB to those businesses which have signified in writing an interest in submitting bids for particular categories of items of tangible personal property, construction and services and which have paid any required fees. This may be done through electronic means. (Section 13-1-104 NMSA 1978). Reference is also given to 1.4.1.48 NMAC of this rule.

C. Public availability. A copy of the IFB shall be made available for public inspection on the state purchasing agnet’s website.

[1.4.1.17 NMAC - Rp, 1.4.1.17 NMAC, 6/21/2022]

1.4.1.18 PRE-BID CONFERENCES: Pre-bid conferences may be conducted to explain the procurement requirements. If a pre-bid conference is to be held it shall be noticed in the IFB. The conference should be held long enough after the IFB has been issued to allow bidders to become familiar with it, but sufficiently before bid opening to allow consideration of the conference results in preparing their bids. Nothing stated at the pre-bid conference shall change the IFB. An IFB shall only be changed by written amendment as provided in this rule.

[1.4.1.18 NMAC - Rp, 1.4.1.18 NMAC, 6/21/2022]

1.4.1.19 AMENDMENTS TO THE INVITATION FOR BIDS:

A. Form. An amendment to the IFB shall be identified as such and shall require that bidders acknowledge its receipt. The amendment shall refer to the portions of the IFB it amends.

B. Distribution. Amendments shall be sent to all prospective bidders known to have received the IFB.

NMED Exhibit 7-G_000004

C. Timeliness. Amendments shall be distributed within a reasonable time to allow prospective bidders to consider them in preparing their bids. If the time and date set for receipt of bids will not permit such preparation, the time shall be increased to the extent possible in the amendment or, if necessary, by other electronic means and confirmed in the amendment.

D. Use of amendments: Amendments should be used to:

(1) make any changes in the IFB such as changes in quantity, purchase descriptions, delivery schedules, and opening dates;

(2) correct defects or ambiguities; or

(3) furnish to other bidders information given to one bidder if such information will assist the other bidders in submitting bids or if the lack of such information would prejudice the other bidders.

[1.4.1.19 NMAC - Rp, 1.4.1.19 NMAC, 6/21/2022]

1.4.1.20 PRE-OPENING MODIFICATION OR WITHDRAWAL OF BIDS:

A. Procedure: A bid may be modified or withdrawn by a bidder prior to the time set for bid opening by delivering written or electronic notice to the location designated in the IFB as the place where bids are to be received.

B. Disposition of bid security: If a bid is withdrawn in accordance with this section, the bid security, if any, shall be returned to the bidder.

C. Records: All documents relating to the modification or withdrawal of bids shall be made a part of the appropriate procurement file.

[1.4.1.20 NMAC - Rp, 1.4.1.20 NMAC, 6/21/2022]

1.4.1.21 LATE BIDS, LATE WITHDRAWALS AND LATE MODIFICATIONS:

A. Definition: Any bid or any withdrawal or modification of a bid received after the time and date for opening of bids at the place designated for opening is late. (NOTE: if the time a bid is due is listed as "3 p.m." this means 3:00:00 and not 3:00:59.)

B. General rule: No late bid, late modification, or late withdrawal will be considered unless received before contract award, and the bid, modification, or withdrawal would have been timely but for the action or inaction of state personnel directly serving the procurement activity.

C. Records: All documents relating to late bids, late modifications, or late withdrawals shall be made a part of the appropriate procurement file.

[1.4.1.21 NMAC - Rp, 1.4.1.21 NMAC, 6/21/2022]

1.4.1.22 BID OPENING:

A. Receipt: Upon its receipt, each bid and modification shall be time-stamped but not opened and shall be stored in a secure place until the time and date set for bid opening. This may be done entirely electronically.

B. No bids received: Except as provided in 1.4.1.68 through 1.4.1.72 NMAC of this rule, if no bids are received or if all bids received are rejected in accordance with the provisions of 1.4.1.68 through 1.4.1.72 NMAC of this rule, a new IFB shall be issued. If upon re-bidding with no change in specifications from the first IFB, the bids received are unacceptable, or if no bids are secured, the state purchasing agent may purchase (i.e., as opposed to procure) the items of tangible personal property, construction or services in the open market at the best obtainable price.

C. Opening and recording: Bids and modifications shall be opened publicly in the presence of one or more witnesses at the time and place designated in the IFB. Presence in this context may include virtual presence. The name of each bidder, the amount of each bid and each bid item, if appropriate, the names and addresses of the required witnesses, and such other relevant information as may be specified by the state purchasing agent shall be recorded. The record shall be open for public inspection. Each bid, except those portions for which a bidder has made a written request for confidentiality, shall also be open to public inspection. Any data, which a bidder believes should be kept confidential shall accompany the bid and shall be readily separable from the bid in order to facilitate public inspection of the non-confidential portion of the bid. Prices and makes and models or catalogue numbers of the items offered, deliveries, and terms of payment shall be publicly available at the time of bid opening regardless of any designation to the contrary.

[1.4.1.22 NMAC - Rp, 1.4.1.22 NMAC, 6/21/2022]

1.4.1.23 MISTAKES IN BIDS:

NMED Exhibit 7-G_000005

A. Consideration for award: Bids shall be unconditionally accepted for consideration for award without alteration or correction, except as authorized in 1.4.1.14 through 1.4.1.28 NMAC of this rule.

B. General principles: Correction or withdrawal of a bid because of an inadvertent, nonjudgmental mistake in the bid requires careful consideration to protect the integrity of the competitive bidding system, and to assure fairness. If the mistake is attributable to an error in judgment, the bid may not be corrected. Bid correction or withdrawal by reason of a nonjudgmental mistake is permissible but only to the extent authorized in 1.4.1.14 through 1.4.1.28 NMAC of this rule.

C. Mistakes discovered before opening: A bidder may correct mistakes discovered before bid opening by withdrawing or correcting the bid as provided in 1.4.1.20 NMAC of this rule.

D. Confirmation of bid: When the procurement officer knows or has reason to conclude that a mistake has been made in the low bid, the procurement officer should request the low bidder to confirm the bid. Situations in which confirmation should be requested include obvious, apparent errors on the face of the low bid or a bid unreasonably lower than the other bids submitted. If the low bidder alleges mistake, the bid may be corrected or withdrawn if the conditions set forth in Subsection E of this section are met.

E. Mistakes discovered after opening: This subsection sets forth procedures to be applied in three situations in which mistakes in bids are discovered after the time and date set for bid opening.

(1) Technical irregularities: Technical irregularities are matters of form rather than substance evident from the bid document, or insignificant mistakes that can be waived or corrected without prejudice to other bidders; that is, when there is no effect on price, quality or quantity. The procurement officer may waive such irregularities or allow the low bidder to correct them if either is in the best interest of the state. Examples include the failure of the low bidder to:

(a) return the number of signed bids required by the IFB;

(b) sign the bid, but only if the unsigned bid is accompanied by other material indicating the low bidder's intent to be bound; or

(c) acknowledge receipt of an amendment to the IFB, but only if:

(i) it is clear from the bid that the low bidder received the amendment and intended to be bound by its terms; or

(ii) the amendment involved had no effect on price, quality or quantity.

(2) Mistakes where intended correct bid is evident: If the mistake and the intended correct bid are clearly evident on the face of a bid document, the bid shall be corrected to the intended correct bid and may not be withdrawn. Examples of mistakes that may be clearly evident on the face of a bid document are typographical errors, errors in extending unit prices, transposition errors, and arithmetical errors. It is emphasized that mistakes in unit prices cannot be corrected.

(3) Mistakes where intended correct bid is not evident: A low bidder alleging a material mistake of fact which makes the bid non-responsive may be permitted to withdraw the bid if:

(a) a mistake is clearly evident on the face of the bid document but the intended correct bid is not; or

(b) the low bidder submits evidence which clearly and convincingly demonstrates that a mistake was made.

(4) Written determination: When a bid is corrected or withdrawn, or a correction or withdrawal is denied, the procurement officer shall prepare a written determination showing that the relief was granted or denied in accordance with this section.

[1.4.1.23 NMAC - Rp, 1.4.1.23 NMAC, 6/21/2022]

1.4.1.24 BID EVALUATION AND AWARD:

A. General: A contract solicited by competitive sealed bids shall be awarded with reasonable promptness by written notice to the lowest responsible bidder. The IFB shall set forth the requirements and criteria that will be used to determine the lowest responsive bid. No bid shall be evaluated for any requirement or criterion that is not disclosed in the IFB. Contracts solicited by competitive sealed bids shall require that the bid amount exclude the applicable state gross receipts tax or local option tax but that the contracting agency shall be required to pay the tax including any increase in the tax becoming effective after the contract is entered into. The tax shall be shown as a separate amount on each billing or request for payment made under the contract.

B. Product acceptability: The IFB shall set forth all evaluation criteria to be used in determining product acceptability. It may require the submission of bid samples, descriptive literature, technical data, or other material. It may also provide for accomplishing any or all of the following prior to award:

(1) inspection or testing of a product for such characteristics as quality or workmanship;

NMED Exhibit 7-G_000006

(2) examination of such elements as appearance, finish, taste or feel; or

(3) other examinations to determine whether it conforms with other purchase description requirements.

C. Purpose of acceptability evaluation: An acceptability evaluation is not conducted for the purpose of determining whether one bidder's item is superior to another's but only to determine that a bidder's offering is acceptable as set forth in the IFB. Any bidder's offering which does not meet the acceptability requirements shall be rejected as non-responsive.

D. Brand-name or equal specification: Where a brand-name or equal specification is used in a solicitation, the solicitation shall contain explanatory language that the use of a brand name is for the purpose of describing the standard of quality, performance and characteristics desired and is not intended to limit or restrict competition. When bidding an "or equal" the burden of persuasion is on the supplier or manufacturer who has not been specified to convince the procurement officer that their product is, in fact, equal to the one specified. The procurement officer is given the responsibility and judgement for making a final determination on whether a proposed substitution is an "or equal".

E. Determination of lowest bidder: Following determination of product acceptability as set forth in Subsections B, C and D of this section, if any is required, bids will be evaluated to determine which bidder offers the lowest cost to the state in accordance with the evaluation criteria set forth in the IFB. Only objectively measurable criteria that are set forth in the IFB shall be applied in determining the lowest bidder. Examples of such criteria include, but are not limited to, discounts, transportation costs and ownership or life-cycle formulas. Evaluation factors need not be precise predictors of actual future costs, but to the extent possible the evaluation factors shall be reasonable estimates based upon information the state has available concerning future use.

(1) Prompt payment discounts. Prompt payment discounts shall not be considered in computing the low bid. Such discounts may be considered after award of the contract.

(2) Trade discounts. Trade discounts shall be considered in computing the low bid. Such discounts may be shown separately, but must be deducted by the bidder in calculating the unit price quoted.

(3) Quantity discounts. Quantity discounts shall be included in the price of an item. Such discounts may not be considered where set out separately unless the IFB so specifies.

(4) Transportation costs. Transportation costs shall be considered in computing the low bid. Such costs may be computed into the bid price or be listed as a separate item.

(5) Total or life-cycle costs. Award may be determined by total or life-cycle costing if so indicated in the IFB. Life-cycle cost evaluation may take into account operative, maintenance, and money costs, other costs of ownership and usage and resale or residual value, in addition to acquisition price, in determining the lowest bid cost over the period the item will be used.

(6) Energy efficiency. Award may be determined by an evaluation consisting of acquisition price plus the cost of energy consumed over a projected period of use.

F. Restrictions: Nothing in 1.4.1.24 NMAC of this rule shall be deemed to permit contract award to a bidder submitting a higher quality item than designated in the IFB unless the bidder is also the lowest bidder as determined under Subsection E of this section. Further, except as provided in this Subsection F of 1.4.1.24 NMAC tion, 1.4.1.24 NMAC of this rule does not permit negotiations with any bidder. If the lowest responsive bid has otherwise qualified, and if there is no change in the original terms and conditions, the lowest responsible bidder may negotiate with the purchaser (i.e., this exception applies only to purchases and does not apply to procurements generally) for a lower total bid to avoid rejection of all bids for the reason that the lowest bid was up to ten percent higher than budgeted project funds. Such negotiation shall not be allowed if the lowest bid was more than ten percent over budgeted project funds.

G. Documentation of award: Following award, a record showing the basis for determining the successful bidder shall be made a part of the procurement file. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.

H. Publicizing awards: Written notice of award shall be sent to the successful bidder. Notice of award shall also be posted on the state purchasing website.

[1.4.1.24 NMAC - Rn 1.4.1.24 NMAC, 6/21/2022]

1.4.1.25 STATUTORY PREFERENCES: Statutory preferences to be applied in determining low bidder or successful offeror. New Mexico law provides certain statutory preferences for several categories of bidders and offerors as well as for recycled content goods (Sections 13-1-21 and 13-1-22 NMSA 1978). These preferences must be applied in regard to invitations for bids and requests for proposals in accordance with statute in determining the lowest bidder or successful offeror.

NMED Exhibit 7-G_000007

[1.4.1.25 NMAC - Rp, 1.4.1.25 NMAC, 6/21/2022]

1.4.1.26 IDENTICAL LOW BIDS:

A. Definition: Identical low bids are low responsive bids, from responsible bidders, which are identical in price after the application of the preferences referred to in 1.4.1.25 NMAC of this rule and which meet all the requirements and criteria set forth in the IFB.

B. Award: When two or more identical low bids are received, the state purchasing agent may:

(1) award pursuant to the multiple source award provisions of Sections 13-1-153 and 13-1-154 NMSA 1978;

(2) award to a bidder with a statutory preference if the identical low bids are submitted by a bidder with a statutory preference and a nonresident business or nonresident contractor;

(3) award to a bidder offering recycled content goods if the identical low bids are for recycled content goods and virgin goods;

(4) award by lottery to one of the identical low bidders; or

(5) reject all bids and re-solicit bids or proposals for the required services, construction or items of tangible personal property.

[1.4.1.26 NMAC - Rp, 1.4.1.26 NMAC, 6/21/2022]

1.4.1.27 MULTI-STEP SEALED BIDS:

A. General: Multi-step bidding is a variant of the competitive sealed bidding method. This method may be utilized when the state purchasing agent or a central purchasing office makes a determination that it is impractical initially to prepare specifications to support an award based on price, or that specifications are inadequate or are too general to permit full and free competition without technical evaluation and discussion.

B. Phased process: Multi-step bidding is a phased process which combines elements of both the competitive sealed proposal method, seeking necessary information or unpriced technical offers in the initial phase; and regular competitive sealed bidding, inviting bidders who submitted technically acceptable offers in the initial phase, to submit competitive sealed price bids on the technical offers in the final phase. The contract shall be awarded to the lowest responsible bidder. If time is a factor, the state purchasing agent or a central purchasing office may require bidders to submit a separate sealed bid during the initial phase to be opened after the technical evaluation.

C. Public notice: Whenever multi-step sealed bids are used, public notice for the first phase shall be given in accordance with 1.4.1.17 NMAC of this rule. Public notice is not required for the second phase.

[1.4.1.27 NMAC - Rp, 1.4.1.27 NMAC, 6/21/2022]

1.4.1.28 PAYMENTS FOR PURCHASES: Contract clause. All contracts resulting from an invitation for bids shall contain a clause allowing for late payment charges against the state agency in the amount and under the conditions set forth in Section 13-1-158 NMSA 1978.

[1.4.1.28 NMAC - Rp, 1.4.1.28 NMAC, 6/21/2022]

1.4.1.29 APPLICATION (COMPETITIVE SEALED PROPOSALS; 1.4.1.29-1.4.1.47 NMAC):

A. General: Except as provided in Subsections B and C of this section, the provisions of 1.4.1.29 through 1.4.1.47 NMAC of this rule apply to every procurement made by competitive sealed proposals.

B. Architects, engineers, landscape architects and surveyors: The provisions of 1.4.1.29 through 1.4.1.47 NMAC of this rule do not apply to the procurement of professional services of architects, engineers, landscape architects and surveyors for state public works projects or local public works projects. Except that when procuring such professional services for state public works projects or local public works projects state agencies and local public bodies shall comply with Section 13-1-120 through 13-1-124 NMSA 1978, competitive sealed qualifications-based proposals.

C. Procurement of professional services by state agencies with rulemaking authority: A state agency with rule making authority may adopt its own regulations for the procurement of professional services by competitive sealed proposals under the following conditions:

(1) the state agency must receive prior written authorization from the general services department secretary;

(2) the state agency's proposed regulations must provide that RFPs or notices thereof having a value exceeding sixty thousand dollars ($60,000) will be provided to the state purchasing agent for distribution to

NMED Exhibit 7-G_000008

prospective offerors who have registered with the state purchasing agent's office in accordance with the terms of Subsection B of 1.4.1.17 NMAC and Subsection A of 1.4.1.32 NMAC of this rule.

D. "Professional services" are defined in Section 13-1-76 NMSA 1978: The section of statute acknowledges the difficulty of any attempt made to recognize and list each and every service that could conceivably fall within the definition of "professional services". Instead, the statute provides in relevant part that "...other persons or businesses providing similar professional services to those listed may be designated as such by a determination issued by the state purchasing agent or a central purchasing office." In instances where "...other persons or businesses providing similar professional services...", as cited in Section 13-1-76, NMSA 1978, is not clearly defined, state agencies shall submit a written request to the state purchasing agent for issuance of a determination and a finding that the service is to be designated as a professional service. State agencies shall not make such a determination independent of the state purchasing agent.

[1.4.1.29 NMAC - Rp, 1.4.1.29 NMAC, 6/21/2022]

1.4.1.30 GENERAL DISCUSSION:

A. Use of competitive sealed proposals: When a state agency procures professional services that are not related to a design and build project delivery system in accordance with Section 13-1-119.1 NMSA 1978, or when the state purchasing agent or a designee makes a determination that the use of competitive sealed bids is either not practicable or not advantageous to the state, a procurement shall be effected by competitive sealed proposals. Note well: Section 13-1-111 NMSA 1978 only authorizes state agencies other than the state purchasing agent to procure professional services by means of competitive sealed proposals. Section 13-1-111 NMSA 1978 does not authorize state agencies to avoid centralized purchasing through the state purchasing agent by issuing RFPs for items of tangible personal property, or nonprofessional services.

B. Definitions: The words "practicable" and "advantageous" are to be given ordinary dictionary meanings. The term "practicable" denotes what may be accomplished or put into practical application. "Advantageous" denotes a judgmental assessment of what is in the state's best interest. The use of competitive sealed bids may be practicable, that is, reasonably possible, but not necessarily advantageous, that is, in the state's best interest.

C. Proposals offer flexibility: The key element in determining advantageousness is the need for flexibility. The competitive sealed proposal method differs from the competitive sealed bid method in two important ways:

(1) it permits discussions with competing offerors and changes in their proposals including price; and;

(2) it allows more subjective evaluations to be made in comparing acceptable offerors' proposals with stated evaluation criteria when selecting among acceptable proposals for award of a contract.

D. Determinations by category: The state purchasing agent may make determinations by category of services or items of tangible personal property that it is either not practicable or not advantageous to procure specified types of service or items of tangible personal property by competitive sealed bids in which case competitive sealed proposals shall be utilized. The state purchasing agent may modify or revoke such determinations at any time.

[1.4.1.30 NMAC - Rp, 1.4.1.30 NMAC, 6/21/2022]

1.4.1.31 REQUEST FOR PROPOSALS ("RFP"):

A. Initiation: The request for proposals ("RFP") is used to initiate a competitive sealed proposal procurement. All state agencies shall follow published guidelines and procedures issued by the state purchasing agent from development stage through award of RFP-based procurements. At a minimum the RFP shall include the following:

(1) the specifications for the services or items of tangible personal property to be procured;

(2) all contractual terms and conditions applicable to the procurement;

(3) instructions concerning the submission and response to questions;

(4) the term of the contract and conditions of renewal or extension, if any;

(5) instructions and information to offerors, including the location where proposals are to be received and the date, time and place where proposals are to be received and reviewed;

(6) all of the evaluation factors, and the relative weights to be given to the factors in evaluating proposals;

NMED Exhibit 7-G_000009

(7) a statement that discussions may be conducted with offerors who submit proposals determined to be potentially acceptable of being selected for award, but that proposals may be accepted without such discussions;

(8) a notice that the RFP may be canceled and that any and all proposals may be rejected in whole or in part when it is in the best interest of the state of New Mexico; and

(9) a statement of how proposed costs should be submitted;

(10) a notice that reads substantially as follows: The Procurement Code, Section 13-1-28 through 13-1-199 NMSA 1978, imposes civil, misdemeanor and felony criminal penalties for its violation. In addition, the New Mexico criminal statutes impose felony penalties for bribes, gratuities and kick-backs.

B. Incorporation by reference: The RFP may incorporate documents by reference, provided that the RFP specifies where such documents can be obtained.

C. Form of proposal: The manner in which proposals are to be submitted, including any forms for that purpose, must be designated in the RFP.

D. Proposal preparation time: 30 calendar days between the date of issue and the proposal due date is the recommended minimum proposal preparation time. A longer preparation time may be required for complex procurements or for procurements that require substantial offeror resources to prepare an acceptable proposal.

[1.4.1.31 NMAC - Rp, 1.4.1.31 NMAC, 6/21/2022]

1.4.1.32 PUBLIC NOTICE REQUEST FOR PROPOSAL:

A. Procurements by the state purchasing agent: The state purchasing agent shall give public notice of the RFP in the same manner as provided in 1.4.1.17 NMAC of this rule. However, an RFP or a notice shall be published not less than 20 days prior to the date set for receipt of proposals unless a shorter time frame is requested and approval granted by the state purchasing agent.

B. Procurements of all tangible personal property or services: The procurement manager shall deliver to the state purchasing agent or designee the following listed items no later than 15 calendar days prior to the proposed issue date (this requirement may be waived by the state purchasing agent at the state purchasing agent's discretion):

(1) the RFP authorization and plan document, if required;

(2) a state of New Mexico requisition completed according to state purchasing division processes;

(3) a list containing the names and addresses of suggested vendors, if any;

(4) a copy of the complete RFP document; for large or complex procurements, the draft RFP document shall be delivered to the state purchasing agent for review at least thirty days prior to the proposed issue date (this requirement may be waived by the state purchasing agent at the state purchasing agent's discretion).

C. Procurements of professional services by other central purchasing offices: When procuring professional services, central purchasing offices other than the state purchasing agent shall provide the following notice:

(1) the RFP or a notice thereof shall be published not less than 10 calendar days prior to the date set for the receipt of proposals; it is recommended, however, that the time period between the published date and the date set for receipt of proposals be no less than 20 days; the RFP or notice shall be published at least once in a newspaper of general circulation in the area in which the central purchasing office is located; if there is no newspaper of general circulation in the area, such other notice may be given as is commercially reasonable; and

(2) a copy of the RFP and notice may be delivered to the state purchasing agent not less than 15 calendar days prior to the date set for the issuance; if so received, the state purchasing agent shall distribute the RFP or notice to prospective offerors who have registered with the state purchasing agent's office in accordance with the terms of Subsection B of 1.4.1.17 NMAC of this rule and Subsection A of this section; and

(3) a copy of the RFP shall be made available for public inspection at the central purchasing office or electronically or online.

D. Additional notice: The requirements of Subsections A, B and C of this section are in addition to any other procedures which may be adopted by the state purchasing agent or central purchasing offices to notify prospective offerors that proposals will be received, including but not limited to publication in professional journals, if available.

[1.4.1.32 NMAC - Rp 1.4.1.32 NMAC, 6/21/2022]

1.4.1.33 PRE-PROPOSAL CONFERENCES: Pre-proposal conferences may be conducted in accordance with 1.4.1.18 NMAC of this rule. Any such conference should be held prior to submission of initial

proposals. Other than for particular procurements where an agency feels a pre-proposal conference is necessary (such as for construction procurements where building walk-throughs or similar activities would be required or other like procurements), it is strongly recommended that pre-proposal conferences not be made mandatory so as to not eliminate potential vendors prior to receiving bids or proposals.
[1.4.1.33 NMAC - Rp, 1.4.1.33 NMAC, 6/21/2022]

1.4.1.34 AMENDMENTS TO THE REQUEST FOR PROPOSALS:

A. Prior to submission of proposals: Prior to submission of proposals, amendments to the RFP may be made in accordance with 1.4.1.19 NMAC of this rule.

B. After submission of proposals: After submission of proposals, amendments to the RFP shall be distributed only to short-listed offerors. The short-listed offerors shall be permitted to submit new proposals or to amend those submitted. If in the opinion of the procurement officer or procurement manager, a contemplated amendment will significantly change the nature of the procurement, the RFP shall be canceled in accordance with 1.4.1.68 through 1.4.1.72 NMAC of this rule, and a new RFP issued.
[1.4.1.34 NMAC - Rp, 1.4.1.34 NMAC, 6/21/2022]

1.4.1.35 MODIFICATION OR WITHDRAWAL OF PROPOSALS: Proposals may be modified or withdrawn prior to the established due date in accordance with 1.4.1.20 NMAC of this rule. The established due date is either the time and date announced for receipt of proposals or receipt of modifications to proposals, if any; or, if discussions have begun, it is the time and date by which best and final offers must be submitted by short-listed offerors. (NOTE: if the time a proposal is due is listed as “3 p.m.” this means 3:00:00 and not 3:00:59.)
[1.4.1.35 NMAC - Rp, 1.4.1.35 NMAC, 6/21/2022]

1.4.1.36 LATE PROPOSALS, LATE WITHDRAWALS AND LATE MODIFICATIONS: Any proposal, withdrawal, or modification received after the established due date at the place designated for receipt of proposals is late. (See 1.4.1.35 NMAC of this rule for the definition of "established due date.") They may be considered only in accordance with 1.4.1.21 NMAC of this rule.
[1.4.1.36 NMAC - Rp, 1.4.1.36 NMAC, 6/21/2022]

1.4.1.37 RECEIPT AND OPENING OF PROPOSALS:

A. Receipt: Proposals and modifications shall be time-stamped upon receipt and held in a secure place until the established due date. This may be done entirely electronically. (See 1.4.1.35 NMAC of this rule for the definition of "established due date.")

B. Opening: Proposals shall not be opened publicly and shall not be open to public inspection until after award of a contract. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement. An offeror may request in writing nondisclosure of confidential data. Such data shall accompany the proposal and shall be readily separable from the proposal in order to facilitate eventual public inspection of the nonconfidential portion of the proposal.
[1.4.1.37 NMAC - Rp, 1.4.1.37 NMAC, 6/21/2022]

1.4.1.38 EVALUATION OF PROPOSALS:

A. Evaluation factors: The evaluation shall be based on the evaluation factors and the relative weights set forth in the RFP. Appropriate rating systems (numerical, point-based, pass/fail, etc.) are required for requests for proposals-based procurements.

B. Evaluation committee: The state agency management shall appoint an evaluation committee prior to the due date for receipt of proposals. The size of the committee should be manageable and include both user and technical support representatives. Contractor subject matter experts may be used to advise the committee but cannot evaluate proposals.

C. Classified proposals: For the purpose of conducting discussions under 1.4.1.39 NMAC of this rule, proposals shall be initially classified as:

(1) responsive;

(2) potentially responsive, that is, reasonably susceptible of being made responsive; or

(3) non-responsive.

D. Disqualification: Non-responsive proposals are disqualified and eliminated from further consideration. A written determination in the form of a letter shall be sent to the disqualified offeror setting forth the grounds for the disqualification, and made a part of procurement file.

[1.4.1.38 NMAC - Rp, 1.4.1.38 NMAC, 6/21/2022]

1.4.1.39 PROPOSAL DISCUSSIONS AND NEGOTIATIONS WITH INDIVIDUAL OFFERORS:

A. Discussions authorized: Discussions may be conducted with responsible offerors who submit acceptable or responsive, potentially acceptable or potentially responsive proposals.

B. Purposes of discussions: Discussions are held to clarify technical or other aspects of the proposals.

C. Conduct of discussions: If during discussions there is a need for any substantial clarification or change in the request for proposals, the request for proposals shall be amended to incorporate such clarification or change. Any substantial oral clarification of a proposal shall be reduced to writing by the offeror. Proposals may be accepted and evaluated without such discussion. This is not an opportunity for the offerors to amend the substance of their proposals.

D. Short list: All responsible offerors who submit acceptable proposals are eligible for the short list. If numerous acceptable proposals have been submitted, however, the procurement officer or procurement manager may rank the proposals and select the highest ranked proposals for the short list. Those responsible offerors who are selected for the short list are the "short-listed offerors" or "finalist offerors".

E. Competitive negotiations: Competitive negotiations may be held among the short-listed offerors to:

(1) promote understanding of a state agency's requirements and short-listed offerors' proposal; and

(2) facilitate arriving at a contract that will be most advantageous to a state agency taking into consideration the evaluation factors set forth in the RFP;

(3) except for circumstances and situations otherwise approved by the state purchasing agent, negotiations of the relevant terms and conditions as well as any other important factors in an RFP and proposed contract are negotiated prior to award of a contract, not after award.

F. Conduct of competitive negotiations: Short-listed offerors shall be accorded fair and equal treatment with respect to any negotiations and revisions of proposals. The procurement officer should establish procedures and schedules for conducting negotiations. If during discussions there is a need for any substantial clarification of or change in the RFP, the RFP shall be amended to incorporate such clarification or change. Any substantial oral clarification of a proposal shall be reduced to writing by the short-listed offeror.
[1.4.1.39 NMAC - Rp, 1.4.1.39 NMAC, 6/21/2022]

1.4.1.40 DISCLOSURE: The contents of any proposal shall not be disclosed so as to be available to competing offerors during the negotiation process and prior to award. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.
[1.4.1.40 NMAC - Rp, 1.4.1.40 NMAC, 6/21/2022]

1.4.1.41 BEST AND FINAL OFFERS: Best and final offers in a request for proposals are sometimes appropriate and helpful. An offeror’s best offer should be included in that offeror’s original proposal and no discussion or changes to that offer should be allowed prior to selection of the offeror as the successful offeror unless negotiations are undertaken pursuant to 1.4.1.39 NMAC of this rule. After such selection of a successful offeror or offerors (for a multiple award procurement) and before final award, an agency may negotiate with the selected successful offeror(s) for the best possible terms for the state but such negotiations shall not change the successful offeror’s or offerors’ (for a multiple award procurement) proposal(s) to the detriment of the state. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.
[1.4.1.41 NMAC - Rp, 1.4.1.41 NMAC, 6/21/2022]

1.4.1.42 MISTAKES IN PROPOSALS:

A. Modification or withdrawal of proposals: Proposals may be modified or withdrawn as provided in 1.4.1.35 NMAC of this rule.

B. Mistakes discovered after receipt of proposals: This subsection sets forth procedures to be applied in several situations in which mistakes in proposals are discovered after receipt of proposals.

(1) Confirmation of proposal. When the procurement officer or procurement manager knows or has reason to conclude before award that a mistake has been made, the procurement officer or procurement manager should request the offeror to confirm the proposal. If the offeror alleges mistake, the proposal may be

NMED Exhibit 7-G_000012

corrected or withdrawn during any discussions that are held or if the conditions set forth in Subsection C of this section are met.

(2) During negotiations. If best and final offers are requested in the RFP, between the period of selecting short-listed/finalist offerors and the date set for best and final offers, any short-listed or finalist offeror may freely correct any mistake by modifying or withdrawing the proposal until the time and date set for receipt of best and final offers.

C. Technical irregularities: Technical irregularities are matters of form rather than substance evident from the proposal document, or insignificant mistakes that can be waived or corrected without prejudice to other offerors; that is, when there is no effect on price, quality or quantity. If discussions are not held or if best and final offers upon which award will be made have been received, the procurement officer or procurement manager may waive such irregularities or allow an offeror to correct them if either is in the best interest of the state. Examples include, but are not limited to, the failure of an offeror to:

(1) return the number of signed proposals required by the RFP;

(2) sign the appropriate forms where called for, but only if the unsigned forms are accompanied by other material indicating the offeror's intent to be bound; or

(3) acknowledge receipt of an amendment to the RFP, but only if:

(a) it is clear from the proposal that the offeror received the amendment and intended to be bound by its terms; or

(b) the amendment involved had no effect on price, quality or quantity.

D. Correction of mistakes: If discussions are not held, or if the best and final offers upon which award will be made have been received, mistakes shall be corrected to the intended correct offer whenever the mistake and the intended correct offer are clearly evident to the evaluation committee members or the procurement officer or the procurement manager on the face of the proposal, in which event the proposal may not be withdrawn.

E. Withdrawal of proposals: If discussions are not held, or if the best and final offers upon which award will be made have been received, an offeror alleging a material mistake of fact which makes a proposal non-responsive may be permitted to withdraw the proposal if:

(1) the mistake is clearly evident to the evaluation committee members or the procurement officer or the procurement manager on the face of the proposal but the intended correct offer of the offeror is not; or

(2) the offeror submits evidence which clearly and convincingly demonstrates that a mistake was made.

F. Determination required: When a proposal is corrected or withdrawn, or correction or withdrawal is denied under Subsections C through E of this section, the procurement officer or procurement manager shall prepare a written determination showing that the relief was granted or denied in accordance with this section.

[1.4.1.42 NMAC - Rp, 1.4.1.42 NMAC, 6/21/2022]

1.4.1.43 AWARD: PROFESSIONAL SERVICES:

A. Procedure: An award shall be made to the responsible offeror whose proposal is most advantageous to a state agency, taking into consideration the evaluation factors set forth in the RFP. The procurement officer shall make a written determination in the form of an evaluation committee report showing the basis on which an award was found to be most advantageous to a state agency based on the factors set forth in the RFP. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.

B. Publicizing awards: The procurement manager or procurement officer shall promptly provide all offerors who submitted proposals written notice of the award. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.

C. Publicizing awards: The procurement manager or procurement officer shall promptly provide all offerors who submitted proposals written notice of the award which notice shall be sent via certified mail, return receipt requested, and shall include the expiration date and time of the protest period, if there was a change from the date and time published in the RFP.

[1.4.1.43 NMAC - Rp, 1.4.1.43 NMAC, 6/21/2022]

1.4.1.44 AWARD: ALL TANGIBLE PERSONAL PROPERTY OR SERVICES: (INCLUDES SOFTWARE, HARDWARE, NON-PROFESSIONAL SERVICES, etc):

A. Procedure: The award shall be made by the state purchasing agent or designee to the responsible offeror whose proposal is most advantageous to the state agency, taking into consideration the evaluation factors set forth in the RFP. The procurement manager shall make a written determination in the form of an evaluation

NMED Exhibit 7-G_000013

committee report showing the basis on which the recommended award was found to be most advantageous to the state agency based on the factors set forth in the RFP.

B. Publicizing awards: The procurement manager shall promptly provide all offerors who submitted responsive proposals written notice of the award. The written notice shall be sent via certified mail, return receipt requested, and shall include the expiration date and time of the protest period, if there was a change from the date and time published in the RFP.

[1.4.1.44 NMAC - Rp, 1.4.1.44 NMAC, 6/21/2022]

1.4.1.45 PUBLIC INSPECTION:

A. General: After award, any written determinations made pursuant to these rules, the evaluation committee report and each proposal, except those portions for which the offeror has made a written request for confidentiality, shall be open to public inspection. Confidential data is normally restricted to confidential financial information concerning the offeror's organization and data that qualifies as a trade secret in accordance with the Uniform Trade Secrets Act, Sections 57-3A-1 to 57-3A-7 NMSA 1978. The price of products offered or the cost of services proposed may not be designated as confidential information. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.

B. Confidential data: If a request is received for disclosure of data, for which an offeror has made a written request for confidentiality, the state purchasing agent or central purchasing office shall examine the offeror's request and make a written determination that specifies which portions of the proposal should be disclosed. If it is determined that an offeror's requested confidential data should be disclosed, that offeror will receive reasonable notice in order to afford the offeror the opportunity to take legal action to prevent the disclosure. Unless the offeror takes legal action to prevent the disclosure, the data will be so disclosed. After award the proposal shall be open to public inspection subject to any continuing prohibition on the disclosure of confidential data. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.

[1.4.1.45 NMAC - Rp, 1.4.1.45 NMAC, 6/21/2022]

1.4.1.46 PAYMENTS FOR PURCHASES: Contract clause. All contracts resulting from a request for proposals shall contain a clause allowing for late payment charges against the state agency in the amount and under the conditions set forth in Section 13-1-158 NMSA 1978.

[1.4.1.46 NMAC - Rp, 1.4.1.46 NMAC, 6/21/2022]

1.4.1.47 GSD CONTRACT REVIEW: All contracts for professional services with state agencies shall be reviewed as to all requirements as set forth in statute and rule by the general services department, if such review is required by the general services department or subsequent general services department rules.

[1.4.1.47 NMAC - Rp, 1.4.1.47 NMAC, 6/21/2022]

1.4.1.48 APPLICATION (SMALL PURCHASES; 1.4.1.48 - 1.4.1.52 NMAC): The provisions of 1.4.1.48 through 1.4.1.52 NMAC of this rule apply to the procurement of nonprofessional services, construction or items of tangible personal property having a value not exceeding the value set forth in statute for small purchases and to the procurement of professional services having a value not exceeding the value set forth in statute for small purchases of professional services, the use of a statewide price agreement, an existing contract or the methods of procurement set forth in 1.4.1.50 through 1.4.1.52 NMAC of this rule provide alternatives to the competitive sealed bid and competitive sealed proposal methods of procurement. If an existing statewide price agreement, an existing contract or, the procurement methods set forth in 1.4.1.50 through 1.4.1.52 NMAC of this rule are not used, the competitive sealed bid or competitive sealed proposal methods shall apply.

[1.4.1.48 NMAC - Rp, 1.4.1.48 NMAC, 6/21/2022]

1.4.1.49 DIVISION OF REQUIREMENTS: Procurement requirements shall not be artificially divided so as to constitute a small purchase under 1.4.1.48 through 1.4.1.52 NMAC of this rule.

[1.4.1.49 NMAC - Rp, 1.4.1.49 NMAC, 6/21/2022]

1.4.1.50 SMALL PURCHASES OF $20,000 OR LESS: A state agency may procure services, construction or items of tangible personal property having a value not exceeding twenty thousand dollars ($20,000) by issuing a direct purchase order to a contractor based upon the best obtainable price and in accordance with any procedures or processes set forth by the state purchasing agent and the state controller.

[1.4.1.50 NMAC - Rp, 1.4.1.50 NMAC, 6/21/2022]

NMED Exhibit 7-G_000014

1.4.1.51 SMALL PURCHASES OF ITEMS OF TANGIBLE PERSONAL PROPERTY, CONSTRUCTION AND NONPROFESSIONAL SERVICES:

A. Quotation to be obtained: Insofar as it is practical for small purchases of nonprofessional services, construction or items of tangible personal property having a value exceeding twenty thousand dollars ($20,000) but not exceeding the value set forth in statute for small purchases, and in accordance with any procedures or processes set forth by the state purchasing agent and the state controller, no fewer than three businesses shall be solicited via written requests containing the specifications for the procurement to submit written quotations that are recorded and placed in the procurement file. Such notations as "does not carry" or "did not return my phone call" do not qualify as a valid quotation. The central nonprofit agency's declining to offer to perform a particular service does not qualify as a valid quotation; it is, in fact, the refusal to provide a quotation. If the lowest quotation is not acceptable, the central purchasing office must issue a written determination as to the reasons for such a decision. These reasons must not be arbitrary or capricious. The written determination becomes a part of the procurement file.

B. Disclosure: Prior to award, the contents of any response to a quotation shall not be disclosed to any other business from which the same request for quotation is also being solicited. Award in this context means the final required state agency signature on the contract(s) or purchase order resulting from the procurement.

C. Award: Award shall be made to the responsible and responsive business offering the lowest acceptable quotation.

D. Records: The names of the businesses submitting quotations and the date and the amount of each quotation shall be recorded and maintained as a public record.

[1.4.1.51 NMAC - Rp, 1.4.1.51 NMAC, 6/21/2022]

1.4.1.52 SMALL PURCHASES OF PROFESSIONAL SERVICES:

A. Application: A central purchasing office may procure professional services having a value not to exceed the value set forth in statute for small purchases of professional services, except for the services of architects, engineers, landscape architects, or surveyors for state public works projects, as that term is defined in Section 13-1-91 NMSA 1978, in accordance with Subsections B, C, and D of this section and 1.4.10 NMAC.

B. Examination of offeror list: Before contacting any business, a central purchasing office is encouraged to examine the state purchasing agent's current list of registered offerors, if any. Central purchasing offices are encouraged to contact at least three businesses for written offers before selecting a contractor.

C. Negotiations: A central purchasing office shall negotiate a contract for the required services at a fair and reasonable price to the state agency.

D. Disclosure: If more than one business is contacted, the contents of the written or oral offer of one business shall not be disclosed to another business until award is made. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.

[1.4.1.52 NMAC - Rp, 1.4.1.52 NMAC, 6/21/2022]

1.4.1.53 APPLICATION (SOLE SOURCE PROCUREMENTS, 1.4.1.53 - 1.4.1.57 NMAC): The provisions of 1.4.1.53 through 1.4.1.57 NMAC of this rule apply to all sole source procurements unless emergency conditions exist as defined in 1.4.1.59 NMAC of this rule.

[1.4.1.53 NMAC - Rp, 1.4.1.53 NMAC, 6/21/2022]

1.4.1.54 SOLE SOURCE PROCUREMENT OF ITEMS OF TANGIBLE PERSONAL PROPERTY, CONSTRUCTION AND NONPROFESSIONAL SERVICES:

A. Conditions for use: A contract may be awarded without competitive sealed bids or competitive sealed proposals, regardless of the estimated cost, when the state purchasing agent or a central purchasing office, employing due diligence, determines, in writing, that:

(1) there is only one source for the required service, construction or item of tangible personal property;

(2) the service, construction or item of tangible personal property is unique and this uniqueness is substantially related to the intended purpose of the contract; and

(3) other similar services, construction or items of tangible personal property cannot meet the intended purpose of the contract.

B. Request by using agency: Any request by a using agency that a procurement be restricted to one potential contractor shall be accompanied by a written explanation as to why no other will be suitable or acceptable

to meet the need. The written explanation shall be made upon a form provided by the state purchasing agent and available on-line.

C. Posting: Prior to the award of a sole source procurement contract, the state purchasing agent or central purchasing office shall:

(1) provide the information set forth in statute and listed upon the form made available by the state purchasing agent on the state purchasing agent's website to the department of information technology for posting on the sunshine portal; and

(2) forward the same information to the legislative finance committee.

D. A local public body central purchasing office, prior to award of a sole source contract, shall post the information required by statute on the local public body website, if one exists, and post the information required by statute on the state purchasing agent's website.

E. Negotiations: The state purchasing agent or a central purchasing office shall conduct negotiations, as appropriate, as to price, delivery and quantity, in order to obtain the price most advantageous to the state.

F. Notice; protest: At least 30 days before a sole source contract is awarded, the state purchasing agent, a central purchasing office, a local public body, or a designee of any of these entities shall post notice of the intent to award a sole source contract on its website if one exists, and post the information required by statute on the state purchasing agent's website. Any qualified potential contractor who was not awarded a sole source contract may protest to the state purchasing agent or a central purchasing office. The protest shall be submitted:

(1) in writing; and

(2) within 15 calendar days of the notice of intent to award a contract being posted on the state purchasing agent's website or a central purchasing office's website, if it maintains one, or on a local public body's website, if it maintains one. (NOTE: the posting date should be the same on all websites upon which it is posted. If this is not the case, however, the 15 calendar period runs from the latest posted date.)

G. Specifications: The state purchasing agent or a central purchasing office shall not circumvent the sole source request and posting and award process by narrowly drafting specifications so that only one predetermined source would satisfy those specifications.

[1.4.1.54 NMAC - Rp, 1.4.1.54 NMAC, 6/21/2022]

1.4.1.55 [**RESERVED**]

1.4.1.56 [**RESERVED**]

1.4.1.57 RECORDS OF SOLE SOURCE PROCUREMENTS: The state purchasing agent or central purchasing office shall maintain records of sole source procurements for a period as required by the commission of public records, state records center and archives statutes and rules. The party responsible for the procurement must retain the records. Posting such procurements on the state purchasing agent's website does not remove the central purchasing office's or a local public body's responsibility to maintain these records if the central purchasing office or a local public body was responsible for the procurement. The record of each such procurement shall be a public record and shall contain:

A. the contractor's name and address;

B. the amount and term of the contract;

C. a listing of the services, construction, or items of tangible personal property procured under the contract; and

D. the justification for the procurement method which shall include any written determinations and written approvals required by any provision of 1.4.1.53 through 1.4.1.57 NMAC of this rule.

[1.4.1.57 NMAC - Rp, 1.4.1.57 NMAC, 6/21/2022]

1.4.1.58 APPLICATION (EMERGENCY PROCUREMENTS, 1.4.1.58 - 1.4.1.64 NMAC): The provisions of 1.4.1.58 through 1.4.1.64 NMAC of this rule apply to every procurement made under emergency conditions that will not permit other source selection methods to be used.

[1.4.1.58 NMAC - Rp, 1.4.1.58 NMAC, 6/21/2022]

1.4.1.59 DEFINITION OF EMERGENCY CONDITIONS: Refer to Section 13-1-127 NMSA 1978 for conditions allowing for the use of an emergency procurement.

[1.4.1.59 NMAC - Rp, 1.4.1.59 NMAC, 6/21/2022]

1.4.1.60 SCOPE OF EMERGENCY PROCUREMENTS: Emergency procurements shall be limited to those services, construction, or items of tangible personal property necessary to meet the emergency. Such procurement shall not include the purchase or lease-purchase of heavy road equipment.
[1.4.1.60 NMAC - Rp, 1.4.1.60 NMAC, 6/21/2022]

1.4.1.61 AUTHORITY TO MAKE EMERGENCY PROCUREMENTS: The state purchasing agent or a central purchasing office, employing due diligence, may make emergency procurements when an emergency condition arises; provided that emergency procurements shall be made with such competition as is practicable under the circumstances.
[1.4.1.61 NMAC - Rp, 1.4.1.61 NMAC, 6/21/2022]

1.4.1.62 PROCEDURE: The procedure used shall be selected to assure that the required services, construction, or items of tangible personal property are procured in time to meet the emergency. Given this constraint, such competition as is practicable shall be obtained.
[1.4.1.62 NMAC - Rp, 1.4.1.62 NMAC, 6/21/2022]

1.4.1.63 WRITTEN DETERMINATION AND POSTING REQUIRED: A written determination of the basis for the emergency procurement shall be made containing the information set forth in statute and listed on the form issued by the state purchasing agent and available on the state purchasing agent's website. Within three business days of awarding an emergency procurement, the awarding central purchasing office within a state agency shall:

A. provide the information required by statute to the department of information technology for posting on the sunshine portal; and

B. forward the same information to the legislative finance committee.

[1.4.1.63 NMAC - Rp, 1.4.1.63 NMAC, 6/21/2022]

1.4.1.64 RECORDS OF EMERGENCY PROCUREMENTS: The state purchasing agent or central purchasing office shall maintain records of emergency procurements for a period as required by the commission of public records, state records center and archives statutes and rules. The party responsible for the procurement must retain the records. Posting such procurements on the state purchasing agent's website does not remove the central purchasing office's responsibility to maintain these records if the central purchasing office was responsible for the procurement. The record of each such procurement shall be a public record and shall contain:

A. the contractor's name and address;

B. the amount and term of the contract;

C. a listing of the services, construction, or items of tangible personal property procured under the contract; and

D. the justification for the procurement method.

[1.4.1.64 NMAC - Rp, 1.4.1.64 NMAC, 6/21/2022]

1.4.1.65 PROCUREMENT UNDER EXISTING CONTRACTS AUTHORIZED: The state purchasing agent or a central purchasing office may contract for services, professional services, construction, or items of tangible personal property without the use of competitive sealed bids or competitive sealed proposals as follows:

A. at a price equal to or less than the contractor's current federal supply contract (GSA), providing the contractor has indicated in writing a willingness to extend the contract's pricing, terms and conditions to the state agency and the purchase order adequately identifies the contract relied upon; or

B. with a business which has a current price agreement with the state purchasing agent or a central purchasing office for the item, services, or construction meeting the same standards and specifications as the items to be procured, if the following conditions are met:

(1) the total quantity purchased does not exceed the quantity which may be purchased under the applicable price agreement; and

(2) the purchase order adequately identifies the price agreement relied upon;

C. other than Subsection A and B of this section and cooperative procurements as authorized by statute (and described in Section 13-1-135 NMSA 1978) or the state procurement card program (described in Section 6-5-9.1 NMSA 1978), no other procurement under existing contracts is authorized; no central purchasing office of a state agency or any other governmental entity may utilize a contract entered into by a different state

NMED Exhibit 7-G_000017

agency or other governmental entity if not involved in the procurement itself (i.e., so-called “piggybacking” of contracts; the practice of “piggybacking” is not allowed under the Procurement Code); purchases under contracts developed through cooperative procurement authorized under Section 13-1-135 NMSA 1978 or contracts which qualify under Section 13-1-129 NMSA 1978 is permitted and does not constitute “piggybacking.”
[1.4.1.65 NMAC - Rp, 1.4.1.65 NMAC, 6/21/2022]

1.4.1.66 LIMITATION ON SUBSECTION A OF 1.4.1.65 OF THIS RULE RELATING TO GSA CONTRACTS: It should be understood, the state is not authorized to utilize a GSA contract per se. It is imperative, therefore, that the contractor, not a dealer or distributor, who has a current GSA contract indicate in writing a willingness to extend the contract's pricing, terms and conditions to the state of New Mexico. Therefore, a state agency shall not procure services, construction or items of tangible personal property directly under a general services administration (GSA) contract. Rather, a state agency must procure pursuant to a state purchasing agent price agreement which reflects the prices, terms and conditions of the respective GSA contract. If no such state purchasing agent price agreement exists, a state agency may make a written request to the state purchasing agent for the issuance of one. The request must be accompanied by a current copy of the applicable GSA contract, a letter from the contractor expressing a willingness to extend the contract's pricing, terms and conditions to the state of New Mexico and a letter from the state agency indicating a commitment to utilize the price agreement. The state purchasing agent will ascertain whether it is current and whether the proposed price is equal to or less than the federal supply contract price. If everything is in order, the state purchasing agent will issue a price agreement or purchase order reflecting the prices, terms and conditions of the GSA contract. A state agency shall make no procurements from the GSA contractor until a state purchasing agent price agreement has been issued.
[1.4.1.66 NMAC - Rp, 1.4.1.66 NMAC, 6/21/2022]

1.4.1.67 COPIES OF CONTRACTS AND PRICE AGREEMENTS: A central purchasing office shall retain for public inspection and for the use of auditors a copy of each state purchasing agent contract or current price agreement relied upon to make purchases without seeking competitive bids.
[1.4.1.67 NMAC - Rp, 1.4.1.67 NMAC, 6/21/2022]

1.4.1.68 APPLICATION (CANCELLATION OF SOLICITATIONS OR REJECTION OF BIDS OR PROPOSALS; 1.4.1.68 - 1.4.1.72 NMAC): The provisions of 1.4.1.68 through 1.4.1.72 NMAC of this rule shall govern the cancellation of any solicitations whether issued by the state purchasing agent under competitive sealed bids, competitive sealed proposals, small purchases, or any other source selection method, and rejection of bids or proposals in whole or in part.
[1.4.1.68 NMAC - Rp, 1.4.1.68 NMAC, 6/21/2022]

1.4.1.69 POLICY: Any solicitation may be canceled or any or all bids or proposals may be rejected in whole or in part when it is in the best interest of the state of New Mexico.
[1.4.1.69 NMAC - Rp, 1.4.1.69 NMAC, 6/21/2022]

1.4.1.70 CANCELLATION OF SOLICITATIONS OR REJECTION OF ALL BIDS OR PROPOSALS:

A. Prior to opening:

(1) As used in this section, "opening" means the date set for opening of bids or receipt of proposals.

(2) Prior to opening, a solicitation may be canceled in whole or in part when the state purchasing agent or central purchasing office makes a written determination that such action is in the state's best interest for reasons including but not limited to:

(a) the services, construction, or items of tangible personal property are no longer required;

(b) the using agency no longer can reasonably expect to fund the procurement; or

(c) proposed amendments to the solicitation would significantly change the nature of the procurement.

(3) When a solicitation is canceled prior to opening, notice shall be sent to all businesses solicited. The notice shall:

(a) identify the solicitation;

(b) briefly explain the reason for cancellation; and

NMED Exhibit 7-G_000018

(c) where appropriate, explain that an opportunity will be given to compete on any resolicitation or any future procurements of similar services, construction, or items of tangible personal property.

B. After opening:

(1) After opening but prior to award, all bids or proposals may be rejected in whole or in part when the state purchasing agent or central purchasing office makes a written determination that such action is in the state's best interest for reasons including but not limited to:

(a) all of the bids and proposals are nonresponsive;

(b) the services, construction, or items of tangible personal property are no longer required;

(c) ambiguous or otherwise inadequate specifications were part of the solicitation;

(d) the solicitation did not provide for consideration of all factors of significance to the using agency;

(e) prices exceed available funds and it would not be appropriate to adjust quantities to come within available funds;

(f) all otherwise acceptable bids or proposals received are at clearly unreasonable prices; or

(g) there is reason to believe that the bids or proposals may not have been independently arrived at in open competition, may have been collusive, or may have been submitted in bad faith.

(2) A notice of rejection should be sent to all businesses that submitted bids or proposals, and it shall conform to Paragraph (3) of Subsection A of this section.

[1.4.1.70 NMAC - Rp, 1.4.1.70 NMAC, 6/21/2022]

1.4.1.71 REJECTION OF INDIVIDUAL BIDS OR PROPOSALS:

A. Reasons for rejection:

(1) Bids. As used in this section, "bid"means competitive sealed bids. Reasons for rejecting a bid shall include but are not limited to:

(a) the business that submitted the bid is nonresponsible as determined under 1.4.1.73 NMAC of this rule;

(b) the bid is not responsive; or

(c) the service, construction, or item of tangible personal property offered in the bid is unacceptable by reason of its failure to meet the requirements of the specifications, or permissible alternates, or other acceptability criteria set forth in the IFB.

(2) Proposals. As used in this section, "proposal" means competitive sealed proposals. Unless the solicitation states otherwise, proposals need not be unconditionally accepted without alteration or correction and a using agency's stated requirements may be revised or clarified after proposals are submitted. This flexibility must be considered in determining whether reasons exist for rejecting all or any part of a proposal. Reasons for rejecting proposals include but are not limited to:

(a) the business that submitted the proposal is nonresponsible as determined under 1.4.1.75 through 1.4.1.79 NMAC of this rule;

(b) the proposal is not responsive; or

(c) the proposed price is clearly unreasonable; or

(d) the proposal failed to adequately address one or more material mandatory requirements as set forth in the request for proposals.

B. Written determination required: A written determination which contains the reasons for the rejection of an individual bid or proposal shall be prepared by the state purchasing agent or central purchasing office and made a part of the procurement file.

[1.4.1.71 NMAC - Rp, 1.4.1.71 NMAC, 6/21/2022]

1.4.1.72 "ALL OR NONE" BIDS: When the term "all or none" is used:

A. By the purchaser in a solicitation: A solicitation may require bidders to submit bids or offers on all items listed in the solicitation, or may identify certain groups of items in which all items must be bid. If the solicitation is properly so limited, a bidder's failure to bid all items identified as "all or none" items may render the bid nonresponsive.

B. By the bidder or offeror, and not the purchaser: If the bidder restricts acceptance of the bid, or a portion thereof, by such a statement as "all or none", the bidder has "qualified" the offer which may render the bid as nonresponsive.

NMED Exhibit 7-G_000019

C. In instances as stated in both Subsections A and B of this section such a bid or offer may be accepted only if the state purchasing agent or a central purchasing office issues a determination setting forth the basis for accepting the bid or offer as being in the best interest of the state. Also in both instances, the bid or offer is only eligible for award if it is the overall low bid for the item or items so restricted.
[1.4.1.72 NMAC - Rp, 1.4.1.72 NMAC, 6/21/2022]

1.4.1.73 APPLICATION (RECEIPT; INSPECTION; ACCEPTANCE OR REJECTION OF DELIVERIES; 1.4.1.73 - 1.4.1.74 NMAC): The using agency is responsible for inspecting and accepting or rejecting deliveries.

A. The using agency shall determine whether the quantity is as specified in the purchase order or contract.

B. The using agency shall determine whether the quality conforms to the specifications referred to or included in the purchase order or contract.

C. If inspection reveals that the delivery does not meet or conform to the quantity or quality specified in the purchase order or contract, the using agency shall notify the vendor that the delivery has been rejected and shall order the vendor to promptly make a satisfactory replacement or supplementary delivery.

D. In case the vendor fails to comply, the using agency shall promptly file a purchasing complaint with the state purchasing agent.

E. Also, in case the vendor fails to comply, the using agency shall have no obligation to pay for the nonconforming delivery.

F. If the delivery does conform to the quantity and quality specified in the purchase order or contract, the using agency shall certify that delivery has been completed and is satisfactory.
[1.4.1.73 NMAC - Rp, 1.4.1.73 NMAC, 6/21/2022]

1.4.1.74 SUMMARY: Notwithstanding the requirements of 1.4.1.73 NMAC, if, after delivery and acceptance of the delivery, the delivery or a portion thereof is later found to be non-conforming to the specifications referred to or included in the purchase order or contract, such acceptance does not waive any rights or remedies which are otherwise granted to the buyer in accordance with other applicable sections of laws of New Mexico.
[1.4.1.74 NMAC - Rp, 1.4.1.74 NMAC, 6/21/2022]

1.4.1.75 APPLICATION (RESPONSIBILITY OF BIDDERS AND OFFERORS; 1.4.1.75 - 1.4.1.79 NMAC): A determination of responsibility or non-responsibility shall be governed by 1.4.1 75 through 1.4.1.79 NMAC.
[1.4.1.75 NMAC - Rp, 1.4.1.75 NMAC, 6/21/2022]

1.4.1.76 STANDARDS OF RESPONSIBILITY:

A. Standards for bidders: Factors to be considered in determining whether the standard of responsibility has been met include whether a bidder has:

(1) submitted a responsive bid;

(2) adequate financial resources, production or service facilities, personnel, service reputation and experience to make satisfactory delivery of the services, construction, or items of tangible personal property described in the IFB;

(3) a satisfactory record of performance;

(4) a satisfactory record of integrity;

(5) qualified legally to contract with the state; and

(6) supplied all necessary information and data in connection with any inquiry concerning responsibility.

B. Standards for offerors: Factors to be considered in determining whether the standard of responsibility has been met include whether an offeror has:

(1) submitted a responsive proposal;

(2) adequate financial resources, production or service facilities, personnel, service reputation and experience to make satisfactory delivery of the services or items of tangible personal property described in the proposal;

(3) a satisfactory record of performance;

(4) a satisfactory record of integrity;

(5) qualified legally to contract with the state; and

NMED Exhibit 7-G_000020

(6) supplied all necessary information and data in connection with any inquiry concerning responsibility.
[1.4.1.76 NMAC -Rp, 1.4.1.76 NMAC, 6/21/2022]

1.4.1.77 ABILITY TO MEET STANDARDS: A bidder or offeror may demonstrate the availability of adequate financial resources, production or service facilities, personnel and experience by submitting, upon request:

A. evidence that the bidder or offeror possesses the necessary items;

B. acceptable plans to subcontract for the necessary items; or

C. a documented commitment from, or explicit arrangement with, a satisfactory source to provide the necessary items.
[1.4.1.77 NMAC - Rp, 1.4.1.77 NMAC, 6/21/2022]

1.4.1.78 INQUIRY BY PROCUREMENT OFFICER: Before awarding a contract, the procurement officer or procurement manager must be satisfied that the bidder or offeror is responsible. Therefore, a bidder or offeror shall supply information and data requested by the procurement officer concerning the responsibility of the bidder or offeror. The unreasonable failure of a bidder or offeror to promptly supply information or data in connection with such an inquiry is grounds for a determination that the bidder or offeror is not responsible.
[1.4.1.78 NMAC - Rp, 1.4.1.78 NMAC, 6/21/2022]

1.4.1.79 DETERMINATION REQUIRED: If a bidder or offeror who otherwise would have been awarded a contract is found to be non-responsible, a written determination, setting forth the basis of the finding, shall be prepared by the state purchasing agent or central purchasing office. The written determination shall be made part of the procurement file, and a copy of the determination shall be sent to the non-responsible bidder or offeror.
[1.4.1.79 NMAC - Rp, 1.4.1.79 NMAC, 6/21/2022]

1.4.1.80 APPLICABILITY (PROTESTS; 1.4.1.80 - 1.4.1.93 NMAC): The provisions of 1.4.1.80 through 1.4.1.93 NMAC of this rule apply to all protests filed with the state purchasing agent and all central purchasing offices that have not adopted regulations for resolving protests. Central purchasing offices with rulemaking authority, other than the state purchasing agent, may adopt regulations for resolving protests filed within their jurisdictions.
[1.4.1.80 NMAC - Rp, 1.4.1.80 NMAC, 6/21/2022]

1.4.1.81 RIGHT TO PROTEST: Any bidder or offeror who is aggrieved in connection with a solicitation or award of a contract, including a sole source procurement, may protest to the state purchasing agent or central purchasing office.
[1.4.1.81 NMAC - Rp, 1.4.1.81 NMAC, 6/21/2022]

1.4.1.82 FILING OF PROTEST:

A. Protest must be written: Protests must be in writing and addressed to the state purchasing agent or central purchasing office, whichever has control and administration over the procurement.

B. Contents: The protest shall:

(1) include the name and address of the protestant;

(2) include the solicitation number;

(3) contain a statement of the grounds for protest;

(4) include supporting exhibits, evidence or documents to substantiate any claim unless not available within the filing time in which case the expected availability date shall be indicated; and

(5) specify the ruling requested from the state purchasing agent or central purchasing office.

C. Pleadings: No formal pleading is required to initiate a protest, but protests should be concise, logically arranged, and direct.

D. Time limit: Protests shall be submitted within 15 calendar days after knowledge of the facts or occurrences giving rise to the protest. Any person or business that has been sent written notice of any fact or occurrence is presumed to have knowledge of the fact or occurrence. Posting on the state purchasing division's website is considered public notice in this regard as well.
[1.4.1.82 NMAC - Rp, 1.4.1.82 NMAC, 6/21/2022]

1.4.1.83 PROCUREMENTS AFTER PROTEST:

A. In the event of a timely protest, as defined in Subsection D of 1.4.1.82 NMAC of this rule, the state purchasing agent or central purchasing office shall not proceed further with the procurement unless the state purchasing agent or central purchasing office makes a written determination that the award of the contract is necessary to protect substantial interests of a state agency. Such written determination should set forth the basis for the determination. As used in 1.4.1.80 through 1.4.1.93 NMAC of this rule, the point in time in which a contract is awarded is that point at which a legally enforceable contract is created unless the context clearly requires a different meaning. Award in this context means the final required state agency signature on the contract(s) resulting from the procurement.

B. A procurement shall not be halted after a contract has been awarded merely because a protest has been filed. After a contract has been awarded, the state purchasing agent or central purchasing office may, in its sole discretion, halt a procurement in exceptional circumstances or for good cause shown.

[1.4.1.83 NMAC - Rp, 1.4.1.83 NMAC, 6/21/2022]

1.4.1.84 PROCEDURE:

A. Upon the filing of a timely protest, the state purchasing agent or central purchasing office shall give notice of the protest to the contractor if award has been made or, if no award has been made, to all bidders or offerors who appear to have a substantial and reasonable prospect of receiving an award if the protest is denied.

B. The protestant and every business that receives notice pursuant to Subsection A of this section will automatically be parties to any further proceedings before the state purchasing agent or central purchasing office. In addition, any other person or business may move to intervene at any time during the course of the proceedings. Intervention will be granted upon a showing of a substantial interest in the outcome of the proceedings. Interveners shall accept the status of the proceedings at the time of their intervention; in particular, they must abide by all prior rulings and accept all previously established time schedules. The state purchasing agent or central purchasing office, and all employees thereof, are not parties to the proceedings.

C. The state purchasing agent or central purchasing office may take any action reasonably necessary to resolve a protest. Such actions include, but are not limited to, the following:

(1) issue a final written determination summarily dismissing the protest;

(2) obtain information from the staff of the state purchasing agent or central purchasing office;

(3) require parties to produce for examination information or witnesses under their control;

(4) require parties to express their positions on any issues in the proceedings;

(5) require parties to submit legal briefs on any issues in the proceeding;

(6) establish procedural schedules;

(7) regulate the course of the proceedings and the conduct of any participants;

(8) receive, rule on, exclude or limit evidence;

(9) take official notice of any fact that is among the traditional matters of official or administrative notice;

(10) conduct hearings; and

(11) take any action reasonably necessary to compel discovery or control the conduct of parties or witnesses.

[1.4.1.84 NMAC - Rp, 1.4.1.84 NMAC, 6/21/2022]

1.4.1.85 DISCOVERY: Upon written request of any party, or upon its own motion, the state purchasing agent or central purchasing office may require parties to comply with discovery requests.

[1.4.1.85 NMAC - Rp, 1.4.1.85 NMAC, 6/21/2022]

1.4.1.86 HEARINGS:

A. Hearings will be held only when the state purchasing agent or central purchasing office determines that substantial material factual issues are present that cannot be resolved satisfactorily through an examination of written documents in the record. Any party may request a hearing, but such requests shall be deemed denied unless specifically granted.

B. Hearings, when held, should be as informal as practicable under the circumstances, but the state purchasing agent or central purchasing office has absolute discretion in establishing the degree of formality for any particular hearing. In no event is the state purchasing agent or central purchasing office required to adhere to formal rules of evidence or procedure.

[1.4.1.86 NMAC - Rp, 1.4.1.86 NMAC, 6/21/2022]

1.4.1.87 RESOLUTION:

A. The state purchasing agent or central purchasing office shall promptly issue a written determination relating to the protest. The determination shall:

(1) state the reasons for the action taken; and

(2) inform the protestant of the right to judicial review of the determination pursuant to Section 13-1-183 NMSA 1978.

B. A copy of the written determination shall be sent immediately by certified mail, return receipt requested, to each of the contractors, if award has been made or, if no award has been made, to all bidders or offerors who appear to have a substantial and reasonable prospect of receiving an award if the protest is denied.

[1.4.1.87 NMAC - Rp, 1.4.1.87 NMAC, 6/21/2022]

1.4.1.88 RELIEF:

A. Prior to award: If, prior to award, the state purchasing agent or central purchasing office makes a written determination that a solicitation or proposed award of a contract is in violation of law, then the solicitation or proposed award shall be canceled.

B. After award:

(1) No fraud or bad faith. If, after an award, the state purchasing agent or central purchasing office makes a written determination that a solicitation or award of a contract is in violation of law and that the business awarded the contract has not acted fraudulently or in bad faith:

(a) the contract may be ratified, affirmed or revised to comply with law, provided that a written determination is made that doing so is in the best interest of the state; or

(b) the contract may be terminated, and the business awarded the contract shall be compensated for the actual expenses reasonably incurred under the contract plus a reasonable profit prior to termination.

(2) Fraud or bad faith. If, after an award, the state purchasing agent or central purchasing office makes a written determination that a solicitation or award of a contract is in violation of law and that the business awarded the contract has acted fraudulently or in bad faith, the contract shall be canceled.

C. Relief not allowed: Except as provided in Subparagraph (b) of Paragraph (1) of Subsection B of this section, the state purchasing agent or central purchasing office shall not award money damages or attorneys' fees.

[1.4.1.88 NMAC - Rp, 1.4.1.88 NMAC, 6/21/2022]

1.4.1.89 MOTION FOR RECONSIDERATION:

A. Motion: A motion for reconsideration of a written determination issued pursuant to 1.4.1.87 NMAC of this rule may be filed by any party or by any using agency involved in the procurement. The motion for reconsideration shall contain a detailed statement of the factual and legal grounds upon which reversal or modification of the determination is deemed warranted, specifying any errors of law made, or information not previously considered.

B. When to file: A motion for reconsideration shall be filed not later than seven calendar days after receipt of the written determination.

C. Response to motion: The state purchasing agent or central purchasing office shall promptly issue a written response to the motion for reconsideration. A copy of the written response shall be sent immediately by certified mail, return receipt requested, to each of the contractors, if award has been made or, if no award has been made, to all bidders or offerors who appear to have a substantial and reasonable prospect of receiving an award if the protest is denied.

[1.4.1.89 NMAC - Rp, 1.4.1.89 NMAC, 6/21/2022]

1.4.1.90 DESIGNEE:

A. Designation: At any point during a protest proceeding, the state purchasing agent or central purchasing office may appoint a designee as defined in Section 13-1-51 NMSA 1978 to preside over the proceeding. The designee will have all of the powers described in 1.4.1.80 through 1.4.1.93 NMAC of this rule except the power to issue a written determination under 1.4.1.87 NMAC of this rule. The designee only has authority to recommend a resolution to the state purchasing agent or central purchasing office under 1.4.1.87 NMAC of this rule.

NMED Exhibit 7-G_000023

B. Who may be designated: Any person, other than the procurement officer, procurement manager or other person not directly involved in the procurement, may serve as a designee.

C. Recommended written determination: A designee shall present a recommended written resolution to the state purchasing agent or central purchasing office. No party may appeal from the recommended resolution of the designee.

D. Action by state purchasing agent or central purchasing office: The state purchasing agent or central purchasing office shall approve, disapprove or modify the recommended resolution of the designee in writing. Such approval, disapproval or modification shall be the written determination required by 1.4.1.87 NMAC of this rule. Any party may file a motion for reconsideration of the written determination pursuant to 1.4.1.89 NMAC of this rule.

[1.4.1.90 NMAC - Rp, 1.4.1.90 NMAC, 6/21/2022]

1.4.1.91 FINAL DETERMINATION:

A. No motion for reconsideration: In those proceedings in which no motion for reconsideration is filed, the written determination issued pursuant to 1.4.1.87 NMAC of this rule shall be the final determination for purposes of the time limits for seeking judicial review under Section 13-1-183 NMSA 1978.

B. Motion for reconsideration: In those proceedings in which a motion for reconsideration is filed, the written response to the motion issued pursuant to 1.4.1.89 NMAC of this rule shall be the final determination for purposes of the time limits for seeking judicial review under Section 13-1-183 NMSA 1978.

[1.4.1.91 NMAC - Rp, 1.4.1.91 NMAC, 6/21/2022]

1.4.1.92 COPIES OF COMMUNICATIONS:

A. Copies to be provided to parties: Each party to a protest proceeding shall certify that it has provided every other party with copies of all documents or correspondence addressed or delivered to the state purchasing agent or central purchasing office.

B. Ex parte communications: No party shall submit to the state purchasing agent or central purchasing office, ex parte, any material, evidence, explanation, analysis, or advice, whether written or oral, regarding any matter at issue in a protest.

[1.4.1.92 NMAC - Rp, 1.4.1.92 NMAC, 6/21/2022]

1.4.1.93 COUNTING DAYS: In computing any period of time prescribed in 1.4.1.80 through 1.4.1.93 NMAC of this rule, the day of the event from which the designated period of time begins to run shall not be included, but the last day of the period shall be included unless it is a Saturday, a Sunday, or a legal holiday, in which event the period shall run to the end of the next business day.

[1.4.1.93 NMAC - Rp, 1.4.1.93 NMAC, 6/21/2022]

1.4.1.94 CHIEF PROCUREMENT OFFICER REGISTRATION AND CERTIFICATION:

A. Overview: This section applies to chief procurement officers in all state agencies and local public bodies.

(1) Statutory Authority. Under Section 9-17-5 NMSA 1978 and the Procurement Code, Sections 13-1-1 et seq NMSA 1978 , the general services secretary has authority to promulgate rules and regulations relating to this program.

(2) Scope. The chief procurement officer registration, certification and recertification training program is a state wide program administered by the state purchasing agent. Each state agency and local public body shall provide to the state purchasing agent the name of and all changes to the name of the state agency's or local public body's chief procurement officer and information identifying the state agency's or local public body's central purchasing office. The state purchasing agent shall maintain a list of the names of chief procurement officers reported to the state purchasing agent by state agencies and local public bodies. The state purchasing agent shall make the list of approved chief procurement officers available to the public through the web site of the purchasing division of the general services department and in any other appropriate form. It is a violation of statute if state agencies and local public bodies do not have a chief procurement officer listed on the state purchasing agent list before performing procurements. Section 13-1-98 NMSA 1978 shall not reduce the scope of duties, responsibilities or authority of the state purchasing agent, nor shall such exemptions exclude state agencies and local public bodies from the duties and responsibilities of providing the state purchasing agent the name of its certified chief procurement officer. All state agencies and local public bodies and their certified chief procurement officers are required to comply with all requirements under Sections 13-1-28 through 13-1-199 NMSA 1978 (amended 2013).

NMED Exhibit 7-G_000024

B. Definitions:

(1) "Approves" or "approved" means a chief procurement officer has successfully completed the certification or recertification training program administered by the state purchasing agent and attested to by the issuance of a certificate signed by the state purchasing agent.

(2) "Conduct" or "conducting" procurements means the act of preparing, advertising, processing, and awarding procurements of any kind, including, but not limited to, sole source, invitation to bid, request for proposals, and contracts under state price agreements.

(3) "Certification program" means the initial certification process through passing an exam after completing course material and a test approved by the general services secretary.

(4) "Recertification program" means training that will include affirmation of successfully completing course material approved by the general services secretary.

C. Mandatory identification of certified chief procurement officer: Each state agency and local public body shall annually, on or before January 1st of each year, and within 15 calendar days every time thereafter upon a vacancy or extended absence of a certified chief procurement officer for more than two weeks, provide to the state purchasing agent the name of the state agency or local public body certified chief procurement officer and, if applicable, information identifying the state agency or local public body central purchasing office. Every state agency or local public body shall have a certified chief procurement officer on the state purchasing agent list to perform procurments. No agency shall conduct procurements until a certified chief procurement officer is approved by the state purchasing agent. Upon a vacancy or absence, the state agency or local public body shall have 90 days to replace its certified chief procurement officer. In the event the initial 90 day period is to be exceeded, and upon good cause shown, to the satisfaction of the state purchasing agent, an additional 90 days may be granted to the state agency or local public body by the state purchasing agent to replace its certified chief procurement officer. Examples of good cause would include vacancies due to emergencies, death or resignation of a certified chief procurement officer. Until a certified chief procurement officer is reported to the state purchasing agent no procurements may be conducted and no duties, responsibilities, and obligations may be performed as detailed in Subsection F of 1.4.1.94 NMAC unless granted temporary authority by the state purchasing agent.

D. Registration of chief procurement officer with state purchasing agent: Each state agency or local public body is responsible for registering its chief procurement officer and ensuring the information on the state purchasing division website is current and correct. The certified chief procurement officer, that has been reported by the state agency or local public body to the state purchasing agent as provided in Subsection C of 1.4.1.94 NMAC above, shall register with the state purchasing agent through the state purchasing division's website. The state agency or local public body shall provide all the required identification information, including:

(1) certified chief procurement officer name with title, phone number and email address;

(2) agency or entity name with full address and registration date.

At the time of registering for the certification or recertification program, the applicant shall execute a statement of personal responsibility affirming:

(a) the applicant is a current employee of a state agency or local public body and not employed as an independent contractor;

(b) the applicant has not been convicted of a felony unless pardoned by the governor; and

(c) any additional required information specified by the state purchasing agent.

E. Chief procurement officer certification: The state purchasing agent shall establish a certification and recertification program for all chief procurement officers including the initial certification, and recertification every two years, on or before the certification anniversary date for each certified chief procurement officer. In order to be certified or recertified, a chief procurement officer shall remain an employee of the state agency or local public body, must not be convicted of a felony or behavior unbecoming of a chief procurement officer with a record of performance that establishes good moral character and competency, and shall obtain such training as deemed appropriate by the secretary of the general services department and pass a certification or recertification program, as appropriate, approved by the secretary of the general services department. Subject to the provisions of subsection J, the state purchasing agent may revoke a certification if shown that the chief procurement officer has not maintained the standards for a chief procurement officer. The secretary of the general services department reserves the right to add separate certifications and recertifications of specialized acquisitions under the procurement code as are deemed necessary or useful by the secretary.

F. Certified chief procurement officer duties, responsibilities and obligations: On and after July 1, 2015, only certified chief procurement officers may do the following, except that persons using procurement cards may continue to issue purchase orders and authorize small purchases:

NMED Exhibit 7-G_000025

(1) make determinations, including determinations regarding exemptions, pursuant to the Procurement Code;

(2) issue purchase orders and authorize small purchases pursuant to the Procurement Code; and

(3) approve procurement pursuant to the Procurement Code.

G. Failure to identify and register a certified chief procurement officer: In the event that the state agency or local public body does not have a certified chief procurement officer identified and registered in conformance with Section 13-1-95.2 NMSA 1978, pursuant to Section 13-1-97 NMSA 1978, procurement acts by that state agency or local public body may be suspended at the discretion of the state purchasing agent.

H. Identification, registration and certification violations: Any procurement act performed by a state agency or local public body under the New Mexico procurement code that has not identified and registered its certified chief procurement officer in conformance with Section 13-1-95.2 NMSA 1978, may be deemed a procurement violation. For state agencies, such procurement violation(s) may also result in a violation of the department of finance and administration's Model Accounting Practices.

I. Delegation or sharing of certified chief procurement officer duties: The sharing of a certified chief procurement officer through mutual execution of a memorandum of agreement by the state agency (agencies) or local public body(bodies) is allowed. A state agency or local public body wanting to delegate or share a certified chief procurement officer with another state agency or local public body shall: provide to the state purchasing agent for such sharing arrangement, information identifying the state agency or local public body central purchasing office, the name of the state agency or local public body shared certified chief procurement officer and the intergovernmental agreement supporting the arrangement. Chief procurement officers may only be employees of the state or a local public body and may not be third parties or temporary employees exept as otherwise provided in this subsection.

J. Revocation or suspension of certification:

(1) The state purchasing agent may suspend or revoke certified chief procurement officer certification in whole or in part, based on any action or conduct deemed improper of a certified chief procurement officer, including but not limited to severity or frequency of procurement violations, non-compliance with the Governmental Conduct Act (Sections 10-16-1 through 10-16-18 NMSA 1978), lack of verification that the chief procurement officer has successfully completed the certification or recertification program established by the state purchasing agent; lack of verification of current employement by the reporting state agency or local public body and not employed as an independent contractor; lack of verification that the person has not been convicted of a felony and behavior unbecoming of a chief procurement officer with a record of performance that establishes competency.

(2) Due process procedures shall be initiated by the state purchasing agent after reasonable notice to the certified chief procurement officer involved as follows in this section. The state purchasing agent or his designee shall cause written notice of the proposed revocation or suspension of certification (the Action) to be sent by certified mail, return receipt requested, to the certified chief procurement officer involved. The notice shall contain the following statements:

(a) the action contemplated is for revocation or suspension of certified chief procurement officer certification;

(b) the reasons for the action, which shall include a summary of the certified chief procurement officer's conduct or performance/nonperformance of his duties to which the action relates;

(c) the action is brought pursuant to the provisions contained in Section 13-1-95.2 NMSA 1978 and the regulations promulgated thereunder;

(d) sufficient facts exist, unless rebutted, to support the proposed revocation or suspension of certification and that the state purchasing agent shall proceed to suspend or revoke certified chief procurement officer certification in whole or in part unless the certified chief procurement officer requests, in writing, a hearing within 15 consecutive calendar days from the day the certified chief procurement officer receives the notice of the proposed Action;

(e) the address where the certified chief procurement officer's request for hearing shall be sent, and the name of the person to whom the request shall be sent; and

(f) that if the certified chief procurement officer fails to deliver a written request for a hearing to the person designated within the 15 days required in Subparagraph (d) of this Section, a final determination shall be made by the state purchasing agent;

(g) upon receipt of a timely request for hearing, the state purchasing agent will appoint a neutral hearing officer and any such hearing officer so appointed will conduct the hearing and recommend

a final decision to the state purchasing agent. If no hearing officer can be appointed in timely fashion, the state purchasing agent shall then act as the hearing officer.

(3) If a hearing is requested, the hearing officer shall send written notice to the certified chief procurement officer of the time and the place of the hearing.

(4) Hearings, and any subsequent appeals, shall conform to the standards, requirements, and process set forth for protests under the procurement code, Sections 13-1-28 thru 13-1-199 NMSA 1978, and be as informal as may be reasonable and appropriate under the circumstances. However, in no event shall the hearing officer be required to adhere to formal rules of evidence or procedure. The weight to be attached to evidence presented in any particular form will be within the discretion of the hearing officer. Stipulations of fact agreed upon by the participants may be regarded and used as evidence at the hearing. The participants may stipulate the testimony that would be given by a witness as if the witness were present. The hearing officer may require evidence in addition to that offered by the participants. The state purchasing agent shall issue a written determination regarding revocation or suspension of certification following the hearing.

K. Reinstatement of certification:

(1) The state purchasing agent may reinstate the certified chief procurement officer certification:

(a) in whole or in part;

(b) temporarily or permanently; or

(c) may limit the scope of duties as the state purchasing agent deems appropriate.

(2) The state purchasing agent may require successful completion of re-certificaton or proof of eligibility as a pre-condition for reinstatement. This may include successful completion of the certification program or recertification program.

(3) The state purchasing agent reserves the right to adopt additional remedies into the program as deemed appropriate.

L. Coordination by the state purchasing agent: The state purchasing agent may coordinate with the department of finance and administration regarding the reporting of decisions and actions under this section for state agencies, and with the local government division of the department of finance and administration for local public bodies.

M. Policies from the state purchasing agent: The state purchasing agent reserves the right to implement further policies to give full effect to the certified chief procurement officer statutes and this rule as required and necessary.

N. Limitations: Nothing in these rules shall be deemed to be a limit on the authority of the state purchasing agent to enact the purpose of these rules, nor a limit on other legal liability of certified chief procurement officer for their action or conduct.

[1.4.1.94 NMAC - Rp, 1.4.1.94 NMAC, 6/21/2022]

1.4.1.95 STATE USE ACT:

A. Procurement of services: In regard to the procurement of services, before utilizing any other procurement method allowed under the Procurement Code, a state agency or local public body shall first offer the procurement to the central non-profit agency under contract with the state. The central non-profit agency has the right of first refusal for any procurement of services provided that the service is stated on a list provided and published by the central non-profit agency and provided that the provider can meet the time requirements of the state agency.

B. Central non-profit agency: The central non-profit agency shall:

(1) publish the list of services available through the central non-profit agency on a website available to all state agencies and local public bodies;

(2) ensure that all service providers on this list meet the eligibility requirements to offer services under Section 13-1C-1 et. seq., NMSA 1978; and

(3) ensure that the prices offered to state agencies and local public bodies reflect the fair market value of such services in accordance with Section 13-1C-5 NMSA 1978;

(4) provided that, under Section 13-1C-6 NMSA 1978, services provided pursuant to and facilities covered by Section 22-14-27 NMSA 1978 are excluded from procurement through the central non-profit agency.

C. Procurement of services pursuant to Section 13-1C-1 et. seq., NMSA 1978 are exempt from the Procurement Code.

NMED Exhibit 7-G_000027

[1.4.1.95 NMAC - Rp, 1.4.1.95 NMAC, 6/21/2022]

History of 1.4.1 NMAC:
Pre-NMAC History:
Laws of 1984, Chapter 65, Section 1 enacted the Procurement Code to apply to every expenditure by state agencies and local public bodies for the procurement of items of tangible personal property, services and construction. To implement the Code, and in accordance with the statutory requirements applicable at the date and time, the subject and material found in this rule was first filed with the state records center and archives in 1984 as general services department (GSD) Procurement Code Regulations, GSD Rule No. 84-611, filed 11/21/1984; superseded by Procurement Code Regulations, GSD Rule No. 87-601, filed 12/16/1987; superseded by Procurement Code Regulations, GSD Rule No. 89-601, filed 12/01/1989; superseded by Procurement Code Regulations, GSD Rule No. 93-601, filed 09/21/1993; superseded by 1 NMAC 5.2, filed 01/15/1998.

History of Repealed Material:
1.4.1 NMAC, Procurement Code Regulations (filed 11/01/2001) repealed 09/30/2005.
1.4.1 NMAC, Procurement Code Regulations (filed 09/16/2005) repealed 8/30/2013.
1.4.1 NMAC, Procurement Code Regulations (filed 8/13/2013) repealed 6/21/2022.

Other History:
GSD Rule No. 93-601 (filed 09/21/1993) was renumbered, reformatted and amended to 1 NMAC 5.2, Procurement Code Regulations, effective 01/15/1998.
1 NMAC 5.2, Procurement Code Regulations (filed 01/02/1998) was renumbered, reformatted, amended and replaced to 1.4.1 NMAC, Procurement Code Regulations, effective 11/15/2001.
1.4.1 NMAC, Procurement Code Regulations (filed 11/01/2001) was replaced by 1.4.1 NMAC, Procurement Code Regulations, effective 09/30/2005.
1.4.1 NMAC, Procurement Code Regulations (filed 09/16/2005) was replaced by 1.4.1 NMAC, Procurement Code Regulations, effective 8/30/2013.
1.4.1 NMAC, Procurement Code Regulations (filed 8/13/2013) was replaced by 1.4.1 NMAC, Procurement Code Regulations, effective 6/21/2022.

NMED Exhibit 7-G_000028

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 2 DEFINITIONS

20.2.2.1 ISSUING AGENCY: New Mexico Environmental Improvement Board.
[10/27/95; 20.2.2.1 NMAC - Rn, 20 NMAC 2.100, 10/31/02]

20.2.2.2 SCOPE: The provisions of this part shall apply to all New Mexico regulations regarding air quality, and codified as 20.2.3 NMAC through 20.2.99 NMAC.
[10/27/95; 20.2.2.2 NMAC - Rn, 20 NMAC 2.101, 10/31/02]

20.2.2.3 STATUTORY AUTHORITY: The environmental improvement board "shall promulgate regulations and standards in ... air quality management" (NMSA 1978, section 74-1-8.A) and "the Environmental Improvement Board... shall adopt... regulations to attain and maintain national ambient air quality standards and prevent or abate air pollution..." (NMSA 1978, section 74-2-5.B).
[10/27/95; 20.2.2.3 NMAC - Rn, 20 NMAC 2.102, 10/31/02]

20.2.2.4 DURATION: Permanent.
[10/27/95; 20.2.2.4 NMAC - Rn, 20 NMAC 2.103, 10/31/02]

20.2.2.5 EFFECTIVE DATE: October 27, 1995.
[10/27/95; 20.2.2.5 NMAC - Rn, 20 NMAC 2.104, 10/31/02]
[The latest effective date of any section in this Part is 08/31/09.]

20.2.2.6 OBJECTIVE: To provide specific definitions for terms used and not defined in air quality regulations 20.2.3 NMAC through 20.2.99 NMAC.
[10/27/95; 20.2.2.6 NMAC - Rn, 20 NMAC 2.105, 10/31/02]

20.2.2.7 DEFINITIONS: The following definitions apply to all Parts of Title 20, Chapter 2 NMAC.

A. **"Administrator"** means the administrator of the United States environmental protection agency (US EPA) or his or her designee.

B. **"Aerodynamic diameter"** means the diameter of a sphere of unit density which behaves aerodynamically the same as the particle of the test substance. It is used to predict where particles of different size and density may be deposited in the respiratory tract.

C. **"Air contaminant"** means any airborne substance, including but not limited to, any particulate matter, fly ash, dust, fumes, gas, mist, smoke, vapor, micro-organisms, radioactive material, any combination thereof or any decay or reaction product thereof.

D. **"Air pollution"** means the emission, except as such emission occurs in nature, into the outdoor atmosphere of one or more air contaminants in such quantities and duration as may with reasonable probability injure human health, animal or plant life, or as may unreasonable interfere with the public welfare, visibility or the reasonable use of property.

E. **"Asbestos"** includes chrysolite, crocidolite, amosite, anthophylite, tremolite, and actinolite.

F. **"Board"** means the New Mexico environmental improvement board or its successor agency or authority.

G. **"Carbon dioxide"** means the chemical compound containing one atom of carbon and two atoms of oxygen.

H. **"Carbon monoxide"** means the chemical compound containing one atom of carbon and one atom of oxygen.

I. **"Department"** means the New Mexico environment department or its successor agency or authority, as represented by the department secretary or his or her designee.

J. **"Federal act"** means the Federal Clean Air Act, as amended, 42 U.S.C. sections 7401 et seq.

K. **"Flue"** means, any duct for air, gases, or the like, such as a stack or chimney.

L. **"Fugitive dust"** or **"fugitive particulate matter"** means particulate emissions which escape to the atmosphere due to leakage; materials handling, transfer or storage; travel over unpaved roads or parking areas; or other industrial activities, and which are not ducted through exhaust systems.

NMED Exhibit 7-H_000001

M. **"Greenhouse gas"** means any of the following: carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons or sulfur hexafluoride.

N. **"Heavy metal"** means any metal having an atomic number greater than 21.

O. **"Hydrofluorocarbons"** means gaseous chemical compounds containing only hydrogen, carbon, and fluorine atoms.

P. **"Hydrogen sulfide"** means the chemical compound containing two atoms of hydrogen and one atom of sulfur.

Q. **"Kraft pulp"** means the fibrous cellulose material produced in a kraft mill.

R. **"Lead"** means elemental lead; alloys in which one of the elements is lead; or compounds containing lead, which are measured as elemental lead.

S. **"Methane"** means the chemical compound containing one atom of carbon and four atoms of hydrogen.

T. **"mg/m3"** means milligrams per cubic meter.

U. **"Nitrogen dioxide"** means the chemical compound containing one atom of nitrogen and two atoms of oxygen, for the purposes of ambient determinations. The term "nitrogen dioxide," for the purposes of stack emissions monitoring, shall include nitrogen dioxide (the chemical compound containing one atom of nitrogen and two atoms of oxygen), nitric oxide (the chemical compound containing one atom of nitrogen and one atom of oxygen), and other oxides of nitrogen which may test as nitrogen dioxide.

V. **"Nitrous oxide"** means the chemical compound containing two atoms of nitrogen and one atom of oxygen.

W. **"Non-methane hydrocarbons"** means any combination of hydrocarbons (chemical compounds consisting of hydrogen and carbon) excluding only the molecule methane.

X. **"Ozone"** means the chemical compound having the molecular composition of three oxygen atoms.

Y. **"Particulate matter"** means any airborne, finely divided solid or liquid material with an aerodynamic diameter smaller than 100 micrometers.

Z. **"Particulate matter emissions"** means all finely divided solid or liquid material, other than uncombined water, emitted to the ambient air as measured by: applicable reference methods; an equivalent or alternative method specified by the administrator; or a test method specified in the New Mexico state implementation plan.

AA. **"Perfluorocarbons"** means gaseous chemical compounds containing only carbon and fluorine atoms.

AB. **"Person"** means any individual; partnership; corporation; association; municipality; the state or political subdivision of the state; and any agency, department, or instrumentality of the United States and any of their officers, agents, or employees.

AC. **"Photochemical oxidents"** means those oxidizing chemical compounds which are the products of photo initiated reactions involving organic compounds and nitrogen oxides, consisting primarily of ozone and peroxyacetyl nitrate (PAN).

AD. **"PM10"** means particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers.

AE. **"PM10 emissions"** means finely divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal 10 micrometers, emitted to the ambient air, as measured by: an applicable reference method; an equivalent or alternative method specified by the EPA administrator; or a test method specified in the New Mexico state implementation plan.

AF. **"PM2.5"** means particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers.

AG. **"PM2.5 emissions"** means finely divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers, emitted to the ambient air, as measured by: an applicable reference method; an equivalent or alternative method specified by the EPA administrator; or a test method specified in the New Mexico state implementation plan.

AH. **"ppm"** means parts per million by volume.

AI. **"Ringelmann scale"** means the grading of opacity, appearance, density or shade of a smoke emission, in determining the light-obscuring power of smoke.

AJ. **"Schedule of compliance"** means a schedule or timetable, acceptable to the board, which clearly sets out in detail, the steps to be taken in achieving the objectives of a regulation or standard.

AK. "Secretary" means the secretary of the New Mexico environment department or his or her designee.

AL. "Smoke" means small gas-borne particles resulting from incomplete combustion, consisting predominantly, by not exclusively, of carbon, soot and combustible material.

AM. "Sulfur dioxide" means the chemical compound containing one atom of sulfur and two atoms of oxygen, for the purposes of ambient determinations. The term sulfur dioxide, for the purposes of stack emissions monitoring, shall include sulfur dioxide (chemical compound containing one atom of sulfur and two atoms of oxygen), and other oxides of sulfur which may test as sulfur dioxide.

AN. "Sulfur hexafluoride" means the chemical compound containing one atom of sulfur and six atoms of fluorine.

AO. "Total reduced sulfur" means any combination of sulfur compounds, except sulfur dioxide and free sulfur, which test as total reduced sulfur, including, but not limited to, hydrogen sulfide, methyl mercaptan, and ethyl mercaptan.

AP. "Total suspended particulates (TSP)" means particulate matter as measured by the method described in 40 CFR Part 50, Appendix B.

AQ. "ug/m3" means micrograms per cubic meter.

AR. "US EPA" means the United States environmental protection agency.

AS. "Volatile organic compound (VOC)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the administrator designates as having negligible photochemical reactivity.

[10/27/95; 20.2.2.7 NMAC - Rn, 20 NMAC 2.2.200 10/31/02; A, 01/01/08; A, 08/31/09]

20.2.2.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This part supersedes AQCR 100, originally filed on January 23, 1970, and subsequently amended and refiled on May 26, 1971, September 1, 1971, September 14, 1973, June 14, 1974, July 15, 1974, February 7, 1983, May 26, 1983, August 1, 1988, and May 29, 1990.

HISTORY OF 20.2.2 NMAC:

Pre-NMAC History: The material in this part was derived from that previously filed with the commission of public records-state records center and archives:

HSSD 70-1, Ambient Air Quality Standards and Air Quality Control Regulations, 01/27/70.
AQCR 100, Air Quality Control Regulation 100 - Definitions, 02/07/83.
AQCR 100, Air Quality Control Regulation 100 - Definitions, 05/26/83.
EIB/AQCR 100, Air Quality Control Regulation 100 - Definitions, 08/01/88.
EIB/AQCR 100, Air Quality Control Regulation 100 - Definitions, 05/29/90.

History of Repealed Material: [RESERVED]

Other History:

EIB/AQCR 100, Air Quality Control Regulation 100 - Definitions, filed 05/29/90 was **renumbered** into first version of the New Mexico Administrative Code as 20 NMAC 2.2, Definitions, effective 10/27/95.
20 NMAC 2.2, Definitions (filed 09/27/95) was **renumbered, reformatted and replaced** by 20.2.2 NMAC, Definitions, effective 10/31/02.

NMED Exhibit 7-H_000003

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 70 OPERATING PERMITS

20.2.70.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.70.1 NMAC - Rp, 20.2.70.1 NMAC, 9/15/2025]

20.2.70.2 SCOPE: All persons who own or operate a major source or any other source required to obtain a permit under this Part.
[20.2.70.2 NMAC - Rp, 20.2.70.2 NMAC, 9/15/2025]

20.2.70.3 STATUTORY AUTHORITY: Environmental Improvement Act, Paragraphs (4) and (7) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 et seq., NMSA 1978, including specifically, Subsections A, B, D and E of Section 74-2-5 NMSA 1978.
[20.2.70.3 NMAC - Rp, 20.2.70.3 NMAC, 9/15/2025]

20.2.70.4 DURATION: Permanent.
[20.2.70.4 NMAC - Rp, 20.2.70.4 NMAC, 9/15/2025]

20.2.70.5 EFFECTIVE DATE: September 15, 2025, except where a later date is cited at the end of a section.
[20.2.70.5 NMAC - Rp, 20.2.70.5 NMAC, 9/15/2025]

20.2.70.6 OBJECTIVE: The objective of this Part is to establish the requirements for obtaining an operating permit.
[20.2.70.6 NMAC - Rp, 20.2.70.6 NMAC, 9/15/2025]

20.2.70.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (definitions), as used in this Part the following definitions shall apply.

A. "Acid rain source" has the meaning given to "affected source" in the regulations promulgated under Title IV of the federal act, and includes all sources subject to Title IV of the federal act.

B. "Affected programs" means all states, local air pollution control programs, and Indian tribes and pueblos, that are within 50 miles of the source.

C. "Air pollutant" means an air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive (including source material, special nuclear material, and byproduct material) substance or matter which is emitted into or otherwise enters the ambient air. Such term includes any precursors to the formation of any air pollutant, to the extent the administrator has identified such precursor or precursors for the particular purpose for which the term "air pollutant" is used. This excludes water vapor, nitrogen (N2), oxygen (O2), and ethane.

D. "Air pollution control equipment" means any device, equipment, process or combination thereof, the operation of which would limit, capture, reduce, confine, or otherwise control regulated air pollutants or convert for the purposes of control any regulated air pollutant to another form, another chemical or another physical state. This includes, but is not limited to, sulfur recovery units, acid plants, baghouses, precipitators, scrubbers, cyclones, water sprays, enclosures, catalytic converters, and steam or water injection.

E. "Applicable requirement" means all of the following, as they apply to a Part 70 source or to an emissions unit at a Part 70 source (including requirements that have been promulgated or approved by the board or US EPA through rulemaking at the time of permit issuance but have future-effective compliance dates).

(1) Any standard or other requirement provided for in the New Mexico state implementation plan approved by US EPA, or promulgated by US EPA through rulemaking, under Title I of the federal act to implement the relevant requirements of the federal act, including any revisions to that plan promulgated in 40 CFR, Part 52.

(2) Any term or condition of any preconstruction permit issued pursuant to regulations approved or promulgated through rulemaking under Title I, including Parts C or D, of the federal act, unless that term or condition is determined by the department to be no longer pertinent.

(3) Any standard or other requirement under Section 111 of the federal act, including Section 111(d).

NMED Exhibit 7-I_000001

(4) Any standard or other requirement under Section 112 of the federal act, including any requirement concerning accident prevention under Section 112(r)(7) of the federal act.

(5) Any standard or other requirement of the acid rain program under Title IV of the federal act or the regulations promulgated thereunder.

(6) Any requirements established pursuant to Section 504(b) or Section 114(a)(3) of the federal act.

(7) Any standard or other requirement under Section 126(a)(1) and (c) of the federal act.

(8) Any standard or other requirement governing solid waste incineration under Section 129 of the federal act.

(9) Any standard or other requirement for consumer and commercial products under Section 183(e) of the federal act.

(10) Any standard or other requirement for tank vessels under Section 183(f) of the federal act.

(11) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the federal act, unless the administrator has determined that such requirements need not be contained in a Title V permit.

(12) Any national ambient air quality standard or increment or visibility requirement under Part C of Title I of the federal act, but only as it would apply to temporary sources permitted pursuant to Section 504(e) of the federal act. This means that general permits for temporary sources must consider these requirements, but they are not applicable for other operating permits under this Part.

(13) Any rule adopted by the board pursuant to the New Mexico Air Quality Control Act, Subsection B of Section 74-2-5, NMSA 1978.

F. "CFR" means the Code of Federal Regulations.

G. "Draft permit" means a version of a permit which the department offers for public participation or affected program review.

H. "Emission limitation" means a requirement established by US EPA, the board, or the department, that limits the quantity, rate or concentration, or combination thereof, of emissions of regulated air pollutants on a continuous basis, including any requirements relating to the operation or maintenance of a source to assure continuous reduction.

I. "Emissions allowable under the permit" means:

(1) any state or federally enforceable permit term or condition that establishes an emission limit (including a work practice standard) requested by the applicant and approved by the department or determined at issuance or renewal to be required by an applicable requirement; or

(2) any federally enforceable emissions cap that the permittee has assumed to avoid an applicable requirement to which the source would otherwise be subject.

J. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any air pollutant listed pursuant to Section 112(b) of the federal act. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the federal act.

K. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within the New Mexico state implementation plan, and any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Part 51, Subpart I, including 40 CFR 51.165 and 40 CFR 51.166.

L. "Final permit" means the version of an operating permit issued by the department that has met all review requirements of 20.2.70.400 NMAC - 20.2.70.499 NMAC.

M. "Fugitive emissions" are those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

N. "General permit" means an operating permit that meets the requirements of 20.2.70.303 NMAC.

O. "Greenhouse gas" for the purpose of this Part is defined as the aggregate group of the following six gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.

P. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to the federal act.

Q. "Insignificant activities" means those activities which have been listed by the department and approved by the administrator as insignificant on the basis of size, emissions or production rate.

R. "Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person(s)) in which all of the pollutant emitting activities at such source belong to the same major group (i.e., all have the same two-digit

code), as described in the standard industrial classification manual, 1987, and that is described in Paragraphs (1), (2) or (3) of Subsection R of 20.2.70.7 NMAC.

(1) A major source under Section 112 of the federal act, which is defined as the following.

(a) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons or more per year of any hazardous air pollutant which has been listed pursuant to Section 112 (b) of the federal act, 25 or more tons per year of any combination of such hazardous air pollutants (including any major source of fugitive emissions of any such pollutant, as determined by rule by the administrator), or such lesser quantity as the administrator may establish by rule. Notwithstanding the preceding sentence, hazardous emissions from any oil or gas exploration or production well (with its associated equipment) and hazardous emissions from any pipeline compressor or pump station shall not be aggregated with hazardous emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources.

(b) For radionuclides, "major source" shall have the meaning specified by the administrator by rule.

(2) A major stationary source of air pollutants that directly emits or has the potential to emit, 100 or more tons per year of any air pollutant subject to regulation (including any major source of fugitive emissions of any such pollutant, as determined by rule by the administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of Paragraph (2) of Subsection R of 20.2.70.7 NMAC, unless the source belongs to one of the following categories of stationary sources:

(a) coal cleaning plants (with thermal dryers);
(b) kraft pulp mills;
(c) portland cement plants;
(d) primary zinc smelters;
(e) iron and steel mills;
(f) primary aluminum ore reduction plants;
(g) primary copper smelters;
(h) municipal incinerators capable of charging more than 250 tons of refuse per day;
(i) hydrofluoric, sulfuric, or nitric acid plants;
(j) petroleum refineries;
(k) lime plants;
(l) phosphate rock processing plants;
(m) coke oven batteries;
(n) sulfur recovery plants;
(o) carbon black plants (furnace process);
(p) primary lead smelters;
(q) fuel conversion plant;
(r) sintering plants;
(s) secondary metal production plants;
(t) chemical process plants;
(u) fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
(v) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
(w) taconite ore processing plants;
(x) glass fiber processing plants;
(y) charcoal production plants;
(z) fossil fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input;
(aa) any other stationary source category, which as of August 7, 1980, is being regulated under Section 111 or 112 of the federal act.

(3) A major stationary source as defined in Part D of Title I of the federal act, including:

(a) for ozone non-attainment areas, sources with the potential to emit 100 tons or more per year of volatile organic compounds or nitrogen oxides in areas classified as "marginal" or "moderate," 50 tons or more per year in areas classified as "serious," 25 tons or more per year in areas classified as "severe," and 10

NMED Exhibit 7-I_000003

tons or more per year in areas classified as "extreme," except that the references in Subparagraph (a) of Paragraph (3) of Subsection R of 20.2.70.7 NMAC to 100, 50, 25, and 10 tons per year of nitrogen oxides shall not apply with respect to any source for which the administrator has made a finding, under Section 182(f)(1) or (2) of the federal act, that requirements under Section 182(f) of the federal act do not apply;

(b) for ozone transport regions established pursuant to Section 184 of the federal act, sources with the potential to emit 50 tons or more per year of volatile organic compounds;

(c) for carbon monoxide non-attainment areas (1) that are classified as "serious," and (2) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the administrator, sources with the potential to emit 50 tons or more per year of carbon monoxide; and

(d) for particulate matter (PM10) non-attainment areas classified as "serious," sources with the potential to emit 70 tons or more per year of PM10.

S. "Operating permit" or **"permit"** (unless the context suggests otherwise) means any permit or group of permits covering a source that is issued, renewed, modified or revised pursuant to this Part.

T. "Operator" means the person or persons responsible for the overall operation of a facility.

U. "Owner" means the person or persons who own a facility or part of a facility.

V. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.

W. "Part 70 source" means any source subject to the permitting requirements of this Part, as provided in 20.2.70.200 NMAC - 20.2.70.299 NMAC.

X. "Permit modification" means a revision to an operating permit that meets the requirements of significant permit modifications, minor permit modifications, or administrative permit amendments, as defined in 20.2.70.404 NMAC.

Y. "Permittee" means the owner, operator or responsible official at a permitted Part 70 source, as identified in any permit application or modification.

Z. "Portable source" means any plant that is mounted on any chassis or skids and which can be moved by the application of a lifting or pulling force. In addition, there shall be no cable, chain, turnbuckle, bolt or other means (except electrical connections) by which any piece of equipment is attached or clamped to any anchor, slab, or structure, including bedrock, that must be removed prior to the application of a lifting or pulling force for the purpose of transporting the unit. Portable sources may include sand and gravel plants, rock crushers, asphalt plants and concrete batch plants which meet this criteria.

AA. "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable. The potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

AB. "Proposed permit" means the version of a permit that the department proposes to issue and forwards to the administrator for review in compliance with 20.2.70.402 NMAC.

AC. "Regulated air pollutant" means the following:

(1) nitrogen oxides or any volatile organic compounds;

(2) any pollutant for which a national ambient air quality standard has been promulgated;

(3) any pollutant that is subject to any standard promulgated under Section 111 of the federal act;

(4) any class I or II substance subject to any standard promulgated under or established by Title VI of the federal act;

(5) any pollutant subject to a standard promulgated under Section 112 or any other requirements established under Section 112 of the federal act, including Sections 112(g), (j), and (r), including the following;

(a) any pollutant subject to requirements under Section 112(j) of the federal act; if the administrator fails to promulgate a standard by the date established pursuant to Section 112(e) of the federal act, any pollutant for which a subject source would be a major shall be considered to be regulated on the date 18 months after the applicable date established pursuant to Section 112(e) of the federal act; and

(b) any pollutant for which the requirements of Section 112(g)(2) of the federal act have been met, but only with respect to the individual source subject to a Section 112(g)(2) requirement; or

(6) any other pollutant subject to regulation as defined in Subsection AL of 20.2.70.7 NMAC.

AD. "Renewal" means the process by which a permit is reissued at the end of its term.

AE. "Responsible official" means one of the following:

(1) for a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(a) the facilities employ more than 250 persons or have gross annual sales or expenditures exceeding $25 million (in second quarter 1980 dollars); or

(b) the delegation of authority to such representative is approved in advance by the department;

(2) for a partnership or sole proprietorship: a general partner or the proprietor, respectively;

(3) for a municipality, state, federal or other public agency: either a principal executive officer or ranking elected official; for the purposes of this Part, a principal executive officer of a federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a regional administrator of US EPA); or

(4) for an acid rain source: the designated representative (as defined in Section 402(26) of the federal act) in so far as actions, standards, requirements, or prohibitions under Title IV of the federal act or the regulations promulgated thereunder are concerned; and for any other purposes under 40 CFR Part 70.

AF. "Section 502(b)(10) changes" are changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

AG. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose.

AH. "Solid waste incineration unit" means a distinct operating unit of any facility which combusts any solid waste material from commercial or industrial establishments or the general public (including single and multiple residences, hotels, and motels). The term "solid waste incineration unit" does not include:

(1) incinerators or other units required to have a permit under Section 3005 of the federal Solid Waste Disposal Act;

(2) materials recovery facilities (including primary or secondary smelters) which combust waste for the primary purpose of recovering metals;

(3) qualifying small power production facilities, as defined in Section 3(17)(C) of the Federal Power Act (16 U.S.C. 796(17)(C)), or qualifying cogeneration facilities, as defined in Section 3(18)(B) of the Federal Power Act (16 U.S.C. 796(18)(B)), which burn homogeneous waste (such as units which burn tires or used oil, but not including refuse-derived fuel) for the production of electric energy or in the case of qualifying cogeneration facilities which burn homogeneous waste for the production of electric energy and steam or forms of useful energy (such as heat) which are used for industrial, commercial, heating or cooling purposes; or

(4) air curtain incinerators, provided that such incinerators only burn wood wastes, yard wastes and clean lumber and that such air curtain incinerators comply with opacity limitations established by the administrator by rule.

AI. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose.

AJ. "Stationary source" or **"source"** means any building, structure, facility, or installation, or any combination thereof that emits or may emit any regulated air pollutant or any pollutant listed under Section 112(b) of the federal act.

AK. "Subsidiary" means a business concern which is owned or controlled by, or is a partner of, the applicant or permittee.

AL. "Subject to regulation" means, for any air pollutant, that the pollutant is subject to either a provision in the act, or a nationally-applicable regulation codified by the administrator in Subchapter C of 40 CFR Chapter I, that requires actual control of the quantity of emissions of that pollutant, and that such a control requirement has taken effect and is operative to control, limit or restrict the quantity of emissions of that pollutant released from the regulated activity. Except that:

(1) "greenhouse gases" (GHGs) shall not be subject to regulation, unless, as of July 1, 2011, the GHG emissions are at a stationary source emitting or having the potential to emit 100,000 tons per year CO_2e equivalent emissions;

(2) the term **"tons per year CO_2e equivalent emissions"** (CO_2e) shall represent the aggregate amount of GHGs emitted by the regulated activity, and shall be computed by multiplying the mass

amount of emissions (tons per year), for each of the six greenhouse gases in the pollutant GHGs, by the gas's associated global warming potential published at Table A-1 to Subpart A of 40 CFR Part 98 - Global Warming Potentials, and summing the resultant value for each gas; for purposes of Paragraph (2) of Subsection AL of 20.2.70.7 NMAC, prior to July 21, 2014, the mass of the greenhouse gas carbon dioxide shall not include carbon dioxide emissions resulting from the combustion or decomposition of non-fossilized and biodegradable organic material originating from plants, animals, or micro-organisms (including products, by-products, residues and waste from agriculture, forestry and related industries as well as the non-fossilized and biodegradable organic fractions of industrial and municipal wastes, including gases and liquids recovered from the decomposition of non-fossilized and biodegradable organic material);

(3) if a federal court stays, invalidates or otherwise renders unenforceable by the US EPA, in whole or in part, the prevention of significant deterioration and Title V greenhouse gas tailoring rule (75 FR 31514, June 3, 2010), the definition "subject to regulation" shall be enforceable by the department only to the extent that it is enforceable by US EPA.

AM. "Temporary source" means any plant that is situated in one location for a period of less than one year, after which it will be dismantled and removed from its current site or relocated to a new site. A temporary source may be semi-permanent, which means that it does not have to meet the requirements of a portable source. Temporary sources may include well head compressors which meet this criteria.

AN. "Title I modification" means any modification under Sections 111 or 112 of the federal act and any physical change or change in method of operations that is subject to the preconstruction regulations promulgated under Parts C and D of the federal act.

[20.2.70.7 NMAC - Rp, 20.2.70.7 NMAC, 9/15/2025]

20.2.70.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation ("AQCR") 770, - Operating Permits, filed November 15, 1993, as amended ("AQCR 770"). The original effective date of AQCR 770 was December 19, 1994, which was the effective date of approval, by the administrator, of the New Mexico operating permit program. (See 59 FR 59656, November 18, 1994).

A. All references to AQCR 770 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 770 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 770.

[20.2.70.8 NMAC - Rp, 20.2.70.8 NMAC, 9/15/2025]

20.2.70.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau. [As of April 2013, the Air Quality Bureau is located at 525 Camino de los Marquez, Suite 1, Santa Fe, New Mexico 87505]

[20.2.70.9 NMAC - Rp, 20.2.70.9 NMAC, 9/15/2025]

20.2.70.10 to 20.2.70.199 [RESERVED]

20.2.70.200 PART 70 SOURCES: Operating permits must be obtained from the department for the following sources:

A. any major source;

B. any source, including an area source, subject to a standard or other requirement promulgated under Section 111 -- Standards of Performance for New Stationary Sources, or Section 112 -- Hazardous Air Pollutants, of the federal act, but not including any source which:

(1) is exempted under Subsection B of 20.2.70.202 NMAC; or

(2) would be required to obtain a permit solely because it is subject to regulations or requirements under Section 112(r) of the federal act;

C. any acid rain source; and

D. any source in a source category so designated by the administrator, in whole or in part, by regulation, after notice and comment.

[20.2.70.200 NMAC - Rp, 20.2.70.200 NMAC, 9/15/2025]

20.2.70.201 REQUIREMENT FOR A PERMIT:

NMED Exhibit 7-I_000006

A. A Part 70 source may operate after the time that it is required to submit a timely and complete application under this Part only if:

(1) the source is in compliance with an operating permit issued by the department or EPA; or

(2) a timely permit (including permit renewal) application has been submitted consistent with 20.2.70.300 NMAC; the ability to operate under these circumstances shall cease if the applicant fails to submit by the deadline specified in writing by the department any additional information identified as being needed to process the application.

B. Revocation or termination of a permit by the department terminates the permittee's right to operate.

C. The submittal of a complete operating permit application shall not protect any source from any applicable requirement, including any requirement that the source have a preconstruction permit under Title I of the federal act or state regulations.

D. Requirement for permit under 20.2.72 NMAC.

(1) Part 70 sources that have an operating permit and do not have a permit issued under 20.2.72 NMAC or 20.2.74 NMAC shall submit a complete application for a permit under 20.2.72 NMAC within 180 days of September 6, 2006. The department shall consider and may grant reasonable requests for extension of this deadline on a case-by-case basis.

(2) Part 70 sources that do not have an operating permit or a permit under 20.2.72 NMAC upon the effective date of 20.2.70.201 NMAC shall submit an application for a permit under 20.2.72 NMAC within 60 days after submittal of an application for an operating permit.

(3) Paragraphs (1) and (2) of Subsection D of 20.2.70.201 NMAC shall not apply to sources that have demonstrated compliance with both the national and state ambient air quality standards through dispersion modeling or other method approved by the department and that have requested incorporation of conditions in their operating permit to ensure compliance with these standards.

[20.2.70.201 NMAC - Rp, 20.2.70.201 NMAC, 9/15/2025]

20.2.70.202 SOURCE CATEGORY EXEMPTIONS:

A. The following source categories are exempted from the obligation to obtain an operating permit:

(1) all sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR Part 60, Subpart AAA -- Standards of Performance for New Residential Wood Heaters;

(2) all sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR Part 61, Subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation;

(3) except as required under Sections 20.2.70.500 NMAC - 20.2.70.599 NMAC, any source that would be required to obtain a permit solely because of emissions of radionuclides; and

(4) any source in a source category exempted by the administrator, by regulation, after notice and comment.

B. Non-major sources, including those subject to Sections 111 or 112 of the federal act, are exempt from the obligation to obtain a Part 70 (20.2.70 NMAC) permit until such time that the administrator completes a rulemaking that requires such sources to obtain operating permits.

C. Any source exempted from the requirement to obtain an operating permit may opt to apply for a permit under this Part.

D. No permit for a solid waste incineration unit shall be issued by the department if a New Mexico state agency is responsible, in whole or in part, for the design and construction or operation of the unit. In such cases, applications shall be made to the administrator. Department review or approval of solid waste incineration units shall not constitute responsibility for the design, construction, or operation of the unit.

[20.2.70.202 NMAC - Rp, 20.2.70.202 NMAC, 9/15/2025]

20.2.70.203 EXISTING MAJOR SOURCES WHICH ARE NOT REQUIRED TO HAVE A PERMIT UNDER 20.2.72 NMAC (CONSTRUCTION PERMITS): The owner or operator of any major source may reverse or avoid designation as a major source under this Part by obtaining a permit under 20.2.72 NMAC (Construction Permits) which includes federally enforceable conditions which restrict the potential to emit of the source to non-major emission rates. Such conditions may include emissions limitations, process restrictions or limitations or both, restrictions on annual hours of operation, or other conditions which reduce the facility's potential to emit.

[20.2.70.203 NMAC - Rp, 20.2.70.203 NMAC, 9/15/2025]

20.2.70.204 BERNALILLO COUNTY: For the operation of sources within Bernalillo County, the applicant shall make such applications to the air pollution control division of the Albuquerque environmental health department or its successor agency or authority.
[20.2.70.204 NMAC - Rp, 20.2.70.204 NMAC, 9/15/2025]

20.2.70.205 INDIAN TRIBAL JURISDICTION: The requirements of this Part do not apply to sources within Indian Tribal jurisdiction. For the operation of sources in that jurisdiction, the applicant should make such applications to the Tribal Authority or to the administrator, as appropriate.
[20.2.70.205 NMAC - Rp, 20.2.70.205 NMAC, 9/15/2025]

20.2.70.206 to 20.2.70.299 [RESERVED]

20.2.70.300 PERMIT APPLICATIONS:

A. Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application in accordance with this Part.

B. Timely application. A timely application for a source applying for a permit under this Part is:

(1) for first time applications, one that is submitted within 12 months after the source commences operation as a Part 70 source;

(2) for purposes of permit renewal, one that is submitted at least 12 months prior to the date of permit expiration;

(3) for the acid rain portion of permit applications for initial phase II acid rain sources under Title IV of the federal act, by January 1, 1996 for sulfur dioxide, and by January 1, 1998 for nitrogen oxides.

C. Completeness of application.

(1) To be deemed complete, an application must provide all information required pursuant to Subsection D of 20.2.70.300 NMAC, except that applications for permit modifications need supply such information only if it is related to the proposed change.

(2) If, while processing an application, regardless of whether it has been determined or deemed to be complete, the department determines that additional information is necessary to evaluate or take final action on that application, it may request such information in writing and set a reasonable deadline for a response.

(3) Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application or in a supplemental submittal shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information. In addition, an applicant shall provide further information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

(4) The applicant's ability to operate without a permit, as set forth in Paragraph (2) of Subsection A of 20.2.70.201 NMAC, shall be in effect from the date a timely application is submitted until the final permit is issued or disapproved, provided that the applicant adequately submits any requested additional information by the deadline specified by the department.

D. Content of application. Any person seeking a permit under this Part shall do so by filing a written application with the department. The applicant shall submit three copies of the permit application, or more, as requested by the department. An applicant may not omit information needed to determine the applicability of, or to impose, any applicable requirement, or to evaluate the fee amount required under 20.2.71 NMAC (Operating Permit Emissions Fees). Fugitive emissions shall be included in the permit application in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. All applications shall meet the following requirements.

(1) Be made on forms furnished by the department, which for the acid rain portions of permit applications and compliance plans shall be on nationally-standardized forms to the extent required by regulations promulgated under Title IV of the federal act.

(2) State the company's name and address (and, if different, plant name and address), together with the names and addresses of the owner(s), responsible official and the operator of the source, any subsidiaries or parent companies, the company's state of incorporation or principal registration to do business and corporate or partnership relationship to other permittees subject to this Part, and the telephone numbers and names of the owners' agent(s) and the site contact(s) familiar with plant operations.

(3) State the date of the application.

NMED Exhibit 7-I_000008

(4) Include a description of the source's processes and products (by standard industrial classification code) including any associated with alternative scenarios identified by the applicant, and a map, such as the 7.5-minute topographic quadrangle map published by the United States geological survey or the most detailed map available showing the exact location of the source. The location shall be identified by latitude and longitude or by Universal Transverse Mercator (UTM) coordinates.

(5) For all emissions of all air pollutants for which the source is major and all emissions of regulated air pollutants, provide all emissions information, calculations and computations for the source and for each emissions unit, except for insignificant activities (as defined in 20.2.70.7 NMAC). This shall include:

(a) a process flow sheet of all components of the facility which would be involved in routine operations and emissions;

(b) identification and description of all emissions points in sufficient detail to establish the basis for fees and applicability of requirements of the state and federal acts;

(c) emissions rates in tons per year, pounds per hour and in such terms as are necessary to establish compliance consistent with the applicable standard reference test method;

(d) specific information such as that regarding fuels, fuel use, raw materials, or production rates, to the extent it is needed to determine or regulate emissions;

(e) identification and full description, including all calculations and the basis for all control efficiencies presented, of air pollution control equipment and compliance monitoring devices or activities;

(f) the maximum and standard operating schedules of the source, as well as any work practice standards or limitations on source operation which affect emissions of regulated pollutants;

(g) if requested by the department, an operational plan defining the measures to be taken to mitigate source emissions during startups, shutdowns and emergencies;

(h) other relevant information as the department may reasonably require or which are required by any applicable requirements (including information related to stack height limitations developed pursuant to Section 123 of the federal act); and

(i) for each alternative operating scenario identified by the applicant, all of the information required in Subparagraphs (a) through (h) of Paragraph (5) of Subsection D of 20.2.70.300 NMAC, as well as additional information determined to be necessary by the department to define such alternative operating scenarios.

(6) Provide a list of insignificant activities (as defined in 20.2.70.7 NMAC) at the source, their emissions, to the extent required by the department, and any information necessary to determine applicable requirements.

(7) Provide a citation and description of all applicable air pollution control requirements, including:

(a) sufficient information related to the emissions of regulated air pollutants to verify the requirements that are applicable to the source; and

(b) a description of or reference to any applicable test method for determining compliance with each applicable requirement.

(8) Provide an explanation of any proposed exemptions from otherwise applicable requirements.

(9) Provide other specific information that may be necessary to implement and enforce other requirements of the state or federal acts or to determine the applicability of such requirements, including information necessary to collect any permit fees owed under 20.2.71 NMAC (Operating Permit Emissions Fees).

(10) Provide certification of compliance, including all of the following.

(a) A certification, by a responsible official consistent with Subsection E of 20.2.70.300 NMAC, of the source's compliance status for each applicable requirement. For national ambient air quality standards, certifications shall be based on the following.

(i) For first time applications, this certification shall be based on modeling submitted with the application for a permit under 20.2.72 NMAC.

(ii) For permit renewal applications, this certification shall be based on compliance with the relevant terms and conditions of the current operating permit.

(b) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods.

(c) A statement that the source will continue to be in compliance with applicable requirements for which it is in compliance, and will, in a timely manner or at such schedule expressly required by the applicable requirement, meet additional applicable requirements that become effective during the permit term.

(d) A schedule for submission of compliance certifications during the permit term, to be submitted no less frequently than annually, or more frequently if specified by the underlying applicable requirement or by the department.

(e) A statement indicating the source's compliance status with any enhanced monitoring and compliance certification requirements of the federal act.

(11) For sources that are not in compliance with all applicable requirements at the time of permit application, provide a compliance plan that contains all of the following.

(a) A description of the compliance status of the source with respect to all applicable requirements.

(b) A narrative description of how the source will achieve compliance with such requirements for which it is not in compliance.

(c) A schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with such applicable requirements. The schedule of compliance shall be at least as stringent as that contained in any consent decree or administrative order to which the source is subject, and the obligations of any consent decree or administrative order shall not be in any way diminished by the schedule of compliance. Any such schedule of compliance shall be supplemental to, and shall not prohibit the department from taking any enforcement action for noncompliance with, the applicable requirements on which it is based.

(d) A schedule for submission of certified progress reports no less frequently than every six months.

(e) For the portion of each acid rain source subject to the acid rain provisions of Title IV of the federal act, the compliance plan content requirements specified in Paragraph (11) of Subsection D of 20.2.70.300 NMAC, except as specifically superseded by regulations promulgated under Title IV of the federal act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

E. Certification. Any document, including any application form, report, or compliance certification, submitted pursuant to this Part shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Part shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

[20.2.70.300 NMAC - Rp, 20.2.70.300 NMAC, 9/15/2025]

20.2.70.301 CONFIDENTIAL INFORMATION PROTECTION:

A. All confidentiality claims made regarding material submitted to the department under this Part shall be reviewed under the provisions of the New Mexico Air Quality Control Act Section 74-2-11 NMSA 1978 and the New Mexico Inspection of Public Records Act, Sections 14-2-1 et seq. NMSA 1978.

B. In the case where an applicant or permittee has submitted information to the department under a claim of confidentiality, the department may also require the applicant or permittee to submit a copy of such information directly to the administrator.

C. An operating permit is a public record, and not entitled to protection under Section 114(c) of the federal act.

[20.2.70.301 NMAC - Rp, 20.2.70.301 NMAC, 9/15/2025]

20.2.70.302 PERMIT CONTENT:

A. Permit conditions.

(1) The department shall specify conditions upon a permit, including emission limitations and sufficient operational requirements and limitations, to assure compliance with all applicable requirements at the time of permit issuance or as specified in the approved schedule of compliance. The permit shall:

(a) for major sources, include all applicable requirements for all relevant emissions units in the major source;

(b) for any non-major source subject to 20.2.70.200 NMAC - 20.2.70.299 NMAC, include all applicable requirements which apply to emissions units that cause the source to be subject to this Part;

(c) specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement upon which the term or condition is based;

(d) include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit;

(e) include a provision to ensure that the permittee pays fees to the department consistent with the fee schedule in 20.2.71 NMAC (Operating Permit Emissions Fees); and

(f) for purposes of the permit shield, identify any requirement specifically identified in the permit application or significant permit modification that the department has determined is not applicable to the source, and state the basis for any such determination.

(2) Each permit issued shall, additionally, include provisions stating the following.

(a) The permittee shall comply with all terms and conditions of the permit. Any permit noncompliance is grounds for enforcement action. In addition, noncompliance with federally enforceable permit conditions constitutes a violation of the federal act.

(b) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit.

(c) The permit may be modified, reopened and revised, revoked and reissued, or terminated for cause in accordance with 20.2.70.405 NMAC.

(d) The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance shall not stay any permit condition.

(e) The permit does not convey any property rights of any sort, or any exclusive privilege.

(f) Within the period specified by the department, the permittee shall furnish any information that the department may request in writing to determine whether cause exists for reopening and revising, revoking and reissuing, or termination of the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the department copies of records required by the permit to be maintained.

(3) The terms and conditions for all alternative operating scenarios identified in the application and approved by the department:

(a) shall require that the permittee maintain a log at the permitted facility which documents, contemporaneously with any change from one operating scenario to another, the scenario under which the facility is operating; and

(b) shall, for each such alternative scenario, meet all applicable requirements and the requirements of this Part.

(4) The department may impose conditions regulating emissions during startup and shutdown.

(5) All permit terms and conditions which are required under the federal act or under any of its applicable requirements, including any provisions designed to limit a source's potential to emit, are enforceable by the administrator and citizens under the federal act. The permit shall specifically designate as not being federally enforceable under the federal act any terms or conditions included in the permit that are not required under the federal act or under any of its applicable requirements.

(6) The issuance of a permit, or the filing or approval of a compliance plan, does not relieve any person from civil or criminal liability for failure to comply with the provisions of the Air Quality Control Act, the federal act, federal regulations thereunder, any applicable regulations of the board, and any other applicable law or regulation.

(7) The department may include part or all of the contents of the application as terms and conditions of the permit or permit modification. The department shall not apply permit terms and conditions upon emissions of regulated pollutants for which there are no applicable requirements, unless the source is major for that pollutant.

(8) Fugitive emissions from a source shall be included in the operating permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source.

(9) The acid rain portion of operating permits for acid rain sources shall additionally:

(a) state that, where an applicable requirement of the federal act is more stringent than an applicable requirement of regulations promulgated under Title IV of the federal act, both provisions shall be incorporated into the permit and shall be enforceable by the administrator; and

(b) contain a permit condition prohibiting emissions exceeding any allowances that the acid rain source lawfully holds under Title IV of the federal act or the regulations promulgated thereunder; no permit modification under this Part shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit modification under

any other applicable requirement; no limit shall be placed on the number of allowances held by the acid rain source; the permittee may not use allowances as a defense to noncompliance with any other applicable requirement; any such allowance shall be accounted for according to the procedures established in regulations promulgated under Title IV of the federal act.

B. Permit duration. The department shall issue operating permits for a fixed term of five years.

C. Monitoring.

(1) Each permit shall contain all emissions monitoring requirements, and analysis procedures or test methods, required to assure and verify compliance with the terms and conditions of the permit and applicable requirements, including any procedures and methods promulgated by the administrator.

(2) Where the applicable requirement does not require periodic testing or instrumental or noninstrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), the permit shall require periodic monitoring sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit, as reported pursuant to Subsection E of 20.2.70.302 NMAC. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement.

(3) The permit shall also contain specific requirements concerning the use, maintenance, and, when appropriate, installation of monitoring equipment or methods.

D. Recordkeeping.

(1) The permit shall require recordkeeping sufficient to assure and verify compliance with the terms and conditions of the permit, including recordkeeping of:

(a) the date, place as defined in the permit, and time of sampling or measurements;

(b) the date(s) analyses were performed;

(c) the company or entity that performed the analyses;

(d) the analytical techniques or methods used;

(e) the results of such analyses; and

(f) the operating conditions existing at the time of sampling or measurement.

(2) Records of all monitoring data and support information shall be retained for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Supporting information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit.

E. Reporting. The permit shall require reporting sufficient to assure and verify compliance with the terms and conditions of the permit and all applicable requirements, including all of the following.

(1) Submittal of reports of any required monitoring at least every six months. The reports shall be due to the department within 45 days of the end of the permittee's reporting period. All instances of deviations from permit requirements, including emergencies, must be clearly identified in such reports. All required reports must be certified by a responsible official consistent with Subsection E of 20.2.70.300 NMAC.

(2) Prompt reporting of all deviations from permit requirements, including those attributable to upset conditions as defined in the permit, the probable cause of such deviations, and any corrective actions or preventive measures taken. The report shall be contained in the report submitted in accordance with the timeframe given in Paragraph (1) of Subsection E of 20.2.70.302 NMAC.

(3) Submittal of compliance certification reports at least every 12 months (or more frequently if so specified by an applicable requirement) certifying the source's compliance status with terms and conditions contained in the permit, including emission limitations, standards, or work practices. The reports shall be due to the department within 30 days of the end of the permittee's reporting period. Such compliance certifications shall be submitted to the administrator as well as to the department and shall include:

(a) the identification of each term or condition of the permit that is the basis of the certification;

(b) the compliance status of the source;

(c) whether compliance was continuous or intermittent;

(d) the method(s) used for determining the compliance status of the source, currently and during the reporting period identified in the permit; and

(e) such other facts as the department may require to determine the compliance status of the source.

(4) Such additional provisions as may be specified by the administrator to determine the compliance status of the source.

F. Portable and temporary sources. The department may issue permits for portable and temporary sources which allow such sources to relocate without undergoing a permit modification. Such permits shall not apply to acid rain sources and shall include conditions to assure that:

(1) the source is installed at all locations in a manner conforming with the permit;

(2) the source shall comply with all applicable requirements and all other provisions of this Part at all authorized locations;

(3) the owner or operator shall notify the department in writing at least 15 calendar days in advance of each change in location;

(4) notification shall include a legal description of where the source is to be relocated and how long it will be located there; and

(5) emissions from the source shall not, at any location, result in or contribute to an exceedance of a national ambient air quality standard or increment or visibility requirement under Part C of Title I of the federal act; the department may require dispersion modeling to assure compliance at any location.

G. Compliance. To assure and verify compliance with the terms and conditions of the permit and with this Part, permits shall also include all the following.

(1) Require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized representatives of the department to perform the following:

(a) enter upon the permittee's premises where a source is located or emission related activity is conducted, or where records must be kept under the conditions of the permit;

(b) have access to and copy any records that must be kept under the conditions of the permit;

(c) inspect any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(d) sample or monitor any substances or parameters for the purpose of assuring compliance with the permit or applicable requirements or as otherwise authorized by the federal act.

(2) Require that sources required under Paragraph (11) of Subsection D of 20.2.70.300 NMAC to have a schedule of compliance submit progress reports to the department at least semiannually, or more frequently if specified in the applicable requirement or by the department. Such progress reports shall be consistent with the schedule of compliance and requirements of Paragraph (11) of Subsection D of 20.2.70.300 NMAC and shall contain:

(a) dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(b) an explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(3) Include such other provisions as the department may require.

H. Operational flexibility.

(1) Section 502(b)(10) changes.

(a) The permittee may make Section 502(b)(10) changes, as defined in 20.2.70.7 NMAC, without applying for a permit modification, if those changes are not Title I modifications and the changes do not cause the facility to exceed the emissions allowable under the permit (whether expressed as a rate of emissions or in terms of total emissions).

(b) For each such change, the permittee shall provide written notification to the department and the administrator at least seven days in advance of the proposed changes. Such notification shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change.

(c) The permittee and department shall attach each such notice to their copy of the relevant permit.

(d) If the written notification and the change qualify under this provision, the permittee is not required to comply with the permit terms and conditions it has identified that restrict the change. If the change does not qualify under this provision, the original terms of the permit remain fully enforceable.

(2) Emissions trading within a facility.

(a) The department shall, if an applicant requests it, issue permits that contain terms and conditions allowing for the trading of emissions increases and decreases in the permitted facility solely for the purpose of complying with a federally enforceable emissions cap that is established in the permit in addition to any applicable requirements. Such terms and conditions shall include all terms and conditions required under 20.2.70.302 NMAC to determine compliance. If applicable requirements apply to the requested emissions trading,

NMED Exhibit 7-I_000013

permit conditions shall be issued only to the extent that the applicable requirements provide for trading such increases and decreases without a case-by-case approval.

(b) The applicant shall include in the application proposed replicable procedures and permit terms that ensure the emissions trades are quantifiable and enforceable. The department shall not include in the emissions trading provisions any emissions units for which emissions are not quantifiable or for which there are no replicable procedures to enforce the emissions trades. The permit shall require compliance with all applicable requirements.

(c) For each such change, the permittee shall provide written notification to the department and the administrator at least seven days in advance of the proposed changes. Such notification shall state when the change will occur and shall describe the changes in emissions that will result and how these increases and decreases in emissions will comply with the terms and conditions of the permit.

(d) The permittee and department shall attach each such notice to their copy of the relevant permit.

I. Off-permit changes.

(1) Permittees are allowed to make, without a permit modification, changes that are not addressed or prohibited by the operating permit, if:

(a) each such change meets all applicable requirements and shall not violate any existing permit term or condition;

(b) such changes are not subject to any requirements under Title IV of the federal act and are not Title I modifications;

(c) such changes are not subject to permit modification procedures under 20.2.70.404 NMAC; and

(d) the permittee provides contemporaneous written notice to the department and US EPA of each such change, except for changes that qualify as insignificant activities. Such written notice shall describe each such change, including the date, any change in emissions, pollutants emitted and any applicable requirement that would apply as a result of the change.

(2) The permittee shall keep a record describing changes made at the source that result in emissions of a regulated air pollutant subject to an applicable requirement, but not otherwise regulated under the permit, and the emissions resulting from those changes.

J. Permit shield.

(1) Except as provided in this Part, the department shall expressly include in a Part 70 (20.2.70 NMAC) permit a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:

(a) such applicable requirements are included and are specifically identified in the permit; or

(b) the department, in acting on the permit application or significant permit modification, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.

(2) A Part 70 (20.2.70 NMAC) permit that does not expressly state that a permit shield exists for a specific provision shall be presumed not to provide such a shield for that provision.

(3) Nothing in Subsection J of 20.2.70.302 NMAC or in any Part 70 (20.2.70 NMAC) permit shall alter or affect the following:

(a) the provisions of Section 303 of the federal act - Emergency Powers, including the authority of the administrator under that Section, or the provisions of the New Mexico Air Quality Control Act, Section 74-2-10 NMSA 1978;

(b) the liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;

(c) the applicable requirements of the acid rain program, consistent with Section 408(a) of the federal act; or

(d) the ability of US EPA to obtain information from a source pursuant to Section 114 of the federal act, or the department to obtain information subject to the New Mexico Air Quality Control Act, Section 74-2-13 NMSA 1978.

(4) The permit shield shall remain in effect if the permit terms and conditions are extended past the expiration date of the permit pursuant to Subsection D of 20.2.70.400 NMAC.

(5) The permit shield shall extend to terms and conditions that allow emission increases and decreases as part of emissions trading within a facility pursuant to Paragraph (2) of Subsection H of 20.2.70.302

NMAC, and to all terms and conditions under each operating scenario included pursuant to Paragraph (3) of Subsection A of 20.2.70.302 NMAC.

(6) The permit shield shall not extend to administrative amendments under Subsection A of 20.2.70.404 NMAC, to minor permit modifications under Subsection B of 20.2.70.404 NMAC, to Section 502(b)(10) changes under Paragraph (1) of Subsection H of 20.2.70.302 NMAC, or to permit terms or conditions for which notice has been given to reopen or revoke all or part under 20.2.70.405 NMAC.

[20.2.70.302 NMAC - Rp, 20.2.70.302 NMAC, 9/15/2025]

20.2.70.303 GENERAL PERMITS:

A. Issuance of general permits.

(1) The department may, after notice and opportunity for public participation and US EPA and affected program review, issue a general permit covering numerous similar sources. Such sources shall be generally homogenous in terms of operations, processes and emissions, subject to the same or substantially similar requirements, and not subject to case-by-case standards or requirements.

(2) Any general permit shall comply with all requirements applicable to other operating permits and shall identify criteria by which sources may qualify for the general permit.

B. Authorization to operate under a general permit.

(1) The owner or operator of a Part 70 source which qualifies for a general permit must:

(a) apply to the department for coverage under the terms of the general permit; or

(b) apply for an operating permit consistent with 20.2.70.300 NMAC.

(2) The department may, in the general permit, provide for applications which deviate from the requirements of Subsection D of 20.2.70.300 NMAC, provided that such applications meet the requirements of the federal act and include all information necessary to determine qualification for, and to assure compliance with, the general permit. The department shall review the application for authorization to operate under a general permit for completeness within 30 days after its receipt of the application.

(3) The department shall authorize qualifying sources which apply for coverage under the general permit to operate under the terms and conditions of the general permit. The department shall take final action on a general permit authorization request within 90 days of deeming the application complete.

(4) The department may grant a request for authorization to operate under a general permit without repeating the public participation procedures required under 20.2.70.401 NMAC. Such an authorization shall not be a permitting action for purposes of administrative review under New Mexico Air Quality Control Act Subsection H of Section 74-2-7, NMSA 1978. Permitting action for the purposes of Section 74-2-7 NMSA 1978 shall be the issuance of the general permit.

(5) Authorization to operate under a general permit shall not be granted for acid rain sources unless otherwise provided in regulations promulgated under Title IV of the federal act.

(6) The permittee shall be subject to enforcement action for operation without an operating permit if the source is later determined not to qualify for the conditions and terms of the general permit.

[20.2.70.303 NMAC - Rp, 20.2.70.303 NMAC, 9/15/2025]

20.2.70.304 [RESERVED]

[20.2.70.304 NMAC - Rp, 20.2.70.304 NMAC, 9/15/2025]

20.2.70.305 to 20.2.70.399 [RESERVED]

20.2.70.400 ACTION ON PERMIT APPLICATIONS:

A. A permit (including permit renewal) or permit modification shall only be issued if all of the following conditions have been met:

(1) the department has received a complete application for a permit, permit modification, or permit renewal, except that a complete application need not be received before issuance of a general permit under 20.2.70.303 NMAC;

(2) except for administrative and minor permit modifications, the department has complied with the requirements for public participation procedures under 20.2.70.401 NMAC;

(3) except for administrative amendments, the department has complied with the requirements for notifying and responding to affected programs under 20.2.70.402 NMAC;

(4) the conditions of the permit provide for compliance with all applicable requirements and the requirements of this Part; and

(5) the administrator has received a copy of the proposed permit and any notices required under 20.2.70.402 NMAC, and has not objected to issuance of the permit within the time period specified within 20.2.70.402 NMAC.

B. The department shall, within 60 days after its receipt of an application for a permit or significant permit modification, review such application for completeness. Unless the department determines that an application is not complete, requests additional information or otherwise notifies the applicant of incompleteness within 60 days of receipt of an application, the application shall be deemed complete. When additional information is requested by the department prior to ruling an application complete, receipt of such information shall be processed as a new application for purposes of 20.2.70.400 NMAC. If the application is judged complete, a certified letter to that effect shall be sent to the applicant. If the application is judged incomplete a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to judge the application complete.

C. The department shall take final action on each permit application (including a request for permit renewal) within 18 months after an application is ruled complete by the department, except that:

(1) for sources in operation on or before December 19, 1994 and which submit to the department timely and complete applications in accordance with 20.2.70.300 NMAC, the department shall take final action on one-third of such applications annually over a period not to exceed three years after such effective date;

(2) any complete permit application containing an early reduction demonstration under Section 112(i)(5) of the federal act shall be acted on within nine months of deeming the application complete; and

(3) the acid rain portion of permits for acid rain sources shall be acted upon in accordance with the deadlines in Title IV of the federal act and the regulations promulgated thereunder.

D. If a timely and complete application for a permit renewal is submitted, consistent with 20.2.70.300 NMAC, but the department has failed to issue or disapprove the renewal permit before the end of the term of the previous permit, then the permit shall not expire and all the terms and conditions of the permit shall remain in effect until the renewal permit has been issued or disapproved.

E. Permits being renewed are subject to the same procedural requirements, including those for public participation, affected program and US EPA review, that apply to initial permit issuance.

F. The department shall state within the draft permit the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions).

G. The department shall grant or disapprove the permit based on information contained in the department's administrative record. The administrative record shall consist of the application, any additional information submitted by the applicant, any evidence or written comments submitted by interested persons, any other evidence considered by the department, and, if a public hearing is held, the evidence submitted at the hearing.

H. If the department grants or disapproves a permit or permit modification, the department shall notify the applicant by certified mail of the action taken and the reasons therefor. If the department grants a permit or modification, the department shall mail the permit or modification, including all terms and conditions, to the applicant by certified mail.

I. Voluntary discontinuation. Upon request by the permittee, the department shall permanently discontinue a Part 70 (20.2.70 NMAC) permit. Permit discontinuance terminates the permittee's right to operate the source under the permit. The department shall confirm the permit discontinuance by certified letter to the permittee.

J. No permit shall be issued by failure of the department to act on an application or renewal.

[20.2.70.400 NMAC - Rp, 20.2.70.400 NMAC, 9/15/2025]

20.2.70.401 PUBLIC PARTICIPATION:

A. Proceedings for all permit issuances (except administrative and minor permit modifications, pursuant to Paragraph (2) of Subsection A of 20.2.70.400 NMAC) including renewals, significant permit modifications, reopenings, revocations and terminations, and all modifications to the department's list of insignificant activities, shall include public notice and provide an opportunity for public comment. The department shall provide 30 days for public and affected program comment. The department may hold a public hearing on the draft permit, a proposal to suspend, reopen, revoke or terminate a permit, or for any reason it deems appropriate, and shall hold such a hearing in the event of significant public interest. The department shall give notice of any public hearing at least 30 days in advance of the hearing.

B. Public notice and notice of public hearing shall be given by publication in a newspaper of general circulation in the area where the source is located or in a state publication designed to give general public notice, to persons on a mailing list developed by the department, including those who request in writing to be on the list, and by other means if necessary to assure adequate notice to the affected public.

C. The public notice shall identify:

(1) the affected facility;

(2) the names and addresses of the applicant or permittee and its owners;

(3) the name and address of the department;

(4) the activity or activities involved in the permit action;

(5) the emissions change(s) involved in any permit modification;

(6) the name, address and telephone number of a person from whom interested persons may obtain additional information, including copies of the permit draft, the application, and relevant supporting materials;

(7) a brief description of the comment procedures required by the department; and

(8) as appropriate, a statement of procedures to request a hearing, or the time and place of any scheduled hearing.

D. Notice of public hearing shall identify:

(1) the affected facility;

(2) the names and addresses of the applicant or permittee and its owners;

(3) the name and address of the department;

(4) the activity or activities involved in the permit action;

(5) the name, address and telephone number of a person from whom interested persons may obtain additional information;

(6) a brief description of hearing procedures; and

(7) the time and place of the scheduled hearing.

E. Public hearings shall be held in the geographic area likely to be impacted by the source. The time, date, and place of the hearing shall be determined by the department. The department shall appoint a hearing officer. A transcript of the hearing shall be made at the request of either the department or the applicant and at the expense of the person requesting the transcript. At the hearing, all interested persons shall be given a reasonable chance to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing.

F. The department shall keep a record of the commenters and also of the issues raised during the public participation process so that the administrator may fulfill his or her obligation under Section 505(b)(2) of the federal act to determine whether a citizen petition may be granted. Such records shall be available to the public upon request.

G. The department shall provide such notice and opportunity for participation by affected programs as is provided for by 20.2.70.402 NMAC.

[20.2.70.401 NMAC - Rp, 20.2.70.401 NMAC, 9/15/2025]

20.2.70.402 REVIEW BY THE ADMINISTRATOR AND AFFECTED PROGRAMS:

A. Notification: The department shall not issue an operating permit (including permit renewal or reissuance), minor permit modification or significant permit modification, until affected programs and the administrator have had an opportunity to review the proposed permit as required under 20.2.70.402 NMAC. Permits for source categories waived by the administrator from this requirement and any permit terms or conditions which are not required under the federal act or under any of its requirements are not subject to administrator review or approval.

(1) Within five days of notification by the department that the application has been determined complete, the applicant shall provide a copy of the complete permit application (including the compliance plan and all additional materials submitted to the department) directly to the administrator. The permit or permit modification shall not be issued without certification to the department of such notification. The department shall provide to the administrator a copy of each draft permit, each proposed permit, each final operating permit, and any other relevant information requested by the administrator.

(2) The department shall provide notice of each draft permit to any affected program on or before the time that the department provides this notice to the public under 20.2.70.401 NMAC, except to the extent that minor permit modification procedures require the timing of the notice to be different.

(3) The department shall keep for five years such records and submit to the administrator such information as the administrator may reasonably require to ascertain whether the state program complies with the requirements of the federal act or related applicable requirements.

B. Responses to objections:

(1) No permit for which an application must be transmitted to the administrator under this Part shall be issued by the department if the administrator, after determining that issuance of the proposed permit

would not be in compliance with applicable requirements, objects to such issuance in writing within 45 days of receipt of the proposed permit and all necessary supporting information.

(2) If the administrator does not object in writing under Paragraph (1) of Subsection B of 20.2.70.402 NMAC, any person may, within 60 days after the expiration of the administrator's 45-day review period, petition the administrator to make such objection. Any such petition shall be based only on objections to the permit that were raised with reasonable specificity during the public comment period provided for in 20.2.70.401 NMAC, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the administrator objects to the permit as a result of a petition filed under Paragraph (2) of Subsection B of 20.2.70.402 NMAC, the department shall not issue the permit until the administrator's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to the administrator's objection.

(3) The department, as part of the submittal of the proposed permit to the administrator (or as soon as possible after the submittal for minor permit modification procedures allowed under Subsection B of 20.2.70.404 NMAC), shall notify the administrator and any affected program in writing of any refusal by the department to accept all recommendations for the proposed permit that the affected program submitted during the public or affected program review period. The notice shall include the department's reasons for not accepting any such recommendation. The department is not required to accept recommendations that are not based on federally enforceable applicable requirements.

[20.2.70.402 NMAC - Rp, 20.2.70.402 NMAC, 9/15/2025]

20.2.70.403 PETITIONS FOR REVIEW OF FINAL ACTION:

A. Hearing before the board:

(1) Any person who participated in a permitting action before the department and who is adversely affected by such permitting action may file a petition for hearing before the board. For the purposes of 20.2.70.403 NMAC, permitting action shall include the failure of the department to take final action on an application for a permit (including renewal) or permit modification within the time specified in this Part.

(2) The petition shall be made in writing to the board within 30 days from the date notice is given of the department's action and shall specify the portions of the permitting action to which the petitioner objects, certify that a copy of the petition has been mailed or hand-delivered as required by Paragraph (2) of Subsection A of 20.2.70.403 NMAC, and attach a copy of the permitting action for which review is sought. Unless a timely request for hearing is made, the decision of the department shall be final. The petition shall be copied simultaneously to the department upon receipt of the appeal notice. If the petitioner is not the applicant or permittee, the petitioner shall mail or hand-deliver a copy of the petition to the applicant or permittee. The department shall certify the administrative record to the board.

(3) If a timely request for hearing is made, the board shall hold a hearing within 60 days of receipt of the petition in accordance with New Mexico Air Quality Control Act Section 74-2-7 NMSA 1978.

B. Judicial review:

(1) Any person who is adversely affected by an administrative action taken by the board pursuant to Subsection A of 20.2.70.403 NMAC may appeal to the court of appeals in accordance with New Mexico Air Quality Control Act, Section 74-2-9 NMSA 1978. Petitions for judicial review must be filed no later than 30 days after the administrative action.

(2) The judicial review provided for by 20.2.70.403 NMAC shall be the exclusive means for obtaining judicial review of the terms and conditions of the permit.

[20.2.70.403 NMAC - Rp, 20.2.70.403 NMAC, 9/15/2025]

20.2.70.404 PERMIT MODIFICATIONS:

A. Administrative permit amendments:

(1) An administrative permit amendment is one that:

(a) corrects typographical errors;

(b) provides for a minor administrative change at the source, such as a change in the address or phone number of any person identified in the permit;

(c) incorporates a change in the permit solely involving the retiring of an emissions unit;

(d) requires more frequent monitoring or reporting by the permittee; or

(e) any other type of change which has been determined by the department and the administrator to be similar to those in Paragraph (1) of Subsection A of 20.2.70.404 NMAC.

(2) Changes in ownership or operational control of a source may be made as administrative amendments provided that:

(a) a written agreement, containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee, has been submitted to the department, and either the department has determined that no other change in the permit is necessary, or changes deemed necessary by the department have been made;

(b) the new owners have submitted the application information required in Paragraph (2) of Subsection D of 20.2.70.300 NMAC;

(c) no grounds exist for permit termination, as set out in Subparagraphs (b) and (c) of Paragraph (3) of Subsection A of 20.2.70.405 NMAC; and

(d) the permittee has published a public notice of the change in ownership of the source in a newspaper of general circulation in the area where the source is located.

(3) The department may incorporate administrative permit amendments without providing notice to the public or affected programs, provided that it designates any such permit modifications as administrative permit amendments and submits a copy of the revised permit to the administrator.

(4) The department shall take no more than 60 days from receipt of a request for an administrative permit amendment to take final action on such request. The permittee may implement the changes outlined in Subparagraphs (a) through (d) of Paragraph (1) of Subsection A of 20.2.70.404 NMAC immediately upon submittal of the request for the administrative amendment. The permittee may implement the changes outlined in Subparagraph (e) of Paragraph (1) of Subsection A of 20.2.70.404 NMAC or Paragraph (2) of Subsection A of 20.2.70.404 NMAC upon approval of the administrative amendment by the department.

B. Minor permit modifications:

(1) Minor permit modification procedures may be used only for those permit modifications that:

(a) do not violate any applicable requirement;

(b) do not involve relaxation of existing monitoring, reporting, or recordkeeping requirements in the permit;

(c) do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(d) do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the permittee has assumed to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include any federally enforceable emissions cap assumed to avoid classification as a Title I modification and any alternative emissions limit approved pursuant to regulations promulgated under Section 112(i)(5) of the federal act;

(e) are not Title I modifications; and

(f) are not required by the department to be processed as a significant modification pursuant to Subsection C of 20.2.70.404 NMAC.

(2) A permittee shall not submit multiple minor permit modification applications that may conceal a larger modification that would not be eligible for minor permit modification procedures. The department may, at its discretion, require that multiple related minor permit modification applications be submitted as a significant permit modification.

(3) An application requesting the use of minor permit modification procedures shall meet the requirements of Subsections C and D of 20.2.70.300 NMAC and shall include:

(a) a description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;

(b) the applicant's suggested draft permit;

(c) certification by a responsible official, consistent with Subsection E of 20.2.70.300 NMAC, that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and

(d) if the requested permit modification would affect existing compliance plans or schedules, related progress reports, or certification of compliance requirements, an outline of such effects.

(4) The department shall, within 30 days after its receipt of an application for a minor permit modification, review such application for completeness. Unless the department determines that an application is not

NMED Exhibit 7-I_000019

complete, requests additional information or otherwise notifies the applicant of incompleteness within 30 days of receipt of an application, the application shall be deemed complete. If the application is judged complete, a certified letter to that effect shall be sent to the applicant. If the application is judged incomplete a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to judge the application complete.

(5) Within five working days of notification by the department that the minor permit modification application has been determined complete, the applicant shall meet its obligation under Subsection A of 20.2.70.402 NMAC to notify the administrator of the requested permit modification. The department promptly shall send any notice required under Paragraph (2) of Subsection A of 20.2.70.402 NMAC and Subsection B of 20.2.70.402 NMAC to the administrator and affected programs.

(6) The permittee may make the change proposed in its minor permit modification application immediately after such application is deemed complete. After the permittee makes the change allowed by the preceding sentence, and until the department takes any of the actions specified in Paragraph (7) of Subsection B of 20.2.70.404 NMAC below, the permittee must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time period, the permittee need not comply with the existing permit terms and conditions it seeks to modify. If the permittee fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(7) The department may not issue a final minor permit modification until after the administrator's 45-day review period of the proposed permit modification or until US EPA has notified the department that the administrator will not object to issuance of the permit modification, although the department may approve the permit modification prior to that time. Within 90 days of ruling the application complete under minor permit modification procedures or within 15 days after the end of the administrator's 45-day review period, whichever is later, the department shall:

(a) issue the permit modification as it was proposed;

(b) disapprove the permit modification application;

(c) determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures; or

(d) revise the draft permit modification and transmit to the administrator the new proposed permit modification as required by Subsection A of 20.2.70.402 NMAC.

C. Significant permit modifications:

(1) A significant permit modification is:

(a) any revision to an operating permit that does not meet the criteria under the provisions for administrative permit amendments under Subsection A of 20.2.70.404 NMAC or for minor permit modifications under Subsection B of 20.2.70.404 NMAC above;

(b) any modification that would result in any relaxation in existing monitoring, reporting or recordkeeping permit terms or conditions;

(c) any modification for which action on the application would, in the judgment of the department, require decisions to be made on significant or complex issues; and

(d) changes in ownership which do not meet the criteria of Paragraph (2) of Subsection A of 20.2.70.404 NMAC.

(2) For significant modifications which are not required to undergo preconstruction permit review and approval, changes to the source which qualify as significant permit modifications shall not be made until the department has issued the operating permit modification.

(3) For significant modifications which have undergone preconstruction permit review and approval, the permittee shall:

(a) before commencing operation, notify the department in writing of any applicable requirements and operating permit terms and conditions contravened by the modification, emissions units affected by the change, and allowable emissions increases resulting from the modification; and

(b) within 12 months after commencing operation, file a complete operating permit modification application.

(4) Where an existing operating permit would specifically prohibit such change, the permittee must obtain an operating permit modification before commencing operation or implementing the change.

(5) Significant permit modifications shall meet all requirements of this Part for permit issuance, including those for applications, public participation, review by affected programs and review by the administrator.

(6) The department shall complete review on the majority of significant permit modification applications within nine months after the department rules the applications complete.

D. Modifications to acid rain sources: Administrative permit amendments and permit modifications for purposes of the acid rain portion of the permit shall be governed by regulations promulgated by the administrator under Title IV of the federal act.

[20.2.70.404 NMAC - Rp, 20.2.70.404 NMAC, 9/15/2025]

20.2.70.405 PERMIT REOPENING, REVOCATION OR TERMINATION:

A. Action by the department:

(1) Each permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration of the permit. A permit shall be reopened and revised for any of the following, and may be revoked and reissued for Subparagraphs (c) or (d) of Paragraph (1) of Subsection A of 20.2.70.405 NMAC:

(a) additional applicable requirements under the federal act become applicable to a major source with a remaining permit term of three or more years. Such a reopening shall be completed not later than 18 months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms or conditions have been extended past the expiration date of the permit pursuant to Subsection D of 20.2.70.400 NMAC;

(b) additional requirements (including excess emissions requirements) become applicable to a source under the acid rain program promulgated under Title IV of the federal act. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit;

(c) the department or the administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the terms or conditions of the permit; or

(d) the department or the administrator determines that the permit must be revised or revoked and reissued to assure compliance with the applicable requirements.

(2) Proceedings to reopen and revise, or revoke and reissue, a permit shall affect only those parts of the permit for which cause to reopen or revoke exists. Units for which permit conditions have been revoked shall not be operated until permit reissuance. Reopenings shall be made as expeditiously as practicable.

(3) A permit, or an authorization to operate under a general permit, may be terminated when:

(a) the permittee fails to meet the requirements of an approved compliance plan;

(b) the permittee has been in significant or repetitious non-compliance with the operating permit terms or conditions;

(c) the applicant or permittee has exhibited a history of willful disregard for environmental laws of any state or Tribal authority, or of the United States;

(d) the applicant or permittee has knowingly misrepresented a material fact in any application, record, report, plan, or other document filed or required to be maintained under the permit;

(e) the permittee falsifies, tampers with or renders inaccurate any monitoring device or method required to be maintained under the permit;

(f) the permittee fails to pay fees required under the fee schedule in 20.2.71 NMAC (Operating Permit Emissions Fees); or

(g) the administrator has found that cause exists to terminate the permit.

(4) The department shall, by certified mail, provide a notice of intent to the permittee at least 30 days in advance of the date on which a permit is to be reopened or revoked, or terminated, except that the department may provide a shorter time period in the case of an emergency. The notice shall state that the permittee may, within 30 days of receipt, submit comments or request a hearing on the proposed permit action.

B. Action by the administrator: Within 90 days, or longer if the administrator extends this period, after receipt of written notification that the administrator has found that cause exists to terminate, modify or revoke and reissue a permit, the department shall forward to the administrator a proposed determination of termination, modification, or revocation and reissuance, as appropriate. Within 90 days from receipt of an administrator objection to a proposed determination, the department shall address and act upon the administrator's objection.

C. Compliance orders: Notwithstanding any action which may be taken by the department or the administrator under Subsections A and B of 20.2.70.405 NMAC, a compliance order issued pursuant to New Mexico Air Quality Control Act Section 74-2-12 NMSA 1978 may include a suspension or revocation of any permit or portion thereof.

20.2.70.407 VARIANCES: Pursuant to New Mexico Air Quality Control Act Section 74-2-8 NMSA 1978, applicants and permittees may seek a variance from the non-federally enforceable provisions of this Part.
[20.2.70.407 NMAC - Rp, 20.2.70.407 NMAC, 9/15/2025]

20.2.70.408 ENFORCEMENT: Notwithstanding any other provision in the New Mexico state implementation plan approved by the administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of the terms or conditions of a permit issued pursuant to this Part.

A. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(1) a monitoring or information gathering method approved for the source pursuant to this Part and incorporated in an operating permit; or

(2) compliance methods specified in the New Mexico state implementation plan.

B. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(1) any federally enforceable monitoring or testing methods, including those in 40 CFR Parts 51, 60, 61 and 75; and

(2) other testing, monitoring or information gathering methods that produce information comparable to that produced by any method under Subsection A of 20.2.70.408 NMAC or Paragraph (1) of Subsection B of 20.2.70.408 NMAC.

EIB/AQCR 770, Air Quality Control Regulation 770 - Operating Permits, filed 11/15/93.

History of Repealed Material:
20.2.70 NMAC, Operating Permits, effective 06/14/02 – Repealed, effective 9/15/2025 and replaced by 20.2.70 NMAC, Operating Permits, effective 9/15/2025.

Other History:
EIB/AQCR 770, Air Quality Control Regulation 770 - Operating Permits, filed 11/15/93 was **renumbered** into first version of the New Mexico Administrative Code as 20 NMAC 2.70, Operating Permits, filed 10/30/95;
20 NMAC 2.70, Operating Permits, filed 10/30/95 was **renumbered, reformatted and replaced** by 20.2.70 NMAC, Operating Permits, effective 06/14/02.

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 72 CONSTRUCTION PERMITS

20.2.72.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.72.1 NMAC - Rn, 20 NMAC 2.72.100, 2/2/01]

20.2.72.2 SCOPE: All persons who intend to construct or modify a source, except as otherwise provided by this Part.
[20.2.72.2 NMAC - Rn, 20 NMAC 2.72.101, 2/2/01]

20.2.72.3 STATUTORY AUTHORITY: Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4) and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Section 74-2-7(A)(1), (B), (C) and (D).
[20.2.72.3 NMAC - Rn, 20 NMAC 2.72.102, 2/2/01]

20.2.72.4 DURATION: Permanent. Notwithstanding the applicability provisions of 20.2.72.402 NMAC, the Department is stayed from enforcing requirements relating to asphalt fumes as a toxic air pollutant for new or modified sources until September 1, 1997.
[20.2.72.4 NMAC - Rn, 20 NMAC 2.72.103, 2/2/01]

20.2.72.5 EFFECTIVE DATE: November 30, 1995 except where a later date is cited at the end of a section or paragraph.
[The latest effective date of any section in this Part is 9/6/06.]
[20.2.72.5 NMAC - Rn, 20 NMAC 2.72.104, 2/2/01]

20.2.72.6 OBJECTIVE: The objective of this part is to establish the requirements for obtaining a construction permit.
[20.2.72.6 NMAC - Rn, 20 NMAC 2.72.105, 2/2/01]

20.2.72.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions) as used in this part:

A. "Accelerated review" means an optional process of permit application review that allows the department to utilize a qualified outside firm to assist in review of a construction permit application.

B. "Affiliate," for the purposes of accelerated review, means a person that directly or indirectly, through one or more intermediaries, controls or is under common control with another person. Control includes the possession of the power to direct or cause the direction of management and policies of a person, whether directly or indirectly through the ownership, control or holding with the power to vote ten percent or more of the person's voting securities.

C. "Air pollution control equipment" means any device, equipment, process or combination thereof the operation of which would limit, capture, reduce, confine, or otherwise control air contaminants or convert for the purposes of control any air contaminant to another form, another chemical or another physical state.

D. "Ambient air" means the outdoor atmosphere, but does not include the area entirely within the boundaries of the industrial or manufacturing property within which the air contaminants are or may be emitted and public access is restricted within such boundaries.

E. "Coal mining operation" means the business of developing, producing, preparing or loading bituminous coal, subbituminous coal, anthracite, or lignite, or of reclaiming the areas upon which such activities occur. This definition does not include coal preparation plants.

F. "Coal preparation plant" means any facility which prepares coal by one or more of the following processes: breaking, crushing, screening, wet or dry cleaning, and thermal drying.

G. "Commencement" means that an owner or operator has undertaken a continuous program of construction or modification.

H. "Conflict of interest," for the purposes of accelerated review, means any direct or indirect relationship between the qualified outside firm and the applicant or other interested person that would cause a reasonable person with knowledge of the relevant facts to question the integrity or impartiality of the qualified outside firm in review of the application. A conflict of interest does not include any gifts, gratuities, financial or

NMED Exhibit 7-J_000001

contractual relationship of less than one hundred dollars ($100) in value for the twelve month period preceding Department receipt of the application. A conflict of interest includes but is not limited to the following examples:

(1) Gifts or gratuities of value have been exchanged between the qualified outside firm and the applicant.

(2) The qualified outside firm has provided goods or services to the applicant within one year prior to the start, or during the term, of the accelerated review process.

(3) An express or implied contractual relationship exists between the qualified outside firm and the applicant and the qualified outside firm has provided goods or services to the applicant through that relationship within five years prior to the start of the accelerated review process.

(4) There is a current financial relationship between the qualified outside firm and the applicant. Current financial relationships include, but are not limited to:

(a) The qualified outside firm owes anything of value to, or is owed anything of value by the applicant.

(b) The qualified outside firm has provided goods or services to the applicant and has issued a warranty or guarantee for the work that is still in effect during the time the contracted work for accelerated review is being performed.

(5) A director, officer, or employee of the qualified outside firm, who will perform services under a contract pursuant to this section (20.2.72.221 NMAC), has one or more personal, business, or financial interests or relationships with the applicant or any director, officer or employee of the applicant which would cause a reasonable person with knowledge of the relevant facts to question the integrity or impartiality of those who are or will be acting under a contract.

(6) A director, officer or employee of the qualified outside firm was a director, officer or employee of the applicant within one year prior to the start of the accelerated review process.

(7) Except where allowed by the department, communication has been made between the qualified outside firm and the applicant regarding the substance of the application before a qualified outside firm has been selected to perform accelerated review of an application. Direct communication between the qualified outside firm and the applicant may take place once the qualified outside firm has been selected by the department.

(8) Any affiliate of the applicant has any of the above identified relationships with the qualified outside firm.

(9) Any affiliate of the qualified outside firm has any of the above identified relationships with the applicant.

(10) Any affiliate of the applicant has any of the above identified relationships with any affiliate of the qualified outside firm.

I. "Construction" means fabrication, erection, installation or relocation of a stationary source, including but not limited to temporary installations and portable stationary sources.

J. "Emergency" means unforeseen circumstances resulting in an imminent and substantial endangerment to health, safety, or welfare which requires immediate action.

K. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator of the US EPA, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within any applicable State Implementation Plan, any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR Part 51, Subpart I including 40 CFR 51.165 and 40 CFR 51.166.

L. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

M. "Hazardous air pollutant" means an air contaminant which has been classified as a "hazardous air pollutant" by the administrator of the US EPA and is subject to a NESHAP.

N. "Interested person," as used in the definition of conflict of interest, means any person, other than the department, that is reasonably expected to provide or has provided substantive comment or technical evidence on the permit application.

O. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment, process equipment, or process to operate in an expected manner. Failures that are caused entirely or in part by poor maintenance, careless operation, or any other preventable equipment breakdown shall not be considered a malfunction.

P. "Modification" means any physical change in, or change in the method of operation of, a stationary source which results in an increase in the potential emission rate of any regulated air contaminant emitted

by the source or which results in the emission of any regulated air contaminant not previously emitted, but does not include:

(1) a change in ownership of the source;

(2) routine maintenance, repair or replacement;

(3) installation of air pollution control equipment, and all related process equipment and materials necessary for its operation, undertaken for the purpose of complying with regulations adopted by the board or pursuant to the federal act; or

(4) unless previously limited by enforceable permit conditions:

(a) an increase in the production rate, if such increase does not exceed the operating design capacity of the source;

(b) an increase in the hours of operation; or

(c) use of an alternative fuel or raw material if, prior to January 6, l975, the source was capable of accommodating such fuel or raw material, or if use of an alternate fuel or raw material is caused by any natural gas curtailment or emergency allocation or any other lack of supply of natural gas.

Q. "National Ambient Air Quality Standard" means, unless otherwise modified, the primary (health-related) and secondary (welfare-based) federal ambient air quality standards promulgated by the US EPA pursuant to Section 109 of the federal act.

R. "National Emission Standards for Hazardous Air Pollutants" or **"NESHAP"** mean the regulatory requirements, guidelines and emission limitations promulgated by the US EPA pursuant to Section 112 of the federal act.

S. "New Source Performance Standard" or **"NSPS"** means the regulatory requirements, guidelines and emission limitations promulgated by the US EPA pursuant to Section 111 of the federal act.

T. "Nonattainment area" means for any air contaminant an area which is shown by monitored data or which is calculated by air quality modeling (or other methods determined by the administrator to be reliable) to exceed any national or New Mexico ambient air quality standard for such contaminant. Such term includes any areas identified under Sub-paragraphs (A) through (C) of Section 107 (d)(1) of the federal act.

U. "Operator" means the person or persons responsible for the overall operation of a facility.

V. "Owner" means the person or persons who own a facility or part of a facility.

W. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.

X. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly, including for example but not limited to moveable sand and gravel processing operations and asphalt plants.

Y. "Potential emission rate" means the emission rate of a source at its maximum capacity to emit a regulated air contaminant under its physical and operational design, provided any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its physical and operational design only if the limitation or the effect it would have on emissions is enforceable by the department pursuant to the Air Quality Control Act or the federal Act.

Z. "Qualified outside firm" means any person who has entered into a contract with the department to provide assistance in the accelerated review of construction permit applications.

AA. "Regulated air contaminant" means, any air contaminant, the emission or ambient concentration of which is regulated pursuant to the New Mexico Air Quality Control Act or the federal act.

BB. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose, except routine phasing out of batch process units.

CC. "Standard Industrial Classification" or **"SIC"** means the code from the classification manual created by the Executive Office of the President-Office of Management and Budget, which categorizes industrial, manufacturing and commercial facilities, as listed in the Standard Industrial Code Manual published by the U.S. Government Printing Office, Washington D.C. 1972.

DD. "Startup" means the setting into operation of any air pollution control equipment, process equipment or process for any purpose, except routine phasing in of batch process units.

EE. "Stationary source" or **"source"** means any building, structure, equipment, facility, installation (including temporary installations), operation or portable stationary source which emits or may emit any air contaminant. Any research facility may group its sources for the purpose of this part at the discretion of the secretary.

NMED Exhibit 7-J_000003

20.2.72.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This part amends and supersedes Air Quality Control Regulation ("AQCR") 702 - Permits, filed May 29, 1990, as amended ("AQCR 702").

A. All references to AQCR 702 in any other rule shall be construed as a reference to this part.

B. The amendment and supersession of AQCR 702 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 702.

[20.2.72.8 NMAC - Rn, 20 NMAC 2.72.106, 2/2/01]

20.2.72.9 DOCUMENTS: Documents incorporated and cited in this part may be viewed at the New Mexico Environment Department, Air Quality Bureau, Harold Runnels Building, 1190 St. Francis Drive, Santa Fe, NM 87505.

[20.2.72.9 NMAC - Rn, 20 NMAC 2.72.108, 2/2/01]

20.2.72.10 - 20.2.72.199 [RESERVED]

20.2.72.200 APPLICATION FOR CONSTRUCTION, MODIFICATION, NSPS, AND NESHAP - PERMITS AND REVISIONS:

A. Permits must be obtained from the department by:

(1) Any person constructing a stationary source which has a potential emission rate greater than 10 pounds per hour or 25 tons per year of any regulated air contaminant for which there is a National or New Mexico Ambient Air Quality Standard. If the specified threshold in this subsection is exceeded for any one regulated air contaminant, all regulated air contaminants with National or New Mexico Ambient Air Quality Standards emitted are subject to permit review. Within this subsection, the potential emission rate for nitrogen dioxide shall be based on total oxides of nitrogen;

(2) Any person modifying a stationary source when all of the pollutant emitting activities at the entire facility, either prior to or following the modification, emit a regulated air contaminant for which there is a National or New Mexico Ambient Air Quality Standard with a potential emission rate greater than 10 pounds per hour or 25 tons per year and the regulated air contaminant is emitted as a result of the modification. If the specified threshold in this subsection is exceeded for any one regulated air contaminant, all regulated air contaminants with National or New Mexico Ambient Air Quality Standards emitted by the modification are subject to permit review. Within this subsection, the potential emission rate for nitrogen dioxide shall be based on total oxides of nitrogen;

(3) Any person constructing or modifying any source or installing any equipment which is subject to 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards for Hazardous Air Pollutants), or any other New Mexico Air Quality Control Regulation which contains emission limitations for any regulated air contaminant;

(4) For toxic air pollutants, see 20.2.72.400 NMAC - 20.2.72.499 NMAC;

(5) Any person constructing a stationary source which has a potential emission rate for lead greater than 5 tons per year or modifying a stationary source which either prior to or following the modification has a potential emission rate for lead greater than 5 tons per year; or

(6) Sources which are major sources of hazardous air pollutants by the definitions in 20.2.83 NMAC (Construction or Modification of Major Sources of Hazardous Air Pollutants).

B. Fugitive dust emissions from a coal mining operation shall not be subject to the requirements of Paragraph 1 of Subsection A of 20.2.72.200 NMAC. Note: New coal mining operations are required to have an approved air pollution control plan for fugitive dust emissions by the New Mexico surface coal mining commission.

C. Any source or modification meeting the applicability requirements of this part, but which is a major stationary source or a major modification as defined in 20.2.74 NMAC, shall in addition be subject to 20.2.74 NMAC (Prevention of Significant Deterioration).

D. Any source or modification meeting the applicability requirements of this part but which is a major stationary source or a major modification as defined in 20.2.79 NMAC, shall in addition be subject to 20.2.79 NMAC (Permits - Nonattainment Areas).

E. For all sources subject to this part, applications for permits shall be filed prior to the commencement of the construction, modification or installation. Regardless of the anticipated commencement date, no construction, modification or installation shall begin prior to issuance of the permit.

F. Temporary installations and portable stationary sources are subject to this part.

G. If a source consists of more than one unit, a separate permit may be required for each unit which is not substantially interrelated with another unit. A common connection leading to ductwork, pollution control equipment or a single stack shall not, by itself, constitute a substantial interrelationship.

H. Any source which previously did not require a permit because it was in existence before August 31, 1972 shall be subject to the requirements of this Part if operations cease for a period of five years or more and the source has a potential emission rate greater than 10 pounds per hour or 25 tons per year of any regulated air contaminant for which there is a National or New Mexico Ambient Air Quality Standard.

I. Any source meeting the applicability requirements of this part, but which is a major source of hazardous air pollutants, shall in addition be subject to 20.2.83 NMAC (Construction or Modification of Major Sources of Hazardous Air Pollutants).

[20.2.72.200 NMAC - Rn, 20 NMAC 2.72.II.200, 2/2/01]

20.2.72.201 NEW SOURCE REVIEW COORDINATION: In cases where the new source review requirements of either 20.2.74 NMAC, 20.2.77 NMAC, 20.2.78 NMAC, 20.2.79 NMAC, or 20.2.83 NMAC (Construction or Modifications of Major Sources of Hazardous Air Pollutants*)* apply to a new stationary source or modification in addition to this Part, the following provisions apply:

A. Only one permit application shall be submitted. The applicant shall submit a sufficient number of copies to meet the requirement of the applicable Part which requires the most copies;

B. The application shall be ruled administratively complete when information required by all applicable Parts has been submitted;

C. Definitions and requirements of each applicable Part are applied separately and do not supersede each other; and

D. After the requirements of all applicable Parts are met, only one permit shall be issued.

[20.2.72.201 NMAC - Rn, 20 NMAC 2.72.II.201, 2/2/01]

20.2.72.202 EXEMPTIONS: The following exemptions are made to the following requirements of 20.2.72.200 NMAC - 20.2.72.299 NMAC. The exemptions in this section do not apply to emissions of toxic air pollutants listed under 20.2.72.502 NMAC, do not alter the calculation of the potential emissions of toxic air pollutants for applicability under 20.2.72.402 NMAC, and do not exempt the department or the owner or operator of any source from any requirement under 20.2.72.403 NMAC, 20.2.72.404 NMAC, or 20.2.72.405 NMAC.

A. The following sources and activities shall not be reported in the permit application. Emissions from such activities shall not be included in the calculation of facility-wide potential emission rate under Paragraphs 1 or 2 of Subsection A of 20.2.72.200 NMAC. Such activities may be commenced or changed without a permit or permit revision under 20.2.72.200 NMAC - 20.2.72.299 NMAC:

(1) Activities which occur strictly for maintenance of grounds or buildings, including: lawn care, pest control, grinding, cutting, welding, painting, woodworking, sweeping, general repairs, janitorial activities, and building roofing operations;

(2) Activities for maintenance of equipment or pollution control equipment, either inside or outside of a building, including cutting, welding, and grinding, but excluding painting;

(3) Exhaust emissions from forklifts, courier vehicles, front end loaders, graders, carts, maintenance trucks, and fugitive emissions from fleet vehicle refueling operations, provided such emissions are not subject to any requirements under this Chapter (Air Quality), NSPS or NESHAP;

(4) Use of fire fighting equipment and fire fighting training;

(5) Government military activities such as field exercises, explosions, weapons testing and demolition to the extent that such activities:

(a) Do not result in visible emissions entering publicly accessible areas; and

(b) Are not subject to a NSPS or NESHAP;

(6) Office activities, such as photocopying;

(7) Test drilling for characterization of underground storage tank and waste disposal sites;

(8) Non-anthropogenic wind blown dust;

(9) Residential activities such as use of fireplaces, woodstoves, and barbecue cookers;

(10) Gases used to calibrate plant instrumentation, including continuous emission monitoring (CEM) systems;

(11) Food service, such as cafeteria activities;

(12) Automotive repair shop activities, except painting and use of solvents;

NMED Exhibit 7-J_000005

(13) Use of portable aerospace ground equipment (such as power generators, compressors, heaters, air conditioners, lighting units) in direct support of aircraft operations and on or in the immediate vicinity of an airfield;

(14) Activities which occur strictly for preventive maintenance of highway bridges, displays and water towers, including: grinding, cutting, welding, painting, and general repairs;

(15) The act of repositioning or relocating equipment, pipes, ductwork, or conveyors within the plant site, but only when such change in physical configuration does not:

(a) Reposition or relocate any source of air emissions or the emission points from any such source; or

(b) Increase the amount of air emissions or the ambient impacts of such emissions.

B. The presence of the following new or modified sources and activities at the facility shall be reported as provided for in the permit application forms supplied by the department. Emissions from such sources and activities shall not be included in the calculation of facility-wide potential emission rate under Paragraphs 1 or 2 of Subsection A of 20.2.72.200 NMAC. Construction of such sources or commencement of such activities after issuance of the permit shall be subject to the administrative permit revision procedures in 20.2.219 NMAC.

(1) Fuel burning equipment which is used solely for heating buildings for personal comfort or for producing hot water for personal use and which:

(a) Uses gaseous fuel and has a design rate less than or equal to five (5) million BTU per hour; or

(b) Uses distillate oil (not including waste oil) and has a design rate less than or equal to one (1) million BTU per hour;

(2) VOC emissions resulting from the handling or storing of any VOC if:

(a) Such VOC has a vapor pressure of less than two tenths (0.2) PSI at temperatures at which the compound is stored and handled; and

(b) The owner or operator maintains sufficient record keeping to verify that the requirements of Sub-paragraph (a) of this paragraph are met;

(3) Standby generators which are:

(a) Operated only during the unavoidable loss of commercial utility power;

(b) Operated less than 500 hours per year; and

(c) Either are:

(i) The only source of air emissions at the site; or

(ii) Accompanied by sufficient record keeping to verify that the standby generator is operated less than 500 hours per year;

(4) The act of repositioning or relocating sources of air emissions or emissions points within the plant site, but only when such change in physical configuration does not increase air emissions or the ambient impacts of such emissions;

(5) Any emissions unit, operation, or activity that has a potential emission rate of no more than one-half (1/2) ton per year of any pollutant for which a national or New Mexico ambient air quality standard has been set or one-half (1/2) ton per year of any VOC. Multiple emissions units, operations, and activities that perform identical or similar functions shall be combined in determining the applicability of this exemption;

(6) Surface coating of equipment, including spray painting, roll coating, and painting with aerosol spray cans, if:

(a) The potential emission rate of VOCs do not exceed ten (10) pounds per hour;

(b) The facility-wide total VOC content of all coating and clean-up solvent use is less than two (2) tons per year; and

(c) The owner or operator maintains sufficient record keeping to verify that the requirements in Sub-paragraphs (a) and (b) of this paragraph are met;

(7) Particulate emissions resulting from abrasive blasting operations, if:

(a) Blasting operations are entirely enclosed in a building; and

(b) No visible particulate emissions are released from the building.

C. For sources and units subject to 40 CFR Part 60 (NSPS), 40 CFR Part 61 (NESHAP) or other Parts of this Chapter (Air Quality), except 40 CFR Part 60 Subparts I (asphalt plants) and OOO (rock crushers), 40 CFR Part 61 Subpart C (Beryllium), and 40 CFR Part 61 Subpart D (Beryllium Rocket Motor Firing):

(1) Such sources and units shall be exempt from the applicability requirements in Paragraph 3 of Subsection A of 20.2.72.200 NMAC if such sources or units:

(a) Are included in a notice of intent filed under 20.2.73 NMAC (Notice of Intent and Emissions Inventory); or

(b) Have met the notification requirements to which they are subject under NSPS or NESHAP; and

(2) Applicability determinations under Paragraphs 1 and 2 of Subsection A of 20.2.72.200 NMAC shall take into account all federally enforceable emission limits established for such sources or units under NSPS, NESHAP and other parts of this chapter.

D. Portable source relocation. For a portable source which has been issued a permit under this part:

(1) Such source may relocate without undergoing a permit revision if:

(a) The source is installed in a manner conforming with the initial permit;

(b) The source continues to meet all applicable emission limitations and permit conditions; and

(c) The source meets the applicable requirements in Paragraphs 2 and 3 of Subsection D of 20.2.72.202 NMAC below;

(2) For each portable compressor engine which has been issued a streamlined permit in accordance with Paragraph 1 of Subsection D of 20.2.72.301 NMAC, the owner or operator shall complete the appropriate forms provided by the department and maintain such records on file for at least two (2) years;

(3) For all other portable sources, including but not limited to rock crushers and asphalt plants:

(a) The owner or operator shall notify the department, on the form provided by the department, at least fifteen (15) days prior to beginning installation at the new location;

(b) Operation at a new location of such source shall not commence until the department has approved the relocation in writing;

(c) The department shall not approve the relocation if it would result in exceedances of any national or New Mexico ambient air quality standard at the new location; and

(d) The department shall approve, deny, or approve with conditions, the relocation request within fifteen (15) days of receipt of the notice form.

[20.2.72.202 NMAC - Rn, 20 NMAC 2.72.II.202, 2/2/01]

20.2.72.203 CONTENTS OF APPLICATIONS:

A. Any person seeking a permit under Subsection A of 20.2.72.200 NMAC shall do so by filing a written application with the department. The applicant shall submit the number of copies of the permit application specified in the applicable application form. The items of this section, if requested on the applicable application form, are required before the department may deem an application administratively complete. The items may be modified by the department, as appropriate, for emergency permits processed under 20.2.72.215 NMAC. All applications shall, as required by the department:

(1) Be filled out on the form(s) furnished by the department;

(2) State the applicant's name and address, together with the names and addresses of all owners or operators of the source, and the applicant's state of incorporation or principal registration to do business;

(3) Provide all information, including all calculations and computations, to describe the specific chemical and physical nature and to estimate the maximum quantities of any regulated air contaminants the source will emit through routine operations after construction, modification or installation is completed, and estimate maximum potential emissions during malfunction, startup, shutdown. With respect to a toxic air pollutant as defined by Subsection H of 20.2.72.401 NMAC this requirement only applies when the toxic air pollutant is emitted in such a manner that a permit is required under the provisions of 20.2.72.400 NMAC - 20.2.72.499 NMAC;

(4) Contain a regulatory compliance discussion demonstrating compliance with each applicable air quality regulation, ambient air quality standard, prevention of significant deterioration increment, and provision of 20.2.72.400 NMAC - 20.2.72.499 NMAC. The discussion must include an analysis, which may require use of US EPA-approved air dispersion model(s), to (1) demonstrate that emissions from routine operations will not violate any New Mexico or National Ambient Air Quality Standard or prevention of significant deterioration increment, and (2) if required by 20.2.72.400 NMAC - 20.2.72.499 NMAC, estimate ambient concentrations of toxic air pollutants.

(5) Provide a preliminary operational plan defining the measures to be taken to mitigate source emissions during malfunction, startup or shutdown;

(6) Include a topographical map, at least as detailed as the 7.5 minute Topographic Quadrangle map published by the United States Geological Survey, showing the exact location and geographical coordinates of the proposed construction, modification or installation of the source;

(7) Include a process flow sheet, including a material balance, and a site diagram of all components and locations of emissions to the atmosphere of the facility which would be involved in routine operations and emissions;

(8) Include a full description, including all calculations of controlled and uncontrolled emissions and the basis for all control efficiencies presented, of the equipment to be used for air pollution control, including a process flow sheet, or, if the department so requires, layout and assembly drawings;

(9) Include a description of the equipment or methods proposed by the applicant to be used for emission measurement;

(10) State the maximum and standard operating schedules of the source after completion of construction, modification or installation or after permit revision in terms of which and how many hours per day, days per week, days per month and days per year;

(11) Contain such other specifically identified relevant information as the department may reasonably require;

(12) Be notarized and signed under oath or affirmation by the operator, the owner or an authorized representative, certifying, to the best of his or her knowledge, the truth of all information in the application and addenda, if any;

(13) Contain payment of any fees which are specified in 20.2.75 NMAC (Construction Permit Fees) as payable at the time the application is submitted;

(14) Contain documentary proof of applicant's public notice, if applicable, as specified in Subsection B of 20.2.72.203 NMAC; and

(15) At the sole discretion of the applicant, contain a request for accelerated review of the application.

B. The applicant's public notice for technical permit revisions shall be as specified in Paragraph 6 of Subsection B of 20.2.72.219 NMAC. The applicant's public notice for a permit or significant permit revision shall be:

(1) Provided by certified mail, to the owners of record, as shown in the most recent property tax schedule, of all properties:

(a) Within one hundred (100) feet of the property on which the facility is located or proposed to be located, if the facility is or is proposed to be located in a Class A or Class H county or a municipality with a population of more than two thousand five hundred (2500) persons; or

(b) Within one-half (1/2) mile of the property on which the facility is located or is proposed to be located if the facility is or will be in a county or municipality other than those specified in Sub-paragraph (a) of Paragraph 1 of Subsection B of 20.2.72.203 NMAC;

(2) Provided by certified mail to all municipalities and counties in which the facility is or will be located and to all municipalities, Indian tribes, and counties within a ten (10) mile radius of the property on which the facility is proposed to be constructed or operated;

(3) Published once in a newspaper of general circulation in each county in which the property on which the facility is proposed to be constructed or operated is located. This notice shall appear in either the classified or legal advertisements section of the newspaper and at one other place in the newspaper calculated to give the general public the most effective notice and, when appropriate, shall be printed in both English and Spanish;

(4) Posted in at least four (4) publicly accessible and conspicuous places, including:

(a) The proposed or existing facility entrance on the property on which the facility is, or is proposed to be, located, until the permit or significant permit revision is issued or denied; and

(b) Three (3) locations commonly frequented by the general public, such as a nearby post office, public library, or city hall; and

(5) Submitted as a public service announcement to at least one radio or television station which serves the municipality or county in which the source is or is proposed to be located.

C. The notice specified in Paragraphs 1 through 4 of Subsection B of 20.2.72.203 NMAC shall contain the following:

(1) The applicant's name and address, together with the names and addresses of all owners or operators of the facility or proposed facility;

(2) The actual or estimated date that the application was or will be submitted to the department;

(3) The exact location of the facility or proposed facility;

(4) A description of the process or change for which a permit is sought, including an estimate of the maximum quantities of any regulated air contaminant the source will emit after proposed construction is complete or permit is issued;

(5) The maximum and standard operating schedules of the facility after completion of proposed construction or permit issuance; and

(6) The current address of the department to which comments and inquiries may be directed.

D. The public service announcement request specified in Paragraph 5 of Subsection B of 20.2.72.203 NMAC shall contain the following information about the facility or proposed facility:

(1) The name, location, and type of business;

(2) The name of the principal owner or operator;

(3) The type of process or change for which a permit is sought;

(4) Locations where the notices required under Paragraph 4 of Subsection B of 20.2.72.203 NMAC have been posted; and

(5) The address or telephone number at which comments and inquires may be directed to the department.

E. Changing, Supplementing or Correcting Applications:

(1) Prior to a final decision on an application, the applicant shall have a duty to promptly supplement and correct information submitted in the application. The duty to supplement shall include relevant information thereafter acquired or otherwise determined to be relevant.

(2) If, while processing an application, regardless of whether it has been determined to be administratively complete, the department determines that additional information is necessary to evaluate or take final action on that application, it may request such information. The request shall be in writing, identify the additional information requested and the need for the additional information, and set a reasonable deadline for a response. The applicant shall submit the requested information in writing on or before the deadline set by the department.

[20.2.72.203 NMAC - Rn, 20 NMAC 2.72.II.203, 2/2/01; A, 3/30/01]

20.2.72.204 CONFIDENTIAL INFORMATION PROTECTION: All confidentiality claims made regarding material submitted to the department under this part shall be reviewed under the provisions of 20.2.1 NMAC (General Provisions).

[20.2.72.204 NMAC - Rn, 20 NMAC 2.72.II.204, 2/2/01]

20.2.72.205 CONSTRUCTION, MODIFICATION AND PERMIT REVISION IN BERNALILLO COUNTY: For the construction or modifications of sources within Bernalillo county, the applicant shall make such applications to the air quality control staff of the joint Albuquerque-Bernalillo county air quality control board, unless that board loses, rejects or fails to exercise authority for the administration and enforcement of the Air Quality Control Act, at which time this part shall apply in full in Bernalillo county.

[20.2.72.205 NMAC - Rn, 20 NMAC 2.72.II.205, 2/2/01]

20.2.72.206 PUBLIC NOTICE AND PARTICIPATION:

A. The department shall:

(1) Make available for public inspection a list of all pending applications for permits or permit revisions;

(2) Make available for public inspection the permit application and the department's preliminary determination. This material shall be available both at the department's central office and the district or field office nearest to the proposed source. Copies of any permit application, except those portions of which may be determined as confidential in accordance with 20.2.1 NMAC (General Provisions), will be supplied upon written request and payment of reasonable costs;

(3) Subsequent to an affirmative administrative completeness determination, publish a public notice in a newspaper of general circulation in the area closest to the location of the source. The notice shall include: the applicant's name and address, the location and brief description of the source, a summary of estimated emissions and ambient impact, and the department's preliminary intent to issue the permit if the construction or modification requested in the application will comply with air quality requirements, including ambient standards. The notice shall identify the location of the permit application and department’s analysis (when available) for public review and describe the manner in which comments or evidence may be submitted to the department, including that persons must inform the department in writing of their interest in the permit application in order to have a 30 day period to

review and comment on the analysis under Subsection B of 20.2.72.206 NMAC below. The notice shall clearly state that any person who does not express such interest in writing prior to the end of the initial 30 day comment period will not receive notification of the availability of the analysis and thus forewarn such person of the need to express interest in writing if they desire to review and comment on the analysis;

(4) Provide the notice under Paragraph 3 of Subsection A of 20.2.72.206 NMAC above by mail, which may include electronic mail, to all individuals and organizations identified on a list maintained by the department of those who have indicated in writing a desire to receive notices of all applications under this part;

(5) Allow all interested persons thirty (30) days from the date the public notice is published to express an interest in writing in the permit application;

(6) Mail written notice of the action taken on a permit application to any person who expresses an interest in writing in the application; and

(7) Mail a copy of the public notice at the same time it is sent for publication to the appropriate agency in the following locations if the source will locate within fifty kilometers of the boundary of other states, Bernalillo county, or a Class I area. Copies of all public notices shall be sent to US EPA Region VI, if requested by US EPA.

B. In the event that any person expresses an interest in writing in the permit application, the department shall also:

(1) Notify each person who expressed an interest in writing in the permit application of the date and the location that the department's analysis was or will be available for review; and

(2) Not issue the permit until at least thirty (30) days after the department's analysis is available for review. During this thirty (30) day period, any person may submit written public comments or request a public hearing.

C. The department shall hold a public hearing if the secretary determines that there is a significant public interest. Public hearings shall be held in the geographic area likely to be impacted by the source. The time, date, and place of the hearing shall be determined by the department. The department shall give notice of the hearing to the applicant and the public. The secretary may appoint a hearing officer. A transcript of the hearing shall be made at the request of either the department or the applicant and at the expense of the person requesting the transcript. At the hearing, all interested persons shall be given a reasonable chance to submit data, views or arguments orally or in writing and to examine witnesses testifying at the hearing.

[20.2.72.206 NMAC - Rn & A, 20 NMAC 2.72.II.206, 2/2/01]

20.2.72.207 PERMIT DECISIONS AND APPEALS:

A. The department shall, within thirty (30) days after its receipt of an application for a permit or significant permit revision, review such application and determine whether it is administratively complete. If the application is deemed:

(1) administratively complete, a letter to that effect shall be sent by certified mail to the applicant;

(2) administratively incomplete, a letter shall be sent by certified mail to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete; upon receipt of the additional information or clarification, the department shall promptly review such information and determine whether the application is administratively complete;

(3) administratively complete but no permit is required, a letter shall be sent by certified mail to the applicant informing the applicant of the determination.

B. The department shall either grant, grant subject to conditions or deny the permit or significant permit revision:

(1) within ninety (90) days after the department deems the application administratively complete, if the application is not subject to the requirements of 20.2.74 NMAC (Prevention of Significant Deterioration); or

(2) within one hundred eighty (180) days after the department deems the application administratively complete, if the application is subject to the requirements of 20.2.74 NMAC (Prevention of Significant Deterioration).

C. If the department fails to take action on the application within the deadlines specified in Subsection B of 20.2.72.207 NMAC, the department shall notify the applicant by certified mail that an extension of time is necessary to process the application and shall specify, in detail, the grounds for the extension. The secretary may grant an extension, not to exceed ninety (90) days, to the deadlines specified in Subsection B of 20.2.72.207 NMAC, if the secretary determines that good cause exists for the extension. The secretary shall notify the applicant by certified mail of the decision on the extension. If the secretary grants the extension, the notification shall include the length of the extension and the reasons therefore. The authority under this paragraph may be delegated by the

secretary only to the deputy secretary or a division director. Examples of good cause for extension include, but are not limited to:

(1) the need to have public hearings;

(2) a health assessment is required under 20.2.72.400 NMAC - 20.2.72.499 NMAC;

(3) the permit application is subject to the requirements of 20.2.79 NMAC (Permits - Nonattainment Areas);

(4) additional time is needed to complete the requirements for federal review specified in 20.2.74.403 NMAC;

(5) the permit application requires review of unusually complex technical and regulatory issues; or

(6) the department is unable to complete review of information submitted, because of the timing and scope of the submittal.

D. The department shall grant the permit, grant the permit subject to conditions, or deny the permit based on information contained in the department's administrative record. The administrative record shall consist of the application, any other evidence submitted by the applicant, any evidence or written comments submitted by interested persons, any other evidence considered by the department, a statement of matters officially noticed, and if a public hearing is held, the evidence submitted at the hearing. The applicant has the burden of demonstrating that a permit or permit revision should be approved.

E. Any person who participated in a permitting action before the department shall be notified by the department of the action taken and the reasons for the action. Notification of the applicant shall be by certified mail.

F. Any person who participated in a permitting action before the department and who is adversely affected by such permitting action may file a petition for hearing before the board. The petition shall be made in writing to the board within thirty (30) days from the date notice is given of the department's action and shall specify the portions of the permitting action to which the petitioner objects, certify that a copy of the petition has been mailed or hand-delivered as required by this paragraph, and attach a copy of the permitting action for which review is sought. Unless a timely request for hearing is made, the decision of the department shall be final. The petition shall be copied simultaneously to the department upon receipt of the appeal notice. If the petitioner is not the applicant or permittee, the petitioner shall mail or hand-deliver a copy of the petition to the applicant or permittee. The department shall certify the administrative record to the board.

G. If a timely request for a hearing is made, the board shall hold a hearing within sixty (60) days of receipt of the petition in accordance with Section 74-2-7 of the New Mexico Air Quality Control Act, NMSA 1978.

H. Any person adversely affected by an administrative action taken by the board may appeal in accordance with Section 74-2-9 of the New Mexico Air Quality Control Act, NMSA 1978.

[20.2.72.207 NMAC - Rn, 20 NMAC 2.72.II.207, 2/2/01]

20.2.72.208 BASIS FOR DENIAL OF PERMIT: The department shall deny any application for a permit or permit revision if considering emissions after controls:

A. It appears that the construction, modification or permit revision will not meet applicable regulations adopted pursuant to the Air Quality Control Act;

B. The source will emit a hazardous air pollutant or an air contaminant in excess of any applicable New Source Performance Standard or National Emission Standard for Hazardous Air Pollutants or a regulation of the board;

C. For toxic air pollutants, see 20.2.72.400 NMAC - 20.2.72.499 NMAC;

D. The construction, modification, or permit revision will cause or contribute to air contaminant levels in excess of any National Ambient Air Quality Standard or New Mexico ambient air quality standard unless the ambient air impact is offset by meeting the requirements of either 20.2.79 NMAC or 20.2.72.216 NMAC, whichever is applicable;

E. The construction, modification, or permit revision would cause or contribute to ambient concentrations in excess of a prevention of significant deterioration (PSD) increment;

F. Any provision of the Air Quality Control Act will be violated;

G. It appears that the construction of the new source will not be completed within a reasonable time; or

H. The department chooses to deny the application due to a conflict of interest in accelerated review as provided for under Subsection C of 20.2.72.221 NMAC.

[20.2.72.208 NMAC - Rn, 20 NMAC 2.72.II.208, 2/2/01; A, 3/30/01]

20.2.72.209 ADDITIONAL LEGAL RESPONSIBILITIES ON APPLICANTS: The issuance of a permit does not relieve any person from civil or criminal liability for failure to comply with the provisions of the Air Quality Control Act, the federal act, federal regulations thereunder, any applicable regulations of the board, and any other applicable law or regulation.
[20.2.72.209 NMAC - Rn, 20 NMAC 2.72.II.209, 2/2/01]

20.2.72.210 PERMIT CONDITIONS:

A. The contents of the application specifically identified by the department shall become terms and conditions of the permit or permit revision.

B. The department shall, as appropriate, specify conditions upon a permit, including:

(1) Placement of individual emission limits determined on a case-by-case basis on the source for which the permit is issued, but such individual emission limits shall be only as restrictive as the more stringent of the following:

(a) the extent necessary to meet the requirements of the Air Quality Control Act and the federal act; or

(b) the emission rate specified in the permit application;

(2) A requirement that such source install and operate control technology, determined on a case-by-case basis, sufficient to meet the requirements of the Air Quality Control Act and the federal act and regulations promulgated under either;

(3) Compliance with applicable NSPS and NESHAP;

(4) Imposition of reasonable restrictions and limitations other than restrictions and limitations relating to emission limits or emission rates; or

(5) Any combination of the above;

(6) In the case of a modification, the requirements of Subsection B of 20.2.72.210 NMAC apply only to the facility or facilities involved in such modification.

C. The department may impose such other reasonable conditions upon a permit, including a schedule of construction, a condition requiring timely revision of permit terms or conditions in order to meet new requirements, if any, under any federally required and approved State Implementation Plan revision, and conditions requiring the source to be provided with or to undertake:

(1) Sampling ports of a size, number and location as the department may require;

(2) Safe access to each port;

(3) Instrumentation to monitor and record emission data including continuous emission monitoring, if appropriate;

(4) Any other reasonable sampling, testing and ambient monitoring and meteorological facilities and protocols; and

(5) Periodic testing pursuant to 20.2.72.213 NMAC.

D. Any term or condition imposed by the department on a permit or permit revision is enforceable to the same extent as a regulation of the board.

E. The department will as a condition of each permit require the permittee to establish and maintain such records of the nature and amount of emissions and to make such periodic reports to the department regarding the nature and amounts of emissions and the performance of air pollution control equipment, as are necessary to carry out the purpose of the Air Quality Control Act.

F. [RESERVED]

[20.2.72.210 NMAC - Rn, 20 NMAC 2.72.II.210, 2/2/01]

20.2.72.211 PERMIT CANCELLATIONS:

A. The department shall automatically cancel any permit for any source which ceases operation for five years or more, or permanently. Reactivation of any source after the five year period shall require a new permit.

B. The department may cancel a permit if the construction or modification is not commenced within two years from the date of issuance or, if during the construction or modification, work is suspended for a total of one year, such cancellation shall be subject to the following procedures:

(1) At least thirty days prior to the cancellation of a permit, the department shall notify the permittee by certified mail of the impending cancellation. The department shall notify the permittee by certified mail of the cancellation of his permit and the reasons therefor. Construction, modification and, if required, interim operation shall cease upon the effective date of cancellation contained in the notice of cancellation. A permittee who has received notice that a permit is or will be cancelled may request a hearing before the board. The request must be

made in writing to the board within thirty days after notice of the department's action has been received by the permittee. Unless a timely request for hearing is made, the decision of the department shall be final; and

(2) If a timely request for hearing is made, the board shall hold a hearing within thirty days after receipt of the request. The department shall notify the permittee by certified mail of the date, time and place of the hearing. In the hearing the burden of proof shall be upon the permittee. The board may designate a hearing officer to take evidence in the hearing. Based upon the evidence presented at the hearing, the board shall sustain, modify or reverse the action of the department.

[20.2.72.211 NMAC - Rn, 20 NMAC 2.72.II.211, 2/2/01]

20.2.72.212 PERMITTEE'S NOTIFICATION REQUIREMENTS TO DEPARTMENT: Any owner or operator subject to this part shall notify the department in writing of or provide the department with:

A. Anticipated date of initial startup of a source not less than thirty (30) days prior to the date;

B. Actual date of initial startup of a source within fifteen (15) days after the startup date;

C. Any change of operators within fifteen (15) days of such change;

D. Any necessary update or correction no more than sixty (60) days after the operator knows or should have known of the condition necessitating the update or correction of the permit.

[20.2.72.212 NMAC - Rn, 20 NMAC 2.72.II.212, 2/2/01]

20.2.72.213 STARTUP AND FOLLOWUP TESTING: Within sixty (60) days after achieving the maximum production rate at which the source will be operated but not later than one hundred eighty (180) days after initial startup of the source, the owner or operator of the source may be required to conduct a performance test. The test method utilized shall be approved by the department. Whenever the requirements of 40 CFR 60 or 61 apply, test methods must be utilized as specified in those regulations. The owner or operator shall notify the department at least thirty (30) days prior to the test date and allow a representative of the department to be present at the test. A written report of the results of the test shall be submitted to the department by the owner or operator within thirty (30) days from the test date. This requirement may be reimposed on a source as necessary if inspections of the source indicate noncompliance with permit conditions subject to such testing, or the previous test showed noncompliance or was technically unsatisfactory. In such cases, the test requirement may be reimposed as frequently as necessary until compliance is achieved and testing is performed in a technically satisfactory manner. This testing requirement may be waived if the source is a member of a class subject to an exemption from this requirement pursuant to 20.2.72.214 NMAC, and has agreed to comply with, and its permit contains, enforceable design, operational and locational protocols set by the department for the class of sources to which the source belongs.

[20.2.72.213 NMAC - Rn, 20 NMAC 2.72.II.213, 2/2/01]

20.2.72.214 SOURCE CLASS EXEMPTION PROCESS (PERMIT STREAMLINING):

A. Upon application by any person or group of persons, or upon the initiative of the department, the board may exempt any source or class of sources, from any procedural requirement of this part except the requirement to obtain a permit prior to commencement of construction if the board finds that the conditions set forth below in this section have been met. When possible, comprehensive exemptions shall be established for source classes in order to conduct expedited, streamlined permit processing for any applicant whose source is a member of such class. Exemptions may be granted only after a public hearing of the board, at which time the basis for such exemption shall be presented and any interested person allowed to comment and to question any witness. The board's decision that an exemption under this section is justified shall be based at a minimum on each of the following findings:

(1) The department has substantial actual experience with or knowledge of the specific class of sources proposed for exemption, that such experience or knowledge is material to the application for exemption, and that such experience or knowledge includes modeling and analysis of a representative sample of such sources. Such knowledge may be acquired through, but not limited to, direct department experience with such sources, or the review of other regulatory agencies' experience, records, documentation and formal actions, or through publications of professional organizations and societies upon which engineers and scientists would conventionally rely in formulating a professional judgment;

(2) The sources possess sufficiently common characteristics of operation, process technology, emissions, emission control technology and impact on air quality that with respect to the specific requirements proposed to be exempted, protocols have been developed which, if applied to all members of that class, will ensure that air quality is protected at least as well as would be accomplished by the full permit review process; and

(3) Under such an exemption, compliance with all federal and state air quality laws, regulations, standards and emissions limitations will be assured.

B. Exemptions may apply statewide or regionally and may be revoked by the board only after a public hearing following at least sixty days public notice.

C. As may be required under federal law, all protocols established hereunder shall be submitted to the US EPA for review and approval as revisions to the State Implementation Plan. Such protocols shall be established contingent upon approval by the US EPA.

D. There shall be no exemptions under this section from the requirements of 20.2.74 NMAC, 20.2.77 NMAC, 20.2.78 NMAC, or 20.2.79 NMAC.

[20.2.72.214 NMAC - Rn, 20 NMAC 2.72.II.214, 2/2/01]

20.2.72.215 EMERGENCY PERMIT PROCESS:

A. The department may issue an emergency permit when the secretary determines an emergency exists which threatens the public health, safety or welfare, and which requires the rapid construction or modification of, or installation of equipment in, a facility subject to this part in order to mitigate, prevent or remedy such emergency.

B. Department personnel shall verify that the source, operating in accordance with the permit issued, can and will meet all applicable standards, emissions limitations and conditions before authorizing start-up in order to ensure that the public emergency is not worsened by excess or improperly controlled air pollution.

C. An emergency caused by any negligent or unlawful action or operation of the facility or the facility owner or operator, including but not limited to failure to apply timely for a permit or revision, shall not constitute an emergency for the purposes of this section.

D. The requirements of Paragraphs 5 and 6 of Subsection A of 20.2.72.206 NMAC, Subsection C of 20.2.72.206 NMAC, and Subsections A and B of 20.2.72.207 NMAC shall not apply to emergency permits processed under this section.

E. Construction shall not commence until the emergency permit is issued.

[20.2.72.215 NMAC - Rn & A, 20 NMAC 2.72.II.215, 2/2/01]

20.2.72.216 NONATTAINMENT AREA REQUIREMENTS:

A. The requirements of this section apply to:

(1) a new source or modification of an existing source that will emit a regulated air contaminant such that the ambient impact of the contaminant would exceed the significant ambient concentration in 20.2.72.500 NMAC, table 1, at any location that does not meet the New Mexico ambient air quality standard for the contaminant;

(2) a new source or modification of an existing source that is not a major stationary source or major modification as defined in 20.2.79 NMAC and that will emit a regulated air contaminant such that the ambient impact of the contaminant would exceed the significant ambient concentration in table 1 at any location that does not meet the national ambient air quality standard for the contaminant; or

(3) an existing source that does not propose an increase in emissions and that will emit a regulated air contaminant such that the ambient impact of the contaminant would exceed the significant ambient concentration in 20.2.72.500 NMAC (table 1) at any location that does not meet the national or New Mexico ambient air quality standard for the contaminant.

B. A new source or modification of an existing source subject to this section shall offset the ambient impact of its emissions by:

(1) obtaining emission offsets for proposed emissions in an amount greater than one-to-one such that a net air quality benefit will occur; and

(2) ensuring emission offsets are quantifiable, enforceable, and permanent by meeting the following sections of 20.2.79 NMAC:

(a) 20.2.79.114 NMAC (emission offset baseline);

(b) 20.2.79.115 NMAC (emission offsets); and

(c) 20.2.79.117 NMAC (air quality benefit).

C. An existing source that is subject to this section shall demonstrate a net air quality benefit of at least a 20 percent reduction in ambient impact for each applicable contaminant. The 20 percent reduction shall be calculated as the projected source impact subtracted from the existing source impact divided by the existing source impact. The net air quality benefit must also meet the requirements of 20.2.79.117 NMAC (air quality benefit).

[20.2.72.216 NMAC - Rn, 20 NMAC 20.2.72.II.216, 2/2/01; A, 9/6/06]

20.2.72.217 COMPLIANCE CERTIFICATIONS:

A. Notwithstanding any other provision in the New Mexico State Implementation Plan approved by the administrator, for the purpose of determining compliance, an owner or operator is not prohibited from using monitoring as required under 20.2.70 NMAC and incorporated into an operating permit in addition to any specified compliance methods.

B. The requirements of this section are only applicable to those sources which, in addition to being subject to this part are either: defined as a major source under 20.2.70 NMAC (Operating Permits), or; subject to 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants).

[20.2.72.217 NMAC - Rn, 20 NMAC 20.2.72.II.217, 2/2/01]

20.2.72.218 ENFORCEMENT: Notwithstanding any other provision in the New Mexico State Implementation Plan approved by the administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of the terms or conditions of a permit issued pursuant to this part, including permits for sources meeting the applicability requirements 20.2.74 NMAC (Prevention of Significant Deterioration), or 20.2.79 NMAC (Permits - Nonattainment Areas).

A. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(1) A monitoring or information gathering method approved for the source pursuant to 20.2.70 NMAC and incorporated in an operating permit; or

(2) Compliance methods specified in the New Mexico State Implementation Plan.

B. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(1) Any federally enforceable monitoring or testing methods, including those in 40 CFR, parts 51, 60, 61 and 75; and

(2) Other testing, monitoring or information gathering methods that produce information comparable to that produced by any method in Subsection A of 20.2.72.218 NMAC or Paragraph 1 of Subsection B of 20.2.72.218 NMAC, above.

C. The requirements of this section are only applicable to those sources which, in addition to being subject to this part, are either: defined as a major source under 20.2.70 NMAC (Operating Permits), or; subject to 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants).

[20.2.72.218 NMAC - Rn, 20 NMAC 20.2.72.II.218, 2/2/01]

20.2.72.219 PERMIT REVISIONS:

A. Administrative Permit Revisions:

(1) Administrative permit revision procedures may be used only for those permit revisions that:

(a) Correct typographical errors;

(b) Provide for a minor administrative change at the source, such as a change in ownership or a change in the address or phone number of any person identified in the permit;

(c) Incorporate a change in the permit solely involving the retiring of a source or closing of a facility upon notification of the department that the permittee has ceased operations of the source or facility;

(d) Incorporate a change in the permit solely involving the deletion from the permit of a source or sources upon notification of the department that the source or sources have not been and will not be built; or

(e) Incorporate a source or activity at the facility which is exempted under Subsection B of 20.2.72.202 NMAC;

(2) The permittee shall apply for an administrative permit revision by filing a certified written notification of the proposed revision with the department which includes all information required by the department to review the request. The certification shall be made as required under Paragraph 12 of Subsection A of 20.2.72.203 NMAC;

(3) The administrative permit revision is effective upon receipt of the notification by the department;

(4) Administrative permit revisions shall not be subject to public notification requirements under Subsection B of 20.2.72.203 NMAC and 20.2.72.206 NMAC. The department shall attach the revision to the permit;

NMED Exhibit 7-J_000015

(5) Administrative permit revisions shall not be subject to filing fees or permit fees under 20.2.75 NMAC (Construction Permit Fees);

(6) The department is not required to reissue the permit to incorporate an administrative permit revision.

B. Technical Permit Revisions:

(1) Technical permit revision procedures may be used only for:

(a) Permit revisions that incorporate a change in the permit solely involving a change to monitoring, record keeping, or reporting requirements by the permittee, provided that the department determines that such change does not reduce the enforceability of the permit;

(b) Permit revisions that incorporate a change in the permit solely involving additional equipment with a potential emission rate of no more than one (1) pound per hour for any pollutant for which a National or New Mexico Ambient Air Quality Standard has been set or one (1) pound per hour for any VOC;

(c) Permit revisions that incorporate a change in the permit solely involving the placement of permit conditions, including emissions limitations, on sources which existed on August 31, 1972 and which have been regularly operated since that time;

(d) Modifications that replace an emissions unit for which the allowable emissions limits have been established in the permit, provided that the new emissions unit:

(i) Is equivalent to the replaced emissions unit, and serves the same function within the facility and process;

(ii) Has the same or lower capacity and potential emission rates;

(iii) Has the same or higher control efficiency, and stack parameters which are at least as effective in the dispersion of air pollutants;

(iv) Would not result in an increase of the potential emission rate of any other equipment at the facility;

(v) Shall be subject to the same or lower allowable emissions limits under the permit, and to all other permit conditions which have applied to the replaced emissions unit;

(vi) Would not, when operated under applicable permit conditions, cause or contribute to a violation of any national or New Mexico ambient air quality standard; and

(vii) Would not, as determined by the department, require additional permit conditions in order to ensure the enforceability of the permit, such as additional record keeping or reporting to show compliance;

(e) Permit revisions that make adjustments to the emissions limitations based on the result of the initial compliance test(s), provided that:

(i) The test is performed in accordance with permit conditions;

(ii) Such adjustment occurs within six (6) months of the compliance test;

(iii) No other such adjustment has occurred since the most recent permit issuance or reissuance;

(iv) Such adjustment does not: alter any other permit condition; trigger additional requirements under any other part, including 20.2.74 NMAC (Prevention of Significant Deterioration); or result in allowable emissions which could contribute to a violation of any national or New Mexico ambient air quality standard;

(v) Such request does not increase the permitted allowable emissions of the unit(s) on which the initial compliance test(s) have been performed by more than ten (10) percent; and

(vi) Where the permit fee calculated under 20.2.75 NMAC (Construction Permit Fees) would have been greater if it had been based on the potential emission rate as indicated by the compliance test, the balance of the permit fee is submitted as part of the technical permit revision application;

(f) Permit revisions that incorporate a change in the permit solely involving the addition of air pollution control equipment or the substitution of a different type of air pollution control equipment to existing equipment provided that such addition or substitution shall not result in an increase in the potential emission rate of more than one (1) pound per hour for any pollutant for which a national or New Mexico ambient air quality standard has been set, or one (1) pound per hour for total VOCs; or

(g) Permit revisions that incorporate terms and conditions in the permit, such as a cap on hours of operation, limitations on throughput of a specific product or products, or limitations on equipment capacity, for the purpose of reducing the potential emission rate of a unit or source.

(2) A request for a technical permit revision shall be accomplished by filing a certified written notification of the proposed revision with the department on forms provided by the Department and shall include all information required by the department to review the request. The certification shall be made as required under

Paragraph 12 of Subsection A of 20.2.72.203 NMAC;

(3) The department shall approve or deny the technical permit revision, or inform the applicant that the request must be submitted as a significant permit revision:

(a) Within thirty (30) days of receipt of the application; or

(b) If in response to significant public interest the department holds a public meeting regarding the technical permit revision, within sixty (60) days of receipt of the application;

(4) The department may deny an application for a technical permit revision or require that such application be submitted as a significant permit revision if:

(a) Such revision does not meet the criteria of this section;

(b) In the judgment of the department the revision would require a decision on a significant or complex issue; or

(c) In the judgment of the department the permittee has submitted multiple or subsequent applications for technical permit revisions under this Part that segment a larger revision or modification that would not be eligible for a technical permit revision;

(5) The technical permit revision shall become effective upon written approval from the department;

(6) Technical permit revisions shall not be subject to public notification requirements under Paragraphs 1, 4 and 5 of Subsection B of 20.2.72.203 NMAC, and 20.2.72.206 NMAC. The department shall attach the technical permit revision to the permit.

C. [RESERVED]

D. Significant Permit Revisions:

(1) A significant permit revision is required for any modification to a source, and for revisions to any term or condition of such permit, including but not limited to emissions limitation, control technology, operating conditions, and monitoring requirements; that:

(a) Do not meet the criteria under the provisions for administrative or technical permit revisions under Subsections A or B of 20.2.72.219 NMAC; or

(b) Meet the applicability criteria under 20.2.72.402 NMAC regarding toxic air pollutants;

(2) Applications for significant permit revisions shall meet all requirements of this part for permits and shall be processed in accordance with the public notice, review, and hearing procedures set forth in this part for such permits.

[20.2.72.219 NMAC - Rn, 20 NMAC 2.72.II.219, 02/02/01; A, 08/27/03]

20.2.72.220 GENERAL PERMITS:

A. Issuance of general construction permits:

(1) The department may, after notice under Subsections A and B of 20.2.72.206 NMAC and a public hearing with opportunity for public participation under Subsection C of 20.2.72.206 NMAC issue one or more general construction permits, each covering numerous similar sources. Sources registered for coverage under a general permit shall be generally homogeneous in terms of operations, processes and emissions, subject to the same or substantially similar requirements, and not subject to case-by-case standards or requirements.

(2) Each general construction permit shall:

(a) Describe which sources may qualify to register under the general construction permit;

(b) Specify the contents of a complete application to register under the general construction permit. The department may, in the general construction permit, provide for applications which deviate from the requirements under 20.2.72.203 NMAC, provided that such applications include:

(i) All information necessary to determine qualification for, and to assure compliance with, the general construction permit; and

(ii) Applicant's public notice requirements including, at a minimum, a notice: a) published once in the legal notices section of a newspaper in general circulation in the county or counties in which the property on which the facility is proposed to be constructed or operated is located; and b) posted at the proposed or existing facility entrance in a publicly accessible and conspicuous place on the property on which the facility is, or is proposed to be, located, until the general permit registration is granted or denied;

(c) Contain permit terms and conditions which apply to all sources registered under the general construction permit, and which include:

(i) Sufficient terms and conditions to assure that all sources registered under and operating in accordance with the general construction permit will meet all applicable requirements under the federal act, the New Mexico Air Quality Control Act and this chapter (Air Quality), including 20.2.74 NMAC (Prevention of Significant Deterioration), 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission

Standards for Hazardous Air Pollutants), 20.2.79 NMAC (Permits - Nonattainment Areas), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants), and will not cause or contribute to air contaminant levels in excess of any national or New Mexico ambient air quality standard; and

(ii) Monitoring, record keeping and reporting requirements appropriate to the source and sufficient to ensure compliance with the general construction permit. At a minimum, the general permit shall specify where the records shall be maintained, how long the records shall be retained and that all records or reports shall be made available upon request by the department;

(iii) As appropriate, terms and conditions to address and report emissions occurring during upsets, startups and maintenance; and

(d) Specify that any document, including any application form, report, compliance certification and supporting data, submitted pursuant to this section (20.2.72.220 NMAC) shall contain a certification that meets the requirements of Paragraph 10 of Subsection A of 20.2.72.203 NMAC.

B. Revisions to a General Construction Permit:

(1) The department may, after notice under Subsections A and B of 20.2.72.206 NMAC and a public hearing with opportunity for public participation under Subsection C of 20.2.72.206 NMAC, revise a general construction permit. Notice of the proposed revision shall also be sent to the owner or operator of all sources registered under the general construction permit.

(2) Revisions to a general construction permit shall include a reasonable transition schedule for existing registered sources to comply with the revised permit. The department shall revise the general permit terms and conditions only to the extent necessary to ensure that the requirements of Sub-paragraph (c) of Paragraph 2 of Subsection A of 20.2.72.220 NMAC are met.

C. Registration under a General Construction Permit:

(1) The owner or operator of a source required to obtain a permit pursuant to this part and which qualifies to register under a general construction permit shall either:

(a) Apply to the department to register under the terms of the general construction permit; or

(b) Apply for a construction permit under 20.2.72.200 NMAC.

(2) Within thirty (30) days of receiving an application to register under a general construction permit, the department shall review the application for completeness and shall grant or deny the registration. The department shall not grant the registration until at least fifteen (15) days after the date the applicant's public notice was initiated. The department shall notify the applicant of its determination by certified mail. The department shall attach a copy of the general construction permit to registration approvals.

(3) The department shall grant registration under a general permit to a source only if:

(a) The application is complete and meets the requirements of this section (20.2.72.220 NMAC); and

(b) The source meets the terms and conditions of the general permit.

(4) The department may grant or deny an application to register under a general construction permit without repeating the public notice and participation procedures required under 20.2.72.206 NMAC.

(5) Administrative review under Sections 74-2-7.H through L NMSA 1978 shall be available for a determination made by the department of whether or not a source qualifies to register for coverage under a general construction permit. However, administrative review of a registration for coverage under a general construction permit shall not extend to administrative review of the general permit itself. Administrative review of the general construction permit shall be available under Sections 74-2-7.H through L NMSA 1978 only upon issuance or revision of the general permit as a permitting action.

(6) Sources shall be subject to enforcement action for construction without a permit if:

(a) Construction of a source is commenced prior to the receipt of the department's written approval of registration under a general construction permit; or

(b) It is determined after construction commences that a source does not qualify for coverage under the general construction permit.

(7) A general permit registration may be canceled, consistent with the provisions of 20.2.72.211 NMAC, for any source which ceases operation for five years or more, or permanently, and for any source for which the construction or modification is not commenced within two years from the date of issuance or, if during the construction or modification, work is suspended for a total of one year. The owner or operator shall notify the department of the anticipated and actual startup of a source, consistent with the provisions of 20.2.72.212 NMAC.

D. Modifications to Sources Registered Under a General Construction Permit: Each general construction permit shall provide that, prior to modification of a source which is registered under a general construction permit, the owner or operator shall:

(1) For those modifications for which the facility will continue to meet the conditions of the general construction permit after the modification, notify the department in writing of such modification; and

(2) For those modifications for which the source will not continue to meet the conditions of the general construction permit after such modification, obtain a construction permit from the department under this part prior to the modification.

[20.2.72.220 NMAC - Rn & A, 20 NMAC 2.72.II.220, 2/2/01]

20.2.72.221 ACCELERATED REVIEW:

A. Qualified Outside Firms:

(1) The department shall request proposals from persons interested in providing assistance as a qualified outside firm in the accelerated review of construction permit applications under this part.

(2) The department shall evaluate the proposal submitted by the person. To be eligible to contract with the department as a qualified outside firm a person must:

(a) Be legally qualified to contract with the department; and

(b) Be qualified to assist the department in review of permit applications, as determined by the department in the department's sole discretion.

(3) Persons who are selected as qualified outside firms shall be under contract with the department for accelerated review of construction permit applications under this section.

B. Requests for Accelerated Review:

(1) At the sole discretion of the applicant, a construction permit applicant under this part may request accelerated permit review of the application by a qualified outside firm. Applications for accelerated review shall be preceded by a pre-application meeting between the applicant and the department. Requests for accelerated review shall not be granted unless there is at least one qualified outside firm under contract with the department pursuant to Paragraph 3 of Subsection A of 20.2.72.221 NMAC. If there are no firms under contract to provide accelerated review, the department shall review the application in accordance with 20.2.72.207 NMAC.

(2) Such request for accelerated permit review shall be submitted with the construction permit application along with a corporate check or money order for the amount of the accelerated review filing fee as specified in 20.2.75 NMAC. The department shall notify the applicant of the names and addresses of the qualified outside firms. The applicant shall deliver a copy of the application, by mail or hand delivery, to each qualified outside firm identified by the department, unless the applicant is aware of a conflict of interest.

(3) Participation in the accelerated permit review process shall not relieve the applicant of any responsibilities specified in this chapter.

(4) Applicants who have opted for accelerated review under this section shall be subject to supplementary fees pursuant to 20.2.75 NMAC which shall be assessed in addition to all other applicable fees levied under 20.2.75 NMAC.

(5) Qualified outside firms under contract which are interested in performing the accelerated review on a specific application shall submit to the department:

(a) A statement of interest;

(b) A statement of qualifications for that specific application;

(c) An estimate of the cost and schedule for the review; and

(d) A notarized affidavit attesting that no conflict of interest exists on the specific permit application.

(6) If no qualified outside firm submits the four items required by Paragraph 5 of Subsection B of 20.2.72.221 NMAC, the department shall apply the accelerated review filing fee to the permit fee in accordance with 20.2.75 NMAC and review the application without the assistance of a qualified outside firm and in accordance with 20.2.72.207 NMAC.

(7) The department shall review the submittals and determine, in the department's sole discretion, which firms qualify for any specific application.

(8) Prior to determining any application administratively complete for which accelerated review has been requested as allowed under 20.2.72.203 NMAC, the department shall provide the applicant a written summary of the qualified submittals showing the costs to the applicant of the accelerated review and the anticipated schedule for application review, permit development and permit issuance.

(9) Applicant’s responsibilities for response to submittal summary:

(a) Within five (5) working days of receipt of the department's bid summary the applicant shall either: (i) submit to the department a written recommendation to accept one of the accelerated review bids, or a prioritized list of more than one of the accelerated review bids, including a brief justification for the recommendation(s) along with a corporate check or money order payable to the department for the amount of the accelerated review bid and a notarized affidavit attesting that no conflict of interest exists on the specific permit application; or (ii) submit to the department a written withdrawal of the request for accelerated review.

(b) The request for accelerated review is deemed withdrawn if the applicant fails to submit a written recommendation or withdrawal within five (5) working days of receipt of the department's bid summary unless the Department has granted an extension.

(10) Department's selection of qualified outside firm

(a) If the request for accelerated review is withdrawn, the department shall retain the accelerated review filing fee in accordance with 20.2.75 NMAC and shall review the application without the assistance of a qualified outside firm and in accordance with 20.2.72.207 NMAC.

(b) If the applicant recommends a qualified submittal, the department shall determine whether to accept the recommended submittal. If the department accepts the recommended submittal it shall instruct the qualified outside firm to begin review of the application. If the department rejects the recommended submittal, it shall inform the applicant and allow the applicant to recommend an alternate submittal pursuant to Paragraph 9 of Subsection B of 20.2.72.221 NMAC or, if there are no other qualified submittals, the department shall retain the accelerated review filing fee in accordance with 20.2.75 NMAC and review the application without the assistance of a qualified outside firm and in accordance with 20.2.72.207 NMAC.

C. Disclosure of Conflicts During Accelerated Review:

(1) The applicant and the qualified outside firm have a continuing obligation to investigate potential conflicts of interest and to immediately disclose, in writing, any conflict of interest to the department. If a conflict of interest was not disclosed pursuant to Subparagraph d of Paragraph 5 of 20.2.72.221 NMAC or Subparagraph a of Paragraph 9 of Subsection B of 20.2.72.221 NMAC, and is later disclosed or discovered, the department may:

(a) Deny the application pursuant to 20.2.72.208 NMAC;

(b) Terminate accelerated review and review the application pursuant to 20.2.72.207 NMAC; or

(c) Allow accelerated review to continue after elimination of the conflict.

(2) In choosing between these options the department shall consider whether the conflict of interest was disclosed or discovered, the timing of the disclosure or discovery, diligence in investigating potential conflicts of interest, any indication of intentional or willful failure to disclose, significance of the conflict of interest, and ability to eliminate the conflict of interest in a timely manner.

D. Issuance of a Permit After Accelerated Review:

(1) Upon completion of the review, the qualified outside firm shall provide the department with all documentation, including but not limited to all communications, notes, and drafts, pertaining to the permit application. At any time during the review, the qualified outside firm shall provide all documentation pertaining to a specific application to the department upon request. Such documentation shall be subject to the Inspection of Public Records Act, Chapter 14, Article 2 NMSA 1978, and the Confidential Information Section of the Air Quality Control Act, Section 74-2-11 NMSA 1978.

(2) The department shall review the analysis prepared by the qualified outside firm and shall issue a permit or deny the permit application in accordance with this part. The qualified outside firm's analysis is not binding on the department. The department retains final authority to accept or reject the qualified outside firm's analysis regarding the permit application.

(3) The department shall not issue the permit until both the accelerated review processing fee and any fees due pursuant to 20.2.75 NMAC have been paid.

[20.2.72.221 NMAC - N, 3/30/01]

20.2.72.222 - 20.2.72.299 [RESERVED]

20.2.72.300 DEFINITIONS: In addition to the definitions in 20.2.72.7 NMAC, the following definitions apply to 20.2.72.300 NMAC - 20.2.72.399 NMAC:

A. "Compressor station" means a facility whose primary function is the extraction of crude oil, natural gas, or water from the earth with compressors, or movement of any fluid, including crude oil or natural gas, or products refined from these substances through pipelines or the injection of natural gas or CO2 back into the earth using compressors. A compressor station may include engines to generate power in conjunction with the other

functions of extraction, injection or transmission and may contain emergency flares. A compressor station may have auxiliary equipment which emits small quantities of regulated air contaminants, including but not limited to, separators, de-hydration units, heaters, treaters and storage tanks, provided the equipment is located within the same property boundaries as the compressor engine.

B. **"Good engineering practice stack height"** means HsubGEP = H + 1.5L, where H equals the height of any building or obstruction within 5L of the stack, and L equals the lesser of the height or maximum projected width of the building or obstruction.

C. **"Impact area"** means the circular area with a radius extending from the source to the most distant point where the total potential emissions from the facility will cause a significant ambient impact (i.e., equal or exceed the applicable significant ambient impact level in 20.2.72.500 NMAC.

D. **"Maximum projected width"** means the largest crosswind building or obstruction dimension.

E. **"Potential to emit"** or **"potential emissions"** means the maximum capacity of a stationary source to emit a regulated air contaminant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitations or the effect it would have on emissions is federally enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

F. **"Secondary emissions"** means emissions of an air contaminant which occur as a result of the construction or operation of a stationary source or modification, but do not come from the stationary source or modification itself. Secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the stationary source or modification which causes the secondary emissions. Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the stationary source or modification. Secondary emissions do not include any emissions which come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

G. **"SUM"** means the sum of the potential emissions for oxides of nitrogen from all adjacent sources.

H. **"SUM15"** means the sum of the potential emissions for oxides of nitrogen from all adjacent sources within 15 km of the NO2 impact area.

I. **"SUM25"** means the sum of the potential emissions for oxides of nitrogen from all adjacent sources within 25 km of the NO2 impact area.

J. **"Sweet natural gas"** means natural gas containing no more than 0.25 grains of hydrogen sulfide per 100 standard cubic feet of gas.

[20.2.72.300 NMAC - Rn & A, 20 NMAC 2.72.III.300, 2/2/01]

20.2.72.301 APPLICABILITY:

A. Any owner or operator intending to construct or modify a source which requires a permit under the provisions of 20.2.72.200 NMAC may elect to obtain a permit under 20.2.72.300 NMAC - 20.2.72.399 NMAC if the source category is listed in 20.2.72.501 NMAC.

B. 20.2.72.300 NMAC - 20.2.72.399 NMAC shall not apply to:

(1) Any "major stationary source" as defined in 20.2.74 NMAC;

(2) Any facility, either before or after construction or modification, with a total potential to emit of any regulated air contaminant greater than 200 tons per year (tpy);

(3) Any source subject to the requirements of 20.2.78 NMAC or 20.2.72.400 NMAC - 20.2.72.499 NMAC;

(4) Any reciprocating internal combustion (IC) engines and/or turbines located at petroleum refineries, chemical manufacturing plants, bulk gasoline terminals, natural gas processing plants, or at any facility containing sources in addition to IC engines and/or turbines for which an air quality permit is required through state or federal air quality regulations;

(5) Any source which emits or proposes to emit those contaminants for which the impact area from the facility intersects an area, or for which the area itself is: 1) designated nonattainment for federal ambient air quality standards; or 2) nonattainment for federal PSD increments or state ambient air quality standards according to ambient data or air quality modeling; or 3) shown by air quality data or dispersion or other air quality modeling that air contaminants have consumed more than 80% of state or federal ambient air quality standards or PSD increments for those areas where the baseline has been triggered for the specific PSD increments;

(6) Any source with the nearest property boundary located less than:

(a) 1 kilometer (km) from a school, residence, office building, or occupied structure. Buildings and structures within the immediate industrial complex of the source are not included.

(b) 3 km from the property boundary of any state park, Class II wilderness area, Class II national wildlife refuge, national historic park, state recreation area, or community with a population of more than twenty-thousand people.

(c) 10 km from the boundary of any community with a population of more than forty-thousand people, or

(d) 30 km from the boundary of any Class I area;

(7) Any source located in Bernalillo county or within 15 km of the Bernalillo county line.

C. The following sections and subsections of 20.2.72.200 NMAC - 20.2.72.299 NMAC apply to permit applications submitted pursuant to 20.2.72.300 NMAC - 20.2.72.399 NMAC: Subsections A, B and E through H of 20.2.72.200 NMAC, 20.2.72.202 NMAC, 20.2.72.204 NMAC, 20.2.72.205 NMAC, Subsection C of 20.2.72.206 NMAC, Subsections D through G of 20.2.72.207 NMAC, 20.2.72.208 NMAC, 20.2.72.209 NMAC, 20.2.72.210 NMAC, 20.2.72.211 NMAC, 20.2.72.212 NMAC, 20.2.72.214 NMAC and 20.2.72.215 NMAC. The remainder of 20.2.72.200 NMAC - 20.2.72.299 NMAC does not apply to applications submitted pursuant to 20.2.72.300 NMAC - 20.2.72.399 NMAC.

D. Any source, including compressor stations, consisting of IC engines and/or turbines must comply with one of the following three criteria, Paragraph 1, 2, or 3 of Subsection D of 20.2.72.301 NMAC, in order to qualify for source class permit streamlining under 20.2.72.300 NMAC - 20.2.72.399 NMAC (In demonstrating compliance with Subsection D of 20.2.72.301 NMAC, the department shall give no credit for modeled reductions in ambient air concentrations due to so much of a source's stack which exceeds good engineering stack height, or fifty (50) feet in situations where there are not obstructions or buildings associated with the source):

(1) The total potential to emit of each regulated contaminant from all sources at the facility shall be less than 40 tpy. The potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen; or

(2) The total potential to emit of each regulated contaminant from all emission sources at the facility shall be less than 100 tons per year (tpy) and the impact on ambient air from all sources at the facility shall be less than the ambient significance levels in 20.2.72.500 NMAC, Table 1. The potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen expressed as nitrogen dioxide; or

(3) The maximum modeled ambient impact from the total potential emissions at the facility shall be less than 50 percent of each applicable PSD increment, for those areas where the baseline has been triggered for the specific PSD increments, and state and federal ambient air quality standards; and

(a) There shall be no adjacent sources emitting the same regulated air contaminant(s) as the source within 2.5 km of the modeled nitrogen dioxide (NO2) impact area; and

(b) The "sum of the potential emissions for oxides of nitrogen from all adjacent sources" (SUM) within 15 km of the NO2 impact area (SUM15) shall be less than 740 tpy; and

(c) The SUM25 within 25 km from the NO2 impact area shall be less than 1540 tpy.

(4) Modifications to the auxiliary emission generating equipment at a facility qualifying and electing source class permit streamlining may commence without obtaining a permit for such modification as long as the total potential to emit of all auxiliary equipment remains at or below 1.0 lb/hr for any one regulated air contaminant and as long as the total potential to emit of each regulated air contaminant from the compressor station meets the requirements of Paragraphs 1 or 2 of Subsection D of 20.2.72.301 NMAC or previously qualified under Paragraph 3 of Subsection D of 20.2.72.301 NMAC. The applicant shall provide, in writing, the nature of all changes to the department no later than 15 days prior to the expected change.

[20.2.72.301 NMAC - Rn & A, 20 NMAC 2.72.III.301, 2/2/01]

[Annotated Note: Section 20.2.72.202 - Permit Revisions, which is referenced in Subsection C of this section, was renumbered to Section 20.2.72.219 NMAC, effective 1/7/1998]

20.2.72.302 CONTENTS OF APPLICATION:

A. Any person seeking a permit under 20.2.72.300 NMAC - 20.2.72.399 NMAC shall do so by filing a written application with the department. For those applications not qualifying under Subsection A of 20.2.72.303 NMAC, the applicant shall also:

(1) Provide by certified mail a complete copy of the application and public notice to the department's field or district office nearest the source; and

(2) Provide by certified mail a copy of the public notice to the appropriate federal land manager if the source will locate within 50 km of the boundary of a Class I area.

B. The items of this section, if requested on the applicable application form, are required before the department may deem an application administratively complete. The applicant shall submit the number of copies of the permit application specified in the applicable application form. All applications shall be filed on the forms furnished by the department and shall include:

(1) The applicant's name and address, the person to contact regarding the application, and the name and address of the new source or modification;

(2) A description of the new facility or modification including all operations effecting air emissions;

(3) The anticipated operating schedule;

(4) A topographical map, at least as detailed as a 7.5 minute United States Geological Survey Topographic Quadrangle, showing the exact location and geographical coordinates of the stationary source;

(5) The Universal Transverse Mercator (UTM) horizontal and vertical coordinates for the facility;

(6) A plot plan showing the location of emission units with respect to the plant's property boundaries and the dimensions of any buildings, terrain, or obstructions which may cause emissions to be down-washed;

(7) A detailed description of any air pollution control device or method to be utilized, including the basis for the estimated control efficiency;

(8) The stack and exhaust gas parameters for all emission points, including calculations and manufacturer's or supplier's data which documents the emission rates and exhaust gas parameters;

(9) A comprehensive regulatory compliance review, including all pertinent data and calculations, for each applicable new source performance standard, such as 40 CFR 60, Subpart GG - Standards of Performance for Stationary Gas Turbines;

(10) Documentation of the manufacturer's or supplier's recommended maintenance schedules and procedures for all air pollution control equipment;

(11) A compliance demonstration based on US EPA approved modeling or analysis, including all pertinent calculations and computations, for all applicable requirements of 20.2.72.300 NMAC - 20.2.72.399 NMAC for any facility electing to obtain a permit under 20.2.72.300 NMAC - 20.2.72.399 NMAC;

(12) Documentary proof that the requirements of Paragraphs 1 and 2 of Subsection A of 20.2.72.302 NMAC have been satisfied;

(13) The notarized signature under oath or affirmation by the operator, the owner, or an authorized representative, certifying to the best of his or her knowledge the truth of all information submitted;

(14) Payment of any fees which are specified in 20.2.75 NMAC (Construction Permit Fees) as payable at the time the application is submitted; and

(15) Any other specifically identified relevant information as the department may reasonably require. [20.2.72.302 NMAC - Rn & A, 20 NMAC 2.72.III.302, 2/2/01]

20.2.72.303 PUBLIC NOTICE AND PARTICIPATION:

A. Applications qualifying under the following paragraphs of 20.2.72.300 NMAC - 20.2.72.399 NMAC are not subject to Subsection B of 20.2.72.303 NMAC and Paragraph 2 of Subsection C of 20.2.72.303 NMAC: Paragraphs 1 and 2 of Subsection D of 20.2.72.301 NMAC.

B. The applicant shall:

(1) Publish notice once in a newspaper of general circulation in the area closest to the location of the source. This notice shall appear in either the classified or legal advertisements section of the newspaper. Notice shall be published in accordance with department guidance documents and must include:

(a) The applicant's name and address;

(b) The address and phone number of the department's air quality bureau in Santa Fe, and the address of the field or district office where a copy of the application will be sent as required in Subsection A of 20.2.72.302 NMAC;

(c) The location and a brief description of the source;

(d) A summary of estimated emissions and ambient impact for each regulated contaminant for the entire facility;

(e) Where required in 20.2.72.300 NMAC - 20.2.72.399 NMAC, the applicant's public notice shall contain the following statement: "Any comments submitted on this permit application should address the relevant requirements of state and federal air quality regulations and the Federal Clean Air Act and the state Air Quality Control Act. The comments shall be submitted to the department's air quality bureau in Santa Fe within thirty (30) days following the date of publication";

(f) Any other information required by the department; and

(2) Post the notice at the proposed or existing facility entrance on the property on which the facility is, or is proposed to be located prior to submittal of the application and remaining posted until the department takes final action on the permit.

C. The department shall:

(1) Make available for public inspection the permit application. Copies of any permit application, except those portions of which may be determined as confidential in accordance with 20.2.1 NMAC (General Provisions), will be supplied upon written request and payment of reasonable costs.

(2) Allow all interested persons thirty (30) days from the date of publication of the applicant's public notice in a newspaper of general circulation, to submit written comments or evidence on the application.

[20.2.72.303 NMAC - Rn & A, 20 NMAC 2.72.III.303, 2/2/01]

20.2.72.304 PERMIT DECISIONS:

A. The department shall within thirty (30) days after its receipt of an application for a permit or permit revision review such application and determine whether it is administratively complete.

(1) If the application is deemed administratively complete, a certified letter to that effect shall be sent to the applicant.

(2) If the application is deemed administratively incomplete, a certified letter shall be sent to the applicant stating what additional information or points of clarification are necessary to deem the application administratively complete. Upon receipt of such information, the department shall promptly review such information and determine whether the application is administratively complete.

(3) If the application is deemed administratively complete but no permit is required, a certified letter shall be sent to the applicant informing the applicant of the determination.

B. The department shall either grant, grant subject to conditions, or deny the permit or permit revision as soon as practicable after the department deems the application administratively complete but not to exceed the times specified below:

(1) For applications qualifying under the Paragraphs 1 and 2 of Subsection D of 20.2.72.301 NMAC, within thirty (30) days;

(2) For all other applications, within sixty (60) days, or ninety (90) days if there is a hearing under 20.2.72.206 NMAC.

[20.2.72.304 NMAC - Rn & A, 20 NMAC 2.72.III.304, 2/2/01]

20.2.72.305 GENERAL REQUIREMENTS: All sources permitted pursuant to 20.2.72.300 NMAC - 20.2.72.399 NMAC shall operate in compliance with the following conditions:

A. A copy of the most recent permit issued by the department shall be made available to department personnel for inspection upon request. If the permit is not kept at the plant location, a notice at the plant site shall be located in a conspicuous place stating the facility name and ownership, air quality permit number, and the address and phone number of the department in Santa Fe;

B. The source shall operate in compliance with all applicable state and federal regulations, including federal new source performance standards incorporated by 20.2.77 NMAC and permit conditions;

C. The owner or operator of the source shall be required to conduct such performance tests as specified by the department to determine compliance with emission limitations or technology requirements as specified in an applicable regulation or permit condition. Specific schedules and requirements will be listed in 20.2.72.306 NMAC for each source class and/or in the permit. Performance test requirements may be reimposed on a source as necessary if inspections of the source or other information available to the department, indicate noncompliance, or the previous test showed noncompliance or was technically unsatisfactory. In such cases, the department may reimpose such tests as frequently as necessary until compliance is achieved and testing is performed in a manner technically satisfactory to the department. The owner or operator shall:

(1) Arrange a pretest meeting with the department at least two weeks prior to the anticipated test date for all tests;

(2) Notify the department at least thirty (30) days prior to the date and time of performance testing, and provide the department an opportunity to have an observer present during testing;

(3) Conduct performance tests in accordance with methods and procedures specified by the department. Whenever the requirements of 40 CFR 60 apply, test methods must be utilized as specified in those regulations;

(4) Submit a written report to the department of the results of the test within thirty (30) days from the test date; and

D. The owner or operator using a catalytic converter to meet the requirements of 20.2.72.300 NMAC - 20.2.72.399 NMAC shall satisfactorily test the reduction efficiency across the catalyst bed and report the results of the test to the department according to the permit conditions, within ninety (90) days following initial start-up and on a quarterly basis thereafter, unless an alternative testing schedule is specified by the department. The tests shall be conducted in accordance with the requirements of Subsection C of 20.2.72.305 NMAC and as required in the permit, except that the requirements of Paragraphs 1 and 2 of Subsection C of 20.2.72.305 NMAC shall be waived unless the department specifically requests a pretest meeting or notification of the next test date.
[20.2.72.305 NMAC - Rn & A, 20 NMAC 2.72.III.305, 2/2/01]

20.2.72.306 SOURCE CLASS REQUIREMENTS:

A. In addition to the general conditions of 20.2.72.305 NMAC, each permitted source listed in 20.2.72.501 NMAC (Table 2) shall also comply with the applicable source class requirements below:

(1) Requirements for source class category 1 - reciprocating internal combustion (IC) engines:

(a) Gas fuel shall be produced natural gas, sweet natural gas, liquid petroleum gas, or fuel gas. No gas fuel shall contain more than 0.1 grain of total sulfur per dry standard cubic foot. Liquid fuel shall be first run refinery grade diesel or No. 2 fuel oil that is not a blend containing waste oils or solvents and contains less than 0.3% by weight sulfur;

(b) Within ninety (90) days after initial start-up of the source, the owner or operator shall conduct NOx and carbon monoxide (CO) performance tests on one or more engines (turbines) at the facility to ensure the facility is in compliance with 20.2.72.300 NMAC - 20.2.72.399 NMAC and permit requirements, including emission limits and any applicable pollution control device reduction efficiency requirements for NOx. The department shall specifically identify in the permit each engine or turbine subject to initial performance testing requirements. Tests shall be conducted in accordance with the requirements of Subsection C of 20.2.72.305 NMAC;

(c) Any engine which operates with a non-selective catalytic converter shall comply with the following requirements:

i. Any spark ignited gas-fired or any compression ignited dual fuel-fired engine shall be equipped and operated with an automatic air-fuel ratio (AFR) controller which maintains AFR in the range required to minimize NOx emissions, as recommended by the manufacturer; and

ii. The owner or operator shall make and maintain records to demonstrate that the manufacturer's or supplier's recommended maintenance is performed, including replacement of the oxygen sensor as necessary for oxygen-based AFR controllers, and cleaning, regeneration, and/or replacement of catalyst(s) as necessary to maintain at least the NOx reduction efficiencies across the catalyst bed that are specified in the permit.

B. Requirements for source class category 2 - turbines: The source must comply with Paragraphs 1 and 2 of Subsection A of 20.2.72.306 NMAC.
[20.2.72.306 NMAC - Rn & A, 20 NMAC 2.72.III.306, 2/2/01]

20.2.72.307 - 20.2.72.399 [RESERVED]

20.2.72.400 PREAMBLE: The board is concerned about the increasingly common presence of toxic air pollutants in the ambient air. The board believes that the best approach to regulating sources of toxic air pollutants over the long term is to set ambient standards for each pollutant of concern. However, because of financial constraints, the unavailability of sufficient information to establish such ambient standards, the time necessary to establish such standards for the contaminants identified as toxic air pollutants and because the board wishes to implement a toxic air pollutant permitting program as soon as possible, the board has adopted a source-by-source permit-based approach for the present. Under this permit-based approach, the board has given limited authority to the department to use factors of the OELs (occupational exposure limits) in evaluating permit applications. The board recognizes that the use of OELs, or factors of them, as ambient air standards would be inappropriate; therefore, the board has authorized their use for screening purposes only. This authorization is not intended to represent, and should not be interpreted as, a finding by the board that these factors are suitable for determining safe or unsafe ambient air concentrations. Various respected groups, such as the American Conference of Governmental Industrial Hygienists (ACGIH), may develop ambient air exposure guidelines in the future. Development of ambient air guidelines by groups such as this could be the basis for developing toxic air pollutant ambient air standards. The board also notes that the department currently is developing an emissions inventory of toxic air pollutants. An emissions inventory may identify toxic air pollutants that are of particular concern in New Mexico. The board believes that efforts like these may facilitate the development of toxic air pollutant ambient air standards. For these reasons, the board requests the department to prepare and present a report to the board within five years of

NMED Exhibit 7-J_000025

the effective date of the toxic air pollutant permitting requirements. The report shall review and evaluate the implementation of the toxic air pollutant permitting program, summarize the results of the toxic air pollutant inventory gathered pursuant to AQCR 752, and review scientific and technical progress made in the area of toxic air pollutants that might facilitate the development of toxic air pollutant ambient air standards. The board shall schedule a discussion of this report at a regular monthly meeting within three months of the publication of this report.
[20.2.72.400 NMAC - Rn & A, 20 NMAC 2.72.IV.400, 2/2/01]

20.2.72.401 DEFINITIONS: In addition to the definitions in 20.2.72.7 NMAC, the following definitions apply to 20.2.72.400 NMAC - 20.2.72.499 NMAC:

A. "Best available control technology" means an emission limitation based on the maximum degree of reduction in emissions of each contaminant subject to this part which the secretary (or the board), on a case-by-case basis, taking into consideration the cost of achieving such emission reduction, and any non-air quality health and environmental impacts resulting from the use of such technology, determines is achievable for the source, through application of measures, processes, methods, systems, or techniques including, but not limited to, measures which:

(1) Reduce the volume of such pollutants through process changes, substitutions of materials, or other modifications, or

(2) Enclose systems or processes to eliminate emissions, or

(3) Collect, capture or treat such pollutants when released from a process, stack, storage, or fugitive emission point.

B. "Existing source" means any source, the construction or modification of which was commenced on or before December 31, 1988.

C. "Fixed capital costs" means that capital needed to provide all the depreciable components.

D. "New source" means any source, the construction of which is commenced after December 31, 1988. The term does not include any new source which is integrally related with and integrally connected to the process of an existing source. The term includes the reconstruction of an existing source.

E. "Occupational Exposure Limit" or **"OEL"** means the eight-hour time weighted average concentration specified for workroom air in "Threshold Limit Values and Biological Exposure Indices for 1986-1987" as adopted by the American Conference of Governmental Industrial Hygienists, or for compounds not assigned an OEL in that document, the minimum detection limit specified in the National Institute for Occupational Safety and Health "Manual of Analytical Methods", Third Edition.

F. "Oil and gas production facilities" means facilities for the exploration, development, production, treatment, separation, storage, transport, and sale of unrefined hydrocarbons, natural gas liquids, and CO2 (e.g., major SIC group 13, oil and gas extraction, SIC industry group no. 4612, crude, petroleum, pipeline and SIC industry no. 4922, natural gas transmission). Natural gas processing plants and refineries are not included for purposes of this definition.

G. "Reconstruction" means a modification which results in the replacement of the components or addition of integrally related equipment to an existing source to such an extent that the fixed capital cost of the new components or equipment exceeds 50 percent of the fixed capital cost that would be required to construct a comparable entirely new facility.

H. "Toxic air pollutant" means any air contaminant in 20.2.72.502 NMAC.
[20.2.72.401 NMAC - Rn & A, 20 NMAC 2.72.IV.401, 2/2/01]

20.2.72.402 APPLICABILITY:

A. All the requirements of 20.2.72.400 NMAC - 20.2.72.499 NMAC for toxic air pollutants shall supplement other provisions of this Part (20.2.72 NMAC).

B. A permit must be obtained from the department by any person prior to the construction or modification of a new source which has total potential emissions of a toxic air pollutant into the ambient air that exceed the emission level in pounds per hour specified in 20.2.72.502 NMAC, and one or more of the following conditions are met:

(1) The toxic air pollutant is listed under applicable primary and secondary SIC codes appropriate for the source in the US EPA SIC/Pollutant Index (Appendix C of EPA-450/4-86-010); or

(2) The toxic air pollutant is known by the owner or operator to be emitted into the ambient air because of:

(a) Information from material safety data sheets and hazard labelling required under the OSHA Hazard Communications Standard 29 CFR 1910.1200, or

(b) Information from reports required under the Federal Emergency Planning and Community Right-to-Know Act of 1986, P.L. 99-499, Title III, Sections 300-330, or

(c) Other information reasonably available to the owner or operator based on the source's obligations under other regulatory programs; or

(3) The toxic air pollutant is identified by the department on or before the date the application is determined to be complete, as likely to be emitted from a source. The department shall also provide the owner or operator a reasonable basis to support the belief that the source will emit such toxic air pollutant.

C. The following classes of sources are exempt from the permitting requirements for toxic air pollutants:

(1) Gasoline Service Stations - SIC No. 5441

(2) Automotive Repair Shops - SIC No. 753

(3) Laundry, Cleaning, and Garment Services - SIC No. 721

(4) Domestic Woodstoves and Fireplaces

(5) Oil and Gas Production Facilities

(6) Agricultural Production - Crops, SIC No. 01

(7) Agricultural Production - Livestock, SIC No. 02

(8) Agricultural Services - SIC No. 07

(9) Containers, such as tanks, barrels, drums, cans and buckets, unless equipped with a vent that emits or may emit any toxic air pollutant, which are used in connection with the operation, maintenance or repair of a stationary source.

(10) Non-process fugitive emissions of toxic air pollutants from stationary sources, such as construction sites, unpaved roads, coal piles, tailings piles, waste piles, and fuel and ash handling operations.

D. An exemption or exclusion from the permitting requirements for toxic air pollutants does not relieve a source from any other requirements in this part (20.2.72 NMAC).

[20.2.72.402 NMAC - Rn & A, 20 NMAC 2.72.IV.402, 2/2/01]

20.2.72.403 CONTENTS OF APPLICATION:

A. For the department to deem administratively complete a permit application for the emission of a toxic air pollutant, the application shall contain, in addition to the requirements of 20.2.72.203 NMAC, the following items:

(1) Identification of all toxic air pollutants that may be emitted in excess of the screening level (specified in pounds per hour) in 20.2.72.502 NMAC;

(2) Air quality modeling, in accordance with methods approved by the US EPA or the department, that estimates ambient concentrations that would be caused by the proposed emissions. The modeling for the toxic air pollutants will include available emissions supplied by the department from registration and permitting information from all registered or permitted sources in the area of the source being permitted.

B. If the modeling shows that the eight-hour average ambient concentration of the toxic air pollutant exceeds one-one hundredth of the OEL and the toxic air pollutant is not identified as a known or suspected human carcinogen in 20.2.72.502 NMAC, Table B, the permit application shall also include, as a requirement for administrative completeness, a health assessment for the toxic air pollutant under consideration. The assessment shall include consideration of the following:

(1) Source to potential receptor data and modeling;

(2) Relevant environmental pathway and effects data;

(3) Available health effects data such as:

(a) Functional diseases;

(b) Mutagenicity data as an index of genotoxic effects including heritable diseases;

(c) Reproductive effects data;

(d) Other diseases; and

(4) An integrated assessment of the human health effects for projected exposures from the applicant's facility. The assessment should use existing relevant data obtained from epidemiological studies, controlled human exposure studies, laboratory animal studies, and studies using tissues and cells.

C. If the toxic air pollutant is identified as a known or suspected human carcinogen in 20.2.72.502 NMAC and air quality modeling shows that the eight-hour average concentration of the toxic air pollutant exceeds one one-hundredth of the OEL or the minimum detection level in 20.2.72.502 NMAC, the permit application shall

include, as a requirement for administrative completeness, information necessary to demonstrate the source will install the best available control technology to control that pollutant.
[20.2.72.403 NMAC - Rn & A, 20 NMAC 2.72.IV.403, 2/2/01]

20.2.72.404 PUBLIC NOTICE AND PARTICIPATION: In addition to the requirements of 20.2.72.206 NMAC:

A. The department shall meet with the applicant during the permit application process, prior to deeming the application administratively complete, to discuss the need for additional data and information not initially submitted by the applicant; and

B. The department shall promptly advise the applicant of all medical or other scientific evidence the department uses to evaluate the health effects of the toxic air pollutant emissions and make available to the applicant in a timely manner all information, including all previous decisions on the toxic air pollutant in question.
[20.2.72.404 NMAC - Rn & A, 20 NMAC 2.72.IV.404, 2/2/01]

20.2.72.405 PERMIT DECISIONS: In making its decisions, the department shall consider emissions after control.

A. Ambient concentrations not exceeding one one-hundredth of the OEL or the minimum detection level for compounds without an OEL: If the department finds that the eight-hour average concentration of the toxic air pollutant in the ambient air does not exceed one one-hundredth of the OEL, or for compounds without an OEL, the minimum detection levels as shown in 20.2.72.502 NMAC, the department shall grant the permit. The administrative screening level of one one-hundredth the OEL and the OEL shall not be a basis for denying a permit and shall not constitute an ambient air quality standard.

B. Ambient concentrations exceeding one one-hundredth of the OEL or the minimum detection level for compounds without an OEL for substances identified as known or suspected human carcinogens in 20.2.72.502 NMAC: If the toxic air pollutant being considered is identified as a known or suspected carcinogen in 20.2.72.502 NMAC, Table B, and the department finds the eight-hour concentration of the toxic air pollutant in the ambient air exceeds one one-hundredth of the OEL, or for compounds without an OEL, the minimum detection level, the department shall grant the permit if the applicant implements the best available control technology to control that pollutant.

C. Ambient concentrations exceeding one one-hundredth of the OEL for substances not identified as carcinogens in 20.2.72.502 NMAC:

(1) If the applicant has been required to prepare a health assessment under Subsection B of 20.2.72.403 NMAC, the department shall prepare a Summary Review Statement (SRS) which indicates the department's opinion of the adequacy of the applicant's health assessment. The SRS will include a summary recommendation on whether the issuance of a permit will or will not with reasonable probability injure human health.

(2) If the applicant does not agree with the recommendation contained in the SRS, the applicant's assessment and the SRS will be provided to the Air Toxics Scientific Advisory Committee (ATSAC). The ATSAC will be composed of five members appointed by the Secretary. They will include physicians, toxicologists, industrial hygienists, or others knowledgeable of the potential health and environmental effects of air pollution. The committee will include at least one member nominated by the applicant. The ATSAC will review the applicant's assessment and the SRS in a public meeting. The ATSAC shall provide a letter to the Secretary stating: (1) whether the submitted documents provide a scientifically adequate basis to determine whether the proposed source will with reasonable probability injure human health and (2), if the documents do provide an adequate basis, whether the proposed source will with reasonable probability injure human health. If the documents are scientifically inadequate, the ATSAC shall return them to the department and indicate their inadequacies.

(3) The department will make a final decision on the issuance of the permit after consideration of the following factors:

(a) The nature of the toxic air pollutant and the size, susceptibility, and proximity of the human population;

(b) The pathways of human exposure (e.g., ingestion, inhalation, skin absorption);

(c) The short term and long term health effects associated with the toxic air pollutant at levels of exposure commensurate with the anticipated exposure level;

(d) Existing epidemiological data on health effects associated with the anticipated levels of exposure;

(e) The character of the land use of the predicted area of impact (e.g., residential, industrial, and recreational); and

(f) The scientific adequacy of the health and environmental assessment submitted by the applicant and the recommendation of the ATSAC. The department shall not rely on the OEL or on the administrative screening level of one one-hundredth the OEL, and it shall not be bound by prior permit decisions when considering pending applications.

(4) The department shall deny any application for a permit evaluated under Subsection C of 20.2.72.405 NMAC if the source will emit a toxic air pollutant in such quantities and duration as may with reasonable probability injure human health.

D. The department shall document, in the administrative record, all processes, facts, and reasoning relied on in making the permit decision, including citations to the relevant technical data, publications, and expert opinions considered.

(1) The final deliberations of the ATSAC shall be open to the public. Except for requests by members of the ATSAC for input from the applicant or department, no other comments from the applicant, department, or audience shall be allowed during final deliberations.

(2) Prior to a final decision, the ATSAC members may communicate among themselves in order to facilitate the evaluation process. However, all ATSAC members shall be apprised of such communications.

(3) Prior to a final decision, the ATSAC members may also communicate with the department and applicant in order to clarify information or secure additional information concerning the applicant's health assessment or the department's SRS. The department, applicant, and all ATSAC members shall be apprised of such communication.

o-Tolidine	11.0**	0.733
p-Toluidine	9.00	0.600
Vinyl cyclohexene dioxide	60.0	4.00

FOOTNOTES

The emissions in pounds per hour in Section 502 were derived using the formula listed below:

emission level (lbs/hr) = OEL (mg/m3) / 15

* = Compound for which an OEL is not listed by the ACGIH. Value derived by using the miminum detectable level listed in the NIOSH "Manual of Analytical Methods", Third Edition.

** = Compound for which an OEL is not listed by the ACGIH and for which there is no chemical specific analytical method listed in the NIOSH "Manual of Analytical Methods", Third Edition. A minimum dectable level (MDL) was derived by using the MDL of a similar compound listed in the NIOSH analytical methods or by assigning the average MDL for a class of compounds such as "halogenated hydrocarbons". In some cases the lowest MDL of the whole class was used.

NMED Exhibit 7-J_000038

Table C - Stack Height Release Correction Factor

Sources may choose to use a correction factor for the release height of emissions for the purpose of determining whether a permit is necessary for the emission of a toxic air pollutant. To apply the correction go to the table below and find the minimum height of release for the toxic air pollutant and select the correction factor (CF) which corresponds to that figure. If the height of release is between two values, the lower number shall be selected; or in the event of multiple releases of the same substance from different release heights, the source may choose to use a weighted average CF, weighted by the emission rate at each. The emissions in pounds per hour is then multiplied by the CF (see below). If the emissions from your source exceed the resulting number, you must apply for a permit from the department. Remember, this must be done for each toxic air pollutant.

CF x Emissions in Pounds per Hour

where: E - emission rate (pounds per hour)

OEL - occupational exposure limit (mg per cubic meter)

CF is a correction factor, shown in the table below, which accounts for release height.

Release Height in Meters	Correction Factor (CF)*
Less than 3	1

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 73 NOTICE OF INTENT AND EMISSIONS INVENTORY REQUIREMENTS

20.2.73.1 ISSUING AGENCY: Environmental Improvement Board.
[11/30/95; 20.2.73.1 NMAC - Rn, 20 NMAC 2.73.100 02/18/02]

20.2.73.2 SCOPE: All persons who own or operate a source or who intend to construct or modify a source.
[11/30/95; 20.2.73.2 NMAC - Rn, 20 NMAC 2.73.101 02/18/02]

20.2.73.3 STATUTORY AUTHORITY: Environmental Improvement Act, NMSA 1978, Section 74-1-8(A)(4), and Air Quality Control Act, NMSA 1978, Sections 74-2-1 et seq., including specifically, Section 74-2-7(A)(1) and (B).
[11/30/95; 20.2.73.3 NMAC - Rn, 20 NMAC 2.73.102 02/18/02]

20.2.73.4 DURATION: Permanent.
[11/30/95; 20.2.73.4 NMAC - Rn, 20 NMAC 2.73.103 02/18/02]

20.2.73.5 EFFECTIVE DATE: November 30, 1995 except where a later date is cited at the end of a section or paragraph.
[11/30/95, 10/01/97; 20.2.73.5 NMAC - Rn, 20 NMAC 2.73.104 02/18/02]
[The latest effective date of any section in this Part is July 6, 2011.]

20.2.73.6 OBJECTIVE: The objective of this part is to establish requirements for the submission of certain relevant information to ensure that the regulations and standards under the Air Quality Control Act and the federal act will not be violated, and to facilitate the quantification of greenhouse gas emissions in New Mexico.
[11/30/95; 20.2.73.6 NMAC - Rn, 20 NMAC 2.73.105 02/18/02; A, 01/01/08]

20.2.73.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this part, the following apply.

A. "Air pollution control equipment" means any device, equipment, process or combination thereof the operation of which would limit, capture, reduce, confine, or otherwise control air contaminants or convert for the purposes of control any air contaminant to another form, another chemical or another physical state.

B. "California climate action registry" means the voluntary registry for greenhouse gas emissions established pursuant to California Health & Safety Code D. 26, Pt. 4, Ch. 6 (West 2007).

C. "Commencement" means that an owner or operator has undertaken a continuous program of construction or modification.

D. "Construction" means fabrication, erection, installation or relocation of a stationary source, including but not limited to temporary installations and portable stationary sources.

E. "Emission report or inventory" means a listing, by source, of the amount of air pollutants discharged into the atmosphere of a community.

F. "Fuel carbon content" means the mass of carbon per unit of heat content of a fuel.

G. "Fugitive emissions" are those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

H. "Greenhouse gas emissions reporting year" means the calendar year in which greenhouse gas emissions required to be reported under this part occurred.

I. "Modification" means any physical change in, or change in the method of operation of, a stationary source which results in an increase in the potential emission rate of any regulated air contaminant emitted by the source or which results in the emission of any regulated air contaminant not previously emitted, but does not include:

(1) a change in ownership of the source;

(2) routine maintenance, repair or replacement;

(3) installation of air pollution control equipment, and all related process equipment and materials necessary for its operation, undertaken for the purpose of complying with regulations adopted by the board or pursuant to the federal Clean Air Act; or

(4) unless previously limited by enforceable permit conditions:

NMED Exhibit 7-K_000001

(a) an increase in the production rate, if such increase does not exceed the operating design capacity of the source;

(b) an increase in the hours of operation; or

(c) use of an alternative fuel or raw material if, prior to January 6, 1975, the source was capable of accommodating such fuel or raw material, or if use of an alternate fuel or raw material is caused by any natural gas curtailment or emergency allocation or any other lack of supply of natural gas.

J. "Nonattainment area" means, for any air pollutant, an area which has been designated as a nonattainment area under Section 107 of the federal act.

K. "Operator" means the person or persons responsible for the overall operation of a facility.

L. "Owner" means the person or persons who own a facility or part of a facility.

M. "Part" means an air quality control regulation under Title 20, Chapter 2 of the New Mexico administrative code, unless otherwise noted; as adopted or amended by the board.

N. "Portable stationary source" means a source which can be relocated to another operating site with limited dismantling and reassembly, including for example but not limited to moveable sand and gravel processing operations and asphalt plants.

O. "Potential emission rate" means the emission rate of a source at its maximum capacity to emit a regulated air contaminant under its physical and operational design, provided any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its physical and operational design only if the limitation or the effect it would have on emissions is enforceable by the department pursuant to the Air Quality Control Act or the federal act.

P. "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design; any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable; the potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

Q. "Regulated air contaminant" means any air contaminant, the emission or ambient concentration of which is regulated pursuant to the New Mexico Air Quality Control Act or the federal act.

R. "Shutdown" means the cessation of operation of any air pollution control equipment, process equipment or process for any purpose, except routine phasing out of batch process units.

S. "Stationary source" or "source" means any building, structure, equipment, facility, installation (including temporary installations), operation or portable stationary source which emits or may emit any air contaminant; any research facility may group its sources for the purpose of this part at the discretion of the secretary of the department.

T. "The climate registry" means the nonprofit corporation by that name incorporated under the District of Columbia Nonprofit Corporation Act with a purpose of creating and operating a multi-state greenhouse gas emissions registry.

U. "WEB source" means a stationary source that meets the applicability requirements of 20.2.81.101 NMAC.

V. "Western backstop sulfur dioxide trading program" means 20.2.81 NMAC, triggered as a backstop in accordance with the provisions in the sulfur dioxide milestones and backstop trading program implementation plan, if necessary, to ensure that regional sulfur dioxide emissions are reduced.

[11/30/95, 10/01/97; 20.2.73.7 NMAC - Rn, 20 NMAC 2.73.107 & A, 02/18/02; A, 12/31/03; A, 01/01/08]

20.2.73.8 to 20.2.73.105 [RESERVED]

20.2.73.106 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This part amends and supersedes Air Quality Control Regulation ("AQCR") 703.1 - Notice of Intent and Emissions Inventory Requirements last filed May 29, 1990, as amended ("AQCR 703.1").

A. All references to AQCR 703.1 in any other rule shall be construed as a reference to this part.

B. The amendment and supersession of AQCR 703.1 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 703.1.

[11/30/95; 20.2.73.106 NMAC - Rn, 20 NMAC 2.73.106 02/18/02]

20.2.73.107 to 20.2.73.199 [RESERVED]

20.2.73.200 NOTICE OF INTENT:

A. Applicability:

(1) Any owner or operator intending to construct a new stationary source which has a potential emission rate greater than 10 tons per year of any regulated air contaminant or 1 ton per year of lead shall file a notice of intent with the department.

(2) Any owner or operator intending to modify a stationary source which either prior to or following the modification has a potential emission rate greater than 10 tons per year of any regulated air contaminant or 1 ton per year of lead shall file a notice of intent with the department.

(3) The requirements of 20.2.73.200 NMAC do not apply to stationary sources or modifications located in Bernalillo county.

(4) The notice of intent shall be filed prior to the commencement of construction. Construction shall not begin prior to issuance of a written determination by the department that a permit is not required, or if a permit is required, prior to the issuance of the permit under 20.2.72 NMAC, 20.2.74 NMAC or 20.2.79 NMAC.

B. Contents of Notice: Notices of intent shall be filed on forms furnished by the department, which shall be identical to the extent practicable, as those used for 20.2.72 NMAC (Construction Permits) and shall include:

(1) The applicant's name and address, the person to contact regarding the application, and the name and address of the new source or modification.

(2) The date of the application.

(3) A description of the new facility or modification including all operations affecting air emissions.

(4) The anticipated operating schedule.

(5) A map such as a 7.5 minute United States geological survey topographic quadrangle showing the location of the stationary source.

(6) The nature and quantities of any regulated air contaminants the new source or modification will emit, including all calculations utilized to estimate emissions.

(7) A description of any air pollution control device or method to be utilized, including the basis for the estimated control efficiency.

(8) The stack and exhaust gas parameters for all emission points.

(9) Any other relevant information as the department may reasonably require.

(10) Be signed under oath or affirmation by the operator, the owner, or an authorized representative, certifying to the best of his or her knowledge the truth of all information submitted.

C. Review of Notice: Within thirty days from the date a notice is received, the department shall review its content and by certified letter indicate to the applicant:

(1) the notice is incomplete and indicate specific additional material or clarification required; or

(2) a permit is not required and construction may commence; or

(3) a permit is required before construction may commence. For this case, the department will indicate whether the application is complete with respect to the requirements of each applicable permit regulation and specify additional material or clarification required if it is not complete.

D. Verification: In verifying information submitted in response to the requirements of this part, the department may:

(1) Enter at all reasonable times in or upon any private or public property, except private residences, which the department has reasonable cause to believe is or will become a source of air contaminants contributing to air pollution; and

(2) Require the production of information relating to emissions which cause or contribute to air pollution, including the sampling of emissions in accordance with methods and at locations and intervals as may be prescribed by the department.

E. Notification Requirements:

(1) The owner or operator of a portable stationary source shall notify the department in writing of the date and site of any relocation at least fifteen days prior to its occurrence.

(2) Any owner or operator of a stationary source which will be shut down for a period of one year or more shall notify the department in writing of the actual date of shut down within thirty days after the shut down occurs.

(3) Any new owner or operator of a stationary source shall notify the department within thirty days of assuming ownership of his or her name and address.

[11/30/95; 20.20.73.200 NMAC - Rn, 20 NMAC 2.73.200-204 02/18/02]

NMED Exhibit 7-K_000003

20.2.73.201 to 20.2.73.299 [RESERVED]

20.2.73.300 EMISSION INVENTORY REQUIREMENTS:

A. Applicability. The requirements of 20.2.73.300 NMAC apply to the owner or operator of any stationary source located outside of Bernalillo county which:

(1) has been issued a permit under 20.2.72 NMAC (Construction Permits) during any period of time, except for toxic air pollutant permits issued under Sections 401 to 499 of 20.2.72 NMAC;

(2) is required to file a notice of intent under 20.2.73.200 NMAC; or

(3) emits in excess of 1 ton of lead or 10 tons of total suspended particulate, PM10, PM2.5, sulfur dioxide, nitrogen oxides, carbon monoxide, or volatile organic compounds in any calendar year including and subsequent to 1990.

B. Reporting requirements.

(1) Any source which emits, or has the potential to emit, 5 tons per year or more of lead or lead compounds, or 100 tons per year or more of PM10, PM2.5, sulfur oxides, nitrogen oxides, carbon monoxide, or volatile organic compounds shall submit an emissions report annually.

(2) Any source defined as a major source of hazardous air pollutants under 20.2.70 NMAC (Operating Permits) shall submit an emissions report annually.

(3) Any source which is located in an ozone nonattainment area and which emits, or has the potential to emit, 25 tons per year or more of nitrogen oxides or volatile organic compounds shall submit an emissions report annually.

(4) Any source which is not required by Paragraph (1), (2), or (3) of Subsection B of this section (20.2.73.300 NMAC) to submit an emission report shall submit an emissions report under this part upon request by the department, but no more frequently than annually.

(5) Except as provided in Paragraph (8) of Subsection B of this section (20.2.73.300 NMAC), the department shall provide to the owner or operator required by this section (20.2.73.300 NMAC) to submit an emissions report a complete copy of the most current emissions report for their stationary source which is on file with the department. The department shall provide this copy to the owner or operator at least 90 days prior to the date when the source is required to submit an emissions report.

(6) The owner or operator shall submit to the department a complete, correct and current emissions report in the format specified by the department which reflects emissions during the previous calendar year.

(7) Except as provided in Paragraph (8) of Subsection B of this section (20.2.73.300 NMAC) the owner or operator shall submit the emission report by April 1 of each year in which the source is required to submit an emission report.

(8) Sources for which a date for submitting an annual emission report is specified in a current operating permit issued under 20.2.70 NMAC (Operating Permits) shall submit such report on that date. The department shall provide a copy of the previous emissions report upon request by the owner or operator of such source.

(9) Any source that is requested by the department to submit a report of greenhouse gas emissions shall:

(a) submit such report on the schedule and according to the greenhouse gas emissions reporting procedures established by the department, but not more often than annually; or

(b) report greenhouse gas emissions from the source under 20.2.87 NMAC for the greenhouse gas emissions reporting year and the two years following that year; or

(c) provide the department access to the requested information for the greenhouse gas emissions reporting year registered in either the climate registry or the California climate action registry; and

(d) keep records in support of the report for a minimum of five years.

(10) In determining the schedule of greenhouse gas emissions reports and reporting procedures, the department, subject to Paragraph (11) below, shall provide an opportunity for public comment, and shall consider:

(a) public comments regarding the schedule of such reports and greenhouse gas emissions reporting procedures;

(b) emissions quantification standards and best practices approved or recommended by federal and state agencies, by greenhouse gas emissions registries, and by non-governmental bodies having expertise in greenhouse gas emissions quantification;

NMED Exhibit 7-K_000004

(c) whether greenhouse gases emissions from a particular source or source type, considering the amount and chemical composition of the emissions, are expected to be minimal relative to emissions from other sources or source types, and

(d) whether emissions of a particular greenhouse gas from a source or source type, considering the amount and chemical composition of the emissions, are expected to be minimal relative to the total greenhouse gas emissions from that source or source type.

(11) The schedule for greenhouse gas emissions reports and reporting procedures pursuant to Paragraphs (9) and (10) of Subsection B of 20.2.73.300 NMAC, shall:

(a) subject to the department's selection of best available quantification methodologies, include a requirement that sources within North American industry classification system codes 211111, 211112, 213111, 213112, 486210, 221210, 486110, and 486910 subject to this part and permit requirements pursuant to 20.2.70 NMAC (Operating Permits) report at a minimum emissions of carbon dioxide and methane beginning no later than reporting year 2009 and for subsequent reporting years; and

(b) subject to the department's selection of best available quantification methodologies, include a requirement that sources within North American industry classification system codes 211111, 211112, 213111, 213112, 486210, 221210, 486110, and 486910 subject to this part pursuant to Paragraphs (1) and (2) of Subsection A of 20.2.73.300 NMAC, and not otherwise covered by Subparagraph (a), above, report at a minimum emissions of carbon dioxide and methane no later than reporting year 2010 and for subsequent reporting years as requested by the department.

C. Content of emissions reports. Emissions report contents for reports made under Paragraphs (1) through (8) of Subsection B of 20.2.73.300 NMAC shall include:

(1) the name, address, if any, and physical location of the stationary source;

(2) the name and telephone number of the person to contact regarding the emissions report;

(3) a certification signed by the owner, or operator, or a responsible official as defined in 20.2.70 NMAC attesting that the statements and information contained in the emissions report are true and accurate to the best knowledge and belief of the certifying official, and including the full name, title, signature, date of signature, and telephone number of the certifying official; for sources subject to 20.2.70 NMAC, the certification shall be made as required under that part;

(4) smelters shall submit an annual report of sulfur input, in tons/year;

(5) for each emission point, as required by the department:

(a) stack and exhaust gas parameters and location information;

(b) type of control equipment and estimated control efficiency;

(c) schedule of operation;

(d) estimated actual emissions, including fugitive emissions and emissions occurring during maintenance, start-ups, shutdowns, upsets, and downtime of total suspended particulate, PM10, PM2.5, ammonia, sulfur oxides, nitrogen oxides, carbon monoxide, volatile organic compounds, and lead, and, if requested by the department, speciated hazardous air pollutants, in tons per year and a description of the methods utilized to make such estimates, including calculations;

(e) the annual process or fuel combustion rates; and

(f) the fuel heat, sulfur, and ash content; and

(6) all information required under the federal act.

D. Additional content for emissions reports from sources in ozone nonattainment areas. Emissions reports from sources located in ozone nonattainment areas shall include, in addition to the contents specified by Subsection C of this section (20.2.73.300 NMAC), the following information:

(1) typical daily process rate during the peak ozone season, where the peak ozone season is specified by the department; and

(2) estimated actual emissions of nitrogen oxides and volatile organic compounds, which shall be reported:

(a) for each emissions point;

(b) for each process and fuel type contributing to emissions from each point;

(c) in units of tons per year for annual emissions; and

(d) in units of pounds per day for a typical day during the peak ozone season.

E. Waiver of reporting requirements for insignificant emissions. The department may waive the requirements of Paragraph (5) of Subsection C of this section (20.2.73.300 NMAC) for emissions which the department determines to be insignificant under 20.2.70 NMAC, except that:

(1) for sources in nonattainment areas, reporting of emissions of pollutants for which the area is nonattainment shall not be waived; and

(2) reporting of emissions for which reporting is required under the federal act shall not be waived.

F. Emission tracking requirements for sulfur dioxide emission inventories. All stationary sources with actual emissions of one hundred (100) tons per year or more of sulfur dioxide in the year 2000, or in any subsequent year, shall submit an annual inventory of sulfur dioxide emissions, beginning with the 2003 emission inventory. A source that meets these criteria that then emits less than 100 tons per year in a later year shall submit a sulfur dioxide inventory for tracking compliance with the regional sulfur dioxide milestones until the western backstop sulfur dioxide trading program has been fully implemented and emission tracking has occurred under 20.2.81.106 NMAC.

(1) All WEB sources will be subject to the following federally enforceable provisions:

(a) submit an annual inventory of sulfur dioxide emissions;

(b) document the emissions monitoring/estimation methodology used, and demonstrate that the selected methodology is acceptable under the inventory program;

(c) include emissions from start up, shut down, and upset conditions in the annual total inventory;

(d) use 40 CFR Part 75 methodology for reporting emissions for all sources subject to the federal acid rain program;

(e) maintain all records used in the calculation of the emissions, including but not limited to the following:

(i) amount of fuel consumed;

(ii) percent sulfur content of fuel and how the content was determined;

(iii) quantity of product monitoring data;

(iv) emissions monitoring data;

(v) operating data; and

(vi) how the emissions are calculated;

(f) maintain records of any physical changes to facility operations or equipment, or any other changes that may affect the emissions projections; and

(g) retain records for a minimum of ten years from the date of establishment, or if the record was the basis for an adjustment to the milestone, five years after the date of an implementation plan revision, whichever is longer.

(2) Changes in emission measurement techniques. Each source subject to this subsection that uses a different emission monitoring or calculation method than was used to report sulfur dioxide emissions in 2006 under this part or 40 CFR Part 75 shall adjust their reported emissions to be comparable to the emission monitoring or calculation method that was used in 2006. The calculations that are used to make this adjustment shall be included with the annual emission report.

(3) The department shall retain emission inventory records for non-utilities for 2006 until the year 2018 to ensure that changes in emissions monitoring techniques can be tracked.

G. Content of greenhouse gas emissions reports. Greenhouse gas emissions reports shall contain the following information, as set out in the greenhouse gas emissions reporting procedures established under Subparagraph (a) of Paragraph (9) of Subsection B of 20.2.73.300 NMAC:

(1) the name, location, and permit or notice of intent number of the stationary source;

(2) the name and telephone number of the person to contact regarding the greenhouse gas emissions report;

(3) a certification signed by the owner or operator attesting that the statements and information contained in the emissions report are true and accurate to the best knowledge and belief of the certifying official, and including the full name, title, signature, date of signature, and telephone number of the certifying official;

(4) for each emission point as required by the department under the greenhouse gas emissions reporting procedures, the estimated actual emissions of greenhouse gases, including fugitive emissions and emissions occurring during maintenance, start-ups, shutdowns, upsets and downtime; and

(5) if requested by the department, the fuel type, fuel heat content, and fuel carbon content.

No. EIB 25-77(R)

New Mexico Environment Department,

Petitioner.

NEW MEXICO ENVIRONMENT DEPARTMENT
TECHNICAL TESTIMONY OF SECRETARY JAMES C. KENNEY

I. INTRODUCTION AND QUALIFICATIONS

My name is James C. Kenney, and I have served as the Cabinet Secretary for the New Mexico Environment Department ("Department") for the past seven years. In this capacity, I lead the Department in the development of public health and environmental laws, regulations and policies to implement federal and state programs. I am responsible for the Department's $235 million annual budget and a workforce of over 600 individuals across 26 offices throughout New Mexico.

The mission of the Department is to protect and restore the environment and to foster a healthy and prosperous New Mexico for present and future generations. The Department successfully implements federal and state programs related to air and water quality, drinking water and food safety, solid and hazardous waste, occupational health and safety, and other such programs. We keep New Mexicans healthy and safe, and specifically work to prevent the deterioration of air quality for all New Mexico residents as part of this effort.

Increasing challenges facing New Mexico's public health and environment have been met with increased duties and budget for the Department. During my tenure, I have overseen a period of significant Department growth aimed at meeting modern environmental challenges. This includes moving and upgrading the Department's Albuquerque location to a 98,000 square foot space in the Mesa del Sol community; digitizing all paper files across the Department through "Project Velocity" and creating the ability to search for files using an artificial intelligence agent; conducting Rapid Hire events at least once per year to quickly recruit qualified candidates; and ensuring – as the first agency in New Mexico state government to do so – all Department employees are properly compensated and aligned according to their years of education and experience.

In calendar year 2025, I served as the president of the Environmental Council of the States, the national nonprofit, nonpartisan association of state environmental agency leaders that works to improve the capability of state environmental agencies and their leaders to protect and improve human health and the environment of the United States. In this role, I worked with other state environmental agency leaders who, although having different programs, costs and needs, are underpinned together under federal environmental laws and regulations. In this nonpartisan role, I also work with my colleagues on advocating for federal cost share on funding for state-led implementation of the nation's environmental programs.

My resume with additional qualifications is included as **NMED Exhibit 9**.

I present this written testimony on behalf of the Department in support of the Department's Petition for Regulatory Change to Repeal and Replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees* ("Petition") (filed Dec. 3, 2025), in the form of the text of recommended modifications set forth in 20.2.71 NMAC, *Operating*

Permit Emissions Fees, **NMED Exhibit 1** (clean) and **NMED Exhibit 2** (redline) ("Revised Part 71") and 20.2.75 NMAC, *Construction Permit Fees*, **NMED Exhibit 4** (clean) and **NMED Exhibit 5** (redline) ("Revised Part 75"), for the Environmental Improvement Board ("Board")'s adoption in place of the regulatory changes proposed in the Petition as 20.2.71 NMAC and 20.2.75 NMAC, Petition, Exhibits B and C (clean), respectively, and Exhibits D and E (redline), respectively (filed Dec. 3, 2025).

The purpose of my testimony is to: (1) provide an overview of Department organization, strategic plan and performance metrics; (2) provide a general orientation to the state budgeting process; (3) explain the specific complexities of the Department's budget; and (4) outline how this effort by the Department to repeal and replace the regulations at 20.2.71 NMAC ("Part 71") and 20.2.75 NMAC ("Part 75") to increase the amount of funding in the Department's "bank accounts" for its Air Quality Program is essential for the Program's stability, integrity and overall success.

II. ORGANIZATIONAL OVERVIEW

The Department is comprised of six divisions, four offices, and 19 bureaus. This is important to understand the broader framework in which the Air Quality Program is situated. The divisions include: (1) the Environmental Protection Division, which largely regulates sources of air pollution, greenhouse gas emissions, and commercial radiation source material; (2) the Environmental Health Division, which largely regulates food manufacturing, restaurants, and septic systems; (3) the Resource Protection Division, which largely regulates solid and hazardous wastes, including chemical and radiological wastes; (4) the Water Protection Division, which regulates all groundwater and surface water quality, as well as drinking water, and housing water infrastructure fiscal programs; (5) the Compliance and Enforcement Division, which conducts compliance assurance activities for almost every regulatory program in the other Divisions and

includes compliance assistance, civil and criminal investigations, and technical support for litigation purposes; and (6) the Resource Management Division, which serves as the "back of house" for the Department, containing cross-cutting support functions for all divisions including budget and finance, human resources, information technology, legal support, public facilitation, and strategic initiatives. Together, the divisions implement and administer numerous non-discretionary duties as required under federal and state laws and rules. The most recent Department organization chart is included as **NMED Exhibit 10**.[1] The newest division is the Compliance and Enforcement Division, which the Department launched on July 1, 2025.

To ensure the Department has a transparent framework that demonstrates its annual program goals and objectives, the Department publishes a strategic plan every year. The Department's strategic plans for Fiscal Year 2026 ("FY26") and Fiscal Year 2027 ("FY27")[2] are included as **NMED Exhibit 11**. As set forth in these plans, the number one program goal and objective for FY26 and FY27 is to "ensure robust staffing and resources to improve the implementation of our mission." **NMED Exhibit 11** at pp. 2, 25. The additional goals and objectives are to: (1) create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities; (2) protect communities from emerging public health and environmental contaminants, and (3) protect the public health and the environment through innovative and traditional compliance assurance activities. ***Id***.

[1] As seen from NMED Exhibit 10, there are also a number of affiliated boards and commissions related to the Department.

[2] State fiscal years run on a July 1 to June 30 schedule.

The Department publishes Department-focused quarterly performance reports, as seen in **NMED Exhibit 12**, and maintains a public-facing website on its performance that is available to the public, legislators, and Department employees.

The Department also qualitatively and quantitatively measures its progress on approximately 30 different performance measures through reports to the Legislative Finance Committee ("LFC"), the nonpartisan fiscal arm of the New Mexico Legislature that oversees the effectiveness of agency programs. This is seen in **NMED Exhibit 13**.

The Department also tracks the amount of agency employees, known as "Full-Time Equivalents" or "FTEs" by months. This is seen at **NMED Exhibit 14**.

The Department also recently started an effort entitled "Enforcement Watch," which tracks the Department's new and resolved enforcement actions and posts them online, as seen at **NMED Exhibit 15**.

III. ORIENTATION TO THE STATE BUDGETING PROCESS

One of the primary ways the Department meets its number one FY26 and FY27 goal and objective to "ensure robust staffing and resources to improve the implementation of our mission" is to make sure that it has enough funding to meet demands on the agency. It is important for the Board to understand the state budgeting process in the context of this particular rulemaking effort, because as will be described below, the Board's designated authority under the Air Quality Control Act informs how the Department can budget and spend for the Program each year.

Every year, the State of New Mexico passes a budget and funds programs, services, and infrastructure that keep our communities healthy, safe, and economically strong. This includes the Department's budget, and as will be described below, the Air Quality Program budget as well. New Mexico's budgeting process is unlike any other state's process, as it starts with an agency

request and then moves to two separate budget recommendations from the executive branch and the legislative branch before finally coming together into one that will support state needs. The process and timeline are further detailed below.

A. Agency Budget Request (June – September 1)

The agency budgeting process begins about a year before the fiscal year for which the funds are needed. See NMSA 1978, §§ 6-3-18 to -19 (1999). By way of example, agencies started developing their budget proposals for FY25 in June of 2023 – 13 months before actual FY25 even began. Since fiscal year budgeting occurs so far in advance, the agency has yet to collect that future fiscal year's actual revenue. Thus, the agency has to make its best estimate based on available data and information as to how much revenue will be available.

As a starting place to develop its budget request, the agency will review its budget from the previous fiscal year. The budget from the previous fiscal year is an amount known as the base budget. The agency will start with the base budget and make adjustments to increase or decrease its base budget by evaluating a number of factors. Examples of factors include: (1) how much revenue the agency expects to collect; (2) changes in costs for employee pay and benefits; (3) changing program needs; and (4) the need to replace federal funding due to federal program changes. After the agency makes the adjustments to its base budget due to these types of relevant factors, that adjusted budget becomes the agency's budget request. Importantly, while the agency is preparing its adjusted budget, the agency ties its request to the actual amount of revenue it expects to collect that fiscal year.

After this work, the agency then sends its adjusted budget request to the New Mexico Department of Finance and Administration ("DFA") and the LFC. DFA is an executive agency charged with ensuring the effective, efficient, and accountable management of state government

finances and operations so that public resources are used responsibly. See NMSA 1978, §§ 9-6-1 to -21 (2024). As noted previously, the LFC provides objective fiscal and program analysis to help the New Mexico Legislature responsibly allocate public resources and oversee state government. See NMSA 1978, §§ 2-5-1 to -7 (1999).

B. Agencies submit their budgets for the upcoming fiscal year to both DFA and LFC on September 1. Agencies must align their budget requests with strategic plans and performance measures. See NMSA 1978, § 6-3A-6 (2004).Separate Executive and Legislative Budget Preparations (September – January)

New Mexico is one of the only states in which both the executive and the legislative branches of government propose separate budgets. After the agencies submit their budget requests to DFA (the executive) and LFC (the legislative), DFA and LFC begin their separate processes. LFC evaluates budget submissions and holds public committee hearings from September to December on the agency budgets before it releases the legislative recommendation. DFA separately reviews the agency budget submissions and provides a recommendation to the governor's office through an internal process, after which the governor releases the executive recommendation. This process results in two independent budget recommendations.

In developing their separate budget proposals, the legislature and executive rely on revenue estimates that help determine how much money will be available, factoring in economic conditions and agencies' projected revenues. Importantly, New Mexico's Constitution requires a balanced budget – which forbids deficit spending. N.M. Const. Art. IV sec. 30; N.M. Const. Art. V. § 9.

C. Legislative Appropriations and Governor Signing (January – March/April)

The executive and the legislative branches each release their budgets before the New Mexico Legislative Session begins in mid-January. Then, during each Legislative Session, the state's legislative chambers – the House and the Senate – hold financial committee hearings where agencies appear and explain their budgets and funding needs for the upcoming fiscal year. The

House and Senate review this input and negotiate the budget within the General Appropriation Act, creating the state budget through legislation, often known as House Bill 2. See N.M. Const. Art. IV, § 16. House Bill 2 contains the appropriations for the upcoming fiscal year for all executive agencies. Once both legislative chambers agree on a budget, House Bill 2 is sent to the governor (executive) for action. The governor has line-item veto power that can be used on items in House Bill 2, should the governor so decide, before the governor signs House Bill 2 into law. After the governor signs House Bill 2 into law, the agencies know how much funding they will receive for the upcoming fiscal year. See N.M. Const. Art IV, § 22.

D. Operating Budget (Spring – Summer)

After the signing of House Bill 2, DFA works with the agencies to ensure the agencies receive the allocated appropriations by program and budget categories,[3] which allows the agency to have an approved operating budget. DFA and LFC monitor agency expenditures and budget compliance throughout the fiscal year.

E. Budget Adjustment Requests

Because an agency conducts this budgeting process so far in advance, a lot can change, and agencies must always be ready to adjust their budgets based on real-time conditions and actual revenue collected. When an agency needs to make such an adjustment, the agency will work with DFA and LFC on justification for the budget adjustment and will work with the agency to approve the adjustment if enough funding is available in accordance with applicable procedures. See NMSA 1978, §§ 6-3-23 to -25 (2000).

[3] The state's budget categories are generally separated into: the "200s Category", the "300s Category", and the "400s Category." The 200s Category corresponds to employee salaries and benefits. The 300s Category corresponds to contractors. The 400s Category corresponds to equipment, travel and other needs.

IV. THE DEPARTMENT'S BUDGET

The Department's budget is one of the most – if not the most – complex agency budget in state government. The Department does not receive one lump sum for its budget during the state budgeting process, but rather receives funding separated out into its six different divisions as described above. In addition, each division in itself is allocated monies from a complex blend of different sources. Those sources include: (1) General Fund, *i.e.* the primary account used to pay for the state's ongoing daily operations with contributions from gross receipts taxes, income taxes, severance taxes, oil and gas royalties and investment income;[4] (2) Federal Funds, *i.e.* federal grants for federally-delegated programs; and (3) Special Revenue Funds, *i.e.* monies derived from restricted accounts created for a particular purpose that are replenished by fees collected by the Department.

For FY26, the Department budget consists of $34.2 million in General Fund (reoccurring); $59.1 million in General Fund (one-time earmarked Special Appropriations); $95.5 million in Federal Funds; and $84.9 million in Special Revenue Funds. This translates into 12.5% General Fund (reoccurring); 21.6% in General Fund (one-time earmarked Special Appropriations); 34.9% Federal Funds; and 31% Special Revenue Funds.

Within these categories, the Department is supported by over 120 distinct sources – and 24 different Special Revenue Funds. This large number of distinct funding sources causes significant challenges, as there is little, if any flexibility in spending from the funding sources given the

[4] For the General Fund sources, the Department can receive two kinds of General Fund monies. The first is recurring General Fund. The second is one-time earmarked General Fund monies for a specific purpose. The one-time earmarked General Fund monies are also known as "Special Appropriations."

assigned restrictions for each source. Given the number of distinct sources, the Department's budget is one of the most restrictive amongst state agencies.

For example, if the Department needs to purchase a new vehicle for its Radiation Protection Program inspectors to perform inspections around the state, the Department may purchase the vehicle only using authorized monies, *i.e.*, monies appropriated to it from the radiation Special Revenue Fund. And, once the Department purchases the vehicle for the Radiation Protection Program inspectors using radiation Special Revenue Fund monies, it is meant to be used only for the benefit of that particular program. Although this may seem inefficient, the Department must follow the federal and state provisions that govern each funding source.

On a larger scale, these kinds of restrictions not only prevent the Department from balancing its program expenses and revenue needs across its six divisions, but it also prevents the Department from balancing its programs within each division given the individual federal and state funding source restrictions. If one program is running a deficit from its Special Revenue Funds, it cannot simply use monies received from any of its Federal Fund revenue to make up the deficit. If the Department did so, it may be running afoul of the federal and state restrictions assigned to those funding sources. This situation places the Department in a place where if it needs funding for a specific program, it must go to the particular funding source for that program and determinate how to make the necessary adjustments.

V. THE DEPARTMENT'S AIR QUALITY PROGRAM

F. Air Quality Program

The Department has one Air Quality Program separated into two separate bureaus: (1) the first exists within the Department's Environmental Protection Division and is known as the Air Quality Bureau ("AQB"); (2) the second exists within the Department's Compliance and

Enforcement Division and is known as the Environmental Protection Compliance and Enforcement Bureau ("EPCEB"). The Department's Compliance and Enforcement Division and EPCEB just launched July 1, 2025.

Under the Air Quality Control Act, the Board is legally required to evaluate the harms caused by air contaminants and ensure that New Mexico's Air Quality Program can operate in compliance with federal and state law. Air quality permitting is an initial and essential mechanism by which emissions limits are imposed, monitored and enforced. Adequately funding permitting and compliance activities reduces the likelihood and duration of uncontrolled or under-regulated emissions that interfere with public health, welfare, and visibility. My colleagues Cindy Hollenberg, Bureau Chief of the AQB, and Bret Anderson, Bureau Chief of the EPCEB, explain more about these individual bureaus in their testimonies, marked as **NMED Exhibit 16** and **NMED Exhibit 57**, respectively.

G. Air Quality Program Fee Authority

Under the New Mexico Air Quality Control Act (specifically NMSA 1978, § 74-2-7), the New Mexico Legislature has identified how the Air Quality Program generates income, where the income is to be placed and how that income is to be used. Under this state statutory framework, the Department is required to collect fees that are set aside for its activities to protect the deterioration of air quality, and specifically administer the Air Quality Program, including enforcement. Fee revenue obtained by the Department under Part 71 is placed in the Title V Special Revenue Fund. Fee revenue obtained under Part 75 is placed in the Construction Special Revenue Fund.[5] The Air Quality Control Act specifies that these funds must be used for the purpose of

[5] Although the Air Quality Control Act references on "State Air Quality Permit Fund," this fund as a practical matter is comprised of the Title V Special Revenue Fund and the Construction Special Revenue Fund.

paying the reasonable costs of the Department's air-related activities, which includes the scope of AQB and EPCEB as described in Bureau Chief Hollenberg's and Bureau Chief Anderson's testimonies. Similar to an enterprise fund, the intent of the Title V Special Revenue Fund and the Construction Special Revenue Fund are that the costs (including depreciation) of providing goods or services to the general public are recovered primarily through user charges.

The Air Quality Control Act also directly aligns with requirements under the state's delegated authority under the federal Clean Air Act ("CAA") and corresponding federal statutory framework. For example, the CAA instructs the U.S. EPA Administrator to promulgate regulations addressing minimum elements of a permit program to be administered by any air pollution control agency.[6] One such element is the requirement that regulated entities must pay fees sufficient to cover ***all*** reasonable (direct and indirect) costs required to develop and administer the permit program requirements. This includes the reasonable costs of: (1) reviewing and acting upon any application for such a permit; (2) implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action); (3) emissions and ambient monitoring; (4) preparing generally applicable regulations, or guidance; (5) modeling, analyses, and demonstrations; and (6) preparing inventories and tracking emissions.[7] This framework is reflected in the federal CAA implementing regulations and guidance as well.[8]

Importantly, both federal and state fee requirements set the *minimum floor* for state air programs. At the federal level, the CAA and its implementing regulations protect the role of states in establishing more stringent requirements.[9] This is true of the state Air Quality Control Act itself,

---

[6] Federal Clean Air Act, 42 U.S.C. § 7401 *et seq*.
[7] 42 U.S.C. § 7661a(b)(3).
[8] 40 C.F.R. § 70.9; https://www.epa.gov/title-v-operating-permits/title-v-permit-fees.
[9] 40 C.F.R. § 70.1(c); 42 U.S.C. § 7416.

which establishes only minimum elements of the state air program, not any prohibitions. This is demonstrated by NMSA 1978, Section 74-2-7(B), which states that regulations adopted by the Board must "include at least" certain provisions.

H. Air Quality Program's Two Special Revenue Funds

Two Special Revenue Funds support the Department's Air Quality Program.[10] Because the Department's Air Quality Program is funded almost exclusively through the two Special Revenue Funds, the services the Air Quality Program is able to deliver is tied almost exclusively to the Special Revenue Funds' available amounts. The Special Revenue Funds' available amounts are directly tied to the fee schedule adopted by the Board under the regulatory framework at Part 71 and Part 75.

Since the Board has not increased the fee schedule at Part 71 and Part 75 for approximately 17-23 years, the Department's two air Special Revenue Funds have not been replenished by fees at a rate that has corresponded to the Air Quality Program's needs. Because as previously described, the Department's adjusted budget every fiscal year is tied to projected revenue, every year the Department is restricted in the state budgeting process by the outdated projected income of the two air Special Revenue Funds because those Funds cannot not have a deficit. At the same time the Department is unable to independently raise fee revenue from Part 71 and Part 75 without Board approval, hence the need for the present action. The effect of the Board's decision on the Department's fee proposal will be to allow the Department to incorporate the resulting increased revenue into its adjusted budget that it submits to DFA and LFC annually to demonstrated that it

[10] The Air Quality Program receives a de minimis amount of General Fund (recurring) and Federal Funds for the federal-state air monitoring network through a federal-state match program. As part of its initial standup funding, the Legislature granted the entire Compliance and Enforcement Division a one-time earmarked $3 million Special Appropriation that will expire on June 30, 2026, at the end of Fiscal Year 2026.

can spend more on its Air Quality Program needs without putting the two air Special Revenue Funds at risk of a deficit.

One of the critiques of the past has been that the Department does not have a need for a fee alignment as set forth in its present proposal due to the balances in its two air Special Revenue Funds. However, that critique demonstrates a fundamental misunderstanding of how state budgets work and the oversight roles of DFA and LFC. For the Air Quality Program, the Department is not allowed to have increasing costs without a corresponding increase in projected fee revenue as part of its budgeting process. Thus, relying on the two air Special Revenue Funds, the Department has been unable to increase its costs to address Air Quality Program changes, the high volume of permitting increases, increased need for monitors and quality assurance work, modeling and emissions inventory needs, technology upgrades, environmental justice considerations, and an increase in compliance and enforcement needs for the expanding universe of emitting facilities under the Air Quality Program's jurisdiction. Importantly, all civil penalties and field citations collected by the Air Quality Program are deposited into the state's General Fund to make state residents whole – not into the Air Quality Program's two Special Revenue Funds.

In past years, the Department has attempted to supplement the funding sources for its Air Quality Program beyond the two air Special Revenue Funds by requesting General Fund monies as part of the state budgeting process. However, the Department was not successful and was reminded numerous times that the funding source for its Air Quality Program was not through General Fund requests, but through replenishing its two air Special Revenue Funds. The Department was also reminded that if the Air Quality Program needed to fund additional services, the Board is the correct body to which the Department should make this funding request.

This led to the Department petitioning the Board in 2024 with a fee increase proposal. During the 2024 proceeding, although the Board recognized the need, it declined to adopt the Department's proposal. Now, the Department appears again before the Board to repeal and replace Part 71 and Part 75 to make sure that the two Special Revenue Funds are properly replenished to support present Air Quality Program needs.

The Board's approval of this proposal will in turn allow for the Department to increase its projected revenue as part of the state budgeting process in order to increase the reasonable costs needed to ensure that air quality for all New Mexicans is clean and healthy. With an increase in projected revenue, the Board will also demonstrate that the Department's two air Special Revenue Funds are solvent for purposes of DFA and LFC oversight as the Department continues to ensure that it has enough resources in its Air Quality Program to meet the requirements under state and federal law.

I. Alignment of the Air Quality Program with Modern Demands

Over the past fiscal year, the Department made the decision for the Air Quality Program, and specifically the Air Quality Bureau, to begin increasing the number of its employees and ensuring that it has enough contractor funds to actually accommodate what the Department needs. Over the past eighteen months, the Department has hired over 20 employees in its Air Quality Program in the modeling, permitting, monitoring and planning teams; hired a consultant to perform extensive photochemical modeling analysis for ozone pollution in the Permian Basin; hired a consultant to assist with analysis of Title V permit applications; hired a consultant to assist with analysis of minor sources permit applications; hired a consultant to perform stack test analysis for compliance verification; initiated a sampling study responding to an air quality complaint; upgraded the equipment in its U.S. EPA monitoring network; trained drone pilots to utilize drone

cameras during inspections; and completed a "gap analysis" as a first step to replace the Department's legacy TEMPO database used for the Air Quality Program to further transparency, efficiency and effectiveness.

What the Department has found is that even with its spending over the past twelve or so months, these efforts have not been nearly enough. The Department continues to receive regular input from industry to do more to serve the regulated community – from requests for weekly meetings to discuss permit calculations to permit timeline guarantees. And, the Department continues to receive regular input from residents and advocacy groups – from additional rulemakings, responding to complaints about non-compliant facilities and requests for community meetings to explain permit conditions and air quality monitoring results. Finally, the Department has its own federal and state requirements to meet.

If the Board declines to adopt the Department's proposal, the Department will not only be unable to sustain all the current work underway, it will not be able to fulfill its program alignment as set forth in the testimony of my colleagues. For those unfamiliar with the business side of the Department's Air Quality Program, it may seem that there is "enough" funding for these projects, but I am here to state that is not the case. Our Air Quality Program cannot meet the financial threshold necessary to create and hire for new positions in the Program. Nor are we able to continue work at the current spending levels, as demonstrated by the testimony of my colleagues. This fee alignment is necessary to ensure the Air Quality Program is financially stable over time to meet its core responsibilities – including responsibilities that it has long been forced to neglect based on lack of resources.

The belief that the Air Quality Program can provide a safe and healthy environment in a growing economy is core to the integrity of this essential Departmental Program. In recent years,

no matter who I talk to, everyone cannot agree on everything, but all of us can agree on needing "clean air and clean water." This effort is needed to deliver that "clean air" for all.

VI. CONCLUSION

As demonstrated above, this present rulemaking is not a substitute to replace any of the state budgeting processes, but rather is a specific effort to ensure that within the state budgeting processes, the Department has enough resources in its two air Special Revenue Funds to align the Air Quality Program's to meet modern demands. And, as my colleagues will further establish in their testimonies, this Department rulemaking is a critical request at a critical time. For these reasons, we ask that the Board adopt the Department's proposal for Revised Parts 71 and 75.

Experience

New Mexico Environment Department | Cabinet Secretary
Santa Fe, NM, January 2019 – Present

In January of 2019, Governor Michelle Lujan Grisham appointed me to serve as the Cabinet Secretary of the New Mexico Environment Department (NMED). Following my appointment, I was unanimously confirmed by the State Senate. Our mission is to protect public health and the environment. I restored four core values to the Department in how we implement our mission: (1) Science – Using the best available science to inform our decision-making in protecting public health and the environment; (2) Innovation – Employing creative engineering and technological solutions to address environmental challenges; (3) Collaboration – Engaging communities and interested stakeholders in environmental decision-making outcomes; and (4) Compliance – Ensuring meaningful compliance with regulations and permits with a commitment to leveling the playing field through enforcement.

The NMED is responsible for administering federal and state public health and environmental regulatory programs throughout the state and in consultation with 23 sovereign nations, including those pertaining to air quality, drinking water quality, surface and groundwater quality, and solid and hazardous waste management. The NMED also houses numerous other regulatory programs including worker safety under the New Mexico's Occupational Health and Safety Act (OSHA); restaurant and food manufacturing permitting and compliance; commercial and residential septic system permitting and compliance; hemp manufacturing permitting and compliance; and radiation equipment regulation.

Mission Champion and Employee Advocate

Throughout my tenure, I have championed public service by fiercely advocating for both my agency's mission and its people. I lead efforts to significantly expand the Agency's budget from $90M at the start of my term to approximately $237M today. Currently, the Environment Department's budget is comprised of over 80% federal grants and permit fees, with less than 20% coming from the New Mexico general fund. In Fiscal Year 2024, we spent $25.5M in general funds but collected over $30M in civil penalties—producing an 18.4% return on investment for New Mexicans while holding polluters accountable. In Fiscal Year 2025, NMED spent $33.3M in general funds but collected over $17.1M in civil penalties that were remitted to the general fund.

My legislative advocacy finally resolved a decade-old issue of chronically underpaying our staff. I am proud that my colleagues are now properly compensated for their education and professional experience. As a result, we have achieved the lowest vacancy rate in our history at 5%, and our data shows that my team is twice as engaged in their day-to-day work compared to the national average.

Fighting Against "Forever Chemicals"

I have championed grassroots activism from within state government to support communities afflicted with toxic PFAS contamination. I am aggressively pursuing legal action against the U.S. Department of Defense for the poisoning of New Mexicans around our Air Force Bases. To date, I have led initiatives for blood testing and other health-based studies, private well water testing, and public drinking water

system testing across the state. I have taken this fight to Washington, D.C., where I have testified before Congress twice on this urgent matter. I championed New Mexico's PFAS Protection through the New Mexico Legislature and got it to the Governor's desk for signature. Under my leadership, New Mexico also listed certain discarded PFAS as hazardous wastes under state law.

Climate Action, Cleaner Energy, and Improved Air Quality

I have been a key figure in New Mexico's transition to a cleaner energy economy. I have championed efforts to onshore clean energy investments, such as Australia-based Star Scientific's $125M campus in Albuquerque. Under my leadership, New Mexico became the fourth state in the U.S. to adopt clean fuel standards, using market-based mechanisms to expand investment while lowering emissions.

I have also focused on ensuring zero-emission vehicle incentives, such as tax credits, were adopted while mandating that auto manufacturers provide New Mexicans with access to these vehicles through clean car and truck standards. Furthermore, I led the effort to clean up the oil and gas industry by developing state rules that served as a model for the nation.

Water Protection and Regulation

I have spearheaded efforts to protect our water supply in the face of climate change and adverse Supreme Court decisions that have left New Mexico's waters among the most threatened in the country. Under my leadership, New Mexico is seeking federal primacy for discharges to surface waters while strengthening our groundwater permitting program. This includes identifying and cleaning up over 300 abandoned and polluted groundwater sites across the state.

Ending a Radioactive Legacy

I have held a firm line against the federal government or private sector further exploiting New Mexicans with radioactive waste. Whether it was strengthening the Waste Isolation Pilot Plant permit and enforcement, prioritizing the cleanup of legacy waste at Los Alamos National Laboratory through policy and legal actions, or helping pass a state law to prevent New Mexico from becoming a dumping ground for spent nuclear waste—I have fought these battles for the generations of New Mexicans, Tribes, and Pueblos who feel these impacts most. I have also coordinated efforts to address the legacy of abandoned uranium mining to ensure these communities receive the recognition and health outcomes they deserve.

Pandemic Response and Illicit Drugs

During the COVID-19 pandemic, I played a crucial role in ensuring workplace safety and protecting people in congregate care facilities. We conducted "Rapid Responses" to address outbreaks and shared that data publicly in real-time. My department received national attention for our innovative sewer monitoring for COVID-19, which served as an early detection system.

Additionally, I led a statewide wastewater testing program for illicit drugs at public and charter high schools. We sampled wastewater from 184 schools, covering 97,166 students at a cost of only about $7 per student, providing us with vital data to protect our youth.

U.S. Environmental Protection Agency | Senior Policy Advisor for Oil and Natural Gas
Albuquerque, NM and Washington, DC June 2014 – January 2019

In 2014, U.S. Environmental Protection Agency (EPA) Administrator Gina McCarthy and Assistant Administrator Cynthia Giles appointed me to serve as the Senior Policy Advisor for Oil and Natural Gas. I

counseled EPA senior political and career leadership on national, regional and local oil and natural gas matters. Such matters commonly included: federal/state legislative, regulatory and policy developments; technical and economic industry trends; impact of Administration goals and objectives; stakeholder interests; etc.

I built and maintained relationships with an extensive network of stakeholders around the energy and environment nexus daily, including: industry chief executive officers (CEOs), federal and state agency political appointees, elected officials, tribal leaders, trade association executive directors, environmental non-governmental organizations (eNGOs) executive directors, academic and scientific researchers, and members of the public.

I collaborated with individual states and associations of states through organizations like the National Governors Association, the Environmental Council of State, the Interstate Oil and Gas Compact Commission, the Western Regional Partnership, and the Western States Land Commissioners Association. Such state and state association collaborations include specific projects which focus on the greening of existing energy industry while creating renewable energy opportunities.

I provided leadership to EPA executive management, staff, and contractors across the country while managing project budgets to effectively achieve outcomes. For example, I developed and facilitated oil and natural gas stakeholder roundtables across the U.S. focusing on (1) ensuring compliance through innovative, real-time monitoring technologies, and (2) effective governance through regulation, permitting and compliance assurance. In another example, I developed and led a New Mexico-based, multi-stakeholder workgroup to stand-up an innovative voluntary recognition program. The hallmark of the program was to incentivize the financial sector to set financial assurance requirements (i.e., bonding/insurance premiums) commensurate with operational risk. This program offsets the environmental impacts in New Mexico and the costs incurred by the state from poorly operated, managed, or financed companies.

U.S. EPA | Acting Assistant Deputy Director for the Office of Civil Rights
Washington, DC January 2014 – June 2014

I served as the principal advisor to the Director of the Office of Civil Right (OCR) and other EPA executive management concerning EPA's obligations to comply with the responsibilities under Title VI of the Civil Rights Act of 1964 (Title VI), as well as the Presidential Executive Orders ensuring recipients of EPA financial assistance do not discriminate based on federally-protected class status.

I directly and indirectly managed a diverse group of multi-disciplined and multi-cultural staff with varying years of government service. I managed the day-to-day operations in the OCR. I developed and implemented a $2 million budget, ensured both procurement (contract) and assistance agreements (grants) were managed efficiently and appropriately.

U.S. EPA | Senior Environmental Engineer
Washington, DC January 2010 – January 2014

I provided expert regulatory and technical consultation to various EPA offices, the U.S. Department of Justice, state agencies and state attorney general offices, and other stakeholders related to assuring compliance with environmental laws. My area of focus was the energy sector, specifically oil and natural gas exploration and development.

I developed strategic plans related to compliance and enforcement activities; crafting multi-year goals, objectives, and metrics to benchmark progress. I tracked and reported on the overall success of the

Agency's compliance and enforcement goals. I leveraged synergies with federal and state partners to conserve resources yet expand impact. For example, I integrated GIS-based approaches to achieve more efficient outcomes and explain the Agency's environmental successes to the public. I managed EPA staff and numerous contractors, including scientists, engineers, expert witnesses, etc. The annual budget was approximately $350,000 for the contracts that I managed.

McCoy and Associates | Senior Environmental Engineer
Denver, CO August 2008 – January 2010

I was the principal lead for developing and managing the consulting business related to the Clean Air Act (CAA).

I managed the CAA-related business, client services and contracts. I authored and published a technical reference book, CAA Unraveled, a 400+ page text that succinctly explains this federal law and the regulatory programs which implement it. Upon publication, revenues exceeded $312,000 in the first year after publishing. I also developed client-based, technical seminars to accompany the technical reference book I wrote.

I counseled federal and state agencies, industry and industry associations, consulting firms, law firms, and trade associations on various aspects of the CAA, as well as other federal laws, including: Clean Water Act (CWA), National Environmental Policy Act (NEPA) and Resource Conservation and Recovery Act (RCRA).

U.S. EPA | Senior Environmental Engineer
Denver, CO and Philadelphia, PA
September 1996 – August 2008

I managed the CAA ozone program, western federal/state coordination, and civil/criminal enforcement matters at the EPA regional offices in Denver and Philadelphia. I developed and enforced federal regulations in collaboration with states and stakeholders across many industrial sectors, including oil and natural gas, refining, chemical manufacturing, iron and steel, and combined animal feeding operations. I directed enforcement staff in field activities across the U.S., negotiated settlements, wrote legal and technical briefs, participated in administrative/judicial proceedings, etc.

FY2026 Strategic PLAN

NMED

New Mexico Environment Department

www.env.nm.gov

Fiscal Year 2026 Strategic Plan

James C. Kenney
Cabinet Secretary

The New Mexico Environment Department (NMED) started Fiscal Year 2025 by fully implementing a long-term goal to fairly and equitably compensate all employees based on their education and experience. The strength of our agency and our ability to achieve our mission of protecting the public health and environment of New Mexico is entirely dependent on our dedicated and expert staff. For this reason, our priority this year is to continue to address both our staffing shortages through renewed focus on hiring and the insufficient compensation that has historically been the root cause of our staffing shortages. In addition, NMED will continue to aggressively safeguard our state both according to our statutory requirements and by looking at emerging risks to public health. Our strategic plan for FY26 is centered around four agency-wide program goals and objectives:

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

NMED will qualitatively and quantitatively measure our progress through reports to the Legislative Finance Committee and by publishing quarterly performance reports. NMED maintains a webpage on Agency performance that is available to the public, legislators, and our employees. NMED's performance webpage is found here: https://www.env.nm.gov/performance-measures/.

Vision, Mission, Values

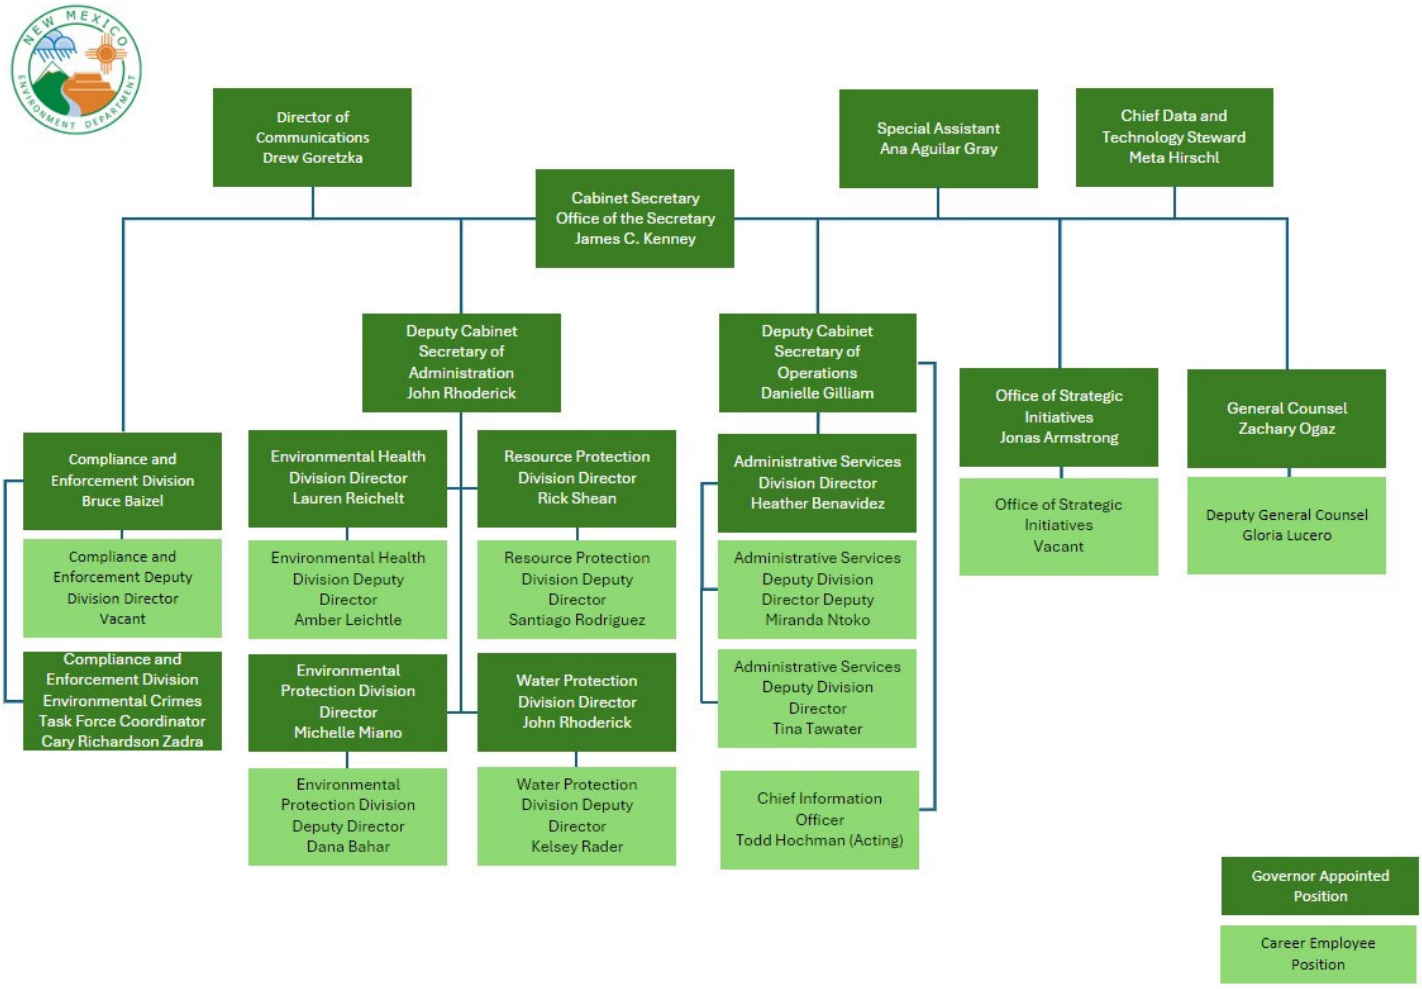
Vision

To foster a thriving and trusted, nationally leading organization known for protecting public health and the environment through its dedicated public servants.

Mission

Protect and restore the environment and foster a healthy and prosperous New Mexico for present and future generations.

Values



Science - Embracing the best available science to inform decision-making in support of our vision and mission.

Innovation - Employing creative engineering and technological solutions to address challenges.

Collaboration - Engaging communities and interested stakeholders in decision-making and outcomes.

Compliance - Ensuring accountability with permits and rules while maintaining a fair and level playing field.

Organizational Structure

Resource Management Division (P567)

Purpose of the Program

The Office of the Secretary (OOTS) is responsible for translating NMED's vision, mission, and values into action. This execution aligns with the Governor's and Secretary's vision, legislative authority, and federal delegation, primacy, and grant agreements.

OOTS not only implements NMED's core principles but also ensures transparent communication and cooperation with Tribal, local, federal, and international governments and stakeholders. Services include strategic leadership and decision-making in all programmatic and policy matters within the agency.

OOTS fosters meaningful relationships with community members, elected officials, governmental agencies, Tribal governments, the business community, industry, and nongovernmental organizations, and Tribal governments to inform sound policy and decision-making and advocate for the Administration's legislative priorities and sustain state investment in services and policies for the betterment of New Mexicans. OOTS plays a pivotal role in ensuring the continuous provision of essential services by actively engaging with and listening to the NMED workforce. Through these efforts, OOTS contributes to the enhancement of workforce culture and its ongoing improvement.

Program Users

Businesses, stakeholders, the public, Tribes and Pueblos. Anyone who places their trust in the air they breathe, water they drink, land on which they live, food they eat, etc. Internally, our employees who work and live across New Mexico to fulfill our mission.

Benefits to New Mexicans

- A well-funded and highly functioning NMED can protect public health and the environment equally for all New Mexicans and communities served.
- Responsive communication of complex scientific and technical issues in a clear manner to all members of the public in multiple languages.
- Timely, accurate, equitable and transparent access to public health and environmental information for community and family-based decision-making.
- Accountability and oversight of public funds.
- Expanded online program delivery that strengthens traditional program access.
- Compliance with public health and environmental protections that provides a level playing field for all businesses and deterrence through vigorous enforcement when violations occur.
- Strong collaborations with all stakeholders and state agencies with a responsive and productive workforce.
- A highly-engaged workforce that advances efficient and safe customer service options.

Budget and FTE

Resources Management Division	FTE	Budget
Office of the Secretary	22.10	$3,584,520
Office of General Counsel	24.00	$4,779,190
Office of Information Technology	28.00	$6,160,640
Administrative Services Division	42.00	$11,218,030

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

Resource Management Division (P567)

Program Goals, Objectives, and Strategic Actions

<u>Program Goal and Objective 1:</u> Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Increase spending of funds to support NMED's mission.
- Advocate for increased flexibility of special revenue funds.
- Support all divisions and offices in integrating equity and renewed focus on environmental justice throughout delivery of services and operation of programs by providing clear guidance and staffing support.
- Reduce NMED's vacancy rate through data-driven process improvements supported by implementation of new business technologies (e.g., paperless and automation initiatives).
- Engage in compensation and classification analysis across NMED in order to ensure internal equity and balanced workloads, adjust to market conditions, and orient NMED's staffing strategy to align with strategic growth and career advancement pathways.

<u>Program Goal and Objective 2</u>: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Maximize federal Bipartisan Infrastructure Law and Inflation Reduction Act funding and spending to create jobs and support economic development.
- Coordinate across state, local, federal, and Tribal governments to maximize the quantity and effectiveness of federal funds benefiting the people of New Mexico.
- Ensure services provided to New Mexicans are easy to access and modernize business processes making it easier to conduct business online where possible. Streamline and modernize administrative processes to improve public health and environmental outcomes and transparency of operations.
- Lead and coordinate New Mexico's work to clean up uranium sites among state agencies and with impacted communities, other states, federal agencies, and Native Nations, Tribes and Pueblos.

<u>Program Goal and Objective 3</u>: Protect communities from emerging public health and environmental contaminants.

- Take every necessary measure to safeguard communities from newly arising contaminants that pose risks to public health and the environment, encompassing a range of activities such as establishing and maintaining laws and regulations, adherence to these regulations, and their diligent enforcement.
- Build robust partnerships to increase collaboration including in rulemaking or permitting processes, grantmaking, and surrounding NMED action in other areas of interest.

Resource Management Division (P567)

<u>Program Goal and Objective 4:</u> Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Ensure accountability for violations through strong and consistent enforcement policy and actions through NMED's Compliance and Enforcement unit.
- Increase consistency and timeliness in compliance across programs to ensure a level playing field.
- Provide strategic, innovative, and effective legal advice and representation to NMED management and staff.
- Facilitate exceptional customer service to the public and ensure public participation in docketed matters of the boards and commissions that the Office of Public Facilitation administers (including the Water Quality Control Commission and Environmental Improvement Board), public hearings assigned by the Secretary as a result of significant public interest, and due process compliance orders served on respondents by bureaus that benefit from public participation.

Water Protection Division (P568)

Purpose of the Program

To ensure reliable, clean and safe water supplies for New Mexicans today and into the future through the protection of surface water and groundwater quality. To provide financing for and oversight of water infrastructure projects across the state with added emphasis on projects related to the impacts of climate change, emerging contaminants, etc.

Program Users

A public that expects to consume clean and safe drinking water whether in an urban or rural community. A public that recreates in and along New Mexico's lakes, rivers, and streams. Regulated entities who rely on relationships with regulators to provide technical and consistent expertise. Local governments, municipalities, and private utilities in need of technical and/or financial assistance to repair, update, or add water and wastewater infrastructure. Tribes, Pueblos, and Nations whose water quality may be impacted by others. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- Safe, clean, and reliable sources of drinking water for today's growing economy and future generations of New Mexicans.
- Healthy rivers and lakes that fully support recreation, tourism, and agriculture, which are essential components of a thriving state economy.
- Modernized and reliable infrastructure for our counties, cities, and towns that fosters healthy communities.
- Economic development opportunities on formerly contaminated properties that reinvigorate communities.
- Easily accessible information about drinking water, groundwater, and surface water quality, including in the aftermath of catastrophic events, such as devastating wildfires.

Budget and FTE

Water Protection Division	FTE	Budget
Office of the Director	16.25	$10,341,400
Construction Programs Bureau	23.00	$17,256,800
Drinking Water Bureau	51.00	$19,173,100
Ground Water Quality Bureau	72.00	$20,035,700
Surface Water Quality Bureau	40.00	$9,346,800

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

NMED Exhibit 11_000009

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Increase spending of funds to support WPD's mission.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Leverage available federal and state funding to maximize financing opportunities for water, wastewater, surface water infrastructure investments, and assist communities in utilizing available funding.
- Lead action-oriented discussions with key partners and stakeholders to develop needed reforms to capital outlay funding for water infrastructure projects to improve outcomes for communities.
- Leverage innovative partnerships and conduct marketing outreach for water infrastructure financing programs to increase loan utilization rates, including federal Bipartisan Infrastructure Law funding.
- Work with local governments, agency partners, other service providers to develop regionalization partnerships between public drinking water and wastewater systems to enhance resiliency, viability, and ability to provide safe drinking water and functional wastewater systems to the public.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Implement water reuse regulations.
- Support the ongoing work of the New Mexico Produced Water Research Consortium to fill science and technology gaps related to treatment and use of produced water for purposes outside the oil and gas sector.
- Implement the Produced Water Act to preserve freshwater resources, protect water quality and public health, and provide regulatory certainty.
- Implement state surface water permitting program by FY27 to protect from fluctuations in the definition of "Waters of the United States" under the federal Clean Water Act.
- Identify and implement innovative approaches to leverage existing authorities to build communities and natural resource systems that are resilient to the impacts of climate change, consistent with the Governor's Executive Order 2019-003 on addressing Climate Change and Energy Waste Prevention and the 50 Year Water Action Plan.
- Develop and implement strategic actions to identify and address water contaminated with per- and polyfluoroalkyl substances (PFAS) and other emerging contaminants.

- Implement federal grant for Emerging Contaminants in disadvantaged communities including sampling, evaluation, solution development, and deployment.
- Develop and maintain informative and interactive public facing tools, including story maps on drought and other water related emergencies and PFAS, to provide resources and current public health information to regulated entities, community leaders, and other stakeholders.
- Oversee and support lead service line inventory by October 10, 2024.
- Expand assessment of neglected contamination sites around the state and develop mechanisms for site remediation where no responsible party exists.
- Improve efficiency of coordination on Abandoned Uranium Mine sites and subsequent remediation activities.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Improve the consistency and efficiency of the groundwater discharge permit program to better serve the public.
- Improve the consistency and efficiency of enforcement on wastewater systems to ensure protection of the environment and consumers.
- Improve the consistency and efficiency of enforcement on public drinking water systems that fail to provide safe drinking water to their customers.
- Continue to work closely with federal, state, tribal, and local partners to assess, manage, and mitigate contamination from legacy mine and mill sites, generating stations, and listed CERCLA (superfund) sites around the state.

Resource Protection Division (P569)

Purpose of the Program

Preventing new contamination and expeditiously addressing legacy pollution in New Mexico for the protection of public health and the environment. Ensuring there is environmental justice for the equal protection and meaningful involvement of all people with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies and the equitable distribution of environmental benefits. Ensuring that all hazardous waste is managed – from cradle to grave – and contaminated sites are cleaned up as quickly as possible to lessen the burden to communities, their health, and our environment. Effectively monitoring the environment within and around U.S. Department of Defense (DOD) and U.S. Department of Energy (DOE) facilities in New Mexico, taking swift and meaningful compliance actions when warranted. Ensuring that petroleum storage tanks are managed to prevent releases and that any releases are remediated as expeditiously as possible and as eligibility and the Corrective Action Fund allows. Ensuring that all solid waste – including infectious waste – and recyclable materials are responsibly managed.

Program Users

A public that trusts and expects that New Mexico's natural resources will not diminish their family's health, safety, or economic prosperity regardless of where they live, work, or play. This includes New Mexico's service members who are stationed at U.S. Air Force installations, employees and contractors at DOE facilities and the residents who live in proximity to these installations. Regulated entities who rely on relationships with regulators to provide technical and consistent expertise. County and municipal governments who rely on our expertise for emergency response and technical guidance, including best management practices to minimize costs to taxpayers where possible. Tribes, Pueblos, and Nations whose natural resources may be impacted by others. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- Timely responses to hazardous substance releases to prevent exposure to people and environment.
- Accountability and consequences for those who put New Mexicans at risk from improper management of waste.
- Federal facilities that comply with regulations and properly manage and clean up their waste.
- Robust surveillance of DOE facilities to confirm environmental results and inform communities.
- Financial assurance and incentives for the petroleum industry to prevent or clean up petroleum spills/releases.
- Landfills that are designed, operated, and monitored to safely isolate waste from the environment, thereby protecting human health and the environment.
- Timely response to illegal dumping of trash.
- Reuse and recycling programs that encourage New Mexicans to turn their trash into treasures.

Budget and FTE

Resource Protection Division	FTE	Budget
Office of the Director	5.00	$1,248,100
DOE Oversight Bureau	16.00	$3,630,100
Hazardous Waste Bureau	30.00	$5190,200
Petroleum Storage Tank Bureau	49.00	$23,948,000
Solid Waste Bureau	12.00	$3,370,200

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

Resource Protection Division (P569)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Increase spending of funds to support RPD's mission.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Maximize federal bipartisan infrastructure law and inflation reduction act funding and spending to create jobs and support a circular economy in New Mexico.
- Coordinate across state, local, federal, and Tribal governments to maximize the quantity and effectiveness of federal and state funds benefiting the people of New Mexico.
- Maximize use of the Corrective Action Fund including for clean-up petroleum storage tank release sites and other contaminated facilities.
- Provide funding for local governments to develop recycling programs and abate illegal dumpsites.
- Create opportunities to reduce waste streams while growing New Mexico's participation in the circular economy.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Further the state's climate change and emissions reductions goals by exploring emerging technologies that reduce waste streams and encourage use of waste as feedstock for other valuable products.
- Protecting New Mexicans by reducing their exposure to nonessential PFAS-containing products.
- Create greater flexibility in protecting the environment from emerging contaminants by allowing New Mexico to enforce cleanup of newly listed hazardous constituents and hazardous wastes.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Provide increased regulatory oversight and accountability over hazardous waste generators, hazardous waste permittees, solid waste facilities, and petroleum storage tank operators.
- Strengthen corrective action, compliance assurance, and enforcement response so it is consistent and timely.
- Hold federal agencies accountable for their contamination sites and corrective action activities.
- Strengthen the Compliance Order on Consent to provide greater accountability and enforcement for the legacy waste clean-up activities at Los Alamos National Laboratory.
- Increase enforcement of Resource Conservation and Recovery Act and Hazardous Waste Act violations discovered during inspections of hazardous waste generators through the Hazardous Waste Bureau, decreasing referrals to abatement under the Water Quality Regulations.

NMED Exhibit 11_000013

Environmental Protection Division (P570)

Purpose of the Program

To mitigate and prevent the impacts of climate change on our population, industries and infrastructure by decarbonizing our thriving economy. To protect New Mexico's inhabitants and our natural beauty through clean and clear air for all to breathe. To prevent unnecessary risks to public health when medical or veterinary services are needed. To protect communities and the environment by assuring the proper licensing and financial assurance of industrial activities that use or concentrate radioactive materials.

Program Users

A public that breathes air and receives radiologic exams. The regulated community, including oil and gas producers. Other state agencies and institutions, county and local governments, including Tribes and Pueblos who participate in consultation. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- Clean air for all New Mexicans, including children, elderly and other vulnerable populations.
- Clear air for tourism and recreational opportunities from improved visibility at national and state parks and wilderness areas.
- Decreased greenhouse gas emissions to reduce the adverse effects of climate change.
- Increased access clean energy and clean transportation infrastructure and jobs through investments.
- Protection for workers and the public from the ill effects on human health and natural resources of radioactive materials in academic, medical, and industrial applications.
- Reduced exposure to indoor radon.
- Critical assistance to current and former DOE or DOE-contracted facility nuclear workers who are ill because of exposure to radiation, chemicals, or both.

Budget and FTE

Environmental Protection Division	FTE	Budget
Office of the Director	5.25	$887,200
Air Quality Bureau	81.00	$24,485,000
Climate Change Bureau	13.00	2,191,800
Radiation Control Bureau	21.00	$3,610,800

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

NMED Exhibit 11_000014

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of air quality scientists, climate scientists, and radiation specialists, including permit writers, environmental analysts, monitoring, and regulatory specialists.
- Prioritize hiring, leadership training, and succession planning.
- Increase spending of funds to support EPD's mission.
- Ensure EPD programs have sufficient funding via fee increases to support program objectives.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Encourage and implement clean fuel development strategies, including promulgating Clean Transportation Fuel Standard rules to ensure decarbonizing occurs in alignment with economic development and protects public health.
- Coordinate with local and Tribal governments, community-based organizations and other state agencies to obtain and implement federal grant opportunities.
- Reduce exposure to and increase knowledge about the dangers of indoor radon to the public.
- Support implementation of the Climate Change Task Force's Equity Principles across applicable program and policy actions, including the Climate Pollution Reduction Grant and all other state climate initiatives.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Implement federal requirements that reduce methane and other harmful pollutants from oil and gas facilities.
- Implement Advanced Clean Cars II/Advanced Clean Trucks rules, the Clean Transportation Fuel Standard rules, and other programs focused on transportation equity and decarbonization.
- Coordinate with local and Tribal governments, community-based organizations and other entities to refine and implement priority climate actions under the Climate Pollution Reduction Grant to achieve the state's greenhouse gas reduction goals.
- Plan for and implement federal requirements lowering the National Ambient Air Quality Standard for fine particulate matter.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Increase state agency coordination and data sharing, including on methane, as a basis to inform compliance work. Upgrade systems to ensure maximum transparency of air quality information.
- Implement and enforce regulations to control volatile organic compounds and nitrogen oxides in areas that exceed 95 percent of the 2015 National Ambient Air Quality Standard for ozone. Ensure ongoing compliance with the Naturally Occurring Radioactive Materials regulations for the oil and gas industry.

NMED Exhibit 11_000015

Environmental Health Division (P571)

Purpose of the Program

To develop and implement preventive strategies to mitigate threats posed by emerging environmental health hazards. To promote and regulate New Mexico businesses, products and services in a manner that prevents adverse impacts and risks to public health and the environment; this includes commercially prepared foods, manufactured foods, hemp-finished products, adult use and medical edible cannabis products, public swimming pools and spas and liquid waste systems. To prevent workplace illnesses, injuries and fatalities to move our economy forward. To develop and implement preventive strategies to mitigate threats posed by emerging environmental health hazards related to public health.

Program Users

Residents of New Mexico who are impacted by environmental conditions negatively influencing the health of their communities. A public that eats at restaurants, purchases manufactured foods for their family, enjoys public pools and spas and expects and requires a safe working environment, as well as on-site septic system/property owners. The regulated community, including hemp and cannabis product manufacturers and food establishment owners. Other state agencies and institutions, county and local governments, and Tribes, Pueblos, and Nations who participate in consultation. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- A more engaged public that is aware of the positive and negative impacts of environmental conditions on their future health.
- Safe food in restaurants and from New Mexico manufacturing facilities.
- Economic development, job growth, and human health protection through responsible hemp and cannabis manufacturing.
- Safe public swimming pools and spas for recreation, fitness and medical care.
- Septic tanks for onsite liquid waste that protect local ground water supplies and residents.
  Workers and workplaces that are safe and protected from hazards both day-to-day and during public health emergencies.
- Successful businesses with safe and productive workplaces.

Budget and FTE

Environmental Health Division	FTE	Budget
Office of the Director	5.00	$921,000
Environmental Health Bureau	100.0	$10,978,500
Cannabis and Hemp Bureau	5.00	$693,900

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

NMED Exhibit 11_000016

Environmental Health Division (P571)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Ensure EHD has sufficient and stable funding via fee increases to support program objectives.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Increase engagement for State of New Mexico and local government health agencies to identify key areas of environmental concern.
- Deploy the liquid waste assistance fund to help low-income residents with the cost to repair, replace, construct wastewater systems, alternative systems, or connect to sewer systems.
- Provide free and confidential compliance assistance to businesses at their request by identifying workplace hazards, analyzing safety and health management systems.
- Expand and retain NMED's skilled and trained team of food safety inspectors to keep pace with growth in food establishments across New Mexico and support local economies.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Implement heat standards for Occupational Health and Safety Bureau.
- Hire State of New Mexico Heat Officer to oversee response to emerging heat stress threat.
- Maintain a timely and flexible response capacity to emergent public health risks that create workplace hazards.
- Identify hazards specific to the Cannabis and Hemp industry, engaging other agencies as needed in mitigation and policy development.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Develop and implement standard operating procedures to ensure consistency in enforcement.
- Publish all permits and findings online.
- Strive to align with the federal Food and Drug Administration goals for a highly effective and responsive program for regulating food service and retail food establishments bringing the State into compliance with (the Voluntary National Retail Food Program Standards), as budget allows.

NMED Exhibit 11_000017

Compliance and Enforcement Division (P566)

Purpose of the Program

The Compliance and Enforcement Division protects public health and the environment by assuring business, industry and federal facility compliance with federal and state rules, permits, and licenses. The CED develops compliance assurance strategies based on federal and state priorities, as well as other data that shapes more effective ways to improve public health and environmental outcomes for communities. At its core, the CED is responsible for promptly enforcing against entities when violations occur. The CED oversees compliance and enforcement activities for applicable air, water, food, radiation, petroleum storage tanks, and hazardous and nonhazardous waste permits and regulations, and occupational health and safety. Additionally, the CED oversees and manages the agency's Emergency Operations and Response efforts, a critical function given the rising frequency of climate-related emergencies statewide. This enhancement bolsters NMED's ability to respond rapidly to environmental crises while maintaining its commitment to ongoing regulatory functions.

Program Users

Residents of New Mexico who are impacted by environmental conditions negatively influencing their health and the land, water and air of their communities. The regulated community, including public drinking water system operators, oil and gas producers, workers and employers. Other state agencies and institutions, county and local governments, and Tribes, Pueblos, and Nations who participate in consultation. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- A more engaged public that is aware of the positive and negative impacts of environmental conditions on their future health.
- Safe, clean, and reliable sources of drinking water for today's growing economy and future generations of New Mexicans.
- Clean air for all New Mexicans, including children, elderly and other vulnerable populations.
- Accountability and consequences for those who put New Mexicans at risk from improper management of waste.
- Federal facilities that comply with regulations related to air, water, soil, and waste.
- Successful businesses with safe and productive workplaces.

Budget and FTE

Environmental Health Division	FTE	Budget
Office of the Director	5.0	$150,000
Environmental Protection Bureau	34	$4,336,200
Resource Protection Bureau	26	$2,479,100
Water Protection Bureau	25	$3,777,900
Occupational Health and Safety Bureau	52	$3,295,500

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

Compliance and Enforcement Division (P566)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Recruit, build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Develop the funding to support CED's mission.

Program Goal and Objective 2: Ensure a level playing field for businesses through robust, consistent, and comprehensive enforcement of environmental regulations that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, enforce health and safe workplaces and ensure environmental justice for marginalized communities.

- Increase engagement of local governments and regulated business communities in ensuring self-compliance with environmental regulations.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Further the state's climate change and emissions reductions goals by employing emerging technologies that identify the release of excess emissions of methane and other contaminants.
- Protect New Mexicans by reducing PFAS contamination and increasing the clean-up of PFAS contamination by responsible parties.
- Ensure swift and effective action during environmental emergencies, safeguarding public health and the environment while sustaining regulatory enforcement and compliance efforts.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance and enforcement activities.

- Modify, develop and implement consistent penalty and enforcement policies for all divisions.
- Publish all violations on Enforcement Watch to increase public transparency of compliance and enforcement efforts.
- Develop and implement standard operating procedures to ensure consistency in enforcement.
- Publish all permits and findings online.

NMED Exhibit 11_000019

Appendix A: Performance Measures

Public Health
Percent of the population breathing air meeting federal health standards
Percent of the population served safe and healthy drinking water
Number of drinking water systems serving drinking water that did not meet at least one standard compared to the total number of drinking water systems
Number of community water system violations returned to compliance as a result of NMED assistance
Number of superfund sites cleaned up as compared to the number of superfund sites remaining
Employers that did not meet occupational health and safety requirements for at least one standard

Environmental Protection
Amount of volatile organic compounds emitted statewide, in tons
Amount of volatile organic compounds emitted illegally, in tons
Amount of nitrogen oxides emitted statewide, in tons
Amount of nitrogen oxides emitted illegally, in tons
Quantity of nutrient-based pollutants reduced due to implementation of watershed restoration and on-the-ground improvement projects, in pounds
Reduction in nonpoint source sediment loading attributed to implementation of watershed restoration and on-the-ground improvement projects
Number of nonpoint source impaired waterbodies restored by the Department relative to the number of impaired water bodies
Number of underground storage tank sites cleaned up compared to the total number of leaking underground petroleum storage tank sites remaining
Number of completed cleanups of petroleum storage tank release sites that require no further action
Number of zero-emission vehicles registered in New Mexico

Economic Investment
Total investment of grants dollars awarded to communities, year to date
Number of brownfield acres of contaminated land cleaned up and available for reuse
Investments in water infrastructure, in dollars
Number of new water infrastructure projects

NMED Exhibit 11_000020

Appendix A: Performance Measures

Compliance	
Air	Percent of air emitting sources inspected
	Percent of air emitting source inspections showing compliance
	Percent of air emitting sources with active/ongoing violations
Groundwater	Percent of groundwater permittees inspected
	Percent of groundwater permittee inspections showing compliance
	Percent of groundwater permittees with active/ongoing violations
Hazardous Waste	Percent of hazardous waste facilities inspected
	Percent of hazardous waste facility inspections showing compliance
	Percent of hazardous waste facilities with active/ongoing violations
Restaurants and Food Manufacturing	Percent of restaurants/food manufactures inspected
	Percent of restaurants/food manufacturer inspections showing compliance
	Percent of restaurants/food manufactures with active/ongoing violations
Septic Systems	Percent of new or modified liquid waste systems inspected
	Percent of new or modified liquid waste system inspections showing compliance
	Percent of new or modified liquid waste systems with active/ongoing violations
	Number of liquid waste system violations resulting from complaints
Solid and Infectious Waste	Percent of solid and infectious waste management facilities inspected
	Percent of solid and infectious waste management facility inspections showing compliance
	Percent of solid and infectious waste management facilities with active/ongoing violations
Surface Water	Percent of surface water permittees inspected
	Percent of surface water permittee inspections showing compliance
	Percent of surface water permittees with active/ongoing violations
Radiation Sources in Medical Equipment	Percent of ionizing/non-ionizing radiation sources inspected
	Percent of ionizing/non-ionizing radiation source inspections showing compliance
	Percent of ionizing/non-ionizing radiation sources with active/ongoing violations

NMED Exhibit 11_000021

Appendix A: Performance Measures

Compliance (Continued)	
Occupational Health and Safety	Percent of high-hazard facilities inspected
	Percent of all employers inspected
Cannabis and Hemp	Percent of cannabis and hemp permittees inspected
	Percent of cannabis and hemp permittee inspections showing compliance
	Percent of cannabis and hemp permittees with active/ongoing violations
Petroleum Storage Tanks	Percent of petroleum storage tank permittees inspected
	Percent of petroleum storage tank permittee inspections showing compliance
	Percent of petroleum storage tank permittees with active/ongoing violations

Operational
Total dollars collected by NMED and transferred to the general fund resulting from successful prosecutions and/or settlements stemming from non-compliance with laws, rules, or permits administered by the Department
Vacancy rate by month
Percent of NMED financial transactions completed online by the public or regulated community

Appendix B: Statutory Authority & Duties

• NMSA 1978, §§ 3-29-1 to -21	Sanitary Projects Act
• NMSA 1978, §§ 9-7A-1 to -17	Department of Environment Act
• NMSA 1978, §§ 11-18-1 to -5	State Tribal Collaboration Act
• NMSA 1978, §§ 10-15-1 to -4	Open Meetings Act
• NMSA 1978, §§ 13-1-1 to -199	Procurement Code
• NMSA 1978, §§ 14-2-1 to -12	Inspection of Public Records Act
• NMSA 1978, §§ 14-3-1 to -24	State Records Act
• NMSA 1978, §§ 14-4-1 to -11	State Rules Act
• NMSA 1978, §§ 14-4A-1 to -6	Small Business Regulatory Relief Act
• NMSA 1978, §§ 14-16-1 to -21	Uniform Electronic Transactions Act
• NMSA 1978, §§ 25-1-1 to -16	Food Service Sanitation Act
• NMSA 1978, §§ 25-2-1 to -21	Adulterated or Misbranded Food Act
• NMSA 1978, §§ 26-2C-1 to -42	Cannabis Regulation Act
• NMSA 1978, §§ 50-9-1 to -25	Occupational Health and Safety Act
• NMSA 1978, §§ 61-33-1 to -10	Utility Operators Act
• NMSA 1978, §§ 70-13-1 to -5	Produced Water Act
• NMSA 1978, §§ 71-8-1 to -8	Sustainable Development Testing Site Act
• NMSA 1978, §§ 74-1-1 to -18	Environmental Improvement Act
• NMSA 1978, §§ 74-2-1 to -22	Air Quality Control Act
• NMSA 1978, §§ 74-3-1 to -16	Radiation Protection Act
• NMSA 1978, §§ 74-4-1 to -14	Hazardous Waste Act
• NMSA 1978, §§ 74-4G-1 to -12	Voluntary Remediation Act
• NMSA 1978, §§ 74-4H-1 to -4	San Juan Generating Station Facility and Mine Remediation and Restoration Study Act
• NMSA 1978, §§ 74-6-1 to -17	Water Quality Act
• NMSA 1978, §§ 74-6A-1 to -15	Wastewater Facility Construction Loan Act
• NMSA 1978, §§ 74-6B-1 to -14	Ground Water Protection Act
• NMSA 1978, §§ 74-9-1 to -43	Solid Waste Act
• NMSA 1978, §§ 74-13-1 to -20	Recycling and Illegal Dumping Act
• NMSA 1978, §§ 76-24-1 to -10	Hemp Manufacturing Act

New Mexico Environment Department

Fiscal Year 2027 Strategic Plan
September 1, 2025

www.env.nm.gov

Fiscal Year 2027 Strategic Plan

James C. Kenney
Cabinet Secretary

The New Mexico Environment Department (NMED) enters Fiscal Year 2027 with a renewed commitment to workforce stability, operational excellence, and environmental protection. Our mission depends on the dedication and expertise of our staff, and this year we will continue to strengthen recruitment and retention, streamline operations, and foster a workplace culture that supports innovation and collaboration.

At the same time, NMED recognizes the urgency of emerging environmental and public health threats. From climate change and water scarcity to new contaminants, the challenges facing our state demand both vigilance and innovation. NMED will continue to aggressively safeguard New Mexico by fulfilling our statutory responsibilities while anticipating and responding to these challenges. This strategic plan outlines four agency-wide program goals and objectives that define our priorities for the year ahead:

- **Program Goal and Objective 1:** Ensure robust staffing and resources to improve the implementation of our mission.
- **Program Goal and Objective 2:** Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.
- **Program Goal and Objective 3:** Protect communities from emerging public health and environmental contaminants.
- **Program Goal and Objective 4:** Protect the public health and the environment through innovative and traditional compliance assurance activities.

NMED will track progress through both qualitative and quantitative measures, reporting regularly to the Legislative Finance Committee and publishing quarterly performance reports. Our performance webpage provides transparent updates for the public, legislators, and employees: https://www.env.nm.gov/performance-measures/.

Vision, Mission, Values

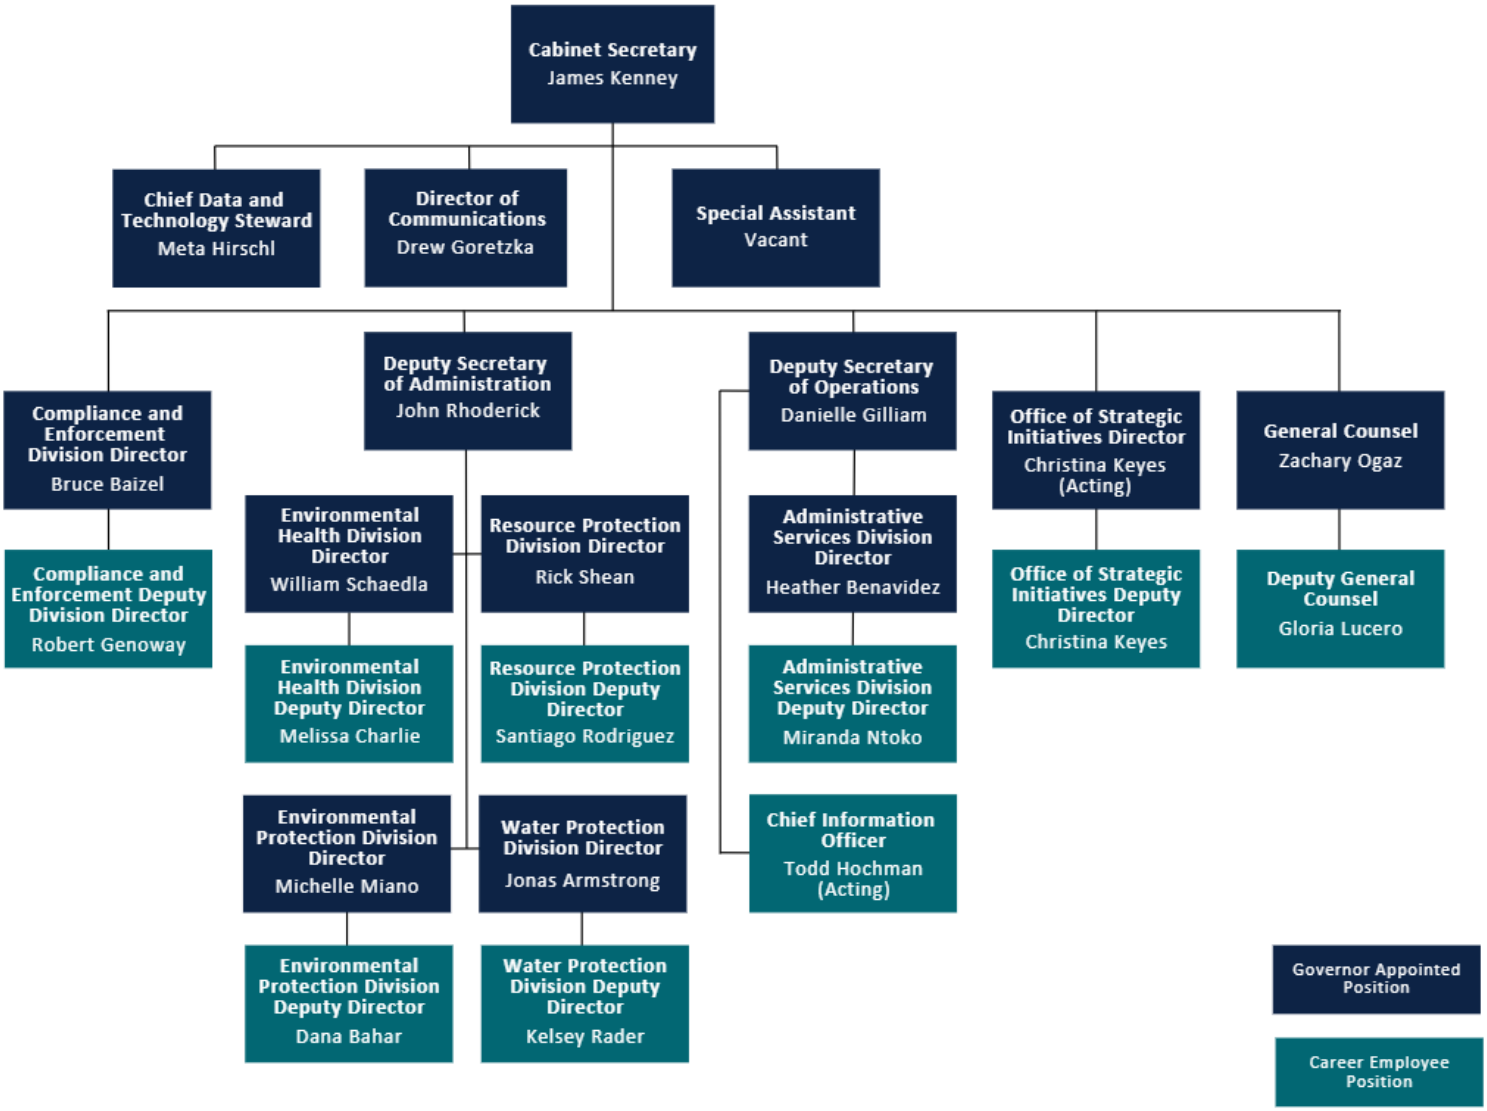
Vision

To foster a thriving and trusted, nationally leading organization known for protecting public health and the environment through its dedicated public servants.

Mission

Protect and restore the environment and foster a healthy and prosperous New Mexico for present and future generations.

Values



Science - Embracing the best available science to inform decision-making in support of our vision and mission.

Innovation - Employing creative engineering and technological solutions to address challenges.

Collaboration - Engaging communities and interested stakeholders in decision-making and outcomes.

Compliance - Ensuring accountability with permits and rules while maintaining a fair and level playing field.

Organizational Structure

Resource Management Division (P567)

Purpose of the Program

The Office of the Secretary (OOTS) is responsible for translating NMED's vision, mission, and values into action. This execution aligns with the Governor's and Secretary's vision, legislative authority, and federal delegation, primacy, and grant agreements. OOTS not only implements NMED's core principles but also ensures transparent communication and cooperation with Tribal, local, federal, and international governments and stakeholders. Services include strategic leadership and decision-making in all programmatic and policy matters within the agency.

OOTS fosters meaningful relationships with community members, elected officials, governmental agencies, Tribal governments, the business community, industry, and nongovernmental organizations to inform sound policy and decision-making, advocate for the Administration's legislative priorities, and sustain state investment in services and policies for the betterment of New Mexicans. OOTS plays a pivotal role in ensuring the continuous provision of essential services by actively engaging with and listening to the NMED workforce. Through these efforts, OOTS contributes to the enhancement of workforce culture and its ongoing improvement.

Program Users

Businesses, stakeholders, the public, Tribes and Pueblos. Anyone who places their trust in the air they breathe, water they drink, land on which they live, food they eat, etc. Internally, our employees who work and live across New Mexico to fulfill our mission.

Benefits to New Mexicans

- Protection of public health and the environment for all New Mexicans and their communities.
- Communication of complex scientific and technical issues in clear, accessible language for the public.
- Access to timely, accurate, equitable, and transparent information on public health and the environment to support community and family decision-making.
- Accountability and oversight of public funds to ensure integrity and public trust.
- Expansion of online program delivery to strengthen and complement traditional program access.
- Compliance with public health and environmental protections to deter violations through vigorous enforcement.
- Collaboration with stakeholders and state agencies supported by a responsive and productive workforce.
- Engagement of a highly motivated workforce that advances efficient customer service.

Budget and FTE FY27 Request

Resources Management Division	FTE	Budget
Office of the Secretary	13.00	$3,479,700
Office of General Counsel	29.00	$4,815,700
Office of Strategic Initiative	15.00	$2,051,300
Office of Information Technology	38.00	$6,550,800
Administrative Services Division	43.00	$11,971,600

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

Resource Management Division (P567)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Increase spending of funds to support NMED's mission.
- Advocate for increased flexibility of special revenue funds.
- Integrate equity and environmental justice initiatives across services and programs.
- Continue to reduce NMED's vacancy rate through data-driven process improvements supported by implementation of new business technologies (e.g., paperless and automation initiatives).
- Upgrade digital service infrastructure and streamline core technology systems.
- Review and update NMED policies to ensure alignment with agency goals and compliance requirements.
- Develop and disseminate comprehensive transition documentation, including briefing materials, procedural guides, and project status summaries, to ensure continuity of operations and effective knowledge transfer during the upcoming administration transition.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Leverage available federal and state funding to create jobs and support economic development.
- Coordinate with state, local, federal, and Tribal governments to maximize the impact and availability of federal funds for the people of New Mexico.
- Provide services that are easy for New Mexicans to access by modernizing business processes and expanding online options where possible.
- Streamline administrative systems to improve transparency and support stronger public health and environmental outcomes.
- Lead and coordinate New Mexico's efforts to clean up uranium sites in partnership with state agencies, impacted communities, other states, federal agencies, and Native Nations, Tribes and Pueblos.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Protect communities from emerging contaminants that threaten public health and the environment by establishing and maintaining effective regulations.
- Build robust partnerships to increase collaboration in the rulemaking, permitting and grantmaking processes

Resource Management Division (P567)

<u>Program Goal and Objective 4:</u> Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Promote accountability for violations by implementing strong, consistent enforcement policies and actions through NMED's Compliance and Enforcement Division.
- Provide strategic, innovative, and effective legal advice and representation to NMED management and staff.
- Facilitate exceptional customer service to the public and ensure meaningful participation in docketed matters administered by the Office of Public Facilitation—including those before the Water Quality Control Commission and Environmental Improvement Board—as well as public hearings assigned by the Secretary due to significant public interest, and compliance orders issued by bureaus that benefit from public input.

Water Protection Division (P568)

Purpose of the Program

The Water Protection Division (WPD) protects drinking water, surface water, and groundwater to ensure New Mexicans have access to clean and safe water supplies to support domestic, agricultural, recreational, environmental, and drinking water interests. WPD assists qualifying entities in obtaining funding for water, wastewater, and stormwater projects across the state. Oversight of infrastructure projects is provided as applicable.

WPD works in coordination with federal agencies, state agencies, local governments, and citizen groups to maintain, improve, and protect the quality of the state's water resources, modernize water infrastructure, and ensure water, wastewater, and stormwater systems are designed and constructed to meet regulatory standards. WPD also provides economic development opportunities through improved water quality used for agriculture and outdoor recreation as well as infrastructure and river and wetland restoration projects.

Program Users

A public that expects to consume clean and safe drinking water whether in an urban or rural community. A public that recreates in and along New Mexico's lakes, rivers, and streams. Regulated entities who rely on relationships with regulators to provide technical and consistent expertise. Local governments, municipalities, and private utilities in need of technical and/or financial assistance to repair, update, or add water and wastewater infrastructure. Tribes, Pueblos, and Nations whose water quality may be impacted by others. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- Improved drinking water systems supported by operator workforce development, comprehensive community water system assistance, and sustainable infrastructure solutions.
- Healthy rivers and lakes that sustain recreation, tourism, and agriculture as essential components of a thriving state economy.
- Modern and reliable infrastructure in counties, cities, and towns that fosters healthy communities.
- Economic development opportunities on formerly contaminated properties that reinvigorate communities.
- Accessible information on drinking water, groundwater, and surface water quality available to the public, including in the aftermath of catastrophic events such as wildfires.

Budget and FTE FY27 Request

Water Protection Division	FTE	Budget
Office of the Director	16.00	$10,784,500
Construction Programs Bureau	23.00	$24,636,500
Drinking Water Bureau	43.00	$19,652,900
Ground Water Quality Bureau	72.00	$27,295,000
Surface Water Quality Bureau	48.00	$11,798,200

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

NMED Exhibit 11_000033

Water Protection Division (P568)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Increase spending of funds to support WPD's mission.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Leverage available federal and state funding to maximize financing opportunities for water, wastewater, and surface water infrastructure investments.
- Lead action-oriented discussions with key partners and stakeholders to develop capital outlay funding reforms for water infrastructure projects.
- Leverage innovative partnerships and conduct marketing outreach for water infrastructure financing programs to increase loan utilization rates.
- Work with local governments, agency partners, other service providers to develop regionalization partnerships between public drinking water and wastewater systems to enhance resiliency, viability, and ability to provide safe drinking water and functional wastewater systems to the public.
- Expand and modernize the Utility Operator Certification Program curriculum to prepare operators for current and future drinking water challenges.
- Recruit and retain qualified drinking water operators through targeted outreach, career development, and partnerships with education and workforce organizations.
- Provide technical, managerial, and financial assistance to public water systems to improve operational performance, resiliency, and long-term sustainability.
- Assist communities in planning, financing, and constructing sustainable drinking water infrastructure, prioritizing disadvantaged and underserved areas.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Implement water reuse regulations.
- Support the ongoing work of the New Mexico Produced Water Research Consortium to fill science and technology gaps related to treatment and use of produced water for purposes outside the oil and gas sector.
- Implement the Produced Water Act to preserve freshwater resources, protect water quality and public health, and provide regulatory certainty.
- Implement state surface water permitting program by FY27 to protect from fluctuations in the definition of "Waters of the United States" under the federal Clean Water Act.

NMED Exhibit 11_000034

- Identify and implement innovative approaches to leverage existing authorities to build communities and natural resource systems that are resilient to the impacts of climate change, consistent with the Governor's Executive Order 2019-003 on addressing Climate Change and Energy Waste Prevention and the 50 Year Water Action Plan.
- Develop and implement strategic actions to identify and address water contaminated with per- and polyfluoroalkyl substances (PFAS) and other emerging contaminants.
- Implement federal grant for Emerging Contaminants in disadvantaged communities including sampling, evaluation, solution development, and deployment.
- Develop and maintain informative and interactive public facing tools, including story maps on drought and other water related emergencies and PFAS, to provide resources and current public health information to regulated entities, community leaders, and other stakeholders.
- Expand assessment of neglected contamination sites around the state and develop mechanisms for site remediation where no responsible party exists.
- Improve efficiency of coordination on Abandoned Uranium Mine sites and subsequent remediation activities.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Improve the consistency and efficiency of the groundwater discharge permit program to better serve the public.
- Support and implement source water protection strategies to safeguard drinking water supplies from contamination and overuse.
- Continue to work closely with federal, state, tribal, and local partners to assess, manage, and mitigate contamination from legacy mine and mill sites, generating stations, and listed CERCLA (superfund) sites around the state.

Resource Protection Division (P569)

Purpose of the Program

The Resource Protection Division (RPD) oversees and coordinates hazardous waste, solid waste, and petroleum storage tank management. RPD works to prevent new contamination and promptly address legacy pollution for the protection of public health and the environment. When addressing new and legacy contamination, RPD collaborates with affected communities to facilitate the best possible environmental solutions and outcomes.

RPD closely monitors the environment within and around U.S. Department of Defense (DOD) and U.S. Department of Energy (DOE) facilities in New Mexico, taking swift and meaningful compliance actions when warranted. RPD also coordinates NMED efforts on perfluorinated compound (PFAS) related activities. RPD also ensures that all solid waste and recyclable materials are responsibly recovered and managed.

Program Users

A public that trusts and expects that New Mexico's natural resources will not diminish their family's health, safety, or economic prosperity regardless of where they live, work, or play. This includes New Mexico's service members who are stationed at U.S. Air Force installations, employees and contractors at DOE facilities and the residents who live in proximity to these installations. Regulated entities who rely on relationships with regulators to provide technical and consistent expertise. County and municipal governments who rely on our expertise for emergency response and technical guidance, including best management practices to minimize costs to taxpayers where possible. Tribes, Pueblos, and Nations whose natural resources may be impacted by others. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- Timely responses to hazardous substance releases to prevent exposure to people and environment.
- Accountability and consequences for those who put New Mexicans at risk from improper management of waste.
- Federal facilities that comply with regulations and properly manage and clean up their waste.
- Robust surveillance of DOE facilities to confirm environmental results and inform communities.
- Financial assurance and incentives for the petroleum industry to prevent or clean up petroleum spills/releases.
- Landfills that are designed, operated, and monitored to safely isolate waste from the environment, thereby protecting human health and the environment.
- Timely response to illegal dumping of trash.
- Reuse and recycling programs that encourage New Mexicans to turn their trash into treasures.

Budget and FTE FY27 Request

Resource Protection Division	FTE	Budget
Office of the Director	5.00	$1,168,500
DOE Oversight Bureau	16.00	$4,362,900
Hazardous Waste Bureau	35.00	$6,241,800
Petroleum Storage Tank Bureau	49.00	$22,724,700
Resource Recovery Bureau	20.00	$3,632,200

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

Resource Protection Division (P569)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Increase spending of funds to support RPD's mission.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Maximize federal and state funding to create jobs and support a circular economy in New Mexico.
- Coordinate across state, local, federal, and Tribal governments to maximize the quantity and effectiveness of federal and state funds benefiting the people of New Mexico.
- Maximize use of the Corrective Action Fund for clean-up petroleum storage tank release sites and other contaminated facilities.
- Provide funding for local governments to develop recycling programs and abate illegal dumpsites.
- Create opportunities to reduce waste streams while growing New Mexico's participation in the circular economy.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Further the state's climate change and emissions reductions goals by exploring emerging technologies that reduce waste streams and encourage use of waste as feedstock for other valuable products.
- Protecting New Mexicans by reducing their exposure to nonessential PFAS-containing products.
- Create greater flexibility in protecting the environment from emerging contaminants by allowing New Mexico to enforce cleanup of newly listed hazardous constituents and hazardous wastes.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Provide increased regulatory oversight and accountability over hazardous waste generators, hazardous waste permittees, solid waste facilities, and petroleum storage tank operators.
- Strengthen corrective action, permit reporting, and permit modifications response so it is consistent and timely.
- Hold federal agencies accountable for their contamination sites and corrective action activities.
- Enforce the Compliance Order on Consent to provide greater accountability and enforcement for the legacy waste clean-up activities at Los Alamos National Laboratory.

NMED Exhibit 11_000037

Resource Protection Division (P569)

- Increase enforcement of Resource Conservation and Recovery Act and Hazardous Waste Act violations discovered during inspections of hazardous waste generators through the Hazardous Waste Bureau, decreasing referrals to abatement under the Water Quality Regulations.

NMED Exhibit 11_000038

Environmental Protection Division (P570)

Purpose of the Program

The Environmental Protection Division (EPD) mitigates and prevents the impacts of climate change on our population, industries, and infrastructure by decarbonizing our thriving economy. EPD protects New Mexico's inhabitants and our natural beauty through clear air for all to breathe; prevents unnecessary risks to public health when medical or veterinary services are needed; and protects communities and the environment by assuring the proper licensing and financial assurance of industrial activities that use or concentrate radioactive materials.

Program Users

A public that breathes air, may be subject to extreme weather events, and receives radiologic exams. The regulated community, including oil and gas producers. Other state agencies and institutions, county and local governments, including Tribes and Pueblos who participate in consultation. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- Clean air for all New Mexicans, including children, elderly, and other vulnerable populations.
- Clear air for tourism and recreational opportunities from improved visibility at national and state parks and wilderness areas.
- Decreased greenhouse gas emissions to reduce the adverse effects of climate change.
- Increased access to clean energy and clean transportation infrastructure and jobs through investments.
- Protection for workers and the public from the ill effects on human health and natural resources of radioactive materials in academic, medical, and industrial applications.
- Reduced exposure to indoor radon.
- Critical assistance to current and former DOE or DOE-contracted facility nuclear workers who are ill because of exposure to radiation, chemicals, or both.

Budget and FTE FY27 Request

Environmental Protection Division	FTE	Budget
Office of the Director	6.00	$984,700
Air Quality Bureau	91.00	$28,285,100
Climate Change Bureau	18.00	$2,287,600
Radiation Control Bureau	21.00	$3,610,800

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

Environmental Protection Division (P570)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Upgrade information technology systems to ensure transparency, efficiency and reliability for EPD staff, regulated communities and the public interest.
- Secure solvency for the State Air Permit Funds as expenses related to increased workload and needed upgrades to meet program objectives increase.
- Prioritize training EPD staff, with focus on incoming managers and supervisors, on team development and project management.
- Continue hiring efforts, including creating and transitioning positions to new office space to increase recruitment and retention.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Support the growth of industries and businesses that produce and provide low-carbon fuels to the state though implementation of the clean transportation fuels program.
- Establish a comprehensive regulatory framework for fusion machines that ensures public health and safety, protects the environment, and fosters responsible innovation in fusion energy.
- Ensure meaningful community engagement in decision-making through accessible outreach, public meetings, and translation services.
- Promote incentives and program activities that align economic growth with protection of the environment and public health.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Evaluate and address cumulative impacts on public health and the environment in areas with higher numbers of permits, licenses, and registrations.
- Safeguard state progress in reducing emissions—including excess methane, ozone, other harmful pollutants, and Naturally Occurring Radioactive Materials—from oil and gas operations.
- Advance and collaborate on measures identified under the state's Climate Action Plan.
- Proactively conduct education and outreach activities on air quality, climate, indoor radon, and radiation exposure.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Implement mobile air monitoring capabilities to gather data above and beyond current stationary air quality monitoring network.
- Establish capabilities for mobile monitoring and analysis of radioactive materials in oil and gas basins and throughout the state.
- Update EPD regulations to ensure accuracy and consistency with program needs.
- Provide regular permitting, licensing, and registration updates to regulated community.

NMED Exhibit 11_000040

Environmental Health Division (P571)

Purpose of the Program

The Environmental Health Division (EHD) develops and implements preventive strategies to mitigate threats posed by emerging environmental health hazards. EHD promotes and regulates New Mexico businesses, products and services in a manner that prevents adverse impacts and risks to public health and the environment; this includes commercially prepared foods, manufactured foods, hemp-finished products, adult use and medical edible cannabis products, public swimming pools and spas, and liquid waste systems. EHD also develops and implements preventive strategies to mitigate threats posed by emerging environmental health hazards related to public health.

Program Users

Residents of New Mexico who are impacted by environmental conditions negatively influencing the health of their communities. A public that eats at restaurants, purchases manufactured foods for their family, and enjoys public pools and spas. On-site septic system/property owners. The regulated community, including hemp and cannabis product manufacturers and food establishment owners. Other state agencies and institutions, county and local governments, and Tribes, Pueblos, and Nations who participate in consultation. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- An engaged public with awareness of the positive and negative impacts of environmental conditions on future health.
- Safe food in restaurants and from New Mexico manufacturing facilities.
- Economic development, job growth, and health protection supported by responsible hemp and cannabis manufacturing.
- Safe public swimming pools and spas for recreation, fitness, and medical care.
- Septic tanks that manage onsite liquid waste while protecting local groundwater supplies and residents.

Budget and FTE FY27 Request

Environmental Health Division	FTE	Budget
Office of the Director	4.00	$694,400
Environmental Health Bureau	101.0	$12,503,600
Cannabis and Hemp Bureau	5.00	$738,100

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

NMED Exhibit 11_000041

Environmental Health Division (P571)

Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Build and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, leadership training, and succession planning.
- Ensure EHD has sufficient and stable funding via fee increases to support program objectives.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Deploy the liquid waste assistance fund to help low-income residents with the cost to repair, replace, construct wastewater systems, alternative systems, or connect to sewer systems.
- Expand and retain NMED's skilled and trained team of food safety inspectors to keep pace with the growth in food establishments and support local economies.

Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Adopt rules to regulate hemp extraction, processing, and other manufacturing activities.
- Inspect public food establishments to protect consumers and the public from adverse health and safety conditions such as foodborne and other illnesses.
- Regulate onsite treatment and disposal of liquid waste.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance assurance activities.

- Publish all permits online to increase transparency.
- Align state food regulation programs with FDA goals by developing a highly effective and responsive system for overseeing food service and retail establishments, achieving compliance with the Voluntary National Retail Food Program Standards as resources allow.

NMED Exhibit 11_000042

Compliance and Enforcement Division (P566)

Purpose of the Program

The Compliance and Enforcement Division (CED) protects public health and the environment by assuring business, industry, and federal facility compliance with federal and state rules, permits, and licenses. CED develops compliance assurance strategies based on federal and state priorities, as well as other data that shapes more effective ways to improve public health and environmental outcomes for communities.

CED is responsible for promptly enforcing against entities when violations occur. CED oversees compliance and enforcement activities for applicable air, water, food, radiation, petroleum storage tanks, and hazardous and non-hazardous waste permits and regulations, and occupational health and safety. Additionally, CED oversees and manages the agency's Emergency Operations and Response efforts, a critical function given the rising frequency of climate-related emergencies statewide.

Program Users

Residents of New Mexico who are impacted by environmental conditions negatively influencing their health and the land, water, and air of their communities. The regulated community, including public drinking water system operators, oil and gas producers, and employers. Other state agencies and institutions, county and local governments, and Tribes, Pueblos, and Nations who participate in consultation. All others who ensure our accountability to our mission, including: the Governor, Legislature, Federal Government, and the public.

Benefits to New Mexicans

- An engaged public aware of the positive and negative impacts of environmental conditions on future health.
- Safe, clean, and reliable drinking water supporting today's economy and protecting future generations of New Mexicans.
- Clean air for all New Mexicans, including children, the elderly, and other vulnerable populations.
- Accountability and consequences for those who put New Mexicans at risk through improper waste management.
- Federal facilities in compliance with regulations governing air, water, soil, and waste.
- Workers and workplaces safeguarded from hazards in daily operations and during public health emergencies.
- Successful businesses sustained by safe and productive workplaces.

Budget and FTE FY27 Request

Compliance and Enforcement Division	FTE	Budget
Office of the Director	3.00	$366,700
Environmental Protection Bureau	35.00	$5,230,100
Resource Protection Bureau	25.00	$3,733,600
Water Protection Bureau	25.00	$2,048,200
Occupational Health and Safety Bureau	52.00	$6,106,400
Emergency Operations	2.00	$669,600

See Appendix A for our performance measures and Appendix B for a comprehensive listing of our statutory authority.

Compliance and Enforcement Division (P566)

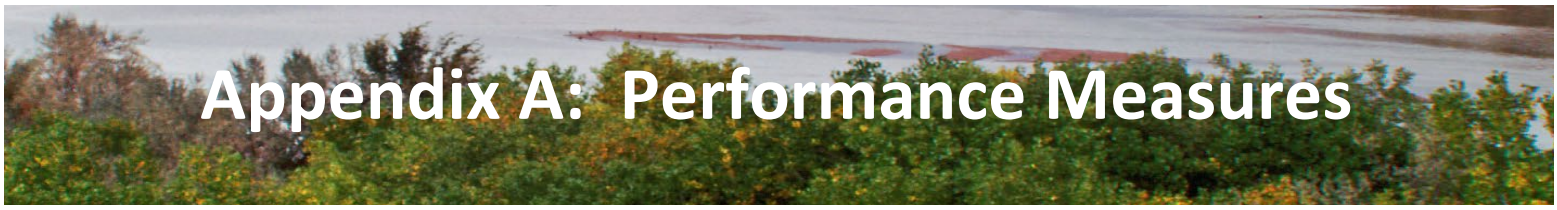
Program Goals, Objectives, and Strategic Actions

Program Goal and Objective 1: Ensure robust staffing and resources to improve the implementation of our mission.

- Recruit, build, and retain a skilled and trained team of professional and support staff to implement our mission.
- Prioritize hiring, inspector and leadership training, and succession planning.
- Develop the funding to support CED's mission.

Program Goal and Objective 2: Create and support economic development opportunities that mitigate climate change, improve air quality, protect freshwater resources, reduce wastes, and ensure environmental justice for marginalized communities.

- Increase engagement of local governments and regulated business communities in assuring self-compliance with environmental regulations.
- Provide free and confidential compliance assistance to businesses at their request by identifying workplace hazards, analyzing safety and health management systems.



Program Goal and Objective 3: Protect communities from emerging public health and environmental contaminants.

- Further the state's climate change and emissions reductions goals by employing emerging technologies that identify the release of excess emissions of methane and other contaminants.
- Protect New Mexicans by reducing PFAS contamination and increasing the clean-up of PFAS contamination by responsible parties.
- Ensure swift and effective action during environmental emergencies, safeguarding public health and the environment while sustaining regulatory enforcement and compliance efforts.
- Implement workplace heat standards, developed in collaboration with employers, to address emerging threats from heat stress.
- Maintain a timely and flexible response capacity to emergent public health risks that create workplace hazards.

Program Goal and Objective 4: Protect the public health and the environment through innovative and traditional compliance and enforcement activities.

- Modify, develop, and implement consistent penalty and enforcement policies for all divisions.
- Enhance and modernize agency laboratory infrastructure through updates to existing lab spaces and the deployment of mobile laboratory units.
- Publish all violations on Enforcement Watch to increase public transparency of compliance and enforcement efforts.
- Develop and implement standard operating procedures to ensure consistency in enforcement.
- Publish all permits and findings online.

NMED Exhibit 11_000044

Appendix A: Performance Measures

Public Health
Percent of the population breathing air meeting federal health standards
Percent of the population served safe and healthy drinking water
Number of drinking water systems serving drinking water that did not meet at least one standard compared to the total number of drinking water systems
Number of community water system violations returned to compliance as a result of NMED assistance
Number of superfund sites cleaned up as compared to the number of superfund sites remaining
Employers that did not meet occupational health and safety requirements for at least one standard

Environmental Protection
Amount of volatile organic compounds emitted statewide, in tons
Amount of volatile organic compounds emitted illegally, in tons
Amount of nitrogen oxides emitted statewide, in tons
Amount of nitrogen oxides emitted illegally, in tons
Quantity of nutrient-based pollutants reduced due to implementation of watershed restoration and on-the-ground improvement projects, in pounds
Reduction in nonpoint source sediment loading attributed to implementation of watershed restoration and on-the-ground improvement projects
Number of nonpoint source impaired waterbodies restored by the Department relative to the number of impaired water bodies
Number of underground storage tank sites cleaned up compared to the total number of leaking underground petroleum storage tank sites remaining
Number of completed cleanups of petroleum storage tank release sites that require no further action
Number of zero-emission vehicles registered in New Mexico

Economic Investment
Total investment of grants dollars awarded to communities, year to date
Number of brownfield acres of contaminated land cleaned up and available for reuse
Investments in water infrastructure, in dollars
Number of new water infrastructure projects

NMED Exhibit 11_000045

Appendix A: Performance Measures

Compliance	
Air	Percent of air emitting sources inspected
	Percent of air emitting source inspections showing compliance
	Percent of air emitting sources with active/ongoing violations
Groundwater	Percent of groundwater permittees inspected
	Percent of groundwater permittee inspections showing compliance
	Percent of groundwater permittees with active/ongoing violations
Hazardous Waste	Percent of hazardous waste facilities inspected
	Percent of hazardous waste facility inspections showing compliance
	Percent of hazardous waste facilities with active/ongoing violations
Restaurants and Food Manufacturing	Percent of restaurants/food manufactures inspected
	Percent of restaurants/food manufacturer inspections showing compliance
	Percent of restaurants/food manufactures with active/ongoing violations
Septic Systems	Percent of new or modified liquid waste systems inspected
	Percent of new or modified liquid waste system inspections showing compliance
	Percent of new or modified liquid waste systems with active/ongoing violations
	Number of liquid waste system violations resulting from complaints
Solid and Infectious Waste	Percent of solid and infectious waste management facilities inspected
	Percent of solid and infectious waste management facility inspections showing compliance
	Percent of solid and infectious waste management facilities with active/ongoing violations
Surface Water	Percent of surface water permittees inspected
	Percent of surface water permittee inspections showing compliance
	Percent of surface water permittees with active/ongoing violations
Radiation Sources in Medical Equipment	Percent of ionizing/non-ionizing radiation sources inspected
	Percent of ionizing/non-ionizing radiation source inspections showing compliance
	Percent of ionizing/non-ionizing radiation sources with active/ongoing violations

NMED Exhibit 11_000046

Appendix A: Performance Measures

Compliance (Continued)	
Occupational Health and Safety	Percent of high-hazard facilities inspected
	Percent of all employers inspected
Cannabis and Hemp	Percent of cannabis and hemp permittees inspected
	Percent of cannabis and hemp permittee inspections showing compliance
	Percent of cannabis and hemp permittees with active/ongoing violations
Petroleum Storage Tanks	Percent of petroleum storage tank permittees inspected
	Percent of petroleum storage tank permittee inspections showing compliance
	Percent of petroleum storage tank permittees with active/ongoing violations

Operational
Total dollars collected by NMED and transferred to the general fund resulting from successful prosecutions and/or settlements stemming from non-compliance with laws, rules, or permits administered by the Department
Vacancy rate by month
Percent of NMED financial transactions completed online by the public or regulated community

NMED Exhibit 11_000047

Appendix B: Statutory Authority & Duties

• NMSA 1978, §§ 3-29-1 to -21	Sanitary Projects Act
• NMSA 1978, §§ 9-7A-1 to -17	Department of Environment Act
• NMSA 1978, §§ 11-18-1 to -5	State Tribal Collaboration Act
• NMSA 1978, §§ 10-15-1 to -4	Open Meetings Act
• NMSA 1978, §§ 13-1-1 to -199	Procurement Code
• NMSA 1978, §§ 14-2-1 to -12	Inspection of Public Records Act

Performance Assessment

Fiscal Year 2025 – 4th Quarter – April 1 thru June 30, 2025

New Mexico Environment Department
Office of Strategic Initiatives

Published September 30, 2025
www.env.nm.gov

Investing for tomorrow, delivering today.

Our mission is to protect and restore the environment and to foster a healthy and prosperous New Mexico for present and future generations. We implement our mission guided by four core values: science, innovation, collaboration, and compliance. We use the best available science to inform our decision-making in protecting public health and the environment. We employ creative engineering and technical solutions to address environmental challenges. We engage communities and stakeholders in environmental decision-making. Finally, we ensure compliance with state regulations and permits, leveling the playing field by holding violators accountable. We embrace our mission and core values at every level of the organization.

In FY25, we are strategically deploying our limited funding and personnel to advance public health, protect our natural resources, hold responsible parties accountable, and work to ensure access to clean land, air, and water for New Mexicans. For more information on NMED's program workloads, see Appendix A, beginning on page 17 of this report.

For FY25, NMED received appropriations totaling $198.5 million to protect public health and the environment. This included $33.3 million in general funds, $67.9 million in special revenue funds (e.g., permit fees), $97.3 million in federal funds, and $22.7 million in non-recurring special appropriations for earmarked projects/purposes.

NMED's approximate recurring budget breakdown is:

- 16.8% state general fund
- 34.2% special revenue funds
- 49.0% federal funds

About this Report

The New Mexico Environment Department (NMED) began publishing quarterly assessments in Fiscal Year 2022 (FY22). This is the fourth quarterly performance assessment for FY25 and provides a retrospective look at the quarter while providing totals for the entire fiscal year.

For more information, please visit our website:
www.env.nm.gov > About > Performance
to see past reports and other metrics.

Office of Strategic Initiatives
Christina Keyes
Acting Director
(505) 469-5754
Christina.keyes@env.nm.gov

Beginning on page 7, this report covers 56 performance measures across these five categories:

- 7 Public Health Measures
- 10 Environmental Protection Measures
- 32 Compliance Measures
- 4 Economic Investment Measures
- 3 Operational Measures

NMED Exhibit 12_000002

PFAS Litigation

NMED and NMDOJ File New Lawsuit Against Cannon Air Force Base

A new lawsuit ordering the U.S. Department of the Air Force to clean up its toxic PFAS contamination at Cannon Air Force Base near Clovis was filed in June by NMED and NMDOJ. The new lawsuit relies on existing and expanded authority under the new law, established by the passage of HB140 during the Legislative Session and signed by Governor Lujan Grisham.

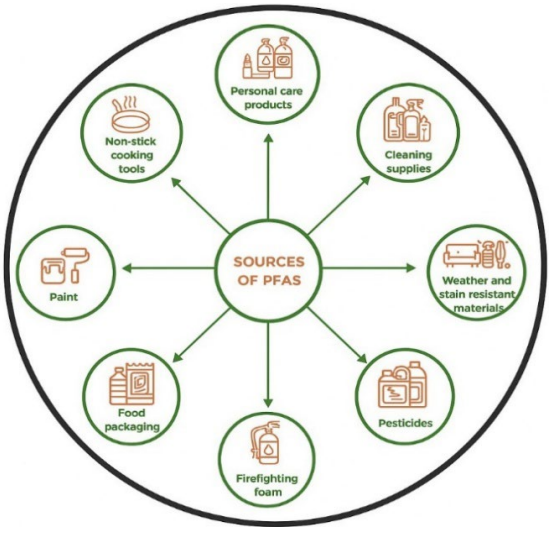
HB140 gives direct authority to New Mexico to regulate discarded Aqueous Fire Fighting Foam containing PFAS as a hazardous waste. HB140 is consistent with 21 other states that sought greater protection from industry-specific hazardous wastes.

In addition to cleaning up the decades of ongoing PFAS releases and paying civil penalties, the lawsuit seeks to order the USAF to:

- End all use of PFAS-containing firefighting foam at Cannon for anything other than emergency purposes
- Provide water treatment systems to residents whose water has been affected by PFAS contamination
- Install drinking water lines for any willing residents currently serviced by private wells in the spill area
- Hold regular public meetings with the community
- Install stormwater controls and retention basins to prevent offsite migration of PFAS from contaminated media
- Valuate nearby private property affected by PFAS contamination
- Compensate the owners of said property for losses resulting from PFAS contamination

New Mexico PFAS Claim Filed as Federal Bellwether Case

Case could establish precedent for similar cases in national PFAS lawsuit

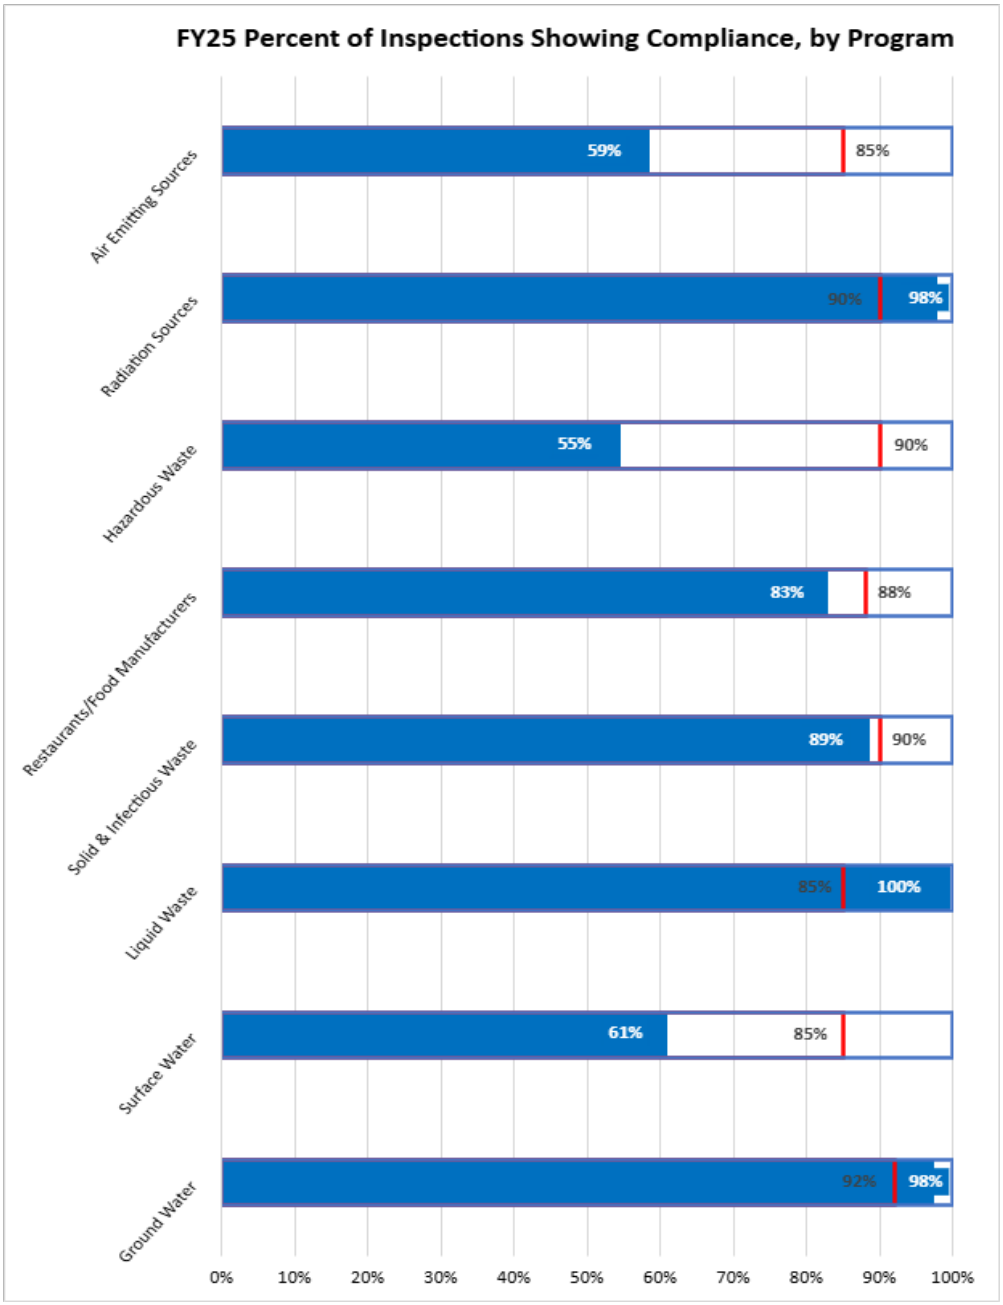


In June, a federal judge opened the door to New Mexico's pursuit of its ongoing civil case against Cannon Air Force Base for environmental and public health damage near Clovis.

The judge's statements pave the way for New Mexico's July 2024 lawsuit to serve as a national bellwether case for PFAS claims under the Comprehensive Environmental Response, Compensation, and Liability Act, commonly referred to as the federal Superfund law.

With this filing, New Mexico moves to the front of the line among states seeking compensation for damages to their natural resources resulting from the U.S. Air Force's decades-long use of toxic PFAS-laden firefighting foam. The foam leaked into nearby groundwater and caused devastating damage to Clovis residents' health and local agriculture.

New Mexico's case is one of hundreds that are part of multi-district litigation in a South Carolina federal court that aims to hold producers and users of PFAS-laden firefighting foam accountable for contamination at both military and civilian sites across the country. As such, any judgement in the New Mexico case will set a new precedent for states to hold polluters accountable across the United States.



A decision that the United States is liable for natural resource damages under the Superfund law will force the federal government to compensate the state for ongoing contamination of its groundwater by paying the costs of projects that restore, protect, conserve, or replace groundwater. A declaration of liability will force the United States to work with New Mexico to address the PFAS contamination crisis around Cannon AFB.

Compliance and Enforcement

In FY25, NMED staff conducted 11,938 compliance inspections. In the fourth quarter alone, NMED conducted 2,851 inspections. In addition to these inspections, NMED staff frequently perform multiple inspections of a single facility in response to complaints from the public and follow-up inspections to check on issues identified in previous inspections and ensure compliance, adding up to thousands more inspections each year.

Based on all FY25 compliance inspections, the bar chart below shows compliance levels in programs across the Department compared to the performance benchmark or target. Regulated entities in five program areas fell below the target (depicted by the red line) and regulated industry in three program areas including Liquid Waste, Ground Water and Radiation exceeded the benchmark or target. Solid Waste came within half of a percent of achieving its target for FY25.

Ensuring Compliance with the Safe Drinking Water Act

The Drinking Water Bureau issued 59 Notices of Violation to 30 different water systems, including the municipalities of Lordsburg, Grady, Springer, Portales, Gallup and Carlsbad, across New Mexico for a range of violations of New Mexico public drinking water regulations. A health-based violation means a system has exceeded a protective standard meant to reduce health risks. In July 2024, the department cracked down on drinking water systems with chronic violations of drinking water standards. The department issued 138 letters to drinking water systems across the state, informing their owners of impending civil penalties if they continue to serve consumers unsafe drinking water.

Since then, the department has issued 14 Administrative Compliance Orders (ACOs) requiring public and private water suppliers to immediately fix health-based violations. The department assessed $887,820 in civil penalties, which are required by law to fund drinking water sampling and the training and development of water utility operators. Another 16 ACOs are currently in progress and expected to be issued soon. Progress in protecting New Mexico's drinking water is evident in the data on statewide violation trends. In Q3 of Fiscal Year 2025, the number of water systems with health-based violations dropped to 94 —down from the previous year's average of 115 to 125 systems per quarter.

Emerging Contaminants and PFAS in Drinking Water Systems

In April 2024, the U.S. Environmental Protection Agency (EPA) announced National Primary Drinking Water Regulation (NPDWR) for six per-and polyfluoroalkyl substances (PFAS). The regulation established Maximum Contaminant Levels (MCLs) for PFOA, PFOS, PFNA, PFHxS, and HFPO-DA (also known as GenX chemicals) as individual contaminants, and will regulate PFNA, PFHxS, HFPO-DA, and PFBS as a mixture through a Hazard Index. MCLs are enforceable maximum regulatory levels of a compound allowed in drinking water. The rule is expected to reduce PFAS exposure in drinking water for millions of people, preventing thousands of deaths and significantly lowering PFAS-related illnesses. The rule requires:

- Public water systems (PWSs) to monitor for these six PFAS. Systems have three years to complete initial monitoring (by 2027), followed by ongoing compliance monitoring. Water systems must also provide the public with information on the levels of these PFAS in their drinking water beginning in 2027. **Link to Monitoring Fact Sheet**.
- Public water systems have five years (by 2029) to implement solutions that reduce these PFAS if monitoring shows that drinking water levels exceed these MCLs.
- Beginning in five years (2029), public water systems that have PFAS in drinking water that violate one or more of these MCLs must take action to reduce levels of these PFAS in their drinking water and must provide notification to the public of the violation.

NMED Files Lawsuit Against CRRUA

NMED filed a lawsuit in the Third Judicial District Court in Las Cruces in May, asking the court to appoint an independent manager to oversee the daily operations of the Camino Real Regional Utility Authority, or CRRUA. If granted, the order would effectively place the troubled water system into a status like receivership. The request comes after more than a decade of mismanagement at the utility related to arsenic issues. In addition to failing to properly treat its drinking water, CRRUA also failed to inform its customers of the dangerous levels of arsenic in their tap water — a violation that has been repeated for years. NMED is seeking additional relief from the court, ordering CRRUA to implement real-time arsenic monitoring; distribute free arsenic test strips for all CRRUA customers; provide an alternative drinking water source if arsenic levels exceed state limits; conduct monthly public meetings; pay civil penalties which, per state law, fund drinking water and wastewater utility operators for communities across New Mexico.

Enforcement Watch Update

To bring our mission to life for every New Mexican, we must assure compliance with applicable laws, rules, and permits. This is why compliance is one of our four core values. NMED's Enforcement Watch provides a transparent, publicly accessible listing of all active and resolved enforcement cases with online reporting tools. In the fourth quarter of FY25, NMED initiated 513 enforcement actions and resolved 249 violations.

FY25 Enforcement Watch Alerts:

(click on the month to read the corresponding press release)

	Enforcement Actions	
Month	**Initiated**	**Resolved**
July, 2024	164	73
August, 2024	175	140
September, 2024	120	21
October, 2024	197	53
November, 2024	164	59
December, 2024	128	83
January, 2025	84	104
February, 2025	157	104
March, 2025	78	124
April, 2025	184	88
May, 2025	87	69
June, 2025	242	92
FY25 Total	**1,780**	**1,010**

Major enforcement actions taken in the fourth quarter include:

• Air: Administrative Compliance Order to DCP Operating Company, of Houston for 17 violations of their permit or New Mexico Air Regulations at seven compressor facilities in Eddy and Lea counties.

•The Groundwater Quality Bureau issued a Notice of Violation to the Village of Cimarron wastewater treatment facility for violations of New Mexico groundwater quality regulations.

•The Solid Waste Bureau issued a Notice of Violation to Corralitos Regional Landfill of Las Cruces for failing to control litter in violation of New Mexico Solid Waste regulations.

Public Health Measures

Clean air and land, safe drinking water and food, and healthy communities are critical public health measures for developing and maintaining a prosperous New Mexico. The table below provides an at-a-glance view of our progress toward our FY25 targets.

	FY25 Target	Q1	Q2	Q3	Q4	FY25 Actual
Percent of the population (in NMED jurisdiction) breathing air meeting federal health standards.	95.0% or more	98.3%	90.8%	90.8%	78.3%	78.3%
Percent of the population served safe and healthy drinking water.	95.0% or more	95.2%	94.8%	95.0%	94.7%	94.7%
Number of drinking water systems serving drinking water that did not meet at least one standard compared to the total number of drinking water systems.	200/560 (35.7%)	222/560 (39.6%)	238/559 (42.6%)	248/559 (44.4%)	310/559 (55.5%)	310/559 (55.5%)
Number of community water system violations returned to compliance as a result of NMED assistance.	250	26	22	58	58	164
Number of superfund sites cleaned up as compared to the number of superfund sites remaining.	0/15					0/15
Number of employers that did not meet Occupational Safety and Health Administration (OSHA) requirements for at least one standard compared to the total number of employers.	55.0%	72.0%	80.0%	64.3%	60.5%	60.5%

Note: Grey boxes in tables represent fields with no data reported because the respective measures are reported on a semi-annual or annual basis, rather than quarterly.

Our public health performance measures are described in detail in Appendix B. These explanations include additional definitions and assumptions to provide further insight into the significance of these measures.

Air Quality Bureau Monitors Pollutants Level Exceedances

NMED operates 20 monitoring stations throughout the state, monitoring multiple air pollutants to determine trends in air pollution and compliance with the National Ambient Air Quality Standards (NAAQS). The pollutants monitored include nitrogen dioxide (NO2), ozone, particulate matter (PM10), fine particulate matter (PM2.5) and sulfur dioxide (SO2). This measure calculates the percentage of New Mexicans that breathe air in compliance with these standards under the state's jurisdiction. NMED's Carlsbad monitor had ozone exceedances above the NAAQS this quarter. Dust issues occurred in Doña Ana County and Luna County, attributed to seasonal high wind events and dust is regulated in these counties for disturbed land. NMED has also been tracking and utilizing satellite data and other technologies to identify potential issues related to compliance. Air Quality Bureau's efforts in Eddy County focus on decreasing ozone pollution from the oil the gas industry through implementation of NMED's Ozone Precursor Rule (20.2.50 NMAC) - including compliance and enforcement efforts related to same. Many requirements in 20.2.50 NMAC are now in effect (with more to come in the next two years), that tighten the standards for emissions.

Environmental Protection Measures

Environmental protection is a set of mitigation techniques aimed at helping protect and manage different environmental issues. Environmental protection can be accomplished by reducing pollutants and other factors that contribute to the degradation of the environment. The table below provides an at-a-glance view of our progress toward our FY25 targets.

	FY25 Target	Q1	Q2	Q3	Q4	FY25 Actual
Amount of volatile organic compounds emitted statewide, in tons per year (TPY).	90,986					66,363
Amount of volatile organic compounds emitted illegally, TPY.	4,500					1,215
Amount of nitrogen oxides emitted statewide, TPY.	123,215					56,036
Amount of nitrogen oxides emitted illegally, in TPY.	6,000					75
Quantity of nutrient-based pollutants reduced due to implementation of watershed restoration and on-the-ground improvement projects, in pounds.	1,275		2,588		9,962	9,962
Reduction in nonpoint source sediment loading attributed to the implementation of watershed restoration and on-the-ground improvement projects, in tons.	1,000		2,165		5,187	5,187
Number of nonpoint source impaired waterbodies restored by the Department relative to the number of impaired water bodies.	1/377 (0.3%)					1/377 (0.3%)
Number of underground storage tank sites cleaned up compared to the total number of leaking underground petroleum storage tank sites remaining. (Denominator fluctuates as sites reach no further action status after completed cleanup.)	20/972 (2.1%)	2	0	4	0	6/972 (0.62%)
Number of completed cleanups of petroleum storage tank release sites that require no further action. (Cumulative over all time.)	1,976	0	0	4	0	4/1976
Number of zero-emission vehicles registered in New Mexico*	Explanatory	14,958	18,514	18,514	20,016	20,016
Number of liquid waste system violations resulting from complaints*	Explanatory	6.0	1.0	3.0	3.0	3.0

*New Measure in FY25.

Our environmental protection performance measures are described in detail in Appendix B. These explanations include additional definitions and assumptions to provide further insight into the significance of these measures.

Solid Waste Bureau's RAID Grants Clean Up!

In Q4 of FY25, the Solid Waste Bureau and the RAID Alliance awarded the 2026 Recycling and Illegal Dumping (RAID) grants. Through a competitive application process, 21 projects were selected to receive over $800,000 in funding to support scrap tire abatement, illegal dumpsite cleanup, recycling infrastructure, composting initiatives, and community education programs across the state. Among the 21 funded projects, several stand out for their innovative approaches and broad impact. The Southwest Solid Waste Authority will install 20 recycling bins throughout Silver City as part of a targeted outreach campaign to increase commercial cardboard recycling. Meanwhile, the City of Albuquerque will launch a bilingual public education initiative aimed at reducing recycling contamination, using a combination of digital media, billboards, social platforms, and in-person engagement. Other awardees for FY 2026 include municipalities, counties, pueblos, tribes, and solid waste authorities, many of which serve rural and frontier communities. Funded projects this cycle will: remove and recycle thousands of illegally dumped scrap tires; expand rural recycling drop-off infrastructure; launch or enhance composting initiatives; clean up legacy dumpsites near sensitive waterways; and deliver environmental education to youth and residents. The RAID Grant is funded through a dedicated fee on motor vehicle registrations and has supported over 400 projects with more than $13.4 million awarded since 2006. Projects are reviewed and recommended by the 12-member RAID Alliance and must be completed within the state fiscal year.

The following photos show the impact of the tire clean up and tire amnesty event held in Q4 2025.

Above left photo: dump site before cleanup. Above right: tire removal crew at work.
Below photo: dump site after tire and debris removal. (Photos provided by Shirlene Sitton, SWB Bureau Chief.)

Compliance Measures

Environmental regulatory compliance is essential to protect the environment and prevent harm to human health. Inspections are a valuable tool for NMED to determine whether regulated entities are in compliance with applicable laws, rules or permits. The table below provides an at-a-glance view of our progress toward our FY25 targets. The "compliance" measures reflect the results of inspections conducted within the reporting period. The "violation" measures reflect all active violations among all permittees. This difference in denominators can cause large differences between the "compliance" and "violations" rates.

	FY25 Target (%)	Q1 (%)	Q2 (%)	Q3 (%)	Q4 (%)	FY25 Actual (%)
Air						
Percent of air emitting sources inspected.	25.0	7.8	3.4	4.2	8.5	6.0
Percent of air emitting sources in compliance.	85.0	50.0	25.0	20.0	70.0	58.6
Percent of air emitting sources in violation.	15.0	50.0	75.0	80.0	30.0	51.7
Cannabis and Hemp						
Percent of cannabis and hemp permittees inspected*	85.0	14.5	13.0	5.3	15.8	95.0
Percent of cannabis and hemp permittee inspections showing compliance*	90.0	77.8	85.7	100.0	44.4	75.0
Percent of cannabis and hemp permittees with active or ongoing violations*	5.0	0.0	14.3	0.0	0.0	3.6
Groundwater						
Percent of groundwater permittees inspected.	65.0	10.7	9.3	9.5	9.2	38.4
Percent of groundwater permittees in compliance.	92.0	97.4	100.0	98.5	93.9	97.5
Percent of groundwater permittees in violation.	8.0	1.4	1.3	1.4	1.4	1.4
Hazardous Waste						
Percent of hazardous waste facilities inspected.	13.0	1.3	1.0	1.5	0.5	1.4
Percent of hazardous waste facilities in compliance.	90.0	40.6	60.0	64.9	50.0	54.6
Percent of hazardous waste facilities in violation.	5.0	0.9	0.9	0.8	0.5	0.8
Occupational Health and Safety

Percent of new or modified liquid waste systems in compliance.	85.0	99.8	99.7	99.1	99.6	99.7
Percent of new or modified liquid waste systems in violation.	13.0	0.2	0.3	0.9	0.4	0.3
Solid/Infectious Waste						
Percent of solid and infectious waste management facilities inspected.	85.0	10.9	13.0	17.0	34.8	19.0
Percent of solid and infectious waste management facilities in compliance.	90.0	100.0	83.3	100.0	81.3	88.6
Percent of solid and infectious waste management facilities in violation.	N/A	23.9	23.9	19.6	8.7	19.0
Surface Water						
Percent of surface water permittees inspected.	100.0	10.0	25.0	40.0	40.0	115.0
Percent of surface water permittees in compliance.	85.0	0.0	40.0	75.0	75.0	60.9
Percent of surface water permittees in violation.	N/A	4.0	3.0	3.0	4.0	3.8

*New Measure in FY25.

Our compliance performance measures are described in detail in Appendix B. These explanations include additional definitions and assumptions to provide further insight into the significance of these measures.

Clean Fuels Program to Protect Air and Boost Economy

NMED has proposed a Clean Transportation Fuel Program to the state's Environmental Improvement Board (EIB). If approved, New Mexico would become the fourth state in the nation with a clean transportation fuel standard, following Gov. Michelle Lujan Grisham's signing of House Bill 41 in March 2024. This innovative market-based program would allow producers, importers, and dispensers of low-carbon fuels to generate and sell credits to those producing high-carbon fuels. The program aims to: Strengthen and diversify New Mexico's economy; Create new economic opportunities in the $3 billion alternative fuels market; Attract investment in emerging industries like clean hydrogen and renewable propane.

NMED developed the proposal after extensive public input, including approximately 90 responses to a discussion draft published in December 2024. The department also met with industry representatives, environmental advocates, and tribal governments. A 60-day public comment period is expected to begin in mid-June 2025, with the EIB considering all feedback before making a final decision during the fall hearing.

At the end of Q4, a total of 20,016 electric vehicles registered in New Mexico (14,008 battery electric vehicles and 6,008 plug-in hybrid electric vehicles). The number of EVs registered on the road in the state has increased by 5,050 compared to Q4 2024; a 33.7% increase. To increase residents' familiarity with EVs, NMED has launched the "Electrify Your Ride" PSA across state media markets. The "Electrify Your Ride" PSA also alerts residents to the versatility of EVs, of existing state and utility incentives that may be applicable and encourages residents to visit their local dealerships for more sales information.

New Mexico's Climate Action Plan

Public meetings held in May and June provided New Mexicans with the opportunity to meet with NMED and EMNRD staff and provide public input on New Mexico's Climate Action Plan (CAP). Expected to be completed by December 2025, CAP will provide a roadmap to meet New Mexico's climate pollution reduction targets, and aims to ensure a healthy, secure, and prosperous future for all New Mexicans. Meeting participants gave insightful feedback to NMED and EMNRD staff, providing direction about forest management as climate solutions, environmentally friendly agricultural techniques, and new technologies to offset oil and gas emissions. The CAP team, comprised of NMED Climate Change Bureau and EMNRD Climate Policy Bureau staff conducted the series of meetings to strengthen community engagement and collaboration. Additional meetings throughout the summer will focus on further information gathering and analyzing how draft measures can most efficiently reduce greenhouse gases, benefit communities, and develop workforce opportunities. Continued engagement will support the move towards implementation of the plan. CAP is the culmination of a series of efforts initiated by the Governor's 2019 executive order directing that state to reduce climate pollution by 45% by 2030 and reach net-zero emissions by 2050. https://www.climateaction.nm.gov/CAP/

Economic Sector Climate Data

Industry — Industrial activities, primarily used in oil and gas production, generate 48% of the state's total emissions.

Transportation — Vehicles burning fossil fuels account for roughly 20% of greenhouse gas emissions.

Agriculture, Forests, and Wilderness — Fertilizer use, manure management, and livestock operations drive most of the emissions in this sector, which contributes about 12% of the total. In contrast, forests act as carbon sinks, helping to clean our air.

Buildings, Waste, and Materials — Heating and cooling systems, landfills, and wastewater treatment facilities produce the bulk of emissions from this sector, which makes up around 6% of the total.

Economic Investment Measures

NMED is dedicated to making economic investments that promote public health, improve environmental protection, and foster compliance. Economic investment is critical to New Mexico's ability to continue to build resilient environments. The table below provides an at-a-glance view of our progress toward our FY25 targets.

	FY25 Target	Q1	Q2	Q3	Q4	FY25 Actual
Total grant dollars awarded to communities.	$65,000,000					$70,607,000
Number of brownfield acres of contaminated land cleaned up and available for reuse.	20					3.7
Investments in water infrastructure, in dollars.	$30,000,000	$14,900,000	$49,500,000	$16,000,000	$23,800,000	$69,970,000
Number of new water infrastructure projects.	115	47	50	27	24	148

Our economic investment performance measures are described in detail in Appendix B. These explanations include additional definitions and assumptions to provide further insight into the significance of these measures.

City of Socorro saves $3.8 million by refinancing a federal loan with NMED Clean Water State Revolving Fund

The City of Socorro recently refinanced three USDA Rural Development 40-year infrastructure loans that were set at a 3.5% interest rate with NMED's Construction Programs Bureau.
Socorro completed an extensive replacement of deteriorating wastewater collection lines and upgrades to their wastewater treatment plant totaling $9.1 million. By consolidating the three USDA-RD loans and shortening the amortization period from 40-years to 25-years, Socorro will save $3.8 million in interest payments over the lifetime of the loan.

Since the City had to follow federal procurement and environmental review guidelines under the USDA-RD program, they met all CWSRF requirements, thereby making this loan consolidation and refinance possible.

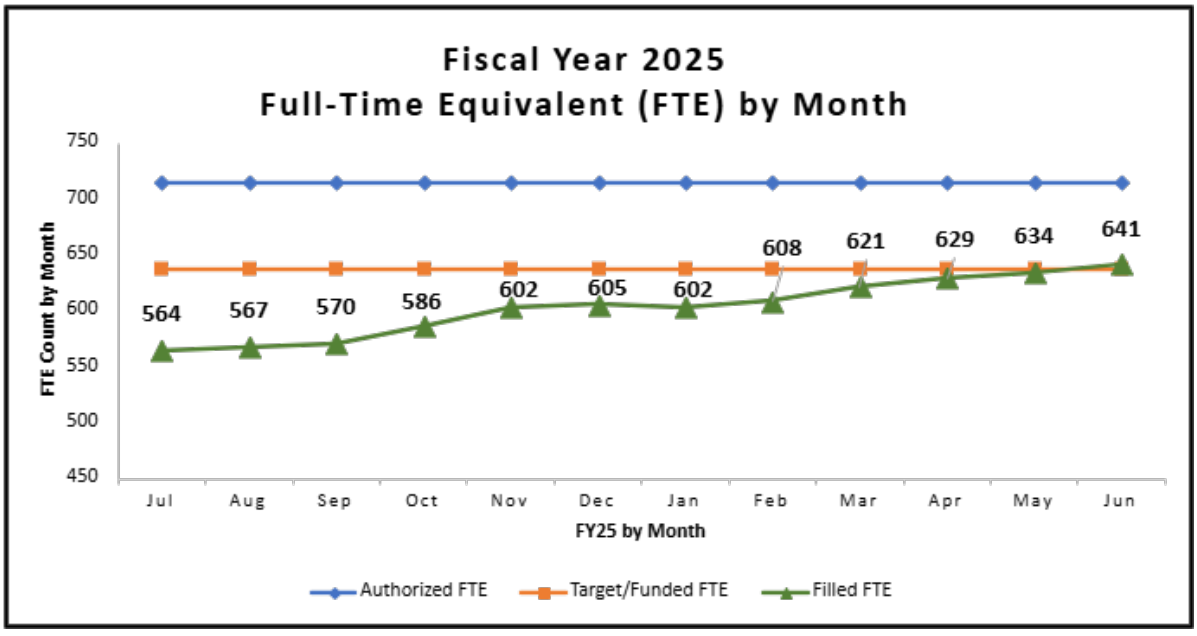
City of Socorro Wastewater Treatment facilities

Operational Measures

NMED is committed to modernizing and improving operational efficiency while reducing operational costs with no loss in customer service. Increasing operational efficiency enables NMED to provide greater services to the public, industry, and our employees. The table below provides an at-a-glance view of our progress toward our FY25 targets.

	FY25 Target	FY25 Actual
Percent of NMED financial transactions completed online by the public or regulated community.	50%	23%
Total dollars collected by NMED and transferred to the general fund resulting from successful prosecutions and/or settlements stemming from non-compliance with laws, rules, or permits administered by the Department.	$750,000	$1,884,519

In FY25, NMED collected and deposited in the State's General Fund nearly $1.9 million in penalties assessed against municipalities, corporations and federal entities. Assessments were performed by the Air Quality Bureau, Hazardous Waste Bureau, Drinking Water Bureau and Occupational Health and Safety Bureau. In FY25, the Office of General Counsel (OGC) hired five new attorneys to alleviate the workload of over 500 matters, of which 243 are



enforcement. In FY26, OGC expects to fill four more attorney positions, two in Air Quality, to assist NMED and the various bureaus in rulemakings and compliance and enforcement.

Funded Vacancy Rate by Month													
FY25 Target	**Jul**	**Aug**	**Sep**	**Oct**	**Nov**	**Dec**	**Jan**	**Feb**	**Mar**	**Apr**	**May**	**Jun**	**FY25 Actual**
6.0%	11.5%	11.0%	10.5%	8.0%	4.9%	5.0%	5.5%	4.6%	2.5%	1.3%	0.5%	-0.6%	5.4%

Our operational performance measures are described in detail in Appendix B. These explanations include additional definitions and assumptions to provide further insight into the significance of these measures.

NMED reduced its vacancy rate by 106% over the course of FY25, and in the fourth quarter of FY25, NMED saw a net gain of 20 filled positions. This represents a 3.2% increase in the number of positions filled in Q4, from 621 to 641. Hiring to fill vacancies across the agency was supported by increased recruitment through hiring fairs by the Human Resources Division and an increased number of applicants from Federal entities, pursuing opportunities to apply their government experience and skills at NMED. During FY25 Employees in many of our programs continue to struggle with unreasonable workloads. Our NMED Staff Workload Snapshot, on page 15, highlights some of those areas.

With the budget passed during the 2024 legislative session, the Department's FY25 budget included funding to increase salaries to appropriately compensate employees based on their education and experience in accordance with state regulations. NMED expects this will support the agency's efforts to fill positions, realign workloads to support employees and maintain an extraordinarily low vacancy rate.

NMED Staff Workload Snapshot

Based on existing staffing levels and assuming 235 workdays per year, it would take most NMED programs multiple years to conduct inspections to ensure compliance with *all* permitted or licensed facilities. Each year NMED carefully assesses, based on available resources, how to best regulate and assure compliance of businesses that are subject to laws passed by the Legislature, regulations adopted by state boards and commissions, and permits and licenses issued by the Department. With tens of thousands of regulated entities, NMED's employees, across programs and bureaus, carry a significant workload.

13 OSHA inspectors oversee 68,291 employers, or 5,253 employers per inspector

At current staffing levels, Air Quality Bureau staff can visit all permittees once every 6.3 years

The Drinking Water Bureau's 2 Utility Operator Certification employees support and provide services to 2,173 operators, or 1,086 operators for each NMED staff

The Surface Water Quality Bureau has 6 staff covering water quality monitoring of almost 200,000 stream miles, 173 lakes and reservoirs, and over 1,000,000 acres of wetlands

Construction Programs Bureau's 4 technical staff each manages 151 infrastructure projects

NMED Exhibit 12_000019

Appendix B

Public Health Measures	Definitions and Assumptions
Percent of the population breathing air meeting federal health standards.	“Meeting federal health standards” means meeting the National Ambient Air Quality Standards (NAAQS) for air pollutants. “Population” means 32 percent of the total population of New Mexico since 35 percent of the total population live in 20 counties without air monitors and 33 percent of the total population live in Bernalillo County and the City of Albuquerque which operate their own air monitoring sites and monitors and do not contribute to the NMED data set. Therefore, 32 percent of the population will be used as the denominator when calculating the percent of the population in the 10 monitored counties breathing air meeting federal health standards.
Percent of the population served safe and healthy drinking water.	"Community water system" means a public water system that serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents. "Safe and healthy drinking water" is defined as drinking water served by a community water system that meets primary health-based drinking water standards. Health-Based Standards are standards that fall into one of three categories: 1) maximum contaminant levels (MCLs) that specify the highest allowable contaminant concentrations in drinking water; 2) maximum residual disinfectant levels (MRDLs) that specify the highest concentrations of disinfectants allowed in drinking water; and 3) treatment technique requirements that specify certain processes intended to reduce the level of a contaminant. The numerator will exclude the population served by systems with unresolved violations from prior quarters and will be based on the compliance status of each community water system at any time during the quarter. The denominator is the total number of people served by community water systems.
Number of drinking water systems serving drinking water that did not meet at least one standard compared to the total number of drinking water systems	"Drinking water system serving drinking water that did not meet at least one standard" is a community water system with one or more violations of primary health-based drinking water standards. See above for "community water system" definition. The numerator will exclude population served by systems with unresolved violations from prior quarters; also, the numerator will be based on compliance status of each community water system at any time during the quarter. The denominator is the total number of people served by community water systems.
Number of community water system violations returned to compliance as a result of NMED assistance.	See above for "community water system" definition. "Violations" means all violations, including monitoring, reporting, public notice, and exceedances. "Returned to compliance" means that a violation has gone from non-compliant status to compliant status in the data system of record (i.e., Safe Drinking Water Information System). Note that there can be a lag between when the system addresses the violation and when NMED documents that the system returned to compliance.
Number of superfund sites cleaned up as compared to the number of superfund sites remaining.	“Superfund site” means an entire Superfund Site on the National Priorities List, including all operational units. As of September 30, 2021, there are 15 Superfund Sites in New Mexico. Superfund Site clean-ups take many years, and it is common for Sites to remain on the National Priorities List for decades. As a result, most years the number of Superfund Sites cleaned-up will be zero. If, in a given year, a Superfund Site is partially delisted (e.g., one operational unit is delisted and one or more remains) we will note this in the narrative, but a partial delisting will not count toward this measure.
Number of restaurants/food manufacturers that did not meet at least one standard compared to the total number of restaurants/food manufacturers.	"One standard" means having at least one priority violation during an annual inspection. "Priority violations" are the highest risk violations that indicate the greatest risk of consumers possibly becoming ill as a result of eating food from the restaurant/food manufacturer. The denominator is the number of facilities for which NMED made a compliance determination during the quarter, following an inspection of the facility. The denominator does not include facilities for which the program made a compliance determination without conducting an inspection (e.g., based on records review).
Number of employers that did not meet Occupational Safety and Health Administration (OSHA) requirements for	"Number of employers that did not meet OSHA requirements" includes all employers issued at least one citation for violation(s) of OSHA standards (numerator). "Total number of workplaces" includes all employers found in compliance (case closed with no citations) and employers issued citation(s) during the fiscal year (denominator).

at least one standard compared to the total number of employers.	

Environmental Protection Measures	Definitions and Assumptions
Amount of volatile organic compounds emitted statewide, in tons.	This measure will use the annual calendar year volatile organic compounds (VOCs) emissions inventory which includes actual emissions (i.e., routine, start up, shut down, maintenance, malfunction (SSM/M)) and all illegal VOC emissions. The tons per year reported at the end of the fiscal year will constitute emissions for the previous calendar year. Qualified sources are defined in 20.2.73.300.B(1) as "Any source which emits, or has the potential to emit, 5 tons per year or more of lead or lead compounds, or 100 tons per year or more of PM10, PM2.5, sulfur oxides, nitrogen oxides, carbon monoxide, or volatile organic compounds shall submit an emissions report annually". NMED will assume for this performance measure that legal emissions are from sources in NMED's jurisdiction, which excludes Bernalillo County and Tribal areas.
Amount of volatile organic compounds emitted illegally, in tons.	"Illegal emissions" are those that exceed permitted (allowable) limits. This is a reporting of the illegal total tons of VOC emissions for comparison to total tons of emissions. The tons per year reported at the end of the fiscal year will constitute emissions for the previous calendar year. NMED will assume for this performance measure that illegal emissions are from sources in NMED's jurisdiction, which excludes Bernalillo County. This measure assumes all excess emissions reported to NMED by regulated facilities are in violation of state and federal law. Note: nonpermitted sources are not required to report excess emissions because they do not have an "allowable" limit.
Amount of nitrogen oxides emitted statewide, in tons.	This measure will use the annual calendar year nitrogen oxides (NOx) emissions inventory which includes actual emissions (i.e., routine, start up, shut down, maintenance, malfunction (SSM/M)) and all the illegal NOx emissions. The tons per year reported at the end of the fiscal year will constitute emissions for the previous calendar year. See above for "qualified sources" definition. NMED will assume for this performance measure that legal emissions are from sources in NMED's jurisdiction, which excludes Bernalillo County and Tribal areas. The data is collected from permitted and registered industrial facilities (point sources).
Amount of nitrogen oxides emitted illegally, in tons.	See above for "illegal emissions" definition. This is a reporting of the illegal total tons of NOx emissions for comparison to the total tons of emissions. The tons per year reported at the end of the fiscal year will constitute emissions for the previous calendar year. NMED will assume for this performance measure that illegal emissions are from sources in NMED's jurisdiction, which excludes Bernalillo County. This measure assumes all excess emissions reported to NMED by regulated facilities are in violation of state and federal law. Note: nonpermitted sources are not required to report excess emissions because they do not have an "allowable" limit.
Quantity of nutrient-based pollutants reduced due to implementation of watershed restoration and on-the-ground improvement projects, in pounds.	"Nutrient-based pollutants" are nitrogen and phosphorus. "Pounds of nitrogen" are measured as Total Nitrogen. "Pounds of phosphorus" are measured as Total Phosphorus. NMED will count load reductions toward this measure when NMED confirms individual project completion. The data do not include pollutant load reductions resulting from programs and projects not represented in the U.S. Environmental Protection Agency's (EPA) Grants Reporting and Tracking System (GRTS). Due to the requirement for NMED to report to EPA once annually, along with the cycle for implementation of water quality restoration projects that generate pollutant reductions, numbers reported for this measure mid-year may not demonstrate progress toward annual targets.
Reduction in nonpoint source sediment loading attributed to implementation of watershed restoration and on-the-ground improvement projects.	"Nonpoint source sediment loading" means the amount of sediment (in pounds) that is carried by rain and snowmelt and deposited in aquatic environments from many diffuse (i.e., nonpoint) sources over a specific period (e.g., day, year, etc.). "Nonpoint source pollutant" means a pollutant released into the aquatic environment from a wide area and many diffuse sources. NMED will count load reductions toward this measure when NMED confirms individual project completion. The data do not include pollutant load reductions resulting from programs and projects not represented in EPA GRTS. Due to the requirement for NMED to report to EPA once annually, along with the cycle for implementation of water quality restoration projects that generate pollutant reductions, numbers reported for this measure mid-year may not demonstrate progress toward annual targets.

Number of nonpoint source impaired waterbodies restored by the Department relative to the number of impaired water bodies.	See above for "nonpoint source pollutant" definition. "Impaired waterbody" means a surface water of the state (i.e., stream, river, lake, wetland) is not meeting the applicable surface water quality standards for one or more pollutants. In other words, the concentration of the pollutant(s) is higher than the levels established to protect fish, recreation, irrigation, and other uses. Full restoration of a waterbody takes years and typically many combined projects to address the causes of the impairment. Despite successful efforts to restore certain waterbodies and remove them from the impaired waters list, the total number of impaired waterbodies will increase over time due to: (1) monitoring and assessment of more waterbodies; and (2) the general trend for changing land uses over time, combined with impacts of climate change.
Number of underground storage tank sites cleaned up compared to the total number of leaking underground petroleum storage tank sites remaining.	"Cleaned up" means that soil and groundwater contaminants of concern have met the applicable state's standards. "Underground storage tank" means a single tank or combination of tanks, including pipes connected thereto, that are used to contain an accumulation of regulated substances and the volume of which, including the volume of the underground pipes connected thereto, is ten percent or more beneath the surface of the ground. "Petroleum storage tank" means a storage tank system that contains petroleum or a mixture of petroleum with de minimis quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils. "Leak" means any spilling, emitting, discharging, escaping, or disposing of a regulated substance due to the failure of components of a storage tank system to contain a regulated substance as designed. A leak may or may not result in a release to the environment. "Petroleum" means crude oil, crude oil fractions, and refined petroleum fractions, including gasoline, kerosene, heating oils, and diesel fuels. This measure does not reflect ongoing work to clean up sites to achieve No Further Action (NFA) status. Also, this measure does not report NFA releases from above ground storage tanks.
Number of completed cleanups of petroleum storage tank release sites that require no further action.	"No Further Action" is a technical determination issued by NMED that documents that the owner or operator of a site has met all applicable WQCC and EIB remediation standards and that no contaminant will present a significant risk of harm to public health, safety, welfare, and the environment. "Completed cleanups" is another term for "No Further Action." See above for "petroleum storage tank" definition. "Release" means any spilling, leaking, emitting, discharging, escaping, leaching, or disposing of a regulated substance from a storage tank system into the groundwater, surface water or soil. See above for "petroleum" definition. This measure does not reflect ongoing work to clean up sites to achieve NFA status.
Number of zero-emission vehicles registered in New Mexico*	Clean cars mean both battery electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs). By identifying all the clean cars registered in the state, the performance measure encompasses new and used vehicles. New Mexico Motor Vehicle Division (MVD) provides Atlas Public Policy vehicle information number (VIN) quarterly for all vehicles registered in New Mexico. Atlas Public Policy decodes the NM MVD VIN data to identify which vehicles are classified as clean vehicles. Atlas Public Policy posts the clean vehicle data with a visual interpretation on a public, New Mexico-specific dashboard (https://atlaspolicy.com/evaluatenm/).
Number of liquid waste system violations resulting from complaints*	A "complaint" is a negative report regarding a particular liquid waste system. A "liquid waste system violation" pertains to a new or modified liquid waste system that has been inspected and found to not meet regulatory requirements and could not be issued a final approval.

Compliance Measures	**Definitions and Assumptions**
Air	
Percent of air emitting sources inspected.	"Inspected" means a full compliance evaluation, either on-site or off-site (with photographic verification of equipment and other physical verifications required) that is conducted to inform a compliance determination and support enforcement actions, if appropriate. Inspections include evaluation of all appropriate regulatory requirements and permit conditions. "Air emitting source" means a source of air pollutants, usually an industrial facility, that is included in the Air Quality Bureau (AQB) list of sites to inspect in the universe of sources that may be included in a given annual Compliance Monitoring Strategy (CMS) Plan.

Percent of air emitting sources in compliance.	"Air emitting source" means an industrial facility that is included in the annual CMS Plan that is subject to approval by the EPA. “In compliance" means, upon completion of an on-site or off-site evaluation by NMED, the air emitting source meets all the requirements of permit(s), state regulations and federal regulations that apply to the facility and its operations. The denominator is the number of facilities for which NMED made a compliance determination during the quarter, following an inspection of the facility. The denominator does not include facilities for which the program made a compliance determination without conducting an inspection (e.g., based on records review).
Percent of air emitting sources in violation.	See above for "air emitting source" definition. "In violation" means that one or more potential violations were discovered through analysis of state or federal regulatory requirements or permit conditions. Numerator is all permittees with one or more potential violations that remain unresolved (i.e., permittees with an ongoing violation). Denominator is the total number of regulated entities (permittees/facilities).
Groundwater	
Percent of groundwater permittees inspected.	“Inspected” means an on-the-ground compliance inspection that is conducted to inform a compliance determination and support enforcement actions, if appropriate. "Groundwater permittees" means a person or facility with an active discharge permit issued by the NMED Ground Water Quality Bureau (GWQB) under the authority of Water Quality Control Commission (WQCC) regulations found at 20.6.2 NMAC, 20.6.6 NMAC, and 20.6.7 NMAC; this term does not include sites under abatement pursuant to WQCC regulations unless the facility is abating groundwater contamination under discharge permit. The numerator is the number of permittees inspected during the reporting period; the denominator is total regulated permittees. The denominator will be set on July 1 each year and quarterly inspection activity will vary. This measure will be tracked and reported cumulatively across quarters.
Percent of groundwater permittees in compliance.	See above for "groundwater permittees" definition. "In compliance" means that GWQB inspected the facility and determined that no violations of the permit conditions or regulations were found at the time of inspection. See above for which permits are included in this measure. This measure will provide a compliance rate as a snapshot in time (one quarter only). The numerator is the number of permittees inspected in past quarter that are in compliance with applicable requirements and permit conditions. The denominator is the number of permittees for which a compliance determination was made during the quarter following an inspection of the permittee. The denominator does not include facilities for which the program made a compliance determination without conducting an inspection (e.g., based on records review).
Percent of groundwater permittees in violation.	See above for "groundwater permittees" definition. "In violation" means a permittee with a violation that has not yet been resolved. This will include permittees that are working on ongoing corrective actions but have not completed them. See above for which permits are included in this measure. Numerator is the number of facilities with an unresolved violation, regardless of whether the violation was identified during the reporting quarter. Denominator is the total number of regulated facilities/entities.
Hazardous Waste	
Percent of hazardous waste facilities inspected.	“Inspected” means an on-the-ground compliance inspection that is conducted to inform a compliance determination and support enforcement actions, if appropriate. "Facilities" tracked under this measure include hazardous waste generators, transporters, and treatment, storage and disposal facilities.
Percent of hazardous waste facilities in compliance.	See above for "facilities" definition. “In compliance” means that there were no violations of the New Mexico Hazardous Waste Management Regulations (HWMR) 20.4.1 New Mexico Administrative Code (NMAC) found at the time of inspection. This percentage will be calculated based on the number of compliant facilities out of the total number of facilities inspected.
Percent of hazardous waste facilities in violation.	See above for "hazardous waste facilities" definition. “In violation” means the facility was found to be out of compliance with the New Mexico HWMR 20.4.1 NMAC at the time of inspection. Numerator is the number of facilities with an unresolved violation, regardless of whether the violation was identified during the reporting quarter. Denominator is the total number of regulated facilities/entities.
Petroleum Storage Tanks	

Percent of petroleum storage tank facilities inspected.	“Inspected” means an on-the-ground compliance inspection that is conducted to inform a compliance determination and support enforcement actions, if appropriate. "Facilities" tracked under this measure include hazardous waste generators, transporters, and treatment, storage and disposal facilities.
Percent of petroleum storage tank facilities in compliance after inspection.	“In compliance” means that there were no violations in the New Mexico Administrative Code (NMAC) found at the time of inspection. This percentage will be calculated based on the number of compliant facilities out of the total number of facilities inspected.
Percent of petroleum storage tank facilities with active/ongoing violations.	“In violation” means the facility was found to be out of compliance at the time of inspection.
Radiation Sources in Medical Equipment	
Percent of ionizing/non-ionizing radiation sources inspected.	“Inspection” means an official examination or observation including, but not limited to, tests, surveys and monitoring to determine compliance with rules, regulations, orders, requirements and license or registration conditions of the department. In other words, an on-the-ground compliance inspection that is conducted to inform a compliance determination and support enforcement actions, if appropriate. “Ionizing radiation” means a form of energy that acts by removing electrons from atoms and molecules of materials that include air, water, and living tissue. “Non-ionizing radiation” means a form of radiation with less energy than ionizing radiation. Unlike ionizing radiation, non-ionizing radiation does not remove electrons from atoms or molecules of materials that include air, water, and living tissue. The denominator is the total regulated entities.
Percent of ionizing/non-ionizing radiation sources in compliance.	See above for “ionizing radiation” and “non-ionizing radiation” definitions. “In compliance" means no violations of state regulations were found during onsite or virtual inspections. The denominator is the number of facilities for which NMED made a compliance determination during the quarter, following an inspection of the facility. The denominator does not include facilities for which the program made a compliance determination without conducting an inspection (e.g., based on records review).
Percent of ionizing/non-ionizing radiation sources in violation.	See above for “ionizing radiation” and “non-ionizing radiation” definitions. "In violation" means a violation of at least one state regulation was found during and on-site or virtual inspection. Numerator is the number of facilities with an unresolved violation, regardless of whether the violation was identified during the reporting quarter. Denominator is the total number of regulated facilities/entities.
Restaurants and Food Manufacturing	
Percent of restaurants/food manufactures inspected.	“Inspected” means an on-the-ground compliance inspection that is conducted to inform a compliance determination and support enforcement actions, if appropriate. The denominator is the total regulated entities with scheduled inspections within the quarter being reported.
Percent of restaurants/food manufactures in compliance.	"Compliance" means an inspected facility did not have priority violations during an annual inspection. "Priority violations" are the highest risk violations that indicate the greatest risk of consumers possibly becoming ill as a result of eating food from the restaurant/food manufacturer. The denominator is the number of facilities for which NMED made a compliance determination during the quarter, following an inspection of the facility. The denominator does not include facilities for which the program made a compliance determination without conducting an inspection (e.g., based on records review).
Percent of restaurants/food manufactures in violation.	"Violation" means having at least one priority violation during an annual inspection. See above for "priority violations" definition. Numerator is the number of facilities with an unresolved violation, regardless of whether the violation was identified during the reporting quarter. Denominator is the total number of regulated facilities/entities.
Cannabis and Hemp	
Percent of cannabis and hemp permittees inspected.	“Inspected” means a routine, annual on-the-ground compliance inspection that is conducted to inform a compliance determination and support enforcement actions, if appropriate.

Percent of cannabis and hemp permittees showing compliance.	"Compliance" means not having priority violations during an annual inspection. "Priority violations" are the highest risk violations that indicate the greatest risk of consumers possibly becoming ill as a result of eating or consuming cannabis edibles or hemp finished products.
Percent of cannabis and hemp permittees with active/ongoing violations.	"Violation" means having at least one priority violation during an annual inspection. "Priority violations" are the highest risk violations that indicate the greatest risk of consumers possibly becoming ill as a result of eating or consuming cannabis edibles or hemp finished products.
Occupational Health and Safety	
Percent of high-hazard facilities inspected	Bureau management and administrative staff develop targeting systems, including emphasis programs, each year based on data identifying establishments considered high hazard by industry, illness/injury rate or other neutral selection criteria. Management assigns cases to compliance officers who enter inspection and violation data in OIS in accordance with the New Mexico Field Operations Manual (FOM).
Percent of all employers inspected	The intent of this measure is to display the number of employers issued at least one citation for OSHA standard violations compared to the total number of employers inspected during the reporting period.
Septic Systems	
Percent of new or modified liquid waste systems inspected.	“Inspected” means an on-the-ground compliance inspection that is conducted to inform a compliance determination and support enforcement actions, not including photo or virtual inspections. A liquid waste system inspection includes, for the purpose of this measure, an inspection of a new or modified system that has been installed, complete and not ready for a compliance inspection. This measure does not include compliance-based inspections. The denominator is total number of systems inspected as a result of the installation of a new or modified system.
Percent of new or modified liquid waste systems in compliance.	“Compliance” of a new or modified liquid waste systems means the system has been inspected on-site and found to meet regulatory requirements during the initial inspection and may be issued a final approval. The denominator is the total number of systems inspected as a result of the installation of a new or modified system by department personnel, not including photo and unpermitted system inspections.
Percent of new or modified liquid waste systems in violation.	“Violation” of new or modified liquid waste systems are those that have been inspected and have been found to not meet regulatory requirements and could not be issued a final approval. The system installation requires a re-inspection before final approval. The denominator is the total number of systems inspected as a result of the installation of a new or modified system by department personnel, not including photo and unpermitted system inspections.
Surface Water	
Percent of surface water permittees inspected.	“Inspected” means an off-site or on-site compliance inspection that is conducted to evaluate compliance with the EPA permit and support EPA enforcement actions, if appropriate. "Surface water permittees" refers to NPDES surface water discharge permittees. The numerator is the number of permittees subject to NMED-led inspections completed that quarter; the denominator is the number of NMED-led inspections planned for the fiscal year through SWQB’s commitment to EPA Region 6. This measure represents surface water discharge inspections NMED conducts on behalf of EPA Region 6, which is currently the permitting authority for these regulated entities in New Mexico.
Percent of surface water permittees in compliance.	See above for "surface water permittees" definition. "In compliance" means the permittee scored a 3 or higher on their facility evaluation rating on a scale of 1 (very unreliable programs) to 5 (very reliable programs). The denominator is the number of permittees for which NMED issued a final Facility Evaluation Rating during the quarter, following an NMED-led inspection of the permittee. The numerator is the number of permittees for which final inspection reports were issued with a Facility Evaluation Rating of 3 or higher during the quarter.

Percent of surface water permittees in violation.	See above for "surface water permittees" definition. "In violation" means that EPA issued an enforcement action against an inspected facility. Numerator is the number of facilities with an unresolved violation, regardless of whether the violation was identified during the reporting quarter. Denominator is the total number of regulated facilities/entities. “Enforcement action” is an EPA-issued administrative order or administrative penalty order. If SWQB completes an inspection report during the 1st quarter, that facility may not be in the numerator for percent in violation for the 1st quarter because the noncompliance determination may not be made until another quarter. This facility would end up in the numerator for the percent in violation measure in the quarter when the EPA issues the enforcement action.

Economic Investment Measures	**Definitions and Assumptions**
Total investment of grants dollars awarded to communities, year to date.	"Investment" means the action of investing money to a particular undertaking with the expectation of a worthwhile result. “Grant dollars” means money from state or federal funds. “Communities” means a physical location of census tracts or a neighborhood bounded by certain streets and geophysical features. “Awarded” means funds given to communities. This performance measure will include data from many sources, including but not limited to: Solid Waste Bureau’s Recycling and Illegal Dumping (RAID) grants, the Construction Program Bureau (CPB)’s Clean Water State Revolving Loan Fund (CWSRF) and Rural Infrastructure Program (RIP). These data do not include tracking funds as they are reimbursed or capital outlay funds. Also, these data do not include funds awarded to contractors or areas without populations.
Number of brownfield acres of contaminated land cleaned up and available for reuse.	“Brownfield acres” means brownfields sites that utilize the Brownfield Revolving Loan Fund (BRLF) program or a national brownfield grant to fund assessment or clean-up. "Cleaned up and available for reuse” means the acres are remediated and “Ready for Anticipated Use (RAU),” a technical determination that environmental conditions at the site are protective of human health and the environment based on current use(s) or planned future use(s). This measure will not report on sites being regulated through the State Cleanup Program.
Investments in water infrastructure, in dollars.	"Investments" means actual disbursements from CWSRF, RIP and Capital Outlay to communities for water infrastructure projects. "Water infrastructure" includes drinking water, wastewater, stormwater and any other projects eligible for CWSRF or RIP, and any Capital Outlay projects appropriated to NMED and managed by the CPB. These data are reported by quarter, not as a rolling total of dollars from quarter to quarter. It is important to note that the number of new Capital Outlay projects in a given year is dependent on legislative appropriation. Disbursements from programs not managed directly by CPB are not included in this measure, so a total amount of financial impact to the state from water programs CPB only participates in as a contractor are not included.
Number of new water infrastructure projects.	"New water infrastructure project" means Clean Water State Revolving Loan Fund (CWSRF), Rural Infrastructure Program (RIP) and capital outlay projects with a funding agreement executed during the reporting period (i.e., quarter). Capital outlay funding agreements are a consequence of appropriations made to the NMED by the Legislature. Because this measure does not capture disbursements from programs not managed directly by NMED CPB, reporting of this measure does not reflect the total amount of financial impact to the State of New Mexico from all water infrastructure financing programs.
Operational Measures	**Definitions and Assumptions**

Total dollars collected by NMED and transferred to the general fund resulting from successful prosecutions and/or settlements stemming from non-compliance with laws, rules, or permits administered by the Department.	Enforcement actions are administrative or judicial actions initiated by NMED in response to some information that a regulated entity is violating a statute and/or rule (regulation) for which NMED has legal enforcement authority, or a permit administered by NMED. NMED administers permits pertaining to the following: air quality, water quality, drinking water quality, solid waste, hazardous waste, liquid waste, food safety, ionizing radiation, hemp (warehousing, extraction processing, manufacturing), and public recreation water safety. NMED has enforcement authority for all these matters, in addition to occupational health and safety. The intent of this measure is to display the success of enforcement actions and litigation, as well as the benefit to the entire state via general fund revenue generation. Ideally, the target is zero since compliance with state rules and permits is always required. Realistically, and as the compliance and violation performance measures indicate, NMED is likely to see violations that merit civil penalties in all regulatory programs. Note that NMED may transfer penalties to the general fund from actions initiated by NMED, the Attorney General, a federal agency, etc.
Vacancy rate by month.	The intent of this measure is to track NMED's effort to achieve our budgeted vacancy rate. A negative trend will convey greater staff retention and increased hiring to reduce our vacancy rate. “Vacancy rate” is calculated by subtracting the number of filled full-time equivalent (FTE) positions from the number of budgeted FTE positions (i.e., 662 for FY23) and dividing by the number of authorized FTE positions. Note that as FTE goes down, vacancy rate increases.
Percent of NMED financial transactions completed online by the public or regulated community.	A “financial transaction” facilitates the utilization of ACH and credit card payments for NMED license permitting, loan payments, corrective action fees, certification renewal fees, and other compliance, primacy, and regulatory fees which NMED bills to the constituent and regulated community via email, paper mail, or at the Wells Fargo portal, who pay directly to Wells Fargo, who processes the payment, and the money is deposited into individual program’s Wells Fargo account. The intent of this measure is to drive NMED's modernization, cost-saving efforts, and improved customer service (e.g., online transactions require different resources than in-person or by mail). A positive trend will convey that a greater share of financial transactions is being completed online, directly resulting from modernization, human capital, and cost-saving efforts to improve efficiency and provide enhanced customer service. The following transactions are not being measured here: legal settlements, compliance agreements, State of New Mexico budgets, federal and state grants, inter/intra agency transfers, and special revenue funds.

Environment Department
Fourth Quarter, Fiscal Year 2025

ACTION PLAN

Submitted by agency?	Yes
Timeline assigned?	Yes
Responsibility assigned?	Yes

NMED Appropriations by Funding Source
(in thousands)

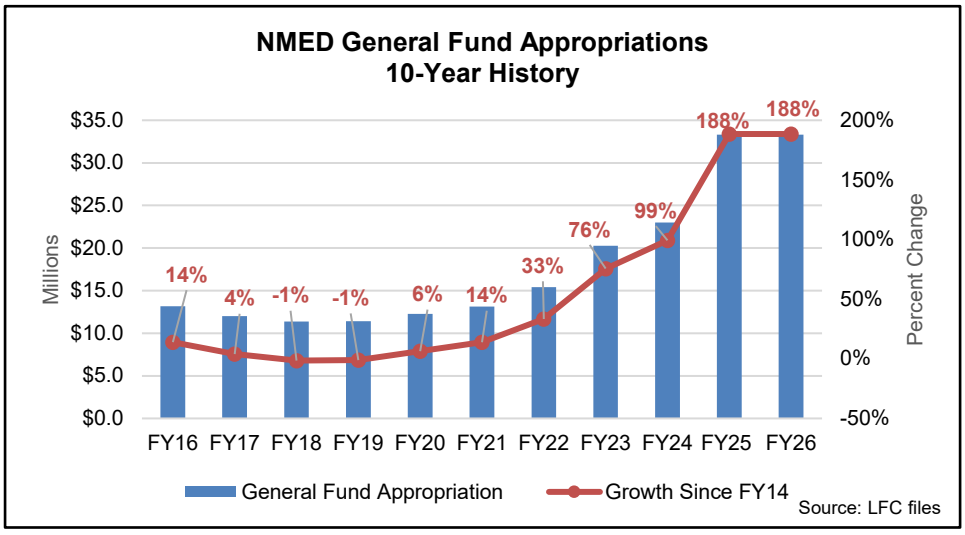
Source: LFC files

Federal Funding Exposure

The portion of NMED's budget funded through federal dollars has steadily increased over the past five years, growing from $19 million, or 16.3 percent, in FY20 to $97.3 million, or 40 percent in FY25. NMED's Water Protection Division receives the largest portion of federal funding, roughly $51 million, making up 68 percent of the divisions total budget. Discussions at the federal level regarding cuts or claw backs related to natural resource protection funding raises the questions as to what avenues the state can pursue in maintaining funding levels for its natural resource agencies.

While certain negative performance trends persisted through FY25, multiple programs reported productive results for the fourth quarter of FY25. The agency's groundwater permitting program exceeded its 100 percent target by 20 percent and the Environmental Health Bureau inspected 7,531 restaurants and food facilities, resulting in a 95 percent completion rate. The continuing negative performance trends seen in Resource Protection slightly abated, with one of its performance measures moving from red to yellow, although the program overall finished the year in the red.

The improved performance in certain sectors of the agency is due in part to improved agency operations and legislative investment. In addition to the significant investment made into NMED over the past six years, the agency suggests the department needs significant additional funding to address its staffing and retention issues. Potential federal funding cuts to natural resource protection funding could exacerbate funding issues. The Legislature should continue to monitor NMED performance and consider targeted investment or research into persistently low performing sectors of the agency.



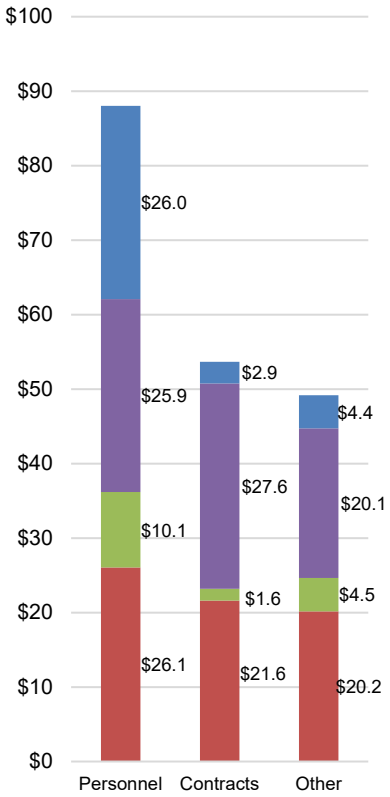
Water Protection

Amendments to the state Water Quality Act enacted in 2025 granted primacy to NMED to administer a National Pollutant Discharge Elimination System program, in effect placing control of all discharge into the state's surface water and groundwater from the federal government to the state's water quality agency. Creation and implementation is underway and will continue to take shape, pending approval of a permitting program from the Water Quality Control Commission. NMED met is FY25 target for surface water permittees inspected, exceeding the target by 20 percent. NMED did not meet its FY25 target for groundwater permits inspected, missing it by 26 percent. The agency notes staffing issues could abate because only four of the 35 inspector positions remain vacant. However, a database to enhance tracking and documentation has yet to be implemented and the additional workload added to NMED from the amendments could further hamper the groundwater bureau's ability to meet its performance measure. The Construction Programs Bureau initiated 148 new water infrastructure projects in FY25 and exceeded its FY25 target.

Budget: $62,511.4 **FTE:** 191.3	**FY23 Actual**	**FY24 Actual**	**FY25 Target**	**FY25 Actual**	**Rating**
Percent of the population served safe and healthy drinking water	89.8%	89.5%	95%	94.7%	G
Percent of surface water permittees inspected	145%	100%	100%	120%	G
Percent of groundwater permittees inspected	18.2%	30.6%	65%	39%	R
Number of new water infrastructure projects	157	175	115	148	G
Program Rating	Y	Y			Y

Resource Protection

The Resource Protection Division (RPD) continued to be far behind the target for two of its three performance measures, with one measure finishing the year with a yellow. RPD continues to have issues with recruitment and retention, specifically in its Solid and Hazardous Waste bureaus, resulting in consistent lagging of performance measures.



RPD notes it has continued to work to reclassify existing vacancies to higher-level positions to improve recruitment and retention, but the agency reports additional staffing is needed to improve the rate of inspections. The agency requested a $300 thousand, or 10.8 percent, increase for FY27 to address these issues but did not prioritize an increase for the division in FY26.

The Petroleum Storage Tank Bureau has nine vacant positions within its Remediation program and used 30 percent of the corrective action fund for program operation costs. The agency reported it completed the cleanup of 972 petroleum storage tank release sites in FY25 but still missed the target by over 1,000. The agency sites a lack of funding as its largest impediment to meeting performance measures; NMED's general fund budget has grown by 188 percent over 10 years, from $13.2 million in FY25 to $33.3 million in FY26.

The Hazardous Waste Bureau (HWB) monitors 2,547 hazardous waste generators in the state, though this number changes frequently. HWB currently has 6 FTE focused on compliance. HWB inspected less than one percent of the hazardous waste sites in the state in the fourth quarter of FY25. The program also helped man the Emergency Operations Center, which contributed to the low number of inspections. The continued trend of low inspection rates remains even after the bureaus began the decline in the pandemic. While the low inspection rate has been predominantly due to a lack of staff, new efforts to improve performance should be prioritized. The creation of the Compliance and Enforcement Division (CED) could aid in increasing the operational success of the bureau.

Budget: $18,653.4 **FTE:** 144.3	**FY23 Actual**	**FY24 Actual**	**FY25 Target**	**FY25 Actual**	**Rating**
Number of completed cleanups of petroleum storage tank release sites that require no further action	2,005	2,041	1,976	972	R
Percent of solid waste facilities and infectious waste management facilities inspected	53.3%	98.8%	87.5%	75.4%	Y
Percent of hazardous waste facilities inspected	3.7%	3.7%	15.0%	4.3%	R
Program Rating	R	Y			R

Environmental Protection

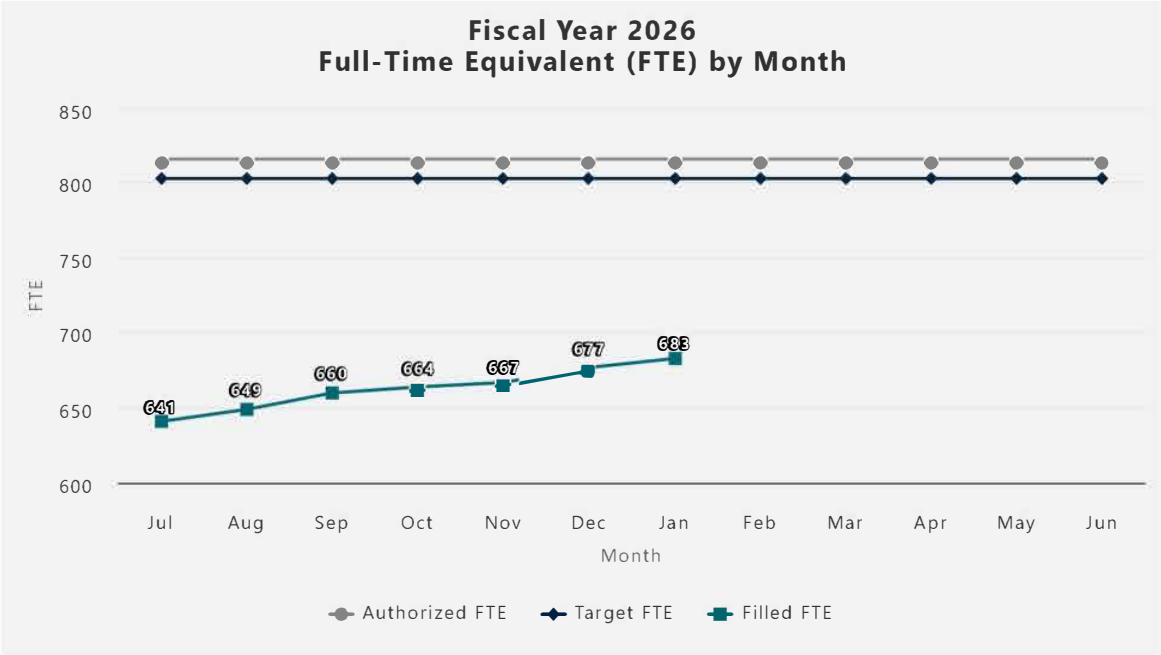
While inspections are valuable for determining whether regulated entities comply with applicable laws, rules, or permits, many of NMED's regulatory compliance programs continually struggle to meet their target percentage of applicable entities inspected. The Environmental Protection Division's Air Quality (AQB) and Radiation Control (RCB) bureaus are responsible for enforcing regulatory and compliance measures to protect the environment and prevent harm to human health. The creation of CED will move the enforcing of the regulation and permits from these bureaus, which could improve compliance.

AQB noted only 78.3 percent of the state's population is breathing air meeting federal health standards, which the bureau notes the Carlsbad air monitoring station found ozone levels in the area exceed federal air quality standards. It also noted large dust storms in Doña Ana and Luna counties contributed to the low air quality figures. The state has 20 air monitoring stations, with the majority surrounding Las Cruces and others scattered around the state (Bernalillo County monitors its own air quality and is separate from the reporting AQB does). Additional stations could provide a clearer picture as to the state's air quality.

Budget: $18,320.1 **FTE:** 121.8	**FY23 Actual**	**FY24 Actual**	**FY25 Target**	**FY25 Actual**	**Rating**
Percent of ionizing and non-ionizing radiation sources inspected	15%	16.8%	20%	13.2%	R
Percent of air emitting sources inspected	33.3%	32.2%	25%	23.9%	Y
Percent of the population breathing air meeting federal health standards	99.9%	99.9%	95%	78.3%	R
Program Rating	R	Y			R

Environmental Health

The Environmental Health Division (EHD) continued to administer the state hemp extraction and manufacturing program. EHD is also responsible for working to prevent workplace injuries and fatalities, avoiding unnecessary risks to public health from commercially prepared foods, regulating septic tanks, and ensuring the safety of public pools and spas.



The Occupational Health and Safety Bureau conducts hundreds of inspections annually and targets workplaces with the greatest expectations of noncompliance to reduce illness, injuries, and fatalities. The bureau, which inspects approximately 1 percent of all workplaces each year, found 60.5 percent of employers did not meet occupational health and safety requirement for at least one standard in FY25, exceeding the target of 55 percent.

Under state statute and regulation, each restaurant and food manufacturer in the state should be inspected once per year. The bureau conducted 7,531 inspections in FY25, though this figure does not include temporary facilities, compliant inspections, or re-inspections. With roughly 95 percent of inspections complete, the bureau met its FY25 target. Bureau staff currently have a compliance and enforcement workload of approximately 313 facilities per inspector, above the federal Food and Drug Administration's guidance that retail food inspectors (a much narrower role than EHB's inspectors) are assigned 280-320 inspections.

PERFORMANCE REPORT CARD
Environment Department
Fourth Quarter, Fiscal Year 2025

Budget: $ 16,219.3 **FTE:** 156.0	**FY23 Actual**	**FY24 Actual**	**FY25 Target**	**FY25 Actual**	**Rating**
Number of employers that did not meet occupational health and safety requirements for at least one standard compared with the total number of employers	64%	67.1%	55%	60.5%	Y
Percent of restaurants and food manufacturers inspected	80%	80.5%	90%	95%	G
Percent of new or modified liquid waste systems inspected	86%	91%	85%	53.2%	R

Enforcement Watch

Compliance is a core value of the New Mexico Environment Department. Assuring compliance with state licenses, permits and rules and enforcing against violations when they occur is critical to protecting the public and their environment. Further, enforcing state licenses, permits, and rules ensures a level playing field because facilities that fail to comply with such requirements may incur an economic advantage over competitors. Compliance with state-issued licenses, permits and rules is not optional – it's required.

** Notices of Violation (NOVs) issued by the Ground Water Quality Bureau or Surface Water Quality Bureau under the authorization of the New Mexico Water Quality Act (NMWQA) and New Mexico Water Quality Control Commission (NMWQCC) regulations are not an enforcement action. NOVs issued under the NMWQA and NMWQCC regulations are final actions to obtain voluntary cooperation before the issuance of an Administrative Compliance Order enforcement action.*

STATE OF NEW MEXICO
BEFORE THE ENVIRONMENTAL IMPROVEMENT BOARD

IN THE MATTER OF PROPOSED REPEAL AND REPLACEMENT OF
20.2.71 NMAC – *OPERATING PERMIT EMISSIONS FEES* AND
20.2.75 NMAC – *CONSTRUCTION PERMIT FEES*

No. EIB 25-77(R)

New Mexico Environment Department,

Petitioner.

NEW MEXICO ENVIRONMENT DEPARTMENT
TECHNICAL TESTIMONY OF BUREAU CHIEF CINDY HOLLENBERG

I. INTRODUCTION AND QUALIFICATIONS

My name is Cindy Hollenberg, and I serve as the Bureau Chief of the Air Quality Bureau ("AQB") of the Environmental Protection Division of the New Mexico Environment Department ("Department"). In my role, I am responsible for oversight of the Air Quality Program, including permitting, ambient air quality monitoring, regulation development, and administration and operations of the AQB as authorized under the New Mexico Air Quality Control Act, NMSA 1978, Sections 74-2-1 through 74-2-17 ("State Air Act"). I also collaborate with the Department's Environmental Protection Compliance and Enforcement Bureau ("EPCEB") in the Department's Compliance and Enforcement Division, which is responsible for assuring compliance with air quality permit conditions and state and federal regulations. You will hear more testimony from Bret Anderson about the Air Quality Section of the EPCEB ("AQC&E").

My duties include prioritizing planning efforts, overseeing the AQB budget, assuring compliance with all U.S. Environmental Protection Agency ("EPA") requirements to fulfill our responsibilities as a delegated authority, and strategizing with Department's Senior Leadership regarding the Bureau's plan for resource usage. Together, the AQB and AQC&E implement and maintain oversight of the federal and state laws, regulations and policies to fulfill New Mexico's delegated authority to protect air quality in the State.

I hold a Bachelor of Science in Biology Teaching from Purdue University, and a Master of Public Administration in Environmental Science and Policy from Columbia University. I started with the AQB in 2013 as an environmental planner, moving to Inspections Manager, followed by Enforcement Manager, Compliance and Enforcement Section Chief, and finally Bureau Chief of the AQB. I also currently hold the position of Vice President of the Western States Air Resources Council ("WESTAR"), an organization of eight western state air agencies formed to promote the exchange of information, serve as a forum to discuss western regional air quality issues of common concern, and share resources for the common benefit of the member states. My full educational and work background are set forth in my resume, marked and attached as **NMED Exhibit 17**.

As the Chief of the AQB, one of my roles is to fulfill the air quality component of the Department's purpose as outlined by the New Mexico Legislature to be a department that will be responsible for environmental management and consumer protection in this state in order to ensure an environment that in the greatest possible measure will confer optimum health, safety, comfort and economic and social well-being on its inhabitants; will protect this generation as well as those yet unborn from health threats posed by the environment; and will maximize the economic and cultural benefits of a healthy people." NMSA 1978, § 74-1-2. As

a key component to fulfilling this directive, the AQB is responsible for ensuring that air pollution is controlled in a manner to maintain or improve air quality for the health of all residents of New Mexico. With guidance from the Office of the Secretary, the Environmental Protection Division Director's Office, and the Administrative Services Division, responsible for agency financial matters, I am responsible for ensuring the financial stability, continuing and improving the air quality programs that EPA has delegated authority to the State through adoption of plans and regulations, and implementing federal laws as the agency with primacy over federal air quality laws and regulations.

The AQB serves all residents of New Mexico and the regulated community, and implements projects, plans and regulations at the state and federal level to assure healthy air while balancing the need for a robust economy and jobs for New Mexico. The residents of New Mexico, including individuals, communities, environmental groups, other organizations and those working at pollution-emitting facilities want and expect that the Air Quality Program will, to the best of its ability, ensure healthy air for all. The regulated community, including owners and operators of pollutant-emitting facilities with permits or General Construction Permit ("GCP") registrations, pollutant-emitting facilities required to submit a Notice of Intent ("NOI") to the Department prior to construction, and other pollutant-emitting facilities subject to state or federal regulations want and expect a high level of customer service – excellent communication, expert analysis, assistance with permitting processes, process certainty, and timely actions.

The Air Quality Program is currently 92% funded by fees that have not been updated for over 15 to 20 years. My testimony and the testimonies of Bret Anderson and Brian Polgar will demonstrate that the Air Quality Program's expansive and complex requirements

necessitate additional resources to fulfill the Department's statutory and regulatory requirements.

The purpose of my testimony is to: (1) explain the legal structure supporting fees; (2) provide a partial history of 20.2.71 NMAC and 20.2.75 NMAC; (3) explain the revised fee structure in the Department's proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC; (4) lay out the justification for the proposed fees and how they are necessary to support an effective program; (5) present an accounting of the public engagement efforts the Department undertook to help the regulated community and residents of New Mexico understand our proposals; (6) demonstrate how the Department has met the requirements for rulemaking before the Environmental Improvement Board ("Board"); and (7) explain to the Board why the costs of the AQB (and AQC&E) are reasonable.

I present this written testimony on behalf of the Department in support of the Department's Petition for Regulatory Change to Repeal and Replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees* ("Petition") (filed Dec. 3, 2025), in the form of the text of recommended modifications set forth in 20.2.71 NMAC, *Operating Permit Emissions Fees*, **NMED Exhibit 1** (clean) and **NMED Exhibit 2** (redline) ("Revised Part 71") and 20.2.75 NMAC, *Construction Permit Fees*, **NMED Exhibit 4** (clean) and **NMED Exhibit 5** (redline) ("Revised Part 75"), for the Board's adoption in place of the regulatory changes proposed in the Petition as 20.2.71 NMAC and 20.2.75 NMAC, Petition, Exhibits B and C (clean), respectively, and Exhibits D and E (redline), respectively (filed Dec. 3, 2025).

II. AIR QUALITY 101

The Air Quality Bureau, as of July 1, 2025, is comprised of three main sections, all of which must operate according to federal and state statutes and regulations. (The fourth section of the Air Quality Program is described in the testimony of Bret Anderson, Bureau Chief of the EPCEB.) As will be described further in this testimony, all reasonable direct and indirect costs of implementing the Air Quality Program must be sufficiently covered by fees collected into the Air Quality Program's special revenue funds from regulated entities. Per statutes, regulations, and guidance from EPA, covered costs include much more than just the act of permitting.

As further outlined below, the Permitting Section maintains the AQB's database (in collaboration with Department Information Technology staff and contractors), analyzes various types of permit applications and registrations, and issues various permitting actions, including initial approvals and permit issuances, denials, revisions and modifications, relocations for some types of facilities, and administrative revisions.

The Operations Section includes technical operations, including monitoring, data analysis and auditing of monitoring stations. The Operations Section also includes support personnel, who assist with logistical and administrative needs, record-keeping, and assistance with contracts management and grants tracking.

The Planning Section includes rulemaking and plans to respond to federal actions and state priorities, modeling to assist in that planning, modeling to analyze permit applicants' effects on ambient air, annual data collection and analysis of actual emissions from regulated entities, assistance to small businesses and analysis of development projects' impacts on New Mexico's air.

A. Source Types, Emissions and Permits

Sources are generally divided into "major" and "minor" sources. Major sources include entities emitting 100 tpy or more of any regulated pollutant other than hazardous air pollutants, which have lower thresholds. These types of facilities must apply for a "Title V" or "operating" permit within one year of beginning to operate at Title V thresholds. A source may be major for "criteria pollutants," hazardous air pollutants ("HAP"), or both. Criteria pollutants, including lead, carbon monoxide, sulfur dioxide, oxides of nitrogen, two sizes of particulate matter, or ozone, each have a cap in ambient air, set by EPA as National Ambient Air Quality Standards ("NAAQS") due to the pollutants' adverse effects on human health and the environment. Ozone is not directly emitted, however. Ozone forms when nitrogen oxides and volatile organic compounds ("VOC") react in sunlight. Therefore, VOCs are considered regulated pollutants, even though there is no NAAQS for VOCs.

Certain major sources may also reach another critical threshold – 250 tpy for any criteria pollutant. This threshold is known as Prevention of Significant Deterioration ("PSD") and additional requirements exist for these sources. A PSD permit, which is different from a Title V (or operating) permit, adds conditions and requirements through a New Source Review ("NSR") permit, also known as a "construction" permit. Both Title V and PSD permit holders are considered "major" sources and all permitting activities for these sources are handled by the AQB's "Major Source" permitting team, even permit actions under the NSR program. Only Title V permits are considered operating permits.

Minor sources are all sources that do not reach the 100 tpy thresholds for any of the criteria pollutants or VOC. Under the "minor source" program, the AQB issues "construction" permits, also known as "NSR" permits or "minor source" permits for sources that emit 25 tpy of any criteria pollutant, but not including VOCs. Again, lower thresholds exist for HAPs. In addition, the AQB

developed various General Construction Permits ("GCP") for similar types of sources. Facilities that meet the criteria in each GCP may apply to register under a particular GCP. For each GCP, the Department completed modeling to determine appropriate parameters that, at the time, would be protective of the air quality in New Mexico. Therefore, while most NSR or construction permit applicants must submit modeling to accompany their applications, those registering for a GCP need not submit modeling since the Department already completed that modeling. This program offers a significant cost savings to those registrants in the form of time and effort, the absence of modeling fees, and lower consulting fees or staff time to prepare permit applications or to prepare modeling files.

As the permitting authority for New Mexico, the AQB has the responsibility and authority to set up its minor source permitting structure to meet its obligations to protect the State's air. Part of this permitting structure includes smaller minor sources emitting between 10 and 25 tpy of any regulated pollutant; these facilities must submit an application and documentation with calculations as part of the notice of intent ("NOI") requirements outlined in 20.2.73 NMAC ("Part 73") (see **NMED Exhibit 7**), for Department approval to construct a regulated pollutant-emitting facility. Similar to the GCP program, they do not require an individualized permit to construct and operate in New Mexico. However, because facilities applying for an NOI are considered minor sources of regulated pollutants, requiring permitting analysis, database entry and maintenance, and ongoing planning, administrative and compliance efforts, these facilities have been subject to fees under 20.2.75 NMAC (see **NMED Exhibit 7**) since 2003.

No facility may begin construction prior to receiving the Department's approval to construct, through a construction permit, a GCP registration or an NOI if the facility meets either the 25 tpy threshold for a permit or the 10 tpy threshold for an NOI. Major sources first apply for

a "construction permit" and, if applicable, a PSD permit to allow initial construction. Once the facility has operated for one year at Title V levels, they must apply for a Title V permit, which incorporates all requirements for the facility from all permits.

For the seven criteria pollutants mentioned above, all areas of the country must stay at or below the NAAQS; if an area exceeds those standards, EPA must designate the area as "nonattainment." A designation of nonattainment means that one or more NAAQS have been exceeded and the delegated authority for that area must submit plans to bring the area back into attainment of the standards. Permitting becomes more stringent, requiring additional pollutant controls. A nonattainment designation occurs at one of the following levels in the range of less polluting to more polluting: Marginal, Moderate, Serious, Severe, and Extreme.

To meet the NAAQS, states and local authorities may be granted authority from the EPA to implement and enforce federal regulations. New Mexico has been delegated this authority through promulgation and periodic updating of 20.2.77 NMAC, 20.2.78 NMAC and 20.2.82 NMAC. As a delegated authority, the Department has the authority and responsibility to ensure all applicable national emission standards are incorporated into permits and that all regulated entities comply with applicable regulations and permit conditions. Additionally, the State has the authority to enact its own regulations to meet the NAAQS. These state regulations, or rules, may be enforceable by only the State, or they may be incorporated into the State Implementation Plan at which time they become federally enforceable also.

Adoption of Revised Parts 71 and 75 is justified and necessary given the character and degree of injury to or interference with health, welfare, visibility, and property. See NMSA 1978, § 74-2-5(F)(1). Every year, criteria air pollutants send New Mexicans to emergency rooms with

asthma attacks, contribute to premature deaths, and damage crops, landscapes, and visibility.[1] The State Air Act directs the state to regulate air pollutants based on their character and degree of injury or interference with health, welfare, visibility, and property. The six federally recognized criteria pollutants, ozone (O_3), particulate matter ($PM_{2.5}$ and PM_{10}), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), carbon monoxide (CO), and lead (Pb) are regulated because decades of scientific evidence show that even at relatively low concentrations they cause real harm to human health and the environment.[2] These pollutants are widespread, come from multiple industrial and mobile sources, and impose real costs when left uncontrolled.[3] Regulation is not optional. It is a basic public and environmental health responsibility of the Department.

Ozone and particulate matter pose the most immediate risks in New Mexico. Ground-level ozone, formed through reactions between nitrogen oxides and volatile organic compounds, aggravates asthma, reduces lung function, increases emergency room visits, and contributes to early death.[4] Fine particulate matter ($PM_{2.5}$) penetrates deep into the lungs and bloodstream, increasing the risk of heart attacks, strokes, respiratory disease, low birth weight, and premature death, while coarse particulates (PM_{10}) exacerbate respiratory conditions and impair visibility.[5] Ground-level ozone and particulate matter also damage crops, forests, and natural landscapes with clear impacts on public welfare, visibility, and property values. The impacts are not abstract; they

manifest in higher health care costs, missed work and school days, lower agricultural productivity, and declining property values in more polluted areas.

Nitrogen dioxide, sulfur dioxide, and carbon monoxide are regulated because of their toxicity and their role in forming additional air pollution. Nitrogen dioxide inflames airways and worsens respiratory disease, especially in children and people with asthma.[6] Sulfur dioxide triggers asthma attacks, causes respiratory distress, and contributes to acid rain that damages soils, water bodies, vegetation, and infrastructure.[7] Carbon monoxide interferes with oxygen delivery in the body and poses serious risks for people with cardiovascular disease, as well as acute poisoning risks at higher concentrations.[8] When these pollutants are not adequately controlled, visibility declines, ecosystems are harmed, buildings deteriorate, and preventable medical emergencies increase.

Lead remains tightly regulated because no level of exposure is safe, particularly for children.[9] Lead causes irreversible neurological damage, impairs learning and development, and contributes to cardiovascular and kidney disease in adults.[10] Once released, lead persists in soil and dust long after emissions stop, creating long-term public health risks and costly cleanup challenges for communities and property owners.

Regulating criteria pollutants requires permitting, monitoring, enforcement, and technical expertise. These functions are essential to ensuring that standards are meaningful and protective, rather than theoretical. Without adequate and sustained funding, the state cannot fully carry out its statutory responsibility to protect public health, welfare, visibility, and property from these well-documented harms.

III. PURPOSE AND STATUTORY BASIS FOR PERMIT FEES

This section explains the statutory and regulatory basis for the Board's authority and obligation, pursuant to the Environmental Improvement Act, NMSA 1978, Sections 74-1-1 through 74-1-18 ("EIA") and the State Air Act, to establish permit fee schedules sufficient to fund the administration of New Mexico's Air Quality Programs. Both federal and state law require the Department, through the AQB and AQC&E, to implement and administer the Title V and Construction Programs that ensure compliance with applicable air quality requirements.

The Department and Secretary of the Department are charged with environmental management and consumer protection for the State, including maintaining, developing and enforcing rules and standards pursuant to the State Air Act. See NMSA 1978, Section 74-1-7, *Department Duties*. The Department developed and the Board approved various permitting program rules, including:

- 20.2.70 NMAC, *Operating Permits;*
- 20.2.71 NMAC, *Operating Permit Emissions Fees;*
- 20.20.72 NMAC, *Construction Permits;*
- 20.2.73 NMAC, *Notice of Intent and Emissions Inventory Requirements;*
- 20.2.74 NMAC, *Permits – Prevention of Significant Deterioration (PSD);*
- 20.2.75 NMAC, *Construction Permit Fees;*

- 20.2.79 NMAC, *Permits – Nonattainment Areas;* and
- 20.2.84 NMAC, *Acid Rain Permits.*

The AQB and AQC&E together support the Department's duties as outlined in the EIA and the State Air Act. The Secretary of the Department authorizes and charges the Air Quality Program staff with understanding and interpreting the statutory directives for implementation and enforcement. This includes implementing all federal and state regulations related to those statutes, not just the permitting-related regulations listed above. Further, EPA has delegated to the Department authority to implement and enforce federal regulations through its approval of the State's "infrastructure SIP" which will be explained in Bret Anderson's testimony.

The Title V Program and the Construction Program are primarily funded through emissions fees (for Title V sources) and permit fees (for minor sources) assessed through 20.2.71 NMAC, *Operating Permit Emissions Fees* ("Part 71") and 20.2.75 NMAC, *Construction Permit Fees* ("Part 75"). Federal law and its implementing regulations, and the State Air Act and its implementing regulations, require that such fees be set at levels sufficient to recover the reasonable direct and indirect costs necessary to develop, administer, and enforce these programs. The Board is specifically authorized and required to adopt fee schedules that enable this funding.

Accordingly, the purpose of this section is to explain why permit fees are required to fund the Department's Air Quality Program and to describe the statutory framework that assigns the Board responsibility for establishing and maintaining fee structures that ensure the continued, effective administration of those Programs.

A. Statutory Requirements Pertaining to the Board and Fees

1. Federal Authority - Clean Air Act

The Clean Air Act, 42 U.S.C. Sections 7401 *et seq*. ("CAA"), as implemented through the

State Air Act, establishes the legal authority for New Mexico's Title V Program. The Title V Program mandates that major stationary sources of air pollution shall obtain operating permits that incorporate all applicable air quality requirements and provide enforceability for those requirements. Major stationary sources or affected facilities that require a Title V permit include, but are not limited to, large gas processing plants, compressor stations, power plants, refineries, and copper and potash mining and processing facilities. An affected facility must obtain a Title V operating permit if it emits or has the potential to emit more than 100 tons per year ("tpy") of a regulated air pollutant, more than 10 tpy of a single hazardous air pollutant, or more than 25 tpy of combined hazardous air pollutants. Title V permitting requirements also apply to other specified facility types and certain sources located in non-attainment areas. Minor stationary sources are all other regulated pollutant-emitting facilities that emit quantities below these thresholds. As will be described in more detail below, minor sources include multiple classes of sources which are all included in the general purview of the AQB's Construction Program.

2. CAA, Section 502(b)(3) and Implementing Regulation, 40 CFR Part 70

Section 502(b)(3) of the CAA and its implementing regulation at 40 CFR Part 70, require states operating EPA-approved Title V programs, such as New Mexico, to assess fees sufficient to cover all reasonable costs of developing, administering and enforcing the operating permit program. The program's allowable costs include, but are not limited to, labor, materials, equipment, training, technical assistance, compliance inspections, enforcement activities up to and including issuance of administrative compliance orders, monitoring, program development, public hearings, and other administrative or operational activities. Section 502 of the CAA and 40 CFR Part 70 (see **NMED Exhibit 7**) do not limit a permitting authority's ability to assess fees above the minimum amounts necessary, provided the fees are used to support the proper administration

of the Title V program.

EPA guidance on Title V operating permit fees further explains the scope of reasonable and allowable costs under 40 CFR Part 70 and supports the assessment of fees sufficient to fully administer and enforce the New Mexico Title V Program. This guidance is attached hereto as **NMED Exhibit 18**.

3. Environmental Improvement Board's Rulemaking Authority

Section 74-1-4 and Section 74-1-8 of the EIA (see **NMED Exhibit 7**) establishes the Board and authorizes it to adopt, amend, and repeal regulations necessary to carry out the purposes of the EIA and the State Air Act, respectively. This statutory authority includes the promulgation of air quality regulations governing permitting programs and associated fee requirements to ensure substantial compliance with federal and state air quality laws. This rulemaking authority, together with the fee authorities provided in Sections 74-2-7(B)(6) and (7) of the State Air Act, provides the legal basis for the Board's adoption of Revised Part 71 and Revised Part 75.

4. State Air Act Sections 74-2-7(B)(6) and (7)

The State Air Act (see **NMED Exhibit 7**) authorizes the Board to adopt fee schedules sufficient to cover the reasonable costs of:

1. Reviewing and acting upon any application for permits;
2. Implementing and enforcing permit conditions; and
3. Maintaining and administering the air quality programs in compliance with federal requirements.

Section 74-2-7(B)(6) of the State Air Act addresses minor source construction permit fees, while Section 74-2-7(B)(7) addresses major source emissions fees. Together, these provisions ensure that fees under Part 71 and Part 75 fully support the AQB's operations and evolving federal

and state requirements.

5. State Air Quality Permit Fund (State Air Act Section 74-2-15)

Section 74-2-15 of the State Air Act (see **NMED Exhibit 7**) establishes the State Air Quality Permit Fund and specifies the purposes for which revenues deposited into the fund may be used. For accounting purposes, the Department has separated the State Air Quality Permit Fund into two funds, the Title V Fund and the Construction Fund, to assure that Title V revenues are used solely for the benefit of the Title V Program. Since Title V Operating Permit emissions fees may only be used for activities associated with Title V facilities, this separation assures accurate accounting for both revenues and costs. See 40 CFR Part 70.

Under the State Air Act, Section 74-2-15, permit and emissions fee revenues are deposited into the appropriate fund and may be used to support a range of Air Quality Program activities, including reviewing and acting upon permit applications, implementing and enforcing permit conditions, emissions and ambient air monitoring, developing regulations and guidance, preparing emissions inventories, conducting modeling and technical analyses, and otherwise administering air quality programs in compliance with federal and state requirements. This statutory framework demonstrates that permit and emissions fees support not only permitting functions, but also broader Air Quality Program responsibilities necessary to effectively implement the State Air Act and the CAA.

6. State Regulatory Implementation – 20.2.70 NMAC

Pursuant to 20.2.70 NMAC ("Part 70") (see **NMED Exhibit 7**), a *"Part 70 source"* means any source subject to the permitting requirements of Part 70, and an *"operating permit"* means any permit covering a source that is issued, renewed, modified, or revised under Part 70. Under the same rule, a *"stationary source"* is defined as any building, structure, facility, or installation

that emits or may emit any regulated air pollutant, and *"regulated air pollutant"* includes, among other pollutants, nitrogen oxides and volatile organic compounds, any pollutant for which a NAAQS has been promulgated, and any pollutant subject to the New Source Performance Standards ("NSPS") or National Emission Standards for Hazardous Air Pollutants ("NESHAP").

Part 70 also describes applicable requirements, which include:

1. Standards or requirements in the New Mexico State Implementation Plan ("SIP");
2. Standards or requirements under Sections 111, 112, 114, 126, 183, 504, in whole or in part of the CAA;
3. Certain provisions of Title VI of the CAA;
4. Any NAAQS;
5. For some facilities, increment or visibility requirements; and
6. Any rule adopted by the Board pursuant to the State Air Act.

In accordance with Part 71, fees for Part 70 sources are based on a facility's allowable emissions of regulated air pollutants. Pursuant to the CAA and the State Air Act, such fees must be sufficient to cover all reasonable direct and indirect costs necessary to administer the Title V Program in accordance with federal and state law. Nothing in federal or state law prevents the adoption of fees for the specific needs of a state air program, provided such fees are used to support proper program administration.

7. Fee Authority is Broad

The statutory requirement that fees cover reasonable costs for the Air Quality Program is intentionally broad so as to allow for states to exercise their discretion to implement programs tailored to state needs. This standard allows for the inclusion of both direct and indirect costs required to effectively implement the Department's Title V Operating Permit and Construction

Programs. EPA guidance on Title V operating permit fees (**NMED Exhibit 18**) explains that allowable program costs include both direct and indirect costs necessary to administer and enforce the permitting program, consistent with federal requirements. Although EPA's guidance is specific to Title V, the categories of direct and indirect costs included in implementing the program relate directly to the Construction Program as well. To provide context for this standard, it is important to connect the permit fees to the specific costs they are intended to cover.

According to EPA's guidance, allowable program costs include, but are not limited to:

1. Staff and personnel costs necessary to support permitting, monitoring, compliance inspections, and enforcement activities;
2. Administrative costs and infrastructure upgrades required for office operations, information technology systems, and record-keeping functions;
3. Regulatory compliance and program development costs to support the implementation of new federal or state requirements;
4. Public engagement and transparency costs for conducting hearings, publishing notices, and community outreach activities;
5. Costs associated with non-compliant sources, including additional administrative costs, investigations, and follow-up actions beyond the basic costs for the program necessary to ensure adherence to permit requirements and regulations.

Also according to EPA's guidance, the EPA recognizes that states implementing Title V programs will have a variety of needs depending on the state and delegates discretion to the state under this framework.

Pursuant to this framework, the Board has the authority and responsibility to adopt rules to enable the full funding of the Air Quality Program. The issuing authority for both Part 71 and Part

75 is the Board, acting pursuant to the EIA, NMSA 1978 Section 74-1-8(A)(4), and the State Air Act, Sections 74-2-1 et seq., including specifically Section 74-2-7(B)(6) and (7).

IV. HISTORY OF PARTS 71 AND 75 (ADOPTION AND AMENDMENTS)

Parts 71 and 75 establish the fee structures that support New Mexico's Title V Program and Construction Program, respectively, and have evolved through a series of adoptions, renumbering, and amendments since the early 1990s. While Parts 71 and 75 are both administered by the AQB at the direction of the Secretary, they serve distinct regulatory purposes and apply to different types and sizes of facilities. The regulatory histories of Parts 71 and 75 demonstrate that the current fee structures are rooted in longstanding programs that have evolved over decades in response to changing regulatory requirements, program demands, and administrative responsibilities. This historical context supports the periodic evaluation and updating of fees to ensure the continued effective administration of both the Title V Program and the Construction Program.

To evaluate the appropriateness of the Department's proposed fee revisions, we must identify their individual requirements, areas of overlap, and points of distinction.

A. Part 71 – Operating Permit Emissions Fees

Part 71 governs operating permit emissions fees for Title V sources subject to the New Mexico Title V Program set forth in Part 70.

The Part 71 provisions were originally adopted as Air Quality Control Regulation 771, *Operating Permit Emission Fees*, which became effective on November 15, 1993. Air Quality Control Regulation 771 was later renumbered into the first version of the New Mexico Administrative Code, as 20 NMAC 2.71, *Operating Permit Emission Fees*, effective November 20, 1995. Subsequently, 20 NMAC 2.71 was renumbered, reformatted, and replaced by 20.2.71 NMAC, *Operating Permit Emissions Fees*, effective October 31, 2002.

Since the year 2002, Part 71 has been amended periodically, including amendments effective December 15, 2004, June 15, 2007, and January 9, 2009. These amendments increased the fee for each fee pollutant in 20.2.71.112(A) NMAC from $10.25 per ton to $20 per ton plus an additional $2 per ton in 2010, 2011 and 2012 based on a regulatory increase provision that ended in 2012; provided for annual fee increases based on the Consumer Price Index beginning in 2009; added a fee requirement for emissions above annual allowable emission limits; and added a fee schedule for mercury for sources subject to 20.2.85 NMAC, among other lesser changes. These amendments reflect adjustments made by the Board to maintain consistency with federal Title V requirements, evolving program administration needs, and expanding regulatory responsibilities.

B. Part 75 – Construction Permit Fees

Part 75 governs fees for the Construction Program, which applies to new sources, modifications to existing sources, permit revisions, and technical reviews of existing permits for minor sources of regulated air pollutants.

Part 75 establishes a schedule of fees for the review and processing of construction permit applications, permit modifications, and related technical analyses. These fees support the AQB's pre-construction review activities, including emissions calculations, air quality modeling, technical evaluations, and permit issuance decisions that occur before a source is constructed or modified. The fees also cover minor sources registering to construct under a GCP, and sources required to submit an application under the NOI program. GCP registrations and NOIs require applications, permitting review and analysis, and compliance and enforcement activities (including activities to assure compliance with 20.2.50 NMAC, *Oil and Gas Sector – Ozone Precursor Pollutants* ("Part 50", the *Ozone Precursor Rule*), which applies to both permitted and non-permitted sources). Although the State Air Act describes activities necessary to enforce permits,

and NOIs are not technically permits, it would be an unreasonable interpretation of the statute to exclude NOI costs from all reasonable direct and indirect costs construction permit fees are meant to cover.

The Part 75 provisions were originally adopted as Air Quality Control Regulation 700, *Construction Permit Fees*, which was filed on November 20, 1989. Air Quality Control Regulation 770 was later renumbered as 20 NMAC 2.75, *Construction Permit Fees*, effective November 30, 1995. Subsequently, 20 NMAC 2.75 was renumbered, reformatted, and replaced by 20.2.75 NMAC, *Construction Permit Fees*, effective March 2, 2001.

Since the year 2001, Part 75 has been amended once, effective December 1, 2003. This amendment added points for portable source relocations to the schedule in 20.2.75.11(A) NMAC, increased the annual fee for sources that have been issued a construction permit from $220 to $1,500, and provided for annual increases in the cost per point and annual fee based on the Consumer Price Index beginning in 2005. These changes reflect the Board's recognition of changes in program implementation and administrative needs.

C. Similarities and Differences Between Parts 71 and 75

Both Part 71 and Part 75 are administered by the Department and are grounded in statutory requirements in the CAA, the EIA and the State Air Act. However, the two parts differ in scope and function. Part 71 applies to existing Title V sources and supports ongoing permitting needs as well as compliance, monitoring, reporting, inspections, and enforcement activities throughout the operational life of a facility. In contrast, Part 75 applies to major and minor sources, including permits and permit modifications, pre-construction technical review and activities for other minor sources, and direct and indirect costs of all other activities related to implementation and compliance. Part 75 annual fees do not apply to Title V facilities paying emissions fees pursuant

to Part 71; only the application review and modeling fees apply to Title V facilities. Part 75 annual fees may also apply to Title V facilities that have been idled or shut down for the entire year, incurring no emissions fees.

V. DESCRIPTION OF AND JUSTIFICATION FOR THE PROPOSED REGULATORY CHANGES

A. Proposed Changes to Fees

This section of my testimony describes the emissions and permit fee changes the Department has determined are necessary to cover the reasonable costs of the Air Quality Program. I describe the AQB component of the Air Quality Program later in my testimony. Bret Anderson describes the AQC&E component of the Program in his testimony (**NMED Exhibit 57**).

Brian Polgar describes the financial analysis supporting the Department's proposed fee amounts in his testimony (**NMED Exhibit 65**). As his testimony shows, Revised Parts 71 and 75 are technically practicable and economically reasonable as modeled to correspond to needed maintenance for the Air Quality Program. The proposed rules do not alter the equipment and methods for controlling those air contaminants. See NMSA 1978, § 74-2-5(F)(3).

8. Revised Part 71 Fee Changes

Part 71 establishes a schedule of operating permit emissions fees assessed on Title V sources to cover the costs of developing, administering and enforcing the Department's Title V Program. The Part 71 fee schedule is simple in comparison to Part 75's and consists of one fee amount (expressed in dollars per ton of allowable emissions on an annual basis) for fee pollutants other than HAPs, and a second, higher fee amount specifically for HAPs. The higher fee for HAPs only applies to sources that are only major, as defined in Part 70, for any HAP. Currently there are **no** sources in New Mexico that meet this criterion, and the higher fee for HAPs has not been assessed since 2014. The total annual emissions fee for a Title V facility is determined by summing

the fee for each individual fee pollutant the facility is allowed to emit pursuant to its permit(s).

The current baseline fee amount for fee pollutants other than HAPs ("non-HAP fee") is $20 per ton, pursuant to 20.2.71.112(A) NMAC. I refer to this as the baseline fee amount because it is not what Title V facilities currently pay. Rather, it is what the Board set the non-HAP fee at in 2009, the last time it amended Part 71. However, the non-HAP fee increased by $2 per ton in 2010, 2011 and 2012 in accordance with 20.2.71.112(A) NMAC, and it has increased every year since 2009 by the same amount as the Consumer Price Index in accordance with 20.2.71.112(E) NMAC. As a result of these increases, the current non-HAP fee for Title V facilities is $40.59 per ton.

The Department proposes increasing the non-HAP fee to $85 per ton by resetting the baseline fee amount in Revised Part 71, Section 112(A) and resuming automatic annual increases based on the Consumer Price Index in 2028 by changing the trigger date in Revised Part 71, Section 112(D). **NMED Exhibit 2** at 3, Line 52; 4, Line 8. $85 per ton is the amount required for emissions fees to cover the projected costs of the necessary expansion of the Air Quality Program, as discussed in the testimony of Brian Polgar.

The current baseline fee amount for HAPs ("HAP fee") is $165 per ton, pursuant to 20.2.71.112(B) NMAC. The Board set the HAP fee at this amount in 2004, and like the non-HAP fee, it has increased every year since 2009 by the same amount as the Consumer Price Index in accordance with 20.2.71.112(E) NMAC. As a result of these increases, the current HAP fee for Title V facilities is $258.01 per ton.

The Department proposes resetting the baseline fee amount for HAPs in Revised Part 71, Section 112(B), to this amount, rounded to $258, and resuming automatic annual increases based on the Consumer Price Index in 2028 by changing the trigger date in Revised Part 71, Section 112(D). **NMED Exhibit 2** at 3, Line 55; 4, Line 8. Resetting the baseline fee amount for HAPs to

the current amount does not increase the HAP fee. It merely preserves past increases based on the Consumer Price Index going forward, should the Board adopt Revised Part 71.

9. Revised Part 75 Fee Changes

Part 75 establishes a schedule of fees to cover the costs of reviewing and acting upon construction permit, GCP registration and NOI applications, implementing and enforcing permit conditions, and maintaining and administering the Construction Program in compliance with federal requirements. The Part 75 fee schedule is more complicated than Part 71's and currently includes:

- A filing fee for NOI and construction permit applications;
- A complexity-based points schedule for actions associated with the review and processing of construction permit applications;
- A cost per point that is multiplied by the sum of all points applicable to a construction permit application to determine the application review fee (currently called a "permit fee," which is a misnomer); and
- An annual fee for sources that have been issued a construction permit.

The Department is not proposing to increase the current filing fee of $500 in 20.2.75.10(A) NMAC, nor the $1,000 accelerated review filing fee in 20.2.75.10(B) NMAC. However, the Department is proposing to eliminate the filing fee for NOI applications in Revised Part 75, Section 10(A). **NMED Exhibit 5** at 3, Lines 2-3. Under the Department's proposal, the NOI application filing fee will be replaced with an application review fee through other changes to the fee schedule described below.

The Department proposes updating the complexity-based points schedule in Revised Part 75, Section 11(A) by increasing the points for modeling reviews from 15 to 30 and the points for

reviewing applications to register under the Department's general construction permit for oil and gas facilities (GCP-Oil & Gas) from 10 to 30. **NMED Exhibit 5** at 3, Line 39; 4, Line 5. The Department proposes increasing the points assessed for modeling reviews because the average complexity of modeling submitted to the Department, and in turn the time required to review it, has increased significantly in recent years due to the issuance of various general construction permits, which has eliminated the requirement to perform modeling for simpler sources that now register under those GCPs instead of applying for other types of construction permits. This leaves only the more complex facilities to model. As a result, modeling personnel have estimated that, on average, modeling reviews now require twice as much time per facility as in years past – more if modeling files are deficient. Given that modeling reviews now take twice as long as they used to, assessing 30 points for modeling reviews – two times the 15 points currently assessed – is reasonable.

The Department proposes increasing the points assessed for reviewing GCP-Oil & Gas registration applications because GCP-Oil & Gas registration applications are more complex than those for other GCPs and therefore take longer to review – on average three times longer than other GCP registration applications. The proposed point value better reflects the relative effort associated with reviewing GCP-Oil & Gas registration applications, which is significantly underestimated by the current point value. Estimates of the time required to process different types of applications show, for instance, that GCP-Oil & Gas registration applications take, on average, 15 hours to process versus 4-5 hours for most other GCP registration applications. **NMED Exhibit 19**. Given that GCP-Oil & Gas registration applications take three times as long to process as other GCP registration applications, assessing 30 points for GCP-Oil & Gas registration applications – three times the 10 points assessed for other GCP registration applications – is reasonable and will help

make application review fees more equitable overall.

The Department also proposes adding 10 points for reviewing NOI applications to the complexity-based points schedule in Revised Part 75, Section 11(A) so the Department can assess an application review fee for NOI applications in lieu of the current filing fee. **NMED Exhibit 5** at 4, Line 3. The current filing fee is insufficient to cover the cost of reviewing an NOI application to determine whether a construction permit is required before construction may commence. As estimates of the time required to process different types of applications show, NOI applications take approximately 8 hours to process versus 4-5 hours for most GCP registration applications. **NMED Exhibit 19**. However, GCP registration applications are currently assessed application review fees of $5,390 (10 points x $539 per point), more than 10 times higher than the $500 NOI application filing fee. Application review fees for most GCP registration applications will increase to $5,850 (10 points x $585 per point) if the Board adopts Revised Part 75; this would widen the gap with NOIs even further if points are not added to the complexity-based points schedule for NOI applications, allowing the Department to assess application review fees for NOI applications instead of the current $500 filing fee. Assessing application review fees for NOI applications based on a point value that reflects the effort associated with reviewing NOI applications is reasonable and, like other changes to the complexity-based points schedule, will help make application review fees more equitable overall.

The Department proposes increasing the cost per point for calculating application review fees in Revised Part 75, Section 11(B). The current baseline cost per point is $315 pursuant to 20.2.75.11(B) NMAC. The Board set the cost per point at this amount in 2001, and it has increased every year since 2005 by the same amount as the Consumer Price Index in accordance with 20.2.75.11(F) NMAC. As a result of these increases, the current cost per point for calculating

application review fees is $539. The Department proposes increasing this to $585 per point (approximately an 8.5% increase) by resetting the baseline cost per point in Revised Part 75, Section 11(B) to this amount, and resuming automatic annual increases based on the Consumer Price Index in 2028 by changing the trigger date in Revised Part 75, Section 11(G). **NMED Exhibit 5** at 4, Lines 9-10 and 33.

Finally, under the current fee schedule, sources that have been issued a construction permit are assessed an annual fee. Annual fees are assessed because permitted sources impose ongoing compliance obligations on the Department, the costs of which are not covered by one-time application review fees – nor should they be. The current baseline annual fee is $1,500 pursuant to 20.2.75.11(E) NMAC. The Board set the annual fee at this amount in 2003, and it has increased every year since 2005 by the same amount as the Consumer Price Index in accordance with 20.2.75.11(F) NMAC. As a result of these increases, the current annual fee for sources that have been issued a construction permit is $2,564. The Department proposes increasing this to $2,800 (an increase of approximately 9.2%) by resetting the baseline annual fee in Revised Part 75, Section 11(F) to this amount, and resuming automatic annual increases based on the Consumer Price Index in 2028 by changing the trigger date in Revised Part 75, Section 11(G). **NMED Exhibit 5** at 4, Lines 26 and 33.

In addition, the Department proposes adding a new annual fee for NOI facilities. All regulated sources should pay fees to cover the reasonable direct and indirect costs of the Air Quality Program, and NOI facilities – like facilities that have been issued a construction permit – impose ongoing compliance obligations on the Department, although they may be somewhat less burdensome in comparison. In addition, NOI facilities are often subject to Part 50, the *Ozone Precursor Rule*, and so require additional evaluation and analysis. Furthermore, the federal and

state framework allows the Department discretion on how to shape its program and fee structure. For example, NMSA 1978 74-2-15(B)(6) specifically allows for the monitoring and tracking of emissions and preparing emissions inventories, a necessary component to ensure that the Air Quality Program can be effective. All minor source facilities, including those that have filed an NOI, are required to submit emissions inventories every three years. As such, NOI facilities require as much ongoing emissions inventory work as other minor sources. Therefore, Revised Part 75 aims to ensure NOI facilities pay their fair share by paying a minimal annual fee to cover the ongoing costs for these facilities which, combined, emit almost a third of the State's total criteria pollutant emissions. **NMED Exhibit 20**. As such, the Department proposes adding an annual fee of $700 for sources that have filed an NOI to Revised Part 75, Section 11(F) and revising the language in Revised Part 75, Section 11(G) so this fee, too, increases each year based on the Consumer Price Index starting in 2028. **NMED Exhibit 5** at 4, Lines 27-28 and 33-37.

The proposed points for modeling reviews (30), GCP-Oil & Gas registration applications (30) and NOI applications (10), cost per point ($585), and annual fees ($2,800 for construction permits, $700 for NOIs) are the amounts required to cover the projected increased costs of the Air Quality Program, as discussed in the testimony of Brian Polgar.

B. Other Proposed Regulatory Changes

In addition to the fee changes described above, the Department proposes other changes to Revised Parts 71 and 75 that are intended to clarify and modernize the rules, improve fee equity, and incentivize timely payment of fees. For both Revised Parts 71 and 75, the Department proposes adding an effective date of June 1, 2026 in Section 5. Section 5 reflects a mandatory section for all rules promulgated by New Mexico state agencies. See 1.24.10.8(F)(5) NMAC (requiring an effective date for all rules promulgated by New Mexico state agencies).

An effective date of June 1, 2026, ensures the changes would become effective with sufficient notice to the regulated community while allowing the Department to implement the new fee structure in time for the next invoice cycle. The Department expects regulated entities to want certainty of the fees they will be required to pay in time to effectively plan. For Title V facilities, this planning may involve voluntarily reducing their allowable emissions to lower their fees. They may also need to include these amounts in their budgets. The Department begins its budgeting process in July for the next fiscal year, as described in Secretary James Kenney's testimony. Sometimes that planning begins even earlier. Part of that budgeting process includes estimating revenues. A June 1, 2026 effective date allows the Department to include updated revenue estimates for fees collected in the first half of calendar year 2027 so that the requested budget for fiscal year 28 reflects an accurate picture of revenues.

1. Revised Part 71 Additional Changes

The Department proposes two changes to the definition of fee pollutant in Revised Part 71, Section 7(C), which currently includes sulfur dioxide, nitrogen dioxide, carbon monoxide, total suspended particulate matter, volatile organic compounds, mercury, and any hazardous air pollutant subject to any standard promulgated pursuant to Section 112 of the CAA.

First, the Department proposes to remove mercury, which was added to the definition of fee pollutant (and a separate fee schedule for mercury added at 20.2.71.112(C) NMAC) in 2007 as part of a package of regulatory changes addressing mercury emissions from coal-fired electric generating units larger than 25 megawatts. **NMED Exhibit 2** at 1, Line 42. These changes, which included the adoption of 20.2.85 NMAC, *Mercury Emission Standards and Compliance Schedules for Electric Generating Units* ("Part 85"), were necessary to comply with EPA's 2005 Clean Air Mercury Rule. (70 FR 28606, Standards of Performance for New and Existing Stationary Sources:

Electric Utility Steam Generating Units, Final rule, published May18, 2005, effective July 18, 2005). However, less than a year after the Board adopted Part 85, the U.S. Court of Appeals for the D.C. Circuit vacated the Clean Air Mercury Rule, and in 2012 EPA promulgated the Mercury and Air Toxics Standards, establishing more stringent standards for power plant mercury emissions than Part 85 imposed. (77 FR 9304, National Emissions Standards for Hazardous Air Pollutants from Coal- and Oil-Fired Electric Utility Steam Generating Units and Standards of Performance for Fossil-Fuel-Fired Electric Utility, Industrial-Commercial-Institutional, and Small Industrial-Commercial-Institutional Steam Generating Units, Final rule, published Feb. 16, 20112, effective April 16, 2012). As a result, the Board repealed Part 85 in 2014, and because the fee schedule for mercury at 20.2.71.112(C) NMAC only applied to sources subject to Part 85, by operation of law, the Department lost the authority to assess fees for mercury at that time.[11]

Second, the Department proposes removing total suspended particulate matter ("TSP") and replacing it with PM10 and PM2.5.[12] **NMED Exhibit 2** at 1, Lines 41-42. The New Mexico Board of Health and Social Services promulgated New Mexico Ambient Air Quality Standards ("NMAAQS") for TSP in 1969. Two years later, EPA adopted the first National Ambient Air Quality Standards ("NAAQS") for particulate matter ("PM"), with TSP as the indicator. (36 FR 8186, Part 410 - National Primary and Secondary Ambient Air Quality Standards, published 4/30/71, effective 4/30/71). In 1987, EPA revised the PM NAAQS, and PM10 replaced TSP as the

[11] Even if Part 85 had not been repealed and were still effective today, the only sources it applied to, PNM's San Juan Generating Station and Tri-State Generation and Transmission Association's Escalante Generating Station, have permanently shut down. As a result, there are no coal-fired electric generating units within the Board's jurisdiction today.

[12] PM10 and PM2.5 are defined in 20.2.2.7(AD) and (AF) NMAC and mean particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers and particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers, respectively.

indicator.[13] (52 FR 24634, Revisions to the National Ambient Air Quality Standards for Particulate Matter, Final rule, published July 1, 1987, effective July 31, 1987). In 1997, EPA revised the PM NAAQS again, adding PM2.5 as an additional indicator.[14] (62 FR 38652, National Ambient Air Quality Standards for Particulate Matter, Final rule, published July 18, 1997, effective Sept.16, 1997).

The Department stopped monitoring for TSP in 1998, but the Board did not repeal the NMAAQS for TSP until 2018, when the limits for "maximum allowable concentrations of TSP in the ambient air" at 20.2.3.109 NMAC, *Total Suspended Particulates*, were repealed, effective November 30, 2018. Following the repeal, permit conditions limiting TSP emissions became unenforceable and the Department stopped collecting fees for TSP from Title V facilities. In 2025, TSP was removed from the definition of "regulated air pollutant" at 20.2.70.7(AC) NMAC, effective 9/15/2025.

Because the Department did not update the definition of fee pollutant when the NMAAQS for TSP was repealed, the Department has been unable to collect any fees for PM since the repeal. As a result, the Department has foregone collecting approximately $2.5 million in fee revenue since 2019. Removing TSP from the definition of fee pollutant in Revised Part 75, Section 7(C) and replacing it with PM10 and PM2.5 will correct this oversight and allow the Department to

[13] In terms of the health and welfare effects of PM, scientific information supported the conclusion that there are greater risks of adverse health effects associated with respirable PM (which can enter the respiratory system, generally regarded as 10 micrometers or smaller in aerodynamic diameter). The primary (health) and secondary (welfare) standards for PM10 are identical.

[14] The primary standards were set to provide increased protection against PM-related health effects, including premature mortality and increased hospital admissions and emergency room visits, and increased respiratory symptoms and disease in individuals with asthma. The secondary standards were set as appropriate protection against welfare effects including soiling, material damage, and visibility impairment. Therefore, the current PM NAAQS using PM10 and PM2.5 as indicators, are better suited to address health concerns than standards based on TSP.

begin collecting fees for PM again. Importantly, the Department proposes to only collect emissions fees for PM10 or PM2.5, but not both, as discussed below.

The Department proposes adding a new Section 10, *Severability*, to Revised Part 75 specifying that if any provision of the rule – or its application to any person or circumstance – is held invalid, the remainder of the rule shall not be affected. **NMED Exhibit 2** at 2, Lines 17-20. This new provision is intended to prevent the entire rule from being voided should a court strike down one or more specific provisions of the rule and is standard in and consistent with other Board rules. The Department also proposes deleting 20.2.71.109 NMAC, *Applicability*, because it is duplicative of 20.2.71.2 NMAC, *Scope*. **NMED Exhibit 2** at 2, Lines 24-26.

The Department proposes two changes to Revised Part 71, Section 111, which describes how annual emissions fees are calculated. First, as previously described, the total annual emissions fee for a Title V facility is determined by summing the fee for each individual fee pollutant for which a facility's permit establishes an allowable limit. The fee for a given fee pollutant is calculated by multiplying the allowable emission rate for that pollutant expressed in tons per year by the appropriate fee (*i.e.*, non-HAP or HAP). If a facility emits more than its annual allowable emission limits, it is also charged a fee for excess emissions, which is calculated in the same manner. Currently, the emissions used in these calculations are capped at 6,000 tpy pursuant to 20.2.71.111(A)(7) NMAC and 20.2.71.111(C)(4) NMAC. The Department proposes lowering this cap to 3,000 tpy in Revised Part 71, Sections 111(A)(7) and 111(C)(4). **NMED Exhibit 2** at 3, Lines 9 and 43. This will improve fee equity by ensuring that no Title V facility pays more than five percent of the total emissions fees collected in any one year. The Department proposes this change in direct response to concerns raised by industry stakeholders regarding the potential impact of increased fees and other proposed changes to Part 71 on certain sources.

Second, the Department proposes adding new provisions at Revised Part 71, Sections (A)(8) and (C)(5) NMAC providing that, for facilities with allowable emission rates for both PM10 and PM2.5, a fee will only be assessed for one of these fee pollutants based on whichever has the higher allowable emission rate or emissions above annual allowable limits. **NMED Exhibit 2** at 3, Lines 11-13 and 45-47. This will prevent double billing for the same pollutant since PM2.5 is a component of PM10.

The Department proposes deleting the separate fee schedule for mercury currently in 20.2.75.112(C) NMAC. **NMED Exhibit 2** at 4, Lines 1-5. As described above, this fee schedule was added to Part 71 in 2007 as part of a package of regulatory changes addressing mercury emissions from coal-fired electric generating units and only applied to sources subject to Part 85, which the Board repealed in 2014. Because the Department no longer has authority to assess fees for mercury under Part 71, and because mercury will be removed from the definition of fee pollutant in Revised Part 71, Section 7(C) if the Board adopts the proposed changes to the definition described above, the mercury fee schedule should also be removed.

The Department proposes updating the language regarding automatic annual fee increases in Revised Part 71, Section 112(D) to clarify that non-HAP and HAP fees shall remain the same in the event of a decrease or absence of change in the Consumer Price Index. **NMED Exhibit 2** at 4, Lines 10-11. Since these annual adjustments began in 2009 there has only been one year when the Consumer Price Index did not increase, and the Department anticipates this will continue to be a rare occurrence in the future. However, the Department wants to clarify what happens in that infrequent scenario to provide certainty to sources subject to annual emissions fees under Part 71.

Finally, the Department proposes two changes to Revised Part 71, Section 113, which describes the schedule for paying annual emissions fees, how fees shall be remitted, and penalties

for nonpayment of fees. First, the Department proposes adding language to Revised Part 71, Section 113(A)(3) providing that failure to pay annual emissions fees by the due date will subject the owner or operator to a late fee equal to 50 percent of the annual emissions fee. **NMED Exhibit 2** at 4, Lines 27-34. This provision is intended to incentivize timely payment of fees, not generate new revenue. Therefore, the Department is capping the proposed late fee at $5,000 if the late fee itself is timely paid or $10,000 if the late fee is paid late in order to protect sources subject to annual emissions fees in the tens or hundreds of thousands of dollars from potentially excessive late fees. Second, the Department proposes updating Revised Part 71, Section 113(B)(1) to allow electronic payment of annual emissions fees as part of the Department's broader efforts to modernize application and data submission, invoicing, payments, etc. **NMED Exhibit 2** at 4, Line 41.

2. Revised Part 75 Additional Changes

The Department proposes adding a new provision at Revised Part 75, Section 11(C) clarifying that the Department may assess additional points and fees for application reviews each time it is required to repeat an action in the complexity-based points schedule in Revised Part 75, Section 11(A) because the applicant updated the application after submission. **NMED Exhibit 5** at 4, Lines 11-13. The Department has long had discretion to assess additional fees pursuant to 20.2.75.12(B) NMAC but has seldom (if ever) exercised this discretion. However, as I explain in Section VIII.B.1 of my testimony, the Department's AQB has seen a decline in the quality of permit applications in recent years leading to significantly more work for managers and staff, who have spent significant time and effort working with applicants to correct deficiencies. As a result, the Department may start exercising its discretion to assess additional fees more often. Therefore, the Department believes it is important to clarify when it may do so, so applicants understand the

process better and can take steps to avoid additional fees.

Currently, the AQB spends a significant amount of time working with applicants to gather additional information, correct deficient applications, correct deficiencies in modeling or modeling files, and negotiate conditions needed to protect New Mexico's air. In addition, some companies regularly submit revised applications very close to the issuance date, causing additional review and analysis time and resulting in either other project timelines suffering or a delay in permit issuance. Part of the changes to language in the proposed fee rules is to collect appropriate revenue for the additional time spent on deficient applications. This includes appropriately charging fees for multiple revisions when the revisions cause significant extra work and for additional modeling runs necessary to recommend that a permit should be issued. Deficient GCP-O&G registrations often require 20-35 additional hours to review; deficient NOIs may require an additional 10-15 hours; deficient NSR applications may require an additional 60-70 hours. As of mid-January, 2026, the AQB Permitting Section has 30 NOIs ruled incomplete due to deficiencies.

The Department proposes adding language to Revised Part 75, Section 11(F) clarifying that annual fees shall be assessed if the construction permit, registration or NOI was in active status on December 31 of the preceding year, regardless of the source's operational status. **NMED Exhibit 5** at 4, Lines 28-30. This is already the Department's practice, but sources have occasionally expressed the mistaken belief that annual fees would be prorated, or not assessed at all, due to a temporary or permanent shutdown. The Department wants to ensure sources understand that annual fees will be assessed if they have an active permit, registration or notice of intent at the end of the previous calendar year, in part to incentivize them to cancel a permit, registration or NOI they no longer use or need to avoid unnecessary fees. This will have several benefits, including improving the Department's ability to track active sources and emissions.

The Department proposes updating the language regarding automatic annual fee increases in Revised Part 75, Section 11(G) to clarify that the cost per point and annual fees for sources that have been issued a construction permit or GCP registration or filed an NOI shall remain the same in the event of a decrease or absence of change in the Consumer Price Index. **NMED Exhibit 5** at 4, Lines 42-43. Since these annual adjustments began in 2005 there has only been one year when the Consumer Price Index did not increase, and the Department anticipates this will continue to be a rare occurrence in the future. However, the Department wants to clarify what happens in that infrequent scenario to provide certainty to sources subject to application review and annual fees under Part 75.

The Department proposes a variety of changes to Revised Part 75, Sections 12(A) and 12(B) and adding new provisions at Revised Part 75, Sections 12(C) and 12(D) in an effort to align the invoicing and payment provisions of the rule with the Department's current practices. **NMED Exhibit 5** at 4, Lines 47-56; 5, Lines 1-19. Due to differences in how NMED processes different types of applications and varying statutory and regulatory deadlines for the Department to take final action on different types of applications, invoicing and payment of application review fees necessarily differs for different types of applications as well. These differences are not reflected in the current rule, the invoicing and payment provisions of which only work for certain types of applications and are impracticable for others.

The Department proposes changes to other parts of Revised Part 75, Section 12 NMAC for consistency with Part 71 with regard to fee remittance, late fees and penalties for nonpayment. First, the Department proposes updating Revised Part 75, Section 12(G) to allow electronic payment of annual emissions fees. **NMED Exhibit 5** at 5, Lines 25-26. Second, the Department proposes adding language to Revised Part 75, Section 12(H) providing that failure to pay annual

fees by the due date will subject the owner or operator to a late fee equal to 50 percent of the annual fee. **NMED Exhibit 5** at 5, Lines 30-35. Finally, the Department proposes adding a new provision at Revised Part 75, Section 12(J), specifying the potential penalties under the State Air Act for failing to remit annual fees by the due date. **NMED Exhibit 5** at 5, Lines 37-42.

Finally, the Department proposes adding a new Section 14, *Severability*, to Revised Part 75 specifying that if any provision of the rule – or its application to any person or circumstance – is held invalid, the remainder of the rule shall not be affected. **NMED Exhibit 5** at 5, Lines 51-53. This new provision is intended to prevent the entire rule from being voided should a court strike down one or more specific provisions of the rule and is standard in and consistent with other Board rules.

The Department's financial analysis provided the basis for the dollar amounts needed to fund the Air Quality Program, balancing projected costs with projected revenues. The Department conducted additional analysis of costs related to time and resources typically needed for various types of permits, registrations and facilities to propose a fee structure that is fair and reasonable. Brian Polgar's testimony (**NMED Exhibit 65**) presents the quantitative basis for the proposed fee increases in Revised Parts 71 and 75.

3. Style and Formatting Changes

Revised Parts 71 and 75 were drafted to comply with 1.24.10 NMAC, *New Mexico Administrative Code (NMAC)*, which establishes standards for uniform rule filings in an easily understood and common format, and include non-substantive changes made to meet the State Records Center and Archives' current style and formatting requirements for NMAC rules. These include using words for numbers zero to nine (except dates) and figures for numbers 10 and greater, spelling out numerical figures when using percentages (and spelling out "percent"), spelling out

fractions, using figures and symbols to represent amounts of money (and not spelling out the number), and using proper indents for all subsections, paragraphs and subparagraphs, pursuant to 1.24.10.12 NMAC, *Style*. Internal and external cross-references were also updated for consistency, statute and rule citations reformatted where necessary, and typographical and punctuation errors corrected.

4. Differences from Prior Rulemaking

In the previous (2024) rulemaking, the Department proposed many of the same changes to Part 71 as it proposes now. Identical changes include:

- removing mercury and TSP from the definition of fee pollutant and adding PM10 and PM2.5;
- adding a provision providing that fees will only be assessed for PM10 or PM2.5, not both;
- deleting the fee schedule for mercury;
- updating the language regarding automatic annual fee increases to clarify that non-HAP and HAP fees shall remain the same in the event of a decrease or absence of change in the Consumer Price Index; and
- adding language allowing for electronic payment of annual emissions fees.

However, the Department's current proposal differs from the previous proposal in several respects. First, the Department is proposing to change the non-HAP fee to $85 per ton, versus $81 per ton in the previous proposal. The Department is also proposing to change the HAP fee to $258 per ton, versus $250 per ton in the previous proposal. However, had the Board adopted the previous proposal, the non-HAP fee would be approximately $85.47 per ton today due to annual increases based on the Consumer Price Index, and the HAP fee would be approximately $263.81 per ton. Hence, the proposed non-HAP and HAP fees in the current proposal are effectively identical to

those in the previous proposal.

Second, whereas the previous proposal would have eliminated the 6,000 ton per year cap on emissions used in the annual fee calculation, the current proposal not only retains the cap, but lowers it to 3,000 tons. As discussed previously, this change was made to address concerns raised by industry stakeholders and will improve fee equity by ensuring that no Title V facility pays more than five percent of the total emissions fees collected in any one year.

Third, the current proposal includes a new provision providing that failure to pay annual emissions fees by the due date will subject the owner or operator to a late fee equal to 50 percent of the annual emissions fee. This provision was not in the previous proposal and is intended to incentivize timely payment of fees. The late fee is capped at $5,000 ($10,000 if the late fee is not timely paid) in order to protect large sources from potentially excessive late fees.

Finally, the current proposal does not include the provision confirming administrative compliance costs for the enforcement of Chapter 2, Title 20 NMAC that was in the previous proposal, adds a new severability section that was not in the previous proposal, and removes the duplicative applicability section, which the previous proposal retained.

Similar to Part 71, the Department proposed many of the same changes to Part 75 in the 2024 rulemaking as it proposes now. Identical changes include:

- increasing the points for modeling reviews from 15 to 30;
- updating the language regarding automatic annual cost per point and annual fee increases to clarify that the cost per point and annual fees shall remain the same in the event of a decrease or absence of change in the Consumer Price Index; and
- adding language allowing for electronic payment of fees.

The Department's current proposal does, however, differ from the previous proposal in

several respects. First, the Department is no longer proposing to increase the filing fee for construction permit and NOI applications to $2,000 as previously proposed. Instead, the Department is proposing to retain the current $500 filing fee for construction permit applications, eliminate the filing fee for NOI applications, and add 10 points to Part 75's complexity-based points schedule for NOI applications so the Department can assess application review fees for NOI applications in lieu of the current filing fee.

Second, the Department is proposing to increase the points for GCP-Oil & Gas registration applications from 10 to 30, instead of 50 as previously proposed. This change is based on further evaluation of the time required for permitting staff to process different types of applications, which indicated that the previous five-fold increase in points for GCP-Oil & Gas registration applications was not in alignment with the time required to process them relative to other types of GCP registration applications.

Third, the Department is proposing to change the cost per point to $585 versus $510 in the previous proposal, and to change the annual fee for sources that have been issued a construction permit to $2,800 versus $2,430 in the previous proposal. In addition, the Department is proposing to add a $700 annual fee for NOI facilities, which was not in the previous proposal. These changes are necessary to generate sufficient revenue to cover the costs of the necessary projected needs of the Air Quality Program, as discussed in the testimony of Brian Polgar.

Fourth, the current proposal includes several new provisions that were not in the previous proposal, including: 1) a provision clarifying when the Department may assess additional points and fees for application reviews; 2) a provision clarifying that annual fees shall be assessed if the construction permit, registration or NOI was in active status on December 31 of the preceding year, regardless of the source's operational status; 3) provisions regarding invoicing and payment of fees

for different types of applications that better align with the Department's current practices; 4) a provision providing that failure to pay annual fees by the due date will subject the owner or operator to a late fee equal to 50 percent of the annual fee; and 5) a provision specifying the potential penalties under the State Air Act for failing to remit annual fees by the due date. The reasons for adding these provisions are discussed above.

Finally, the current proposal does not include the provision confirming administrative compliance costs for the enforcement of Chapter 2, Title 20 NMAC that was included in the previous proposal, retains the requirement to prepare and present a review of construction permit fees and program costs to the Board annually, which the previous proposal eliminated, and adds a new severability section that was not in the previous proposal.

VI. NMED STAKEHOLDER ENGAGEMENT

The Department engaged with interested parties in many ways over many months and adjusted the fee proposal in response to the feedback received. This section describes the Department's stakeholder engagement, including how the Department met the legal public notice and engagement requirements.

A. Previous Rulemaking (EIB 24-12(R))

In 2024, the Board held a public hearing on a similar proposal by the Department to increase emissions and permit fees. In response to concerns raised at that hearing, the Department analyzed its 2024 proposal to ensure that these concerns were addressed in the current proposal. Over the course of the next year, the Department completed additional work to structure application review fees to better align with the time and effort necessary to complete the initial reviews of those applications. The Department also considered the concern regarding one company shouldering an outsized burden on Title V emissions fees. In response, the Department lowered

the cap on pollutants used to calculate the emissions fee. The stakeholder engagement, then, began with the 2024 rulemaking and has continued through informal interactions with applicants letting us know that they want or expect a higher level of service than what we are currently able to provide. In response, the Department has increased its use of contractors to provide that service. The Department has responded to stakeholders, beginning with the previous hearing and continuing through the current rulemaking process. This is why the Department has included the stakeholder engagement information for the 2024 rulemaking below.

The Department initiated stakeholder outreach for the 2024 Proposed Repeal and Replacement of 20.2.71 NMAC – *Operating Permit Emissions Fees* and 20.2.75 NMAC – *Construction Permit Fees*, EIB 24-12 (R), on March 8, 2024, when the Department sent out a bilingual notice to potentially affected parties via the AQB's ListServ announcing a March 20, 2024, virtual stakeholder engagement meeting to discuss the proposed revisions to both regulations. The ListServ notice also included links to the Department's petition and the Board's hearing docket. The Department posted notice of the public informational meeting on its websites, including its events calendar. Approximately 10 people attended the March 20, 2024, meeting, representing industry associations, industrial sources, and the general public. The Department later posted on its website its presentation at the meeting. The Department also met individually with industry representatives, including New Mexico Oil & Gas Association ("NMOGA"), the Independent Petroleum Association of New Mexico ("IPANM"), the New Mexico Chamber of Commerce, and the New Mexico Mining Association ("NMMA") to discuss the specifics of the fee proposal.

The Department considered the feedback it received from stakeholders during the previous rulemaking when developing its fee proposal for the current rulemaking. For example, during the

previous rulemaking, IPANM commented that the Department's proposed fivefold increase in points for reviewing GCP-Oil & Gas registration applications would be a hardship for small oil and gas producers. Based on that feedback, and further analysis of the relative effort required to review GCP-Oil & Gas registration applications, the Department has reduced the points for reviewing such applications from 50 to 30 in its current proposal, thereby cutting the proposed increase in points for reviewing GCP-Oil & Gas registration applications nearly in half compared to its previous proposal. (Qualifying small businesses continue to have reduced fees compared to other entities.)

Similarly, NMMA argued during the previous rulemaking that the Department's proposal to add PM10 and PM2.5 to the definition of fee pollutant so it can restart assessing fees for particulate matter would result in one mining facility paying as much in annual emissions fees as many other facilities combined, owing to that facility's high allowable emission rate for PM10. In response to these concerns, the Department has lowered the cap on emissions used in the annual fee calculation from 6,000 tons to 3,000 tons in its current proposal. As discussed in Section V.B.1 of my testimony, lowering the cap will improve fee equity by ensuring that no Title V facility pays more than five percent of the total emissions fees collected in any one year.

The Department also notes that some facilities, including the mining facility in question, have much lower actual emission rates than they do allowable emission rates to provide for maximal operational flexibility or due to other factors. Some mining permits were issued with the assumption that multiple areas of the facility would be operating at the same time even though the available equipment at the facility would not support that. For example, the same haul truck cannot physically drive on multiple haul roads at the same time. Such a facility could modify its permit to account for such physical constraints (e.g., by limiting the allowed area of operations to what

can actually be used in practice), thereby reducing their allowable emission rates – and annual emissions fees - without significantly reducing the flexibility of their permit if that would still be advantageous even with the proposed 3,000 ton per year cap.

The Department has heard two main objections to its proposed emissions fee increases from industry: (1) the Department should charge emissions fees based on actual emissions, rather than allowable emissions; and (2) assessing fees for particulate matter by changing the definition of fee pollutant to include PM10 and PM2.5 as discussed later in my testimony will cause certain facilities to pay a disproportionate share of Title V Program costs. These objections were considered by analyzing other states' fee structures (**NMED Exhibit 21**), considering the impact to the Department of charging only for actual emissions, and analyzing the economic impact to individual facilities for correcting the definition of fee pollutant to include particulate matter, PM10 and PM2.5 (**NMED Exhibit 22**).

The analysis of other states' fee structures provided little useful information. Each state, as EPA clearly allows, can structure their fees as needed, as long as the reasonable direct and indirect costs of the entire program are covered. Some states charge on actual emissions; others charge on allowable emissions. Each state sets their fee structures based on their individual needs.

In considering the impact of charging for actual emissions, the Department concluded two things: (1) this would delay the collection of fees considerably (at least a year) due to the need to analyze and certify data for each year's emissions inventory (inventories are due for prior years' emissions in April followed by 4-6 months for analysis and certification after which these data could be used to calculate fees); and (2) the non-HAP fee would need to be raised well above $85 per ton to cover the reasonable direct and indirect costs of the Title V Program, negating any potential savings to industry, since the same amount of revenue must be collected to cover those

costs regardless of whether fees are charged on actual or allowable emissions.

The Department analyzed the economic impact of adding PM10 and PM2.5 to the list of defined fee pollutants. First and most notably, facilities have not been paying for emissions of particulates at all since TSP was taken out of permits' allowable emissions. The Department's oversight in this matter has saved various industries over two million dollars to date. Further, the Department analyzed how various facilities could save emissions fees by reducing their allowable particulate emissions to more closely match their actual emissions. **NMED Exhibit 22** shows that the largest emitters of particulates could reduce their fees significantly by lowering their allowable limits, even adding in a safety factor (or buffer) for variable conditions in a given year. For example, the largest PM10 emitter, a mine, has set their allowable emission rate at almost 4,700 tpy, even though the highest actual emission rate for PM10 (2022 – 2024) was only 628 tpy. The Department has suggested to this facility that they could lower their allowable limit, but so far the company has chosen not to do this. Taking into account the 3,000 ton per year cap the Department proposes in response to the previous allegation of unreasonableness of this facility's burden, this facility could save $188,000 to $202,000 annually, depending on the safety factor chosen. (The 3,000 tpy cap already saves this facility over $144,300.) This is a business decision that every company can make.

While this analysis compares current fees and current allowable limits with the proposed per ton fees at various allowable limits, it is important to note that a true comparison of the economic impact to these industries should compare the new fees to the fees paid for particulates the last year they were charged for particulates, with adjustments for inflation. For any industry with significant particulate emissions, comparing $0 per ton for particulates to the new fee of $85 per ton is a false comparison.

The Department has been and continues to be responsive to stakeholder feedback.

B. Current Rulemaking (EIB-25-77 (R))

1. Pre-Petition Engagement

The Department initiated the current rulemaking proceedings when it filed its Petition for Regulatory Change to Repeal and Replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*, with the Board on December 3, 2025. Prior to doing so, on October 9, 2025, I met with representatives and spoke at the NMOGA membership meeting. I informed those present at the meeting that the Department planned to petition the Board in December for a new fees hearing and explained that the fees requested would be similar to the fees requested in 2024, but that the Department had made some adjustments based on industry feedback from the 2024 hearing, which I've just described, and to make the fee structure more equitable in general. NMOGA asked a few follow-up questions, mostly unrelated to fees and more about the Department's plans for future rulemakings for methane and anticipated updates for Part 50. The Department has scheduled with NMOGA to present more detailed information regarding the fee increase proposals at their February 25, 2026 meeting.

Importantly, the Department receives feedback from stakeholders almost daily outside of this formal rulemaking proceeding as part of its regular business practices that has informed how the Department has shaped its fee proposal. For example, although industry stakeholders may not inform the Board themselves as part of this particular proceeding, the Department regularly receives communications from industry to increase its services, including providing weekly meeting times to discuss their applications and always deliver permit decisions on time. In addition, although community members and environmental organizations may not inform the Board themselves as part of this formal proceeding, the Department receives regular

communications that the Department should have additional monitors in the Permian Basin and do more to ensure that permitted entities are in compliance.

2. Post-Petition Engagement

a. Additional Stakeholder Engagement

Immediately after filing the petition, the Department sent copies of its proposal to NMOGA, NMMA and IPANM, the two latter of which had opposed the Department's proposal in 2024 and offered to hold meetings to discuss the proposal and feedback on same. The Department did not hear from IPANM, nor has it at the time of this filing. The Department did hear back from NMMA and met with NMMA representatives on Tuesday, January 6, 2026, from 10:30 to 11:30 a.m. The Department provided information regarding what costs fee revenues are required to cover, the newly introduced cap on annual emissions for Title V fee calculations, the reasons related to timing that the Department charges Title V emissions fees based on permitted (allowable) limits, and assured them that the Department uses Title V revenues only for the Air Quality Program as it relates to Title V facilities. Representatives seemed surprised to learn that the revenues must cover all direct and indirect costs of implementing the Title V Program. Representatives also suggested that the Department seek additional funding from the New Mexico Legislature through a General Fund appropriation, which as Secretary Kenney's testimony describes, is not the primary funding source for the Department's Air Quality Program. The NMMA representatives communicated to the Department that it would be making a decision on the fee proposal at their next internal meeting.

The Department met with NMOGA representatives on January 15, 2026, regarding the fee proposal from 1-2 p.m. The NMOGA representatives informed the Department of current member feedback, including that many members understood the need for a fee increase and that some

members did not agree that emitting entities should be "bankrolling program growth." The NMOGA representatives communicated to the Department that it looked forward to the upcoming public virtual information session about the fee proposal and would be making a decision on the fee proposal at their next internal meeting.

Another concern voiced by NMOGA was the removal of Board oversight at Revised Part 75, Section 13. The original intent of removing this language was to align requirements with actual practice, as the Department had not been able to meet this requirement due to under-staffing. The Department agrees that this oversight is important. Therefore, in the NOI version of Revised Part 75, the Department has reversed these changes. **NMED Exhibit 6** at 5, Lines 29-32.

As part of its outreach, the Department held a virtual public informational meeting on January 15, 2026, from 4-6 p.m. regarding its proposed changes to 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*. On December 23, 2025, the Department sent out a bilingual notice via the AQB's ListServ announcing this meeting and the virtual "office hours" described below, and a second bilingual notice on January 8, 2026, providing information about how to join both meetings online or by phone. **NMED Exhibits 23-24**. The Department also provided this information on its website. **NMED Exhibits 25-26**. Department staff provided an overview of the proposed changes to both rules at the meeting, and there was time allowed for questions from stakeholders and the general public. The Department posted its presentation slides on its website before the start of the January 15, 2026, public informational meeting and posted a link to the recording of the meeting on the Department's website the day after. **NMED Exhibits 27-28**.

The Department then held virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the

proposed rules. As described above, the Department sent out several notices regarding this meeting via the AQB's ListServ and provided this information on its website well in advance of the meeting. The Department provided a final meeting reminder on its website on January 20, 2026. **NMED Exhibit 27**. Although Air Quality Program staff and other people attended the meeting, no one that identified themselves as a stakeholder asked questions or provided comments.

To assure the Board focuses on the specific authority cited as part of this rulemaking and the actual fee schedules necessary to align Air Quality Program requirements with needed revenues in the Title V Fund and the Construction Fund, the Department has removed Section 113(D) from the petition version of Revised Part 71 (**NMED Exhibit 3** at 4, Lines 30-31), and Subsection 12(K) from the petition version of Revised Part 75 (**NMED Exhibit 6** at 5, Lines 25-26).

b. Public comments received and NMED response

At its public meeting on January 15, 2026, the Department received live questions from meeting attendees. A representative from WildEarth Guardians asked about the Department's continuation of permitting activities in its Air Quality Program without first ensuring that the Department has sufficient resources to monitor compliance and enforce permit conditions. The Department responded that the Air Quality Program understands its mandate to protect air quality, including ensuring that permittees implement emission controls to the greatest extent possible, comply with the conditions of their permits, and adhere to all applicable regulations. The Department emphasized that the agency does not possess the authority to deny permits outside established statutes; however, the Department did state it aims to enhance regional modeling capabilities to better assess cumulative environmental impacts and underscored that any improvements depend on securing adequate funding for the implementation of those improvements.

WildEarth Guardians also stated that it understood the Department to be saying the Department cannot protect air quality without additional resources and that fee revenue has declined even as permitted facilities increased.[15] WildEarth Guardians asked about interim safeguards to ensure program adequacy and public health protection in the time leading up to the Board's potential adoption of the Department's fee proposal and inquired if the Department has considered limiting or conditioning new permits until the Air Quality Program is able to demonstrate adequate staffing, monitoring, and enforcement capacity. In response, the Department commented that the Department rejects the assertion that it has acknowledged an inability to protect air quality without additional resources. The Department clarified that the statement regarding declining fee revenue applies specifically to the Title V Program and does not extend to the Construction Program.

The Department also communicated in response that it has continued to protect environmental quality and public health despite current revenue conditions, and it considers claims suggesting otherwise to be inaccurate. While acknowledging that improved staffing, technological capacity, and additional resources would enhance its effectiveness, the Department affirms that it is fulfilling its responsibilities under existing circumstances and recognizes that there is always room for improvement. The Department noted that the promulgation of Part 50 has been a successful regulatory measure, expanding oversight to facilities that were previously unregulated and significantly strengthening monitoring and compliance efforts. The Department emphasized that the implementation of Part 50 represents meaningful progress compared to the absence of such

[15] Both the Board and the Department are defendants in *Atencio v. State, 2025 N.M. App. LEXIS 34, Writ of certiorari granted* ***Atencio*** *v. State, 2025 N.M. LEXIS 316 (Nov. 10, 2025)*, brought by a set of plaintiffs, including the Center for Biological Diversity and WildEarth Guardians, that the Department's Air Quality Program needs to do more to protect human health and the environment and needs more funding.

regulation. Overall, the Department asserts that it is making substantial efforts to safeguard air quality, and that recent monitoring data reflects the success of these initiatives, while acknowledging that additional resources would further improve performance.

In addition, at the January 15, 2026, public meeting, a representative from Earthworks asked about the 2024 rulemaking in which the Department mentioned that it receives $8.8 million in fees and the 2024 increase would bring in approximately $35.8 million annually, and to see if those amounts are still an accurate projection for the present rulemaking. The representative from Earthworks also asked if there will be public comment during the March hearing dates. The Department clarified that the specific answers to these questions were not available due to not having information readily available on last year's proposal and the analysis for the current proposal not being completed. The Department confirmed that, for the fiscal year 26, the projected combined revenue for both programs is indeed over $8 million. The Department noted that the estimate of $35.8 million appeared somewhat high and may instead reflect anticipated totals by fiscal year 2030. The Department also noted that projected costs for fiscal year 2026 are expected to surpass the projected revenue.

In response to the inquiry regarding public comment during the March hearing, the Department stated that although the hearing officer in this rulemaking has yet to issue a pre-hearing order assigning the outline of the hearing schedule, the hearing officer will ensure that times for public comments are incorporated into each day. The Department noted that the hearing officer typically provides for oral public comments of usually three minutes each and schedules at least one public comment session during the evening to accommodate those unable to attend the hearing during standard working hours. The Department clarified that although there may be a limit on the length of oral public comment, there is no limit on the length of written public comment and

explained that the Department currently has an open public comment portal for Department-related comments, and the Board also has an open public comment portal for comments directly to the Board or emailed to the Department's Office of Public Facilitation paralegal, Pamela Jones at Pamela.Jones@env.nm.gov.

The representative from Earthworks also asked how the Department's fee proposal would increase benefit to local communities that live amongst permitted facilities and operations. The Department explained that if the Board accepts its fee proposal, the Air Quality Program will be able to enforce permit conditions for existing operations more effectively – including in communities with permitted facilities – through a substantial increase in compliance and enforcement staffing. It was emphasized that additional personnel are necessary to oversee the growing number of facilities under the Department's regulatory authority. The Department staff explained that one activity it has begun and will likely expand is to conduct on-site verifications after the Department issues a permit to confirm that the permitted facilities have been constructed in accordance with their approved permit conditions – an area that previously presented compliance challenges. The Department also explained that it seeks to enhance its monitoring capabilities to proactively address potential air quality concerns. Given that New Mexico is the fifth-largest state geographically, the Department is working to expand its monitoring network, particularly in the Permian Basin. The goal is to develop a more granular data network capable of identifying localized air quality trends and forecasting areas at risk of exceeding established standards. All of these measures are intended to provide tangible benefits to communities that have permitted facilities. The Department also noted that implementation of Part 50 has prompted applicable permittees to invest more heavily in compliance efforts, resulting in measurable improvements in air quality.

The Earthworks representative also inquired as to the deadline for submitting public comment to the Board for the Board's consideration. The Department explained that there are two online portals for the public comments – one for public comment to the Department and one for comments to the Board.

Also at the January 15, 2026, public meeting an attendee identified as Chuck participated by noting that he was unfamiliar with the Environmental Improvement Board process and asked if the Board adopted the Department's proposal, what was the timeline for the application of the updated fees. In response, the Department explained that if the Board adopts the proposed fee rule, it will become effective on June 1, 2026, and the application review fees will take effect immediately on that date. The Department however further explained that although the rule will become effective on June 1, 2026, it will not affect Title V fees for the current year, as those fees must be submitted annually by March, nor will it affect the annual construction permit fees and NOIs for the current year.

At the public meeting, the Department also received a question from an attendee named Antoinette Reyes regarding how many public comment opportunities are available. The Department responded that there are ample and ongoing opportunities to comment to both the Department directly through the public comment portal and to the Board directly through a separate public comment portal. The Department also noted that anyone could informally reach out to the Department as well, and that during the formal rulemaking hearing, there will also be opportunities for oral public comment during those days.

Via email, the Department received a request for clarification as to whether the 30 points for GCPs for oil and gas facilities applied to all GCPs related to oil and gas (such as the GCP-6) or whether it was specific to just the GCP-Oil & Gas. The Department read the question at its

office hours on January 22, 2026, and responded that the 30 points proposed only applies to the GCP-Oil & Gas as this GCP is the comprehensive GCP requiring significantly more analysis than other GCPs. The Department added that they would work on clarifying language in Revised Part 75. The Department has since made changes to Revised Part 75 to make this distinction clear, as discussed below.

c. Revisions to regulatory proposals post-petition

In response to the public comment described above, the Department revised the language in Revised Part 75, Section 11(A) to clarify that all GCP registrations except the GCP-Oil & Gas will continue to be assessed 10 points, and that only GCP-Oil & Gas registrations will be assessed 30 points. The language in question pertained to general permits and was found in the points table under "2. Other Permitting Actions":

General Permits (20.2.72.220 NMAC) for non-Oil and Gas Facilities	10
General Permits (20.2.72.220 NMAC) for Oil and Gas Facilities	30

For enhanced clarity, NMED revised this language as follows:

General Permit Registrations other than GCP-Oil & Gas (20.2.72.220 NMAC)	10
GCP-Oil & Gas Registrations (20.2.72.220 NMAC)	30

NMED Exhibit 6 at 3, Lines 48-50.

Also, as described above, the Department has removed the following provision regarding Administrative Compliance Costs from Revised Parts 71 and 75:

> Non-compliance with Chapter 2, Title 20 NMAC or the Air Quality Control Act subjects each 25 owner or operator to administrative compliance costs for enforcement of Chapter 2, Title 20 NMAC.

NMED Exhibit 3 at 4, Lines 30-31; **NMED Exhibit 6** at 5, Lines 25-26.

Finally, as described above, the Department has also reversed changes to Revised Part 75, Section 13 that would have reduced Board oversight of fees. Revised Part 75, Section 13 has been revised to read as follows:

> The department shall prepare a review of the construction permit fees and construction permit program costs annually. The review shall include information on the budgets, expenditures, fund balance, and related projections. The review shall be presented to the Board within six months following the end of the fiscal year.

NMED Exhibit 6 at 5, Lines 29-32. This is identical to current 20.2.75.13 NMAC.

VII. LEGAL PUBLIC NOTICE REQUIREMENTS

Pursuant to the public notice requirements in Subsection E of Section 14-4-2, *Provide to the Public*, NMSA 1978 (2017); Section 14-4-5.2, *Notice of Proposed Rulemaking*, NMSA 1978 (2017); Section 14-4-5.3, *Public Participation, Comments and Rule Hearings*, NMSA 1978 (2017); Subsection N of 20.1.1.7 NMAC *Provide to The Public*; 20.1.1.301 NMAC, *Notice of Hearings*; and 1.24.15.9 NMAC, *Requirements For Notices*, NMED prepared, published, posted and distributed the "New Mexico Environmental Improvement Board Notice of Rulemaking Hearing to Consider the Proposed Repeal and Replacement of 20.2.71 NMAC *Operating Permit Emissions Fees* and 20.2.75 NMAC *Construction Permit Fees* EIB 25-77 (R)," in both English and Spanish ("Public Notice"). **NMED Exhibits 29-30**. The Department described in the Public Notice all of the statute-required and rule-required information about the rulemaking matter and rule-making process, thus complying with Subsection E of Section 14-4-2, NMSA 1978 (2017); Section 14-4-5.2, NMSA 1978 (2017); Section 14-4-5.3, NMSA 1978 (2017); Subsection N of 20.1.1.7 NMAC; 20.1.1.301 NMAC; and 1.24.15.9 NMAC. For example, for public participation, the Public Notice contained details about how to attend the Board hearing in person or via WebEx

and listed three ways to provide written public comment: 1) via a comment form posted on the Department's online Public Comment Portal;[16] 2) via e-mail to the Board Administrator's e-mail address; and 3) via physical mail delivered to the Board Administrator's postal address. The Public Notice also included the Board Administrator's telephone number in case the public had questions or comments. As of February 17, 2026, the Board Administrator has received no public comments via any of the methods described in the public notice. **NMED Exhibit 31**. Nor has the Department received any public comments via a separate comment form (for commenting directly to the Department) posted on the Department's online Public Comment Portal,[17] the link to which was provided on the Department's website, in AQB ListServ announcements, and in the Department's January 15, 2026, public informational meeting presentation. **NMED Exhibits 23, 25 and 28**.

Pursuant to 20.1.1.301 NMAC, *Notice of Hearings*, the Department published the Public Notice, in both English and Spanish, in the Albuquerque Journal on January 11, 2026, the Tri-City Record on January 12, 2026, and the Carlsbad Current Argus on January 13, 2026. **NMED Exhibits 32-34**.

The Department complied with Subsection A of Section 14-4-5.2, NMSA 1978 (2017) of the *State Rules Act* by publishing the Public Notice in the New Mexico Register, Volume XXXVII, Issue 1, on January 13, 2026. **NMED Exhibit 35**.

The Department also complied with Section 14-4A-4, *Rules Affecting Small Business*, NMSA 1978 (2005) of the *Small Business Regulatory Relief Act* by providing notice and copies of the Department's petition and proposed rules to the Small Business Regulatory Advisory

[16] The comment form was posted on the Public Comment Portal and commenting opened on or about December 24, 2026, prior to publication of the Public Notice in the New Mexico Register. A link to the comment form was included in the Public Notice.
[17] The comment form was posted on the Public Comment Portal and commenting opened on December 4, 2026, the day after the Department filed its Petition.

Commission via e-mail on January 13, 2026. **NMED Exhibit 36**. The Department has received no questions or comments from Commission members as of February 17, 2026.

Pursuant to Section 14-4-5.2, NMSA 1978; Section 14-4-5.3, NMSA 1978 (2017); and Subsection N of 20.1.1.7 NMAC, the Department 'provided to the public' notice of proposed rulemaking, which included:

1) Posting it on the Department's website. **NMED Exhibit 37**;

2) Posting it on the New Mexico Sunshine Portal. **NMED Exhibit 38**;

3) Making it available at the Department's district, field and regional offices via e-mail on January 13, 2026. **NMED Exhibit 39**;

4) Sending it via e-mail on January 13, 2026, to persons who made a written request for notice of announcements addressing the subject matter of the rulemaking proceeding and who provided an e-mail address to the board administrator. **NMED Exhibit 40**;

5) Sending it via e-mail on January 14, 2026, to the person(s) who participated in the rulemaking by filing an Entry of Appearance and providing an e-mail address to the board administrator. **NMED Exhibit 41**;

6) Sending it via postal mail to persons who have provided a postal address. **NMED Exhibit 42**;

7) Sending it via e-mail on January 13, 2026, to the New Mexico Legislative Council for distribution to appropriate interim and standing legislative committees. **NMED Exhibit 43**.

In furtherance of public outreach, the Department developed a Public Involvement Plan ("PIP") which was posted on AQB's webpage. **NMED Exhibit 44**. The Department developed this PIP to outline public participation opportunities and information that may be needed to

participate in the operating and construction fees rule revision project. As part of the PIP, the Department committed to providing notice to:

1) Twenty-three active land grants (Abiquiu, Anton Chico, Atrisco, Cañon de Camué, Cebolleta, Chililí, Cristóbal de la Serna, Cubero, Don Fernando de Taos, Juan Bautista Baldez, Manzano, San Antonio de Las Huertas, San Antonio del Rio Colorado, San Joaquín del Rio de Chama, San Miguel del Bado, Santa Barbara, Santo Domingo de Cundiyó, Santo Tomas Apóstol del Río de Trampas, Tajiqu, Tecolote, Tierra Amarilla, Town of Tomé, and Town of Torreón), via e-mail, completed on January 13, 2026. **NMED Exhibit 45**. The Department has received no comments from land grants as of February 17, 2026.

2) Five Councils of Governments (Northwest NM COG, Mid-Region COG, Eastern Plains COG, Southwest NM COG, South Central COG) and two Economic Development Districts (North Central NM Economic Development District and Southeastern NM Economic Development District) via e-mail, completed on January 13, 2026. **NMED Exhibit 46**. The Department has received no comments from COGs or EDDs as of February 17, 2026.

3) Twenty-five Pueblos, Nations, and Tribes (Acoma, Cochiti, Isleta, Jemez, Laguna, Nambe, Ohkay Owingeh (San Juan), Picuris, Pojoaque, San Felipe, San Ildefonso, Sandia, Santa Ana, Santa Clara, Kewa (Santo Domingo), Taos, Tesuque, Zia, Zuni, Ysleta del Sur, Navajo Nation, Navajo Nation Council, Jicarilla Apache, Mescalero Apache, and Fort Sill Apache), via e-mail, completed on January 13, 2026. **NMED Exhibit 47.** The Department has received no comments from Pueblos, Nations, and Tribes as of February 17, 2026.

VIII. THE AIR QUALITY PROGRAM COMPONENTS

The following testimony describes the AQB's Air Quality Program to provide a clearer

understanding of the many costs associated with implementation of the Program. The Department is responsible for determining the allocation of its operating budget with oversight by the Department of Finance and Administration, but the following provides illustration and justification for the amounts of funding requested in this hearing, as was explained by Secretary Kenney. Specific analysis of the Air Quality Program's funding needs, as it relates to the proposed fee amounts and structure will be provided in separate testimony from Brian Polgar.

As indicated above, fees collected through Parts 71 and 75 are required to cover all direct and indirect costs of implementing and administering the Air Quality Program. As explained in each section below, direct and indirect costs for program activities are first covered by available staff; the Department hires contractors only when staff cannot meet the level of service required. Thus, costs are reasonable within the bounds of costs that must be recovered through fee revenues. I present the following description of the AQB's Air Quality Program, not for approval but rather, for context and understanding of the breadth and complexity of the Program the requested fees must cover to progress in protecting New Mexico's air. The Department authorizes expenditures of its operating budget each year to fund the Air Quality Program. The Board's role is to adopt rules that provide the fee schedules with the amounts necessary to fund the Air Quality Program.

The Air Quality Program is complex and requirements for the program have expanded in terms of both the number and types of facilities regulated and the federal and state rules and regulations applying to those facilities. In addition, the Department has and will continue to devote significant resources to addressing the continuing ozone issues in the Permian Basin and to respond appropriately to community and resident concerns regarding the quality of the air they breathe. The following is an overview of the current organization and responsibilities of the AQB, for which the fees set by Part 71 and Part 75 cover the costs. Bret Anderson will present technical testimony

regarding the EPCEB portion of the Air Quality Program.

In addition to the costs associated with the AQB and AQC&E, the program is supported by the Administrative Services Division, Office of General Counsel, General Services Department, NMED Information Technology Bureau and State Department of Information Technology, and the Grants Coordinator within the Office of the Secretary. Also, the Secretary either directly or through delegated authorities directs the Air Quality Program through the EPD and the EPCEB. The fees from Part 71 and Part 75 fund a pro-rated fraction of these indirect costs.

NMED Exhibit 48 contains a chart showing the historical staffing levels for the AQB as snapshots from the first calendar quarter each year since 2012. **NMED Exhibit 49** contains a table that summarizes the historical staffing since 2012 by section, plus the additional staffing needs for the Bureau and planned position creation over the next five years. Note that the needs expressed here are reasonably foreseeable needs. As the Air Quality Program moves forward with protecting air quality in New Mexico, additional (or different) needs may arise.

The AQB's programmatic tasks are divided into three overarching sections, overseen by the Bureau Chief. **NMED Exhibit 50** shows the general organizational structure of the AQB. Each section has a Section Chief, responsible for directing the work of that section. Each Section Chief supervises three or more managers and supervisors, who may, in turn oversee two or more supervisors or may supervise staff directly. Each section, however, depends in some measure on input from other sections to achieve its goals, as shown in **NMED Exhibit 51**.

Bureau managers and staff regularly meet with EPA's Region 6 personnel. Region 6 personnel require regular updates on each program (Monitoring and Quality Assurance, Planning, Permitting and Compliance & Enforcement) to maintain confidence that New Mexico's Air Program implements the Air Quality Program as required. Region 6 personnel provide guidance

and directives which the Bureaus must implement. Directives may include, but are not limited to Title V permit revisions, SOP revisions, and corrective actions for EPA audits. For example, the most recent EPA audit of the monitoring network program required approximately 250 hours of staff time, travel expenses to each site, and an additional 60 hours of staff time to address the (minor) deficiencies discovered through the audit. Because the Bureau prioritizes development and implementation of appropriate protocols, the most recent audit (2025) required only minor corrective actions and received very positive feedback from EPA, complimenting the Bureau on its efforts.

A. **AQB** Planning Section

The Planning Section of AQB provides small business assistance, develops air quality plans and regulations, reviews and comments on federal regulations and plans, collaborates with federal agencies to manage smoke and wildfires, works with EPA regarding ongoing SIP requirements, performs modeling for planning and permitting purposes, and collects and analyzes annual emissions data as part of the emissions inventory required in Part 73. In 2012, the Planning Section had eighteen (18) full-time employees ("FTE"); positions were reduced through 2021 to fifteen (15) FTEs. To meet requirements of regulatory and SIP planning, the Department has increased the Planning Section to its current level of 26 FTEs. Additional FTEs will still be necessary, though, as explained below. A table of FTE history and additional needs is attached as **NMED Exhibit 49**.

1. Small Business Environmental Assistance Program

Services provided by the Small Business Environmental Assistance Program ("SBEAP") include: assisting small businesses to successfully navigate permitting processes and answering small businesses' questions regarding applicable regulations; assisting small businesses with

completing permit applications, most often GCP registrations, Construction NOIs and Area Registrations for NESHAPs; assisting with training and data collection efforts for the annual emissions inventory; assisting with mining application reviews; developing educational materials and helping with outreach; and analyzing and commenting on National Environmental Policy Act ("NEPA") submissions and other Environmental Impact Statements submitted to the Department.

SBEAP analysts typically spend 20-40 hours per Construction NOI application assistance project and approximately the same for each GCP application assistance project other than the GCP – Oil & Gas ("GCP-O&G"). The unit may assist with 10-15 GCP applications per year and 2-10 Construction NOI applications each year. This portion of their work, then, represents approximately 240 – 4,000 staff hours each year or, on average, approximately 1 FTE.

Additional application assistance provided by SBEAP personnel includes streamline application assistance (20-30 hours each), regular NSR application assistance (30-40 hours each), relocation application assistance (2-5 hours each) and even some operating permit application assistance (100-140 hours). These assistance projects typically require 200 – 700 hours per year or, on average, approximately 1/3 FTE.

SBEAP produces and updates communications materials for distribution to regulated entities, violators of certain regulations, communities and individuals. They also field numerous questions via email and telephone. This includes, for example, helping 416 facilities in 2024 with the 2023 emissions inventory by answering questions and providing trainings about the requirements for the triennial minor source emissions inventory, which included NOI facilities, all sources with a GCP, all other types of minor source permits, as well as Title V facilities, who are required to provide data every year. Combined, this represented approximately 1 FTE.

SBEAP also provides services by reviewing and commenting on environmental impact

statements and NEPA reports. In 2025, the SBEAP unit reviewed and provided comments on 69 NEPA or related documents, representing 140-200 staff hours.

SBEAP also works with AQC&E, helps other AQB sections with outreach efforts, regulatory analysis, relocation applications, and completing requested research, and provides small businesses with small business certifications.

Current SBEAP personnel levels include one supervisor and two staff. Effective job performance requires a clear understanding of both federal regulations and state rules and the Bureau's permitting processes and conditions included in permits. In addition, it requires both attention to detail and an understanding of the larger perspective. SBEAP analysts must be able to determine the applicability of rules and regulations, understand which portions of each rule or regulation apply to the facility, follow the exact requirements of the State's air permitting rules, explain scientific or technical concepts to non-scientific or non-technical audiences, analyze the impacts various projects may have on the State's air quality, and become familiar with other teams' processes. In addition, SBEAP personnel must be excellent communicators in both written and verbal forms.

The Bureau needs to expand SBEAP staffing to assist much more with educational and other outreach efforts to small businesses. AQB also anticipates adding educational and outreach efforts for entities that are not small businesses to the responsibilities of the team. Educational efforts will include webinars, fact sheets, frequently-asked-questions ("FAQs") with responses, flyers, posters, etc. In-person meetings will continue to be optimal for both educational efforts and other assistance. Because of limited resources and high demand for this team's services, they have been unable to provide significant educational resources and outreach which would, over the longer term, provide for reduced compliance problems and more accurate permit applications.

Consultants often contact SBEAP personnel to answer questions regarding permit applications. With additional staff, educational efforts can be expanded to provide training to consultants.

The Small Business and Outreach team will, with an additional four (4) FTEs, be able to proactively provide training to the regulated community regarding permit processes and applications, compliance with state rules and federal regulations, emissions inventory requirements and processes, and new permit application protocols once the Air Quality Program's database is upgraded and expanded. This team will also assist other teams with required outreach and public notices, as well as provide more optimal outreach for rulemaking efforts. They will work with the Office of Strategic Initiatives and the Office of Economic Development to proactively reach out to the regulated community. This team will also focus on multi-media collaboration, working with other bureaus and departments to provide a more comprehensive perspective to the regulated community. Finally, the team will be responsible for assuring that all public-facing web pages are updated appropriately and in a timely manner.

2. Control Strategies

The responsibilities of the Control Strategies unit include: developing air quality plans and regulations; analyzing and drafting comments on federal rulemaking proposals; responding to federal rules and SIP requirements; submitting exceptional events demonstrations to exclude monitoring data for events that are outside of our control; participating in multi-jurisdictional meetings and work groups, such as the Joint Advisory Committee for Improvement of Air Quality ("JAC" – includes Mexico and Texas) or the Four Corners Air Quality Group (includes Arizona, Colorado and Utah); updating State rules as needed through collaboration with other units, AQC&E and EPA; providing analysis and testimony for rulemaking hearings before the Board; planning to address air quality issues proactively (such as the "Ozone Attainment Initiative," which

resulted in Part 50, the *Ozone Precursor Rule*), implementing the Diesel Emissions Reduction Act ("DERA") program and the Volkswagen Mitigation Fund program; advising on air quality considerations for joint projects, such as the Climate Change Action Plan; and assisting the Climate Change Bureau and the Energy, Minerals and Natural Resources Department ("EMNRD") with air quality-related projects. Control Strategies maintains the SIP according to EPA requirements as part of the Department's delegated authority to implement the Air Quality Program. Although the SIP contains more than just rules, **NMED Exhibit 52** provides a summary of the State rules included in the SIP .

Currently, Control Strategies consists of two teams working together on various projects. Two (2) supervisors and eleven (11) staff comprise Control Strategies. Projects vary in scope and complexity. For example, work on New Mexico's Regional Haze SIP revision for the second implementation period, most recently completed, began in 2018 and only recently reached the final stages with the December 2025 Board adoption of the revised plan and new companion rule 20.2.68 NMAC. This project represents 30,000-40,000 hours of staff time over the course of these 8 years, including participating in and leading regional work groups, collaborating with federal land managers and EPA, communicating extensively with Title V facility owners to analyze appropriate strategies to reduce emissions affecting Class I areas in the State, completing analyses and drafting the Regional Haze SIP revision and companion rule, drafting and presenting testimony at the Board hearing, offering stakeholder engagement opportunities, collecting and responding to comments, and making information and documents available and accessible to the public. As with any SIP-related and rulemaking effort, the project required significant attorney assistance, which for this project was handled within the Department.

Similarly, the development and adoption of Part 50, the *Ozone Precursor Rule*, required

over 15,000 hours of staff time to develop, including analysis, rule drafting, review, comment response, testimony drafting and presentation, and further public notice. Over 1,000 people attended public meetings and provided 524 comments on the rule. **NMED Exhibit 53**. In addition, the Department employed contractors to assist with analysis for this project due to limited resources (the Bureau had only one Control Strategies team until 2024), due to the time-sensitive nature of the project (because of continued ozone issues in particular counties), and due to the need for engineering analysis. Staff time included the Bureau Chief, upper management in the Environmental Protection Division and attorneys from the Office of General Counsel.

These are only two examples of rulemaking projects for which Control Strategies took the lead. Other rulemaking projects the Control Strategies unit has recently completed include incorporating federal rules by reference into the NMAC (a periodic effort requiring at least 2,000 staff hours; aligning the Affirmative Defense provisions of the NMAC with EPA rules, which required another 2,000 staff hours; and analyzing program needs for this (fees hearing) rulemaking. The Department estimates that, from the initiation of the 2024 fees hearing effort to the end of January 2026, the Department has invested 10,000-15,000 hours of staff time (including attorneys and upper management) and will incur additional attorney costs up to $200,000.

Control Strategies staff are actively working on methane rules, responding to federal regulations, and a response to the federal power plant emission guidelines. These two efforts currently represent approximately 2.5 FTEs through December 31, 2026. Other staff will continue to prepare for the upcoming third Regional Haze implementation period and work with Permitting staff on needed revisions to 20.2.72 NMAC, *Construction Permits*, and other permitting rules.

Control Strategies and the Planning Section Chief administer the Smoke Management Program in accordance with the requirements of the CAA and the federal Regional Haze Rule,

which primarily focus on mitigating the impacts of smoke on human health and the environment from all sources of fire. This includes implementing 20.2.65 NMAC, *Smoke Management* ("Part 65") for prescribed burns in collaboration with the U.S. Forest Service and the National Parks Service, managing the planned burn registration system, reviewing waiver requests, working with coordinators for emergency situations, and communicating smoke-related information to the public and the Department of Health. The Department submitted Part 65 to EPA as part of the SIP in 2003; EPA approved the addition to the SIP on November 27, 2012 (77 FR 70693). Additionally, the team may field questions regarding 20.2.60 NMAC, *Open Burning*, which prohibits most types of open burning in New Mexico, although potential violations are referred to compliance & enforcement personnel. This program requires approximately 800-1,000 hours of staff time annually, depending on fire-related events in any given year and activity related to Part 65. Wildfire smoke monitoring, when requested, is handled by the Monitoring staff in the Operations Section of the AQB. Data collected may be used for exceptional events demonstrations and for planning purposes, such as for Regional Haze SIP revisions.

Control Strategies has also drafted comments, in collaboration with the Climate Change Bureau, for the State regarding proposed federal rulemakings and deregulatory actions, focusing on the disinformation provided in certain proposals and the negative impacts to the State's air quality. The unit also provided insight regarding the State's Climate Action Plan and appropriate steps needed to mitigate climate change. Together, these projects represent approximately 400 hours of AQB staff time.

Additional projects currently underway for Control Strategies: multiple DERA (and VW Mitigation) projects for which staff advertise funding, analyze project applications, award funding, follow up with the sub-grant awardee and EPA, and handle financial transactions to reimburse

entities across the State (approximately 1500 hours of staff time annually plus additional indirect costs related to assistance from the Grants Coordinator for the Department and Administrative Services Division); analysis of federal deregulatory actions and strategizing for New Mexico's response (1,000 hours so far); and annual exceptional events demonstrations to demonstrate to EPA why certain uncontrollable events should not be included in design value calculations, which determine the attainment status of various areas (approximately 1,500 hours of staff time annually).

The Bureau added the second Control Strategies team in 2024 to address the volume and complexity of controlling air pollution in the state. Since that time, EPA has initiated a significant deregulatory agenda to which the AQB must respond to protect air quality in the State. The AQB anticipates needing to respond to increased federal and state legislation. Up to 24 FTEs may be needed for any urgent rulemaking that may be needed in the near future, (although up to 8 FTEs would be provided by existing staff) with additional contract assistance for analysis in support of these efforts as needed.

The Department is already addressing climate change. The State's Comprehensive Climate Action Plan, attached as **NMED Exhibit 54**, developed by the Climate Change Bureau and EMNRD, with some input from AQB, contains measures for industry, transportation, agriculture, buildings and other sectors. The Air Quality Program will conduct analysis and rulemaking efforts to address several measures in the Industry sector. A brief synopsis of industry measures for which the Air Quality Program will be directly or indirectly involved pursuant to the Climate Action Plan includes:

1. **Measure I-1 – Transition Oil and Gas Equipment to Electric Infrastructure.** This measure aims to reduce carbon dioxide emissions from oil & gas combustion by electrifying fuel combustion equipment in the oil & gas industry and encouraging

renewable energy to replace fossil fuel combustion. This will require the Department to initiate rulemaking through the Board. This effort will require 4 FTEs for two years.

2. **Measure I-2 – Carbon Capture and Sequestration – Combustion.** This measure aims to reduce oil & gas industry combustion emissions of greenhouse gases further by capturing carbon dioxide and sequestering it through subsurface injection. The Department will support EMNRD through overseeing air emissions. This effort will require 1.5 FTE for three years.
3. **Measure I-3 – Carbon Capture and Sequestration – Acid Gas Removal Units.** This measure aims to reduce carbon dioxide emissions for acid gas removal units using carbon capture and sequestration. These units already produce concentrated carbon dioxide streams that would be injected and sequestered instead of vented to the atmosphere. This measure, similar to measure I-2, will be jointly implemented by the Department and EMNRD. This effort will require 3 FTEs for one year, not including enforcement of the rule.
4. **Measure I-4 – Increased Monitoring and Methane Plume Investigation.** This measure establishes a comprehensive program to monitor for and investigate sources of methane plumes in the oil and gas industry. The program will be administered by EMNRD and the Public Regulation Commission's Pipeline Safety Bureau. The Department will provide assistance after it implements measure I-5, below. No immediate costs are anticipated for the Department.
5. **Measure I-5 – Building on Success of Ozone Precursor Rule.** This measure formalizes the Department's ability to reduce methane emissions by implementing a super-emitter monitoring program and to update requirements for pneumatic

controllers. This will require a joint effort by AQB and AQC&E for rulemaking and enforcement of the rules, respectively. This will require a total of 7 FTEs.

6. **Measure I-6 – Plug Inactive Wells.** This measure expands EMNRD's efforts to plug inactive oil and gas wells across the State. The Department will not be actively involved in this measure.
7. **Measure I-7 – Compliance Implementation.** This measure increases the Department's ability to ensure compliance with and enforce upon existing and future regulations for the oil and gas industry. The Department will aim to add 66 FTEs to the AQC&E through 2050.

Regulation changes increase the burden on Permitting staff and AQC&E staff to ensure facilities conform to the updated regulations. They also take great amounts of time for the Control Strategies staff to promulgate the regulations, as indicated above. The following list describes the new regulations that have come about since the previous fee revisions.

1. Since the last emissions and permit fee revisions, the Planning Section has undergone 8 separate rulemakings that involved the incorporation by reference of the delegation of federal NSPS under 20.2.77 NMAC, *New Source Performance Standards* ("Part 77"); NESHAP under 20.2.78 NMAC, *Emissions Standards for Hazardous Air Pollutants* ("Part 78"); and Maximum Achievable Control Technology ("MACT") standards under 20.2.82 NMAC, *Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants* ("Part 82"). Since 2002, over 312 combined new, amended, or corrected final rule notices have been published in the Federal Register and incorporated into Parts 77, 78 and 82.
2. In 2007, as part of the Department's response to the federal Clean Air Mercury Rule, the

Board adopted 20.2.85 NMAC, *Mercury Emission Standards and Compliance Schedules for Electric Generating Units* ("Part 85"), along with revisions to the Title V and Acid Rain Permit Programs under Part 70 and 20.2.84 NMAC, *Acid Rain Permits*, respectively. In 2014, Part 85 was repealed after the Clean Air Mercury Rule was rescinded.

3. Many rules that had been adopted and later repealed are somewhat dependent on the current gubernatorial agenda or federal prerogatives at the time of the rulemakings, including: 20.2.12 NMAC, *Cement Kilns*, repealed in 2014; 20.2.20 NMAC, *Lime Manufacturing Plants – Particulate Matter*, repealed in 2019; 20.2.36 NMAC, *Petroleum Refinery – Sulfur,* and 20.2.37 NMAC, *Petroleum Processing Facilities*, both repealed in 2016; 20.2.87 NMAC, *Greenhouse Gas Emissions Reporting*[18], repealed in 2011; 20.2.88 NMAC, *Emission Standards for New Motor Vehicles*, adopted in 2007, revised in 2011, and repealed in 2013; 20.2.98 NMAC, *Conformity of General Federal Actions to the State Implementation Plan*, repealed in 2013; 20.2.100 NMAC, *Greenhouse Gas Reduction Program*, adopted in 2010 and repealed in 2012; and 20.2.300 NMAC, *Reporting of Greenhouse Gas Emissions*, 20.2.301, *Greenhouse Gas Reporting – Verification Requirements*, and *20.2.350 NMAC, Greenhouse Gas Cap- and- Trade Provisions*, all three adopted in 2010 and repealed in 2012.
4. Rulemakings that are currently in effect since 2003: 20.2.1 NMAC, *General Provisions*, amended in 2010 and 2014; 20.2.2 NMAC, *Definitions*, amended in 2007 and 2009; 20.2.3 NMAC, *Ambient Air Quality Standards*, amended in 2006 and 2018; 20.2.7 NMAC, *Excess Emissions*, amended in 2008; 20.2.23 NMAC, *Fugitive Dust Control*, adopted in 2019;

[18] Provisions remain in 20.2.73 NMAC that allow the Department to collect greenhouse gas inventories.

20.2.35 NMAC, *Natural Gas Processing Plant – Sulfur*, amended in 2007; 20.2.50 NMAC, *Oil and Gas Sector – Ozone Precursor Pollutants*, adopted in 2022; 20.2.60 NMAC, *Open Burning*, amended in 2003; 20.2.64 NMAC, *Municipal Solid Waste Landfills*, amended in 2017; 20.2.66 NMAC, *Cotton Gins*, adopted in 2005; 20.2.70 NMAC, *Operating Permits*, amended six different times from 2004-2025; 20.2.71 NMAC, *Operating Permit Emissions Fees*, amended in 2004, 2007, and 2009; 20.2.72 NMAC, *Construction Permits*, amended in 2003 and 2006; 20.2.73 NMAC, *Notice of Intent and Emissions Inventory Requirements*, amended four times from 2003 through 2011; 20.2.74 NMAC, *Prevention of Significant Deterioration*, amended six times from 2005 through 2014; 20.2.75 NMAC, *Construction Permit Fees*, amended in 2003; 20.2.79 NMAC, *Permits – Nonattainment Areas*, amended four times from 2006 through 2021; 20.2.81 NMAC, *Western Backstop Sulfur Dioxide Trading Program*, adopted in 2003 and amended in 2011; 20.2.84 NMAC, *Acid Rain Permits*, amended in 2007; 20.2.86 NMAC, *Best Available Control Technology for Mercury at New Power Plants*, adopted in 2008; 20.2.89 NMAC, *Qualified Generating Facility Certification*, adopted in 2008 and amended in 2009; 20.2.90 NMAC, *Field Citations*, adopted in 2008; 20.2.99 NMAC, *Conformity to the State Implementation Plan of Transportation Plans, Programs, and Projects*, amended five times from 2005 through 2014; and 20.2.101 NMAC, *Carbon Dioxide Emission Standards for Coal-Fired Electric Generating Facilities*, adopted in 2022. A total of fifty combined rulemakings had occurred since 2003 that are still in effect today. Control Strategies takes the lead on almost all rulemakings before the Board; exceptions have occurred when upper management occasionally leads rulemaking efforts, with assistance from Control Strategies and other AQB sections.

5. The Climate Change Bureau was created on November 1, 2022, when 20.2.91 NMAC, *New Motor Vehicle Emission Standards*, was adopted in May 2022. Prior to that, AQB staff covered all planning activities now undertaken by the Climate Change Bureau, including the greenhouse gas regulations that were adopted and repealed from 2010-2012.
6. 20.2.68 NMAC, *Regional Haze Requirements*, was adopted by the Board in December 2025, as described above. The first Regional Haze planning period SIP submittal was due to EPA in 2007.
7. The Bureau has conducted twenty-four SIP revisions since 2003 that required going before the Board to amend the NMAC. The three most recent SIP revisions include: the Regional Haze SIP in 2025, Nonattainment New Source Review and the Good Neighbor SIP certifications in 2021.
8. Control Strategies has covered other requirements that fall outside the need for a hearing before the Board to be in good standing with the CAA. The work that is involved with submitting exceptional events demonstrations each year to the EPA for the PM_{10} NAAQS exceedances due to high wind blowing dust events includes periodically updating the Dust Mitigation Plan for Doña Ana and Luna Counties. Control Strategies implements planning requirements for the Sunland Park ozone nonattainment area as a marginal nonattainment area for the 2015 ozone standard. Since 2020, the baseline emissions inventory, emissions statement certification and nonattainment new source review under 20.2.79 NMAC, *Permits – Nonattainment Areas,* which did require a hearing to amend, required submission to EPA, and every three years thereafter a periodic emissions inventory update must be submitted. Control Strategies staff continue to collaborate with neighboring air quality management jurisdictions and vested stakeholders, since air quality is not limited by

geopolitical boundaries, with partnerships created through the Four Corners Air Quality Group, Joint Advisory Committee for Improvement of Air Quality in the Paso del Norte Air Basin, Dust Alliance of North America, National Association of Clean Air Agencies, and the Western States Air Resources Council/Western Regional Air Partnership. Control Strategies led the Department's effort to participate in voluntary programs such as EPA's Ozone Advance, leading to the State-led Ozone Attainment Initiative starting in 2016, aiming to preserve or improve air quality in the counties that were falling below or within 95% of the standard.

3. Modeling and Emissions Inventory

The Modeling and Emissions Inventory unit's Modeling team consists of three (3) FTEs reporting to the unit supervisor, while the Emissions Inventory team consists of 3 FTEs also reporting to the unit's supervisor. As these teams' responsibilities need to address more complexity, overdue modeling for planning purposes, and an increased universe of reporting entities, the two teams will need to be separated into their own units, each requiring a supervisor. In general, the Modeling team reviews and analyzes modeling provided by major and minor sources seeking permits and conducts other modeling for planning purposes. The Emissions Inventory team organizes the annual and triennial collection of emissions data and analyzes the data for certification and submission to EPA.

a. Modeling

The Modeling team reviews air dispersion modeling analyses submitted by permittees with permit applications. These analyses demonstrate whether a new industrial facility or a modification of an existing facility will cause air quality degradation leading to violation(s) of air quality standards. The review consists of an initial check that the applicant submitted all required modeling

files, the modeling files match the application, the applicant used the correct protocols following EPA guidance, and that the facility's emissions sources and operations are properly represented in computer simulations. After this step the unit conducts a thorough technical review which includes inputting hundreds of data points, running computer simulation models to confirm the ambient air impacts from a permitting action, analyzing the results and writing a report for the Permitting staff. Each two-step modeling review process typically takes one to four weeks of staff time depending on the complexity of a subject facility and operating scenarios requested. Very simple sources may only take a week, but these types of modeling projects are not common. Most facilities take two weeks if the initial modeling indicates no exceedances of the NAAQS or if no other deficiencies are discovered. Complex facilities take at least four weeks, again assuming that no deficiencies are discovered. That said, in the past, the Modeling team, when faced with deficient modeling submissions, has spent several additional weeks trying to work with the applicant and re-running modeling multiple times without additional compensation. Because of these delays, which are becoming more frequent, Permitting staff may have to re-analyze applications, leading to a delay in permit issuance or even denial. Each time the Department reruns modeling, at least a week can be added to the expected time required. Additional modeling, in the future, will incur an additional modeling fee to appropriately compensate the Department for the additional resources required.

The AQB's Modeling team has provided over-arching modeling for General Construction Permits, eliminating the need for individual facilities to provide modeling. This cost has been absorbed by the overall AQB budget, reducing modeling costs for industry. New modeling is needed to update each of the GCPs. This will require anywhere from 120 hours for each GCP up to 500 hours for each GCP just for modeling, depending on whether a new model will need to be developed. Once the modeling is done, the Control Strategies group will work with Permitting

staff to modify the GCPs. (This will be critical for the GCP O&G should EPA designate any portion of the Permian Basin as nonattainment.) This effort will require 2,000 or more hours of staff time.

The team also participates in pre-application meetings (with Permitting staff) to answer questions applicants may have; the time involved depends on the number and complexity of the pre-application meetings. They also review modeling protocols submitted prior to performing modeling analyses as an additional service to applicants; this increases the probability that the modeling submitted will be acceptable. On average, this review takes 1-2 hours each, with the team reviewing 3-5 pre-application modeling protocols per month. For some protocol reviews, the team must consult with EPA or discuss the protocol with the submitter to understand what is being proposed and why.

Some facilities request modeling waivers, for which modeling staff also conduct an analysis of the request, including a review of past permitting actions to either deny or approve. This type of review requires anywhere from 2-5 hours each, depending on the history of the source's permitting actions and the complexity of the facility. The Department receives 3-4 modeling waiver requests per month.

The Modeling team also assists with contracted services for regional photochemical modeling (for ozone) and analyzes modeling reports, emission estimates and projections from various organizations. So far, the Modeling team has spent approximately 100 hours working with the contractor and analyzing various work plans and reports by the contractor.

The team recently worked with Permitting staff to develop an internal protocol to assist with completeness determinations, avoiding last minute denials due to missing analyses or inaccurate modeling results or, for some applications, failure to demonstrate compliance with applicable ambient air quality standards due to increased emissions or change in operations. This

project, which required approximately 100 staff hours to develop and finalize and an additional 100 staff hours for training and collaboration processes, helps the Permitting team move through the permitting process more efficiently.

Other projects for which the Modeling team is responsible include: mining application reviews affecting multiple bureaus and other departments (one application per month, on average, requiring 2-4 hours each for review and comment development); assisting with the annual emissions inventory (one day per week for one staff member for 12 weeks); and reviewing modeling reports from federal agencies, such as the Bureau of Land Management's ("BLM") 2024 report regarding its photochemical modeling of the Permian Basin region. This report is attached as **NMED Exhibit 55.** The team spent approximately 50 hours reviewing this report and discussing the results with BLM.

Currently, the AQB has photochemical modeling analyses on contract to provide the information needed to determine our approach to addressing ozone issues in the Permian Basin. So far, the Modeling team, the Chief of the AQB and select members of the Planning team have spent 200-250 hours to initiate and scope the project, provide initial approval of the project plan, review reports and meet with the contractor. The Department will spend approximately $400,000 for this project in fiscal year 2026. The results will be used to determine the Department's next steps in addressing the ozone problems in the Permian Basin. Regional photochemical modeling will be an ongoing need for the foreseeable future until the Basin's ozone design value falls below 95% of the NAAQS. Until that time, the State Air Act, Section 74-2-5(C), requires action to address ozone pollution. See **NMED Exhibit 7**.

At this time AQB requires at least three (3) additional FTEs to take over the photochemical modeling for the State, eliminating the need for contract work and to develop new models for areas

of concern (such as nonattainment impacts, cumulative impacts, greenhouse gas impacts, etc.). These projects will require significant computational resources, either cloud computing or acquisition of in-house computer hardware. Additional requirements include training and software, as expanded modeling will draw from multiple databases and includes projections into the future. Each photochemical modeling project will require two full-time staff devoted to the project for approximately one year for the scoping, data gathering, inputs, analyses and reporting. A contractor will still be required to train new staff in this complex task.

b. Emissions Inventory

The Emissions Inventory team collects and analyzes emissions data provided by regulated entities. In the past, minor sources submitted data very rarely, but with the increase in minor sources, the AQB has implemented a schedule whereby minor sources report emissions every three years. In 2023, approximately 5500 facilities submitted emissions inventories. Major sources submit emissions data every year, as required by federal regulations. See 40 CFR Part 51, Subpart A (Air Emissions Reporting Requirements). The AQB also collects greenhouse gas emissions data, which is a part of required reporting for each entity required to submit emissions data in any given year pursuant to Part 73. See **NMED Exhibit 7**.

Each year, the team notifies regulated entities of the data collection effort, including the data points needed and the process for submission. The team also holds training webinars and has developed guides for data collection and submission. These communications and trainings require 100 – 600 hours of staff time each year, depending on the amount of assistance required by reporting entities.

Once data are submitted, the data analysts follow a protocol to quality assure the data. This starts with an initial flagging of data, which then requires significant follow-up with submitters to

either submit additional data or to correct deficiencies in the data presented. This process takes anywhere from 3-6 months. Once this phase of data review is finished, the Emissions Inventory team must then summarize and report data to EPA. By the time this is finished, the team will be focused on either improvements to the data collection process or next year's inventory.

The AQB maintains a web application through which regulated entities submit data electronically. The web application requires ongoing assistance from information technology (the Department and a contractor). Historically, one FTE implemented each emissions inventory effort with help from approximately 4 other staff for training, assisting submitters, and analyzing data. In 2025, the AQB added another two FTEs to accomplish the entire task, and to research, plan and implement improved reporting processes and requirements, including improved greenhouse gas reporting requirements to meet the needs of personnel working to implement the State Climate Action Plan and to provide improved data for future modeling and other planning purposes. We will be able to collect, analyze and report emissions data to assist attainment demonstrations and provide more granular and accurate data to entities such as EPA, non-governmental organizations, and the public. The AQB anticipates that federal greenhouse gas reporting regulations will be repealed, meaning that the Department will have additional responsibilities to ensure that data are accurate and available to support appropriate and informed decision-making. Depending on future climate priorities of the State, additional FTEs may be needed, although this is not reasonably foreseeable and so, not included in the proposal's projections.

4. Overall Planning Section

The Planning Section Chief oversees all three units of the Planning Section – SBEAP, Control Strategies and Modeling and Emissions Inventory. This position meets regularly with supervisors of each unit to provide direction, assist with prioritization and to assure that tasks are

on track. The Section Chief collaborates with the Bureau Chief, the Environmental Protection Division leadership, the Department's senior leadership, the Department's Administrative Services Division, various offices within the Office of the Secretary, AQC&E, federal agencies, Tribal entities and other sections of the AQB to move the Air Quality Program toward its goal of improved protection of New Mexico's air.

Reporting directly to the Planning Section Chief, the Planning Section's Program Coordinator assists the Section Chief, supervisors and other staff with administrative and logistical coordination, including tracking of certain requirements, planning and technical set-up for public meetings, coordinating with administrative staff to publish public notices, and researching tools to help the Section manage multiple projects.

B. Permitting Section

The Permitting Section analyzes multiple types of permit, registration or notification applications. These include: Title V (major source) new permits, permit renewals and permit modifications; Prevention of Significant Deterioration ("PSD") (major source) new permits and permit modifications or revisions; NSR (minor source) new permits and permit revisions; GCP new registrations and registration revisions; NOI new new applications or revisions; requests for a determination that no permit is required; source relocations, mainly for the construction industry; and administrative revisions for multiple types of permits. Overall, AQB staff have processed 126% more permits than in 2012 while Permitting staff levels have only increased 44%, mostly in the last two years. Each type of permitting/registration/notification action carries a statutory deadline by which the action must be completed. These deadlines have not changed since the Department initiated the Air Quality Program, even though additional and more complex regulations require additional review and analysis by permit writers and managers.

In addition, Permitting staff respond to EPA orders following EPA's review of proposed Title V permits, respond to public comments on permits required to go through notice and comment periods, and testify in Department hearings when a permit objection is filed. All of this work also requires significant public outreach, which involves developing Public Involvement Plans, performing Limited English Proficiency analyses, publication of public notices, and comment portal hosting. Finally, Permitting has the main responsibility for maintaining the AQB's permitting database, currently TEMPO. The Permitting Section is divided into three main units: Major Source (Title V and PSD), Minor Source, and Technical Services.

Additionally, the Permitting Section could benefit from more collaboration with AQC&E and the Planning Section to address inconsistencies in and the enforceability of current permit condition language, GCP conditions and applicability, and to streamline the AQB's permit application forms. Permit rules also need to be updated to codify current practices, to provide clarity on permit action types, and to assure reasonable timelines for permitting actions to provide regulatory certainty. Current staffing levels and resources do not allow for this work. The AQB also offers (and recommends to the regulated community) pre-application meetings prior to application submissions. This service helps the applicant understand the type of permit or permit revision/modification that will be required and answers any questions regarding what is to be included in the application. In 2025, the AQB held a total of 103 pre-application meetings. These meetings typically range from 1-2 hours. Permitting staff also answer numerous questions from both pre-applicants and applicants who have already submitted applications; Major Source staff spend approximately 20 hours per week working directly with applicants to answer emails, phone calls, and to participate in meetings, and recently applicants are requesting weekly meetings with the Department for just one permit.

In 2012, the Permitting Section had twenty-four (24) FTEs; positions increased through 2023 to twenty-six (26) FTEs. To accommodate the increase in permitting transactions, the Department has increased the Permitting Section to its current level of thirty-five (35) FTEs. Additional FTEs will be necessary, as explained below. A table of FTE history and additional needs is attached as **NMED Exhibit 49**.

3. Major Source Permitting

The Major Source unit consists of two separate, but related teams – Title V and PSD permitting. This unit handles all actions which pertain to major sources, whether the action is for a Title V permit or not. For example, if a Title V facility submits a technical revision for their construction permit (also known as an NSR permit), the Major Source unit takes the lead. This unit completes administrative, technical and regulatory reviews and analyses of applications, collaborates with the Modeling team, prepares documents, communicates and negotiates with applicants regarding conditions, and issues (or denies) permits based on their analyses. Although the number of major sources has declined from 140 facilities in 2012 to 129 facilities in 2024, the Major Source unit has seen an increase in the complexity of the facilities leading to more complex permits requiring additional review and analysis from the unit. In addition, more permits are being challenged, requiring additional administrative work, communications and legal assistance.

PSD permitting falls under the NSR paradigm, although it is the most complex permitting action and affects major sources. Because of the complexity of major source permitting, especially PSD permitting, an excellent employee will be considered experienced after two years of intensive training. Managers review all permits / permit actions in these teams. A "typical" PSD action may require anywhere from 1,088 hours to 2,368 hours of analysis, 160 to 240 hours of permit drafting, 160 to 240 hours of review and revision, 32 hours to assure proper public notice and comment

requirements are met, and additional hours, depending on whether comments are received, requiring response. These actions are increasingly facing public opposition, with concerned residents and organizations requesting hearings. When this occurs, the team can spend hundreds of additional hours to prepare for, public notice, and testify at the hearing. On a significant permitting revision for a Title V major and PSD minor facility, the Targa/Road Runner Gas Processing Plant hearing in 2023 required 4 staff members working approximately 360 hours per person and at least 500 attorney hours, totaling almost 2,000 hours of work.

The 2018 Title V Fee Schedule EPA Guidance document (**NMED Exhibit 18)** at page 5 states, "part 70 costs must include the cost of implementing and enforcing any term or condition of a non-part 70 permit required under the [CAA] that is incorporated into a part 70 permit and meets the definition of 'applicable requirement' in part 70. Similarly, the cost of implementing and enforcing any term or condition of a consent decree or order that originates in a non-part 70 permit that has been incorporated into a part 70 permit must be included as a part 70 cost." Therefore, costs associated with any New Source Review ("NSR") or construction permit for a Title V facility may be paid out of funds collected from Title V sources.

The Title V team reviews and processes all administrative, technical and regulatory requirements of all NSR and Title V permit applications for Title V facilities, prepares documents and issues (or denies) those permits. Title V new permits, renewals and modifications or revisions require reviewing all existing permits for the facility and incorporating all applicable requirements into the Title V permit, which also must include monitoring, recordkeeping and reporting requirements. Depending on the complexity of the facility (equipment, controls, applicable regulations, etc.), a "typical" Title V action may require from 385 to 514 hours to gather information, 514 to 685 hours to analyze the calculations, processes and controls proposed in the

application, 514 to 685 hours to draft the permit, 257 to 343 hours to provide for public notice and comment (including EPA and interested parties), 385 to 514 hours to respond to comments and revise the permit, 214 to 685 hours to communicate with and negotiate with the permittee, and additional hours (typically hundreds) if a hearing is requested.

Currently, the Major Source unit consists of one manager (who oversees the entire Major Source program), two supervisors (one for Title V and another for PSD), and eight (8) permit writers. Due to previous staffing shortages, the number of challenged permits and EPA orders regarding permits, the AQB currently has a contract for assistance in addressing comments or orders, and to address a backlog of major source permit actions. This contract will cost the Department, in fiscal year 2026, approximately $1,000,000, including additional training necessary for permit writers to ensure knowledge and consistency.

In addition, the AQB has experienced a significant number of facilities constructing and operating outside of application parameters, including not installing or operating required controls. To address this issue, the AQB also has a contract for permit verification whereby the contractor visits sites as directed by the AQB to verify that a facility is built and operating in accordance with the terms and conditions of its recently issued permit or permit modification. (This applies to both major sources and minor sources and is funded out of both funds. The Permitting Section Chief and Lead Technical Advisor for the Section determine which facilities the contractor will visit. The Department has encumbered $45,000 from Title V funding for this effort. Minor source verification tasks are funded out of the Construction Fund.)

The Air Quality Program also needs to address an increasing issue of facilities cancelling their Title V permits, then reporting excess emissions which put them over Title V permitting thresholds. Permitting staff are starting to work with AQC&E and attorneys to determine whether

these facilities have violated State permitting rules and how to address the issue.

Additionally, the Major Source unit has experienced a sudden influx of permit applications for a new type of source, each of which may be a PSD source (250 tons or more of regulated pollutants per year). The AQB must ensure that facilities are not engaged in maneuvers designed to avoid PSD permitting, requiring additional analysis and training. ("PSD circumvention" is a violation of state rules and federal regulations.) The AQB is currently working with a contractor to provide additional training and research for these situations, encumbering $40,000 from the Title V Fund.

Major Source permitting requires significant training, for which outside expertise is often necessary. Besides in-house trainings on AQB processes, major source personnel benefit from 3 levels of general permit-writing training and 3 levels of PSD permit-writing training. In addition, they must understand every aspect of emissions (sources, chemistry and control), requirements for monitoring, recordkeeping and reporting, and the various standards of performance applicable to new and existing sources. These standards are based on the types of equipment or facilities and can be found in 40 CFR (Code of Federal Regulations) Part 60 – *New Source Performance Standards* – and 40 CFR Part 63 – *National Emission Standards for Hazardous Air Pollutants for Source Categorie*s. Permitting staff in general, including Major Source permit writers, must be familiar with the 40 CFR Part 60 regulations and the 40 CFR Part 63 regulations, in addition to state rules applicable to the facilities for which an application has been submitted.

Major Source staff must be aware of and knowledgeable about the most commonly applicable regulations: 27 state regulations and approximately 115 federal regulations including 54 in 40 CFR 60, 61 in 40 CFR 63, and 10 in 40 CFR 61. These are state and federal regulations that permitting must review for any type of permit that we issue. Excluded from these numbers are

general provisions or other regulations that would apply but have duplicative or more general requirements. Also excluded are regulations for less frequently permitted facilities, such as regulations for smelters, lime manufacturing, kraft mills, and cement manufacturing.

Because of previous staff turnover, complex permit applications are often assigned to supervisors or the manager due to the permit writers' lack of experience, procedural knowledge and training. Managers and supervisors, thus, are not available to update protocols, guidance documents, templates, etc. as needed. This means that permit applications must be prioritized based on various factors, including statutory deadlines. Outreach is currently suffering due to the workload this team experiences. Appropriate due diligence often requires requesting additional information from applicants to verify the accuracy of submissions. In the past, statutory deadlines were prioritized over assuring air permits were as protective as needed. Our mission, however, requires that permits contain provisions which are as protective as possible. This requires significant back-and-forth communication with applicants and often, additional analysis, adding hundreds of staff hours to the process.

The Bureau has seen the quality of permit applications decline in recent years, leading to significantly more work for Permitting staff and in some cases delays in permit issuance or even permit denials. Denials and delays each have legal implications for which the Bureau relies on both in-house and contracted legal assistance. Staff (and managers) have spent significant time and effort working with applicants to correct deficiencies, sometimes several hundred hours of additional time. This includes deficient modeling and even inconsistencies within an application. Although the new protocol involving modeling review for administrative completeness will help, issues still remain when technical analysis and technical modeling review show serious flaws in applicants' proposals for their permits.

Hearings for permits and other challenges to permits are extremely labor intensive for the AQB and attorneys. First, the AQB must respond to each comment received; this involves collecting the comments, organizing them, analyzing the validity of each comment or suggestion, and then responding to each commenter. For permits that are challenged, staff and air quality attorneys spend hundreds of hours compiling the administrative record, drafting and presenting testimony, and following up according to the hearing outcome.

The Department projects that additional staffing will be needed for addressing increased permit comments and requests for hearing. Although the Bureau uses contractors to assist, training contractors and reviewing their work takes significant time and effort from managers. In addition, the Bureau anticipates its outreach staff (as indicated in the SBEAP discussion, above) will take on training for consultants and other applicants regarding permit application requirements to reduce permitting staff time dealing with deficient applications.

NMED has already identified the need for at least 2 FTEs to the Major Source unit to assure that these permits can be issued efficiently (within statutory deadlines or earlier) and still be protective of air quality in New Mexico. In addition to the typical work of a major source permit writer, new staff will be able to take on permit verification and new types of industrial sources. The Department will need one additional FTE to specifically address permits challenged or commented on by various entities, especially those for which a hearing will ensue.

4. Minor Source Permitting

The Minor Source unit has grown significantly in the last two years, with two additional teams being added. The team now consists of a Minor Source Manager, 3 supervisors, and twelve (12) permit writers. The team conducts technical and regulatory reviews to process minor NSR new permit applications and revisions, most GCP registrations and registration revisions, and

NOIs (new and revised). Again, each carries a statutory or regulatory deadline by which the action must be completed. For each review, staff verify emissions calculations, determine applicable state and federal regulations, write technical support documents for the administrative record, enter and verify data in the Bureau's database, and coordinate with various stakeholders (industry, the public, consultants, AQB staff, and other state and federal agencies).

Even with this team of permitting staff, the workload is such that the Bureau has had to rely on contractors to assist with GCP reviews. In 2025, contractors processed 298 of the 826 GCP O&G registrations the AQB received. In early 2025, the AQB faced a shortage of contract money due to a delay in the ability to transfer money to the contracts category. This resulted in 358 out of 826 permit actions – mostly for minor sources – exceeding the statutory/regulatory deadlines. Since 2012, Oil & Gas-related GCPs have increased over 2,000 percent, with the biggest jump occurring with the issuance of the GCP-O&G.

As with major sources, the Minor Source unit has seen a decline in the quality of minor source permit applications in recent years, resulting in many more rulings that applications are "administratively incomplete" or in some cases, permit denials. This requires additional work, including legal assistance. As previously stated, one goal of increasing our outreach staff is to provide training for consultants and representatives of facilities regarding proper application completion. In addition, managers are working with attorneys to develop and update guidance on single-source determinations, emission factors, control equipment and other factors leading to permit denials. So far, tasks involving legal determinations for permit denials and single-source determinations has required approximately 180 hours of staff time, and will require an estimated 30 hours of attorney time.

Due to the number of registration applications submitted (typically 20-30 each week),

GCP-Oil & Gas registration reviews consume the greatest amount of Minor Source staff time and resources. Currently, AQB employs 5 contractors to help with this work stream, costing approximately $500,000 in fiscal year 2026. In late 2025 and early 2026, the contractors added assistance with NOI reviews due to the unit staff's inability to handle the number of actions submitted. The Bureau anticipates adding a fourth unit to the Minor Source team, meaning another supervisor and an additional 5 permit writers, to process all GCP-Oil & Gas registration and NOI applications in-house. The AQB also intends to add an additional permit writer to each of the three existing Minor Source units, so that each unit has 5 permit writers. With additional in-house staff, managers and supervisors will be able to focus more on in-house training, and regularly updating protocols, decision trees, guidance documents and templates.

Additionally, new staff benefit from conducting field visits to physically see the types of equipment their permits regulate so that they can contribute more meaningfully to appropriate and enforceable permit conditions. As part of their training, this will require travel expenses at a cost of approximately $1,000 - $1,200 per permit writer. Ultimately, the AQB also will require permit writers completing permit verification site visits following issuance of new permits or significant changes to existing permits. This is beyond the 5-year plan for which we can reasonably estimate staffing needs.

One foreseeable challenge is the possibility of an ozone nonattainment designation for at least one county in the Permian Basin. Should this occur, the Bureau is under-prepared to deal with the ramifications, as current GCPs are not eligible to be used in nonattainment areas. This means that Permitting staff and Planning staff would need to quickly develop a reasonable path forward, which may include an emergency rule, that is regulatorily and statutorily sound, efficient, and balances environmental protection with cost to both industry and the Department. Currently, this

is a project the Bureau is not able to initiate due to limited resources and workload constraints. We estimate that this effort alone, because it would require a staged approach and additional modeling, would require 2 FTEs devoting 100% of their time to the project for two years.

In 2025 the Minor Source unit reviewed: 826 GCP O&G, 278 Construction NOIs, 21 NSR permits. They denied 2 NSR permits and 1 GCP O&G registration. A well-prepared GCP O&G Registration requires approximately 15 hours if reviewed by a seasoned and experienced reviewer. A well-prepared Construction NOI requires approximately 8 hours if reviewed by a seasoned and experienced reviewer. NSR permits take an average of 49 hours to review and draft the permit. However, inexperienced staff (less than 2 years) require twice to three times this amount of time. Additionally, deficient applications require additional work from Permitting staff, Modeling staff, and sometimes legal staff as described above.

Initial training time for the contractors assisting with GCP-O&G registration applications took approximately 24 hours. Initially Minor Source management met with the contractors every week for 1 hour to discuss permitting issues and questions. They currently meet with the contractors every 2 weeks to discuss permitting issues and questions for 1 hour. Questions/emails from the contractors take up about 3 hours per week of management time. In 2026, the Minor Source management team will train the contractors on NOI reviews, anticipating another 24 hours for initial training.

5. Technical Services

The Technical Services team, in general, assists the Permitting Section, the AQB and the AQC&E by assisting in the development and maintenance of the main Air Quality database and various applications needed to efficiently provide permitting information to the public, collect electronic applications, assign and track submitted applications, collect fees electronically, and

otherwise update web-based pages. They also review new construction industry-related GCP registrations and relocations for those GCPs and assist the Minor Source unit with reviewing NOI applications.

The unit consists of 1 supervisor, 5 FTEs and one temporary (part-time) staff person. To maintain the database and various applications, the team works with 2 contractors who have the technical expertise to fix "bugs" and make needed changes. These contractors cost the Department approximately $500,000 annually. Technical Services staff work with the contractors to prioritize technology updates, delegate testing, and implement successful and necessary updates regularly. Technical Services works to maintain various applications, including the ePermitting Portal and the Air Permit Map ("APMAP") where permits are posted within a GIS-based system to visualize where regulated facilities are located within the State. They also post to the NMED Public Comment Portal, the Department TRUMBA calendar, and to the NMED website.

Each Technical Services FTE spends approximately 35 hours per month reviewing various applications for non-oil and gas GCP registrations. Up to 60 hours per month may be spent assisting the Minor Source unit with reviewing and processing NOI applications and processing most of the administrative revisions for the Section. Managing the ePermitting Portal (including managing payments), providing database support, troubleshooting issues, testing and implementing updates for the database and applications requires up to 50 hours per month. Posting public notices to the website, updating forms and documents available on the website and in the database requires approximately 5 hours per month. Posting permit documents to APMAP averages 20 hours per month. Another 20 hours per month may be spent assisting other staff with the Air Quality database and troubleshooting problems related to the database and the ePermitting Portal.

A significant portion of personnel time in this unit is devoted to the annual fees process. The team spends approximately 200 hours, from October through February to complete the billing cycle. The team works with financial staff and Operations staff to accomplish this task each year.

In 2025, Technical Services staff reviewed 18 new construction industry GCP applications, 21 NOI applications for oil & gas facilities, 61 GCP relocation applications, which each incur a fee. Additionally, Technical Services staff reviewed 18 Notices of Exemption, 41 GCP Substitution/Addition applications, and 928 Administrative Revisions, which do not incur a fee under the Department's proposal.

The team's workload – with normal activities and regular side tasks to address questions or problems – precludes working on updates to procedures, guidance documents, and most importantly, GCP language, which has not been updated for 20 years.

The Department envisions moving 3 of this team's staff to the Technical Operations team (see Section VIII.C.4, below), focusing on the technology-related aspects of this team's job duties, including the database and database upgrade/replacement, APMAP, ePermitting Portal, invoicing for fees and web postings. Along with that move, NMED will require at least 2 more Permitting FTEs to support the Technical Services team to work more with Outreach staff on educating the regulated community, and to process NOIs, administrative revisions and relocations, along with other GCP registration actions. Without responsibility for technology-related tasks, the supervisor could then focus on document updates that are needed.

6. Permitting Section Leadership

The Permitting Section also has a Section Chief to oversee the entire permitting program, a program coordinator to manage logistical tasks and coordinate with other sections and bureaus, and a technical advisor who provides expertise in protocols, decision trees, template language and

needed updates. This is a recently reclassified position (October 2025) that serves to fill in gaps by providing intensive training for new employees, reviewing and completing some permitting actions that had been backlogged, and coordinating with the contractor regarding the permit verification task described above under the Major Source team. The Section Chief will also help update protocols, guidance documents, decision trees, template language, manage permit-related contracts, prioritize permitting resource usage, etc. once resources allow.

C. Operations Section

The current Operations Section includes technical staff and administrative staff. Technical Operations staff include the Monitoring unit and the Quality Assurance unit. Administrative Operations staff include the Administrative Services team and the Business Operations team. Historically, the federal government has provided financial assistance in the form of grants to cover various costs of the Technical Operations team. Recently, however, the awards have not been enough to cover the costs associated with the program. Due to a projected shortfall in grant funds by the end of fiscal year 2026, three Technical Operations staff positions were temporarily moved to fee funding as a direct cost of the program. The following describes the current organization of the Section.

In 2012, the Operations Section had eighteen (18) FTEs; positions were reduced through 2021 to seventeen (17) FTEs. To properly carry out the technical and administrative duties of this section, the Department has increased the Operations Section to its current level of 26 FTEs. Additional FTEs will be necessary, as explained below. A table of FTE history and additional needs is attached as **NMED Exhibit 49**.

1. Monitoring

The Monitoring unit works closely with EPA to determine the number, placement, and

types of monitors required to adequately measure air quality throughout the State. The Monitoring manager ensures that the monitoring network operates according to EPA requirements and secures appropriate sites for monitor placement, typically through legal agreements, and provides annual and 5-year network reviews to EPA and the public. The latest reviews are posted on the Bureau's Monitoring web page. Overall, the unit is responsible for siting, procuring, calibrating, operating and maintaining the State's network of monitors at twenty (20) air quality monitoring stations. These official (EPA-approved and regulated) monitors will be referred to as "network monitors" to distinguish them from additional monitors the unit has placed or is planning to place as communities or other entities request. The unit also responds to wildfire events and special projects from either the EPA or the Department by placing temporary monitors in locations in need of immediate air quality information.

Siting of network monitors follows EPA guidelines that include meteorological factors, security, proximity to sources and populations, and the types of sources in the area that may emit particular pollutants. In New Mexico, monitoring stations may become targets for vandalism, so secure sites are preferred, requiring agreements with and sometimes rent to be paid to other entities. The agreements require additional scrutiny, including legal review and approval. Finding an appropriate site for a network monitor typically takes 120 hours, plus time to travel to potential sites. To negotiate, draft, review and complete an agreement with a third party typically takes anywhere from 120-150 hours from Monitoring staff, legal staff and procurement staff. These hours are spread out over 1-2 years, depending on how negotiations proceed and the reviewers' requests for changes. In that time, unforeseen circumstances may occur, requiring the Monitoring team to start over for a particular monitor.

Procurement of monitors, shelters, ancillary equipment and supplies, and data retrieval and

communications technology follow the State Procurement Code (1.4.1 NMAC). See **NMED Exhibit 7**. Depending on the type of equipment or services needed, and possibly the cost, this process can take months or even years to complete. This is especially true if a contract requires the "request for proposal" process. Monitoring procurement processes take up approximately 25% of the Monitoring managers' time. To add a monitoring station to the network monitors already in place often takes at least 2 years (or more if siting is difficult). Depending on the number and type of samplers or analyzers at each site, a single monitoring site may cost $120,000 - $160,000 for equipment, a shelter and a meteorological tower.

Once sites and equipment are procured, monitoring staff install, calibrate and maintain the network monitors, spending an average of 68 hours per new or modified site. This involves travel to the sites and following technical procedures to complete initial calibrations to assure measurements are accurate. It also involves setting up data logging and communications so that air quality data continuously uploads to the monitoring database. The database provides the public with access to real-time monitoring data of air quality at each of the network monitoring stations. In addition, Monitoring staff travel to the sites at least weekly to assure proper functioning and diagnose and repair equipment when they discover problems. This typically takes one full day for each site visit, plus more if the technician discovers a problem and must repair and re-calibrate equipment or de-bug a program.

In addition, Monitoring staff may be asked to respond to emergencies (such as wildfire events) or special projects (such as community special requests). For example, Monitoring staff spent approximately 50 hours, including traveling to and from the site, for the Ruidoso fire in 2024, providing a particulate sampler and lab analysis of the filters to provide air quality data to the federal wildfire response team and the community.

An example of the Monitoring unit responding to a community's concern is the Galisteo dust project for which the Monitoring staff, in addition to spending approximately 60 hours on communications, logistical planning, set-up and analysis of monitoring results, arranged and paid for contractors to supply a dust monitor and complete the monitoring project. The contract cost the Bureau approximately $90,000 from the minor source permit revenue funds, in addition to the Bureau staff time required to coordinate the project. In addition, contract work always involves indirect costs for the work required to initiate the contract task, including requesting a new or revised purchase order, tracking the invoices and paying the contractor. Although this project did not result from a specific facility's emissions, the air quality program, in order to assure air quality is safe to breathe, includes responding to community concerns such as this.

The Monitoring unit has ongoing contracts to provide heating/air conditioning services, maintenance of the data acquisition system, lab analysis for particulate sampler filters, and electrical or other construction-related needs. The ongoing cost for each site averages $9,500 per year. For 20 sites, this is an annual cost of $190,000.00. Most of these contracts are currently paid through a federal grant, although the State must match federal grant awards. For every $6 in federal grant money spent, the State must provide $4 as the match requirement. The match fund is separate from the Title V and Construction Funds in each year's operating budget, but the money put into the match fund each year comes out of the Construction Fund.

The Department received settlement money from a nongovernmental organization to procure and implement a mobile monitoring unit ("mobile lab") for use throughout the State but primarily focused on the Permian Basin. In 2025, the Bureau added a mobile monitoring technician who has been working with the Monitoring manager to procure the necessary equipment and supplies. The cost for the mobile lab equipment and trailer exceeds the amount of settlement money

provided by approximately $300,000, so the remainder will come out of both the Title V and Construction Funds. In addition, the technician's salary and benefits are paid for mostly by federal grant/match funds, although the goal is to include 100% of this salary in future grant applications. Responding to public complaints about a particular facility or about general air quality concerns remains a priority for the Department and the Air Quality Program. Information obtained from the mobile lab will be beneficial to determine the compliance status of individual facilities or to offer the AQB and EPA insight as to where additional network monitors may be needed.

Monitoring equipment, software and ancillary technology require ongoing maintenance and upgrading to meet industry and EPA standards. The AQB has invested in equipment and software to allow for remote troubleshooting, reducing the amount of travel required. As additional efficiencies are discovered, the AQB will analyze the cost/benefit estimates to determine the most appropriate use of funds.

Currently, all network monitors, equipment, warranties and supplies are paid for by federal grants with the 40% match described above. Most personnel in Monitoring are also paid for by federal grants/match, although due to a shortfall in that federal funding in fiscal year 2026, revenues from the Title V and Construction Funds covered the deficit as a direct cost of the air program. Each year, the AQB requests full funding of all expenses, including salaries and benefits for the entire unit.

The AQB projects that at least 3 new Monitoring staff will be required in the next 5 years. This includes an additional mobile lab technician to assist in maintaining and deploying the mobile lab. It also includes 2 new technicians to respond to emergencies and special projects, but also to take on the requirements of additional network or non-network monitoring stations as these are in demand

2. Quality Assurance

The Quality Assurance ("QA") unit reviews, validates, certifies and reports all ambient air monitoring data collected from the monitoring network to EPA and public platforms. Analysts flag abnormal data and data gaps for various purposes. Data are required to be reported to EPA on a quarterly basis following strict QA procedures. Analysts also answer questions from colleagues, management, senior management and the public regarding air quality and assist in making attainment recommendations to EPA.

Data specialists review, analyze and report data for public information, but also for various regulatory purposes. Monitoring data are used for attainment determinations, modeling (facility or regional, traditional and photochemical), and flagging for Control Strategies when abnormal pollutant levels may indicate an exceptional event, such as a dust storm, a wildfire or another atmospheric condition for which the State has no control.

QA Auditors conduct performance evaluations on all network monitors, along with the meteorological towers and non-network monitors. They also conduct siting criteria audits to ensure monitors remain sited appropriately and within guidelines. Audits require travel to individual monitoring sites to conduct calibrations and verifications of various monitor standards. Approximately 40% of Auditors' time is spent traveling to sites and conducting audits according to EPA requirements. They also operate and maintain two monitoring labs that are used to conduct equipment standard verifications in accordance with EPA regulations and test, troubleshoot, and diagnose air monitoring equipment. The Runnels lab is in need of significant upgrades for the safety of the QA staff and to allow for more efficient processing of samples. This needed renovation and equipment upgrade will cost over $400,000.

QA Auditors also may assist Monitoring technicians with needed field work. The QA

manager is responsible for assuring EPA that the program is functioning as required. This is a full-time position responsible for data quality and regulatory compliance for the ambient air monitoring network. This involves developing, implementing, and maintaining Quality Assurance Project Plans ("QAPP"), the Quality Management Plan ("QMP"), and numerous Standard Operating Procedures as required by EPA. The QA Manager oversees all quality control activities including equipment calibrations, audits, verifications, performance evaluations, manages corrective actions, and oversees data reviews, validations, and certifications prior to data submissions to EPA. During the 2024 EPA Technical Systems Audit, QA Unit staff spent approximately 120 hours with EPA personnel during the audit of 17 air monitoring stations and extensive documentation and data reviews.

The Department projects needing three additional FTEs in this unit to keep pace with the amount of data that will be provided and the need for additional audits due to the expansion of Monitoring as described above.

Historically, federal grants funded all salaries and benefits, as well as equipment, travel and technology needs for the QA unit – similar to the Monitoring unit. In fiscal year 2026, however, this funding was not adequate to cover the salaries and benefits of two QA staff; these staff were temporarily paid from permitting revenues as a direct cost to the air program.

3. Administrative Services

The Administrative Services unit consists of two teams, focused on related, but separate responsibilities, as described below. The Business Operations team focuses on equipment and logistical planning and improvements, as well as assistance with records, public information, contracts and grants management. The Administrative Assistance team provides clerical, reception and data stewarding services for the Department.

a. Business Operations

The Business Operations team, as part of the Administrative Services unit, exists to support various logistical needs of the AQB. They administer, at the direction of the Permitting Section, the annual permit fee collection process, including collaborating with AQC&E on delinquencies. This team also administers the Bureau's response to public inquiries pursuant to the Inspection of Public Records Act ("IPRA"). This team tracks accounts receivable and assists financial staff in tracking accounts payable for contracts. Starting in 2025, the team has been actively supporting or leading tasks related to the AQB's main database upgrade and replacement project and the Department-wide move to digital documentation ("Project Velocity"). The team is also responsible for asset tracking, records management, and controlling and tracking keys and building entry cards. The team is responsible for procuring, tracking and maintaining IT equipment (computers, monitors, phones, etc.) and other ancillary equipment needs. In 2026, the team will begin to assist with grants management. A key focus of this team is to analyze and recommend new technical tools or processes to gain efficiency for various AQB work.

Approximately 10% of this team's time is devoted to permit fee collection and follow-up activities. Contract management assistance in the form of coordinating accounts payable requires approximately 25% of the team's time. Additionally, approximately 50% of the team's time is required for appropriate notification and tracking of the Bureau's IPRA responses. Because of understaffing of the Compliance & Enforcement Division's Operations team, the AQB's Business Operations team has also supported various operational needs of the AQC&E.

Currently, the majority of the team's time is spent on equipment procurement and distribution (including travel, approximately 25%), IPRA responses and other public records (20%) and contract tracking and other administrative duties (25%). This team provided

approximately 200 hours to the Department's Project Velocity tasks, specifically adding metadata for appropriately classifying documents ingested. The team also provides logistical support to the Department for the recent moves out of the two Albuquerque offices and the supervisor continues to work with the Department's upper management on the logistics for moving into the new Albuquerque office. The team also contributed to the gap analysis and other meetings for the Air Quality Program's needed database replacement and upgrade project.

The Business Operations team now consists of 1 supervisor and 3 staff to accomplish these diverse and necessary tasks. The supervisor position and 2 staff positions were added in 2025. The Bureau anticipates adding 1 FTE to assist with the numerous responsibilities of this team. The goal will be to hire someone with significant grants management experience to reduce the administrative work of the Control Strategies scientists working on annual DERA grants and the VW Mitigation grants, and to assist the Section Chief and the Bureau Chief in assuring that grants are managed appropriately and that deadlines are not missed. (Currently, in the absence of an Operations Section Chief, the QA Manager has taken prime responsibility for grants management. He is now training this team's members to take on administrative tasks related to grants. The QA Manager spends approximately 40% of their time assuring that our federal grants are managed correctly.)

b. Administrative Assistance

The Administrative Assistance team assists Permitting staff with data entry, validation, corrections and responses to internal and external inquiries. In addition, the team coordinates vehicle assignments, tracks usage and ensures appropriate operation and policy compliance for AQB's fleet of vehicles, reporting to the General Services Division. The team also processes and tracks public notices through various media outlets, processes small purchase requests such as

office supplies, manages certified and general mail processing and provides reception services and inquiry management.

This team consists of 1 supervisor and 3 administrative assistants. The team provides the underlying assistance to keep the Bureau running smoothly and as efficiently as possible.

Due to a high volume of permits, data stewarding consumes approximately 40% of the team's time. Vehicle coordination consumes approximately 30%. Duties are assigned on a daily basis, depending on operational needs. Because of continuously high workloads, permit data stewarding and other tasks are often delayed, causing problems for Permitting and other sections of the Bureau, as well as for AQC&E. The team has not had time for sufficient training, resulting in sometimes less than perfect service. The Bureau will add 2 FTEs to address these needs as the Bureau expands.

4. General Operations

Additional positions in this Section include the Section Chief and a Program Coordinator position. The Section Chief provides oversight of the units, including Monitoring, QA and Administrative Services, but more significantly takes on the role of budget advisor, contracts coordinator and grants oversight and management to assist the Bureau Chief and the Bureau Financial Manager. This position also serves as a liaison for facilities management of the Marquez field office in Santa Fe and coordinates the AQB's Health and Safety planning in collaboration with the Department's Human Resources Bureau.

The Program Coordinator assists with logistical planning and myriad administrative tasks for the Section and also the entire AQB.

As described the Technical Services (Permitting) description above, the Department anticipates a division of the current Operations Section into a Technical Operations Section and an

Administrative Operations Section. This will include the technical expansions noted above, with an additional 5 FTE to take on the ever-increasing need for technology assistance and appropriate oversight of the technical operations of the Air Quality Program.

D. Other Staff and Costs

In my position as Bureau Chief, I oversee, prioritize and generally manage all the work of the AQB and is the point of contact for numerous entities wanting services from the AQB. As Bureau Chief, this position spends approximately 30% of their time in critical meetings to advise and get status updates on various projects and in personnel-related tasks. The main responsibilities also include planning and strategizing how Department and AQB priorities will be implemented (35%), answering questions from internal and external customers (20%), and working with financial staff to manage the AQB's budget (10%), including procuring contract services when necessary. As Bureau Chief I collaborate with the AQC&E's Bureau Chief (5%) and have been delegated authority to sign permits. As part of planning and implementing Department and AQB priorities, the Bureau Chief collaborates with other Bureaus, agencies and organizations, and works directly with financial managers and staff on procurement, directing funding decisions, and prioritizing how the AQB's funds may be spent to better serve both industry and the residents of the State to advance the Department's and the Air Quality Program's mission to protect the environment – specifically the air.

Other costs, which are also required to be covered by Air Quality Program revenues, include: 3 attorneys to assist with legal interpretations, processes and decisions; 4 financial staff to manage the Bureau's accounts receivable and accounts payable and to manage each year's operational budget; Human Resources costs to manage all personnel-related matters; IT costs to manage and assist with technology; travel and training; office furniture and maintenance; assistive

technology and other accommodations for ADA (Americans with Disabilities Act) compliance; other agency costs to oversee procurement and vehicle fleets, the compliance and enforcement program for air (which is described in additional testimony from Bret Anderson); and all (indirect) costs associated with maintaining and staffing various offices around the state. The Department anticipates that, with an expanded Bureau, AQB will require at least 3 additional attorney FTEs and 3 additional financial FTEs.

As should be apparent from this non-exhaustive summary of air program functions, the entire air program required to be funded from construction and emissions fees is broad, complex, and requires significant resources. Because resources were constrained in the past, we anticipate needing contract service assistance to continue over the next several years to address the huge backlog of tasks the air program faces to meet demands of both industry and the public as we bring on additional FTEs and are presented with new and ever evolving challenges.

IX. ADDITIONAL SERVICES THE DEPARTMENT PROVIDES AND BENEFITS OF THE PROGRAM

As an indirect cost, Bureau staff are involved on committees, task forces and other work groups with multi-jurisdictional organizations, as ambient air quality knows no borders. As noted above, I am currently serving as the Council Vice President of WESTAR, collaborating with and coordinating information sharing on various projects of mutual interest to western states. The Department is a member of WESTAR and the National Association of Clean Air Agencies ("NACAA"), and participates in meetings and trainings of the Central States Air Resources Association ("CenSARA") that includes the partner states within EPA Region 6. Additionally, managers and staff attend meetings and trainings offered by these organizations to ensure that our state's Air Quality Program is administered according to EPA requirements. Participation in these organizations provides the Bureau and the Department with valuable information, data, training,

and insight. For example, WESTAR's technical work group collaborated with other states, other multi-jurisdictional agencies, federal land management organization and tribes to assist with the data collection and analysis (including regional modeling), and collaboration required for New Mexico's Regional Haze effort, recently approved by the Board. Reduced federal funding for federal monitors means that these organizations and state air agencies will have added responsibilities for the data and modeling needed for the next Regional Haze implementation period.

Data analysts review and certify monitoring data to provide information to EPA and the public, as described above. In addition, data analysts flag data for various reasons, including recommending data that may indicate an exceptional event, such as a dust storm. Exceptional Events Demonstrations ("EED") may be required to keep design values at levels which indicate areas are "in attainment" of the NAAQS. EEDs must prove by a preponderance of evidence that the uncontrollable events caused the outliers flagged by data analysts. This helps both the AQB and the regulated community by keeping uncontrollable event data out of the calculation for annual design values, which determine whether or not an area is in attainment. Should EPA designate an area as nonattainment, the AQB must spend several thousand hours following the requirements for addressing the nonattainment designation. A designation of nonattainment means that certain permits would no longer be valid, additional controls will be required, and more permits will need to be denied. For this reason, the Bureau spends approximately 500 to 800 hours each year on EEDs.

The AQB responds in a timely manner to requests for information, typically through the process set forth in the *Inspection of Public Records Act*, Sections 14-2-1 to -12, NMSA 1978. AQB staff and the Office of General Counsel collaborate on this effort. Confidential Business

Information or other confidentiality issues may result in additional legal review to protect personal or other confidential information. Operations staff coordinate the process, including tracking Bureau responses, but any staff member may be required to provide information, depending on the request. In 2025, the Bureau responded to 189 IPRA requests, requiring over 600 hours of Business Operations staff time (for coordination) and other staff time (for providing responsive records). In addition, the Office of General Counsel provides an attorney to provide direction for and review Department responses. Operations staff currently collaborate with the Department's Information Technology specialists and the Office of General Counsel to streamline the process and gain efficiency while continuing to meet the demand for transparency required of a government agency.

The AQB's federal grants require significant time and effort to obtain and maintain. AQB staff, working with the Department's Grants Coordinator, complete applications that include budgets, timelines, project descriptions and other information. Much of the same information is required for periodic reporting. In 2025, the AQB grants manager spent an additional 60 hours to reword an application to fit new federal restrictions to assure that this important source of funding remained available to reduce program costs.

The Bureau responds to requests for meetings (typically 3-5 per week), and concerns about general air quality. The AQC&E personnel respond to public complaints (as described in Bret Anderson's testimony, attached as **NMED Exhibit 57**). Bureau Administrative Assistants also answer approximately 10 general inquiries per week, spending an estimated 1-2 hours assisting callers directly, or routing them to appropriate Department personnel with expertise to answer their questions.

The Air Quality Program has collaborated multiple times with EPA to conduct inspections of facilities suspected of contributing to poor air quality in the Permian Basin. These inspections

produced federal enforcement cases resulting in significant technological improvements at facilities violating federal regulations, state rules and permit conditions in addition to sharing significant penalties (for which the State's portion goes directly to the State General Fund). The AQB expended approximately 1,000 person-hours toward planning and participating in the five joint inspections, and another 3,000 person-hours participating in settlement negotiation and settlement planning meetings. A main focus of the AQB's participation included advising on State rules and helping to guide priorities for injunctive relief in the five cases that have been settled so far. In addition, the cases' negotiations benefitted from active support voiced by AQB staff and management. Moving forward, the Compliance & Enforcement Division will take on this responsibility, which benefits compliant entities by leveling the playing field.

Recently, communities and their governing bodies have requested assistance in the form of monitoring, surveillance and control of pollution for their citizens. The Galisteo Dust Project, as described above, is one response to a community request. The Bureau investigated an entire community's facilities once in the Bloomfield area (300 hours start to finish), twice in the Belen area (80 hours), multiple times in the Alamogordo area (at least 200 hours), once in the Carlsbad area (400 hours), and responded to Carlsbad citizens request by providing and maintaining monitors capable of detecting benzene levels, using federal funding to procure and maintain the samplers deployed. The AQB continues to get requests for community monitors and other assistance, including from the mayor of Lovington and concerned citizens regarding air quality in Artesia. One of the Department's priorities is to continue (and improve) response to such concerns.

The AQB makes every effort to provide appropriate services to its constituent stakeholders, including regulated entities, communities and the residents of New Mexico. Each has a vested interest in the success of the Air Quality Program.UPCOMING NEEDS

To improve efficiency and effectiveness, the Air Quality Program needs significantly expanded staffing, technology upgrades and additions, and additional resources to respond to ever-changing requirements and support and the significantly expanded universe of regulated entities.

A. Staffing Changes

The program has been severely understaffed for the complete fulfillment of its mission. In addition, each new FTE requires equipment, an office in which to work and sometimes a dedicated vehicle (depending on the position). Because increasing staff required to fulfill our obligations also requires reorganization, significant time and effort (as indirect costs) will be expended to work through the process of reclassifications, creating new positions, advertising and filling positions.

The Department also needs more staffing for increased community outreach and education and for responding to federal rollbacks, as described above. **NMED Exhibit 56** includes a table of all staffing needs planned through 2030, based on reasonable progress toward the full staffing needed to meet the requirements of the fifth largest state in the nation (geographically), anticipated growth in various industries, and increasing complexity of protecting the air in New Mexico.

The work of the Air Quality Program continues to expand as industry expands and more residents want assurance and protection of their air. In addition, NMED has prioritized addressing the program's concerns and deficiencies due to inadequate staffing and historical constraints on spending. The Department's strategy is to increase staff at a reasonable rate, while continuing to engage contracted specialists for needed projects where staffing or skills of staff remain inadequate. We cannot continue to function, even at current levels, if fees are not increased as requested. Brian Polgar will present testimony regarding the financial analysis showing how the fees and fee schedules were determined to just meet the expected costs of running the air program.

B. Technology Upgrades

Air Quality Program staff have already invested, collectively, approximately 1,200 hours, in addition to approximately 100 hours from information technology staff and upper management in an effort to update the Department's technology and create new efficiencies. Improved technology will serve the Department, regulated entities and the general public with easier information access, greater transparency and more streamlined submissions to the Department.

The AQB, along with its AQC&E counterpart, plans to upgrade its 1990s-era database. Part of this expense will be borne in fiscal year 2026 and some in fiscal year 2027, with maintenance costs realized annually. The Department recommended possible vendors, who presented their software solutions to numerous parties in the Department prior to June 30, 2025. Since that time, AQB personnel, AQC&E, and Information Technology personnel have worked with a preferred vendor to complete a "gap analysis" to identify the needs of the program and to verify that these needs can be met by the vendor's product. From the gap analysis, the Department intends to pursue this major database upgrade which will provide significant efficiencies. Expected efficiencies include reduction of manual data entry, more complete and intuitive database querying, improved automatic reporting to the EPA database, more automated invoicing procedures, and automated and accessible status updates on permit processing at a cost of approximately $700,000 initially and up to $120,000 annually for continued training, maintenance and upgrades.

The current focus of the upgrade is on permitting and compliance & enforcement. An additional need for the near future is to include an emissions inventory module for more efficient data collection, analysis and reporting. This module will also add data for understanding the overall emissions in a given geographic area. The estimated cost for the permitting and compliance & enforcement modules is $736,783. For fiscal year 2027, the expected cost (for additional modules) will be an additional $200,000. Annual support and maintenance of the database will require an

additional $125,000 each year. Although this seems like a large expense, savings will come in the form of reduced staff time for repetitive tasks, ease of use, and included reporting engine, as well as replacement of additional applications that will be superfluous once data are migrated and tested. The upgrade will move us from a simple document repository with manual data entry and limited reports to a forms-based platform that integrates applications, permit process workflows, invoice creation and fee payments, compliance reporting and other compliance activities, enforcement actions, and reporting to EPA databases.

In addition to a major upgrade to the Air Quality Program's database, AQB personnel assist contractors and the Department's IT personnel in providing appropriate documents and metadata for "Project Velocity" – a venture that aims to provide an artificial intelligence platform to help simplify and make more accessible multi-media regulatory documents and information. AQB personnel have spent approximately 200 hours on Project Velocity already and continue to test drive the system as it is being developed to ensure accuracy and completeness. The Project Velocity platform will allow Department personnel to query the artificial intelligence agent for data and analysis. Currently, this type of task requires individual document downloading and analysis or technical queries by specific personnel because most personnel do not have expertise to make the inquiry. In addition, Project Velocity will connect various AQB and other bureau databases to give Department personnel and the public a fuller picture of a facility, a geographic area, or a company.

The AQB anticipates additional technology improvements, not described above, will be necessary for more efficient AQB operations related to various tracking requirements, including tracking of contracts and grants personnel requirements, vehicle and equipment usage and needs, certifications and trainings, etc. In addition, the Department continues to upgrade the Air Quality Program's labs and equipment needed by monitoring staff and auditors. Monitoring staff and

auditors use these labs to store and maintain equipment, conduct equipment standard verifications in accordance with EPA regulations, and set up, test, and troubleshoot air monitoring equipment. The ongoing costs of our labs are funded through federal grants, but the funding will not cover costs associated with upgrades. The Department first built out the Santa Fe Runnels lab in 1986 and it has not been remodeled or upgraded since that time. The Department is working toward a major upgrade in fiscal year 2026. The Department first built out the Las Cruces lab in 2015 and it has not been upgraded since the initial build-out. Additional equipment will be purchased for the Santa Fe lab in fiscal year 2026. The Air Quality Program will also invest in lab space in its new Albuquerque Office location as set forth in the testimony of Secretary James Kenney. The Department needs to purchase additional equipment (such as a fume hood, eyewash station, chemicals and storage cabinets, fire suppression equipment, and lab benches or tables) for this lab. AQB will spend over $400,000 to upgrade the Santa Fe Runnels lab and the Las Cruces lab to technical standards so that employees can work safely to assure effective program requirements for monitoring and quality-assured data. And, it does not want to wait another 10 to 40 years before the next one-time upgrade.

The Department's IT personnel, including the Geographic Information Systems (GIS) specialists, calculated that the current monitoring network has a significant spatial gap, with 20 network monitors responsible for gauging the air quality of almost 121,600 square miles. The air monitoring situation in the Permian Basin is insufficient -- with only three monitors even though the Basin includes thousands of pollutant-emitting facilities as one of the largest oil and gas areas in the world. The Department has already received requests for increased monitoring in dust-prone areas, in areas with many polluting facilities near cities and towns, and in towns with large industrial facilities, such as Artesia. AQB's monitoring team is currently exploring increasing the

number and types of monitors, including siting concerns for permanent monitors and additional staff required to purchase, install, calibrate and maintain those monitors. Monitors may be added to the EPA-approved network under strict conditions and approval from EPA but AQB plans to add monitors to areas in the Permian Basin to better characterize air quality in those areas, which will be helpful for planning purposes but also to recommend appropriate boundaries should EPA designate the areas surrounding the current monitors as not attaining the NAAQS for ozone pollution. As stated above, this is a very involved process, often requiring years of planning and negotiation prior to making the first purchase or hiring a new staff person. The Department, however, feels strongly that additional monitoring capability is warranted.

To address this long-overdue deficiency, AQB will work toward adding *at least* two monitors to the Permian Basin in the next five years. Beyond 2030, AQB will continue to analyze emissions and other data to determine if and where additional monitors may be needed. For each of the two new monitoring stations, the cost estimate will be approximately $300,000 for equipment, including a shelter, ongoing costs of approximately $9,500 per site for electricity, temperature control, supplies and maintenance, and at least one new Monitoring technician and a Quality Assurance Auditor. Depending on how many new monitors AQB installs and where they are located, additional staff may be needed (monitoring technicians and auditors).

AQB is currently in the process of purchasing a trailer with multiple types of samplers and analyzers, along with a meteorological tower, that can be deployed at will following a credible complaint or a community concern. Although part of this cost is funded by a third party, that funding does not cover the entire purchase price, nor does it cover the staff required for deployment. AQB has already hired a “mobile lab specialist” who is helping with the planning and purchasing of the equipment and will be responsible for working with the Air Quality Program’s

management to prioritize and direct its use. The Air Quality Program will also need a second mobile lab specialist for longer-term deployments of the mobile lab and to assist current monitoring technicians with increasing responsibilities for monitoring – a position that is long overdue. Considering the requests AQB is getting for community air quality concerns and a need for verification of modeled air quality, AQB anticipates needing a second mobile lab as well. Once the first mobile lab is functional (anticipated December 2026), usage will be balanced with requests to determine whether another will be required and, if so, whether it will need the same or different equipment. The overall cost for the mobile lab includes approximately an additional $300,000 for the initial equipment purchase and set-up plus the annual staffing cost for salaries & benefits, training, travel and staff equipment for each employee. If AQB moves forward with a second mobile lab, this will require at least $800,000 in equipment costs and additional staffing costs. Added to this will be the need for at least one more, but likely two more vehicles for the mobile labs.

The Department also needs to implement technical improvements in our modeling. To be protective of the air in the Permian Basin, the AQB aims to conduct regional photochemical modeling on a regular basis, moving from contracted work to in-house work. This will require two additional technical staff (at an estimated total cost of at least $300,000 annually), significant training and additional software, hardware and licenses. The Department intends to rely on the current contractor to provide appropriate training to modeling staff to integrate that capability into AQB's capabilities. Beyond staffing, the Department anticipates costs for this activity to reach at least $100,000 initially with ongoing costs for additional training, licensing and upgrades to hardware and software.

Additional modeling will also be required to update various GCPs, as this modeling was

conducted with now outdated information. Due to the current levels of ozone in the Permian Basin, the Department views this as high-priority. Should EPA designate the Permian as nonattainment for ozone (as many are calling on EPA to do), it will be imperative. This will be done with current staff plus assistance from modelers to address this task (as described above) whose main task will be photochemical modeling.

Related to technology improvements, AQB will need to add at least two FTEs whose primary tasks will be to seek technological solutions for AQB needs, troubleshoot with staff when problems arise, advise staff on best practices, ensure all information in AQB is readily accessible to the public, and liase with the Department's IT personnel. This will allow Permitting staff, Planning staff, and Operations staff to focus on the primary tasks of their own jobs. Technology specialists will have a large role to play in assuring that Project Velocity continues toward its goals, that the database upgrade away from TEMPO delivers value to the Air Quality Program, and that the Air Quality Program is able to implement software solutions as needed.

The Climate Change Action Plan (**NMED Exhibit 54**) includes measures for which AQB will be directly responsible, including addressing methane and other greenhouse gases. As it works to ensure the completion of the Climate Change Executive Order 2019-003, the Department will need to add two to five additional Planning staff for rulemaking and implementation, depending on any future measures the State may add.

X. CONSEQUENCES OF NOT ADOPTING THE FEE CHANGES, AS PROPOSED BY THE DEPARTMENT

Fees increases are needed to expand staffing and resources for the higher workload due to increased permitting actions and increased facility complexity for which the Air Quality Program has never aligned its costs, but also to address the recent increase in application deficiencies and anticipated future needs in all areas of the Air Quality Program. More regulated facilities also

means more planning, monitoring, administrative requirements, and compliance and enforcement work. The current deregulatory push at the federal level also increases the resources needed for state-level planning and action to protect New Mexico's air while providing regulatory certainty.

The Department supports continued growth of New Mexico's economy. However, to do so in a protective and responsible way, the Department must increase staff and expand the Air Quality Program to meet the needs of ever-changing conditions and technology improvements. The Department needs to monitor more, verify more, inspect more, update internal processes more, provide more educational opportunities, assist industry with alternatives for compliance, provide more audit management, and respond to public concerns more fully. It has not been able to complete these tasks over the past years, as it has been so long since the Air Quality Program sought a fee alignment from the Board.

Should the Board not approve this fee alignment, the Air Quality Program would continue to be stunted and will need to cut costs, leading to a reduction in services to both industry and residents. The Department may fail to meet federal funding requirements, which then places the entire Air Quality Program at risk as set forth in the testimony of the other witnesses.

The Air Quality Program's inability to fund new positions will lead to overburdened employee workloads, outdated equipment and lack of training, which would in turn lead to a reduction in staffing over time, causing multiple services to be interrupted, delayed or otherwise reduced. The Air Quality Program would be unable to place needed monitors in the state, and insufficient data for decision-making could lead to consequences for attainment decisions, planning efforts and insufficient protection of air quality. The Air Quality Program would also be even less responsive to public concerns and complaints than it is now, and it will be unable to provide outreach and education for emitting entities and the public.

The Air Quality Program will be unable to address concerns from the public and advocacy groups including concerns about ozone levels and air toxics exposure; concerns about the cumulative impacts of stationary sources; concerns about potential impacts of new industries moving to the state, such as data centers; concerns related to a lack of ability to ensure compliance with regulations and permits; concerns about the lack of monitors; and concerns about greenhouse gases like methane, and climate change.

The Air Quality Program will also be unable to address concerns from regulated entities in an adequate or timely way, including concerns about permit processing time; concerns about inconsistent application of permitting rules; concerns about application requirements; concerns about the length of time required for approvals of alternative plans for Part 50; concerns about the length of time enforcement actions take to resolve; concerns about regulations that need updating to provide regulatory certainty; and concerns about underutilizing electronic communication and up-to-date technology..

The Department commits to protecting the air in New Mexico to the best of its ability. With fees that have not been updated to reflect the change in scope and complexity of this mission, we must increase fees to eliminate (or at least have a chance at eliminating) the above consequences. With proper funding, the Department can move forward in fulfilling its mission and address the backlog of items that it has been unable to address. Without proper funding, we are at best stuck with a compromised Air Quality Program in the present; at worst we will be forced to move backward. The Department wants to move forward in its efforts to protect New Mexico's air while ensuring New Mexico has a robust economy – and this is what the Department consistently hears from its stakeholders and that this rulemaking will deliver.

XI. CONCLUSION AND REQUEST FOR APPROVAL

This testimony provides the authority and the obligation for the Board to adopt rules allowing the Department to collect fees sufficient to fund the reasonable costs of the Air Quality Program. As described in the testimony of Secretary James Kenney this is a critical piece to the ability of the Department to budget and spend for an Air Quality Program that meets the state's modern day needs.

This testimony also provides a narrative description of the proposed changes to both Part 71 and Part 75 and the reasons the Department proposes such changes. The testimony of Brian Polgar, **NMED Exhibit 65**, describes the fiscal analysis that the Department undertook to determine a reasonable and equitable fee schedule.

This testimony further provides a detailed, although non-exhaustive, description of the Air Quality Program with further testimony from Bret Anderson (**NMED Exhibit 57**) regarding the Compliance & Enforcement components of the program. The extensive program descriptions provide the context to understand the complexity of the Air Quality Program to help the Board and the public understand how Parts 71 and 75 revenues fund all activities related to protecting New Mexico's air quality.

Finally, this testimony provides documentation that the Department met the requirements for EIB rulemaking public notice and provided ample opportunity for public comment and questions.

The Department does not ask the Board for approval of its program spending, nor does the Board have the authority to do so. Similarly, the Board may hear complaints from industry that the fee increases requested are unreasonable or unwarranted; however, this testimony provides ample documentation that the Department has worked hard over the past year to propose fee schedules that are both reasonable and equitable. The Department needs these fee increases to implement its

mission after numerous years of resource constraints, leading to a program struggling to meet its obligations.

The Board is required to consider:

> (1) character and degree of injury to or interference with health, welfare, animal and plant life, property and the environment;
> (2) the public interest, including the social, economic and cultural value of the regulated activity and the social, economic and cultural effects of environmental degradation; and
> (3) technical practicability, necessity for and economic reasonableness of reducing, eliminating or otherwise taking action with respect to environmental degradation.

NMSA 1978, § 74-1-9(B).

This rulemaking is different than most other rulemakings proposed by the Department. It does not directly address pollutant reductions. Instead, it indirectly addresses pollution reduction by proposing fee schedules needed to prevent "injury to or interference with health, welfare, animal and plant life, property and the environment." The Air Quality Program, when properly resourced, can protect the health and welfare of New Mexico residents and the air we all breathe. The harm of not properly funding the Air Quality Program is already evident in the record of requirements not yet fulfilled. The Department has made strides in the past few years to meet the demands of industry while simultaneously protecting the air quality in New Mexico, through adding resources more fully align our capacity with our mission.

This rulemaking is in the public interest, as requests for additional monitoring and additional protections from polluters confirm. Environmental degradation from under-resourcing of the very entity tasked with protecting the environment (the Department) does not serve the public interest. Socially, under-resourcing creates a lack of faith in the Department's ability to do its job. Culturally, under-resourcing affects Tribal communities and culturally significant lands

since air recognizes no boundaries. Economically, under-resourcing shifts the cost of pollution to individuals and communities through increased health effects, including higher rates of asthma, increased acute and chronic pulmonary episodes, increased emergency and acute care visits, missed work, and missed school.

This rulemaking, because it introduces no required technology for reducing air pollution, is technically feasible. Further, by providing the resources necessary to protect New Mexico's air in alignment with federal and state statutory and regulatory requirements, the Department will be able to conduct even more robust outreach than in the past few years to develop plans and propose rulemakings that assure added air protections within the requirements of technical feasibility and practicability. The under-resourcing of the Air Quality Program, at a time of huge oil and gas expansion and an influx of new source types, forces the Department to focus on priorities like meeting industry demands for faster permits, faster reviews of alternative plans for Part 50 (*Ozone Precursor Rule),* and faster resolution of enforcement cases. At the same time, demands from communities, environmental organizations and individuals for increased monitoring, more protective permit conditions, additional protections to reduce ozone in the oil and gas basins, and air quality data at wildfire-affected areas must also be factored into those priorities.

The Department has demonstrated through this testimony and the testimony of Secretary James Kenney, Bret Anderson and Brian Polgar the need for the requested fee schedules. Without approval of Revised Parts 71 and 75, the Air Quality Program will not be able to meet the demands of industry nor protect the residents of New Mexico.

The Department respectfully requests approval of its proposal to repeal and replace both Part 71 and Part 75.

Experience

New Mexico Environment Department, Air Quality Bureau

November 9, 2024 – present – Bureau Chief

Responsible for directly supervising up to 3 Section Chiefs and up to 14 managers, supervisors or staff, due to vacancies. Supervisory duties include hiring and other personnel actions, evaluations and overseeing all Bureau programs. Responsibilities also include overseeing all organizational operations, coordinating with upper management and financial staff to manage the Bureau budget. Responsible also for strategizing with Bureau and Division managers regarding Bureau priorities, budget management and response to myriad stakeholders.

July 28, 2024 – November 9, 2024 – Acting Bureau Chief

Assumed the role due to vacancy. Responsible for directly supervising 3 Section Chiefs and 3 Managers or Supervisors, including hiring and other personnel actions, evaluations and overseeing all Bureau programs. Responsibilities also included overseeing all organizational operations, coordinating with upper management and financial staff to manage the Bureau budget. Strategized with Bureau and Division managers regarding Bureau priorities, budget management and response to myriad stakeholders.

April 30, 2022 – July 28, 2024 Compliance & Enforcement Section Chief

Responsible for managing the Compliance & Enforcement program for the Air Quality Bureau, overseeing three units: Compliance Inspections, Compliance Reports, and Enforcement. Responsible for hiring and other personnel actions, evaluation of three direct reports and additional staff due to manager vacancies and assuring appropriate workflow from compliance activities to final Enforcement action. Significant duties include participating in and helping to strategize for numerous Enforcement cases and providing guidance to managers regarding EPA-required compliance & enforcement activities.

June 2021 – April 30, 2022, Enforcement Manager

Responsible for overseeing all responses to discovered compliance issues from inspections, report reviews and complaint investigations, including determination of appropriate enforcement actions, building defensible cases for alleged violations and drafting legal documents leading to settlement or compliance orders.

April 6, 2019 – June 12, 2021, Inspections Manager

Responsible for overseeing all air quality-related inspections and investigations in the State, including preparation, logistical problem-solving, post-inspection notifications of violations and report drafting. Managed staff rotation for public complaints and assured timely responses. Helped develop plans for inspecting facilities per EPA obligations.

August 17, 2013 – April 6, 2019, Environmental Analyst, Control Strategies

Analysis of proposed rule changes, preparation of reports to the US EPA, data visualization and mapping using GIS, assisting with affirmative defense reviews for excess emissions, and environmental impact reviews. My main projects were Incorporation by Reference, Transportation Conformity, the SO2 Implementation Rule, the Clean Power Plan and the Regional Haze Rule (Round 2).

EnviroLogic, Inc.
August 5, 2012 – June 28, 2013, Research Associate

Collected data from various agencies and organizations for hydrologic modeling, as well as prepared data for inclusion in GIS applications. Contributed to reports for international clients regarding nuclear safety case issues (using WIPP as a case study) and completed modeling parameter analysis for testimony preparation.

National Museum of Nuclear Science & History
August 18, 2012 – July 28, 2013, Weekend Manager

Responsible for managing two staff and up to five volunteers during weekend hours of operation. Responsible for maintaining appropriate programming, communicating with visitors and assuring that exhibits and the facility in general was secure. Reported to supervisor regarding staff performance.

New York City Mayor's Office of Long Term Planning & Sustainability
January 3, 2012 – June 14, 2012, Project Manager

Provided briefings, reports and presentations to the Office regarding he "New York City Greenhouse Gas Reductions Community Challenge." Responsible for creating the project control plan, delegating task roles to team members, overseeing deliverables to client and communicating with all stakeholders.

Mountainair Public Schools
August 2, 2004 – May 25, 2011, Educator and Program Coordinator

Developed and implemented curricula for 10 high school and middle school science laboratory classes, 3 levels of Spanish, and Communications and managed the high school Chemistry / Physics lab. Includes

evaluation of student progress on a weekly basis, program management, project management and communicating technical information to non-technical audiences. Coordination responsibilities included the high school Student Assistance Team and the Anti-Bullying Program, which I helped develop for the school system. Summers – 20 hrs/week developing new curriculum and planning for Science Olympiad participation.

Fort Wayne Community Schools, South Side High School
August 9, 2001 – June 9, 2004, Educator and Program Coordinator

Developed and implemented curricula for 4 levels of Chemistry, taught department-developed curricula for Biology and Earth Science, managed the Chemistry lab and coordinated the International Baccalaureate Program. Includes evaluation of student progress on a weekly basis, program management, project management and communicating technical information to non-technical audiences. Summers – 20 hrs/week developing new curriculum and planning for IB program.

Arania Books Audio & Print
February 1997 - April 2000, President

Managed financial, contract, marketing and personnel for start-up company. Included hiring and evaluating employees, negotiating and managing contracts with authors, project management and marketing.

Fort Wayne Children's Choir
December 1992 – July 1996, Choralfest Coordinator

Arranged logistics for 200 choir students, directors, guest artists and volunteers. Responsible for project planning, marketing, registration, scheduling and all communications.

Bishop Dwenger High School
January 1988 – June 12, 1989, Science Teacher

Planned and implemented curriculum for four laboratory science courses. Included evaluation of student progress on a monthly basis, project management and communicating technical information to non-technical audiences.

Fort Wayne National Bank
June 1977 – August 1982, Accounts Manager

Managed profit-sharing and retirement portfolios for Trust Department. Arranged for securities purchases and sales. Completed year-end reports for all clients.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
RESEARCH TRIANGLE PARK, NC 27711

MAR 27 2018

OFFICE OF
AIR QUALITY PLANNING
AND STANDARDS

MEMORANDUM

SUBJECT: Updated Guidance on EPA Review of Fee Schedules for Operating Permit Programs Under Title V

FROM: Peter Tsirigotis
Director

TO: Regional Air Division Directors, Regions 1 – 10

The attached guidance is being issued in response to the Environmental Protection Agency Office of Inspector General's (OIG) 2014 report regarding the importance of enhanced EPA oversight of state, local, and tribal[1] fee practices under title V of the Clean Air Act (CAA).[2] Specifically, this guidance reflects the EPA's August 22, 2014, commitment to the OIG in response to OIG's Recommendation 1 to "assess our existing fee guidance and to re-issue, revise, or supplement such guidance as necessary" (we refer to the attached guidance as the "**updated fee schedule guidance**"). The EPA's response to the OIG's other recommendations are being issued concurrently in a separate memorandum and guidance concerning title V program and fee evaluations ("title V evaluation guidance").[3]

Title V of the CAA and 40 CFR part 70 contain the minimum requirements for operating permit programs developed and administered by air agencies, including requirements that each program issue operating permits to certain facilities (facilities that are "major sources" of air pollution and certain other facilities) and that each program charge fees ("permit fees") to these facilities to fund the permit program. These operating permits are intended to identify all federal air pollution control requirements that apply to a facility ("applicable requirements") and to require the facility to track and report compliance pursuant to a series of recordkeeping and reporting requirements. Section 502(b)(3) of the CAA requires each air agency to collect fees "sufficient to cover all reasonable (direct and indirect) costs required to develop and administer" its title V permit program.[4] The 40 CFR part 70 regulations establish the minimum program

---

[1] As used herein, the term "air agency" refers to state, local, and tribal agencies.

NMED Exhibit 18_000001

requirements for operating permit programs, including requirements for fees to be administered by air agencies with approved part 70 programs.[5]

On August 4, 1993, the EPA issued a memorandum, commonly referred to as the "1993 fee schedule guidance," to provide initial guidance on the Agency's approach to reviewing fee schedules for part 70 programs.[6] Since that time, the EPA has issued a number of memoranda and a final rule[7] that have touched upon, revised, or clarified certain topics contained in the 1993 fee schedule guidance.[8] The attached updated fee schedule guidance provides additional direction on how the EPA interprets the title V permit issuance and fee collection activities, as well as discussion of other fee requirements for air agencies. In addition to the memoranda and final rule noted above, the updated fee schedule guidance includes numerous changes to remove outdated regulatory provisions and focuses on the review of existing part 70 programs, rather than on initial program submittals.[9]

The updated fee schedule guidance sets forth updated principles, which will generally guide the EPA's review of part 70 fee programs. These updates are consistent with the fee requirements of title V and part 70, as well as prior guidance on fee requirements. Accordingly, these updates do not themselves provide substantively new fee guidance or create any inconsistencies with fee requirements or prior fee guidance.

The development of this guidance included outreach and discussions with stakeholders, including the EPA Regions, the National Association of Clean Air Agencies, and the Association of Air Pollution Control Agencies.

If you have any questions concerning the updated fee schedule guidance, please contact Juan Santiago, Associate Director, Air Quality Policy Division, Office of Air Quality Planning and Standards, at (919) 541-1084 or *santiago.juan@epa.gov*.

Seitz, Director, OAQPS, U.S. EPA, to Air Division Directors, Regions I-X (August 4, 1993) ("1993 fee schedule guidance") at page 1. Note that there was an earlier document on this subject that was superseded by the 1993 fee schedule guidance.

[7] *See* the October 23, 2015, final rule, *Standards of Performance for Greenhouse Gas Emissions from New, Modified and Reconstructed Stationary Sources: Electric Utility Generating Units*. 80 FR 64510, 64633 (Section XII.E "Implications for Title V Fee Requirements for GHGs").

[8] A list of the relevant title V fee-related guidance memoranda is included as Attachment A.

[9] At this time, all air agencies have EPA-approved part 70 programs. It is conceivable that additional part 70 program submittals will be received in the future for a number of Indian tribes, and, if so, the EPA will work closely with the tribes to assist them with identifying activities which must be included in costs related to the program submittal and to meet other fee requirements of part 70.

NMED Exhibit 18_000002

DISCLAIMER

These documents explain the requirements of the EPA regulations, describe the EPA policies, and recommend procedures for sources and permitting authorities to use to ensure that title V fee schedules and fee evaluations are consistent with applicable regulations. These documents are not a rule or regulation, and the guidance they contain may not apply to a particular situation based upon the individual facts and circumstances. The guidance does not change or substitute for any law, regulation, or any other legally binding requirement and is not legally enforceable. The use of non-mandatory language such as "guidance," "recommend," "may," "should," and "can," is intended to describe the EPA policies and recommendations. Mandatory terminology, such as "must" and "required," is intended to describe controlling requirements under the terms of the Clean Air Act and the EPA's regulations, but the documents do not establish legally binding requirements in and of themselves.

NMED Exhibit 18_000003

Updated Guidance on EPA Review of
Fee Schedules for Operating Permit Programs under Title V

The purpose of this document and the attachments is to provide guidance on the Environmental Protection Agency's (EPA's) review of fee schedules for operating permit programs under 40 CFR part 70 (part 70), the regulations that set minimum requirements for permit programs administered by state, local, and tribal air agencies (referred to here as, "air agencies") authorized under title V of the Clean Air Act (CAA or Act). This document updates and clarifies the previous fee schedule guidance issued by the EPA on August 4, 1993 (the "1993 fee schedule guidance").[1] This updated fee schedule guidance clarifies which permit program costs must be included in an analysis to demonstrate that adequate fees are collected to fund all part 70 program costs. The guidance also discusses other fee-related requirements for air agencies. The updated fee schedule guidance focuses on the costs of program implementation, rather than on the costs of initial program development (as was the case for the 1993 fee schedule guidance).

I. General Principles for Review of Title V Fee Schedules

Section 502(b)(3)(A) of the Act requires operating permit programs to fund all "reasonable direct and indirect costs" of the permit programs through fees collected from "part 70 sources"[2] and requires the fees to be sufficient to cover all reasonable permit program costs.[3] The terms "fee schedule" and "permit fees" are sometimes used interchangeably to describe the fees that an air agency charges to part 70 sources to fulfill this requirement.[4] Section II of this guidance provides an explanation of the term "direct and indirect costs" and a detailed explanation of specific permit program activities to be included in costs for the purpose of analyzing whether the permit fees are sufficient to cover all the permit program costs.

The fees collected under a part 70 program are classified as "exchange revenue" or "earned revenue" in governmental accounting guidance because a good or service (e.g., a permit) is provided by a governmental entity in exchange for a price (e.g., a permit fee).[5] Also, governmental accounting guidance provides that only revenue classified as "exchange revenue" should be compared to costs to

[1] *See Reissuance of Guidance on Agency Review of State Fee Schedules for Operating Permits Programs under Title V*, John S. Seitz, Director, OAQPS, U.S. EPA, to Air Division Directors, Regions I-X (August 4, 1993) ("1993 fee schedule guidance").

[2] The term "part 70 sources" is defined in 40 CFR § 7.2 to mean "any source subject to the permitting requirements of this part, as provided in 40 CFR §§ 70.3(a) and 70.3(b) of this part." Thus, a source is a part 70 source prior to obtaining a part 70 permit if the source is subject to permitting under the applicability provisions of 40 CFR § 70.3.

[3] *See* 40 CFR § 70.9(a).

[4] The fee schedule is typically included in the regulations that the air agency uses to implement part 70; it is a component of the part 70 program. The fee schedule (and other elements of an air agency's regulations for part 70) can vary significantly across air agencies.

[5] *See* Statement of Recommended Accounting Standards Number 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, issued by the Federal Accounting Standards Advisory Board (FASAB) ("FASAB No. 7") at page 2. *See also* Statement No. 33, *Accounting and Financial Reporting for Nonexchange Transactions* (December 1998), issued by the Governmental Accounting Standards Board (GASB) at pages 1-4 ("GASB No. 33").

NMED Exhibit 18_000004

determine the overall financial results of operations for a period.[6] This means that legislative appropriations, taxes, grants,[7] fines and penalties, which are generally characterized as "nonexchange revenue,"[8] should not be compared to part 70 program costs to determine if permit fees are sufficient to cover costs.

Any fee required by part 70 must "be used solely for permit program costs" (in other words, the fees must not be diverted for non-part 70 purposes).[9] Many air agencies transfer fees that are in excess of program costs for a particular year into accounts to be used for part 70 purposes in another year when there is expected to be a fee shortfall, and this is an acceptable practice. However, if title V fees are transferred for uses not authorized by part 70 (e.g., highway maintenance or other general obligations of government), they would be considered improperly diverted.

Each air agency is required, as part of its part 70 program submittal, to submit a "fee demonstration" to show that its fee schedule would result in the collection and retention of fees sufficient to cover program costs, including an "initial accounting" to show that "required fee revenues" would be used solely to cover program costs.[10]

The EPA will generally presume that a fee schedule is sufficient to cover program costs if it results in the collection and retention of fees in an amount above the "presumptive minimum" —i.e., "an amount *not less than* $25 per ton" adjusted annually for increases in the Consumer Price Index[11] "times the total tons of the actual emissions of each regulated air pollutant (for presumptive fee calculation) emitted from part 70 sources," plus any greenhouse gas (GHG) cost adjustments, as applicable.[12] A fee schedule that is expected to result in fees above the "presumptive minimum" is considered to be "presumptively adequate." Note that the "presumptive minimum" is unique to each air agency because the total tons of actual emissions of "regulated air pollutants (for presumptive fee calculation)" are unique to each air agency.

As part of a fee demonstration, air agencies with fee schedules that would not be presumptively adequate are required to submit a "detailed accounting" to show that collection and retention of fee

---

[6] *See* FASAB No. 7 at page 8; GASB No. 33.

[7] Concerning grants, an EPA memo, *Use of Clean Air Act Title V Permit Fees as Match for Section 105 Grants*, Gerald Yamada, Acting General Counsel, U.S. EPA, to Michael H. Shapiro, Acting Assistant Administrator, Office of Air and Radiation, U.S. EPA, October 22, 1993, states that part 70 fees are "program income" under 40 CFR § 31.25(a), and, because of this, part 70 fees cannot be used as match for section 105 grants and no air agency may count the same activity for both grant and part 70 fee purposes.

[8] "Nonexchange revenue" arises primarily from the exercise of governmental power to demand payment from the public (e.g., income tax, sales tax, property taxes, fines, and penalties) and when a government gives value directly without directly receiving equal value in return (e.g., legislative appropriations and intergovernmental grants).

[9] *See* 40 CFR § 70.9(a).

[10] *See* 40 CFR §§ 70.9(c)-(d) (fee demonstration requirements); 1993 fee schedule guidance (explaining that preparing the fee demonstrations that is part of the initial part 70 program submittal).

[11] *See* CAAt§ 502(b)(3)(B); 40 CFR § 70.9(b). The presumptive minimum fee rate is adjusted for increases in the Consumer Price Index each year in September. The fee rate for the period of September 1, 2016, through August 31, 2017, is $48.88 per ton. For more information, including a list of historical adjustment to the fee rate, *see https://www.epa.gov/title-v-operating-permits/permit-fees*.

[12] *See* 40 CFR § 70.9(b)(2) (emphasis added). The components of the "presumptive minimum" calculation—including certain emissions that may be excluded from the calculation, and an upward "GHG cost adjustment" that may apply—are addressed in 40 CFR §§ 70.9(b)(2)(i)-(v).

NMED Exhibit 18_000005

revenue would be sufficient to cover program costs.[13] Air agencies are also required to provide an "initial accounting" to show how "required fee revenues" will be used solely to cover permitting program costs.[14] Air agencies with fee schedules considered "presumptively adequate" are nevertheless required to submit fee demonstrations,[15] but they may be "presumptive minimum program cost" demonstrations[16] showing that expected fee revenues are above the "presumptive minimum" calculated for the air agency. In order to receive the EPA's approval, any fee demonstration must provide an "initial accounting" showing how required fee revenues will be used solely to cover program costs.[17]

After an air agency fee program is approved by the EPA, there are several fee requirements that may apply to the permit program as circumstances dictate. One requirement is for an air agency to submit, as required by the EPA, "periodic updates" of the "initial accounting" portion of the fee demonstration to show how "required fee revenues" are used solely to cover the costs of the permit program.[18] Further, an air agency must submit a "detailed accounting" demonstrating that the fee schedule is adequate to cover costs if an air agency changes its fee schedule to collect *less than* the presumptive minimum or if the EPA determines—based on the EPA's own initiative, or based on comments rebutting a presumption of fee sufficiency—that there are serious questions regarding whether the fee schedule is sufficient to cover the costs.[19]

In addition, title V and part 70 provide general authority for the EPA to conduct oversight activities to ensure air agencies adequately administer and enforce the requirements for operating permits programs, including that the requirements for fees are being met on an ongoing basis.[20] One method the EPA uses to perform such oversight is through periodic program or fee evaluations of part 70 programs. As part of such an evaluation, the EPA may carefully review how the state has addressed the fee requirements of part 70 as previously described and work with the air agency to seek improvements or make corrections and adjustments if any fee concerns are uncovered. Also, as part of such an evaluation, the EPA may require "periodic updates" to a fee demonstration or a "detailed accounting" that fees are sufficient to cover permit program costs.[21] See the EPA's separate *Program and Fee Evaluation Strategy and Guidance for 40 CFR Part 70* ("title V evaluation guidance") for more on this subject.[22]

---

[13] *See* 40 CFR § 70.9(b).
[14] *See* 40 CFR § 70.9(d).
[15] *See* 40 CFR § 70.9(c).
[16] *See* Sections 1.1 and 3.2 of the fee demonstration guidance.
[17] *See* 40 CFR § 70.9(d).
[18] *See* 40 CFR § 70.9(d).
[19] *See* 40 CFR § 70.9(b)(5); fee demonstration guidance, Section 2.0 (providing an example of a "detailed accounting"). The scope and content of a "detailed accounting" may vary but will generally involve information on program fees and costs and other accounting procedures and practices that will show how the air agency's fee schedule will be sufficient to cover all program costs.

NMED Exhibit 18_000006

II. Types of Costs and Activities Included in Title V Costs

A. Overview

Activities that count as part 70 costs (direct and indirect costs of part 70). Part 70 uses the term "permit program costs" to describe the costs that must count for fee purposes under part 70.[23] This term is defined in 40 CFR § 70.2 as "all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in [40 CFR § 70.9(b)] (whether such costs are incurred by the permitting authority or other State or local agencies that do not issue permits directly, but that support permit issuance or administration)." At a minimum, any air program activity performed by an air agency under title V or part 70 must be included in program costs. Many of the activities required under title V or part 70 are described in Sections II.B through II.K of this guidance.

As described above, part 70 costs must include all "reasonable direct and indirect costs"[24] that are incurred by air agencies in the development, implementation, and enforcement of the part 70 program. "Direct costs" are expenses that can be directly attributed to part 70 program activities or services. "Direct costs" can generally be subdivided into two categories: "direct labor costs" and "other direct costs." The term "direct labor costs" refers to salary and wages for direct work on part 70, including fringe benefits. The term "other direct costs" refers to other direct part 70 expenses, such as materials, equipment, professional services, official travel (e.g., transportation, food and lodging), public notices, public hearings, and contracted services. "Indirect costs" are costs for "general administration" or "overhead" that are not directly attributable to a part 70 program because they benefit multiple programs or cost objectives, but they are needed to operate a part 70 program. "Indirect costs" for a part 70 program are typically determined based on an indirect rate or a proportional share of the expenses of a larger organization. Examples of "indirect costs" include, but are not limited to, costs for utilities, rent, general administrative support, data processing charges, training and staff development, budget and accounting support, supplies and postage.

In addition, note that air agency accounting practices vary in how they nominally categorize costs as "direct costs," "indirect costs," or "other direct costs," depending on the specific nature of the activity. An example would be training costs, which are typically treated as "indirect costs" but sometimes as "direct costs," particularly where the training is about part 70 (e.g., for permit staff development). While accounting practices and terminology may vary among air agencies, the important principle to remember is that all reasonable direct and indirect costs of the program must be represented in the costs reported to the EPA, regardless of how the costs are categorized by the air agency.

Part 70 and the 1993 fee schedule guidance describe the part 70 activities of "reviewing and acting on any application for a part 70 permit"[25] and "implementing and enforcing the terms of any part 70

---

[23] See 40 CFR § 70.9(a).

[24] The phrases, "reasonable direct and indirect costs" and "reasonable (direct and indirect) costs" have the same meaning. The phrase "reasonable direct and indirect costs" was initially used by the EPA in the 1993 fee schedule guidance, page 1. The phrase "reasonable (direct and indirect) costs" is also found in CAA section 502(b)(3)(A), (C)(iii).

[25] The response to comments document for the part 70 final rule clarifies that the phrase "acting on permit applications" in section 503(c) of the Act means the act of issuing or denying a permit, not just beginning review of a permit application. *See* Technical Support Document for Title V Operating Permits Programs (May 1992) at page 4-4, EPA Docket No. EPA-HQ-OAR-2004-0288; Legacy Docket No. A-90-33.

NMED Exhibit 18_000007

permit," and these activities must be included in part 70 costs.[26] The following paragraphs use these phrases to clarify the extent that certain activities performed by the air agency must be included in part 70 costs. The phrase "reviewing and acting on any application for a part 70 permit" refers to all activities related to processing the permit application and issuing (or denying) the final part 70 permit, while the phrase "implementing and enforcing the terms of any part 70 permit" refers to all activities necessary to administer and enforce final part 70 permits, prior to the filing of an administrative or judicial complaint or order.[27]

Also, the following paragraphs clarify the extent to which fees must fund the costs of "permit programs under provisions of the Act other than title V" (hereafter referred to as "other permits") (e.g., preconstruction review permits) and "activities which relate to provisions of the Act in addition to title V" (hereafter referred to as "other activities") (e.g., a requirement for an air agency to develop a case-by-case emissions standard for an existing source).[28]

Costs related to "other permits."[29] The costs of "implementing and enforcing" the terms of a part 70 permit must be treated as a part 70 cost.[30] Thus, part 70 costs must include the cost of implementing and enforcing any term or condition of a non-part 70 permit required under the Act[31] that is incorporated into a part 70 permit and meets the definition of "applicable requirement"[32] in part 70. Similarly, the cost of implementing and enforcing any term or condition of a consent decree or order that originates in a non-part 70 permit that has been incorporated into a part 70 permit must be included as a part 70 cost.[33]

The costs of implementing and enforcing "applicable requirements" from a non-part 70 permit that will go into a part 70 permit in the future may be counted as part 70 costs. However, once a source has

---

[26] The phrases "reviewing and acting on any application for a part 70 permit" and "implementing and enforcing the terms of any part 70 permit" are found at 40 CFR § 70.9(b)(1)(ii) and (iv). Similar phrases are found in the EPA's 1993 fee schedule guidance at page 3 and the phrases in the guidance have the same meaning as the phrases in part 70. *See also*, CAA § 502(b)(3)(A).

[27] An EPA memo, *Matrix of Title V-Related and Air Grant-Eligible Activities*, OAQPS, U.S. EPA, September 23, 1993 (the "matrix guidance"), page 8, which clarifies that enforcement costs are counted for part 70 purposes prior to the filing of a complaint or order. *See* page 8.

[28] The phrases cited here were originally discussed on pages 2 and 3 of the cover memorandum for the 1993 fee schedule guidance.

[29] Note that the EPA's 1993 fee schedule guidance contains the statement that "the costs of reviewing and acting on applications for permits required under Act provisions other than title V *need not* be recouped by title V fee." This statement has been interpreted by some to mean that the costs of non-title V permits "are not needed" or "may *optionally*" be counted in title V costs.

[30] *See* 40 CFR § 70.9(b)(1)(iv).

[31] Examples of non-part 70 permits required under the Act may include "minor new source review" (minor NSR) permits, "synthetic minor" permits, Prevention of Significant Deterioration (PSD) permits, and Nonattainment NSR permits authorized under title I of the Act.

[32] "Applicable requirements" are the air quality requirements that must be included in part 70 permits. See the definition of "applicable requirement" in 40 CFR § 70.2, which includes "any terms and conditions of any preconstruction permits issued pursuant to any regulations [under title I]," and certain requirements under titles I, III, IV and VI of the Act.

[33] The EPA has previously explained that consent decrees and orders reflect the conclusion of a judicial or administrative process resulting from the enforcement of "applicable requirements," and, because of this, all CAA-related requirements in such consent decrees and orders "are appropriately treated as 'applicable requirements' and must be included in title V permits. . ." *See In the Matter of Citgo Refining and Chemicals Company, L.P.*, Order on Petition Number VI-2007-01, at 12 (May 28, 2009).

submitted a timely and complete part 70 application and paid part 70 fees, all costs of implementing and enforcing the non-part 70 permit must be counted as part 70 costs.[34]

Also, any implementation and enforcement activities related to a requirement that is incorporated into a part 70 permit that is not "federally enforceable" and would not meet the definition of an "applicable requirement" (e.g., a "state-only" requirement) need not be treated as a part 70 cost.[35] The matrix guidance also clarifies that state-only requirements are air grant-eligible activities, rather than title V-eligible activities.

Costs of performing certain other activities related to applicable requirements. Certain activities required by the Act or its implementing regulations are not "applicable requirements" as defined in part 70 because they apply to the permitting authority rather than the source.[36] We refer to such activities as "other activities." As such, questions often arise as to whether the costs of "other activities" are part 70 costs, costs of the underlying standard, or costs of the preconstruction review permitting process.

Examples of applicable requirements associated with "other activities" include, but are not limited to, the following:

- Emissions standards or other requirements for new sources under section 111(b) of the Act;
- Emissions standards or other requirements for existing sources under section 111(d) of the Act;
- Case-by-case maximum achievable control technology (MACT) standards that may be required under section 112 of the Act; and
- Activities required by a state, federal, or tribal implementation plan (SIP, FIP, or TIP), including section 110 of the Act.

The 1993 fee schedule guidance stated that the cost for performing "other activities" would be part 70 costs only to the extent the activities are "necessary for part 70 purposes."[37] The 1993 fee schedule guidance has resulted in numerous questions over the years as to the scope of the term "part 70 purposes." The EPA believes a clearer standard for determining when "other activities" must be included in part 70 costs would include an evaluation of: the extent to which the air agency is required to perform the "other activities" pursuant to part 70, title V, or the approved part 70 program; the extent to which the activity is performed to assure compliance with, or enforce, part 70 permit terms and conditions; or the extent to which a non-part 70 rule (e.g., a section 111 or 112 standard) requires the air agency to perform the activity in the part 70 permitting context. If an "other activity" does not meet any

---

[34] *See* EPA memo, *Additional Guidance on Funding Support for State and Local Programs*, Mary D. Nichols, Assistant Administrator for Air and Radiation, U.S. EPA, to Regional Administrators, Regions I–X, August 28, 1994.
[35] *See* 40 CFR § 70.6(b)(2).
[36] Although the "other activities" may originate within a federal standard or requirement that we generally refer to as an "applicable requirement" and the activities may result in an "applicable requirement," the activities themselves do not meet the definition of "applicable requirement" within 40 CFR § 70.2.
[37] See page 2 of the introductory memorandum for the 1993 fee schedule guidance.

of these criteria (e.g., a non-part 70 rule requires an activity in a non-part 70 context), it should not be included in part 70 costs.

Nonetheless, if any activity is an "applicable requirement" for a source, the applicable requirement must be included in a part 70 permit and the costs to the air agency of including it in the permit (and implementing and enforcing) must be treated as part 70 costs.[38]

For example, the cost of *incorporating* a standard (e.g., a section 111(b) standard) into a part 70 permit—where the task is merely one of copying the requirements from the regulation unchanged into a permit—would be a part 70 cost. However, the cost of *developing* a source-specific emission limitation outside the permit processing context (e.g., a standard pursuant to section 111(d) emission guidelines) would be a section 111 cost (although the cost of subsequently incorporating that standard into the part 70 permit would be a part 70 cost).

The costs of "other activities" related to implementation plans, including section 110 or 111 of the Act, should not be counted for part 70 purposes if the activities are required as part of the preconstruction review process or directly relate to implementation plan development, as required by title I of the Act.[39] On the other hand, part 70 costs can include ambient monitoring or emission inventories necessary to implement the part 70 program (e.g., development and quality assurance of emissions inventory for potential part 70 sources for the purpose of determining applicability).[40] If an air agency is unsure where to draw the line on including such activities in part 70 costs, they should contact the EPA for assistance.

General standard for EPA review of part 70 costs for a particular air agency. In general, the EPA expects that part 70 permit fees will fund the activities listed in this guidance. However, in evaluating a part 70 program, the EPA will consider the particular design and attributes of that program. Because the nature of permitting-related activities can vary across air agencies, the EPA evaluates each program individually. The activities listed in this guidance may not represent the full range of activities to be covered by permit fees.[41] Additionally, some air agencies may have further program needs based on the particularities of their own air quality issues and program structure.

Sections II.B through II.K of this guidance provide further information on specific permitting activities and the extent to which the costs of such activities must be treated as part 70 costs.

B. The Costs of Part 70 Program Administration

All part 70 program administration costs must be treated as part 70 costs.[42] Examples of program administration costs include:

---

[38] *See* § 70.9(b)(1)(ii), (4).

[39] Implementation plan development is mandated under title I of the Act and costs typically include such activities as maintaining state-wide emissions inventories and performing ambient monitoring and emissions modeling of air pollutants for which national ambient air quality standards have been set.

[40] *See* the matrix guidance at page 1.

[41] The fee demonstration guidance cites various factors that may affect the types of activities included in a permit program and influence costs. *See* fee demonstration guidance at 4-5.

[42] This section includes many activities that would be categorized as part 70 costs under 40 CFR §§ 70.9(b)(1)(i)-(iii) that are not covered elsewhere in subsequent sections of this guidance and are necessary to conduct a part 70 program.

NMED Exhibit 18_000010

- Program infrastructure costs (e.g., development of part 70 regulations, implementation guidance, policies, procedures, and forms);

- Program integration costs (adapting to changes in related programs, such as NSR, section 112 programs, and other programs);

- Data system implementation costs (including data systems for submitting permitting information to the EPA, for permit program administration, implementation and tracking and to provide public access to permits or permit information);

- Costs to operate local or Regional offices for part 70, the costs of interfacing with other state, local, or tribal offices (e.g., briefing legislative or executive staff on program issues and responding to internal audits);

- Costs related to interfacing with the EPA (e.g., related to program oversight, including program evaluations, responding to public petitions, revising implementation agreements between the air agency and the EPA); and

- Activities similar to those above.

In addition, there are other program implementation costs, such as the costs of making determinations of which sources are subject to part 70 permitting requirements that must be treated as part 70 costs.[43] Examples of such activities include:

- Maintaining an inventory of part 70 sources (e.g., for enforcement of the requirement for sources to obtain a permit or for part 70 fee purposes);

- Costs of determining if an individual source is a major source (for applicability purposes);

- Costs of determining if a source qualifies for coverage under a general permit (if the air agency chooses to issue them); and

- Costs of determining if a non-major source is required to obtain a part 70 permit and costs of implementing any insignificant activity and emission level exemptions under part 70.

C. The Costs of Part 70 Program Revisions

All costs of revising an approved part 70 program must be treated as part 70 costs, including the costs of developing new program elements to respond to changes in requirements, whether the revisions are the air agency's own initiative or required by the EPA.[44] Examples of program revision costs include:

- Costs of revising the program elements that are changing (e.g., program legal authority, implementing regulations, data systems, and other program elements);

---

[43] Many of these activities may also be described as related to reviewing and acting on applications for part 70 permits, as provided in 40 CFR § 70.9(b)(1)(ii).
[44] *See* 40 CFR § 70.4(i).

NMED Exhibit 18_000011

- Costs of documenting the changes; and

- Costs associated with obtaining the needed approvals, including for submitting program revisions to the EPA and any necessary follow-up work related to obtaining approval.

D. The Costs of Reviewing Applications and Acting on Part 70 Permits

All costs of reviewing an application for a part 70 permit, developing applicable requirements as part of the process of a permit, and ultimately acting upon the application must be treated as part 70 costs.[45] These costs must include the costs of the application completeness determination, the technical review of the application (including the review of any supplemental monitoring that may be needed, review of any compliance plans, compliance schedules, and review of initial compliance certifications included in the application), drafting permit terms and conditions to reflect the applicable requirements that apply to the source, determining if any permit shields apply, public participation, the EPA and affected air agency review, and issuing the permit. The cost of these activities must be included for initial permit processing, permit renewal, permit reopening, and permit modification.

The costs of developing part 70 permit terms and conditions. All costs associated with the development of permit terms and conditions to reflect the "applicable requirements," including the costs of incorporating such terms in part 70 permits, must be treated as part 70 costs. The applicable requirements include the emissions limitations and standards and other requirements as provided for in the definition of applicable requirements in 40 CFR § 70.2. Such costs may include the costs to determine the provisions of the applicable requirements that specifically apply to the source, to develop operational flexibility provisions, netting/trading conditions, and appropriate compliance conditions (e.g., inspection and entry, monitoring and reporting). Appropriate compliance provisions may include periodic monitoring and testing under 40 CFR § 70.6(a)(3)(i)(B) and monitoring sufficient to assure compliance under 40 CFR § 70.6(c)(1).

Part 70 also requires certain regulatory provisions to be included in permits, such as citation to the origin and authority of each permit term, a statement of permit duration, requirements related to fee payment, certain part 70 compliance and reporting requirements, a permit shield (if provided by the air agency), and similar terms. The costs of developing such terms must be covered by permit fees.[46]

The costs of developing "state-only" permit terms need not be treated as part 70 costs. Air agencies should screen or separate "state-only" requirements from federally-enforceable requirements and—while the act of separating part 70 terms from state-only terms should be treated as part 70 costs—the costs of developing state-only permit terms, putting them in the part 70 permit, and implementing and enforcing them as they appear in the part 70 permit need not be treated as part 70 costs for fee purposes.[47]

---

[45] *See* CAA section 502(b)(3)(A)(i); 40 CFR § 70.9(b)(1)(ii).
[46] *See* 40 CFR § 70.6.
[47] *See* the matrix guidance, which notes that state-only requirements in part 70 permits are air-grant-eligible activities, rather than title V-eligible activities.

NMED Exhibit 18_000012

The costs of public participation and review (by the EPA and the affected air agency). All costs of notices (or transmitting information) to the public, affected air agencies and the EPA for part 70 permit issuance, renewal, significant modifications and (if required by state or local law) for minor modifications (including staff time and publication costs) must be treated as part 70 costs. [48]

Any costs associated with hearings for part 70 permit issuance, renewal, significant modifications, and for minor modifications (if required by state or local law), including preparation, administration, response, and documentation, must be treated as part 70 costs.

All costs for the air agency to develop and provide a response to public comments received during the public comment period must be treated as part 70 costs.

Any costs associated with transmitting necessary documentation to the EPA for review and response to an EPA objection must be treated as part 70 costs.[49] Also, the costs associated with an air agency's response to an EPA order granting objection to a part 70 permit and/or the costs of defending challenges to part 70 permit terms in state court must be treated as part 70 costs.

E. The Costs of Implementation and Enforcement of Part 70 Permits

With some exceptions related to court costs and enforcement actions, the costs of implementing and enforcing the terms of any part 70 permit must be treated as part 70 program costs.[50] Implementation and enforcement of permit terms and conditions related to part 70 includes requirements for compliance plans, schedules of compliance, monitoring reports, deviation reports, and annual certifications.

The costs of any follow-up activities when compliance/enforcement issues are encountered should be treated as part 70 costs. Part 70 costs include such activities as conducting site visits, stack tests, inspections, audits, and requests for information either before or after a violation is identified (e.g., requests similar to the EPA's CAA section 114 letters).

Part 70 costs should include the costs for any notices, findings, and letters of violation, and the development of cases and referrals up until the filing of the complaint or order. Excluded from permit costs are enforcement costs incurred after the filing of an administrative or judicial complaint.[51]

Part 70 costs must also include the costs of implementing and enforcing any restrictions on potential to emit (PTE) that are included in a part 70 permit, whether they originate in the part 70 permit or were transferred from a non-part 70 permit, such as a minor NSR permit for a "synthetic minor source."

---

[48] *See* 40 CFR § 70.7(h) concerning public participation and 40 CFR § 70.8 concerning the EPA and affected air agency review.
[49] *See* 40 CFR § 70.8(a).
[50] *See* 40 CFR §§ 70.4(b), 70.6, 70.9(b)(1)(iv), and 70.11.
[51] *See* the matrix guidance at page 8.

F. The Costs of Implementing and Enforcing the Requirements of Non-Title V Permits Required Under the Act

Part 70 fees must cover the costs of implementing and enforcing the terms and conditions of "other permits" (non-part 70 permits) required under the Act, such as preconstruction review permits under title I, that have been incorporated in part 70 permits as "applicable requirements."[52]

Also, the costs of implementing and enforcing the terms and conditions of consent decrees and orders that originate in a non-part 70 permit that are incorporated into a part 70 permit must be treated as part 70 costs. *See* Section II.A of this guidance.

The costs of implementing and enforcing applicable requirements for "prospective part 70 sources" need not be treated as part 70 costs until such time as the source submits a timely and complete permit application and pays fees. In addition, the costs of implementing and enforcing "state-only" requirements need not be treated as part 70 costs.

G. The Costs of Performing Certain "Other Activities" Related to Applicable Requirements

Certain activities are required by the Act but are not "applicable requirements" because they apply to the permitting authority, rather than the source; such activities are referred to as "other activities."[53] Examples of applicable requirements that contain these activities include, but are not limited to, standards for existing sources under section 111(d) of the Act; case-by-case MACT under sections 112 of the Act; and certain activities required by a SIP, FIP, or TIP, including section 110 of the Act. The costs of other activities must be treated as part 70 costs, if the air agency is required to perform the activities by part 70, title V, or the air agency's approved part 70 program; if a non-part 70 rule requires them to be performed in the part 70 permitting context; or if the activities are needed to assure compliance with, or to enforce, the terms and conditions of a part 70 permit. The costs of other activities should not be treated as part 70 costs, if they do not meet any of these criteria (e.g., a non-part 70 rule requires an activity that occurs in a non-part 70 context). *See* Section II.A of this guidance.

H. The Costs of Revising, Reopening, and Renewing Part 70 Permits

All costs associated with processing permit revisions, including for administrative amendments, minor modifications (fast-track and group processing), and significant modifications, must be treated as part 70 costs.[54] The part 70 costs must include all the costs of reviewing and acting on the application, as well as implementing and enforcing the revised permit terms.[55] The costs of implementing any "operational flexibility provisions"[56] approved into a program to streamline permit revision procedures must be treated as permit program costs (this may also generally be considered to be one of the costs of implementing a permit).

---

[52] Required to be treated as part 70 costs in certain cases by 40 CFR § 70.9(b)(1)(iv).
[53] Required to be treated as part 70 costs in certain cases by 40 CFR §§ 70.9(b)(1)(ii) and (iv).
[54] Required to be treated as part 70 costs under 40 CFR § 70.9(b)(1)(ii). Also *see* 40 CFR § 70.7 for more on permit issuance, renewal, reopening and revision procedures.
[55] 40 CFR §§ 70.9(b)(1)(ii) and (iv).
[56] Section 502(b)(10) of the Act requires the operating permit regulations to include provisions to allow changes within a permitted facility without requiring a permit revision under certain circumstances. The EPA refers to these provisions as "operational flexibility provisions." *See* 40 CFR § 70.4(b)(12).

NMED Exhibit 18_000014

The cost for the air agency to reopen a part 70 permit for cause must be treated as part 70 costs. The proceedings to reopen a permit shall follow the same procedures that apply to initial permit issuance, and include a requirement for the air agency to provide a notice to the source of the agency's intent to reopen the permit.

When the EPA reopens a part 70 permit for cause, the air agency's costs for the proposed determination of termination, modification, or revocation and reissuance, and the costs to resolve the objection in accordance with the EPA's objection, must be treated as part 70 costs.

The cost of renewing permits every 5 years, which involves the same procedural requirements, including public participation, and the EPA and affected air agency review, must be treated as part 70 costs, [57] just as for initial permit issuance.

I. The Costs of General and Model Permits

All costs for development and implementation of general and model permits under part 70 must be included in part 70 program costs, including the costs of drafting permits, public participation, the EPA review and any affected air agency's review, permit issuance, publication, assessing applications for coverage under the general permit, and other related costs.[58] Note that the issuance of general and model permits is an option for air agencies, but if such permits are issued by an air agency under part 70, the costs must be included in part 70 costs.

J. The Costs of the Portion of the Small Business Assistance Program (SBAP) Attributable to Part 70 Sources

The SBAP under title V is authorized to provide counseling to help small business stationary sources to determine and meet their obligations under the Act.[59] The SBAP is authorized to provide assistance to small business stationary sources, as defined by CAA § 507(c)(1), under the preconstruction and operating permit programs; however, air agencies need only to include costs related to assistance with part 70 in part 70 costs.[60] *See* 40 CFR § 70.9(b)(1)(viii). Allowable costs for part 70 include the costs to establish a small business ombudsman program to provide information on the applicability of part 70 to sources, available assistance for part 70 sources, the rights and obligations of part 70 sources, and options for sources subject to part 70. Allowable costs also include the costs associated with part 70 applicability determinations.

---

[57] 40 CFR § 70.9(b)(1)(ii).

[58] Required to be included in part 70 costs by 40 CFR §§ 70.9(b)(1)(ii) and (iv). Also *see* 40 CFR § 70.6(d) for more on the administration of general permits.

[59] For examples of the types of activities of a SBAP that could be attributable to part 70 sources and funded by part 70 fees, see *Transition to Funding Portions of State and Local Air Programs with Permit Fees Rather than Federal Grants*, Mary D. Nichols, Assistant Administrator for Air and Radiation, U.S. EPA, to Regional Administrators, Regions I – X, July 21, 1994 ("transition guidance"); Letter from Conrad Simon, Director, Air & Waste Management Division, EPA Region II to Mr. Billy J. Sexton, Director, Jefferson County Department of Planning and Environmental Management, Air Pollution Control District, Louisville, Kentucky, January 23, 1996 ("Sexton memo").

[60] Note that the preconstruction review permitting costs of assisting non-part 70 sources should generally not be included as part 70 costs, except for costs related to implementation and enforcement of permit terms from a preconstruction review permit that have been included in a part 70 permit.

Part 70 costs for SBAP must include the costs for outreach/publications on the requirements of part 70 and/or the applicable requirements included in part 70 permits, the costs of assisting part 70 sources through a clearinghouse on compliance methods and technologies, including pollution prevention approaches, and the costs to assist sources with part 70 permitting, which may include the portion of costs for a small business comtpliance advisory panel that are related to part 70.

K. The Costs of Permit Fee Program Administration

All costs associated with the administration of an air agency's part 70 fee program must be included in part 70 costs, including the costs for revising fee schedules (as needed to cover all required costs), periodic updates, detailed accounting (if needed), determining the presumptive minimum for the air agency, participating in EPA evaluations of fee programs or similar EPA oversight activities, assisting sources with fee issues, auditing fee payment by sources, assessing penalties for fee payment errors, responding to internal audits and inquiries, and similar activities.[61]

III. Flexibility in Fee Schedule Design

An air agency may design its fee schedule to collect fees from sources using various methods, provided the fee structure raises sufficient revenue to cover all required program costs.[62] Thus, air agencies may charge: emissions-based fees based on actual emissions or allowable emissions; fixed fees for certain permit processes (different fees for initial permit review, renewals, or for various types of permit revisions); different fee rates (e.g., dollars per ton of emissions) for certain air pollutants; fees reflecting the actual costs of services for sources (such as charging for time and materials for a review); or other types of fees, including any combination of such fees. Finally, air agencies may charge annual fees or fees covering some other period of time.

This flexibility for fee schedule design is available without regard to whether the air agency has set its fees to collect above or below the presumptive minimum. Many air agencies have designed their fee schedules to collect fees using an emissions-based approach that mirrors the approach of part 70 for determining the presumptive minimum program cost for an air agency.[63] However, air agencies are not required to charge fees to sources in that manner, and it is possible that such an approach may not necessarily result in fees that would be sufficient to cover all part 70 program costs.

[63] *See* 40 CFR § 70.9(b)(2)(i).

NMED Exhibit 18_000016

IV. The EPA Review of Existing Air Agency Fee Programs

The initial program submittals involved review of data on expected fee revenue, program costs and accounting practices that were prospective in nature, since little or no data would have been available on actual fees or costs at that time.

At this point, the EPA review of air agency fee programs generally focuses on a review of actual data on fee revenue, program costs, and review of existing accounting practices. The EPA oversight of existing fee programs will also likely be conducted as part of a program evaluation, a separate fee evaluation, or through submittal of any periodic updates or detailed accountings related to fee demonstration requirements. The EPA has issued a separate memorandum and guidance on part 70 program and fee evaluations concurrently with this updated fee schedule guidance.[64]

Fee evaluations for existing part 70 programs will generally focus on certain key requirements of the Act and part 70 for fees discussed in Section I, *General Principles for Review of Title V Fee Schedules*, of this guidance. Such reviews may cover certain aspects of air agency accounting practices and procedures related to fees, particularly fee assessment procedures, tracking of fee collection and revenue uses (including transfers in and out of part 70 program accounts), whether all part 70 costs are included in the air agency's accounting of costs, and potentially other accounting aspects.

A fee evaluation may include a review of an air agency's fee program status with respect to the presumptive minimum defined in 40 CFR § 70.9(b)(2). This may be important in cases where a part 70 program was initially approved to charge above the presumptive minimum, in order to determine if the air agency is now charging less than the presumptive minimum. This is relevant because 40 CFR § 70.9(b)(5)(i) requires an air agency to submit a detailed accounting to show that its fees would be adequate to cover the program costs if the air agency charges less than the presumptive minimum. This requirement is ongoing (not restricted to program submittals).

In addition, the EPA revised the part 70 requirements related to calculating the presumptive minimum to add a "GHG cost adjustment" in an October 23, 2015, final rule.[65] Although the EPA has announced a review of this final rule (82 FR 16330, April 4, 2017), the EPA has not proposed any specific changes to the "GHG cost adjustment." Because air agencies are required to collect sufficient fees to cover the costs of implementing their operating permit programs, they may still use the "GHG cost adjustment" (as applicable) in calculating the fees owed to reflect the associated administrative burden of considering GHGs in the permitting process. The "GHG cost adjustment" is designed to cover the overall added administrative burden of adding GHGs to the permitting program in a general sense.

---

[64] *Program and Fee Evaluation Strategy and Guidance for Part 70*, Peter Tsirigotis, Director, Office of Air Quality Planning and Standards (OAQPS), U.S. EPA, to Regional Air Division Directors, Regions 1 – 10, March 27, 2018.

[65] The "GHG cost adjustment" was promulgated as part of an October 23, 2015, final rule titled, *Standards of Performance for Greenhouse Gas Emissions from New, Modified and Reconstructed Stationary Sources: Electric Utility Generating Units*, 80 FR 64510. Specifically, see Section XII.E. "Implications for Title V Fee Requirements for GHGs" at page 64633. *See also* 40 CFR §§ 70.9(b)(2)(v) and (d)(3)(viii).

NMED Exhibit 18_000017

"Presumptive Minimum" Calculation

1. **Calculate the "Cost of Emissions."** The calculation is based on multiplying the actual emissions of "fee pollutants"[66] (tons) from the air agency's part 70 sources for a preceding 12-month period by the "presumptive minimum fee rate"[67] ($/ton) that is in effect at the time the calculation is performed.

   Air agencies may exclude the following types of fee pollutants from the calculation:
   - Actual emissions of each regulated fee pollutant in excess of 4,000 tons per year on source-by-source basis.[68]
   - Actual emissions of any regulated fee pollutant emitted by a part 70 source that was already included in the presumptive minimum fee calculation (i.e., double-counting of the same pollutant is not required).[69]
   - Insignificant quantities of actual emissions not required in a permit application pursuant to 40 CFR § 70.5(c).[70]

2. **Calculate the "GHG Cost Adjustment" (as applicable)**[71] The "GHG cost adjustment" is the cost for the air agency to conduct certain application reviews (activities) to determine if GHGs have been properly addressed for an annual period. The adjustment is calculated by multiplying the total hours to conduct the activities (burden hours) by the average cost of staff time ($/hour) to conduct the activities.

   To calculate the total hours for the air agency to conduct the activities, multiply the number of activities performed in each category listed in the following table by the corresponding "burden hours per activity factor," and sum the results.[72]

Table 1. GHG reviews counted for GHG cost adjustment purposes

Activity	Burden Hours per Activity Factor
GHG completeness determination (for initial permit or updated application)	43
GHG evaluation for a permit modification or related permit action	7
GHG evaluation at permit renewal	10

[66] The term "fee pollutants" used here is shorthand for "regulated pollutants (for presumptive fee calculation)," as defined in 40 CFR § 70.2.
[67] The "presumptive minimum fee rate" is calculated by the EPA in September of each year and is effective from September 1 to August 31 of the following year. The fee rate is adjusted annually for changes in the Consumer Price Index (CPI) and is published on the following Internet site: *https://www.epa.gov/title-v-operating-permits/permit-fees.*
[68] *See* 40 CFR § 70.9(b)(2)(ii)(B).
[69] *See* 40 CFR § 70.9(b)(2)(ii)(C). For example, a source may emit an air pollutant that is defined as both a hazardous air pollutant and a pollutant for which a national ambient air quality standard has been established, e.g., a volatile organic compound. The actual emissions of such a pollutant is not required to be counted twice for fee purposes.
[70] *See* 40 CFR § 70.9(b)(2)(ii)(D).
[71] *See* 40 CFR §§ 70.9(b)(2)(i) and (v).
[72] The table shown here is found at 40 CFR § 70.9(b)(2)(v).

To determine the GHG cost adjustmentt($), the total hours to conduct the reviews (calculated above) is multiplied by the average cost of staff time ($/hour). The average cost of staff time must include wages, employee benefits, and overhead and will be unique to the air agency. The average cost may be known for the air program or may be available from the air agency budget office or accounting staff.

3. **Calculate the Total Presumptive Minimum.** The total presumptive minimumt($) for the annual period is determined by adding the "cost of emissions" (determined in Step 1) and the "GHG cost adjustment," as applicable (determined in Step 2).

See Attachment B, ***Example Presumptive Minimum Calculation***, for an example calculation for a hypothetical air agency that incorporates the "GHG cost adjustment."

V. Future Adjustments to Fee Schedules

Air agencies must collect part 70 fees that are sufficient to cover the part 70 permit program costs.[73] Accordingly, air agencies may need to revise fee schedules periodically to remain in compliance with the requirement that permit fees cover all part 70 permit program costs. Changes in costs over time may be due to many factors, including but not limited to: changes in the number of sources required to obtain part 70 permits; changes in the types of permitting actions being performed; promulgation of new emission standards; and minor source permitting requirements for CAA sections 111, 112, or 129 standards. Air agencies should keep the EPA Regions apprised of any changes to fee schedules over time. The EPA will assess the proposed revision and determine whether it must be processed by the EPA as a substantial or non-substantial revision. As part of this process, the EPA may request additional information, as appropriate.

ATTACHMENT B

Example Presumptive Minimum Calculation

This attachment provides an example calculation of the "presumptive minimum" under 40 CFR part 70 for a hypothetical air agency ("Air Agency X").[1]

Background:

- The "presumptive minimum" is an amount of fee revenue for an air agency that is presumed to be adequate to cover part 70 costs.[2]
    - If an air agency's fee schedule would result in fees that would be less than the presumptive minimum, there is no presumption that its fees would be adequate to cover part 70 costs and the air agency is required to submit a "detailed accounting" to show that its fees would be sufficient to cover its part 70 costs.[3]
    - If an air agency's fee schedule would result in fees that would be at least equal to the presumptive minimum, there is a presumption that its fees would be adequate to cover costs and a "detailed accounting" is not required. However, a "detailed accounting" is required whenever the EPA determines, based on comments rebutting the presumption of fee adequacy or on the EPA's own initiative, that there are serious questions regarding whether its fees are sufficient to cover part 70 costs.[4]
- In addition, independent of the air agency's status with respect to the presumptive minimum, a "detailed accounting" is required whenever the EPA determines on its own initiative that there are serious questions regarding whether an air agency's fee schedule is sufficient to cover its part 70 costs. This is required because part 70 requires an air agency's fee revenue to be sufficient to cover part 70 permit program costs.[5]
- The quantity of air pollutants and the "GHG cost adjustment" are unique to each air agency and vary from year-to-year. As a result, the presumptive minimum calculated for an air agency is also unique to that particular agency on a year-to-year basis.
- No source should use the presumptive minimum calculation described in this attachment to calculate its part 70 fees.[6] Sources should instead contact their air agency for more information on how to calculate fees for a source.

---

[1] The example calculation follows the requirements of 40 CFR § 70.9(b)(2)(i)-(v).
[2] *See* 40 CFR § 70.9(b)(2)(i).
[3] *See* 40 CFR § 70.9(b)(5) (concerning the "detailed accounting" requirement).
[4] *See* 40 CFR § 70.9(b)(5)(ii).
[5] *See* 40 CFR §§ 70.9(a) and (b)(1).
[6] *See* 40 CFR § 70.9(b)(3) (providing air agencies with flexibility on how they charge fees to individual sources).

NMED Exhibit 18_000023

- An air agency may calculate the presumptive minimum in several circumstances:

    - As part of a fee demonstration submitted to the EPA when an air agency sets its fee schedule to collect at or above the presumptive minimum.

    - As part of a fee evaluation to determine if an air agency with a fee schedule originally approved to be at or above the presumptive minimum now results in fees that are below the current presumptive minimum. When this occurs, the air agency is required to submit a "detailed accounting" to show that its fee schedule will be sufficient to cover all required program costs. Such a change in the presumptive minimum for an air agency may occur for many reasons over time.[7]

    - To update the presumptive minimum amount for the air agency to account for changes that have occurred since the calculation was last performeda A common reason for an air agency to do this is to recalculate the amount to add the GHG cost adjustment.[8]

The presumptive minimum calculation is generally composed of three steps:

1. *Calculation of the "cost of emissions."* aThe "cost of emissions" is proportional to the emissions of certain air pollutants of part 70 sources.

2. *Calculation of the "GHG cost adjustment" (as applicable).* The "GHG cost adjustment," promulgated in October 23, 2015, is intended to recover the costs of incorporating GHGs into the permitting program.

3. *Sum the values calculated in Steps 1 and 2.*

---

[7] It has been almost two decades since most part 70 programs were approved. Changes may have occurred since then that would affect the presumptive minimum calculation for an air agency. For example, changes in the emissions inventory for part 70 sources or changes to air agency fee schedules. The part 70 rules were also revised in 2015 to add a "GHG cost adjustment" to the calculation of the presumptive minimum fee.

[8] *See* 80 FR 64633 (October 23, 2015); 40 CFR § 70.9(b)(2)(v).

Example Scenario and Calculation:

Air Agency X performs its presumptive minimum calculation in November of 2016 using data for Fiscal Year 2016 (FY16 or October 1, 2015, through September 30, 2016).

Step 1 – Calculate the Cost of Emissions:

The "cost of emissions" is determined by multiplying the air agency's inventory of actual emissions of certain pollutants from part 70 sources ("fee pollutants") by an annual fee rate determined by the EPA.

A. Determine the Actual Emissions of "Fee Pollutants" for a 12-month Period Prior to the Calculation.

Note that the term "fee pollutants" used here is shorthand for "regulated pollutants (for presumptive fee calculation)," a defined term in part 70,[9] which includes air pollutants for which a national ambient air quality standard has been set, hazardous air pollutants, and air pollutants subject to a standard under section 111 of the Act, excluding carbon monoxide, greenhouse gases, and certain other pollutants.[10] Note that any preceding 12-month period may be used, for example, a calendar year, a fiscal year, or any other period that is representative of normal source operation and consistent with the fee schedule used by the air agency.

For example, a review of Air Agency X's emissions inventory records for part 70 sources for the 12-month period (FY16) indicates that the actual emissions of "fee pollutants" were 15,700 tons.

Total "Fee Pollutants"t= 15,700 tons for FY16

B. Determine the Presumptive Minimum Fee Rate ($/ton) Effective at the Time the Calculation is Performed.

The presumptive minimum fee rate is updated by the EPA annually and is effective from September 1 until August 31 of the following year. Historical and current fee rates are available online: *https://www.epa.gov/title-v-operating-permits/permit-fees.* The fee rate used in the calculation is the one that is effective on the date the calculation is performed, rather than the fee rate in effect for the annual period of the emissions data.

For example, Air Agency X calculates its "presumptive minimum" for FY16 in November 2016. The air agency first refers to the EPA website (listed above) to find the fee rate effective for November 2016. This fee rate ($48.88) is used in the next step to calculate the cost of emissions.

Presumptive Minimum Fee Rate ($/ton) = $ 48.88 per ton.

---

[9] The definition of "regulated pollutant (for presumptive fee calculation)" is found at 40 CFR § 70.2.

[10] Note that 40 CFR §§ 70.9(b)(2)(ii) and (iii) provides exclusions for certain air pollutants and includes a definition of "actual emissions."

C. Calculate the Cost of Emissions.

Calculate the cost of emissions by multiplying the total tons of "fee pollutants" (value found in A) by the presumptive minimum fee rate (value found in B).

Cost of Emissionst= "Fee Pollutants" (tons) * Presumptive Minimum Fee Rate ($/ton)
= 15,700 tonst* $48.88/ton
= $767,416

Value Calculated in Step 1: Cost of Emissionsa= $767,416

Step 2 – Calculate the GHG Cost Adjustment (as applicable):
The "GHG cost adjustment" is the cost for the air agency to review applications for certain permitting actions to determine if GHGs have been properly addressed.

A. Determine the Number of GHG Activities for Each Activity Category.

Determine the total number of activities processed during the period for each activity category listed in the following table [based on table at 40 CFR § 70.9(b)(2)(v)].

Activity	Burden Factor (hours per activity)
GHG Completeness Determinations (for initial permit or updated application)	43
GHG Evaluations for Permit Modification or Related Permit Actions	7
GHG Evaluations at Permit Renewal	10

For example, Air Agency X's records were reviewed to determine the number of activities that occurred for each activity category during FY16:

- 2 GHG completeness determinations for initial applications
- 46 GHG evaluations for permit modifications or related actions *(11 significant modifications and 35 minor modifications)*
- 20 GHG evaluations at permit renewal

Note that the activities above are assumed to occur for each initial application, permit modification, or permit renewal, regardless of whether the source emits GHGs or is subject to applicable requirements for GHGs. Thus, there were 20 GHG evaluations at permit renewal because there were 20 permit renewals.

NMED Exhibit 18_000026

B. Calculate the GHG Burden for Each Activity Category.

The GHG burden for each activity category is calculated by multiplying the number of activities for each category (identified in A) by the relevant burden factor (hours/activity) listed in the table above.

GHG Burden = Number of activities * Burden factor (hours/activity)

For example, Air Agency X calculated GHG burden as follows:

- 2 Completeness Determinations * 43 hours/activity = 86 hours
- 46 Evaluations for Mods or Related Actions * 7 hours/activityt= 322 hours
- 20 Evaluations at Permit Renewal * 10 hours/activity = 200 hours

C. Calculate the Total GHG Burden (in hours).

The total GHG burden hours are calculated by summing the GHG burden hours for each activity category determined in B.

For example, Air Agency X calculated total GHG burden hours as follows:
Total GHG Burden Hours = 86 hours + 322 hours + 200 hours
= 608 hours

D. Calculate the GHG Cost Adjustment.

Calculate the GHG cost adjustment for the period by multiplying the total GHG burden hours (value calculated in C) by the cost of staff time.

GHG Cost Adjustmentt= Total GHG burden hours (hours)t* Cost of staff time ($/hour)

For example, Air Agency X's budget office reported that the average cost of staff time for the Department of Natural Resources (including wages, benefits, and overhead) for FY16 was $56/hour.

GHG Cost Adjustmentt= Total GHG burden hourst* Cost of staff time
= 608 hours * $56/hour
= $34,048

Value Calculated in Step 2: GHG Cost Adjustmenta= $34,048

Step 3 – Calculate the Total Presumptive Minimum:

Calculate the total for the period by adding the cost of emissions (value calculated in Step 1) and the GHG cost adjustment, as applicable (value calculated in Step 2).

Presumptive minimumt= Cost of emission ($) + GHG cost adjustment ($)
= $767,416 + $34,048
= $801,464

Total Presumptive Minimum= $801,464

Conclusion:

$801,464 is the Air Agency X's presumptive minimum for FY16. This value would be compared against the total part 70 fee revenue for the same period to determine if the total fee revenue is greater than or less than the presumptive minimum.

New Mexico Environment Department Announces Public Meetings on Proposed Changes to Emissions and Permit Fee Rules

At its regular meeting on December 19, 2025, the Environmental Improvement Board scheduled a public hearing to consider repealing and replacing 20.2.71 NMAC and 20.2.75 NMAC. The hearing will begin on March 23, 2026, at 9:00 a.m., continuing through March 25, 2026, or as long as required to hear all testimony, evidence, and public comment. More information is available, and future updates will be provided on the New Mexico Environment Department's (NMED) website at https://www.env.nm.gov/air-quality/proposed-regs/#fees. Replacing 20.2.71 NMAC and 20.2.75 NMAC to increase the emission fees and permit fees is essential if NMED is to continue effectively implementing its mission critical Title V and Construction Permit Programs.

NMED will hold a virtual public informational meeting on the proposed rule changes on January 15, 2026, from 4-6 p.m. Department staff will provide an overview of the proposed changes to both 20.2.71 NMAC and 20.2.75 NMAC, and there will be time for questions from stakeholders and the general public. Links to the presentation slides and a recording of the meeting will be provided on the website noted above after the meeting, and NMED will hold virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the proposed rules. Information about how to join these meetings will be provided on the website noted above at least 72 hours prior to each meeting, and on NMED's events calendar at https://www.env.nm.gov/events-calendar/. If you require language interpretation services or have a disability and need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in either of these meetings, contact Brian Polgar as soon as possible at brian.polgar@env.nm.gov or (505) 629-3466. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

To request a one-on-one meeting with the Department to discuss the proposed rules, contact Brian Polgar at brian.polgar@env.nm.gov or (505) 629-3466. NMED is also accepting written comments on the proposed rules via its online public comment portal at https://nmed.commentinput.com?id=dM4UeKV73. Comments will be accepted for at least 30 days after notice of the proposed rulemaking is published in the New Mexico Register.

El Departamento de Medio Ambiente de Nuevo México Anuncia Reuniones Públicas sobre los Cambios Propuestos en las Normas de Emisiones y Tarifas de Permisos

En su reunión regular del 19 de Diciembre de 2025, la Junta de Mejora Ambiental programó una audiencia pública para considerar la derogación y reemplazar 20.2.71 NMAC y 20.2.75 NMAC. La audiencia comenzará el 23 de Marzo de 2026 a las 9:00 a.m. y continuará hasta el 25 de Marzo de 2026, o durante el tiempo que sea necesario para escuchar todos los testimonios, evidencias y comentarios del público. Más información es disponible, y se proporcionarán actualizaciones futuras en el sitio web del Departamento de Medio Ambiente de Nuevo México (NMED) en https://www.env.nm.gov/air-quality/proposed-regs/#fees. Reemplazando 20.2.71 NMAC y 20.2.75 NMAC para aumentar las tarifas de emisiones y de permisos es esencial si NMED quiere continuar implementando de manera efectiva sus programas fundamentales de Permisos Título V y de Construcción.

NMED llevará a cabo una reunión informativa pública virtual sobre los cambios propuestos en las normas el 15 de Enero de 2026, de 4-6 p.m. El personal del Departamento ofrecerá un resumen de los cambios propuestos tanto en 20.2.71 NMAC como en 20.2.75 NMAC, y habrá tiempo para preguntas de los accionistas y del público en general. Los enlaces a las diapositivas de la presentación y a la grabación de la reunión se proporcionarán en el sitio web mencionado arriba después de la reunion, y NMED realizará “horas de oficina” virtuales el 22 de Enero de 2026, de 6-8 p.m. para brindar a las personas interesadas una oportunidad adicional de hacer preguntas o proporcionar comentarios sobre las normas propuestas. Información sobre cómo unirse a estas reuniones se proporcionará en el sitio web mencionado arriba al menos 72 horas antes de cada reunión y en el calendario de eventos de NMED en https://www.env.nm.gov/events-calendar/. Si necesita servicios de interpretación de idiomas o tiene una discapacidad y necesita un lector, amplificador, intérprete calificado de lenguaje de señas o otro tipo de ayuda o servicio auxiliar para asistir o participar en alguna de estas reuniones, comuníquese con Brian Polgar lo antes posible al correo brian.polgar@env.nm.gov o al (505) 629-3466. Para acceder a este número a través de Relay New Mexico, marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

Para solicitar una reunión individual con el Departamento para hablar de las reglas propuestas, comuníquese con Brian Polgar en brian.polgar@env.nm.gov o al (505) 629-3466. NMED también está aceptando comentarios por escrito sobre las reglas propuestas a través de su portal de comentarios públicos en línea en https://nmed.commentinput.com?

id=dM4UeKV73. Se aceptarán comentarios durante al menos 30 días después de que se publique el aviso de la reglamentación propuesta en el Registro de Nuevo México.

For additional information concerning this bulletin, please contact Brian Polgar, Planning Section Chief, at brian.polgar@env.nm.gov or (505) 629-3466.

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Parts 5 & 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kate Cardenas, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@env.nm.gov. You may also visit our website at https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

The following are summaries of proposed new air quality regulations and proposed amendments to existing regulations and the New Mexico State Implementation Plan (SIP). [return to top of page]

Proposed Changes to Emissions and Permit Fee Regulations (20.2.71 NMAC and 20.2.75 NMAC)

The New Mexico Environment Department (NMED) announces a new rulemaking to repeal and replace regulations setting emissions fees and permit fees for regulated sources of air pollutants. On December 3, 2025, NMED petitioned the Environmental Improvement Board (EIB) to repeal and replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*. The New Mexico Air Quality Control Act and the federal Clean Air Act require that NMED collect sufficient emissions and permits fees to cover the reasonable costs of NMED's Title V Permit Program and Construction Permit Program. NMED initiated this rulemaking to increase fees for both the Title V and Construction Permit Programs after determining the current fee structures are inadequate to sufficiently fund the direct and indirect operating costs of these programs. Replacing 20.2.71

NMED Exhibit 25_000001

NMAC and 20.2.75 NMAC is essential if NMED is to continue effectively implementing these mission critical programs.

Copies of the petition and accompanying exhibits, which include the proposed replacement rules, are provided below and are also available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To locate the documents, click on "Environmental Improvement Board" to display the list of matters before the Board, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the list of documents filed in conjunction with this matter. Copies can also be obtained by contacting Eric Peters, Control Strategies Manager, at eric.peters@env.nm.gov or (505) 629-5299, or at any of NMED's offices statewide.

Petition to Repeal and Replace 20.2.71 NMAC and 20.2.75 NMAC (EIB 25-77)
Statement of Reasons
Operating permit clean copy of proposal (20.2.71 NMAC)
Construction permit clean copy of proposal (20.2.75 NMAC)
Operating permit, current rule 20.2.71 NMAC with redline changes
Construction permit, current Rule 20.2.75 NMAC with redline changes

Current Update: December 22, 2025
At its regular meeting on December 19, 2025, the EIB scheduled a public hearing to consider repealing and replacing 20.2.71 NMAC and 20.2.75 NMAC. The hearing will begin on March 23, 2026, at 9:00 a.m., continuing through March 25, 2026, or as long as required to hear all testimony, evidence, and public comment. The EIB is expected to issue an order soon setting the hearing, appointing a hearing officer, and establishing certain pre-hearing deadlines. The order will be available in the docket for this matter once it has been issued. Instructions for accessing the docket are provided above. A link to the recording of the December 19, 2025, EIB meeting is provided below.

https://www.youtube.com/@newmexicoenvironmentdepart8718/videos is a link to NMED's YouTube page, which includes recordings of past EIB meetings and hearings. This link will be replaced with a specific link to the meeting after the video is posted.

Upcoming Public Engagement
NMED will hold a virtual public informational meeting on January 15, 2026, from 4-6 p.m. Department staff will provide an overview of the proposed changes to both rules, and there will be time for questions from stakeholders and the general public. Links to the presentation slides and a recording of the meeting will be provided on this website after the meeting, and NMED will hold virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the proposed rules. Information about how to join these meetings will be provided on this website at least 72 hours prior to each meeting, and on NMED's events calendar at https://www.env.nm.gov/events-calendar/. If you require language interpretation services or have a disability and need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in either of these meetings, contact Brian Polgar as soon as possible at brian.polgar@env.nm.gov or (505) 629-3466. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

To request a one-on-one meeting with the Department to discuss the proposed rules, contact Brian Polgar at brian.polgar@env.nm.gov or (505) 629-3466. NMED is also accepting written comments on the proposed rules via its online public comment portal at https://nmed.commentinput.com?id=dM4UeKV73. Comments will be accepted for at least 30 days after notice of the proposed rulemaking is published in the New Mexico Register.

Proposed Incorporation by Reference of Federal NSPS, NESHAP and MACT Rules

NMED proposes the incorporation into the New Mexico Administrative Code (NMAC) several new or revised federal rules promulgated under 40 CFR Parts 60, 61 and 63 for which New Mexico has been delegated enforcement authority: Standards of Performance for New Stationary Sources; National Emission Standards for Hazardous Air Pollutants; and Maximum Achievable Control Technology for Hazardous Air Pollutants for Source Categories, respectively. These new or revised federal rules would be incorporated by reference into 20.2.77 NMAC – New Source Performance Standards (NSPS); 20.2.78 NMAC – Emission Standards for Hazardous Air Pollutants (NESHAP); and 20.2.82 NMAC – Maximum Achievable Control Technology for Source Categories of Hazardous Air Pollutants (MACT). The Department also requests that the Environmental Improvement Board remove the end date of incorporation in 20.2.77 and 20.2.78 NMAC to implement and enforce all previously adopted and all future NSPS and NESHAP requirements.

Recently Approved Changes to Air Quality Regulations and Plans

The following are summaries of recently approved changes to New Mexico air quality regulations and the New Mexico State Implementation Plan. These changes were approved by either the Environmental Improvement Board or U.S. EPA within the last two years. Please check this webpage periodically for updates.

[return to top of page]

Carbon dioxide emission standards for coal-fired electric generating facilities

The New Mexico Environmental Department (NMED) announces a new rulemaking to develop emission standards for new and existing electric generating facilities, 20.2.101 NMAC, Carbon Dioxide Emission Standards for Coal-Fired Electric Generating Facilities.

During the 2019 legislative session, Senate Bill 489 introduced the Energy Transition Act (ETA), which was later signed into law by Governor Michelle Lujan Grisham. The ETA sets statewide renewable energy standards and establishes a pathway for a low-carbon energy transition away from coal. The ETA requires the Environmental Improvement Board (EIB) to promulgate a rule that limits carbon dioxide emissions from certain electric generating facilities under their jurisdiction to 1,100 pounds per megawatt-hour on or after January 1, 2023. The EIB's jurisdiction does not include Bernalillo County or Tribal lands.

The New Mexico Environmental Improvement Board will hold a public hearing on October 26, 2022, to consider the NMED's proposed new rulemaking targeting carbon dioxide emissions from coal-fired electric generating facilities.

This webpage provides information regarding the rulemaking hearing and key documents. Please visit the Environmental Improvement Board website for further hearing information.

20.2.101 NMAC draft rule contains the proposed regulatory language.
Energy transition Act Document describes the basis for the new rulemaking.
AQB Overview and Rulemaking describes the AQB and its approach to making rules.

Environmental Groups' Comment document compiles comments received on initial proposals.

Dust Mitigation Plan and Fugitive Dust Rule

On September 16, 2016, the Administrator for the U.S. Environmental Protection Agency (EPA) signed revisions to the Exceptional Events Rule with the final rule published in the Federal Register on October 3, 2016. The federal Clean Air Act (Section 319(b)(3)(A)) identifies five guiding principles for developing implementing regulations of exceptional events:

Protection of public health is the highest priority;
All ambient air quality data should be included in a timely manner in an appropriate federal air quality database that is accessible to the public;
Timely information should be provided to the public in any case in which the air quality is unhealthy;
Each state must take necessary measures to safeguard public health regardless of the source of the air pollution; and
Air quality data should be carefully screened to ensure that events not likely to recur are represented accurately in all monitoring data and analyses.
Section V of the preamble to the final rule (81 FR 68270) addresses mitigation and requires the development of mitigation plans in areas with "historically documented" or "known seasonal" exceptional events. These events must be of the same type and pollutant (i.e., high wind dust/PM10) and recur annually or seasonally. Doña Ana and Luna Counties in southern New Mexico were identified by EPA as areas required to be covered by mitigation plans. NMED developed a single mitigation plan for the two counties and a copy may be found below.

Dust Mitigation Plan for Doña Ana and Luna Counties

NMED developed a fugitive dust rule in conjunction with the mitigation plan to detail mandatory measures to abate certain controllable sources in Doña Ana and Luna Counties. A public hearing was held on September 28, 2018 in Las Cruces and the board adopted the rule on October 26, 2018. Copies of the final rule, hearing transcripts and statement of reasons to adopt the rule are provided below.

20.2.23 NMAC, *Fugitive Dust Control*, (Applicable in Doña Ana and Luna Counties only)
Hearing Transcript
Deliberations Transcript
Transmittal Form and Statement of Reasons to Adopt
For questions related to the dust mitigation plan or fugitive dust rule, please contact Armando Paz at (575) 629-3242 or armando.paz@state.nm.us. To stay up to date on the progress of this regulatory action, please visit our website, www.env.nm.gov/air-quality/ and sign up for the Regulatory and SIP or Border Air Quality listserv bulletins.

Good Neighbor State Implementation Plan Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announces an opportunity to comment on and request a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard (NAAQS). The proposed Good Neighbor SIP Certification addresses Clean Air Act (CAA) Section 110(a)(2)(D)(i)(I), to confirm to the U.S. Environmental Protection Agency (EPA) that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2010 Nitrogen Dioxide NAAQS and fulfills its "good neighbor" obligations under the CAA.

All comments or requests for a public hearing must be received by May 17, 2021.* If a request for a public hearing is received during the 30-day public comment period, a hearing date, time and location will be announced at a later date.

Good Neighbor State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announced a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS). The purpose of the hearing was to consider the matter of EIB 21-05 to certify that New Mexico has an adequate, federally-approved SIP that addresses CAA Section 110(a)(2)(D)(i) regarding interstate transport of air pollution in this submittal. The proposed certification confirmed to the U.S. Environmental Protection Agency ("EPA") that the State of New Mexico has the required "infrastructure" in place under the current SIP to implement, maintain, and enforce the revised 2015 Ozone NAAQS and fulfills its "good neighbor" obligations under the CAA.

Incorporation by Reference of federal NSPS, NESHAP and MACT rules

A public hearing was held November 17, 2023 where the Environmental Improvement Board unanimously approved amendments to the dates of incorporation by reference contained in 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards for Hazardous Air Pollutants), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants). The previous update for Parts 77, 78 and 82 was January 15, 2017. Since the most recent date of incorporation, there have been 119 changes to various federal New Source Performance Standards, Emission Standards for Hazardous Air Pollutants, and Maximum Achievable Control Technology Standards. Adoption of the incorporation by reference amendments changes the "through date" in Parts 77, 78 and 82 that reference the final rulings made at the federal level through June 28, 2023.

New Mexico Environmental Improvement Board Notice of Rulemaking Hearing_on 2023-11-17 is the announcement for the incorporation by reference rule.
Junta de Mejora Ambiental de Nuevo México Aviso de Audiencia de Reglamentación is the Spanish version of the announcement for the incorporation by reference rule.
Notice of Public Meeting NM EIB 2023-11-17 is the meeting notice that includes the links to join the meeting online.
Notice of Intent 23-52(R) is the NMED notice of intent to present technical testimony for the incorporation by reference rule.

Infrastructure State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) submitted New Mexico's proposed Infrastructure State Implementation Plan (iSIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS) to the EPA on November 16, 2018. The iSIP certification addresses elements of a Clean Air Act (CAA) Section 110(a)(2), to confirm to the EPA that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2015 ozone NAAQS, promulgated on October 1, 2015 (80 FR 65291, October 26, 2015).

This certification does not address CAA Section 110(a)(2)(D)(i)(I), which prohibits emissions from New Mexico that significantly contribute to nonattainment or interfere with maintenance of a NAAQS in a downwind state. This section is often referred to as the "Good Neighbor Provision" and will be addressed in a future submission to EPA.

Municipal Solid Waste Landfills – New Source Performance Standards and Emission Guidelines

In August 2016, EPA issued revised standards for both new and existing municipal solid waste landfills (MSWLs). The New Source Performance Standards at 40 CFR 60 Subpart XXX apply to landfills constructed or modified after July 17, 2014. The Emission Guidelines at 40 CFR 60 Subpart Cf apply to landfills constructed or modified on or prior to this date. Both of these federal rules aim to reduce landfill gas emissions. The New Source Performance Standard were incorporated by reference into the New Mexico Administrative Code (NMAC) on April 28, 2017.

Subpart Cf, promulgated under Section 111(d) of the Clean Air Act, requires that states, tribes and local authorities with jurisdiction over existing landfills develop a plan to implement the emission guidelines. One aspect of that state plan, for New Mexico, is the amendment of 20.2.64 NMAC – *Municipal Solid Waste Landfills* (Part 64).

On April 28, 2017, the Environmental Improvement Board unanimously approved the adoption of the State Plan implementing the emission guidelines and the repeal and replacement of Part 64.

Public Notice in English and Spanish
Petition for Hearing EIB 16-06 (R)

- Exhibits 24 and 27: Small Business RAC letter and response
- Exhibit 28: Proposed Order and Statement of Reasons

EIB 16-06 (R) Order and Statement of Reasons 05022017
FR – MSW Landfill 11 Sept 2019
NMED submitted the approved State Plan implementing the Emission Guidelines in early May, 2017. On May 31, 2017, the EPA issued a 90-day stay on both the NSPS and EGs. This 90-day stay expired on August 29, 2017. Therefore, the 2016 federal rules are currently in effect. However, EPA is reconsidering several issues in these final rules. EPA does "not plan to prioritize" the review of submitted state plans and issuance of a Federal Plan for states that failed to submit a state plan. For more information on these rules and rule history, visit EPA's web page for landfills.

Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning the State Plan development. For questions regarding implementation of the emission guidelines, contact EPA Region 6 (Boyce.Kenneth@epa.gov).

[return to top of page]

Negative Declarations

Negative Declarations may be submitted to the U.S. EPA when Emissions Guidelines are finalized for existing sources. Emissions Guidelines require States, Tribes and Local Agencies to develop plans to implement the guidelines (rules) for sources within their jurisdictions that meet the applicability criteria. When a State, Tribe or Local Agency does not have an applicable source covered by the rule, a letter to U.S. EPA stating such may be submitted in lieu of an implementing plan. This is termed a "Negative Declaration."

On June 27, 2018, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declarationfor Commercial/Industrial Solid Waste Incinerators (CISWI) to EPA. (effective December 16, 2020) 85 FR 72967

On February 11, 2014, NMED submitted a Negative Declaration for Hospital Medical Infectious Waste Incinerators (HMIWI) to EPA. (effective April 1, 2021) 86 FR 12109

On October 11, 2007, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declaration, for Other Solid Waste Incinerators (OSWI) to EPA. (effective May 5, 2021) 86 FR 17543.

Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning Negative Declarations.

[return to top of page]

Nonattainment Area Permit Amendments (20.2.79 NMAC)

The Air Quality Bureau (AQB) of the New Mexico Environment Department (Department) intends to propose to the Environmental Improvement Board (EIB), amendments to 20.2.79 NMAC, *Permits – Nonattainment Areas* ("Part 79"), to make technical and administrative corrections to the rule. Part 79 specifies permitting requirements for any new major stationary source or major modification of an existing source located within a designated nonattainment area; or located within an area designated attainment or unclassifiable and will emit a regulated pollutant that significantly impacts a nonattainment area for the same pollutant.

The U.S. Environmental Protection Agency (EPA) designated a part of Doña Ana County near the Sunland Park area as a marginal nonattainment area for the 2015 ozone National Ambient Air Quality Standard ("2015 O_3 NAAQS") on August 3, 2018, requiring the AQB to develop a State Implementation Plan ("SIP") revision that includes a nonattainment permitting rule (i.e., Part 79) and submit it to EPA by August 3, 2021.

In December 2018, EPA promulgated the 2015 O_3 NAAQS implementation rule, which specifies nonattainment area SIP requirements. This final rule, referred to as the 2015 O_3 SIP Requirements Rule ("2015 O_3 SRR"), is largely an update to the previous implementing regulations promulgated for the 2008 O_3 NAAQS, and does not contain significant revisions from that previous rule.

The 2015 O_3 SRR addresses a range of nonattainment area SIP requirements New Mexico must meet for implementation of the 2015 O_3 NAAQS, including transportation conformity, nonattainment new source review ("NNSR"), emissions inventories, and emissions statement deadlines for SIP submissions and compliance with emission control measures in the SIP.

Pursuant to the 2015 O_3 SRR, NMED submitted a baseline Emissions Inventory and Emissions Statement to EPA by the specified deadline of August 3, 2020. For more information see /air-quality/dona-ana-2/

As part of the effort to comply with the 2015 O_3 SRR, the AQB analyzed Part 79 to determine if it was adequate to implement and enforce the standard. The AQB compared Part 79 with 40 CFR 51.165, *Permit Requirements*, and identified cross-reference inconsistencies and typographical errors that are addressed in the proposed revision.

Documents related to the proposed draft amendments to Part 79 are provided below.

All comments must be received by 5:00 PM MDT on May 21, 2021 in order for NMED to include a response in the hearing record. Anyone may present technical testimony, non-technical testimony or provide written or oral comments at the hearing. Please see the public hearing notice below for detailed instructions for participation.

Petroleum Processing Facility Regulation Repeal (20.2.37 NMAC)

At a public hearing held August 12, 2016, the Environmental Improvement Board unanimously approved the repeal of 20.2.37 NMAC. Part 37 was adopted in 1974
and specifies emissions limits and other operating requirements for existing (constructed prior to July 1, 1974) and new petroleum refineries and natural gas processing facilities. This rule regulates emissions from several processes associated with petroleum processing facilities and has not been substantially revised since 1984. The rule was identified in the November 2012 Improving Environmental Permitting Report for potential revision or repeal. The Air Quality Bureau has conducted a thorough analysis of the rule as well as other similar federal rules that apply to this industry, and has concluded that the rule can be repealed without a relaxation of emissions controls or an adverse effect on air quality

Revisions to the New Mexico State Implementation Plan Regarding Startup, Shutdown and Malfunctions

A public hearing, held September 9, 2016, approved revisions to the State Implementation Plan (SIP) for New Mexico. The SIP revisions are in response to a final action issued by the U.S. Environmental Protection Agency (EPA). On June 12, 2015, the EPA published its final action to ensure states have plans in place that are fully consistent with the Clean Air Act and recent court decisions concerning startup, shutdown and malfunction (SSM) operations.

In response to this final action, the New Mexico Environment Department Air Quality Bureau proposed revisions to the State Implementation Plan (SIP). These SIP revisions entail removing applicable sections of 20.2.7 NMAC – Excess Emissions during Malfunction, Startup, Shutdown, or Scheduled Maintenance from the SIP. The proposal was unanimously approved by the Environmental Improvement Board on September 9, 2016.

SO_2 Data Requirements Rule (SO_2 DRR) – Implementation of the 2010 1-hour Sulfur Dioxide Primary National Ambient Air Quality Standard

The U.S. EPA requires each State to supply information regarding sources that emit greater than 2,000 tons per year of sulfur dioxide in order to determine compliance with the 2010 1-hour primary standard. The schedule of required information includes:

January 15, 2016 – List of Sources – Sulfur dioxide states include for applicability to the Data Requirements Rule
July 1, 2016 – Approach – Air Quality Characterization – Sulfur dioxide (modeling or monitoring) for determining whether the source does or does not violate the standard
December 2016 – Revised Protocol
January 1, 2017 – Installation of monitors (if monitoring is the approach chosen)
January 13, 2017 – Final Modeling (actual emissions)
August 2017 – EPA SO_2 Disagreements Document
December 20, 2017 – EPA Attainment Designation for New Mexico (Round 3)
The Round 4 2010 SO_2 NAAQS Designations action was signed by the EPA Administrator, Andrew Wheeler, on December 21, 2020, pursuant to a court-ordered deadline of December 31, 2020. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, Acting Administrator Jane Nishida re-signed the same action on March 10, 2021 for publication in the *Federal Register*. Attainment/nonattainment designations for New Mexico were completed in December 2017. For more information on the 2010 SO_2 NAAQS and the Round 3 area designations, visit EPA's Round 3 2010 SO_2 NAAQS Designations webpage.

In accordance with the ongoing requirements in the federal rule, NMED must submit annual reports of the San Juan Generating Station's SO_2 emissions by July 1st of each year following designation. The purpose of this report is to analyze whether or not new modeling is required for areas that employed modeling of actual emissions for characterization. The fourth annual report for San Juan Generating Station (SJGS) is now available for review and public comment before submission to EPA. The report shows that SO_2 emissions continue to decrease from the modeling years of 2013-2015. 2018 emissions decreased significantly because two units were shut down in December 2017. The 2020 one-hour average and the one-hour maximum SO2 emissions showed decreases over the 2019 emissions. The three-year average for 2018-2020 showed decreased emissions when compared to the modeled three-year average for 2013-2015. Also, the annual maxima for 2018-2020 as well as the 99th percentile of 1-hour maxima for 2018-2020 significantly decreased from the modeled years of 2013-2015. Therefore, NMED recommends that new modeling should not be required at this time.

Draft 2022 Annual Report, SO2 Emissions for San Juan Generating Station – 5/6/2022
Draft 2021 Annual Report SO_2 DRR Report – SO_2 Emissions for SJGS – 5/11/2021
Public Involvement Plan for SJGS SO_2 Report – 5/15/2020
Notice of Availability Report Availability – 5/11/2021
[return to top of page]

Title V update (20.2.70 NMAC) to remove emergency provisions and update applicable requirements

EPA required emergency provisions to be removed from the Title V operating program. During this update, NMED also aligned "applicable requirements" more closely with the EPA language for these requirements.

2025-08-20-EIB-25-10-Final-Order-and-SOR-pj.pdf documents the EIB's final order and statement of reasons for the proposed repeal and replacement of 20.2.70 NMAC.
2025-08-17_EPD_AQB_-_EPA_Transmittal_Letter_TV_Program_Revision.pdf is a transmittal letter to EPA notifying that EIB has adopted amendments to 20.2.70 NMAC, Operating Permits, and that AQB is requesting a revision to its Title V Program.

Total Suspended Particulate NM Ambient Air Quality Standard Repeal

The Improving Environmental Permitting Initial Report recommended that the Air Quality Bureau consider the NM Ambient Air Quality Standards (NMAAQS) for Total Suspended Particulate (TSP) for repeal.

The NM standards were adopted in 1969, prior to the adoption of the National Ambient Air Quality Standards (NAAQS) in 1971. The U.S. Environmental Protection Agency (EPA) revised its standards in 1987, replacing TSP with particulate matter less than 10 microns (PM_{10}). The NM TSP standards were retained, to protect the public from soiling and nuisance effects of larger particulates (dust).

The Air Quality Bureau studied the issue and determined that a repeal of the TSP standards will not cause a deterioration in air quality; the current federal air quality standards for PM_{10} and $PM_{2.5}$ are protective of public health. A repeal also eased the permitting burden for regulated sources and the Air Quality Bureau. A hearing was scheduled for September 28, 2018 in Las Cruces.

Public Notice of Rulemaking Hearing: Repeal of TSP Standard (English and Spanish)
In part to address soiling and nuisance effects of windblown dust, the Air Quality Bureau developed a dust mitigation plan and associated fugitive dust rule that applies in areas that are in danger of violating the PM_{10} NAAQS. (See *"Dust Mitigation Plan and Fugitive Dust Rule"* above.)

On September 28, 2018, the Environmental Improvement Board (EIB) held a public hearing in Las Cruces, NM to consider the proposed repeal of the NM Ambient Air Quality Standard for TSP contained in Section 109 of 20.2.3 NMAC. The EIB unanimously approved the proposal at its October 26, 2018 meeting in Santa Fe. The effective date of the repealed standard was November 30, 2018.

The "Notice if Intent for 18-04 (R)" includes written testimony, proposed rule amendments, a noninterference demonstration under CAA 110(l), and copies of public notices and affidavits of publication.

Current Proposed Changes to Air Quality Regulations and Plans

The following are summaries of proposed new air quality regulations and proposed amendments to existing regulations and the New Mexico State Implementation Plan (SIP). [return to top of page]

Proposed Changes to Emissions and Permit Fee Regulations (20.2.71 NMAC and 20.2.75 NMAC)

The New Mexico Environment Department (NMED) announces a new rulemaking to repeal and replace regulations setting emissions fees and permit fees for regulated sources of air pollutants. On December 3, 2025, NMED petitioned the Environmental Improvement Board (EIB) to repeal and replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*. The New Mexico Air Quality Control Act and the federal Clean Air Act require that NMED collect sufficient emissions and permits fees to cover the reasonable costs of NMED's Title V Permit Program and Construction Permit Program. NMED initiated this rulemaking to increase fees for both the Title V and Construction Permit Programs after determining the current fee structures are inadequate to sufficiently fund the direct and indirect operating costs of these programs. Replacing 20.2.71

NMED Exhibit 26_000001

NMAC and 20.2.75 NMAC is essential if NMED is to continue effectively implementing these mission critical programs.

Copies of the petition and accompanying exhibits, which include the proposed replacement rules, are provided below and are also available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To locate the documents, click on "Environmental Improvement Board" to display the list of matters before the Board, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the list of documents filed in conjunction with this matter. Copies can also be obtained by contacting Eric Peters, Control Strategies Manager, at eric.peters@env.nm.gov or (505) 629-5299, or at any of NMED's offices statewide.

Construction permit, current Rule 20.2.75 NMAC with redline changes

Current Update: January 7, 2026
NMED will hold a virtual public informational meeting on January 15, 2026, from 4-6 p.m. regarding its proposed changes to 20.2.71 NMAC and 20.2.75 NMAC. Department staff will provide an overview of the proposed changes to both rules, and there will be time for questions from stakeholders and the general public. Information about how to join this meeting online or by phone is now available on the NMED events calendar and is also provided below:

January 15, 2026 NMED Permit Fee Update Workshop (4 to 6 p.m. Mountain Standard Time) links to the online meeting about the proposed fee updates.
To join by phone: +1-415-665-0001
Meeting number (access code): 2631 042 3836
Meeting password: c2Bh53CsQjt
The presentation slides and a recording of the January 15, 2026, public informational meeting will be provided on this website after the meeting, and NMED will hold virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the proposed rules. Information about how to join this meeting online or by phone is now available on the NMED events calendar and is also provided below:

January 22, 2026 NMED Permit Fee Update Workshop (6 to 8 p.m. Mountain Standard Time) links to the online "office hours" meeting about the proposed fee updates.
To join by phone: +1-415-665-0001
Meeting number (access code): 2864 946 0710

If you require language interpretation services or have a disability and need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in either of these meetings, contact Eric Peters as soon as possible at eric.peters@env.nm.gov or (505) 629-5299. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice). For assistance joining either meeting online or by phone, contact Julianna Montoya at julianna.montoya@env.nm.gov or (505) 479-2910.

Previous Updates:
December 22, 2025 Update
At its regular meeting on December 19, 2025, the EIB scheduled a public hearing to consider repealing and replacing 20.2.71 NMAC and 20.2.75 NMAC. The hearing will begin on March 23, 2026, at 9:00 a.m., continuing through March 25, 2026, or as long as required to hear all testimony, evidence, and public comment. The EIB is expected to issue an order soon setting the hearing, appointing a hearing officer, and establishing certain pre-hearing deadlines. The order will be available in the docket for this matter once it has been issued. Instructions for accessing the docket are provided above. A link to the recording of the December 19, 2025, EIB meeting is provided below.

Environmental Improvement Board Monthly Meeting: December 19, 2025 is the recording of NMED's petition to the EIB for a hearing for the proposed updates to fees.

Upcoming Public Engagement
NMED will hold a virtual public informational meeting on January 15, 2026, from 4-6 p.m. Department staff will provide an overview of the proposed changes to both rules, and there will be time for questions from stakeholders and the general public. Links to the presentation slides and a recording of the meeting will be provided on this website after the meeting, and NMED will hold virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the proposed rules. Information about how to join these meetings will be provided on this website at least 72 hours prior to each meeting, and on NMED's events calendar at https://www.env.nm.gov/events-calendar/. If you require language interpretation services or have a disability and need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in either of these meetings, contact Brian Polgar as soon as possible at brian.polgar@env.nm.gov or (505) 629-3466. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

To request a one-on-one meeting with the Department to discuss the proposed rules, contact Brian Polgar at brian.polgar@env.nm.gov or (505) 629-3466. NMED is also accepting written comments on the proposed rules via its online public comment portal at https://nmed.commentinput.com/?id=dM4UeKV73. Comments will be accepted for at least 30 days after notice of the proposed rulemaking is published in the New Mexico Register.

[return to top of page]

Proposed Incorporation by Reference of Federal NSPS, NESHAP and MACT Rules

NMED proposes the incorporation into the New Mexico Administrative Code (NMAC) several new or revised federal rules promulgated under 40 CFR Parts 60, 61 and 63 for which New Mexico has been delegated enforcement authority: Standards of Performance for New Stationary Sources; National Emission Standards for Hazardous Air Pollutants; and Maximum Achievable Control Technology for Hazardous Air Pollutants for Source Categories, respectively. These new or revised federal rules would be incorporated by reference into 20.2.77 NMAC – New Source Performance Standards (NSPS); 20.2.78 NMAC – Emission Standards for Hazardous Air Pollutants (NESHAP); and 20.2.82 NMAC – Maximum Achievable Control Technology for Source Categories of Hazardous Air Pollutants (MACT). The Department also requests that the Environmental Improvement Board remove the end date of incorporation in 20.2.77 and 20.2.78 NMAC to implement and enforce all previously adopted and all future NSPS and NESHAP requirements.

[return to top of page]

Recently Approved Changes to Air Quality Regulations and Plans

The following are summaries of recently approved changes to New Mexico air quality regulations and the New Mexico State Implementation Plan. These changes were approved by either the Environmental Improvement Board or U.S. EPA within the last two years. Please check this webpage periodically for updates.

[return to top of page]

Carbon dioxide emission standards for coal-fired electric generating facilities

The New Mexico Environmental Department (NMED) announces a new rulemaking to develop emission standards for new and existing electric generating facilities, 20.2.101 NMAC, Carbon Dioxide Emission Standards for Coal-Fired Electric Generating Facilities.

During the 2019 legislative session, Senate Bill 489 introduced the Energy Transition Act (ETA), which was later signed into law by Governor Michelle Lujan Grisham. The ETA sets statewide renewable energy standards and establishes a pathway for a low-carbon energy transition away from coal. The ETA requires the Environmental Improvement Board (EIB) to promulgate a rule that limits carbon dioxide emissions from certain electric generating facilities under their jurisdiction to 1,100 pounds per megawatt-hour on or after January 1, 2023. The EIB's jurisdiction does not include Bernalillo County or Tribal lands.

The New Mexico Environmental Improvement Board will hold a public hearing on October 26, 2022, to consider the NMED's proposed new rulemaking targeting carbon dioxide emissions from coal-fired electric generating facilities.

This webpage provides information regarding the rulemaking hearing and key documents. Please visit the Environmental Improvement Board website for further hearing information.

20.2.101 NMAC draft rule contains the proposed regulatory language.
Energy transition Act Document describes the basis for the new rulemaking.
AQB Overview and Rulemaking describes the AQB and its approach to making rules.
Environmental Groups' Comment document compiles comments received on initial proposals.

[return to top of page]

Dust Mitigation Plan and Fugitive Dust Rule

On September 16, 2016, the Administrator for the U.S. Environmental Protection Agency (EPA) signed revisions to the Exceptional Events Rule with the final rule published in the Federal Register on October 3, 2016. The federal Clean Air Act (Section 319(b)(3)(A)) identifies five guiding principles for developing implementing regulations of exceptional events:

Protection of public health is the highest priority;
All ambient air quality data should be included in a timely manner in an appropriate federal air quality database that is accessible to the public;
Timely information should be provided to the public in any case in which the air quality is unhealthy;
Each state must take necessary measures to safeguard public health regardless of the source of the air pollution; and
Air quality data should be carefully screened to ensure that events not likely to recur are represented accurately in all monitoring data and analyses.
Section V of the preamble to the final rule (81 FR 68270) addresses mitigation and requires the development of mitigation plans in areas with "historically documented" or "known seasonal" exceptional events. These events must be of the same type and pollutant (i.e., high wind dust/PM10) and recur annually or seasonally. Doña Ana and Luna Counties in southern New Mexico were identified by EPA as areas required to be covered by mitigation plans. NMED developed a single mitigation plan for the two counties and a copy may be found below.

Dust Mitigation Plan for Doña Ana and Luna Counties

NMED developed a fugitive dust rule in conjunction with the mitigation plan to detail mandatory measures to abate certain controllable sources in Doña Ana and Luna Counties. A public hearing was held on September 28, 2018 in Las Cruces and the board adopted the rule on October 26, 2018. Copies of the final rule, hearing transcripts and statement of reasons to adopt the rule are provided below.

20.2.23 NMAC, *Fugitive Dust Control*, (Applicable in Doña Ana and Luna Counties only)

Good Neighbor State Implementation Plan Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announces an opportunity to comment on and request a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard (NAAQS). The proposed Good Neighbor SIP Certification addresses Clean Air Act (CAA) Section 110(a)(2)(D)(i)(I), to confirm to the U.S. Environmental Protection Agency (EPA) that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2010 Nitrogen Dioxide NAAQS and fulfills its "good neighbor" obligations under the CAA.

All comments or requests for a public hearing must be received by May 17, 2021.* If a request for a public hearing is received during the 30-day public comment period, a hearing date, time and location will be announced at a later date.

Good Neighbor State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announced a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS). The purpose of the hearing was to consider the matter of EIB 21-05 to certify that New Mexico has an adequate, federally-approved SIP that addresses CAA Section 110(a)(2)(D)(i) regarding interstate transport of air pollution in this submittal. The proposed certification confirmed to the U.S. Environmental Protection Agency ("EPA") that the State of New Mexico has the required "infrastructure" in place under the current SIP to implement, maintain, and enforce the revised 2015 Ozone NAAQS and fulfills its "good neighbor" obligations under the CAA.

Incorporation by Reference of federal NSPS, NESHAP and MACT rules

A public hearing was held November 17, 2023 where the Environmental Improvement Board unanimously approved amendments to the dates of incorporation by reference contained in 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards for Hazardous Air Pollutants), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants). The previous update for Parts 77, 78 and 82 was January 15, 2017. Since the most recent date of incorporation, there have been 119 changes to various federal New Source Performance Standards, Emission Standards for Hazardous Air Pollutants, and Maximum Achievable Control Technology Standards. Adoption of the incorporation by reference amendments changes the "through date" in Parts 77, 78 and 82 that reference the final rulings made at the federal level through June 28, 2023.

New Mexico Environmental Improvement Board Notice of Rulemaking Hearing_on 2023-11-17 is the announcement for the incorporation by reference rule.
Junta de Mejora Ambiental de Nuevo México Aviso de Audiencia de Reglamentación is the Spanish version of the announcement for the incorporation by reference rule.

Infrastructure State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) submitted New Mexico's proposed Infrastructure State Implementation Plan (iSIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS) to the EPA on November 16, 2018. The iSIP certification addresses elements of a Clean Air Act (CAA) Section 110(a)(2), to confirm to the EPA that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2015 ozone NAAQS, promulgated on October 1, 2015 (80 FR 65291, October 26, 2015).

This certification does not address CAA Section 110(a)(2)(D)(i)(I), which prohibits emissions from New Mexico that significantly contribute to nonattainment or interfere with maintenance of a NAAQS in a downwind state. This section is often referred to as the "Good Neighbor Provision" and will be addressed in a future submission to EPA.

Municipal Solid Waste Landfills – New Source Performance Standards and Emission Guidelines

In August 2016, EPA issued revised standards for both new and existing municipal solid waste landfills (MSWLs). The New Source Performance Standards at 40 CFR 60 Subpart XXX apply to landfills constructed or modified after July 17, 2014. The Emission Guidelines at 40 CFR 60 Subpart Cf apply to landfills constructed or modified on or prior to this date. Both of these federal rules aim to reduce landfill gas emissions. The New Source Performance Standard were incorporated by reference into the New Mexico Administrative Code (NMAC) on April 28, 2017.

Subpart Cf, promulgated under Section 111(d) of the Clean Air Act, requires that states, tribes and local authorities with jurisdiction over existing landfills develop a plan to implement the emission guidelines. One aspect of that state plan, for New Mexico, is the amendment of 20.2.64 NMAC – *Municipal Solid Waste Landfills* (Part 64).

On April 28, 2017, the Environmental Improvement Board unanimously approved the adoption of the State Plan implementing the emission guidelines

NMED Exhibit 26_000004

and the repeal and replacement of Part 64.

EIB 16-06 (R) Order and Statement of Reasons 05022017
FR – MSW Landfill 11 Sept 2019

NMED submitted the approved State Plan implementing the Emission Guidelines in early May, 2017. On May 31, 2017, the EPA issued a 90-day stay on both the NSPS and EGs. This 90-day stay expired on August 29, 2017. Therefore, the 2016 federal rules are currently in effect. However, EPA is reconsidering several issues in these final rules. EPA does "not plan to prioritize" the review of submitted state plans and issuance of a Federal Plan for states that failed to submit a state plan. For more information on these rules and rule history, visit EPA's web page for landfills.

Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning the State Plan development. For questions regarding implementation of the emission guidelines, contact EPA Region 6 (Boyce.Kenneth@epa.gov).

[return to top of page]

Negative Declarations

Negative Declarations may be submitted to the U.S. EPA when Emissions Guidelines are finalized for existing sources. Emissions Guidelines require States, Tribes and Local Agencies to develop plans to implement the guidelines (rules) for sources within their jurisdictions that meet the applicability criteria. When a State, Tribe or Local Agency does not have an applicable source covered by the rule, a letter to U.S. EPA stating such may be submitted in lieu of an implementing plan. This is termed a "Negative Declaration."

On June 27, 2018, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declarationfor Commercial/Industrial Solid Waste Incinerators (CISWI) to EPA. (effective December 16, 2020) 85 FR 72967
On February 11, 2014, NMED submitted a Negative Declaration for Hospital Medical Infectious Waste Incinerators (HMIWI) to EPA. (effective April 1, 2021) 86 FR 12109
On October 11, 2007, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declaration, for Other Solid Waste Incinerators (OSWI) to EPA. (effective May 5, 2021) 86 FR 17543.
Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning Negative Declarations.

Nonattainment Area Permit Amendments (20.2.79 NMAC)

The Air Quality Bureau (AQB) of the New Mexico Environment Department (Department) intends to propose to the Environmental Improvement Board (EIB), amendments to 20.2.79 NMAC, *Permits – Nonattainment Areas* ("Part 79"), to make technical and administrative corrections to the rule. Part 79 specifies permitting requirements for any new major stationary source or major modification of an existing source located within a designated nonattainment area; or located within an area designated attainment or unclassifiable and will emit a regulated pollutant that significantly impacts a nonattainment area for the same pollutant.

The U.S. Environmental Protection Agency (EPA) designated a part of Doña Ana County near the Sunland Park area as a marginal nonattainment area for the 2015 ozone National Ambient Air Quality Standard ("2015 O_3 NAAQS") on August 3, 2018, requiring the AQB to develop a State Implementation Plan ("SIP") revision that includes a nonattainment permitting rule (i.e., Part 79) and submit it to EPA by August 3, 2021.

In December 2018, EPA promulgated the 2015 O_3 NAAQS implementation rule, which specifies nonattainment area SIP requirements. This final rule, referred to as the 2015 O_3 SIP Requirements Rule ("2015 O_3 SRR"), is largely an update to the previous implementing regulations promulgated for the 2008 O_3 NAAQS, and does not contain significant revisions from that previous rule.

The 2015 O_3 SRR addresses a range of nonattainment area SIP requirements New Mexico must meet for implementation of the 2015 O_3 NAAQS, including transportation conformity, nonattainment new source review ("NNSR"), emissions inventories, and emissions statement deadlines for SIP submissions and compliance with emission control measures in the SIP.

Pursuant to the 2015 O_3 SRR, NMED submitted a baseline Emissions Inventory and Emissions Statement to EPA by the specified deadline of August 3, 2020. For more information see /air-quality/dona-ana-2/

As part of the effort to comply with the 2015 O_3 SRR, the AQB analyzed Part 79 to determine if it was adequate to implement and enforce the standard. The AQB compared Part 79 with 40 CFR 51.165, *Permit Requirements*, and identified cross-reference inconsistencies and typographical errors that are addressed in the proposed revision.

Documents related to the proposed draft amendments to Part 79 are provided below.

All comments must be received by 5:00 PM MDT on May 21, 2021 in order for NMED to include a response in the hearing record. Anyone may present technical testimony, non-technical testimony or provide written or oral comments at the hearing. Please see the public hearing notice below for detailed instructions for participation.

Stakeholder Review Draft – 20.2.79 NMAC

Petroleum Processing Facility Regulation Repeal (20.2.37 NMAC)

At a public hearing held August 12, 2016, the Environmental Improvement Board unanimously approved the repeal of 20.2.37 NMAC. Part 37 was adopted in 1974
and specifies emissions limits and other operating requirements for existing (constructed prior to July 1, 1974) and new petroleum refineries and natural gas processing facilities. This rule regulates emissions from several processes associated with petroleum processing facilities and has not been substantially revised since 1984. The rule was identified in the November 2012 Improving Environmental Permitting Report for potential revision or repeal. The Air Quality Bureau has conducted a thorough analysis of the rule as well as other similar federal rules that apply to this industry, and has concluded that the rule can be repealed without a relaxation of emissions controls or an adverse effect on air quality

Revisions to the New Mexico State Implementation Plan Regarding Startup, Shutdown and Malfunctions

A public hearing, held September 9, 2016, approved revisions to the State Implementation Plan (SIP) for New Mexico. The SIP revisions are in response to a final action issued by the U.S. Environmental Protection Agency (EPA). On June 12, 2015, the EPA published its final action to ensure states have plans in place that are fully consistent with the Clean Air Act and recent court decisions concerning startup, shutdown and malfunction (SSM) operations.

In response to this final action, the New Mexico Environment Department Air Quality Bureau proposed revisions to the State Implementation Plan (SIP). These SIP revisions entail removing applicable sections of 20.2.7 NMAC – Excess Emissions during Malfunction, Startup, Shutdown, or Scheduled Maintenance from the SIP. The proposal was unanimously approved by the Environmental Improvement Board on September 9, 2016.

SO_2 Data Requirements Rule (SO_2 DRR) – Implementation of the 2010 1-hour Sulfur Dioxide Primary National Ambient Air Quality Standard

The U.S. EPA requires each State to supply information regarding sources that emit greater than 2,000 tons per year of sulfur dioxide in order to determine compliance with the 2010 1-hour primary standard. The schedule of required information includes:

January 15, 2016 – List of Sources – Sulfur dioxide states include for applicability to the Data Requirements Rule
July 1, 2016 – Approach – Air Quality Characterization – Sulfur dioxide (modeling or monitoring) for determining whether the source does or does not violate the standard
December 2016 – Revised Protocol
January 1, 2017 – Installation of monitors (if monitoring is the approach chosen)
January 13, 2017 – Final Modeling (actual emissions)
August 2017 – EPA SO_2 Disagreements Document

December 20, 2017 – EPA Attainment Designation for New Mexico (Round 3)
The Round 4 2010 SO_2 NAAQS Designations action was signed by the EPA Administrator, Andrew Wheeler, on December 21, 2020, pursuant to a court-ordered deadline of December 31, 2020. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, Acting Administrator Jane Nishida re-signed the same action on March 10, 2021 for publication in the *Federal Register*. Attainment/nonattainment designations for New Mexico were completed in December 2017. For more information on the 2010 SO_2 NAAQS and the Round 3 area designations, visit EPA's Round 3 2010 SO_2 NAAQS Designations webpage.

In accordance with the ongoing requirements in the federal rule, NMED must submit annual reports of the San Juan Generating Station's SO_2 emissions by July 1st of each year following designation. The purpose of this report is to analyze whether or not new modeling is required for areas that employed modeling of actual emissions for characterization. The fourth annual report for San Juan Generating Station (SJGS) is now available for review and public comment before submission to EPA. The report shows that SO_2 emissions continue to decrease from the modeling years of 2013-2015. 2018 emissions decreased significantly because two units were shut down in December 2017. The 2020 one-hour average and the one-hour maximum SO2 emissions showed decreases over the 2019 emissions. The three-year average for 2018-2020 showed decreased emissions when compared to the modeled three-year average for 2013-2015. Also, the annual maxima for 2018-2020 as well as the 99th percentile of 1-hour maxima for 2018-2020 significantly decreased from the modeled years of 2013-2015. Therefore, NMED recommends that new modeling should not be required at this time.

Draft 2022 Annual Report, SO2 Emissions for San Juan Generating Station – 5/6/2022
Draft 2021 Annual Report SO_2 DRR Report – SO_2 Emissions for SJGS – 5/11/2021

Total Suspended Particulate NM Ambient Air Quality Standard Repeal

The Improving Environmental Permitting Initial Report recommended that the Air Quality Bureau consider the NM Ambient Air Quality Standards (NMAAQS) for Total Suspended Particulate (TSP) for repeal.

The NM standards were adopted in 1969, prior to the adoption of the National Ambient Air Quality Standards (NAAQS) in 1971. The U.S. Environmental Protection Agency (EPA) revised its standards in 1987, replacing TSP with particulate matter less than 10 microns (PM_{10}). The NM TSP standards were retained, to protect the public from soiling and nuisance effects of larger particulates (dust).

The Air Quality Bureau studied the issue and determined that a repeal of the TSP standards will not cause a deterioration in air quality; the current federal air quality standards for PM_{10} and $PM_{2.5}$ are protective of public health. A repeal also eased the permitting burden for regulated sources and the Air Quality Bureau. A hearing was scheduled for September 28, 2018 in Las Cruces.

Public Notice of Rulemaking Hearing: Repeal of TSP Standard (English and Spanish)
In part to address soiling and nuisance effects of windblown dust, the Air Quality Bureau developed a dust mitigation plan and associated fugitive dust rule that applies in areas that are in danger of violating the PM_{10} NAAQS. (See *"Dust Mitigation Plan and Fugitive Dust Rule"* above.)

On September 28, 2018, the Environmental Improvement Board (EIB) held a public hearing in Las Cruces, NM to consider the proposed repeal of the NM Ambient Air Quality Standard for TSP contained in Section 109 of 20.2.3 NMAC. The EIB unanimously approved the proposal at its October 26, 2018 meeting in Santa Fe. The effective date of the repealed standard was November 30, 2018.

The "Notice if Intent for 18-04 (R)" includes written testimony, proposed rule amendments, a noninterference demonstration under CAA 110(l), and copies of public notices and affidavits of publication.

Current Proposed Changes to Air Quality Regulations and Plans

The following are summaries of proposed new air quality regulations and proposed amendments to existing regulations and the New Mexico State Implementation Plan (SIP). [return to top of page]

Proposed Changes to Emissions and Permit Fee Regulations (20.2.71 NMAC and 20.2.75 NMAC)

The New Mexico Environment Department (NMED) announces a new rulemaking to repeal and replace regulations setting emissions fees and permit fees for regulated sources of air pollutants. On December 3, 2025, NMED petitioned the Environmental Improvement Board (EIB) to repeal and replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*. The New Mexico Air Quality Control Act and the federal Clean Air Act require that NMED collect sufficient emissions and permits fees to cover the reasonable costs of NMED's Title V Permit Program and Construction Permit Program. NMED initiated this rulemaking to increase fees for both the Title V and Construction Permit Programs after determining the current fee structures are inadequate to sufficiently fund the direct and indirect operating costs of these programs. Replacing 20.2.71 NMAC and 20.2.75 NMAC is essential if NMED is to continue effectively implementing these mission critical programs.

Copies of the petition and accompanying exhibits, which include the proposed replacement rules, are provided below and are also available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To locate the documents, click on "Environmental Improvement Board" to display the list of matters before the Board, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the list of documents filed in conjunction with this matter. Copies can also be obtained by contacting Eric Peters, Control Strategies Manager, at eric.peters@env.nm.gov or (505) 629-5299, or at any of NMED's offices statewide.

Aviso de Audiencia – Español

Public Engagement Opportunities (Updated January 20, 2026)
Upcoming Public Engagement:

NMED will hold virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the proposed rules. Members of the public who were unable to attend the previous meeting (January 15, 2026) are encouraged to view the slides, watch the recording, and bring any questions or comments they may have. (There will be no slideshow presentation during the upcoming meeting, just question and answer opportunities and comment opportunities). Information about how to join the upcoming meeting online or by phone is now available on the NMED events calendar and is also provided below.

January 22, 2026 NMED Permit Fee Update Workshop (6 to 8 p.m. Mountain Standard Time) links to the online "office hours" meeting about the proposed fee updates.

To join by phone: +1-415-665-0001

Meeting number (access code): 2864 946 0710

Meeting password: TQuZMpfV735

If you require language interpretation services or have a disability and need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in either of these meetings, contact Eric Peters as soon as possible at eric.peters@env.nm.gov or (505) 629-5299. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice). For assistance joining either meeting online or by phone, contact Julianna Montoya at julianna.montoya@env.nm.gov or (505) 479-2910.

NMED is also accepting written comments on the proposed rules via its online public comment portal at https://nmed.commentinput.com/?id=dM4UeKV73. Comments will be accepted for at least 30 days after notice of the proposed rulemaking is published in the New Mexico Register.

Past Public Engagement Meeting:

NMED held a virtual public informational meeting on January 15, 2026, from 4-6 p.m. regarding its proposed changes to 20.2.71 NMAC and 20.2.75 NMAC. Department staff provided an overview of the proposed changes to both rules, and replied to questions from stakeholders and the general public. Meeting slides and recording links are provided below:

Public Informational Meeting on Updates to Air Quality Emissions and Permit Fees slide deck contains the presentation slides from the January 15 meeting.

Meeting Recording YouTube Link (Posted 1-16-26)

Previous Updates:
Fees Hearing Petition (Updated December 22, 2025)
At its regular meeting on December 19, 2025, the EIB scheduled a public hearing to consider repealing and replacing 20.2.71 NMAC and 20.2.75 NMAC. The hearing will begin on March 23, 2026, at 9:00 a.m., continuing through March 25, 2026, or as long as required to hear all testimony, evidence, and public comment. The EIB is expected to issue an order soon setting the hearing, appointing a hearing officer, and establishing certain pre-hearing deadlines. The order will be available in the docket for this matter once it has been issued. Instructions for accessing the docket are provided above. A link to the recording of the December 19, 2025, EIB meeting is provided below.

Environmental Improvement Board Monthly Meeting: December 19, 2025 is the recording of NMED's petition to the EIB for a hearing for the proposed updates to fees.

[return to top of page]

Proposed Incorporation by Reference of Federal NSPS, NESHAP and MACT Rules

NMED proposes the incorporation into the New Mexico Administrative Code (NMAC) several new or revised federal rules promulgated under 40 CFR Parts 60, 61 and 63 for which New Mexico has been delegated enforcement authority: Standards of Performance for New Stationary Sources; National Emission Standards for Hazardous Air Pollutants; and Maximum Achievable Control Technology for Hazardous Air Pollutants for Source Categories, respectively. These new or revised federal rules would be incorporated by reference into 20.2.77 NMAC – New Source Performance Standards (NSPS); 20.2.78 NMAC – Emission Standards for Hazardous Air Pollutants (NESHAP); and 20.2.82 NMAC – Maximum Achievable Control Technology for Source Categories of Hazardous Air Pollutants (MACT). The Department also requests that the Environmental Improvement Board remove the end date of incorporation in 20.2.77 and 20.2.78 NMAC to implement and enforce all previously adopted and all future NSPS and NESHAP requirements.

[return to top of page]

Recently Approved Changes to Air Quality Regulations and Plans

The following are summaries of recently approved changes to New Mexico air quality regulations and the New Mexico State Implementation Plan. These changes were approved by either the Environmental Improvement Board or U.S. EPA within the last two years. Please check this webpage periodically for updates.

[return to top of page]

Carbon dioxide emission standards for coal-fired electric generating facilities

The New Mexico Environmental Department (NMED) announces a new rulemaking to develop emission standards for new and existing electric generating facilities, 20.2.101 NMAC, Carbon Dioxide Emission Standards for Coal-Fired Electric Generating Facilities.

During the 2019 legislative session, Senate Bill 489 introduced the Energy Transition Act (ETA), which was later signed into law by Governor Michelle Lujan Grisham. The ETA sets statewide renewable energy standards and establishes a pathway for a low-carbon energy transition away from coal. The

ETA requires the Environmental Improvement Board (EIB) to promulgate a rule that limits carbon dioxide emissions from certain electric generating facilities under their jurisdiction to 1,100 pounds per megawatt-hour on or after January 1, 2023. The EIB's jurisdiction does not include Bernalillo County or Tribal lands.

The New Mexico Environmental Improvement Board will hold a public hearing on October 26, 2022, to consider the NMED's proposed new rulemaking targeting carbon dioxide emissions from coal-fired electric generating facilities.

This webpage provides information regarding the rulemaking hearing and key documents. Please visit the Environmental Improvement Board website for further hearing information.

20.2.101 NMAC draft rule contains the proposed regulatory language.
Energy transition Act Document describes the basis for the new rulemaking.
AQB Overview and Rulemaking describes the AQB and its approach to making rules.
Environmental Groups' Comment document compiles comments received on initial proposals.

Dust Mitigation Plan and Fugitive Dust Rule

On September 16, 2016, the Administrator for the U.S. Environmental Protection Agency (EPA) signed revisions to the Exceptional Events Rule with the final rule published in the Federal Register on October 3, 2016. The federal Clean Air Act (Section 319(b)(3)(A)) identifies five guiding principles for developing implementing regulations of exceptional events:

Protection of public health is the highest priority;
All ambient air quality data should be included in a timely manner in an appropriate federal air quality database that is accessible to the public;
Timely information should be provided to the public in any case in which the air quality is unhealthy;
Each state must take necessary measures to safeguard public health regardless of the source of the air pollution; and
Air quality data should be carefully screened to ensure that events not likely to recur are represented accurately in all monitoring data and analyses.
Section V of the preamble to the final rule (81 FR 68270) addresses mitigation and requires the development of mitigation plans in areas with "historically documented" or "known seasonal" exceptional events. These events must be of the same type and pollutant (i.e., high wind dust/PM10) and recur annually or seasonally. Doña Ana and Luna Counties in southern New Mexico were identified by EPA as areas required to be covered by mitigation plans. NMED developed a single mitigation plan for the two counties and a copy may be found below.

Dust Mitigation Plan for Doña Ana and Luna Counties

NMED developed a fugitive dust rule in conjunction with the mitigation plan to detail mandatory measures to abate certain controllable sources in Doña Ana and Luna Counties. A public hearing was held on September 28, 2018 in Las Cruces and the board adopted the rule on October 26, 2018. Copies of the final rule, hearing transcripts and statement of reasons to adopt the rule are provided below.

20.2.23 NMAC, *Fugitive Dust Control*, (Applicable in Doña Ana and Luna Counties only)

Good Neighbor State Implementation Plan Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announces an opportunity to comment on and request a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard (NAAQS). The proposed Good Neighbor SIP Certification addresses Clean Air Act (CAA) Section 110(a)(2)(D)(i)(I), to confirm to the U.S. Environmental Protection Agency (EPA) that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2010 Nitrogen Dioxide NAAQS and fulfills its "good neighbor" obligations under the CAA.

All comments or requests for a public hearing must be received by May 17, 2021.* If a request for a public hearing is received during the 30-day public comment period, a hearing date, time and location will be announced at a later date.

Good Neighbor State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announced a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS). The purpose of the hearing was to consider the matter of EIB 21-05 to certify that New Mexico has an adequate, federally-approved SIP that addresses CAA Section 110(a)(2)(D)(i) regarding interstate transport of air pollution in this submittal. The proposed certification confirmed to the U.S. Environmental Protection Agency ("EPA") that the State of New Mexico has the required "infrastructure" in place under the current SIP to implement, maintain, and enforce the revised 2015 Ozone NAAQS and fulfills its "good neighbor" obligations under the CAA.

Incorporation by Reference of federal NSPS, NESHAP and MACT rules

A public hearing was held November 17, 2023 where the Environmental Improvement Board unanimously approved amendments to the dates of incorporation by reference contained in 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards for Hazardous Air Pollutants), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants). The previous update for Parts 77, 78 and 82 was January 15, 2017. Since the most recent date of incorporation, there have been 119 changes to various federal New Source Performance Standards, Emission Standards for Hazardous Air Pollutants, and Maximum Achievable Control Technology Standards. Adoption of the incorporation by reference amendments changes the "through date" in Parts 77, 78 and 82 that reference the final rulings made at the federal level through June 28, 2023.

New Mexico Environmental Improvement Board Notice of Rulemaking Hearing_on 2023-11-17 is the announcement for the incorporation by reference rule.
Junta de Mejora Ambiental de Nuevo México Aviso de Audiencia de Reglamentación is the Spanish version of the announcement for the incorporation by reference rule.
Notice of Public Meeting NM EIB 2023-11-17 is the meeting notice that includes the links to join the meeting online.
Notice of Intent 23-52(R) is the NMED notice of intent to present technical testimony for the incorporation by reference rule.
Exhibit 16, Sunshine Portal public notice is a copy of the public notice posted on the official government transparency portal of new Mexico.
Exhibit 17, Field Office public notice documentation is documentation of the request to post public notices at NMED field offices.

Infrastructure State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) submitted New Mexico's proposed Infrastructure State Implementation Plan (iSIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS) to the EPA on November 16, 2018. The iSIP certification addresses elements of a Clean Air Act (CAA) Section 110(a)(2), to confirm to the EPA that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2015 ozone NAAQS, promulgated on October 1, 2015 (80 FR 65291, October 26, 2015).

This certification does not address CAA Section 110(a)(2)(D)(i)(I), which prohibits emissions from New Mexico that significantly contribute to nonattainment or interfere with maintenance of a NAAQS in a downwind state. This section is often referred to as the "Good Neighbor Provision" and will be addressed in a future submission to EPA.

Municipal Solid Waste Landfills – New Source Performance Standards and Emission Guidelines

In August 2016, EPA issued revised standards for both new and existing municipal solid waste landfills (MSWLs). The New Source Performance Standards at 40 CFR 60 Subpart XXX apply to landfills constructed or modified after July 17, 2014. The Emission Guidelines at 40 CFR 60 Subpart Cf apply to landfills constructed or modified on or prior to this date. Both of these federal rules aim to reduce landfill gas emissions. The New Source Performance Standard were incorporated by reference into the New Mexico Administrative Code (NMAC) on April 28, 2017.

Subpart Cf, promulgated under Section 111(d) of the Clean Air Act, requires that states, tribes and local authorities with jurisdiction over existing landfills develop a plan to implement the emission guidelines. One aspect of that state plan, for New Mexico, is the amendment of 20.2.64 NMAC – *Municipal Solid Waste Landfills* (Part 64).

On April 28, 2017, the Environmental Improvement Board unanimously approved the adoption of the State Plan implementing the emission guidelines and the repeal and replacement of Part 64.

Public Notice in English and Spanish

Exhibit 28: Proposed Order and Statement of Reasons
EIB 16-06 (R) Order and Statement of Reasons 05022017
FR – MSW Landfill 11 Sept 2019

NMED submitted the approved State Plan implementing the Emission Guidelines in early May, 2017. On May 31, 2017, the EPA issued a 90-day stay on both the NSPS and EGs. This 90-day stay expired on August 29, 2017. Therefore, the 2016 federal rules are currently in effect. However, EPA is reconsidering several issues in these final rules. EPA does "not plan to prioritize" the review of submitted state plans and issuance of a Federal Plan for states that failed to submit a state plan. For more information on these rules and rule history, visit EPA's web page for landfills.

Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning the State Plan development. For questions regarding implementation of the emission guidelines, contact EPA Region 6 (Boyce.Kenneth@epa.gov).

[return to top of page]

Negative Declarations

Negative Declarations may be submitted to the U.S. EPA when Emissions Guidelines are finalized for existing sources. Emissions Guidelines require States, Tribes and Local Agencies to develop plans to implement the guidelines (rules) for sources within their jurisdictions that meet the applicability criteria. When a State, Tribe or Local Agency does not have an applicable source covered by the rule, a letter to U.S. EPA stating such may be submitted in lieu of an implementing plan. This is termed a "Negative Declaration."

On June 27, 2018, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declarationfor Commercial/Industrial Solid Waste Incinerators (CISWI) to EPA. (effective December 16, 2020) 85 FR 72967
On February 11, 2014, NMED submitted a Negative Declaration for Hospital Medical Infectious Waste Incinerators (HMIWI) to EPA. (effective April 1, 2021) 86 FR 12109
On October 11, 2007, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declaration, for Other Solid Waste Incinerators (OSWI) to EPA. (effective May 5, 2021) 86 FR 17543.
Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning Negative Declarations.

Nonattainment Area Permit Amendments (20.2.79 NMAC)

The Air Quality Bureau (AQB) of the New Mexico Environment Department (Department) intends to propose to the Environmental Improvement Board (EIB), amendments to 20.2.79 NMAC, *Permits – Nonattainment Areas* ("Part 79"), to make technical and administrative corrections to the rule. Part 79 specifies permitting requirements for any new major stationary source or major modification of an existing source located within a designated nonattainment area; or located within an area designated attainment or unclassifiable and will emit a regulated pollutant that significantly impacts a nonattainment area for the same pollutant.

The U.S. Environmental Protection Agency (EPA) designated a part of Doña Ana County near the Sunland Park area as a marginal nonattainment area for the 2015 ozone National Ambient Air Quality Standard ("2015 O_3 NAAQS") on August 3, 2018, requiring the AQB to develop a State Implementation Plan ("SIP") revision that includes a nonattainment permitting rule (i.e., Part 79) and submit it to EPA by August 3, 2021.

In December 2018, EPA promulgated the 2015 O_3 NAAQS implementation rule, which specifies nonattainment area SIP requirements. This final rule, referred to as the 2015 O_3 SIP Requirements Rule ("2015 O_3 SRR"), is largely an update to the previous implementing regulations promulgated for the 2008 O_3 NAAQS, and does not contain significant revisions from that previous rule.

The 2015 O_3 SRR addresses a range of nonattainment area SIP requirements New Mexico must meet for implementation of the 2015 O_3 NAAQS, including transportation conformity, nonattainment new source review ("NNSR"), emissions inventories, and emissions statement deadlines for SIP submissions and compliance with emission control measures in the SIP.

Pursuant to the 2015 O_3 SRR, NMED submitted a baseline Emissions Inventory and Emissions Statement to EPA by the specified deadline of August 3, 2020. For more information see /air-quality/dona-ana-2/

As part of the effort to comply with the 2015 O_3 SRR, the AQB analyzed Part 79 to determine if it was adequate to implement and enforce the standard. The AQB compared Part 79 with 40 CFR 51.165, *Permit Requirements*, and identified cross-reference inconsistencies and typographical errors that are addressed in the proposed revision.

Documents related to the proposed draft amendments to Part 79 are provided below.

All comments must be received by 5:00 PM MDT on May 21, 2021 in order for NMED to include a response in the hearing record. Anyone may present technical testimony, non-technical testimony or provide written or oral comments at the hearing. Please see the public hearing notice below for detailed instructions for participation.

Petroleum Processing Facility Regulation Repeal (20.2.37 NMAC)

At a public hearing held August 12, 2016, the Environmental Improvement Board unanimously approved the repeal of 20.2.37 NMAC. Part 37 was adopted in 1974
and specifies emissions limits and other operating requirements for existing (constructed prior to July 1, 1974) and new petroleum refineries and natural gas processing facilities. This rule regulates emissions from several processes associated with petroleum processing facilities and has not been substantially revised since 1984. The rule was identified in the November 2012 Improving Environmental Permitting Report for potential revision or repeal. The Air Quality Bureau has conducted a thorough analysis of the rule as well as other similar federal rules that apply to this industry, and has concluded that the rule can be repealed without a relaxation of emissions controls or an adverse effect on air quality

Revisions to the New Mexico State Implementation Plan Regarding Startup, Shutdown and Malfunctions

A public hearing, held September 9, 2016, approved revisions to the State Implementation Plan (SIP) for New Mexico. The SIP revisions are in response to a final action issued by the U.S. Environmental Protection Agency (EPA). On June 12, 2015, the EPA published its final action to ensure states have plans in place that are fully consistent with the Clean Air Act and recent court decisions concerning startup, shutdown and malfunction (SSM) operations.

In response to this final action, the New Mexico Environment Department Air Quality Bureau proposed revisions to the State Implementation Plan (SIP). These SIP revisions entail removing applicable sections of 20.2.7 NMAC – Excess Emissions during Malfunction, Startup, Shutdown, or Scheduled Maintenance from the SIP. The proposal was unanimously approved by the Environmental Improvement Board on September 9, 2016.

Part 7 Proposed Revisions – Excess Emissions

[return to top of page]

SO_2 Data Requirements Rule (SO_2 DRR) – Implementation of the 2010 1-hour Sulfur Dioxide Primary National Ambient Air Quality Standard

The U.S. EPA requires each State to supply information regarding sources that emit greater than 2,000 tons per year of sulfur dioxide in order to determine compliance with the 2010 1-hour primary standard. The schedule of required information includes:

January 15, 2016 – List of Sources – Sulfur dioxide states include for applicability to the Data Requirements Rule
July 1, 2016 – Approach – Air Quality Characterization – Sulfur dioxide (modeling or monitoring) for determining whether the source does or does not violate the standard
December 2016 – Revised Protocol
January 1, 2017 – Installation of monitors (if monitoring is the approach chosen)
January 13, 2017 – Final Modeling (actual emissions)
August 2017 – EPA SO_2 Disagreements Document
December 20, 2017 – EPA Attainment Designation for New Mexico (Round 3)
The Round 4 2010 SO_2 NAAQS Designations action was signed by the EPA Administrator, Andrew Wheeler, on December 21, 2020, pursuant to a court-ordered deadline of December 31, 2020. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, Acting Administrator Jane Nishida re-signed the same action on March 10, 2021 for publication in the *Federal Register*. Attainment/nonattainment designations for New Mexico were completed in December 2017. For more information on the 2010 SO_2 NAAQS and the Round 3 area designations, visit EPA's Round 3 2010 SO_2 NAAQS Designations webpage.

In accordance with the ongoing requirements in the federal rule, NMED must submit annual reports of the San Juan Generating Station's SO_2 emissions by July 1st of each year following designation. The purpose of this report is to analyze whether or not new modeling is required for areas that employed modeling of actual emissions for characterization. The fourth annual report for San Juan Generating Station (SJGS) is now available for review and public comment before submission to EPA. The report shows that SO_2 emissions continue to decrease from the modeling years of 2013-2015. 2018 emissions decreased significantly because two units were shut down in December 2017. The 2020 one-hour average and the one-hour maximum SO2 emissions showed decreases over the 2019 emissions. The three-year average for 2018-2020 showed decreased emissions when compared to the modeled three-year average for 2013-2015. Also, the annual maxima for 2018-2020 as well as the 99th percentile of 1-hour maxima for 2018-2020 significantly decreased from the modeled years of 2013-2015. Therefore, NMED recommends that new modeling should not be required at this time.

Draft 2022 Annual Report, SO2 Emissions for San Juan Generating Station – 5/6/2022
Draft 2021 Annual Report SO_2 DRR Report – SO_2 Emissions for SJGS – 5/11/2021
Public Involvement Plan for SJGS SO_2 Report – 5/15/2020

Total Suspended Particulate NM Ambient Air Quality Standard Repeal

The Improving Environmental Permitting Initial Report recommended that the Air Quality Bureau consider the NM Ambient Air Quality Standards (NMAAQS) for Total Suspended Particulate (TSP) for repeal.

The NM standards were adopted in 1969, prior to the adoption of the National Ambient Air Quality Standards (NAAQS) in 1971. The U.S. Environmental Protection Agency (EPA) revised its standards in 1987, replacing TSP with particulate matter less than 10 microns (PM_{10}). The NM TSP standards were retained, to protect the public from soiling and nuisance effects of larger particulates (dust).

The Air Quality Bureau studied the issue and determined that a repeal of the TSP standards will not cause a deterioration in air quality; the current federal air quality standards for PM_{10} and $PM_{2.5}$ are protective of public health. A repeal also eased the permitting burden for regulated sources and the Air Quality Bureau. A hearing was scheduled for September 28, 2018 in Las Cruces.

Public Notice of Rulemaking Hearing: Repeal of TSP Standard (English and Spanish)
In part to address soiling and nuisance effects of windblown dust, the Air Quality Bureau developed a dust mitigation plan and associated fugitive dust rule that applies in areas that are in danger of violating the PM_{10} NAAQS. (See *"Dust Mitigation Plan and Fugitive Dust Rule"* above.)

On September 28, 2018, the Environmental Improvement Board (EIB) held a public hearing in Las Cruces, NM to consider the proposed repeal of the NM Ambient Air Quality Standard for TSP contained in Section 109 of 20.2.3 NMAC. The EIB unanimously approved the proposal at its October 26, 2018 meeting in Santa Fe. The effective date of the repealed standard was November 30, 2018.

The "Notice if Intent for 18-04 (R)" includes written testimony, proposed rule amendments, a noninterference demonstration under CAA 110(l), and copies of public notices and affidavits of publication.

Funding for Air Regulatory Activities

- According to federal and state statute and regulations, all air quality program activities are funded through fee revenue from air permittees.
  - Federal grants help offset costs on a very limited basis.
  - Penalties go to the State General Fund, not to NMED.
  - Unlike other NMED programs, the General Fund contributes a de minimis amount to air program activities.
- The New Mexico Department of Finance Administration helps oversee NMED's two air program accounts (Special Revenue Funds).
- The EIB's only role is to set a fee schedule to assure sufficient funds are available for NMED to cover direct and indirect costs of implementing its air regulatory programs.

High Level Budget Process and Oversight

- Every year NMED requests a budget over a year in advance
- Executive and Legislative Branches recommend separate budgets in advance of each Legislative Session.
- Negotiation between those branches to develop House Bill 2, which funds NMED (and other agencies).
- NMED works with gov't partners to develop operating budget into different agency financial categories.
- NMED spends operating budget to fulfill mission within all guidelines.
- At times, NMED will request additional budget authority.

Fees Need to Cover Costs

- Federal and state law require the Environmental Improvement Board (EIB) to establish a schedule of construction permit fees sufficient to cover the reasonable costs of (1) NMED's Construction Permit Program; and (2) the reasonable costs of NMED's Title V Permit Program.
- Current construction permit and emissions fees do not cover the costs of these programs, thus stunting the work of NMED's air regulatory activities.
- Program costs include "direct" and "indirect" costs:
  - Some direct costs are labor, equipment, travel, services (including contracted), materials, and some hearing costs.
  - Some indirect costs are rent and utilities for buildings; training; and accounting, administrative and financial help.

Direct Cost Examples

- Direct costs include, but are not limited to:
  - Reviewing and acting upon any application for a permit or Notice of Intent.
  - Implementing and enforcing the terms and conditions of issued permits and applicable state and federal regulations.
  - Verifying compliance with representations made in applications for Notices of Intent or permits.
  - Air quality monitoring.
  - Preparing air quality regulations and guidance.
  - Modeling, analysis, and demonstrations.
  - Preparing inventories and tracking emissions.
  - Responding to air quality complaints and public concerns from emitting facilities.

Air Regulatory Program Examples

- Permitting – all types (funded by permit revenues)
- Modeling – funded by permit revenues
- Emissions inventory – funded by permit revenues
- Regulation and SIP planning – funded by permit revenues
- Small business assistance – funded by permit revenues
- Monitoring and data analysis – funded in part by federal grants, which NMED must match (40%)
- Administrative Services – funded by permit revenues
- Indirect costs – funded by permit revenues

Current Financial Picture (Two Air Funds)

- For the current fiscal year (FY26) expected costs exceed projected revenue in both programs.
  - For the construction permit program, expected costs are at least $4 million more than projected revenue.
  - For the Title V permit program, expected costs are at least $3 million more than projected revenue.
- With no fee increase and continuation of FY26 spending levels, the Title V Permit Program fund will be exhausted in FY28*, and the Construction Permit Program fund will be exhausted in FY30.*
  - Current revenues prevent NMED from implementing a program that protects New Mexico's air quality.

*This extreme example is not actually possible under state budgeting rules, so costs would be drastically cut to avoid fund exhaustion, constraining NMED's ability to protect New Mexico's air quality and operate its air programs.

Cutting Costs?

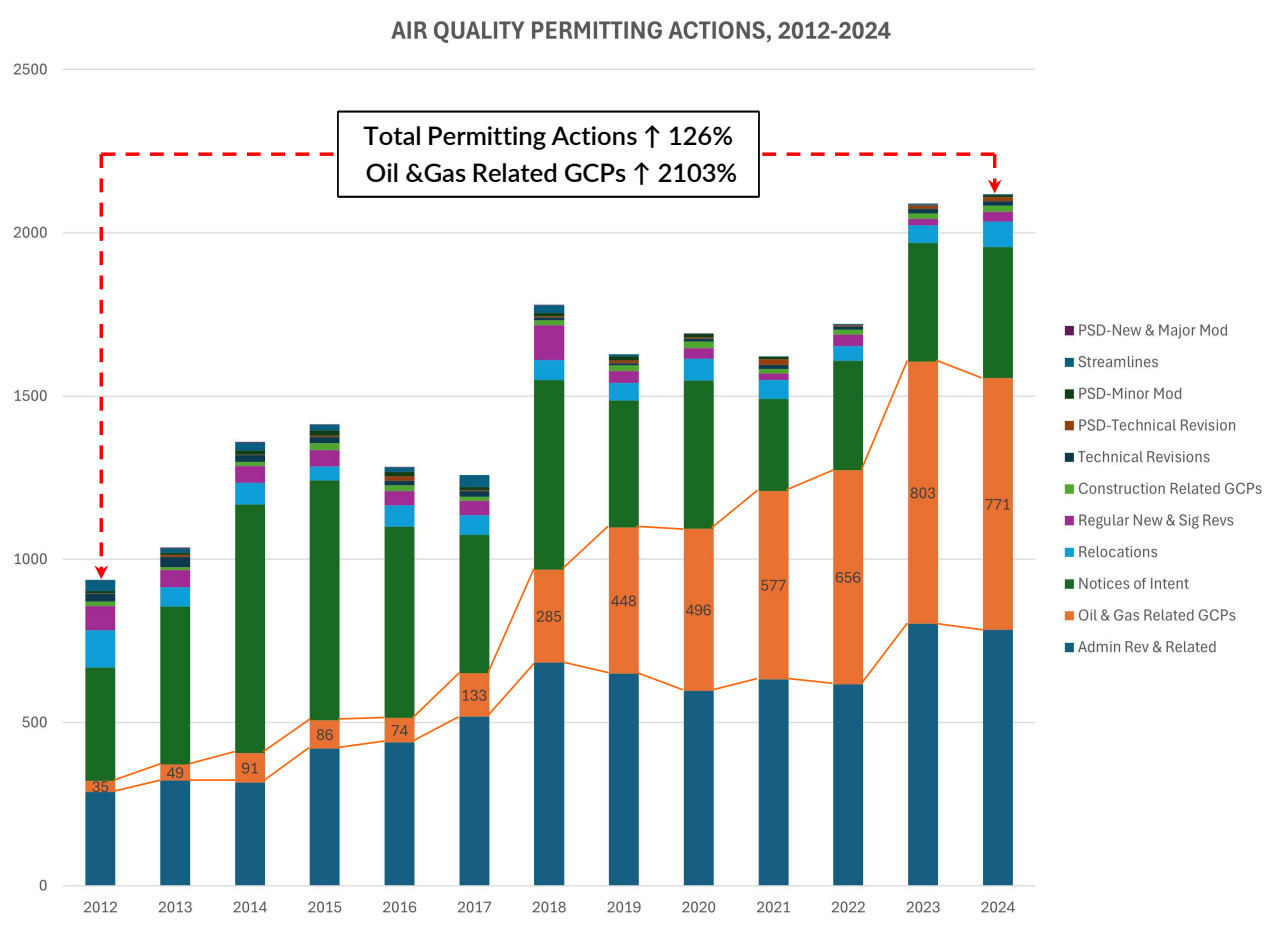
- Should the air regulatory programs need to cut costs, then services would be reduced – to both the regulated entities and the public.
  - Failure to comply with federal funding requirements places state programs at risk.
  - Inability to fill vacancies may lead to reduced staffing.
  - Inability to install additional air monitors leaves vast areas of New Mexico unmonitored.
  - Inability to respond to community concerns places them at risk and degrades the integrity of our mission.
  - Reduced permitting review resources will likely lead to delays.
  - NMED would need to cut services for responding to public complaints filed with NMED on emitting facilities.
  - NMED would need to shortcut collaboration and outreach on environmental planning efforts.

Concerns from the Public

NMED must consider data and input from the public as it implements its air regulatory activities.

Examples of concerns:

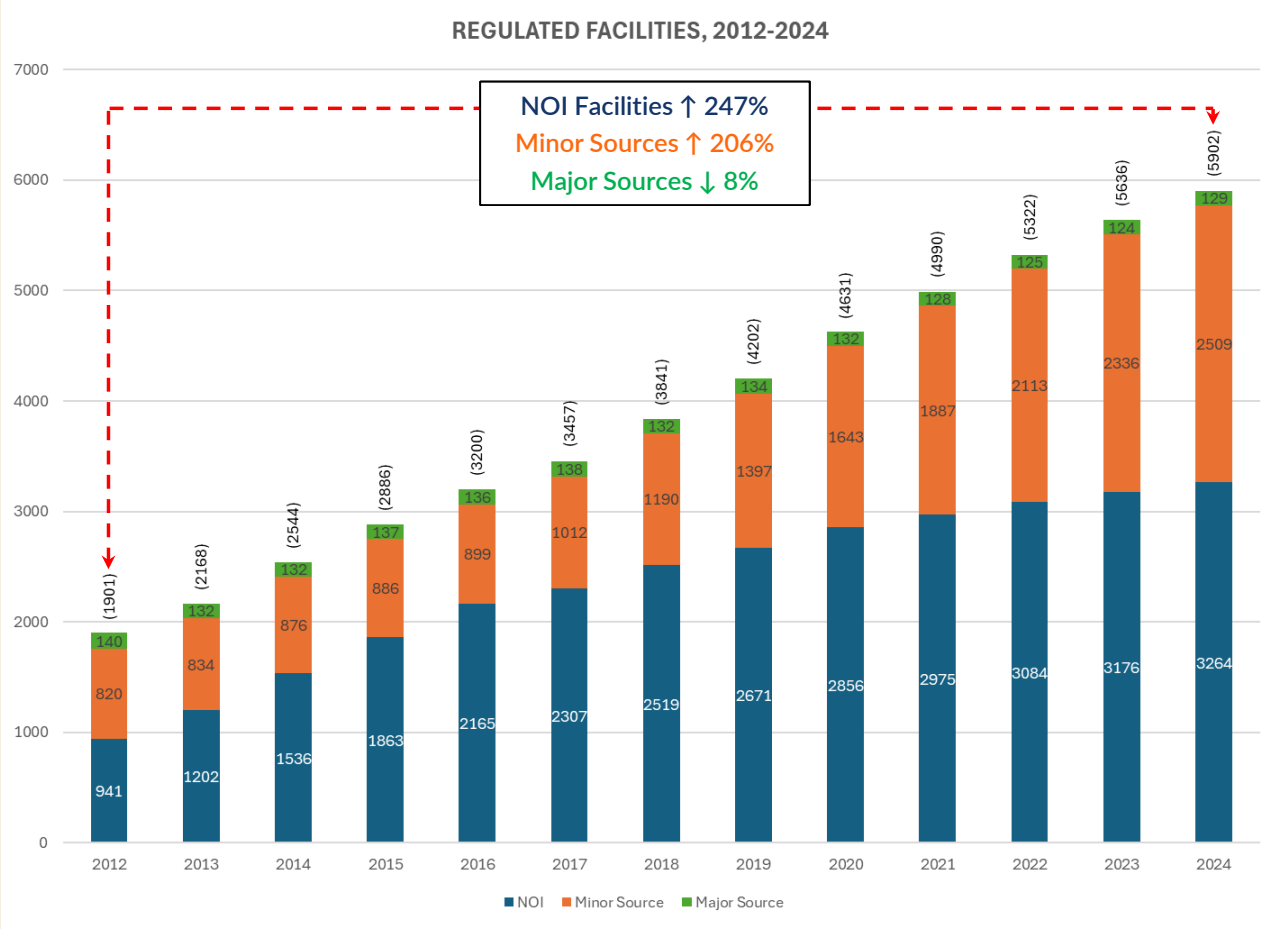
- Concern about ozone levels and air toxics and human exposure.
- Potential impact of data centers.
- Cumulative impacts of stationary sources.
- Concern about greenhouse gas emissions.
- Lack of ability to ensure compliance with regulations.
- Lack of air monitors and community appropriate response to community concerns.



Concerns from Regulated Entities

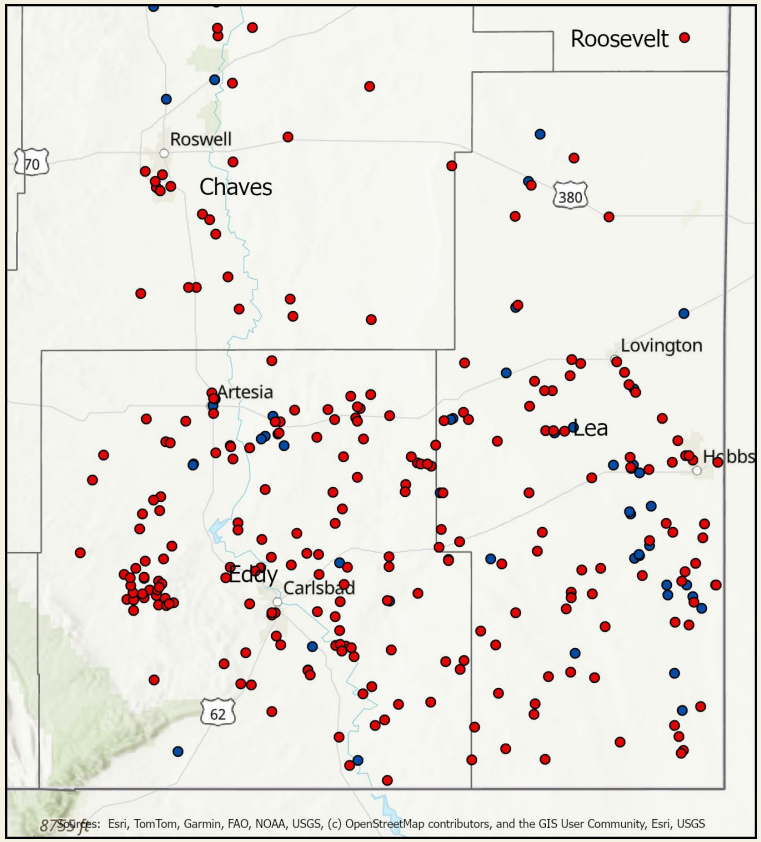
NMED must also consider data and input from regulated entities as it implements its air regulatory activities.

Examples of concerns:



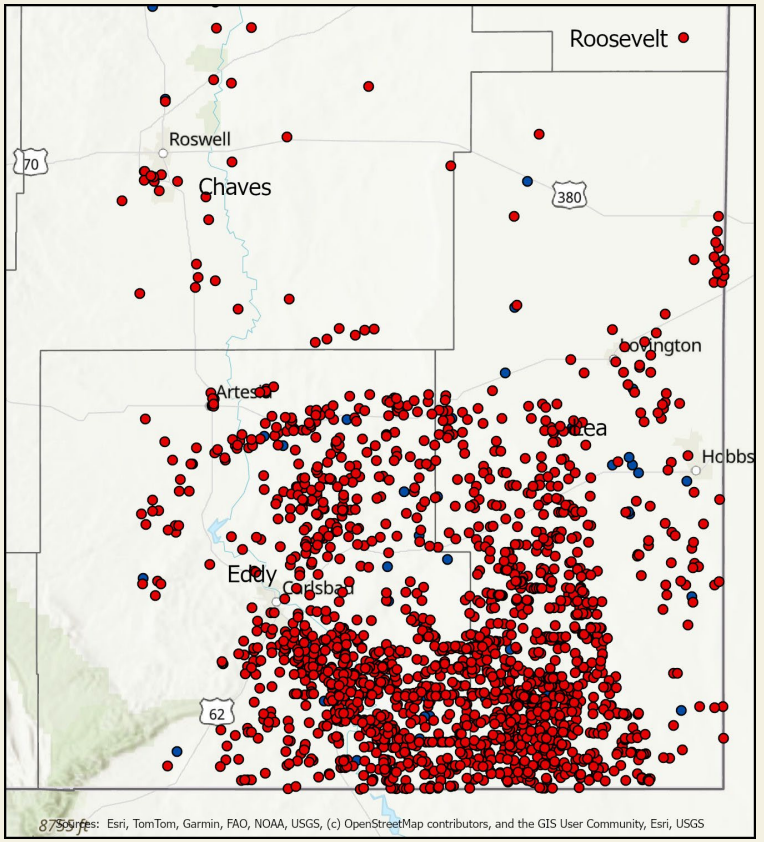
- Permitting process takes too long.
- Permitting responses and questions are inconsistent across staff.
- Permit submission requirements are some of the most complicated in the industry.
- Approval of plans for the Ozone Precursor Rule (Part 50) takes too long.
- More outreach from agency to industry is needed from agency on Part 50 requirements and future regulatory planning.
- Enforcement actions are delayed beyond reasonable time frames.
- Several regulations need to be revised/updated.
- All communications should be electronic instead of paper.

Why? Permitting Actions Over Time

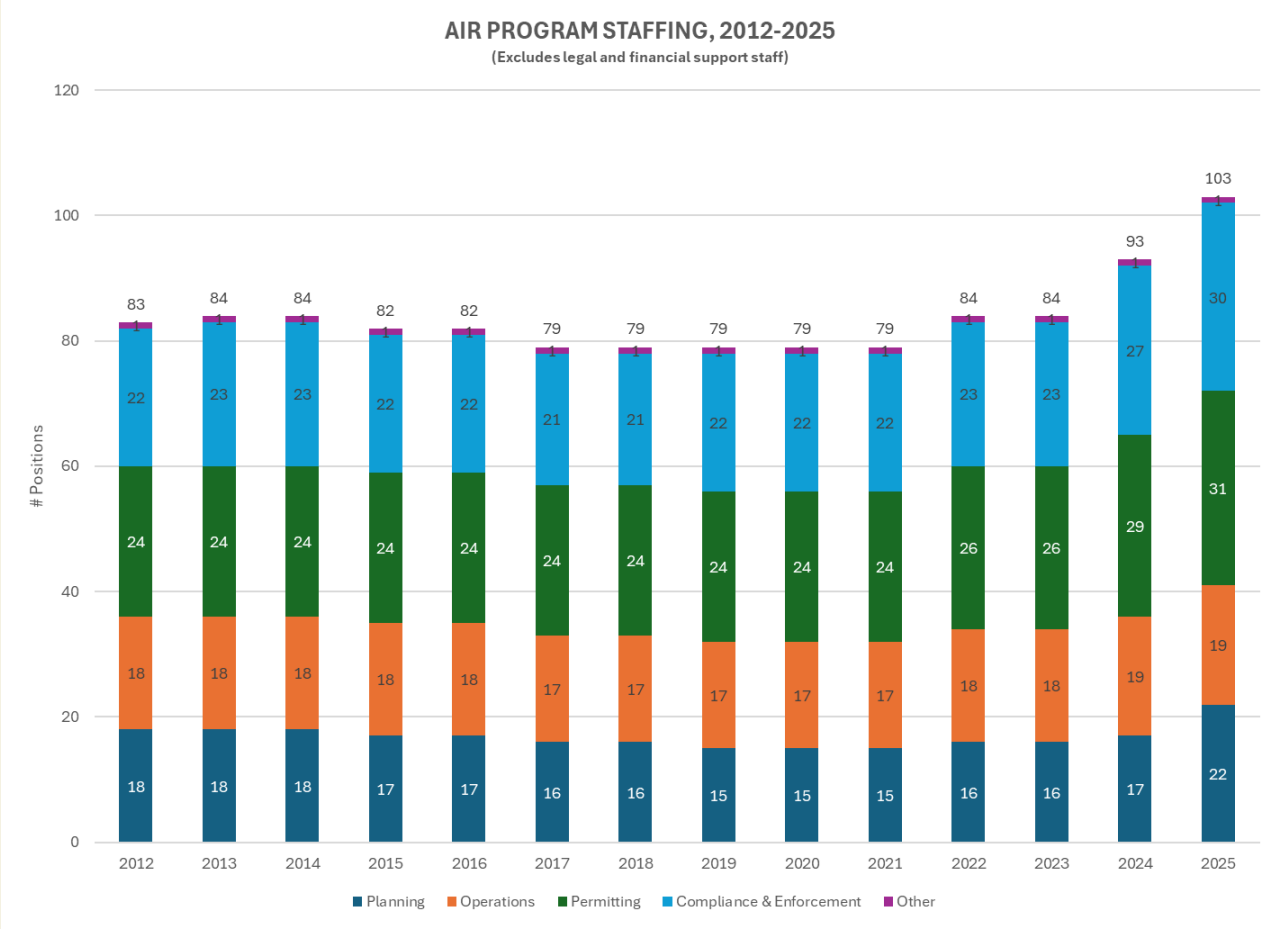


NMED Exhibit 28_000013

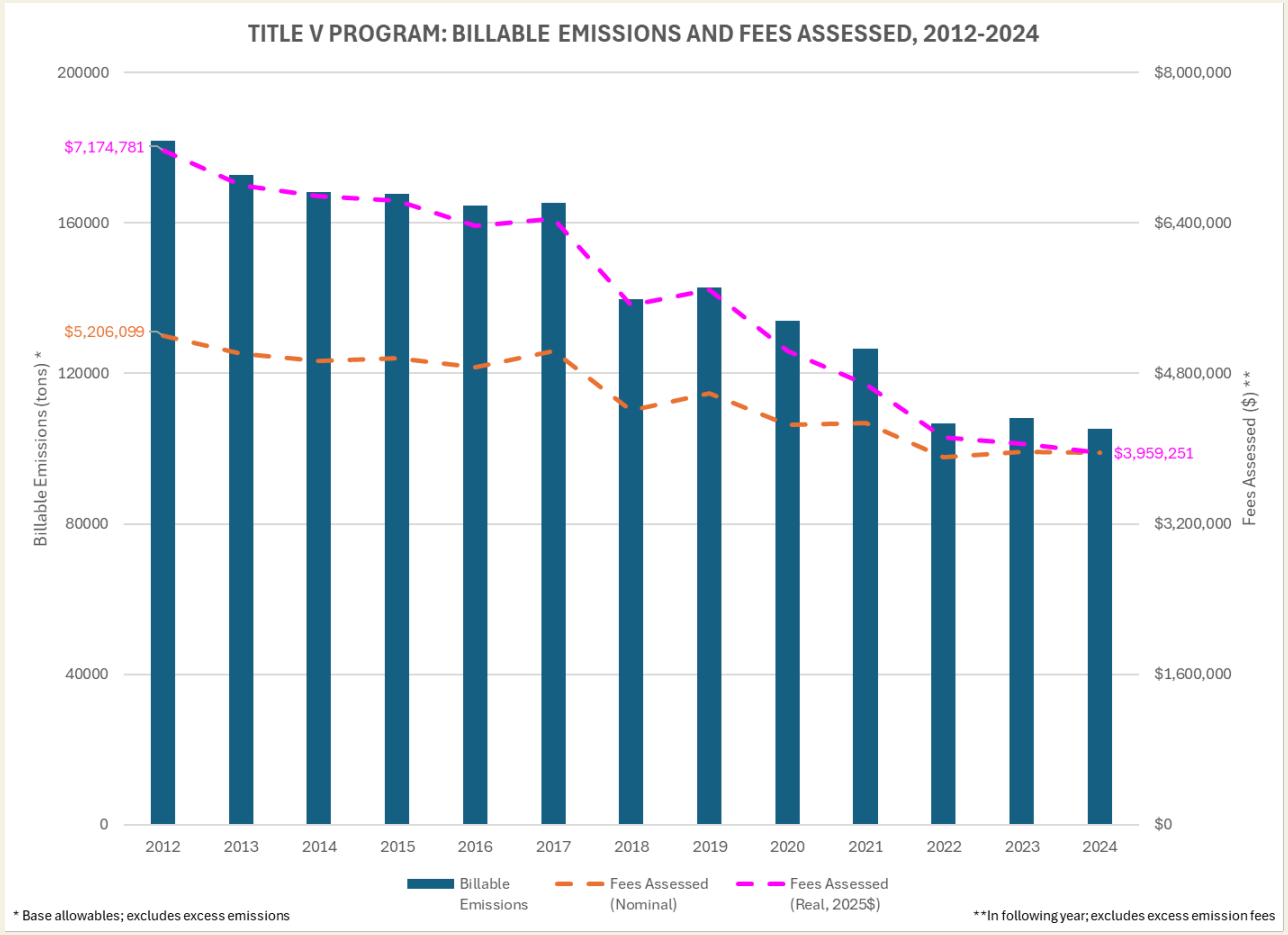
Why? Regulated Facilities Over Time



Why? Permian Growth



2009



2024

Why? Air Program Staffing

Why? Decreasing Title V Revenue

NMED Exhibit 28_000017

Why Fee Increases Are Needed

- Additional staff and resources are needed to keep pace with the higher workload, resulting primarily from increased oil and gas production, but also from complexity of facilities and an increase in application deficiencies.
- In addition to increased permitting needs, more regulated facilities means more non-permitting costs, such as compliance, planning, monitoring, and administration.
- More financial resources to offer competitive salaries, which will increase staff recruitment and retention.
- Air program costs have increased in FY26 due to the use of outside contractors to address increasing program needs for which the program does not have staff.
- Recent changes in federal and state air regulations have increased the complexity of both permitting and compliance.

Why Fee Increases Are Needed Cont.

- Current deregulatory push at the federal level increases the resources needed for state-level planning and action.
- Current construction permit points schedule and fees do not accurately reflect costs associated with modeling reviews, nor application reviews for NOIs and GCP-O&G registrations.
- Ongoing costs (compliance, planning, etc.) associated with NOIs have increased, with no associated ongoing revenue.
- Within the Title V program, revenue has decreased.
- Continue the momentum of fulfilling NMED's mission: Within the last 18 months, NMED has created and filled around 35 new air program positions; started work on needed database updates; initiated complex ozone modeling; initiated the purchase of a new mobile monitoring trailer (partially outside-funded); and evaluated new compliance monitoring technologies for industry usage.

Collateral Benefits for Industry

- Increased permitting program capacity, which:
  - Supports continued growth of New Mexico's economy.
  - Decreases the time required to process permit applications.
  - Allows NMED to provide enhanced technical assistance to permit applicants because permit writers will be able to devote more time to each application.
  - Allows NMED to provide added assistance to small businesses through its Small Business Environmental Assistance Program.
- Increased monitoring capability – may help reduce any nonattainment area should a designation occur.
- Increased compliance & enforcement assistance for Part 50 alternative plans, audits and inquiries.
- Additional capacity for robust outreach in planning efforts.

Collateral Benefits for the Public

- Increased resources allow more monitoring and planning for criteria pollutants and air toxics and an increase in community response.
- Increased compliance and enforcement program capacity, which:
  - Allows for more frequent audits and inspections, as well as quicker and more comprehensive complaint response
  - Reduces overall emissions through increased oversight of compliance
- Greater incentive for facilities to voluntarily reduce allowable emissions to minimize their fees.
- Support for growth of lower-emitting industries.

NMED Exhibit 28_000021

Revisions to 20.2.71 NMAC

- Definition of Fee Pollutants
  - Removed total suspended particulate matter (TSP) and mercury; added PM_{10} and $PM_{2.5}$
  - Mercury being removed (fees also) because there are no longer major sources with mercury emissions in New Mexico.
  - In the past, Title V permits contained allowable TSP emissions and operators were billed for TSP. This changed in 2017 and Title V permits no longer contain TSP, but have allowable emissions for PM10 and PM2.5.
    - Due to this change and oversight, no emission fees have been collected for any particulate matter since 2018.
    - Between 2020-2024, not billing for particulate matter resulted in average annual forgone revenue of ~$350,000.
    - Applied to 2019-2025 (7 years), this adds up to $2.45 million in lost revenue.

NMED Exhibit 28_000022

Revisions to 20.2.71 NMAC Cont.

- Emissions Fees
  - Fee for non-HAPs increase from current inflation-adjusted amount of $40.59 per ton to $85 per ton
  - Fee for HAPs reset to current inflation-adjusted amount of $258 per ton
  - Cap for fee calculation decreased from 6,000 tons per year per pollutant to 3,000 tons per year per pollutant
  - Fees will be assessed for PM10 or PM2.5, not both
- Fee Payment
  - Electronic payment option added
  - Provisions added regarding late fees and administrative compliance costs

Revisions to 20.2.75 NMAC

- Filing Fees
  - Filing fee eliminated for Notices of Intent; NOIs will now be charged an application review fee instead
- Application Review Fees (formerly permit fees)
  - Cost per point increased from $539 to $585
  - Points increased for modeling reviews (15 to 30) and GCP-Oil & Gas registrations (10 to 30)
  - Points added for Notices of Intent (10)
  - Provision added to clarify when NMED may assess additional fees

NMED Exhibit 28_000024

Revisions to 20.2.75 NMAC Cont.

- Annual Fees
  - Annual fee for construction permits increased from $2,564 to $2,800
  - Annual fee of $700 added for Notices of Intent
- Fee Payment
  - Provisions regarding invoicing and payment of application review fees updated to reflect differences based on application type
  - Electronic invoicing and payment options added
  - Provisions added regarding late fees and administrative compliance costs

NMED Exhibit 28_000025

Current vs. Proposed Fees

Type of Facility	Type of Fee	Current Fee[1]	Proposed Fee
All	Cost Per Point	$539	$585
Regular NSR	Modeling Review	$8,085	$17,550
GCP-Oil & Gas	Application Review Fee	$5,390	$17,550
All Other GCPs	Application Review Fee	$5,390	$5,850
NOI	Application Review Fee	None ($500 Filing Fee)	$5,850
Regular NSR	Annual Fee	$2,564	$2,800
NOI	Annual Fee	None	$700
Title V	Emissions Fee (non-HAPs)	$40.59/ton	$85/ton
Title V	Emissions Fee (HAPs)	$258/ton	$258/ton

[1] After January 1, 2026, CPI adjustment. Fees have not been amended by EIB since 2009 for Title V and 2003 for Construction Permit Program.

NMED Exhibit 28_000026

Timeline

- 12/3/2025 – NMED submitted rulemaking petition to the Environmental Improvement Board (EIB)
- 12/4/2025 – Public comment portal open (comments to agency): https://nmed.commentinput.com/?id=dM4UeKV73
- 12/19/2025 – EIB scheduled a hearing starting 03/23/2026
- By 12/30/2025 – Public comment portal open (comments directly to EIB): https://nmed.commentinput.com/?id=t8BRr4m76
- 1/13/2026 – Hearing notice published in the New Mexico Register (https://www.srca.nm.gov/nmac-home/new-mexico-register/volume-xxxvii-issue-1/notices-of-rulemaking-issue-1/)
- 1/15/2026 – NMED virtual public informational meeting
- 1/22/2026 – NMED virtual "office hours" 6-8 p.m.
- 2/20/2026 – Deadline to file a Notice of Intent to provide technical testimony or Entry of Appearance
- 3/23/2026 – Start of hearing before the EIB

Questions and Discussion

- Questions or comments from the meeting attendees?
- Are there concerns or issues you've identified and would like to bring up at this point?
- NMED welcomes the opportunity to discuss specific concerns with groups, organizations or individuals. To ask questions or request a meeting, contact:
  - Eric Peters, AQB Control Strategies Manager, eric.peters@env.nm.gov
  - Brian Polgar, AQB Planning Section Chief, brian.polgar@env.nm.gov
  - https://www.env.nm.gov/request-a-meeting/

NMED Exhibit 28_000028

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public

to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE EMISIONES DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Permiso de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Petición del NMED en la que solicita a la EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación, y 20.2.75 NMAC, Cuotas de Permiso de Construcción. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en https://www.env.nm.gov/opf/docketed-matters/. Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de conformidad con la Ley de Mejora Ambiental, Sección 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones de la Sección 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operación. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro ("PM10") y materia particulada de 2.5

micrómetros o menos de diámetro (“PM2.5”) y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos (“EPA” por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, Permisos de Construcción, y 20.2.73 NMAC, Requisitos de Aviso de Intención e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentación – Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Sección 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. “Testimonio técnico” se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. “Público en general” incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS: El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en https://nmed.commentinput.com/?id=t8BRr4m76, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, en su forma enmendada; la Sección 504 de la Ley de Rehabilitación de 1973; la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas a la Educación de 1972 y la Sección 13 de las Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

Subject: Public Comments, EIB 25-77 (R)

Pam,

With the NOI filing deadline for EIB 25-77 (R) fast approaching, I just wanted to check and see if you have received any public comments to date via the online comment portal, email, or snail mail.

Thanks,
Ken

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC Operating Permit Emissions Fees and 20.2.75 NMAC Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC Operating Permit Emissions Fees and 20.2.75 NMAC Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MEXICO AVISO DE AUDIENCIA DE REGLAMENTACION PARA CONSIDERAR LA PROPUESTA DE DEROGACION Y SUSTITUCION DE 20.2.71 NMAC CUOTAS DE EMISIONES DE PERMISO DE OPERACION Y 20.2.75 NMAC CUOTAS DE PERMISO DE CONSTRUCCION, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo Mexico ("EIB" por sus siglas en ingles) llevara a cabo una audiencia publica que comenzara el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) En el asunto de la Propuesta de Derogacion y Sustitucion de 20.2.71 NMAC Cuotas de Emisiones de Permiso de Operacion y 20.2.75 NMAC Cuotas de Permiso de Construccion. La audiencia durara el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios publicos, y se espera que dure aproximadamente tres dias. La EIB puede deliberar y podra tomar una decision sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunion despues de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevara a cabo en un formato hibrido para permitir la participacion tanto en persona como virtual. El componente presencial se llevara a cabo en la capital del estado de Nuevo Mexico, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo Mexico 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y como participar de forma virtual, estaran disponibles en el Departamento de Medio Ambiente de Nuevo Mexico ("NMED" por sus siglas en ingles) calendario de

GOV'T LEGALS

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC Operating Permit Emissions Fees and 20.2.75 NMAC Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC Operating Permit Emissions Fees and 20.2.75 NMAC Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MEXICO AVISO DE AUDIENCIA DE REGLAMENTACION PARA CONSIDERAR LA PROPUESTA DE DEROGACION Y SUSTITUCION DE 20.2.71 NMAC CUOTAS DE EMISIONES DE PERMISO DE OPERACION Y 20.2.75 NMAC CUOTAS DE PERMISO DE CONSTRUCCION, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo Mexico ("EIB" por sus siglas en ingles) llevara a cabo una audiencia publica que comenzara el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) En el asunto de la Propuesta de Derogacion y Sustitucion de 20.2.71 NMAC Cuotas de Emisiones de Permiso de Operacion y 20.2.75 NMAC Cuotas de Permiso de Construccion. La audiencia durara el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios publicos, y se espera que dure aproximadamente tres dias. La EIB puede deliberar y podra tomar una decision sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunion despues de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevara a cabo en un formato hibrido para permitir la participacion tanto en persona como virtual. El componente presencial se llevara a cabo en la capital del estado de Nuevo Mexico, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo Mexico 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y como participar de forma virtual, estaran disponibles en el Departamento de Medio Ambiente de Nuevo Mexico ("NMED" por sus siglas en ingles) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para mas informacion, comuniquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El proposito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Peticion del NMED en la que solicita a la EIB la derogacion y sustitucion 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operacion, y 20.2.75 NMAC, Cuotas de Permiso de Construccion. La peticion, declaracion de motivos (adjunto a la peticion como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la peticion como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la peticion como Anexos D y E) estan disponibles en el sito web de asuntos archivados de NMED en https://www.env.nm.gov/opf/docketed-matters/. Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, despues haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogacion y Sustitucion de 20.2.71 NMAC Cuotas de Emisiones de Operacion y 20.2.75 NMAC Cuotas de Permiso de Construccion" para mostrar la lista desplegable de todos los documentos presentados en relacion con este asunto. Copias de la peticion, declaracion de motivos, las normas de sustitucion tambien se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El proposito de las reglas de sustitucion 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construccion del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operacion Titulo V y del Programa de Permisos de Construccion de NMED. La EIB esta autorizada a adoptar las normas propuestas de conformidad con la Ley de Mejora Ambiental, Seccion 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operacion del Titulo V debe ser coherente con las disposiciones de la Seccion 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operacion paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administracion del programa estatal de permisos de operacion conforme al Titulo V. Vease Ley de Control de la Calidad del Aire, NMSA 1978, Seccion 74-2-7 (B)(7). El horario de las cuotas de permiso de construccion debe ser suficientes para cubrir los costos razonables de revision y tramitacion de cualquier solicitud de dicho permiso, asi como la implementacion y el cumplimiento de los terminos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una accion coercitiva. Vease Ley de Control de la Calidad del Aire, NMSA 1978, Seccion 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, segun lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operacion. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dolares por tonelada de emisiones permitidas. La regla de sustitucion 20.2.71 NMAC revisa la definicion actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrometros o menos de diametro ("PM10") y materia particulada de 2.5 micrometros o menos de diametro ("PM2.5") y eliminando mercurio y particulas totales en suspension; reduce las toneladas maximas utilizadas en el calculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrara una cuota por PM10 o PM2.5, no ambas, dependiendo de cual tenga la mayor tasa de emision permitida; aumenta el monto en dolares por tonelada utilizado en el calculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardio por no pagar oportunamente las cuotas anuales de emision; y confirma los costos administrativos de cumplimiento para la aplicacion de las regulaciones de calidad del aire de Nuevo Mexico. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentara a la Agencia de Proteccion Ambiental de los Estados Unidos ("EPA" por sus siglas en ingles) como una revision del Programa de Permisos de Operacion Titulo V de Nuevo Mexico.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construccion para avisos de intencion, permisos para construir o modificar una fuente, revisiones de permisos de construccion y revisiones tecnicas de permisos de construccion existentes bajo 20.2.72 NMAC, Permisos de Construccion, y 20.2.73 NMAC, Requisitos de Aviso de Intencion e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una accion de permiso determinada para determinar la cuota de permiso requerida. El horario tambien incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construccion. La regla propuesta de sustitucion 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intencion; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construccion e instituye una cuota anual para fuentes que han presentado un aviso de intencion; establece una multa por pago tardio de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicacion de las regulaciones de calidad del aire de Nuevo Mexico. Si se adopta, la regla de sustitucion 20.2.75 NMAC sera enviada a la EPA como una revision del Plan de Implementacion Estatal de Nuevo Mexico.

La audiencia se llevara a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentacion Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Seccion 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Seccion 74-2-6; las ordenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACION PUBLICA: Las audiencias y reuniones de la EIB estan abiertas al publico y se anima al publico en general a participar. Todas las personas interesadas tendran una oportunidad razonable de participar presentando un aviso de intencion de presentar testimonio tecnico, presentando un registro de comparecencia o participando como miembros del publico. "Testimonio tecnico" se refiere a testimonios cientificos, de ingenieria, economicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de politica o posicion sobre los asuntos tratados en la audiencia. "Publico en general" incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de intencion de presentar testimonio tecnico.

Cualquier miembro del publico podra testificar en la audiencia. Toda persona que preste testimonio en la audiencia estara sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendra derecho a realizar el contrainterrogatorio que sea necesario para una divulgacion completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomaran bajo juramento o afirmacion, que podra realizarse en masa o de forma individual.

TESTIMONIO TECNICO: Cualquier persona que desee presentar testimonio tecnico en la audiencia debe presentar un aviso de intencion por escrito al Administrador del EIB a mas tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentacion (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y debera ser parte. El aviso de intencion debera: (1) identificar a la persona para la cual testificaran los testigos; (2) identificar a cada testigo tecnico que la persona tenga la intencion de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripcion de su formacion educativa y experiencia laboral; (3) si la audiencia se llevara a cabo en multiples lugares, indicar el o los lugares donde estaran presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo tecnico en forma narrativa; (5) incluir el texto de cualquier modificacion recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se preve que dicha persona presente en la audiencia, incluida cualquier declaracion propuesta de motivos para la adopcion de las normas. Cualquier persona que presente un aviso de intencion debera entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia debera presentarse ante la administradora de la EIB a mas tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programacion de Audiencias, del Funcionario de Audiencias Designado y la Fijacion de Determinadas Fechas de Presentacion (emitida el 23 de Diciembre de 2025).

COMENTARIOS PUBLICOS: El público en general podra testificar mediante comentarios publicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaracion por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberan presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios publicos por escrito antes de la audiencia pueden hacerlo en linea en https://nmed.commentinput.com/?id=t8BRr4m76, envie por correo electronico el comentario publico por escrito a pamela.jones@env.nm.gov, o envie un comunicado publico por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo Mexico Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Ademas, cada dia de la audiencia se proporcionara oportunidad para que el publico general preste testimonio oral. No se requiere aviso previo del publico general para presentar testimonio no tecnico en la audiencia. El publico en general tambien puede presentar exhibiciones no tecnicas en relacion con su comentario publico por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinara el proceso y los horarios para que el publico general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretacion de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, interprete calificado de lenguaje de senas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 dias antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este numero a traves de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACION: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administracion de sus programas o actividades, segun lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminacion implementados por 40 CFR Partes 5 y 7, incluido el Titulo VI de la Ley de Derechos Civiles de 1964, en su forma enmendada; la Seccion 504 de la Ley de Rehabilitacion de 1973; la Ley de Discriminacion por Edad de 1975, el Titulo IX de las Enmiendas a la Educacion de 1972 y la Seccion 13 de las Enmiendas a la Ley Federal de Control de la Contaminacion del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminacion de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminacion, Departamento de Medio Ambiente de Nuevo Mexico, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminacion identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender como y donde presentar una queja por discriminacion.

The Board of County Commissioners will convene the in-person public hearing in the Ken Sanchez Commission Chambers, 415 Silver Ave. SW, First Floor, Albuquerque, NM 87102. This meeting will also provide a hybrid option for public comment and participation via Zoom. Details on how to participate via Zoom will be posted on the final meeting agenda. To view the meeting only without participation, please visit https://www.youtube.com/user/BernalilloCounty or www.bernco.gov/live for the live broadcast.

For any questions regarding this hearing, including participating in the hearing via Zoom, please contact Elvira Lopez, Planning and Development Services Department, at least one day prior to the hearing at (505) 314-00384 or ellopez@bernco.gov.

Es necesario traer un interprete si no habla ingles. Para mas informacion puede llamar a Nancy Soto-Campos al (505) 222-3927 o nscampos@bernco.gov.

Individuals with disabilities who need special assistance to benefit from this hearing should contact the County Manager's Office at (505) 468-7000 or TDD (505) 468-7088 at least one week prior to the meeting or as soon as possible.

Journal: January 11, 2026.

**ADVERTISEMENT
SANTA FE COUNTY
Arbitrage Services
RFP No. 2026-0158-FIN/JL**

Santa Fe County seeks an Arbitrage Rebate Provider to perform annual arbitrage calculations, prepare required IRS filings, and deliver compliance reports for each bond issue. The provider must also advise on regulatory changes and assist with any IRS inquiries. All proposals submitted shall be valid for ninety (90) days subject to action by the County. Santa Fe County reserves the right to reject any and all proposals in part or in whole. **All proposals must be received by 2:00 PM on Wednesday, February 18, 2026, and shall be submitted electronically utilizing Dropbox. No hard copy submissions will be accepted**. Please utilize this link to upload your proposal submission. https://www.dropbox.com/request/4NMWcm2kMkb8XztDJRu3.
By submitting a proposal for the requested services described above, each Offeror is certifying that it is a qualified company to do business in the State of New Mexico and agrees to the requirements stated within the Request for Proposals.
A **Pre-Proposal Conference** will be held on **Thursday, January 22, 2026 at 10:00AM (MST)**, via Microsoft Teams; please use the Teams link provided below, meeting number 295 752 229 980 85, passcode E5sa24xa, or join by phone at (773) 352-2011, conference ID 406 049 976#.
Attendance is not mandatory but highly recommended. https://www.microsoft.com/en-us/microsoft-teams/join-a-meeting

EQUAL EMPLOYMENT OPPORTUNITY: All qualified Offerors will receive consideration of contract(s) without regard to race, color, religion, sex or national origin, ancestry, age, physical and mental handicap, serious medical condition, disability, spousal affiliation, sexual orientation or gender identity.
Request for Proposals will be available by contacting Jack Love, Procurement Specialist Senior, 102 Grant Avenue, (First Floor) Santa Fe, New Mexico 87501, or by telephone at (505) 986-6209, or by email at jalove@santafecountynm.gov or on our website at https://www.santafecountynm.gov/finance/purchasing-division/current-bid-solicitations.
PROPOSALS RECEIVED AFTER THE DATE AND TIME SPECIFIED ABOVE WILL NOT BE CONSIDERED AND WILL BE REJECTED BY SANTA FE COUNTY.

Journal: January 11, 2026.

AEPA #026.5 - LEGAL NOTICE

Notice to Vendors

Sealed solicitations will be received by the Association of Educational Purchasing Agencies (AEPA) on behalf of its 31 State Member Agencies until:

1:30 p.m. ET, February 12, 2026

Solicitations: 026.5-A Industrial Arts and Career and Tech Supplies and 026.5-B Institutional Kitchen Equipment.

All responses shall be submitted online via Euna Procurement by the due date and time listed above. Vendors are requested to visit AEPA's website at https://aepacoop.org/registration-solicitations/ for instructions on how to register at no cost with Euna Procurement. AEPA documents will be released on January 7, 2026. Note that Vendors must be able to provide their proposed products and services in up to 31 states.

Solicitations will be publicly opened at **2:00 p.m. ET, February 12, 2026** at EducationPlus, 1460 Craig Road, St. Louis, MO 63146. An opening record will be posted to AEPACOOP.org

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at

https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3)

provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the

particulate matter, reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit

fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the

general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present

person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator

filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at *https://nmed. commentinput. com/?id=t8BRr4m76*, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their

written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as

amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE EMISIONES DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE

CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Permiso de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones

número de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Petición del NMED en la que solicita a la EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación, y 20.2.75 NMAC, Cuotas de Permiso de Construcción. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en *https://www.env.nm.gov/opf/docketed-matters/.* Para acceder a estos documentos, haga clic en "Junta de Mejora

haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de conformidad con la Ley de Mejora Ambiental, Sección 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones

de la Sección 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operación. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de

sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro ("PM10") y materia particulada de 2.5 micrómetros o menos de diámetro ("PM2.5") y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos ("EPA" por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención

para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, Permisos de Construcción, y 20.2.73 NMAC, Requisitos de Aviso de Intención e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta la regla de sustitución

adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentación – Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Sección 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. "Testimonio técnico" se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. "Público en general" incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de

intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la

persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS:

COMENTARIOS PÚBLICOS. El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en *https://nmed.commentinput.com/?id=t8BRr4m76*, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias

funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, en

su forma enmendada; la Sección 504 de la Ley de Rehabilitación de 1973; la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas a la Educación de 1972 y la Sección 13 de las Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

Notice by Hilcorp Energy Company for Downhole Commingling, San Juan County, New Mexico. Pursuant to Paragraph (2) of Subsection C of 19.15.12.11 NMAC, Hilcorp Energy Company, as Operator, has filed form C-107A with the New Mexico Energy, Minerals and Natural Resources Department – Oil Conservation Division (NMOCD) seeking administrative approval to downhole commingle new production from the Basin-Fruitland Coal Pool (71629) and the Aztec Pictured Cliffs Pool (71280) with existing production from the Basin Dakota Pool (71599) in the Martin A 1E well (API No. 30-045-33462) located in Unit M, Section 03, Township 29 North, Range 11 West, NMPM, San Juan County, New Mexico. Commingling will not reduce the value of production. Allocation method to be determined upon completion of this project. This notice is intended for certain unlocatable royalty interest owners in the aforementioned well for which certified mail delivery is not possible. Should you (the interest owner for which this notice is intended) have an objection, you are required to respond within twenty (20) days from the date of this publication. Please mail your objection letter, referencing the well details above, to the New Mexico Oil Conservation Division's Santa Fe office.

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal

Public Legals

and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at *https://nmed.commentinput.com/?id=t8BRr4m76*, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Permiso de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Petición del NMED en la que solicita a la EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación, y 20.2.75 NMAC, Cuotas de Permiso de Construcción. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en *https://www.env.nm.gov/opf/docketed-matters/.* Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en

Public Legals

todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de conformidad con la Ley de Mejora Ambiental, Sección 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones de la Sección 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operación. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro (“PM10”) y materia particulada de 2.5 micrómetros o menos de diámetro (“PM2.5”) y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos (“EPA” por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, Permisos de Construcción, y 20.2.73 NMAC, Requisitos de Aviso de Intención e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentación – Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Sección 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. “Testimonio técnico” se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. “Público en general” incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS: El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en *https://nmed.commentinput.com/?id=t8BRr4m76*, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, en su forma enmendada; la Sección 504 de la Ley de Rehabilitación de 1973; la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas a la Educación de 1972 y la Sección 13 de las Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

INVITATION TO BID
ITB 2026-875
Riverside Park Bank Stabilization
for City of Aztec UBLIC WORKS

The City of Aztec is requesting formal, price-based competitive sealed bids for the Riverside Park Bank Stabilization Sealed bids will be accepted until February 12, 2026, 3:00 pm MST at the City of Aztec City Hall, 201 W Chaco, Aztec New Mexico.

Riverside Park Bank Stabilization will consist of demolition, removal of an existing failed gabion bank stabilization structure and a new bank stabilization system.

The bids that are received from bidders deemed responsible will be reviewed and recommendations for award will be made to the Board of City Commissioners based on the lowest responsive price(s) with the applicable preferences. City of Aztec reserves the right to accept or reject any bid or any part therof; to defer action on the invitation for bids; to reject all bids; to waive technicalities or informalities and to accept the bids which, in its judgement, are most advantageous to the City.

IMPORTANT

DEADLINE TO SUBMIT BIDS: February 12, 2026 AT 3:00 PM MST

Plans, Geotechnical Report and other Contract Documents, including instructions to Bidders and Bid Forms, are available online by accessing the City’s procurement online portal BidNet.

ELECTRONIC BIDS shall be submitted online through the procurement online portal BidNet.
(Offerors need to be registered with the system prior to submitting)
www.bidnetdirect.com/new-mexico/cityofaztec

SEALED BIDS shall be delivered to City of Aztec City Hall 201 W Chaco, Aztec, NM 87410

The words SEALED BID along with the ITB NUMBER, TITLE, AND THE BIDDER’S NAME AND ADDRESS MUST appear clearly on the sealed envelope or package of all bids.

IF THERE IS ANY PROBLEM REGARDING THE FOLLOWING SPECIFICATIONS OR CONDITIONS THAT WOULD PREVENT YOU FROM SUBMITTING A BID, CONTACT THE PROCUREMENT MANAGER IMMEDIATELY FOR CLARIFICATION AND/OR CONSIDERATION OF AN ADDENDUM.

NOTE: WHEN SHIPPING OVERNIGHT DELIVERY, IT IS RECOMMENDED THAT SHIPMENT BE MADE NO LESS THEN 2 DAYS PRIOR TO DEADLINE IF POSSIBLE, TO ENSURE DELIVERY. IT IS ALSO RECOMMENDED TO VERIFY DELIVERY PRIOR TO DEADLINE.

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. Reports: 3B Alex Bregman signing with Cubs for 5 years, $175M

Field Level Media

The Chicago Cubs, who failed in their pursuit of free agent third baseman Alex Bregman a year ago, have agreed with the three-time All-Star on a five-year, $175 million contract, according to multiple media reports on Saturday night.

Bregman played in 2025 for the Boston Red Sox, who signed the former Houston Astros player to a three-year, $120 million deal with two opt-outs. Bregman opted out of his contract after one season, passing on his $40 million player options for the 2026 and 2027 seasons in trying to land a lucrative, long-term contract.

The Cubs, according to reports, offered a club-record $35 million a year, with no opt-outs and a full no-trade clause. Bregman turns 32 on March 30.

The Astros had reportedly offered Bregman a six-year, $156 million deal after the 2024 season to keep him in Houston, which had selected him second overall in the 2015 MLB Draft out of LSU and where he made his major league debut in 2016.

In his lone season with Boston. The Albuquerque native had a .360 on-base percentage and .462 slugging percentage for the season, in which he started strongly before a quad injury sidelined him from May 24 to July 11.

For his career, which includes his first nine seasons with the Astros, Bregman is batting .272 with 209 homers, 293 doubles and 725 RBIs in 1,225 regular-season games.

An All-Star in 2018, 2019 and last season, and the 2024 American League Gold Glove winner at third base, Bregman went to four World Series with the Astros and won in 2017 and 2022.

Cavemen,

Continued from B1

to baseline driving layup to lead Carlsbad to a 38-37 victory.

"We were waiting for somebody to light a fire," said Lincon, who finished the game with 8 points, all in the 4th quarter. "I wanted to win. I gave it my all."

Carlsbad coach Matt Enloe said the squad needed a boost.

"We kind of struggled all year and she gave us a big spark," he said of Licon. "We would grind and grind and grind and we came away with one."

On defense, the Cavegirls pressed most of the game with mixed results. Organ Mountain was held in check - to some degree - but still found some lanes to drive to the basket or kick out for jump shots.

The host Lady Knights held leads in the 4-6 point range throughout most of the outing.

But once his team snared momentum and grabbed the lead in the 4th quarter, Enloe called a timeout and made a drastic change.

When the Cavegirls broke the huddle, they all fell back in a defensive alignment back by their own basket. The press was gone.

"We tried to change the tempo of the game," the Enloe said. "I felt Organ Mountain was pretty comfortable with what we were doing, so we wanted to try and change up a little bit.

"We got a couple of steals out of it," the Carlsbad bench minder added. "The momentum changed; that helped us."

Up 38-34, Organ Mountain's Siena Gonzales drained a 3-pointer at the buzzer. The basket counted, but it was not enough for the hosts as Carlsbad held on for the one-point victory.

"We want to be playing our best basketball when district play starts in a couple of weeks," Enloe said.

Friday night at Las Cruces Centennial the Cavegirls lost to the Lady Hawks 45-27.

Calendar,

Continued from B1

of Game and Fish and Wildlife Forever announce the Art of Conservation New Mexico Fish Art Contest.

The contest is open to youth in grades kindergarten through 12th grade, submissions are being accepted through Jan. 31. More information available at https://wildlife.dgf.nm.gov/.

Ongoing

New Mexico Trout Challenge

The New Mexico Department of Game and Fish invites casters to catch Cutthroat Trout, Rainbow Trout, Brown Trout, Brook Trout and Gila Trout. Earn a bragworthy coin for completing the challenge. Call 888-248-6866.

New Mexico Bass Challenge

The New Mexico Department of Game and Fish invites anglers to participate in the New Mexico Bass Challenge. Catch four species of bass in New Mexico and you could win a special reward and be included in the online records of successful New Mexico Bass Challenge anglers.

More information at 888-248-6866.

Riverwalk Recreation Center

At 400 Riverwalk Drive, offers exercise classes and other family fun and recreational activities.

More information at 575-887-2702.

Wrestling Tryouts

Carlsbad kids interested in learning the finer points of amateur wrestling are encouraged to join the Carlsbad Combat Challenge Wrestling Club.

More information at 575-703-0255.

Carlsbad Roadrunners

At 6 p.m. on odd-numbered Mondays the running group meets at Nurvis Purvis Brewing.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE EMISIONES DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Permiso de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Petición del NMED en la que solicita a la EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación, y 20.2.75 NMAC, Cuotas de Permiso de Construcción. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en https://www.env.nm.gov/opf/docketed-matters/. Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de conformidad con la Ley de Mejora Ambiental, Sección 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones de la Sección 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operación. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro ("PM10") y materia particulada de 2.5 micrómetros o menos de diámetro ("PM2.5") y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos ("EPA" por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, Permisos de Construcción, y 20.2.73 NMAC, Requisitos de Aviso de Intención e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentación – Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Sección 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. "Testimonio técnico" se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. "Público en general" incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS: El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en https://nmed.commentinput.com/?id=t8BRr4m76, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, en su forma enmendada; la Sección 504 de la Ley de Rehabilitación de 1973; la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas a la Educación de 1972 y la Sección 13 de las Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

Cal-State Bakersfield transfer Jemel Jones scored 16 points for NM State in a loss to Middle Tennessee State.

NM State handed first home loss of basketball season

Information and photo provided by NM State Athletics Media

Middle Tennessee State defeated the NM State men's basketball team 59-55 Saturday at the Pan American Center in Las Cruces.

It was the first home defeat for the Aggies (9-6, 2-3 Conference USA). Middle Tennessee upped its overall record to 10-6 and 4-1 in league play.

NM State was led individually by Jemel Jones, who finished with 16 points, and Cyr Malonga, who recorded 10 points. The Aggie bench outscored the Blue Raider reserves 19-12; however, MTSU posted 28 points in the paint to the Aggies 16.

The Blue Raiders got the first basket and then, like in the last contest, the Aggies would find their stride and go on a 13-0 run to gain a cushion early on in the first half. During the scoring burst, the Aggies were fueled by dunks from Jones, Malonga and Mims.

The Aggies would later push their lead to 20-4 with 11:06 left in the half for their largest lead of the half. From there, Middle Tennessee would slowly chip away at the Aggie lead until they would be able to connect on a 3-point basket to knot up the score 29-29 at the half.

Coming out of the half, the Blue Raiders would get off to a hot start with a quick 5-0 run that featured a 3-pointer from Kamari Lands. After starting the period 0-3 from the floor, Malonga brought the crowd to its feet with a two-handed dunk to leave the score at 36-33 with just under 17 minutes remaining.

A 5-0 run from the Blue Raiders later in the half would extend the Aggies' deficit to 13 points with 10:13 left on the clock. Then, a three from Mims and another dunk from Malonga would energize the Aggies and help open an extended 13-6 run that allowed the Aggies to pull back within six points.

Eventually, a 3-pointer from Jayland Randall and a free throw from Kyrese Mullen made it a one-possession game with just 1:42 remaining in the game. While the Aggies would have their opportunities, NM State would be unable to pull any closer, falling by four points on its home floor.

UNM's Hall earns Mountain West basketball honor

Information and photo provided by UNM Athletics Media

Carlsbad, California native Jake Hall is a freshman at the University of New Mexico.

New Mexico's Jake Hall was named the Old Trapper Mountain West Freshman of the Week, the Mountain West Conference announced Monday.

Hall was honored after leading the Lobos to a pair of road wins last week.<\n><\n>Hall's honor is his first of the season and the fourth overall for a Lobo, as Tomislav Buljan has been recognized three times this season. It is just the second time that UNM has had different players win the award in consecutive weeks, matching the feat set in 2023-24 by JT Toppin and Tru Washington. <\n><\n>Hall averaged 21.0 points and 4.5 rebounds per game last week, shooting 13-24 (.542) from the field, including 8-15 (.533) from deep, in the wins at Colorado State and Air Force. In Tuesday's 80-70 win at Colorado State, Hall had a team-high 18 points on 6-10 shooting, including 3-5 from deep. In the 91-49 win at Air Force on Saturday, as the Lobos recorded their largest margin of victory ever in a Mountain West road game, Hall matched career highs with 24 points and seven rebounds, making 5-10 shots from three. It was his fifth 20-point game of the year, setting a new UNM freshman record.

Hall is a 6-foot-4 200-pound first-year student from Carlsbad, California. He was a two-time first team all-state honoree while in high school.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE EMISIONES DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Permiso de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Petición del NMED en la que solicita a la EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación, y 20.2.75 NMAC, Cuotas de Permiso de Construcción. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en https://www.env.nm.gov/opf/docketed-matters/. Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de conformidad con la Ley de Mejora Ambiental, Sección 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones de la Sección 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operación. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro ("PM10") y materia particulada de 2.5 micrómetros o menos de diámetro ("PM2.5") y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos ("EPA" por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, Permisos de Construcción, y 20.2.73 NMAC, Requisitos de Aviso de Intención e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentación – Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Sección 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. "Testimonio técnico" se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. "Público en general" incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS: El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en https://nmed.commentinput.com/?id=t8BRr4m76, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, en su forma enmendada; la Sección 504 de la Ley de Rehabilitación de 1973; la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas a la Educación de 1972 y la Sección 13 de las Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

ENVIRONMENT DEPARTMENT

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits

to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

ENVIRONMENT DEPARTMENT

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE EMISIONES DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Permiso de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Petición del NMED en la que solicita a la EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación, y 20.2.75 NMAC, Cuotas de Permiso de Construcción. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en https://www.env.nm.gov/opf/docketed-matters/. Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de

conformidad con la Ley de Mejora Ambiental, Sección 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones de la Sección 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operación. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro ("PM10") y materia particulada de 2.5 micrómetros o menos de diámetro ("PM2.5") y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos ("EPA" por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, Permisos de Construcción, y 20.2.73 NMAC, Requisitos de Aviso de Intención e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentación – Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Sección 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. "Testimonio técnico" se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. "Público en general" incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS: El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en https://nmed.commentinput.com/?id=t8BRr4m76, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, en su forma enmendada; la Sección 504 de la Ley de Rehabilitación de 1973; la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas a la Educación de 1972 y la Sección 13 de las Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

Subject: SBRAC notice of proposed repeal and replacement of NMAC rules

Good morning Kim,

Please find attached a letter to your attention that provides notice to the Small Business Regulatory Advisory Council (SBRAC) in regard to the **Proposed Repeal and Replacement of 20.2.71 NMAC and 20.2.75 NMAC**, along with copies of the proposed rules . Please let me know if we can provide any further detail.

Could you please also acknowledge receipt? Thank you,

Very Respectfully,

Kelly Villanueva
Assistant General Counsel

c/o Kim Sewell
New Mexico Economic Development Department
1100 S. St. Francis Drive
Santa Fe, NM 87505-4147
kim.sewell@edd.nm.gov

Re: Proposed Repeal and Replacement of 20.2.71 NMAC and 20.2.75 NMAC

Dear Commission Members,

The New Mexico Environment Department ("Department") hereby provides notice to the Small Business Regulatory Advisory Commission pursuant to the Small Business Regulatory Relief Act, NMSA 1978, Sections 14-4A-1 through -6 (2005), that the Department's Air Quality Bureau has petitioned the Environmental Improvement Board ("Board") to repeal and replace 20.2.71 NMAC – Operating Permit Emissions Fees ("Part 71") and 20.2.75 NMAC – Construction Permit Fees ("Part 75").

Parts 71 and 75 establish schedules of emissions and construction permit fees for regulated sources of air pollutants as required by the Air Quality Control Act, NMSA 1978, Sections 74-2-7(B)(6) and (7). The current fee schedules have not been updated in many years and no longer generate sufficient revenue to cover the costs of fully implementing the Department's Title V and Construction Permit Programs, as required by statute. The proposed replacement rules include the higher emissions and construction permit fees necessary to cover the reasonable costs of these mission critical programs. The proposed replacement rules are not expected to have a significant effect on small businesses in New Mexico, in part because emissions fees under Part 71 are only paid by major sources of air pollution, which are typically not small businesses, and in part because small businesses qualify for significantly reduced construction permit fees under Part 75.

The Board will hold a public hearing in this matter beginning at 9:00 a.m. on March 23, 2026, and continuing thereafter as necessary. The hearing will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail, Santa Fe, New Mexico 87501, and will be accessible virtually via Webex. Information including the hearing room number and how to participate virtually can be found on the Department's events calendar at https://www.env.nm.gov/events-calendar/.

If Commission members have further questions, comments, or would like to meet and discuss the proposed rules, please feel free to contact me directly at (505) 795-4383 or via email at kelly.villanueva@env.nm.gov. A copy of the petition and proposed replacement rules are attached.

Sincerely,

Kelly Villanueva
Assistant General Counsel

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 71 OPERATING PERMIT EMISSIONS FEES

20.2.71.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.71.1 NMAC - Rp, 20.2.71.1 NMAC, 6/1/2026]

20.2.71.2 SCOPE: This Part applies to all persons required to obtain a permit under 20.2.70 NMAC (Operating Permits).
[20.2.71.2 NMAC - Rp, 20.2.71.2 NMAC, 6/1/2026]

20.2.71.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph (7) of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.71.3 NMAC - Rp, 20.2.71.3 NMAC, 6/1/2026]

20.2.71.4 DURATION: Permanent.
[20.2.71.4 NMAC - Rp, 20.2.71.4 NMAC, 6/1/2026]

20.2.71.5 EFFECTIVE DATE: June 1, 2026, unless a later date is cited at the end of a section.
[20.2.71.5 NMAC - Rp, 20.2.71.5 NMAC, 6/1/2026]

20.2.71.6 OBJECTIVE: The objective of this Part is to establish a schedule of operating permit emissions fees.
[20.2.71.6 NMAC - Rp, 20.2.71.6 NMAC, 6/1/2026]

20.2.71.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions), as used in this Part, the following definitions apply.

A. "Allowable emission rate" means the maximum emission allowed by the more stringent emission limitation applicable to the source contained in:

(1) any New Mexico air quality control regulation;

(2) any federal standard of performance, emission limitation, or emission standard adopted pursuant to 42 U.S.C. Section 7411 or 7412; or

(3) any condition within a construction or operating permit issued by the department.

B. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any fee pollutant.

C. "Fee pollutant" means:

(1) sulfur dioxide, nitrogen dioxide, carbon monoxide, PM10, PM2.5, and volatile organic compounds; and

(2) any hazardous air pollutant that is subject to any standard promulgated pursuant to Section 112 of the federal act.

D. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

E. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to Section 112 of the federal act.

F. "Operator" means the person or persons responsible for the overall operation of a facility.

G. "Owner" means the person or persons who own a facility or part of a facility.

H. "Stationary source" means any building, structure, facility, or installation that emits or may emit any air pollutant.

[20.2.71.7 NMAC - Rp, 20.2.71.7 NMAC, 6/1/2026]

20.2.71.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 771 - Operating Permit Emission Fees, filed November 15, 1993, as amended.

A. All references to AQCR 771 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 771 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 771.
[20.2.71.8 NMAC - Rp, 20.2.71.8 NMAC, 6/1/2026]

20.2.71.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico environment department, air quality bureau. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505].
[20.2.71.9 NMAC - Rp, 20.2.71.9 NMAC, 6/1/2026]

20.2.71.10 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.
[20.2.71.10 NMAC - N, 6/1/2026]

20.2.71.11 to 20.2.71.108 [RESERVED]

20.2.71.109 [RESERVED]
[20.2.71.109 NMAC – Rp, 20.2.71.109 NMAC, 6/1/2026]

20.2.71.110 FEE REQUIREMENT:

A. An annual emissions fee shall be paid to the department by each owner or operator subject to this Part.

B. The annual emissions fee shall be assessed:

(1) for a major source as defined in 20.2.70 NMAC (Operating Permits), for all emissions units;

(2) for all other stationary sources, for emissions units which cause the source to be subject to 20.2.70 NMAC; and

(3) for emissions above annual allowable emission limits for the source categories in Paragraphs (1) and (2) of this Subsection.

C. The annual emissions fee shall be calculated in conformance with 20.2.71.111 NMAC.
[20.2.71.110 NMAC - Rp, 20.2.71.110 NMAC, 6/1/2026]

20.2.71.111 FEE DETERMINATION:

A. Annual emissions fee calculation.

(1) The annual emissions fee shall be calculated by taking the product of the allowable emission rate for each fee pollutant expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) The allowable emission rate which shall be used in the fee calculation for this Subsection is the allowable emission rate which exists on December 31 for each year.

(3) Allowable emission rates shall be calculated to the tenth of a ton for each emissions unit and then summed to determine the tons per year for the facility. Total facility tons per year quantities shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(4) Emissions from those operations determined to be insignificant activities by the department under 20.2.70 NMAC shall not be included in the fee calculation for this Subsection.

(5) Fugitive emissions which have an allowable emission rate shall be included in the fee calculation for this Subsection.

(6) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(7) A maximum of 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(8) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has the higher allowable emission rate.

(9) The failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.

B. Source shutdown.

(1) The annual emissions fee shall not be reduced due to lack of operation of any emissions unit, except when:

(a) the discontinued operation is accounted for in an allowable emission rate contained within a construction or operating permit issued by the department;

(b) a construction or operating permit issued by the department has been discontinued or terminated and the source ceased operation; or

(c) the emissions unit is located at a stationary source which meets the criteria of Paragraph (2) of this Subsection.

(2) The annual emissions fee shall be reduced when all operations at a stationary source have been shut down for a period greater than 60 consecutive days within a calendar year. In this case, the annual emissions fee calculation shall be adjusted by reducing the annualized allowable emission rate for each day the stationary source was shut down.

C. Annual emissions fee for emissions above annual allowable emission limits.

(1) The annual emissions fee for emissions above annual allowable emission limits shall be based on all emissions above annual allowable emission limits of fee pollutants reported or required to be reported by a stationary source through December 31 in accordance with Subsection E of 20.2.70.302 NMAC. The fee shall be calculated by taking the product of the emissions above annual allowable emission limits for each fee pollutant above and beyond the allowable annual emission limit per unit expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) Total facility tons per year quantities of emissions above annual allowable emission limits shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(3) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(4) A maximum of 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(5) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has higher emissions above annual allowable emission limits.

[20.2.71.111 NMAC - Rp, 20.2.71.111 NMAC, 6/1/2026]

20.2.71.112 EMISSIONS FEE:

A. The fee for each fee pollutant shall be $85 per ton on an annual basis, except as provided for in Subsection B of this Section.

B. The fee for each hazardous air pollutant shall be $258 per ton on an annual basis for any stationary source which is only a major source, as defined in 20.2.70 NMAC, for any hazardous air pollutant.

C. The fee per ton of emissions above annual allowable emission limits shall be identical to the fee per ton of allowable emissions.

D. Beginning in 2028, the fees referenced in this Section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI) in accordance with Section 502(b)(3)(B)(v) of the federal act. In the event there is a decrease or absence of change in the CPI, fees shall remain the same until the next increase in the CPI.

[20.2.71.112 NMAC - Rp, 20.2.71.112 NMAC, 6/1/2026]

20.2.71.113 NOTIFICATION, PAYMENT, LATE FEE AND ENFORCEMENT:

A. Schedule.

(1) The department shall by April 1 of each year provide to each owner or operator subject to this Part notification, which shall contain:

(a) the annual emissions fee based on the requirements of this Part which is currently due; and

(b) a summary of the basis for the required annual emissions fee.

(2) Upon discovery of an error in any past notification of annual emissions fees due, the department shall promptly notify the owner or operator and provide credit for overcharges or require payment for undercharges.

(3) Each owner or operator shall pay by June 1 the annual emissions fee contained in the department's notification required under Paragraph (1) of this Subsection. Failure to remit the full annual emissions fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual emissions fee or $5,000, whichever is less. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, which shall state the late fee and unpaid annual emissions fee balance currently due. The owner or operator shall pay the amount stated in the department's notification within 30 days of the date of the notification. If the amount stated in the notification is not timely paid, the late fee shall increase to one hundred percent of the annual emissions fee or $10,000, whichever is less, and shall be due immediately without further notification from the department, along with the unpaid annual emissions fee balance.

(4) Each owner or operator shall pay invoices based on notices of errors in past notifications within 60 days of the invoice date.

B. Payment.

(1) Annual emissions fees shall be remitted in the form of a certified check or money order made payable to the environment department, electronic payment, or other method as allowed by the state. Annual emissions fees remitted in the form of a certified check or money order shall be submitted to the air quality bureau at the address specified in the notice.

(2) Upon receipt of the annual emissions fee payment, it shall be deposited in the state air quality permit fund.

(3) Annual emissions fees shall be paid in U.S. dollars.

C. Nonpayment. Failure to remit the full annual emissions fee, including any late fees, required by the due date specified in Subsection A of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes suspension or revocation of any permit.

D. Non-compliance with Chapter 2, Title 20 NMAC or the Air Quality Control Act subjects each owner or operator to administrative compliance costs for enforcement of Chapter 2, Title 20 NMAC.

[20.2.71.113 NMAC - Rp, 20.2.71.113 NMAC, 6/1/2026]

HISTORY OF 20.2.71 NMAC:

Pre NMAC History: The material in this Part was derived from that previously filed with the commission of public records - state records center and archives.

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93.

History of Repealed Material:

20.2.71 NMAC, Operating Permit Emissions Fees, effective 10/31/02, repealed, effective 6/1/26.

Other History:

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93, was **renumbered** into first version of the New Mexico Administrative Code as 20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95;

20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95, was **renumbered, reformatted and replaced** by 20.2.71 NMAC, Operating Permit Emission Fees, effective 10/31/02.

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 75 CONSTRUCTION PERMIT FEES

20.2.75.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.75.1 NMAC - Rp, 20.2.75.1 NMAC, 6/1/2026]

20.2.75.2 SCOPE: This Part applies to all persons who apply for a permit to construct or modify a source, apply to register under a general construction permit, apply for a permit revision, or request a technical review of an existing permit under 20.2.72 NMAC, and all persons who file a notice of intent under 20.2.73 NMAC. Annual emissions fees for sources required to obtain a permit under 20.2.70 NMAC (Operating Permits) are covered under 20.2.71 NMAC.
[20.2.75.1 NMAC - Rp, 20.2.75.2 NMAC, 6/1/2026]

20.2.75.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph (6) of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.75.1 NMAC - Rp, 20.2.75.3 NMAC, 6/1/2026]

20.2.75.4 DURATION: Permanent.
[20.2.75.4 NMAC - Rp, 20.2.75.4 NMAC, 6/1/2026]

20.2.75.5 EFFECTIVE DATE: June 1, 2026, except where a later date is cited at the end of a section.

A. For applications received prior to the effective date of this Part, the provisions in 20.2.75 NMAC, as effective as of the date of the receipt of the application, remain effective, and application review fees (formerly permit fees) shall be so determined.

B. For applications received following the effective date of this Part, application review fees shall be based on the current regulation.

[20.2.75.5 NMAC - Rp, 20.2.75.5 NMAC, 6/1/2026]

20.2.75.6 OBJECTIVE: The objective of this Part is to establish a schedule of fees for the construction permit program, including notices of intent, construction permits, registrations under general construction permits, permit revisions, and technical reviews of existing permits.
[20.2.75.6 NMAC - Rp, 20.2.75.6 NMAC, 6/1/2026]

20.2.75.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (Definitions) or 20.2.72 NMAC (Construction Permits), as used in this Part, the following definitions apply.

A. "**Air toxics review"** means the required review of a permit application for the potential emission of an air toxic regulated by 20.2.72.400 NMAC - 20.2.72.499 NMAC. As used in this Part, a level I air toxics review consists of modeling to determine whether one one-hundredth of the occupational exposure limit, as defined in 20.2.72.401 NMAC, is met; a level II air toxics review consists of either a health assessment or best available control technology (BACT) determination, whichever is required by 20.2.72.400 NMAC - 20.2.72.499 NMAC.

B. **"Applicable regulations"** means, for the purpose of assessing application review fee points, those regulations that are applicable to the source and not the review to determine whether the regulation is applicable. Applicable regulations do not include 20.2.1 NMAC (General Provisions), 20.2.2 NMAC (Definitions), 20.2.3 NMAC (Ambient Air Quality Standards), 20.2.5 NMAC (Source Surveillance), 20.2.7 NMAC (Excess Emissions), 20.2.8 NMAC (Emissions Leaving New Mexico), 20.2.60 NMAC (Open Burning), 20.2.70 NMAC (Operating Permits), 20.2.71 NMAC (Operating Permit Emissions Fees), 20.2.72 NMAC (Construction Permits), 20.2.73 NMAC (Notice Of Intent And Emissions Inventory Requirements), 20.2.74 NMAC (Permits - Prevention Of Significant Deterioration (PSD)), 20.2.75 NMAC (Construction Permit Fees), 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards For Hazardous Air Pollutants), 20.2.79 NMAC (Permits - Nonattainment Areas), 20.2.80 NMAC (Stack Heights), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards For Source Categories Of Hazardous Air Pollutants). All other Title 20, Chapter 2 NMAC parts and all new source performance standards (excluding Subpart A) and national emission standards for hazardous air pollutants/maximum achievable control technology (NESHAP/MACT) (excluding 40 CFR Part 61

Subparts A and M and 40 CFR Part 63 Subpart A) regulations that are applicable to the source shall be counted and shall result in additional points for application review fee purposes, in accordance with the fee schedule in this Part.

C. "Fee unit" means any equipment or process which generates, creates, or is the source of a regulated air contaminant, which is listed or identified in a construction permit application or application to revise a permit and which requires review and evaluation against state and federal regulations and standards. This definition does not include sources which are exempt under 20.2.72.202 NMAC or sources for which no applicable requirements are identified in the permit. In the case of a permit modification, revision or technical review of an existing permit, the requirements of Subsection A of 20.2.75.11 NMAC apply only to the equipment or process involved in such modification, revision or review.

D. "Fugitive emissions fee unit" means sources of fugitive emissions for which applicable requirements are identified in the permit. A maximum of one fugitive emissions fee unit shall be applied to any given application.

E. "Revision" means any change requested by an applicant to any term or condition of a permit including emission limitations, control technology, operating conditions and monitoring requirements. For the purposes of this Part, revision does not include administrative revision as used in 20.2.72 NMAC.

F. "Small business" means a company that employs no more than 10 employees at any time during the calendar year. Employees include part-time, temporary, or limited service workers. For the purposes of this Part, small business does not include:

(1) any source which may emit more than 50 tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or 75 tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and

(2) any major source for hazardous air pollutants under 20.2.70 NMAC.

G. "Technical review of an existing permit" means the department's technical review of new information submitted by a permittee as required by an existing permit condition and in conjunction with proposed changes at the source that do not involve any changes to the existing permit. The review must be necessary to demonstrate that all applicable state and federal regulations and standards will continue to be met and that the existing permit will continue to be valid. For the purposes of this Part, technical review of an existing permit does not include the department's review of required periodic reports.

[20.2.75.7 NMAC - Rp, 20.2.75.7 NMAC, 6/1/2026]

20.2.75.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 700 - Filing and Permit Fees, filed November 20, 1989, as amended.

A. All references to AQCR 700 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 700 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 700.

[20.2.75.8 NMAC - Rp, 20.2.75.8 NMAC, 6/1/2026]

20.2.75.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico environment department, air quality bureau. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505.]

[20.2.75.9 NMAC - Rp, 20.2.75.9 NMAC, 6/1/2026]

20.2.75.10 FILING FEE:

A. A filing fee of $500 shall be submitted with each filing of an application for a permit to construct or modify a source or permit revision. The filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC.

B. For applications submitted under 20.2.72.221 NMAC, an accelerated review filing fee of $1,000 shall be submitted in lieu of any other filing fees under this Section. One-half of the accelerated review filing fee shall be applied to the cost of the accelerated review submitted by the qualified outside firm. In the event that:

(1) there are no qualified outside firms on contract with the department, or if all of the qualified outside firms have a conflict of interest, the entire accelerated review filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(2) no qualified outside firm submits a proposal for the accelerated review, one-half of the accelerated review filing fee shall be applied to the application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(3) one or more qualified outside firms submit a proposal but all such proposals are rejected by the applicant, the accelerated review filing fee shall be forfeited and retained by the department; or

(4) the applicant withdraws the application for any reason, the accelerated review filing fee shall be forfeited and retained by the department.

[20.2.75.10 NMAC - Rp, 20.2.75.10 NMAC, 6/1/2026]

20.2.75.11 APPLICATION REVIEW FEE AND ANNUAL FEE:

A. The application review fee shall be based on the following point-based fee schedule.

ACTION	# OF POINTS	
1. CONSTRUCTION PERMIT/TECHNICAL REVIEW OF EXISTING PERMIT		
Technical Complexity		
1-5 Fee Units	5	
6-15 Fee Units	1	point per fee unit
>15 Fee Units	15	
Fugitive Emissions Fee Unit	5	
Portable Source Relocation (Paragraph (3) of Subsection D of 20.2.72.202 NMAC)	1	
Non-Attainment Area (20.2.79 NMAC)	75	
Each Modeling Review	30	
Air Toxics Review (20.2.72.400 NMAC – 20.2.72.499 NMAC)		
Level I	8	
Level II		
Best Available Control Technology (BACT) Analysis	60	
Health Assessment	100	
Applicable Regulations		
20.2.X NMAC (per each)	3	
NSPS (per each)	5	
NESHAP/MACT (per each)	5	
Case-by-Case MACT (20.2.83 NMAC)	100	
PSD netting only (no additional PSD analysis is required)	20	
PSD review (including netting) (20.2.74 NMAC)	75	
2. OTHER PERMITTING ACTIONS		
Notices of Intent (20.2.73.200 NMAC)	10	
General Permits (20.2.72.220 NMAC) for non-Oil and Gas Facilities	10	
General Permits (20.2.72.220 NMAC) for Oil and Gas Facilities	30	
Streamline (each site) (20.2.72.300 NMAC – 20.2.72.399 NMAC)	10	

B. The application review fee shall be the sum of all of the points that are applicable to the application as determined by the department, multiplied by $585.

C. The department may, at its discretion, assess additional points and fees each time the department is required to repeat an action listed in Subsection A of this Section because the applicant updated the application after submission.

NMED Exhibit 36_000009

D. For sources that satisfy the definition of "small business" as defined in Subsection F of 20.2.75.7 NMAC, the application review fee determined by Subsection B of this Section, additional fees (if any) assessed pursuant to Subsection C of this Section, and annual fee assessed pursuant to Subsection F of this Section shall be reduced by half. To qualify for the small business fee reduction, sources must submit a small business certification form to the department certifying that the company employs no more than 10 employees at any time during the calendar year, or for new sources, that the company does not expect to employ any more than 10 employees in the first year of operations.

E. For applications processed by an outside firm under 20.2.72.221 NMAC, the application review fee determined by Subsection B of this Section shall be reduced by half and shall be in addition to the cost of the accelerated review bid.

F. Sources that have been issued a construction permit or registered under a general construction permit under 20.2.72 NMAC shall be assessed an annual fee of $2,800. Sources that have filed a notice of intent under 20.2.73 NMAC and received a written determination by the department that a permit is not required shall be assessed an annual fee of $700. The applicable annual fee shall be assessed if the construction permit, general construction permit registration or notice of intent was in active status as of December 31 of the preceding year, regardless of the source's operational status. The annual fee required by this Subsection shall not apply to sources which are assessed an annual emissions fee in accordance with 20.2.71 NMAC.

G. Beginning in 2028, the cost per point and annual fees in Subsections B and F of this Section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI). The adjusted cost per point and annual fees shall be determined by multiplying the current cost per point and annual fees by the increase in the CPI for the most recent calendar year and rounding the result to the nearest dollar. The CPI for any calendar year is the average of the CPI for all urban consumers published by the United States department of labor, as of the close of the twelve-month period ending on August 31 of that year. In the event there is a decrease or absence of change in the CPI, the cost per point and annual fees shall not be changed and shall remain the same until the next increase in the CPI.

[20.2.75.11 NMAC - Rp, 20.2.75.11 NMAC, 6/1/2026]

20.2.75.12 INVOICING, PAYMENT, LATE FEE AND ENFORCEMENT:

A. The department shall refuse to accept any application for a permit to construct or modify a source or permit revision without payment of the filing fee at the time the application is submitted to the department. The filing fee and the accelerated review filing fee are non-refundable. The department shall refuse to accept any notice of intent or application to register under a general construction permit without payment of the application review fee at the time the notice or application is submitted to the department.

B. For an application for a permit to construct or modify a source or permit revision other than a technical permit revision, an invoice for the application review fee, minus the filing fee, shall be mailed, or transmitted electronically or as otherwise allowed by the state, to the applicant at the time the department finds the application administratively complete pursuant to 20.2.72.207 NMAC. The department shall deny any application for a permit to construct or modify a source or permit revision other than a technical permit revision if the application review fee has not been paid within 30 days of the date of the invoice, unless the department has granted an extension. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, the department shall mail another invoice to the applicant along with its grant or denial of the permit or permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

C. For an application for a technical permit revision, an invoice for the application review fee, minus the filing fee, and any additional fees the department determines are due pursuant to Subsection C of 20.2.75.11 NMAC upon completion of the application review, shall accompany the department's grant or denial of the technical permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

D. For a notice of intent or application to register under a general construction permit, the application review fee shall be paid at the time of filing. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, an invoice shall accompany the department's notification of its determination that an air quality permit is not required or its grant or denial of the registration. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

E. An invoice for a request for technical review of an existing permit shall accompany the department's response if any fees are due. The applicant or permittee shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

F. Except for the refund of excess fees paid, all fees paid under this Part shall be non-refundable.

G. All fees paid pursuant to this Part shall be remitted in the form of a corporate or certified check or money order made payable to the environment department at the address specified in the notice, electronic payment, or other method as allowed by the state. Upon receipt of the fee payment, it shall be deposited in the state air quality permit fund established by Section 74-2-15 NMSA 1978.

H. Owners or operators shall pay annual fees assessed pursuant to Subsection F of 20.2.75.11 NMAC within 30 days of the date of the invoice. Failure to remit the full annual fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual fee. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, accompanied by an invoice for the late fee and unpaid annual fee balance. The owner or operator shall pay this invoice within 30 days of the date of the invoice. If the invoice is not timely paid, the late fee shall increase to one hundred percent of the annual fee and shall be due immediately without further notification from the department, along with the unpaid annual fee balance.

I. All fees shall be paid in U.S. dollars.

J. Failure to remit the full annual fee, including any late fees, required by the due date specified in Subsection H of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 per day for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes the suspension or revocation of any permit.

K. Non-compliance with Chapter 2, Title 20 NMAC or the Air Quality Control Act subjects each owner or operator to administrative compliance costs for enforcement of Chapter 2, Title 20 NMAC.

[20.2.75.12 NMAC - Rp, 20.2.75.12 NMAC, 6/1/2026]

20.2.75.13 PERIODIC REVIEW: The department shall review construction permit fees and construction permit program costs annually. The review shall include information on the budgets, expenditures, fund balance, and related projections.

[20.2.75.13 NMAC - Rp, 20.2.75.13 NMAC, 6/1/2026]

20.2.75.14 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.75.14 NMAC - N, 6/1/2026]

HISTORY OF 20.2.75 NMAC:

Pre-NMAC History: The material in this Part was derived from that previously filed with the commission of public records - state records center and archives:

AQCR 700, Air Quality Control Regulation 700 - Filing and Permit Fees, filed 11/20/89.

History of Repealed Material:

20 NMAC 2.75, Construction Permit Fees, filed 10/30/95, repealed, effective 03/02/01;

20.2.75 NMAC, Construction Permit Fees, effective 03/02/01, repealed, effective 6/1/26.

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 71 OPERATING PERMIT EMISSIONS FEES

20.2.71.1 ISSUING AGENCY: Environmental Improvement Board.
[[~~11/30/95;~~] 20.2.71.1 NMAC - [~~Rn, 20 NMAC 2.71.100 10/31/02~~] Rp, 20.2.71.1 NMAC, 6/1/2026]

20.2.71.2 SCOPE: This Part applies to all persons required to obtain a permit under 20.2.70 NMAC (Operating Permits).
[[~~11/30/95;~~] 20.2.71.2 NMAC - [~~Rn, 20 NMAC 2.71.101 10/31/02~~] Rp, 20.2.71.2 NMAC, 6/1/2026]

20.2.71.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically [~~NMSA 1978, section 74-1-8 (A)(4)~~] Paragraph (4) of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, [~~NMSA 1978, Sections 74-2-1 et seq.~~] Sections 74-2-1 to -17 NMSA 1978, including specifically [~~section 74-2-7(B)(5)~~] Paragraph (7) of Subsection B of Section 74-2-7 NMSA 1978.
[[~~11/30/95;~~] 20.2.71.3 NMAC - [~~Rn, 20 NMAC 2.71.102 10/31/02~~] Rp, 20.2.71.3 NMAC, 6/1/2026]

20.2.71.4 DURATION: Permanent.
[[~~11/30/95;~~] 20.2.71.4 NMAC - [~~Rn, 20 NMAC 2.71.103 10/31/02~~] Rp, 20.2.71.4 NMAC, 6/1/2026]

20.2.71.5 EFFECTIVE DATE: [~~November 30, 1995~~] June 1, 2026, unless a later date is cited at the end of a section.
[[~~11/30/95;~~] 20.2.71.5 NMAC - [~~Rn, 20 NMAC 2.71.104 10/31/02; A, 12/15/04~~] Rp, 20.2.71.5 NMAC, 6/1/2026]
[[~~The latest effective date of any section in this part is 01/09/09.~~]]

20.2.71.6 OBJECTIVE: The objective of this Part is to establish a schedule of operating permit [~~emission~~] emissions fees.
[[~~11/30/95;~~] 20.2.71.6 NMAC - [~~Rn, 20 NMAC 2.71.105 10/31/02~~] Rp, 20.2.71.6 NMAC, 6/1/2026]

20.2.71.7 DEFINITIONS. In addition to the terms defined in 20.2.2 NMAC (definitions), as used in this part, the following definitions apply.

A. "Allowable emission rate" means the maximum emission allowed by the more stringent emission limitation applicable to the source contained in:

(1) any New Mexico air quality control regulation;

(2) any federal standard of performance, emission limitation, or emission standard adopted pursuant to 42 U.S.C. Section 7411 or 7412; or

(3) any condition within a construction or operating permit issued by the department.

B. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any fee pollutant.

C. "Fee pollutant" means:

(1) sulfur dioxide, nitrogen dioxide, carbon monoxide, [~~total suspended particulate matter~~] PM10, PM2.5, and volatile organic compounds[~~, and mercury~~]; and

(2) any hazardous air pollutant that is subject to any standard promulgated pursuant to section 112 of the federal act.

D. "Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

E. "Hazardous air pollutant" means an air contaminant that has been classified as a hazardous air pollutant pursuant to section 112 of the federal act.

F. "Operator" means the person or persons responsible for the overall operation of a facility.

G. "Owner" means the person or persons who own a facility or part of a facility.

[~~**H. "Part"** means an air quality control regulation under Title 20, Chapter 2 of the New Mexico Administrative Code, unless otherwise noted; as adopted or amended by the board.~~]

[~~**I**~~] **H. "Stationary source"** means any building, structure, facility, or installation that emits or may emit any air pollutant.

[[~~11/30/95;~~] 20.2.71.7 NMAC - [~~Rn, 20 NMAC 2.71.107 10/31/02; A, 12/15/04; A, 06/15/07~~] Rp, 20.2.71.7 NMAC, 6/1/2026]

20.2.71.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 771 - Operating Permit Emission Fees, filed November 15, 1993, as amended.

A. All references to AQCR 771 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 771 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 771.

[[~~11/30/95;~~] 20.2.71.8 NMAC - [~~Rn, 20 NMAC 2.71.106 10/31/02~~] Rp, 20.2.71.8 NMAC, 6/1/2026]

20.2.71.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau [~~, Runnels Building, 1190 Saint Francis Drive, Santa Fe, NM 87505 [2048 Galisteo St., Santa Fe, NM 87505]~~]. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505].

[[~~11/30/95;~~] 20.2.71.9 NMAC - [~~Rn, 20 NMAC 2.71.108 10/31/02~~] Rp, 20.2.71.9 NMAC, 6/1/2026]

20.2.71.10 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.71.10 NMAC - N, 6/1/2026]

[~~20.2.71.10~~] 20.2.71.11 to 20.2.71.108 [RESERVED]

20.2.71.109 [~~APPLICABILITY: Each owner or operator required to obtain an operating permit under 20.2.70 NMAC (Operating Permits) shall be subject to the requirements of this Part.~~] [RESERVED]

[[~~11/30/95;~~] 20.2.71.109 NMAC - [~~Rn, 20 NMAC 2.71.109 10/31/02~~] Rp, 20.2.71.109 NMAC, 6/1/2026]

20.2.71.110 FEE REQUIREMENT

A. An annual [~~operating permit emission~~] emissions fee shall be paid to the department by each owner or operator subject to this part.

B. The annual emissions fee shall be assessed:

(1) for a major source as defined in 20.2.70 NMAC (Operating Permits), for all emissions units;

(2) for all other stationary sources, for emissions units which cause the source to be subject to 20.2.70 NMAC; and

(3) for emissions above annual allowable emission limits for the source categories in Paragraphs (1) and (2) of this Subsection [~~B of Section 20.2.71.110 NMAC~~].

C. The annual emissions fee shall be calculated in conformance with 20.2.71.111 NMAC.

[[~~11/30/95;~~] 20.2.71.110 NMAC - [~~Rn, 20 NMAC 2.71.110 10/31/02; A, 12/15/04~~] Rp, 20.2.71.110 NMAC, 6/1/2026]

20.2.71.111 FEE DETERMINATION

A. Annual emissions fee calculation.

(1) The annual emissions fee shall be calculated by taking the product of the allowable emission rate for each fee pollutant expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) The allowable emission rate which shall be used in the fee calculation for this Subsection is

[~~**(a)**~~] the allowable emission rate which exists on December 31 for each year. [~~; and~~

~~**(b)** the failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.~~]

(3) Allowable emission rates shall be calculated to the tenth of a ton for each [~~emission~~] emissions unit and then summed to determine the tons per year for the facility. Total facility tons per year quantities

shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(4) Emissions from those operations determined to be insignificant activities by the department under 20.2.70 NMAC shall not be included in the fee calculation for this Subsection.

(5) Fugitive emissions which have an allowable emission rate shall be included in the fee calculation for this Subsection.

(6) Any quantity of a pollutant which is assessed a fee pursuant to this Subsection because it is a hazardous air pollutant shall not be assessed additional fees.

(7) A maximum of [~~six thousand~~] 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this Subsection.

(8) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has the higher allowable emission rate.

(9) The failure of an owner or operator to include the correct information in a permit application, resulting in incorrect allowable emissions in a permit issued under 20.2.70 NMAC, 20.2.72 NMAC, or 20.2.74 NMAC, shall not preclude the department from requiring payment for the correct emissions from the time payment would have been first due.

B. Source shutdown.

(1) The annual emissions fee shall not be reduced due to lack of operation of any emissions unit, except when:

(a) the discontinued operation is accounted for in an allowable emission rate contained within a construction or operating permit issued by the department;

(b) a construction or operating permit issued by the department has been discontinued or terminated and the source ceased operation; or

(c) the emissions unit is located at a stationary source which meets the criteria of Paragraph (2) of this Subsection [~~B of 20.2.71.111 NMAC~~].

(2) The annual emissions fee shall be reduced when all operations at a stationary source have been [~~shutdown~~] shut down for a period greater than 60 consecutive days within a calendar year. In this case, the annual emissions fee calculation shall be adjusted by reducing the annualized allowable emission rate[~~, or potential to emit if applicable,~~] for each day the stationary source was [~~shutdown~~] shut down.

C. Annual emissions fee for emissions above annual allowable emission limits.

(1) The annual emissions fee for emissions above annual allowable emission limits shall be based on all emissions above annual allowable emission limits of fee pollutants reported or required to be reported by a stationary source through December 31 in accordance with Subsection E of 20.2.70.302 NMAC. The fee shall be calculated by taking the product of the emissions above annual allowable emission limits for each fee pollutant above and beyond the allowable annual emission limit per unit expressed in tons per year and the appropriate fee per ton of pollutant listed in 20.2.71.112 NMAC.

(2) Total facility tons per year quantities of emissions above annual allowable emission limits shall be determined by rounding amounts equal to or greater than five tenths of a ton upward and amounts lower than five tenths of a ton downward.

(3) Any quantity of a pollutant which is assessed a fee pursuant to this [~~section~~] Subsection because it is a hazardous air pollutant shall not be assessed additional fees [~~pursuant to this section~~].

(4) A maximum of [~~six thousand~~] 3,000 tons per year of any one fee pollutant shall be used in the fee calculation for this [~~section~~] Subsection.

(5) For facilities with allowable emission rates for both PM10 and PM2.5, a fee shall only be assessed pursuant to this Subsection for one of these fee pollutants, and shall be based on whichever has higher emissions above annual allowable emission limits.

[[~~11/30/95;~~] 20.2.71.111 NMAC - [~~Rn, 20 NMAC 2.71.111 10/31/02; A, 12/15/04~~] Rp, 20.2.71.111 NMAC, 6/1/2026]

20.2.71.112 [~~EMISSION~~] EMISSIONS FEE

A. The fee for each fee pollutant shall be [~~$20.00~~] $85 per ton on an annual basis, except as provided for in Subsection B of [~~20.2.70.112 NMAC~~] this Section. [~~This fee shall increase by $2.00 per ton on an annual basis beginning on January 1, 2010 through the fees due on June 1, 2012.~~]

B. The fee for each hazardous air pollutant shall be [~~$165.00~~] $258 per ton on an annual basis for any stationary source which is only a major source, as defined in 20.2.70 NMAC, for any hazardous air pollutant.

[~~C. Fees for mercury emissions.~~

~~(1) For the calendar years 2010 through 2017, the fee for mercury emissions from stationary sources subject to 20.2.85 NMAC shall be $8.88 per ounce annually.~~

~~(2) For the calendar years 2018 and thereafter, the fee for mercury emissions] from stationary sources subject to 20.2.85 NMAC shall be $22.51 per ounce annually.~~]

[~~D~~] **C.** The fee per ton of emissions above annual allowable emission limits shall be identical to the fee per ton of allowable emissions.

[~~E~~] **D.** Beginning [~~on January 1, 2009~~] in 2028, the fees referenced in this section shall be changed annually on January 1 by the percentage, if any, of any annual increase in the consumer price index (CPI) in accordance with Section 502(b)(3)(B)(v) of the federal [~~Clean Air~~] Act. In the event there is a decrease or absence of change in the CPI, fees shall remain the same until the next increase in the CPI.

[[~~11/30/95;~~] 20.2.71.112 NMAC - [~~Rn, 20 NMAC 2.71.112 10/31/02; A, 12/15/04; A, 06/15/07; A, 01/09/09~~] Rp, 20.2.71.112 NMAC, 6/1/2026]

20.2.71.113 NOTIFICATION, [~~FEE~~] PAYMENT, LATE FEE AND ENFORCEMENT

A. Schedule.

(1) The department shall by April 1 of each year provide to each owner or operator subject to this part notification, which shall contain:

(a) the annual emissions fee based on the requirements of this part which is currently due; and

(b) a summary of the basis for the required annual missions fee.

(2) Upon discovery of an error in any past notification of annual emissions fees due, the department shall promptly notify the owner or operator and provide credit for overcharges or require payment for undercharges.

(3) Each owner or operator shall pay by June 1 the annual emissions fee contained in the department's notification required under Paragraph (1) of this Subsection [~~A of Section 20.2.71.113 NMAC~~]. Failure to remit the full annual emissions fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual emissions fee or $5,000, whichever is less. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, which shall state the late fee and unpaid annual emissions fee balance currently due. The owner or operator shall pay the amount stated in the department's notification within 30 days of the date of the notification. If the amount stated in the notification is not timely paid, the late fee shall increase to one hundred percent of the annual emissions fee or $10,000, whichever is less, and shall be due immediately without further notification from the department, along with the unpaid annual emissions fee balance.

(4) Each owner or operator shall pay invoices based on notices of errors in past notifications within 60 days of the invoice date.

[~~**(5)** The department shall commence invoicing for fees for emissions above annual allowable emission limits reported by the method specified by the department in calendar year 2007.~~]

B. Payment.

(1) Annual emissions fees shall be remitted in the form of a certified check or money order made payable to the environment department [~~and~~] , electronic payment, or other method as allowed by the state. Annual emissions fees remitted in the form of a certified check or money order shall be submitted to the air quality bureau at the address specified in the notice.

(2) Upon receipt of the [~~check or money order~~] annual emissions fee payment, it shall be deposited in the state air quality permit fund.

(3) Annual emissions fees shall be paid in U.S. dollars.

C. Nonpayment. Failure to remit the full annual emissions fee, including any late fees, required by the due date specified in Subsection A of this section is a violation of this part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 for each day of noncompliance as provided for in the [~~New Mexico~~] Air Quality Control Act, section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the [~~New Mexico~~] Air Quality Control Act, section 74-2-12 NMSA 1978, which includes suspension or revocation of any permit.

D. Non-compliance with Chapter 2, Title 20 NMAC or the Air Quality Control Act subjects each owner or operator to administrative compliance costs for enforcement of Chapter 2, Title 20 NMAC.

[[~~11/30/95;~~] 20.2.71.113 NMAC - [~~Rn, 20 NMAC 2.71.113 10/31/02; A, 12/15/04~~] Rp, 20.2.71.113 NMAC, 6/1/2026]

HISTORY OF 20.2.71 NMAC:

Pre NMAC History: The material in this part was derived from that previously filed with the commission of public records - state records center and archives.

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93.

History of Repealed Material: [[~~RESERVED~~]]

20.2.71 NMAC, Operating Permit Emissions Fees, effective 10/31/02, repealed, effective 6/1/26.

Other History:

EIB/AQCR 771, Air Quality Control Regulation 771 - Operating Permit Emission Fees, filed 11/15/93 was **renumbered** into first version of the New Mexico Administrative Code as 20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95;

20 NMAC 2.71, Operating Permit Emission Fees, filed 10/30/95 was **renumbered, reformatted and replaced** by 20.2.71 NMAC, Operating Permit Emission Fees, effective 10/31/02.

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 2 AIR QUALITY (STATEWIDE)
PART 75 CONSTRUCTION PERMIT FEES

20.2.75.1 ISSUING AGENCY: Environmental Improvement Board.
[20.2.75.1 NMAC - Rp, [~~20 NMAC 2.75.100, 03/02/01~~] 20.2.75.1 NMAC, 6/1/2026]

20.2.75.2 SCOPE:
[~~A.~~]This Part applies to all persons who apply for a permit to construct or modify a source, apply to register under a general construction permit, [~~or revise a permit~~] apply for a permit revision, or [~~who~~] request a technical review of an existing permit under 20.2.72 NMAC, and all persons who file a notice of intent under 20.2.73 NMAC. [~~Part 70 (20.2.70 NMAC) operating permit emission~~] Annual emissions fees for sources required to obtain a permit under 20.2.70 NMAC (Operating Permits) are covered under 20.2.71 NMAC.
[~~B. The requirements concerning the payment of an annual fee shall apply to sources with an air quality construction permit for which the application to either revise, modify or for a new permit was received following the effective date of this regulation.~~]
[20.2.75.1 NMAC - Rp, [~~20 NMAC 2.75.101, 03/02/01~~] 20.2.75.2 NMAC, 6/1/2026]

20.2.75.3 STATUTORY AUTHORITY: Environmental Improvement Act, Sections 74-1-1 to -18 NMSA 1978, including specifically Paragraph 4 of Subsection A of Section 74-1-8 NMSA 1978, and Air Quality Control Act, [~~Chapter 74, Article 2~~] Sections 74-2-1 to -17 NMSA 1978, including specifically Paragraph 6 of Subsection B of Section 74-2-7 NMSA 1978.
[20.2.75.1 NMAC - Rp, [~~20 NMAC 2.75.102, 03/02/01~~] 20.2.75.3 NMAC, 6/1/2026]

20.2.75.4 DURATION: Permanent.
[20.2.75.4 NMAC - Rp, [~~20 NMAC 2.75.103, 03/02/01~~] 20.2.75.4 NMAC, 6/1/2026]

20.2.75.5 EFFECTIVE DATE: [~~March 2, 2001~~] June 1, 2026, except where a later date is cited at the end of a section.

A. For applications received prior to the effective date of this [~~regulation~~] Part, the provisions in 20.2.75 NMAC, as effective as of the date of the receipt of the application, remain effective, and application review fees (formerly permit fees) shall be so determined.

B. For applications received following the effective date of this [~~regulation~~] Part, application review fees shall be based on the current regulation.

[20.2.75.5 NMAC - Rp, [~~20 NMAC 2.75.104, 03/02/01; A, 12/01/03~~] 20.2.75.5 NMAC, 6/1/2026]
[[~~The latest effective date of any section in this Part is 12/01/03.~~]]

20.2.75.6 OBJECTIVE: The objective of this Part is to establish a schedule of fees for the construction permit program, including notices of intent, construction permits, registrations under general construction permits, permit revisions, and technical reviews of existing permits.
[20.2.75.6 NMAC - Rp, [~~20 NMAC 2.75.105, 03/02/01~~] 20.2.75.6 NMAC, 6/1/2026]

20.2.75.7 DEFINITIONS: In addition to the terms defined in 20.2.2 NMAC (definitions) or 20.2.72 NMAC (construction permits), as used in this Part, the following definitions apply.

A. "air toxics review" means the required review of a permit application for the potential emission of an air toxic regulated by 20.2.72.400 NMAC - 20.2.72.499 NMAC. As used in this Part, a level I air toxics review consists of modeling to determine whether one one-hundredth [~~(1/100)~~] of the occupational exposure limit, as defined in 20.2.72.401 NMAC, is met; a level II air toxics review consists of either a health assessment or best available control technology (BACT) determination, whichever is required by 20.2.72.400 NMAC - 20.2.72.499 NMAC.

B. "applicable regulations" means, for the purpose of assessing [~~permit~~] application review fee points, [~~mean~~] those regulations that are applicable to the source and not the review to determine whether the regulation is applicable. Applicable regulations do not include 20.2.1 NMAC (general provisions), 20.2.2 NMAC (definitions), 20.2.3 NMAC (ambient air quality standards), 20.2.5 NMAC (source surveillance), 20.2.7 NMAC (excess emissions [~~during malfunctions, startup, shutdown, or scheduled maintenance~~]), 20.2.8 NMAC (emissions leaving New Mexico), 20.2.60 NMAC (open burning), 20.2.70 NMAC (operating permits), 20.2.71 NMAC

(operating permit emissions fees), 20.2.72 NMAC (construction permits), 20.2.73 NMAC (notice of intent and emissions inventory requirements), 20.2.74 NMAC (Permits - prevention of significant deterioration (PSD)), 20.2.75 NMAC (construction permit fees), 20.2.77 NMAC (new source performance standards), 20.2.78 NMAC (emission standards for hazardous air pollutants), 20.2.79 NMAC (permits - nonattainment areas), 20.2.80 NMAC (stack heights), and 20.2.82 NMAC (maximum achievable control technology standards for source categories of hazardous air pollutants). All other Title 20, Chapter 2 NMAC Parts and all new source performance standards (excluding Subpart A) and national emission standards for hazardous air pollutants/maximum achievable control technology (NESHAP/MACT) (excluding 40 CFR Part 61 Subparts A and M and 40 CFR Part 63 Subpart A) regulations that are applicable to the source shall be counted and shall result in additional points for [~~permit fees~~] application review fee purposes, in accordance with the [~~permit~~] fee schedule in this Part.

C. "fee unit" means any equipment or process which generates, creates, or is the source of a regulated air contaminant, which is listed or identified in a construction permit application or application to revise a permit and which requires review and evaluation against state and federal regulations and standards. This definition does not include sources which are exempt under 20.2.72.202 NMAC or sources for which no applicable requirements are identified in the permit. In the case of a permit modification, revision or technical review of an existing permit, the requirements of Subsection A of 20.2.75.11 NMAC apply only to the equipment or process involved in such modification, revision or review.

D. "fugitive emissions fee unit" means sources of fugitive emissions for which applicable requirements are identified in the permit. A maximum of one fugitive emissions fee unit shall be applied to any given application.

E. "revision" means any change requested by an applicant to any term or condition of a permit including [~~but not limited to~~] emission limitations, control technology, operating conditions and monitoring requirements. For the purposes of this [~~regulation~~] Part, revision does not include administrative revision as used in 20.2.72 NMAC.

F. "small business" means[~~, for the purposes of this Part,~~] a company that employs no more than [~~ten (10)~~] 10 employees at any time during the calendar year. Employees include part-time, temporary, or limited service workers. [~~For new sources, the responsible company official shall certify that the source does not expect to employ any more than ten (10) employees in the first year of operations. In addition, "small business"~~] For the purposes of this Part, small business does not include

(1) any source which may emit more than [~~fifty (50)~~] 50 tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or [~~seventy-five (75)~~] 75 tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and

(2) any major source for hazardous air pollutants under 20.2.70 NMAC.

G. "technical review of an existing permit" means the department's technical review of new information submitted by a permittee as required by an existing permit condition and in conjunction with proposed changes at the source that do not involve any changes to the existing permit. The review must be necessary to demonstrate that all applicable state and federal regulations and standards will continue to be met and that the existing permit will continue to be valid. [~~This~~] For the purposes of this Part, technical review of an existing permit does not include the department's review of required periodic reports.

[20.2.75.7 NMAC - Rp, [~~20 NMAC 2.75.107, 03-02-01; A, 12/01/03~~] 20.2.75.7 NMAC, 6/1/2026]

20.2.75.8 AMENDMENT AND SUPERSESSION OF PRIOR REGULATIONS: This Part amends and supersedes Air Quality Control Regulation (AQCR) 700 - Filing and Permit Fees, filed November 20, 1989, as amended [~~(AQCR 700)~~].

A. All references to AQCR 700 in any other rule shall be construed as a reference to this Part.

B. The amendment and supersession of AQCR 700 shall not affect any administrative or judicial enforcement action pending on the effective date of such amendment nor the validity of any permit issued pursuant to AQCR 700.

[20.2.75.8 NMAC - Rp, [~~20 NMAC 2.75.106, 03/02/01~~] 20.2.75.8 NMAC, 6/1/2026]

20.2.75.9 DOCUMENTS: Documents cited in this Part may be viewed at the New Mexico Environment Department, Air Quality Bureau [~~, Santa Fe, NM~~]. [As of April 2013, the air quality bureau is located at 525 Camino de los Marquez, Santa Fe, New Mexico 87505.]

[20.2.75.9 NMAC - Rp, [~~20 NMAC 2.75.108, 03/02/01~~] 20.2.75.9 NMAC, 6/1/2026]

20.2.75.10 FILING FEE:

A. A filing fee of [~~five hundred dollars ($500)~~] $500 shall be submitted with each filing of [~~a notice of intent,~~] an application for a permit to construct or modify a source or permit revision [~~of a permit~~]. The filing fee shall be applied to the [~~total permit fee~~] application review fee determined from the fee schedule in 20.2.75.11 NMAC.

B. For applications submitted under 20.2.72.221 NMAC[~~, accelerated review~~], an accelerated review filing fee of [~~one thousand dollars ($1,000)~~] $1,000 shall be submitted in lieu of any other filing fees under this section. One-half of the accelerated review filing fee shall be applied to the cost of the accelerated review submitted by the qualified outside firm. In the event that:

(1) There are no qualified outside firms on contract with the department, or if all of the qualified outside firms have a conflict of interest, the entire accelerated review filing fee shall be applied to the [~~total permit fee~~] application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(2) No qualified outside firm submits a proposal for the accelerated [~~permit~~] review, one-half of [~~this~~] the accelerated review filing fee shall be applied to the [~~total permit fee~~] application review fee determined from the fee schedule in 20.2.75.11 NMAC;

(3) One or more qualified outside firms submit a proposal but all such proposals are rejected by the applicant, the accelerated review filing fee shall be forfeited and retained by the department; or

(4) The applicant withdraws the application for any reason, the accelerated review filing fee shall be forfeited and retained by the department.

[20.2.75.10 NMAC - Rp, [~~20 NMAC 2.75.109, 03/02/01; A, 12/01/03~~] 20.2.75.10 NMAC, 6/1/2026]

20.2.75.11 [~~PERMIT~~] APPLICATION REVIEW FEE AND ANNUAL FEE:

A. The [~~permit fee~~] application review fee shall be based on the following point-based fee schedule.

ACTION	# OF POINTS	
1. CONSTRUCTION PERMIT/TECHNICAL REVIEW OF EXISTING PERMIT		
Technical Complexity		
1-5 Fee Units	5	
6-15 Fee Units	1	point per fee unit
>15 Fee Units	15	
Fugitive Emissions Fee Unit	5	
Portable Source Relocation (Paragraph 3 of Subsection D of 20.2.72.202 NMAC)	1	
Non-Attainment Area (20.2.79 NMAC)	75	
Each Modeling Review	[~~15~~] 30	
Air Toxics Review (20.2.72.400 NMAC – 20.2.72.499 NMAC)		
Level I	8	
Level II		
Best Available Control Technology (BACT) Analysis	60	
Health Assessment	100	
Applicable Regulations		
20.2.X NMAC (per each)	3	
NSPS (per each)	5	
NESHAP/MACT (per each)	5	
Case-by-Case MACT (20.2.83 NMAC)	100	
PSD netting only (no additional PSD analysis is required)	20	
PSD review (including netting) (20.2.74 NMAC)	75	

2. OTHER PERMITTING ACTIONS

Notices of Intent (20.2.73.200 NMAC)	10
General Permits (20.2.72.220 NMAC) for non-Oil and Gas Facilities	10
General Permits (20.2.72.220 NMAC) for Oil and Gas Facilities	30
Streamline (each site) (20.2.72.300 NMAC – 20.2.72.399 NMAC)	10

B. The application review fee shall be the sum of all of the points that are applicable to the [~~permitting action~~] application as determined by the department, multiplied by [~~three hundred fifteen dollars ($315)~~] $585.

C. The department may, at its discretion, assess additional points and fees each time the department is required to repeat an action listed in Subsection A of this Section because the applicant updated the application after submission.

[~~C~~] **D.** For sources that satisfy the definition of "small business" as defined in Subsection F of 20.2.75.7 NMAC, the [~~permit~~] application review fee determined by [~~Subsections~~] Subsection B [~~and E~~] of [~~20.2.75.11 NMAC~~] this Section, additional fees (if any) assessed pursuant to Subsection C of this Section, and annual fee assessed pursuant to Subsection F of this Section shall be [~~divided by two~~] reduced by half. To qualify for the small business fee reduction, sources must submit a small business certification form to the department certifying that the company employs no more than 10 employees at any time during the calendar year, or for new sources, that the company does not expect to employ any more than 10 employees in the first year of operations.

[~~D~~] **E.** For applications processed by an outside firm under 20.2.72.221 NMAC[~~, Accelerated Review~~], the [~~permit~~] application review fee determined by Subsection B of [~~20.2.75.11 NMAC~~] this Section shall be [~~divided by two~~] reduced by half and shall be in addition to the cost of the accelerated review bid[~~, as described in 20.2.72.221 NMAC~~].

[~~E~~] **F.** Sources that have been issued a construction permit or registered under a general construction permit under 20.2.72 NMAC shall be assessed an annual fee of [~~one thousand five hundred dollars ($1,500)~~] $2,800. Sources that have filed a notice of intent under 20.2.73 NMAC and received a written determination by the department that a permit is not required shall be assessed an annual fee of $700. The applicable annual fee shall be assessed if the construction permit, general construction permit registration or notice of intent was in active status as of December 31 of the preceding year, regardless of the source's operational status. [~~This fee~~] The annual fee required by this subsection shall not apply to sources which are assessed an annual emissions fee in accordance with 20.2.71 NMAC.

[~~F~~] **G.** Beginning in [~~2005~~] 2028, the cost per point [~~in Subsection B of this section~~] and [~~the~~] annual [~~fee~~] fees in [~~Subsection E~~] Subsections B and F of this section shall be [~~adjusted each year on January 1 to reflect the increase~~] changed annually on January 1 by the percentage, if any, [~~by which the consumer price index for the most recent year exceeds the consumer price index for the year 2004~~] of any annual increase in the consumer price index (CPI). The [~~amount of the change in the fee~~] adjusted cost per point and annual fees shall be determined by multiplying the [~~existing fee~~] current cost per point and annual fees by the [~~change~~] increase in the [~~consumer price index~~] CPI for the most recent calendar year and rounding the result to the nearest dollar. The [~~consumer price index~~] CPI for any calendar year is the average of the [~~consumer price index~~] CPI for all urban consumers published by the United States department of labor, as of the close of the twelve-month period ending on August 31 of that year. In the event there is a decrease or absence of change in the CPI, the cost per point and annual fees shall not be changed and shall remain the same until the next increase in the CPI.

[20.2.75.11 NMAC - Rp, [~~20 NMAC 2.75.110, 03/02/01; A, 12/01/03~~] 20.2.75.11 NMAC, 6/1/2026]

20.2.75.12 [~~PAYMENT OF FEES~~] INVOICING, PAYMENT, LATE FEE AND ENFORCEMENT:

A. The Department shall refuse to accept any [~~permit~~] application for a permit to construct or modify a source or permit revision without payment of the filing fee at the time the application is [~~received by~~] submitted to the Department. The filing fee and the accelerated review filing fee are non-refundable. The department shall refuse to accept any notice of intent or application to register under a general construction permit without payment of the application review fee at the time the notice or application is submitted to the department.

B. For an application for a permit to construct or modify a source or permit revision other than a technical permit revision, an invoice for [~~permit fees~~] the application review fee, minus the filing fee, shall be mailed, or transmitted electronically or as otherwise allowed by the state, to the applicant at the time the Department finds the application administratively complete pursuant to [~~20.2.72.203 NMAC~~] 20.2.72.207 NMAC. The Department shall deny any [~~permit~~] application [~~or request for permit revision~~] for a permit to construct or modify a

source or permit revision other than a technical permit revision if the [~~required permit~~] application review fee has not been paid within [~~thirty (30)~~] 30 days of [~~invoicing~~] the date of the invoice, unless the Department has granted an extension. If, upon completion of the [~~permit~~] application review, the Department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, the Department shall mail [~~an~~] another invoice to the applicant along with [~~the signed permit~~] its grant or denial of the permit or permit revision. The [~~permittee~~] applicant shall pay this invoice within [~~thirty (30)~~] 30 days of [~~invoicing~~] the date of the invoice, unless the Department has granted an extension. [~~In the event excess fees were paid, the department shall issue a refund for excess fees and mail the refund to the applicant.~~]

C. For an application for a technical permit revision, an invoice for the application review fee, minus the filing fee, and any additional fees the department determines are due pursuant to Subsection C of 20.2.75.11 NMAC upon completion of the application review, shall accompany the department's grant or denial of the technical permit revision. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

D. For a notice of intent or application to register under a general construction permit, the application review fee shall be paid at the time of filing. If, upon completion of the application review, the department determines additional fees are due pursuant to Subsection C of 20.2.75.11 NMAC, an invoice shall accompany the department's notification of its determination that an air quality permit is not required or its grant or denial of the registration. The applicant shall pay this invoice within 30 days of the date of the invoice, unless the department has granted an extension.

[~~C~~] **E.** An invoice for a request for technical review of an existing permit shall accompany the Department's response if any fees are due. The applicant or permittee shall pay [~~for the review~~] this invoice within [~~thirty (30)~~] 30 days of [~~invoicing~~] the date of the invoice, unless the department has granted an extension.

[~~D~~] **F.** Except for the refund of excess fees paid, all fees paid under this Part shall be non-refundable.

[~~E~~] **G.** All fees paid pursuant to this Part shall be remitted in the form of a corporate or certified check or money order made payable to the Environment Department at the address specified in the notice, electronic payment, or other method as allowed by the state. Upon receipt of the [~~check~~] fee payment, it shall be deposited in the state air quality permit fund established by [~~NMSA 1978, 74-2-15 (1992)~~] Section 74-2-15 NMSA 1978.

[~~F~~] **H.** [~~Permittees~~] Owners or operators shall pay annual fees assessed pursuant to Subsection F of 20.2.75.11 NMAC within [~~thirty (30)~~] 30 days of [~~receipt of an invoice~~] the date of the invoice [~~for annual fees for a permitted facility~~]. Failure to remit the full annual fee by this date shall subject the owner or operator to a late fee equal to fifty percent of the annual fee. The department shall provide to each owner or operator assessed a late fee pursuant to this Subsection notification, accompanied by an invoice for the late fee and unpaid annual fee balance. The owner or operator shall pay this invoice within 30 days of the date of the invoice. If the invoice is not timely paid, the late fee shall increase to one hundred percent of the annual fee and shall be due immediately without further notification from the department, along with the unpaid annual fee balance.

[~~G~~] **I.** All fees shall be paid in U.S. dollars.

J. Failure to remit the full annual fee, including any late fees, required by the due date specified in Subsection H of this Section is a violation of this Part and may subject the owner or operator to:

(1) civil penalties of up to $15,000 per day for each day of noncompliance as provided for in the Air Quality Control Act, Section 74-2-12.1 NMSA 1978; and

(2) the enforcement provisions of the Air Quality Control Act, Section 74-2-12 NMSA 1978, which includes the suspension or revocation of any permit.

K. Non-compliance with Chapter 2, Title 20 NMAC or the Air Quality Control Act subjects each owner or operator to administrative compliance costs for enforcement of Chapter 2, Title 20 NMAC.

[20.2.75.12 NMAC - Rp, [~~20 NMAC 2.75.111, 03/02/01~~] 20.2.75.12 NMAC, 6/1/2026]

20.2.75.13 PERIODIC REVIEW: The Department shall [~~prepare a review of the~~] review construction permit fees and construction permit program costs annually. The review shall include information on the budgets, expenditures, fund balance, and related projections. [~~The review shall be presented to the Board within six months following the end of the fiscal year.~~]

[20.2.75.13 NMAC - [~~N, 03/02/01~~] Rp, 20.2.75.13 NMAC, 6/1/2026]

20.2.75.14 SEVERABILITY: If any provision of this Part, or the application of this provision to any person or circumstance is held invalid, the remainder of this Part, or the application of this provision to any person or circumstance other than those as to which it is held invalid, shall not be affected thereby.

[20.2.75.14 NMAC - N, 6/1/2026]

HISTORY OF 20.2.75 NMAC:

Pre-NMAC History: The material in [~~the~~] this part was derived from that previously filed with the commission of public records - state records center and archives:

AQCR 700, Air Quality Control Regulation 700 - Filing and Permit Fees, filed 11/20/89.

History of Repealed Material:

20 NMAC 2.75, [~~Air Quality Statewide~~] Construction Permit Fees, filed 10/30/95, repealed effective 03/02/01[-] ; 20.2.75 NMAC, Construction Permit Fees, effective 03/02/01, repealed, effective 6/1/26.

Public Notices

This page lists public notices for rulemakings, permitting actions and any appeals of the action. Any rulemaking hearing or specific permitting or enforcement matter appealed to a board, commission or Environment Department Secretary is found on our Docketed Matters webpage once it is docketed.

Proposed Air Quality Regulations and Plans

Page Contents

The menu below provides rapid access to the latest information and updates on existing, proposed, new, and amended air quality regulations and New Mexico State Implementation Plan (SIP) additions and amendments. Please check this webpage periodically for updates.

Existing Regulations and Guidance

Compliance and Enforcement contains guidance on compliance with excess emissions reporting and ozone precursor rule (20.2.50 NMAC) requirements.
Regulations provides the existing air quality and environmental regulations.
Permitting Home Page contains information on policies and procedures for air quality permitting.

Proposed Changes to Air Quality Regulations and Plans

Proposed Changes to Emissions and Permit Fee Regulations (20.2.71 NMAC and 20.2.75 NMAC)
Proposed Incorporation by Reference of Federal NSPS, NESHAP and MACT Rules
Regional Haze Round 2 SIP and companion rule

Approved Changes to Air Quality Regulations and Plans

Carbon dioxide emission standards for coal-fired electric generating facilities
Dust Mitigation Plan/Fugitive Dust Rule
Good Neighbor SIP Certification for 2010 Nitrogen Dioxide NAAQS
Good Neighbor SIP Certification for 2015 Ozone NAAQS
Incorporation by Reference for NSPS, NESHAP & MACT Rules
Infrastructure SIP Certification for 2015 Ozone NAAQS
Motor Vehicle Emission Standards for New Vehicles (20.2.91 NMAC)
Municipal Solid Waste Landfills-NSPS & Emission Guidelines
Negative Declarations
Nonattainment Area Permit Amendments (20.2.79 NMAC)
Petroleum Processing Facility Regulation Repeal (20.2.37 NMAC)
Revisions to SIP for Startup, Shutdown & Maintenance
SO_2 Data Requirements Rule
Title V update (20.2.70 NMAC) to remove emergency provisions and update applicable requirements
Total Suspended Particulate Air Quality Standard Repeal
Recent EPA Approvals of Regulatory Changes and Plans

Current Proposed Changes to Air Quality Regulations and Plans

The following are summaries of proposed new air quality regulations and proposed amendments to existing regulations and the New Mexico State Implementation Plan (SIP). [return to top of page]

Proposed Changes to Emissions and Permit Fee Regulations (20.2.71 NMAC and 20.2.75 NMAC)

The New Mexico Environment Department (NMED) announces a new rulemaking to repeal and replace regulations setting emissions fees and permit fees for regulated sources of air pollutants. On December 3, 2025, NMED petitioned the Environmental Improvement Board (EIB) to repeal and replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*. The New Mexico Air Quality Control Act and the federal Clean Air Act require that NMED collect sufficient emissions and permits fees to cover the reasonable costs of NMED's Title V Permit Program and Construction Permit Program. NMED initiated this rulemaking to increase fees for both the Title V and Construction Permit Programs after determining the current fee structures are inadequate to sufficiently fund the direct and indirect operating costs of these programs. Replacing 20.2.71 NMAC and 20.2.75 NMAC is essential if NMED is to continue effectively implementing these mission critical programs.

Copies of the petition and accompanying exhibits, which include the proposed replacement rules, are provided below and are also available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To locate the documents, click on "Environmental Improvement Board" to display the list of matters before the Board, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the list of documents filed in conjunction with this matter. Copies can also be obtained by contacting Eric Peters, Control Strategies Manager, at eric.peters@env.nm.gov or (505) 629-5299, or at any of NMED's offices statewide.

Petition to Repeal and Replace 20.2.71 NMAC and 20.2.75 NMAC (EIB 25-77)
Statement of Reasons
Operating permit clean copy of proposal (20.2.71 NMAC)
Construction permit clean copy of proposal (20.2.75 NMAC)

NMED Exhibit 37_000008

Operating permit, current rule 20.2.71 NMAC with redline changes

Construction permit, current Rule 20.2.75 NMAC with redline changes

The EIB has scheduled a hearing in this matter beginning on March 23, 2026, and continuing through March 25, 2026, or as long as required to hear all testimony, evidence, and public comment. More information about the hearing, including how the public can participate by providing testimony or public comment, is provided in the EIB's public notice.

Public Notice – English

Aviso de Audiencia – Español

Current Update: January 7, 2026

NMED will hold a virtual public informational meeting on January 15, 2026, from 4-6 p.m. regarding its proposed changes to 20.2.71 NMAC and 20.2.75 NMAC. Department staff will provide an overview of the proposed changes to both rules, and there will be time for questions from stakeholders and the general public. Information about how to join this meeting online or by phone is now available on the NMED events calendar and is also provided below:

January 15, 2026 NMED Permit Fee Update Workshop (4 to 6 p.m. Mountain Standard Time) links to the online meeting about the proposed fee updates.

To join by phone: +1-415-665-0001

Meeting number (access code): 2631 042 3836

Meeting password: c2Bh53CsQjt

The presentation slides and a recording of the January 15, 2026, public informational meeting will be provided on this website after the meeting, and NMED will hold virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the proposed rules. Information about how to join this meeting online or by phone is now available on the NMED events calendar and is also provided below:

January 22, 2026 NMED Permit Fee Update Workshop (6 to 8 p.m. Mountain Standard Time) links to the online "office hours" meeting about the proposed fee updates.

To join by phone: +1-415-665-0001

Meeting number (access code): 2864 946 0710

Meeting password: TQuZMpfV735

If you require language interpretation services or have a disability and need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in either of these meetings, contact Eric Peters as soon as possible at eric.peters@env.nm.gov or (505) 629-5299. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice). For assistance joining either meeting online or by phone, contact Julianna Montoya at julianna.montoya@env.nm.gov or (505) 479-2910.

Previous Updates:

December 22, 2025 Update

At its regular meeting on December 19, 2025, the EIB scheduled a public hearing to consider repealing and replacing 20.2.71 NMAC and 20.2.75 NMAC. The hearing will begin on March 23, 2026, at 9:00 a.m., continuing through March 25, 2026, or as long as required to hear all testimony, evidence, and public comment. The EIB is expected to issue an order soon setting the hearing, appointing a hearing officer, and establishing certain pre-hearing deadlines. The order will be available in the docket for this matter once it has been issued. Instructions for accessing the docket are provided above. A link to the recording of the December 19, 2025, EIB meeting is provided below.

Environmental Improvement Board Monthly Meeting: December 19, 2025 is the recording of NMED's petition to the EIB for a hearing for the proposed updates to fees.

Upcoming Public Engagement

NMED will hold a virtual public informational meeting on January 15, 2026, from 4-6 p.m. Department staff will provide an overview of the proposed changes to both rules, and there will be time for questions from stakeholders and the general public. Links to the presentation slides and a recording of the meeting will be provided on this website after the meeting, and NMED will hold virtual "office hours" on January 22, 2026, from 6-8 p.m. to provide interested persons an additional opportunity to ask questions or provide feedback on the proposed rules. Information about how to join these meetings will be provided on this website at least 72 hours prior to each meeting, and on NMED's events calendar at https://www.env.nm.gov/events-calendar/. If you require language interpretation services or have a disability and need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in either of these meetings, contact Brian Polgar as soon as possible at brian.polgar@env.nm.gov or (505) 629-3466. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

To request a one-on-one meeting with the Department to discuss the proposed rules, contact Brian Polgar at brian.polgar@env.nm.gov or (505) 629-3466. NMED is also accepting written comments on the proposed rules via its online public comment portal at https://nmed.commentinput.com/?id=dM4UeKV73. Comments will be accepted for at least 30 days after notice of the proposed rulemaking is published in the New Mexico Register.

[return to top of page]

Proposed Incorporation by Reference of Federal NSPS, NESHAP and MACT Rules

NMED proposes the incorporation into the New Mexico Administrative Code (NMAC) several new or revised federal rules promulgated under 40 CFR Parts 60, 61 and 63 for which New Mexico has been delegated enforcement authority: Standards of Performance for New Stationary Sources; National Emission Standards for Hazardous Air Pollutants; and Maximum Achievable Control Technology for Hazardous Air Pollutants for Source Categories, respectively. These new or revised federal rules would be incorporated by reference into 20.2.77 NMAC – New Source Performance Standards (NSPS); 20.2.78 NMAC – Emission Standards for Hazardous Air Pollutants (NESHAP); and 20.2.82 NMAC – Maximum Achievable Control Technology for Source Categories of Hazardous Air Pollutants (MACT). The Department also requests that the Environmental Improvement Board remove the end date of incorporation in 20.2.77 and 20.2.78 NMAC to implement and enforce all previously adopted and all future NSPS and NESHAP requirements.

[return to top of page]

Recently Approved Changes to Air Quality Regulations and Plans

The following are summaries of recently approved changes to New Mexico air quality regulations and the New Mexico State Implementation Plan. These changes were approved by either the Environmental Improvement Board or U.S. EPA within the last two years. Please check this webpage periodically for updates.

[return to top of page]

Carbon dioxide emission standards for coal-fired electric generating facilities

The New Mexico Environmental Department (NMED) announces a new rulemaking to develop emission standards for new and existing electric generating facilities, 20.2.101 NMAC, Carbon Dioxide Emission Standards for Coal-Fired Electric Generating Facilities.

During the 2019 legislative session, Senate Bill 489 introduced the Energy Transition Act (ETA), which was later signed into law by Governor Michelle Lujan Grisham. The ETA sets statewide renewable energy standards and establishes a pathway for a low-carbon energy transition away from coal. The ETA requires the Environmental Improvement Board (EIB) to promulgate a rule that limits carbon dioxide emissions from certain electric generating facilities under their jurisdiction to 1,100 pounds per megawatt-hour on or after January 1, 2023. The EIB's jurisdiction does not include Bernalillo County or Tribal lands.

The New Mexico Environmental Improvement Board will hold a public hearing on October 26, 2022, to consider the NMED's proposed new rulemaking targeting carbon dioxide emissions from coal-fired electric generating facilities.

This webpage provides information regarding the rulemaking hearing and key documents. Please visit the Environmental Improvement Board website for further hearing information.

20.2.101 NMAC draft rule contains the proposed regulatory language.
Energy transition Act Document describes the basis for the new rulemaking.
AQB Overview and Rulemaking describes the AQB and its approach to making rules.
Environmental Groups' Comment document compiles comments received on initial proposals.
Notice of rulemaking hearing to consider adoption of proposed 20.2.101 NMAC – carbon dioxide emission standards for coal-fired electric generating facilities, EIB 22-28 (R)
Aviso de audiencia de reglamentación para considerar la adopción de la propuesta 20.2.101 NMAC – normas de emisiones de dióxido de carbono para instalaciones generadoras de electricidad a base de carbón, EIB 22-28 (R)

Dust Mitigation Plan and Fugitive Dust Rule

On September 16, 2016, the Administrator for the U.S. Environmental Protection Agency (EPA) signed revisions to the Exceptional Events Rule with the final rule published in the Federal Register on October 3, 2016. The federal Clean Air Act (Section 319(b)(3)(A)) identifies five guiding principles for developing implementing regulations of exceptional events:

Protection of public health is the highest priority;
All ambient air quality data should be included in a timely manner in an appropriate federal air quality database that is accessible to the public;
Timely information should be provided to the public in any case in which the air quality is unhealthy;
Each state must take necessary measures to safeguard public health regardless of the source of the air pollution; and
Air quality data should be carefully screened to ensure that events not likely to recur are represented accurately in all monitoring data and analyses.
Section V of the preamble to the final rule (81 FR 68270) addresses mitigation and requires the development of mitigation plans in areas with "historically documented" or "known seasonal" exceptional events. These events must be of the same type and pollutant (i.e., high wind dust/PM10) and recur annually or seasonally. Doña Ana and Luna Counties in southern New Mexico were identified by EPA as areas required to be covered by mitigation plans. NMED developed a single mitigation plan for the two counties and a copy may be found below.

Dust Mitigation Plan for Doña Ana and Luna Counties

NMED developed a fugitive dust rule in conjunction with the mitigation plan to detail mandatory measures to abate certain controllable sources in Doña Ana and Luna Counties. A public hearing was held on September 28, 2018 in Las Cruces and the board adopted the rule on October 26, 2018. Copies of the final rule, hearing transcripts and statement of reasons to adopt the rule are provided below.

20.2.23 NMAC, *Fugitive Dust Control*, (Applicable in Doña Ana and Luna Counties only)
Hearing Transcript
Deliberations Transcript
Transmittal Form and Statement of Reasons to Adopt
For questions related to the dust mitigation plan or fugitive dust rule, please contact Armando Paz at (575) 629-3242 or armando.paz@state.nm.us. To stay up to date on the progress of this regulatory action, please visit our website, www.env.nm.gov/air-quality/ and sign up for the Regulatory and SIP or Border Air Quality listserv bulletins.

Good Neighbor State Implementation Plan Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announces an opportunity to comment on and request a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2010 Nitrogen Dioxide National Ambient Air Quality Standard (NAAQS). The proposed Good Neighbor SIP Certification addresses Clean Air Act (CAA) Section 110(a)(2)(D)(i)(I), to confirm to the U.S. Environmental Protection Agency (EPA) that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2010 Nitrogen Dioxide NAAQS and fulfills its "good neighbor" obligations under the CAA.

All comments or requests for a public hearing must be received by May 17, 2021.* If a request for a public hearing is received during the 30-day public comment period, a hearing date, time and location will be announced at a later date.

Good Neighbor State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) announced a public hearing on New Mexico's proposed Good Neighbor State Implementation Plan (SIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS). The purpose of the hearing was to consider the matter of EIB 21-05 to certify that New Mexico has an adequate, federally-approved SIP that addresses CAA Section 110(a)(2)(D)(i) regarding interstate transport of air pollution in this submittal. The proposed certification confirmed to the U.S. Environmental Protection Agency ("EPA") that the State of New Mexico has the required "infrastructure" in place under the current SIP to implement, maintain, and enforce the revised 2015 Ozone NAAQS and fulfills its "good neighbor" obligations under the CAA.

Incorporation by Reference of federal NSPS, NESHAP and MACT rules

A public hearing was held November 17, 2023 where the Environmental Improvement Board unanimously approved amendments to the dates of incorporation by reference contained in 20.2.77 NMAC (New Source Performance Standards), 20.2.78 NMAC (Emission Standards for Hazardous Air Pollutants), and 20.2.82 NMAC (Maximum Achievable Control Technology Standards for Source Categories of Hazardous Air Pollutants). The previous update for Parts 77, 78 and 82 was January 15, 2017. Since the most recent date of incorporation, there have been 119 changes to various federal New Source Performance Standards, Emission Standards for Hazardous Air Pollutants, and Maximum Achievable Control Technology Standards. Adoption of the incorporation by reference amendments changes the "through date" in Parts 77, 78 and 82 that reference the final rulings made at the federal level through June 28, 2023.

New Mexico Environmental Improvement Board Notice of Rulemaking Hearing_on 2023-11-17 is the announcement for the incorporation by reference rule.

Junta de Mejora Ambiental de Nuevo México Aviso de Audiencia de Reglamentación is the Spanish version of the announcement for the incorporation by reference rule.

Notice of Public Meeting NM EIB 2023-11-17 is the meeting notice that includes the links to join the meeting online.

Notice of Intent 23-52(R) is the NMED notice of intent to present technical testimony for the incorporation by reference rule.

Infrastructure State Implementation Plan Certification for the 2015 Ozone National Ambient Air Quality Standard

The New Mexico Environment Department (NMED) submitted New Mexico's proposed Infrastructure State Implementation Plan (iSIP) Certification for the 2015 ozone National Ambient Air Quality Standard (NAAQS) to the EPA on November 16, 2018. The iSIP certification addresses elements of a Clean Air Act (CAA) Section 110(a)(2), to confirm to the EPA that the State of New Mexico has the required "infrastructure" to implement, maintain, and enforce the 2015 ozone NAAQS, promulgated on October 1, 2015 (80 FR 65291, October 26, 2015).

This certification does not address CAA Section 110(a)(2)(D)(i)(I), which prohibits emissions from New Mexico that significantly contribute to nonattainment or interfere with maintenance of a NAAQS in a downwind state. This section is often referred to as the "Good Neighbor Provision" and will be addressed in a future submission to EPA.

Municipal Solid Waste Landfills – New Source Performance Standards and Emission Guidelines

In August 2016, EPA issued revised standards for both new and existing municipal solid waste landfills (MSWLs). The New Source Performance Standards at 40 CFR 60 Subpart XXX apply to landfills constructed or modified after July 17, 2014. The Emission Guidelines at 40 CFR 60 Subpart Cf apply to landfills constructed or modified on or prior to this date. Both of these federal rules aim to reduce landfill gas emissions. The New Source Performance Standard were incorporated by reference into the New Mexico Administrative Code (NMAC) on April 28, 2017.

Subpart Cf, promulgated under Section 111(d) of the Clean Air Act, requires that states, tribes and local authorities with jurisdiction over existing landfills develop a plan to implement the emission guidelines. One aspect of that state plan, for New Mexico, is the amendment of 20.2.64 NMAC – *Municipal Solid Waste Landfills* (Part 64).

On April 28, 2017, the Environmental Improvement Board unanimously approved the adoption of the State Plan implementing the emission guidelines and the repeal and replacement of Part 64.

Public Notice in English and Spanish
Petition for Hearing EIB 16-06 (R)
Original Plan Hearing Record (1996)
Notice of Intent to present technical testimony – filed 4/7/17
Exhibits 1-3: Witness resumes
Exhibit 4: Written testimony (Hollenberg)

Exhibits 6 , 9 and 10: Proposed Part 64 Revisions
Exhibits 7 and 8: Subpart Cf and Guidance Doc excerpts
Exhibit 12: EPA Letter re Increments of Progress
Exhibits 13 and 15 – 23: NMED Outreach Efforts
Exhibits 14, 25 and 26: Industry comments and NMED response
Exhibits 24 and 27: Small Business RAC letter and response
Exhibit 28: Proposed Order and Statement of Reasons
EIB 16-06 (R) Order and Statement of Reasons 05022017
FR – MSW Landfill 11 Sept 2019

NMED submitted the approved State Plan implementing the Emission Guidelines in early May, 2017. On May 31, 2017, the EPA issued a 90-day stay on both the NSPS and EGs. This 90-day stay expired on August 29, 2017. Therefore, the 2016 federal rules are currently in effect. However, EPA is reconsidering several issues in these final rules. EPA does "not plan to prioritize" the review of submitted state plans and issuance of a Federal Plan for states that failed to submit a state plan. For more information on these rules and rule history, visit EPA's web page for landfills.

Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning the State Plan development. For questions regarding implementation of the emission guidelines, contact EPA Region 6 (Boyce.Kenneth@epa.gov).

[return to top of page]

Negative Declarations

Negative Declarations may be submitted to the U.S. EPA when Emissions Guidelines are finalized for existing sources. Emissions Guidelines require States, Tribes and Local Agencies to develop plans to implement the guidelines (rules) for sources within their jurisdictions that meet the applicability criteria. When a State, Tribe or Local Agency does not have an applicable source covered by the rule, a letter to U.S. EPA stating such may be submitted in lieu of an implementing plan. This is termed a "Negative Declaration."

On June 27, 2018, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declarationfor Commercial/Industrial Solid Waste Incinerators (CISWI) to EPA. (effective December 16, 2020) 85 FR 72967

On February 11, 2014, NMED submitted a Negative Declaration for Hospital Medical Infectious Waste Incinerators (HMIWI) to EPA. (effective April 1, 2021) 86 FR 12109

On October 11, 2007, NMED submitted a Negative Declaration, which was clarified and reaffirmed in a June 15, 2020 Negative Declaration, for Other Solid Waste Incinerators (OSWI) to EPA. (effective May 5, 2021) 86 FR 17543.

Please contact Neal Butt at (505) 629-2972 or neal.butt@state.nm.us if you have questions or comments concerning Negative Declarations.

[return to top of page]

Nonattainment Area Permit Amendments (20.2.79 NMAC)

The Air Quality Bureau (AQB) of the New Mexico Environment Department (Department) intends to propose to the Environmental Improvement Board (EIB), amendments to 20.2.79 NMAC, *Permits – Nonattainment Areas* ("Part 79"), to make technical and administrative corrections to the rule. Part 79 specifies permitting requirements for any new major stationary source or major modification of an existing source located within a designated nonattainment area; or located within an area designated attainment or unclassifiable and will emit a regulated pollutant that significantly impacts a nonattainment area for the same pollutant.

The U.S. Environmental Protection Agency (EPA) designated a part of Doña Ana County near the Sunland Park area as a marginal nonattainment area for the 2015 ozone National Ambient Air Quality Standard ("2015 O_3 NAAQS") on August 3, 2018, requiring the AQB to develop a State Implementation Plan ("SIP") revision that includes a nonattainment permitting rule (i.e., Part 79) and submit it to EPA by August 3, 2021.

In December 2018, EPA promulgated the 2015 O_3 NAAQS implementation rule, which specifies nonattainment area SIP requirements. This final rule, referred to as the 2015 O_3 SIP Requirements Rule ("2015 O_3 SRR"), is largely an update to the previous implementing regulations promulgated for the 2008 O_3 NAAQS, and does not contain significant revisions from that previous rule.

The 2015 O_3 SRR addresses a range of nonattainment area SIP requirements New Mexico must meet for implementation of the 2015 O_3 NAAQS, including transportation conformity, nonattainment new source review ("NNSR"), emissions inventories, and emissions statement deadlines for SIP submissions and compliance with emission control measures in the SIP.

Pursuant to the 2015 O_3 SRR, NMED submitted a baseline Emissions Inventory and Emissions Statement to EPA by the specified deadline of August 3, 2020. For more information see /air-quality/dona-ana-2/

As part of the effort to comply with the 2015 O_3 SRR, the AQB analyzed Part 79 to determine if it was adequate to implement and enforce the standard. The AQB compared Part 79 with 40 CFR 51.165, *Permit Requirements*, and identified cross-reference inconsistencies and typographical errors that are addressed in the proposed revision.

Documents related to the proposed draft amendments to Part 79 are provided below.

All comments must be received by 5:00 PM MDT on May 21, 2021 in order for NMED to include a response in the hearing record. Anyone may present technical testimony, non-technical testimony or provide written or oral comments at the hearing. Please see the public hearing notice below for detailed instructions for participation.

Petroleum Processing Facility Regulation Repeal (20.2.37 NMAC)

At a public hearing held August 12, 2016, the Environmental Improvement Board unanimously approved the repeal of 20.2.37 NMAC. Part 37 was adopted in 1974
and specifies emissions limits and other operating requirements for existing (constructed prior to July 1, 1974) and new petroleum refineries and natural gas processing facilities. This rule regulates emissions from several processes associated with petroleum processing facilities and has not been substantially revised since 1984. The rule was identified in the November 2012 Improving Environmental Permitting Report for potential revision or repeal. The Air Quality Bureau has conducted a thorough analysis of the rule as well as other similar federal rules that apply to this industry, and has concluded that the rule can be repealed without a relaxation of emissions controls or an adverse effect on air quality

Revisions to the New Mexico State Implementation Plan Regarding Startup, Shutdown and Malfunctions

A public hearing, held September 9, 2016, approved revisions to the State Implementation Plan (SIP) for New Mexico. The SIP revisions are in response to a final action issued by the U.S. Environmental Protection Agency (EPA). On June 12, 2015, the EPA published its final action to ensure states have plans in place that are fully consistent with the Clean Air Act and recent court decisions concerning startup, shutdown and malfunction (SSM) operations.

In response to this final action, the New Mexico Environment Department Air Quality Bureau proposed revisions to the State Implementation Plan (SIP). These SIP revisions entail removing applicable sections of 20.2.7 NMAC – Excess Emissions during Malfunction, Startup, Shutdown, or Scheduled Maintenance from the SIP. The proposal was unanimously approved by the Environmental Improvement Board on September 9, 2016.

SO_2 Data Requirements Rule (SO_2 DRR) – Implementation of the 2010 1-hour Sulfur Dioxide Primary National Ambient Air Quality Standard

The U.S. EPA requires each State to supply information regarding sources that emit greater than 2,000 tons per year of sulfur dioxide in order to determine compliance with the 2010 1-hour primary standard. The schedule of required information includes:

January 15, 2016 – List of Sources – Sulfur dioxide states include for applicability to the Data Requirements Rule
July 1, 2016 – Approach – Air Quality Characterization – Sulfur dioxide (modeling or monitoring) for determining whether the source does or does not violate the standard
December 2016 – Revised Protocol
January 1, 2017 – Installation of monitors (if monitoring is the approach chosen)
January 13, 2017 – Final Modeling (actual emissions)

August 2017 – EPA SO_2 Disagreements Document

December 20, 2017 – EPA Attainment Designation for New Mexico (Round 3)
The Round 4 2010 SO_2 NAAQS Designations action was signed by the EPA Administrator, Andrew Wheeler, on December 21, 2020, pursuant to a court-ordered deadline of December 31, 2020. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, Acting Administrator Jane Nishida re-signed the same action on March 10, 2021 for publication in the *Federal Register*. Attainment/nonattainment designations for New Mexico were completed in December 2017. For more information on the 2010 SO_2 NAAQS and the Round 3 area designations, visit EPA's Round 3 2010 SO_2 NAAQS Designations webpage.

In accordance with the ongoing requirements in the federal rule, NMED must submit annual reports of the San Juan Generating Station's SO_2 emissions by July 1st of each year following designation. The purpose of this report is to analyze whether or not new modeling is required for areas that employed modeling of actual emissions for characterization. The fourth annual report for San Juan Generating Station (SJGS) is now available for review and public comment before submission to EPA. The report shows that SO_2 emissions continue to decrease from the modeling years of 2013-2015. 2018 emissions decreased significantly because two units were shut down in December 2017. The 2020 one-hour average and the one-hour maximum SO2 emissions showed decreases over the 2019 emissions. The three-year average for 2018-2020 showed decreased emissions when compared to the modeled three-year average for 2013-2015. Also, the annual maxima for 2018-2020 as well as the 99th percentile of 1-hour maxima for 2018-2020 significantly decreased from the modeled years of 2013-2015. Therefore, NMED recommends that new modeling should not be required at this time.

Draft 2022 Annual Report, SO2 Emissions for San Juan Generating Station – 5/6/2022
Draft 2021 Annual Report SO_2 DRR Report – SO_2 Emissions for SJGS – 5/11/2021

Title V update (20.2.70 NMAC) to remove emergency provisions and update applicable requirements

EPA required emergency provisions to be removed from the Title V operating program. During this update, NMED also aligned "applicable requirements" more closely with the EPA language for these requirements.

2025-08-20-EIB-25-10-Final-Order-and-SOR-pj.pdf documents the EIB's final order and statement of reasons for the proposed repeal and replacement of 20.2.70 NMAC.
2025-08-17_EPD_AQB_-_EPA_Transmittal_Letter_TV_Program_Revision.pdf is a transmittal letter to EPA notifying that EIB has adopted amendments to 20.2.70 NMAC, Operating Permits, and that AQB is requesting a revision to its Title V Program.
07-18-2025-PROPOSED-REPEAL-OF-20.2.70-NMAC_cond_N_CERTIFIED-TRANSCRIPT-blue.pdf certified transcript of the EIB hearing No. 25-10 (R).
2025-6-27-EIB-25-10-Entry-of-Appearance-pj.pdf documents proof of entry of appearance by Jeremy Nichols representing the Center for Biological Diversity.
2025-06-18-EIB-25-10-HO-Appt-pj.pdf documents the EIB hearing schedule on petition and hearing officer appointment.
2025-06-11-EIB-25-10-R-Maxwell-EOA-pj.pdf documents proof of entry of appearance by Nicholas Maxwell.
20.2.70-new-rule.pdf documents the NMAC transmittal form to the New Mexico State Records Center regarding the proposed new rule for 20.2.70 NMAC.
20.2.70-repeal.pdf documents the NMAC transmittal form to the New Mexico State Records Center regarding the repeal and replacement of 20.2.70 NMAC.
NMED NOI to Present Technical Testimony documents the notice of intent before EIB to repeal and replace 20.2.70 NMAC – Operating permits and Title V program revision.
NMED Petition to Repeal and Replace 20.2.70 NMAC documents the petition filed before EIB to repeal and replace 20.2.70 NMAC – Operating permits and Title V program revision.
70.2.70 NMAC Stakeholder Review Draft identifies the proposed changes to 20.2.70 NMAC.

Total Suspended Particulate NM Ambient Air Quality Standard Repeal

The Improving Environmental Permitting Initial Report recommended that the Air Quality Bureau consider the NM Ambient Air Quality Standards (NMAAQS) for Total Suspended Particulate (TSP) for repeal.

The NM standards were adopted in 1969, prior to the adoption of the National Ambient Air Quality Standards (NAAQS) in 1971. The U.S. Environmental Protection Agency (EPA) revised its standards in 1987, replacing TSP with particulate matter less than 10 microns (PM_{10}). The NM TSP standards were retained, to protect the public from soiling and nuisance effects of larger particulates (dust).

The Air Quality Bureau studied the issue and determined that a repeal of the TSP standards will not cause a deterioration in air quality; the current federal air quality standards for PM_{10} and $PM_{2.5}$ are protective of public health. A repeal also eased the permitting burden for regulated sources and the Air Quality Bureau. A hearing was scheduled for September 28, 2018 in Las Cruces.

Public Notice of Rulemaking Hearing: Repeal of TSP Standard (English and Spanish)
In part to address soiling and nuisance effects of windblown dust, the Air Quality Bureau developed a dust mitigation plan and associated fugitive dust rule that applies in areas that are in danger of violating the PM_{10} NAAQS. (See *"Dust Mitigation Plan and Fugitive Dust Rule"* above.)

On September 28, 2018, the Environmental Improvement Board (EIB) held a public hearing in Las Cruces, NM to consider the proposed repeal of the NM Ambient Air Quality Standard for TSP contained in Section 109 of 20.2.3 NMAC. The EIB unanimously approved the proposal at its October 26, 2018 meeting in Santa Fe. The effective date of the repealed standard was November 30, 2018.

The "Notice if Intent for 18-04 (R)" includes written testimony, proposed rule amendments, a noninterference demonstration under CAA 110(l), and copies of public notices and affidavits of publication.

Environmental Improvement Board

Boards and Commissions
Clean Transportation Fuel Standards (CTFS) Advisory Committee
Docketed Matters
Environmental Improvement Board
Medical Imaging And Radiation Therapy Advisory Council
Occupational Health & Safety Review Commission
Radiation Technical Advisory Council
Storage Tank Committee
Utility Operators Certification Advisory Board
Wastewater Technical Advisory Committee
Water Quality Control Commission

The Environmental Improvement Board (EIB) was established under NMSA 1978, Section 74-1-4 (Board creation and organization). The EIB must adopt and promulgate nearly all regulations administered by the Department before they are implemented, with the exception for ground and surface water regulations, which are adopted by the Water Quality Control Commission. The Board also hears appeals of air quality permits issued by the Department. Pursuant to NMSA 1978, Section 74-1-8, the EIB is responsible for environmental management and consumer protection and must promulgate rules and standards in the following areas:

1. food protection;
2. water supply;
3. liquid waste;
4. air quality management;
5. radiation control;
6. noise control;
7. nuisance abatement;
8. vector control;
9. occupational health and safety;
10. sanitation of public swimming pools and public baths;
11. plumbing, drainage, ventilation and sanitation of public buildings in the interest of public health;
12. medical radiation, health and safety certification and standards for radiologic technologists;
13. hazardous wastes and underground storage tanks; and
14. solid waste.

The EIB consists of seven members appointed by the governor and confirmed by the state senate. The members of the Board are appointed for overlapping terms, with no term exceeding five years. No more than four members shall be appointed from any political party. A majority of the membership of the Board must be individuals who represent the public interest and do not derive any significant portion of their income from persons subject to or who appear before the Board on issues related to the federal Clean Air Act or the Air Quality Control Act. Any vacancy occurring in the membership of the Board is filled by appointment by the governor for the unexpired term.

The EIB meets on the fourth Friday of the month, unless there is no pending business. Current members and their term are:

1. Bitzer, J. Barry, term expiring March 22, 2025
2. Carrasco, Guadalupe, term expiring February 19, 2026.
3. Curry, Ronald, term expiring February 19, 2026.
4. Ely, Sandra, term expiring March 22, 2025.
5. Garcia, Karen, term expiring January 1, 2025.
6. Honker, William, term expiring June 30, 2025.
7. Sulna, Phoebe, Board Chair, term expiring January 1, 2025.
8. Vacant

Board Counsel: Eduardo Ugarte, II, NM Department of Justice

Upcoming EIB meetings and associated materials are found on the NMED Events Calendar. Past EIB meeting materials are available on the archived version of our previous website. Meeting recordings are available on the NMED YouTube channel.

Proposed Rule Name:
Proposed Repeal and Replacement of 20.2.71 and 20.2.75 NMAC, EIB 25-77 (R)

Agency:
Environment Department

Purpose:
The purpose of the hearing is to consider the matter of EIB 25-77(R), proposed repeal and replacement of the Air Quality Control Regulations codified in the New Mexico Administrative Code (NMAC) at 20.2.71 NMAC (Operating Permit Emissions Fees) and 20.2.75 NMAC (Construction Permit Fees). The proponent of these regulatory repeals and replacements is the New Mexico Environment Department ("NMED"). The purpose of the public hearing is to consider and take possible action on a petition from the NMED to repeal and replace 20.2.71 NMAC and 20.2.75 NMAC that would allow the NMED to recoup the reasonable costs of operating the NMED's Air Quality Bureau programs as required by the federal Clean Air Act and New Mexico Air Quality Control Act, respectively. The Environmental Improvement Act, Section 74-1-8(A)(4) NMSA 1978 and the Air Quality Control Act, Section 74-2-5 NMSA 1978 specifically authorize the Environmental Improvement Board to adopt rules that are necessary for air quality management as provided in the Air Quality Control Act.

Summary:
On March 23, 2026, the Environmental Improvement Board will hold a public hearing, EIB 25-77(R), to consider the New Mexico Environment Department's proposal to repeal and replace 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees which can be viewed at **https://www.env.nm.gov/air-quality/proposed-regs/ (https://www.env.nm.gov/air-quality/proposed-regs/)**.

How to submit Comments:
PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at **https://nmed.commentinput.com/?id=t8BRr4m76 (https://nmed.commentinput.com/?id=t8BRr4m76)**, email the written public comment to **pamela.jones@env.nm.gov (mailto:pamela.jones@env.nm.gov)**, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

When are comments due:
3/25/2026 5:00 PM

Hearing Date:
3/23/2026 9:00 AM

Public Hearing Location:
NM State Capitol Building, Room 321
490 Old Santa Fe Trail
Santa Fe, New Mexico 87505
(alternatively 411 S. State Capital Street) 3/23/2026 (9:00 AM -5:00 PM)

How to participate:
PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony. Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person

Last Updated Date
1/13/2026 11:37 AM

intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.
ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public

to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

NOTICE OF NON-DISCRIMINATION: NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 CFR Parts 5 and 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, you may contact: Kate Cardenas, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, New Mexico 87502, (505) 827-2855, nd.coordinator@env.nm.gov. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE EMISIONES DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Permiso de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto a la Petición del NMED en la que solicita a la EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación, y 20.2.75 NMAC, Cuotas de Permiso de Construcción. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en https://www.env.nm.gov/opf/docketed-matters/. Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – Cuotas de Emisiones de Operación y 20.2.75 NMAC – Cuotas de Permiso de Construcción" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de conformidad con la Ley de Mejora Ambiental, Sección 74-1-8(A)(4), y la Ley de Control de la Calidad del Aire, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones de la Sección 502(b)(3) de las enmiendas de 1990 a la Ley Federal de Aire Limpio, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase Ley de Control de la Calidad del Aire, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, Permisos de Operación. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro ("PM10") y materia particulada de 2.5

micrómetros o menos de diámetro ("PM2.5") y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota; establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos ("EPA" por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, Permisos de Construcción, y 20.2.73 NMAC, Requisitos de Aviso de Intención e Inventario de Emisiones. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, Procedimientos de Reglamentación – Junta de Mejora Ambiental; la Ley de Mejora Ambiental, NMSA 1978, Sección 74-1-9; la Ley de Control de Calidad del Aire, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. "Testimonio técnico" se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. "Público en general" incluye a cualquier persona que asista a una audiencia y no haya presentado un aviso de intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS: El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en https://nmed.commentinput.com/?id=t8BRr4m76, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, en su forma enmendada; la Sección 504 de la Ley de Rehabilitación de 1973; la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas a la Educación de 1972 y la Sección 13 de las Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – *Operating Permit Emissions Fees* and 20.2.75 NMAC – *Construction Permit Fees*. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, *Operating Permit Emissions Fees*, and 20.2.75 NMAC, *Construction Permit Fees*. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71

NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – *Operating Permit Emissions Fees* and 20.2.75 NMAC – *Construction Permit Fees*" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the *Environmental Improvement Act*, Section 74-1-8(A)(4), and the *Air Quality Control Act*, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal *Clean Air Act*, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See *Air Quality Control Act*, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See *Air Quality Control Act*, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, *Operating Permits*. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical

reviews of existing construction permits under 20.2.72 NMAC, *Construction Permits*, and 20.2.73 NMAC, *Notice of Intent and Emissions Inventory Requirements*. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, *Rulemaking Procedures – Environmental Improvement Board*; the *Environmental Improvement Act*, NMSA 1978, Section 74-1-9; the *Air Quality Control Act*, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.

Any member of the general public may testify at the hearing. Any person who provides testimony at the hearing is subject to cross-examination on the subject matter of his or her testimony and matters affecting his or her credibility. Any person attending the hearing is entitled to conduct such cross-examination as may be required for a full and true disclosure of matters at issue in the hearing. All testimony will be taken under oath or affirmation which may be accomplished in mass or individually.

TECHNICAL TESTIMONY: Any person who wishes to present technical testimony at the hearing must file a written notice of intent with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025), available on NMED's docketed matters website, and shall be a party. The notice of intent shall: (1) identify the person for whom the witness(es) will testify; (2) identify each technical witness the person intends to present and state the qualifications of that witness, including a

description of their educational and work background; (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present; (4) include a copy of the direct testimony of each technical witness in narrative form; (5) include the text of any recommended modifications to the proposed regulatory change; and (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules. Any person who files a notice of intent shall serve a copy on NMED.

ENTRY OF APPEARANCE: Any person may file an entry of appearance as a party. The entry of appearance shall be filed with the EIB Administrator no later than February 20, 2026, in accordance with the EIB's Order Scheduling Hearing, Appointing Hearing Officer and Setting Certain Filing Dates (issued December 23, 2025).

PUBLIC COMMENT: The general public may submit a written public comment or testify orally at the hearing. A member of the general public who wishes to submit a written public comment as a statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Those wishing to submit a written public comment prior to the hearing may submit the written public comment online at https://nmed.commentinput.com/?id=t8BRr4m76, email the written public comment to pamela.jones@env.nm.gov, or mail the written public comment to EIB Administrator, New Mexico Environment Department – Harold Runnels Building, P.O. Box 5469, Santa Fe, New Mexico 87502. Additionally, there will be an opportunity each day of the hearing for oral testimony from members of the general public. No prior notification is required for the general public to present non-technical testimony at the hearing. The general public may also offer non-technical exhibits in connection with their written public comment or oral testimony, so long as the exhibits are not unduly repetitious of the testimony and comply with 20.1.1.402 NMAC. The appointed hearing officer shall determine the process and times for the general public to testify during the hearing.

ACCESSIBILITY: Persons requiring language interpretation services or having a disability who need a reader, amplifier, qualified sign language interpreter, or any other form of auxiliary aid or service to attend or participate in the hearing should contact the EIB Administrator at least 14 days prior to the hearing or as soon as possible at (505) 660-4305 or pamela.jones@env.nm.gov. To access this number via Relay New Mexico dial 711, or call (800) 659-8331 (TTY) or (800) 659-1779 (voice).

For additional information concerning this bulletin, please contact Brian Polgar, Planning Section Chief, at brian.polgar@env.nm.gov or (505) 629-3466.

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-

discrimination requirements implemented by 40 C.F.R. Parts 5 & 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kate Cardenas, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@env.nm.gov. You may also visit our website at https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

JUNTA DE MEJORA AMBIENTAL DE NUEVO MÉXICO AVISO DE AUDIENCIA DE REGLAMENTACIÓN PARA CONSIDERAR LA PROPUESTA DE DEROGACIÓN Y SUSTITUCIÓN DE 20.2.71 NMAC – CUOTAS DE EMISIONES DE PERMISO DE OPERACIÓN Y 20.2.75 NMAC – CUOTAS DE PERMISO DE CONSTRUCCIÓN, EIB 25-77 (R)

La Junta de Mejora Ambiental de Nuevo México ("EIB" por sus siglas en inglés) llevará a cabo una audiencia pública que comenzará el 23 de Marzo de 2026 a las 9:00a.m. para considerar la EIB 25-77 (R) – En el asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – *Cuotas de Emisiones de Permiso de Operación* y 20.2.75 NMAC – *Cuotas de Permiso de Construcción*. La audiencia durará el tiempo que sea necesario para escuchar todos los testimonios, pruebas y comentarios públicos, y se espera que dure aproximadamente tres días. La EIB puede deliberar y podrá tomar una decisión sobre los cambios regulatorios propuestos al concluir la audiencia o puede convocar a una reunión después de la audiencia para considerar medidas sobre la propuesta.

La audiencia se llevará a cabo en un formato híbrido para permitir la participación tanto en persona como virtual. El componente presencial se llevará a cabo en la capital del estado de Nuevo México, 490 Old Santa Fe Trail (alternativamente 411 S. State Capital Street), Sante Fe, Nuevo México 87501. Detalles de la audiencia, incluyendo el numero de la sala de reuniones y cómo participar de forma virtual, estarán disponibles en el Departamento de Medio Ambiente de Nuevo México ("NMED" por sus siglas en inglés) calendario de eventos en https://www.env.nm.gov/events-calendar/, debajo de la entrada del calendario correspondiente a la fecha de inicio de la audiencia. Para más información, comuníquese con la administradora de la EIB llamando al (505) 660-4305 o en pamela.jones@env.nm.gov.

El propósito de la audiencia es que la EIB considere y tome las medidas necesarias respecto

a la Petición del NMED en la que solicita a la *EIB la derogación y sustitución 20.2.71 NMAC, Cuotas de Emisiones de Permiso de Operación*, y 20.2.75 NMAC, *Cuotas de Permiso de Construcción*. La petición, declaración de motivos (adjunto a la petición como Anexo A), normas de reemplazo propuestas 20.2.71 NMAC y 20.2.75 NMAC (adjunto a la petición como Anexos B y C), y las reglas actuales 20.2.71 NMAC 20.2.75 NMAC con los cambios propuestos mostrados en rojo (adjunto a la petición como Anexos D y E) están disponibles en el sito web de asuntos archivados de NMED en https://www.env.nm.gov/opf/docketed-matters/. Para acceder a estos documentos, haga clic en "Junta de Mejora Ambiental" para mostrar la lista desplegable de asuntos ante el EIB, después haga clic en "EIB 25-77 (R): En El Asunto de la Propuesta de Derogación y Sustitución de 20.2.71 NMAC – *Cuotas de Emisiones de Operación* y 20.2.75 NMAC – *Cuotas de Permiso de Construcción*" para mostrar la lista desplegable de todos los documentos presentados en relación con este asunto. Copias de la petición, declaración de motivos, las normas de sustitución también se pueden obtener contactando Eric Peters al (505) 629-5299 o eric.peters@env.nm.gov, o en todas las oficinas del NMED en todo el estado.

El propósito de las reglas de sustitución 20.2.71 NMAC y 20.2.75 NMAC es para asegurar que las emisiones y las cuotas de permiso de construcción del NMED son suficiente para cubrir los costos razonables del Programa de Permisos de Operación Titulo V y del Programa de Permisos de Construcción de NMED. La EIB está autorizada a adoptar las normas propuestas de conformidad con la *Ley de Mejora Ambiental*, Sección 74-1-8(A)(4), y la *Ley de Control de la Calidad del Aire*, NMSA 1978, Secciones 74-2-1 a 17. El horario de cuotas por emisiones de los permisos de operación del Titulo V debe ser coherente con las disposiciones de la Sección 502(b)(3) de las enmiendas de 1990 a la *Ley Federal de Aire Limpio*, esto exige que las fuentes que requieren un permiso de operación paguen cuotas suficientes para cubrir todos los costos directos e indirectos razonables del desarrollo y la administración del programa estatal de permisos de operación conforme al Titulo V. Véase *Ley de Control de la Calidad del Aire*, NMSA 1978, Sección 74-2-7 (B)(7). El horario de las cuotas de permiso de construcción debe ser suficientes para cubrir los costos razonables de revisión y tramitación de cualquier solicitud de dicho permiso, así como la implementación y el cumplimiento de los términos y condiciones del permiso, excluyendo los gastos judiciales u otros gastos asociados a una acción coercitiva. Véase *Ley de Control de la Calidad del Aire*, NMSA 1978, Sección 74-2-7(B)(6).

20.2.71 NMAC establece un horario de cuotas por emisiones para las fuentes que deben obtener un permiso de conformidad con el Titulo V, según lo estipulado en la norma 20.2.70 de NMAC, *Permisos de Operación*. El horario especifica la cuota anual por emisiones para cada contaminante sujeto a pago, expresada en dólares por tonelada de emisiones permitidas. La regla de sustitución 20.2.71 NMAC revisa la definición actual de contaminante sujeto a cuota, agregando materia particulada de 10 micrómetros o menos de diámetro ("PM10") y materia particulada de 2.5 micrómetros o menos de diámetro ("PM2.5") y eliminando mercurio y partículas totales en suspensión; reduce las toneladas máximas utilizadas en el cálculo de la cuota para cada contaminante sujeto a cuota;

establece que se cobrará una cuota por PM10 o PM2.5, no ambas, dependiendo de cuál tenga la mayor tasa de emisión permitida; aumenta el monto en dólares por tonelada utilizado en el cálculo de la cuota para cada contaminante sujeto a cuota; establece una cuota por pago tardío por no pagar oportunamente las cuotas anuales de emisión; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.71 NMAC se presentará a la Agencia de Protección Ambiental de los Estados Unidos ("EPA" por sus siglas en inglés) como una revisión del Programa de Permisos de Operación Título V de Nuevo México.

Similarmente, 20.2.75 NMAC establece un horario de cuotas de permisos de construcción para avisos de intención, permisos para construir o modificar una fuente, revisiones de permisos de construcción y revisiones técnicas de permisos de construcción existentes bajo 20.2.72 NMAC, *Permisos de Construcción*, y 20.2.73 NMAC, *Requisitos de Aviso de Intención e Inventario de Emisiones*. El horario incluye un esquema de puntos basado en la complejidad para varias acciones y un costo por punto, que se multiplica por la suma de todos los puntos aplicables a una acción de permiso determinada para determinar la cuota de permiso requerida. El horario también incluye una cuota anual para fuentes a las que ya se les ha emitido un permiso de construcción. La regla propuesta de sustitición 20.2.75 NMAC revisa el calendario de puntos basado en la complejidad actual, aumentando los puntos para ciertas acciones y agregando puntos para avisos de intención; incrementa el costo por punto utilizado para calcular las cuotas de permisos; aumenta la cuota anual para fuentes que ya han recibido un permiso de construcción e instituye una cuota anual para fuentes que han presentado un aviso de intención; establece una multa por pago tardío de las cuotas anuales; y confirma los costos administrativos de cumplimiento para la aplicación de las regulaciones de calidad del aire de Nuevo México. Si se adopta, la regla de sustitución 20.2.75 NMAC será enviada a la EPA como una revisión del Plan de Implementación Estatal de Nuevo México.

La audiencia se llevará a cabo de conformidad con 20.1.1 NMAC, *Procedimientos de Reglamentación – Junta de Mejora Ambiental*; la *Ley de Mejora Ambiental*, NMSA 1978, Sección 74-1-9; la *Ley de Control de Calidad del Aire*, NMSA 1978, Sección 74-2-6; las órdenes emitidas por el oficial de audiencias designado por la EIB; y otros procedimientos aplicables.

PARTICIPACIÓN PÚBLICA: Las audiencias y reuniones de la EIB están abiertas al público y se anima al público en general a participar. Todas las personas interesadas tendrán una oportunidad razonable de participar presentando un aviso de intención de presentar testimonio técnico, presentando un registro de comparecencia o participando como miembros del público. "Testimonio técnico" se refiere a testimonios científicos, de ingeniería, económicos o especializados, pero no incluye argumentos legales, comentarios generales o declaraciones de política o posición sobre los asuntos tratados en la audiencia. "Público en general" incluye a cualquier persona que asista a una audiencia y no haya

presentado un aviso de intención de presentar testimonio técnico.

Cualquier miembro del público podrá testificar en la audiencia. Toda persona que preste testimonio en la audiencia estará sujeta a contrainterrogatorio sobre el tema de su testimonio directo y sobre cuestiones que afecten su credibilidad. Toda persona que asista a la audiencia tendrá derecho a realizar el contrainterrogatorio que sea necesario para una divulgación completa y veraz de los asuntos tratados en la audiencia. Todos los testimonios se tomarán bajo juramento o afirmación, que podrá realizarse en masa o de forma individual.

TESTIMONIO TÉCNICO: Cualquier persona que desee presentar testimonio técnico en la audiencia debe presentar un aviso de intención por escrito al Administrador del EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB que Programa la Audiencia, Nombra al Funcionario de la Audiencia y Establece Ciertas Fechas de Presentación (emitida el 23 de Diciembre de 2025), disponible en el sitio web de asuntos archivados de NMED, y deberá ser parte. El aviso de intención deberá: (1) identificar a la persona para la cual testificarán los testigos; (2) identificar a cada testigo técnico que la persona tenga la intención de presentar y declarar las cualificaciones de ese testigo, incluyendo una descripción de su formación educativa y experiencia laboral; (3) si la audiencia se llevará a cabo en múltiples lugares, indicar el o los lugares donde estarán presentes los testigos; (4) incluir una copia del testimonio directo de cada testigo técnico en forma narrativa; (5) incluir el texto de cualquier modificación recomendada al cambio regulatorio propuesto; y (6) enumerar y adjuntar todos los documentos que se prevé que dicha persona presente en la audiencia, incluida cualquier declaración propuesta de motivos para la adopción de las normas. Cualquier persona que presente un aviso de intención deberá entregar una copia al NMED.

REGISTRO DE COMPARECENCIA: Cualquier persona puede presentar un registro de comparecencia como parte. El registro de comparecencia deberá presentarse ante la administradora de la EIB a más tardar el 20 de Febrero de 2026, de conformidad con la Orden del EIB sobre la Programación de Audiencias, del Funcionario de Audiencias Designado y la Fijación de Determinadas Fechas de Presentación (emitida el 23 de Diciembre de 2025).

COMENTARIOS PÚBLICOS: El público en general podrá testificar mediante comentarios públicos por escrito o de forma oral en la audiencia. Quienes deseen presentar una declaración por escrito para que conste en actas, en lugar de prestar testimonio oral en la audiencia, deberán presentarla antes de la audiencia o durante la misma. Quienes deseen presentar comentarios públicos por escrito antes de la audiencia pueden hacerlo en línea en https://nmed.commentinput.com/?id=t8BRr4m76, envíe por correo electrónico el comentario público por escrito a pamela.jones@env.nm.gov, o envíe un comunicado público por correo postal al Administrador de la EIB, Departamento de Medio Ambiente de Nuevo México – Harold Runnels Building, P.O. Box 5469, Santa Fe, NM 87502. Además, cada día de la audiencia se proporcionará oportunidad para que el público general preste

testimonio oral. No se requiere aviso previo del público general para presentar testimonio no técnico en la audiencia. El público en general también puede presentar exhibiciones no técnicas en relación con su comentario público por escrito o testimonio oral, siempre que las exhibiciones no sean excesivamente repetitivas del testimonio y cumplan con 20.1.1.402 NMAC. El funcionario de audiencias designado determinará el proceso y los horarios para que el público general preste testimonio durante la audiencia.

ACCESIBILIDAD: Las personas que necesiten servicios de interpretación de idiomas o que tengan alguna discapacidad y requieran un lector, amplificador, intérprete calificado de lenguaje de señas u otra forma de ayuda o servicio auxiliar para asistir o participar en la audiencia deben comunicarse con el Administrador del EIB al menos 14 días antes de la audiencia o lo antes posible al (505) 660-4305 o pamela.jones@env.nm.gov. Para acceder a este número a través de Relay New Mexico marque 711, o llame al (800) 659-8331 (TTY) o al (800) 659-1779 (voz).

AVISO DE NO DISCRIMINACIÓN: El NMED no discrimina por motivos de raza, color, nacionalidad, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y regulaciones aplicables. El NMED es responsable de coordinar los esfuerzos de cumplimiento y recibir consultas sobre los requisitos de no discriminación implementados por 40 CFR Partes 5 y 7, incluido el Título VI de la *Ley de Derechos Civiles de 1964*, en su forma enmendada; la Sección 504 de la *Ley de Rehabilitación de 1973*; la *Ley de Discriminación por Edad de 1975*, el Título IX de las *Enmiendas a la Educación de 1972* y la Sección 13 de las *Enmiendas a la Ley Federal de Control de la Contaminación del Agua de 1972*. Si tiene alguna pregunta sobre este aviso o cualquiera de los programas, políticas o procedimientos de no discriminación de NMED, puede comunicarse con: Kate Cardenas, coordinadora de no discriminación, Departamento de Medio Ambiente de Nuevo México, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, 505-827-2855, nd.coordinator@env.nm.gov. Si cree que ha sido discriminado con respecto a un programa o actividad del NMED, puede comunicarse con la coordinadora de no discriminación identificada anteriormente o visite https://www.env.nm.gov/non-employee-discrimination-complaint-page/ para aprender cómo y dónde presentar una queja por discriminación.

For additional information concerning this bulletin, please contact Brian Polgar, Planning Section Chief, at brian.polgar@env.nm.gov or (505) 629-3466.

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Parts 5 & 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-

discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kate Cardenas, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@env.nm.gov. NEW MEXICO ENVIRONMENTAL IMPROVEMENT BOARD NOTICE OF RULEMAKING HEARING TO CONSIDER THE PROPOSED REPEAL AND REPLACEMENT OF 20.2.71 NMAC – OPERATING PERMIT EMISSIONS FEES AND 20.2.75 NMAC – CONSTRUCTION PERMIT FEES, EIB 25-77 (R)

The New Mexico Environmental Improvement Board ("EIB") will hold a public hearing beginning on March 23, 2026, at 9:00 a.m. to consider EIB 25-77 (R) – In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees. The hearing will last as long as required to hear all testimony, evidence, and public comment, and is expected to last approximately three days. The EIB may deliberate and make a decision on the proposed regulatory changes at the conclusion of the hearing or may convene a meeting after the hearing to consider action on the proposal.

The hearing will be conducted in a hybrid format to allow for both in-person and virtual participation. The in-person component will be held at the New Mexico State Capitol, 490 Old Santa Fe Trail (alternatively 411 S. State Capital Street), Santa Fe, New Mexico 87501. Hearing details, including the meeting room number and how to participate virtually, will be available on the New Mexico Environment Department ("NMED") events calendar at https://www.env.nm.gov/events-calendar/, under the calendar entry corresponding to the hearing start date. For more information, contact the EIB Administrator at (505) 660-4305 or pamela.jones@env.nm.gov.

The purpose of the hearing is for the EIB to consider and take possible action on a petition by NMED requesting that the EIB repeal and replace 20.2.71 NMAC, Operating Permit Emissions Fees, and 20.2.75 NMAC, Construction Permit Fees. The petition, statement of reasons (attached to the petition as Exhibit A), proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC (attached to the petition as Exhibits B and C), and current rules 20.2.71 NMAC and 20.2.75 NMAC with proposed changes shown in redline fashion (attached to the petition as Exhibits D and E) are available on NMED's docketed matters website at https://www.env.nm.gov/opf/docketed-matters/. To access these documents, click on "Environmental Improvement Board" to display the drop-down list of matters before the EIB, then click on "EIB 25-77 (R): In the Matter of Proposed Repeal and Replacement of 20.2.71 NMAC – Operating Permit Emissions Fees and 20.2.75 NMAC – Construction Permit Fees" to display the drop-down list of all documents filed in conjunction with this matter. Copies of the petition, statement of reasons, and proposed replacement rules can also be obtained by contacting Eric Peters at (505) 629-5299 or eric.peters@env.nm.gov, or at any of NMED's offices statewide.

The purpose of proposed replacement rules 20.2.71 NMAC and 20.2.75 NMAC is to ensure that NMED's emissions and construction permit fees are sufficient to cover the reasonable costs of NMED's Title V Operating Permit Program and Construction Permit Program. The EIB is authorized to adopt the proposed rules pursuant to the Environmental Improvement Act, Section 74-1-8(A)(4), and the Air Quality Control Act, NMSA 1978, Sections 74-2-1 to 17. The schedule of Title V operating permit emissions fees must be consistent with the provisions of Section 502(b)(3) of the 1990 amendments to the federal Clean Air Act, which requires sources that are required to obtain an operating permit to pay fees sufficient to cover all reasonable direct and indirect costs of developing and administering the state's Title V Operating Permit Program. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(7). The schedule of construction permit fees must be sufficient to cover the reasonable costs of reviewing and acting upon any application for such permit and implementing and enforcing the terms and conditions of the permit, excluding any court costs or other costs associated with an enforcement action. See Air Quality Control Act, NMSA 1978, Section 74-2-7(B)(6).

20.2.71 NMAC establishes a schedule of emissions fees for sources required to obtain a Title V permit under 20.2.70 NMAC, Operating Permits. The schedule specifies the annual emissions fee for each fee pollutant expressed in dollars per ton of allowable emissions. Proposed replacement rule 20.2.71 NMAC revises the current definition of fee pollutant, adding particulate matter 10 micrometers or less in diameter ("PM10") and particulate matter 2.5 micrometers or less in diameter ("PM2.5") and removing mercury and total suspended particulate matter; reduces the maximum tons used in the fee calculation for each fee pollutant; provides that a fee shall be assessed for either PM10 or PM2.5, not both, depending on which has the higher allowable emission rate; increases the dollar per ton amount used in the fee calculation for each fee pollutant; establishes a late fee for failing to timely pay annual emissions fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.71 NMAC will be submitted to the U.S. Environmental Protection Agency ("EPA") as a revision to New Mexico's Title V Operating Permit Program.

Similarly, 20.2.75 NMAC establishes a schedule of construction permit fees for notices of intent, permits to construct or modify a source, construction permit revisions, and technical reviews of existing construction permits under 20.2.72 NMAC, Construction Permits, and 20.2.73 NMAC, Notice of Intent and Emissions Inventory Requirements. The schedule includes a complexity-based points schedule for various actions and a cost per point, which is multiplied by the sum of all the points applicable to a given permitting action to determine the required permit fee. The schedule also includes an annual fee for sources that have already been issued a construction permit. Proposed replacement rule 20.2.75 NMAC revises the current complexity-based points schedule, increasing the points for certain actions and adding points for notices of intent; increases the cost per point used to calculate permit fees; increases the annual fee for sources that have already been issued a construction permit and institutes an annual fee for sources that have filed a notice of intent; establishes a late fee for failing to timely pay annual fees; and confirms administrative compliance costs for enforcement of New Mexico's air quality regulations. If adopted, replacement rule 20.2.75 NMAC will be submitted to EPA as a revision to the New Mexico State Implementation Plan.

The hearing will be conducted in accordance with 20.1.1 NMAC, Rulemaking Procedures – Environmental Improvement Board; the Environmental Improvement Act, NMSA 1978, Section 74-1-9; the Air Quality Control Act, NMSA 1978, Section 74-2-6; orders issued by the hearing officer appointed by the EIB; and other applicable procedures.

PUBLIC PARTICIPATION: The EIB's hearings and meetings are open to the public, and the general public is encouraged to participate. All interested persons will be given a reasonable opportunity to participate by filing a notice of intent to present technical testimony, filing an entry of appearance, or participating as a member of the general public. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments, or statements of policy or position concerning matters at issue in the hearing. "General public" includes any person attending a hearing who has not submitted a notice of intent to present technical testimony.
