Heading: W264 ($\pm 12^\circ$,T)

SAN MATEO - EXHIBIT X

The images to the left correspond in sequence to the preceding data-tagged images, which were reproduced in lower resolution. These photos depict the area downstream from the alleged release location near the old railroad bridge and correspond to the location depicted in the first image in Exhibit S taken during the kayak inspection on July 31, 2020. The sediment identified in this location consists of a light-tan, pudding-like mud that matches the sediments tested in core samples C2 and C3 using XRD/XRF analysis.
