Ms. Nancy McDuffie  
New Mexico Environment Department  
Ground Water Quality Bureau  
Remediation Oversight Section  
121 Tijeras Avenue NE, Suite 1000  
Albuquerque, NM 87102-3421

Dear Ms. McDuffie:

On behalf of Doña Ana Dairies, Inc., EA Engineering, Science, and Technology, Inc., PBC is submitting this Annual Groundwater Monitoring Report for Doña Ana Dairies located in Mesquite, Vado, and Anthony, New Mexico. The report discusses the annual groundwater sampling event conducted to fulfill requirements of the Stage 2 Abatement Plan for Doña Ana Dairies.

Please let me know if you have any questions regarding the information provided in this report.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Gina Mullen', is positioned above the printed name.

Gina Mullen

## 1.0 INTRODUCTION

On behalf of Doña Ana Dairies (Dairies), EA Engineering, Science, and Technology, Inc., PBC (EA) has prepared this Annual Monitoring Report for Doña Ana Dairies located south of Las Cruces, New Mexico (Figure 1). The report was completed in accordance with the Stage 2 Abatement Plan and the Sampling and Analysis Plan, Doña Ana Dairies, Doña Ana County, New Mexico dated November 7, 2013 and August 11, 2008, respectively, and the Conceptual Work Plan (CWP) dated February 1, 2008. All were prepared to satisfy requirements stated in the New Mexico Administrative Code, Title 20, Chapter 6, Part 2, Sections 4106 through 4110 (20.6.2.4106 – 20.6.2.4110 NMAC). The Sampling and Analysis Plan (SAP) was approved by the New Mexico Environment Department (NMED) Ground Water Quality Bureau (GWQB) on September 25, 2008 (NMED 2008). On March 25, 2015, the Stipulated Agreement to additional requirements to the Dona Ana Dairies Stage 2 Abatement Plan was agreed to by NMED, Doña Ana Dairies, and the Rio Valle Concerned Citizens (NMED et al. 2015). On April 10, 2015, the Stage 2 Abatement Plan was approved by NMED by Final Order (NMED 2015).

### 1.1 Objective

The objective of this monitoring program is to satisfy the requirements set forth in the Stage 2 Abatement Plan and the Stipulated Agreement and to satisfy the requirements set forth in 20.6.24110 NMAC.

The following work was performed to meet the objective of the monitoring program:

- Gauged discharge plan (DP), abatement plan (AP) and Anthony Waste Water Treatment Plant monitoring wells.
- Collected groundwater samples from AP and DP monitoring wells that contained sufficient water to sample as well as irrigation/water supply wells. The samples were analyzed for nitrate, chloride, and total Kjeldhal nitrogen (TKN). During sampling, field parameters were monitored and recorded.
- Updated analyte trend analysis.
- Performed geostatistical analysis of analytes.

### 1.2 Background

In correspondence dated April 7, 2006, NMED required a Stage 1 Abatement Plan for 13 dairies in Doña Ana County, based on analytical results from DP monitoring of on-site compliance monitoring wells that showed concentrations of nitrate, chloride, and TDS exceeding ground water standards promulgated in New Mexico Water Quality Control Commission (NMWQCC) Regulations (20.6.3.3103 NMAC). On October 30, 2006, the Dairies notified NMED that they reached an agreement to work as a group and submit a joint response to NMED's request (Doña Ana Dairies 2006).

On December 11, 2006, on behalf of the Doña Ana Dairies, Golder Associates (Golder) submitted a Stage 1 and 2 Abatement Plan Proposal to address impacts to groundwater in the area of the Dairies (Golder 2006). The first major deliverable in the Abatement Plan Proposal was an Existing Data Report (EDR) to bring together in one document historical data and practices of the constituent dairies.

Submitted on February 1, 2008 (Golder 2008a), the EDR was intended to satisfy the Dairies commitment for compilation and submission of existing data identified in the Doña Ana Dairies response (2006) to the NMED requirement for Stage I Abatement Plans. Section 9 of the EDR outlined data gaps identified during the preparation of the report, as well as the actions recommended. To facilitate the discussion of the path forward after the submittal of the EDR and concurrent with the EDR submission, a conceptual work plan (CWP) was prepared (Golder 2008b).

On July 15, 2008, the Dairies, Golder and NMED met (Golder 2008c). During that meeting, plume maps presented in the EDR (Golder 2008a), new monitoring data, and knowledge of well locations and groundwater chemistry results at adjacent DP-regulated facilities were used to identify data gaps with respect to groundwater flow direction and plume delineation. The agreed-upon data gaps yielded new well locations (including contingency locations) as recorded in the meeting minutes (Golder 2008c) and depicted in the SAP dated August 8, 2008 (Golder 2008d). The SAP outlined the details of the field operations to be implemented for completion of data gaps, such that a Site Investigation Report (§4106.C.6) and Stage 2 Abatement Plan (§4106.D) could be prepared.

Groundwater gauging was conducted concurrent to discussions with NMED at the Dairies for four quarters, February 2008, June 2008, September 2008, and December 2008, to determine the current and historical site groundwater gradient.

In May 2009, field work was conducted as outlined in the SAP and ten (10) AP monitoring wells (DAD-01 through DAD-10) were installed. In July 2009, the Site Investigation Report was submitted to the NMED (EA 2009).

On February 9, 2012, the Final Site Investigation Report was submitted to NMED (EA 2012a). The report summarized field activities that occurred from October 10 through October 14, 2011 and November 10 through 18, 2011, during which eleven soil borings were advanced at the site and converted into monitoring wells DAD-12 through DAD-14, DAD-16 through DAD-22, and DP well 177-03A.

On August 16, 2012 soil boring/monitoring well DAD-15 was installed and on August 20, 2012 well DAD-15 was sampled. An addendum to the Final Site Investigation Report was submitted to NMED on September 7, 2012, which summarized DAD-15 field activities (EA 2012b).

A Stage 2 Abatement Plan was submitted to NMED on March 13, 2013 (EA 2013a). Based on an NMED response in August 2013, a Revision to the Stage 2 Abatement Plan was submitted on November 7, 2013 (EA 2013b).

On March 25, 2015, the stipulated agreement to additional requirements to the Dona Ana Dairies Stage 2 Abatement Plan was agreed to by NMED, Dona Ana Dairies, and the Rio Valle Concerned Citizens. On April 10, 2015 the Stage 2 Abatement Plan with the stipulated agreement was approved by NMED by Final Order.

EA began implementation of the Stage 2 Abatement Plan and stipulated agreement as directed by the Final Order in December 2015. In order to meet objectives, four monitoring wells were installed (DAD-23 through DAD-26) and Del Oro Dairy discharge plan (DP) well 692-01 was plugged and abandoned. Details on implementation of these tasks are included in the Stage 2 Implementation and Quarterly Groundwater Monitoring Report, July 2016. A letter from NMED dated June 12, 2018 indicates that a Stage 2 Abatement Modification proposal should be submitted to NMED by August 11, 2018 to address increased nitrate concentrations at Del Oro Dairy, replacement or rehabilitation of AP well DAD-06, and the eastward migration of groundwater in the northern portion of the Dairies (NMED 2018); a plan to address these issues is currently under development.

In accordance with the Stage 2 Abatement Plan and stipulated agreement, a baseline compound specific isotope analysis (CSIA) for nitrogen 14 and nitrogen 15 ( $^{15}\text{N}/^{14}\text{N}$  [ $\delta^{15}\text{N}$ ]) and total organic carbon (TOC) was completed for 16 wells in spring of 2016. Additionally, background concentrations were recalculated for the contaminants of concern. Results of these analyses are presented in the Stage 2 Implementation and Quarterly Groundwater Monitoring Report, July 2016. These tasks will be completed every five years and are scheduled to occur in spring of 2021.

Contaminant concentration trend analysis as well as geospatial analysis to evaluate changes in plume behavior are required on an annual basis and are provided in this report. Also presented in this report are the results of the annual sampling of irrigation and supply wells and concentration trends of analytes in AP and DP wells.

## **2.0 WELLS PLUGGED AND ABANDONED**

Several wells in the central portion were plugged and abandoned in the last year. Big Sky Dairy wells 833-01 and 833-03 were consistently dry since 2011. They were plugged and abandoned on August 5, 2017. Sunset/Desert Land Dairy well 257/260-01 was plugged and abandoned on February 2, 2018 due to a cracked well casing. All wells were plugged by Hargraves Drilling Company using gravity placement of bentonite chips. See Appendix A for plugging records.

## **3.0 GROUNDWATER MONITORING ACTIVITIES**

Groundwater monitoring activities conducted by D&H included gauging DP and AP monitoring wells as well as Anthony Waste Water Treatment Plant monitoring wells. Groundwater samples were collected from DP and AP monitoring wells and irrigation/supply wells. Groundwater samples were analyzed for nitrate, chloride, TDS, and TKN. The resulting data from this groundwater monitoring event are compiled and presented herein.

### 3.1 Well Gauging

From February 5 through February 6, 2018, representatives from D&H gauged the DP and AP with an electronic water level indicator. Anthony Waste Water Treatment Plant monitoring wells were gauged on February 13, 2018. Table 1 provides a summary of the groundwater gauging data collected from the monitoring network. Locations of monitoring wells are shown on Figures 2, 3, 4, and 5. Well gauging field forms are available in Appendix B.

### 3.2 Groundwater Sampling

From February 26 through February 28, 2018, D&H sampled all AP monitoring wells with sufficient water. Well DAD-06 was dry and could not be sampled. Groundwater sampling was accomplished with new disposable bailers. Three well casing volumes were purged unless the well contained insufficient water.

D&H sampled the DP wells from February 9 through February 23, 2018. Prior to sampling, the DP wells were purged of three well casing volumes, if practicable, by (1) hand-bailing with new disposable bailers and twine, (2) pumping with a submersible pump and new polyethylene tubing, or (3) pumping with a dedicated pump and tubing. Due to a declining water table, several wells were dry or contained insufficient water for sampling. Additionally, Del Oro well 692-05 could not be sampled because the pump was not operable and River Valley wells were not sampled.

The wells were sampled from historically clean to dirty to the extent possible to minimize cross-contamination potential. All non-dedicated or disposable equipment was decontaminated between wells with an Alconox™ solution to further ensure sample quality. All meters were calibrated and/or checked with standards in accordance with manufacturer's specifications prior to daily use. Purge water was ground discharged.

When sufficient water was available, field parameters including specific conductance, temperature, pH, and dissolved oxygen were monitored using a YSI 556 MPS and recorded on field forms. ORP was measured using an Ultrameter® II. Dissolved oxygen and ORP were only measured in the first set of readings. Field parameters from August 2015 to present are summarized in Table 2. The sampling field forms are presented in Appendix B.

All groundwater samples were collected immediately after purging. Sampling was either accomplished by carefully pouring groundwater from the bailer into the sample containers or by pumping groundwater through dedicated polyethylene tubing into the sample container. Sample containers were provided by Hall Environmental Analysis Laboratory (HEAL). Container size, type, sample preservatives, analytical methods, and holding times are specified in Table 3. All samples were preserved in accordance with method requirements, labeled, then immediately cooled to <6°C with ice and shipped under chain-of-custody to HEAL in Albuquerque, New Mexico. All analytical laboratory reports are provided in Appendix C.

### 3.3 Irrigation/Supply Well Groundwater Sampling

Fourteen irrigation/supply locations were sampled in February through April 2018. Samples were analyzed for nitrate, chloride, TDS, and TKN. Irrigation/supply wells were sampled by collecting a grab aliquot from a faucet or tank located nearest to the pump outlet. Where tap samples were collected the pumps were pumping at the time of sampling therefore no purging was completed.

Two of the samples were collected from irrigation wells. One is located at the Mountain View Land Application Area (LRG-0457) and one at the Dominguez Dairy pecan orchard (LRG-00590-S-6). The irrigation well (LRG-314495-POD1) adjacent to AP well DAD-08 was scheduled to be sampled; however, the irrigation well has not been operational for several years. River Valley well LRG-524-S-2 was not sampled.

Eleven of the samples are from dairy supply wells located near their respective milking parlors. The supply wells at Bright Star Dairy, Dominguez Dairy, Desert Land Dairy, and Del Oro Dairy were sampled from their holding tanks using new disposable bailers, from taps located on the tank, or from valves located on lines going into the tank. At Del Oro Dairy three supply wells pumped water into the holding tank; therefore, the groundwater sample collected was a composite sample.

## 4.0 GROUNDWATER MONITORING RESULTS

### 4.1 Hydraulic Gradient and Direction of Groundwater Flow

This quarter, groundwater was present beneath the site at depths ranging from 11.55 feet below top of casing (ft btoc) in AP well DAD-03 to 132.89 ft btoc in Dominguez #2 well 42-12. Groundwater was encountered at shallower depths near the Mesquite Drain and at greater depths near I-10 where the topographic elevation increases.

AP monitoring well DAD-25 may have been completed in a perched aquifer. Groundwater elevations have consistently measured approximately 10 feet higher than groundwater elevations in surrounding wells; as a result, this groundwater elevation has not been used in contouring for the central potentiometric surface map.

Potentiometric surface maps were completed using the monitoring well gauging data for the northern, central, and southern portions of the Dairies. Groundwater elevation data are provided in Table 1 and potentiometric surface maps are provided as Figures 2, 3, 4, and 5. Hydrographs were completed for select monitoring wells and are provided in Appendix D. On average, groundwater levels increased in all areas since the previous monitoring event. However, the previous drought has resulted in many wells becoming and remaining dry.

The groundwater flow direction in northern, central, and southern portions of the regional aquifer was to the southeast. Groundwater flow in the southern portion of the perched aquifer was to the southwest. The hydraulic gradient across the Dairies is approximately 0.001 ft/ft.

## 4.2 Groundwater Field Parameters

Field parameters from the most recent monitoring event including specific conductance, pH, temperature, ORP, and dissolved oxygen were recorded on the sampling field forms (Appendix B) and are summarized in Table 2. Specific conductance, dissolved oxygen, and ORP trends for select wells are presented in Appendix E. Though dissolved oxygen and ORP measurements from wells containing a dedicated pump were recorded, these measurements are not considered representative of aquifer conditions. Note that dissolved oxygen measurements are variable due to the difficulties of obtaining an accurate dissolved oxygen reading while collecting samples with a bailer.

## 4.3 Groundwater Nitrate, Chloride, and TDS Analytical Results

### 4.3.1 Abatement Plan Well Results

Groundwater analyte concentrations were below the NMWQCC standard for nitrate (10 mg/L) in 15 of the 25 AP wells sampled. The AP wells that had nitrate concentrations above standards were DAD-02, DAD-07, DAD-08, DAD-09, DAD-11 (vertical delineation well), DAD-12 (vertical delineation well), DAD-13, DAD-14, DAD-18, DAD-19 (vertical delineation well), DAD-20, DAD-21, DAD-22, DAD-23, and DAD-26.

Both chloride and TDS concentrations exceeded their respective NMWQCC standards in all 25 wells sampled, except for well DAD-17 which remained below standards for chloride and TDS at 54.0 mg/L and 572 mg/L, respectively.

Chloride concentrations in the AP wells range from 54.0 mg/L in well DAD-17 to 1,700 mg/L in well DAD-08 for this event, and TDS ranged from 572 mg/L in well DAD-17 to 4,710 mg/L in well DAD-08.

Table 4 summarizes the analytical results for AP monitoring wells and the analytical laboratory results are found in Appendix C. Nitrate and chloride concentration trends for DAD wells are presented in Appendix F.

### 4.3.2 Abatement Plan and Discharge Permit Well Results by Area

DP groundwater analytical results are presented in Table 5. These data were combined with the analytical data collected from the 25 AP monitoring wells sampled and are plotted on Figures 6, 7, 8, and 9. Analytical laboratory reports are included in Appendix C. The following discussions summarize the results by area at the Dairies.

#### Northern Portion

The highest nitrate concentration was detected at Dominguez Dairy #2 well 42-06 with a concentration of 140 mg/L. The northern nitrate plume downgradient well, DAD-02, was slightly above the NMWQCC standard for nitrate (10 mg/L) for the first time in May 2015 and was at standard at 10 mg/L for the February/March 2018 monitoring event. Upgradient well

70/86/340-01 located in the Northern Land Application area had a nitrate concentration above standard at 19.0 mg/L, but upgradient well 86/340-01 had a nitrate concentration just below standard at 9.6 mg/L. Eastern cross-gradient wells 42-10, 42-11, 42-12, and DAD-01 had nitrate concentrations below the standard. Eastern cross gradient well DAD-13 was above standards again this monitoring event with a concentration of 27.0 mg/L. This is a new maximum concentration. Nitrate has consistently exceeded the standard at this well since May 2015. The western delineating cross-gradient well Dominguez 624-05 had a nitrate concentration of 6.72 mg/L in February 2013; however, the well has remained dry since that time. Nitrate concentrations in the well nearest to Dominguez well 624-05, Dominguez 2 well 42-02 was below standard at 8.1 mg/L.

The chloride concentrations are above the standard in all wells sampled within the northern portion with the exception of Organ Dairy well 126-09 and Dominguez 2 well 42-08. The TDS concentrations are above the standard in all wells sampled within the northern portion with the exception of Organ Dairy well 126-09. The highest concentrations of chloride and TDS were observed at Northern Land Application Area well 70-03 with concentration of 3,400 mg/L and 8,490 mg/L, respectively.

### Central Portion

The highest nitrate concentration was observed in Big Sky Dairy well 833-02 at a concentration of 65 mg/L. The upgradient extent of the nitrate plume is defined in the central portion by Buena Vista Dairy II well 74-03, which was well below standards with a nitrate concentration of 1.40 mg/L for this event. Sunset Dairy well 257-02 defines the downgradient extent of the plume. It has fluctuated above and below the standard since November 2015, and was above the standard at 14 mg/L for this monitoring event. The eastern cross-gradient extent of the plume is defined by well DAD-15. AP well DAD-07 was previously used to define the eastern edge of the plume but has been just over the standard beginning in 2017; it was just above the standard with a concentration of 12 mg/L during the most recent sampling event. The western extent is defined by wells DAD-04, DAD-16, and 833-10; nitrate concentrations remain below standards in all of these wells. Western delineation River Valley wells 167-01A, 167-05, 167-08 were not sampled during the most recent sampling event, but were below the standard during the May, August, and November 2017 sampling events. Abatement well, DAD-25, located in the southeastern corner of the central portion was below the standard for nitrate at 6.3 mg/L, which is the lowest it has been since installation in December 2015. The abatement plan vertical delineation well DAD-24 has remained below standards since its installation in March 2016, thereby defining the vertical extent of nitrate contamination.

With the exception of AP wells DAD-04 and DAD-17, chloride concentrations are above standards in all wells within the central portion. TDS concentrations are above standards in all wells within the central portion except for AP well DAD-17. The highest chloride and TDS concentrations were observed at well DAD-08 with concentrations of 1,700 mg/L and 4,710 mg/L, respectively. Well DAD-08 is located east of Sunset Dairy, adjacent to irrigation well LRG-00590-S-6. This irrigation well has not been operational since 2014.

### Southern Portion

Nitrate is present within both the regional and perched aquifers in the southern portion of the Dairies. All of the wells in the regional aquifer are below the NMWQCC standard for nitrate. Nitrate concentrations in AP well DAD-10, in the regional aquifer, has been fluctuating above and below the nitrate standard since 2014; in the most recent monitoring event the nitrate concentration was below the standard with a concentration of 9.1 mg/L.

The well with the highest nitrate concentration in the shallow, perched aquifer was abatement well DAD-21 at 76 mg/L. All other wells screened in the perched aquifer were above the NMWQCC standard (10 mg/L).

Chloride and TDS concentrations are above NMWQCC standards in all wells sampled within the southern portion. Chloride concentrations in this area ranged from 360 mg/L in AP well DAD-10 (regional aquifer) to 940 mg/L in well abatement well DAD-26 (perched aquifer). TDS ranged from 1,360 mg/L in Del Oro Dairy well 692-08 to 3,000 mg/L in abatement well DAD-26. Upgradient Del Oro well 692-08 had a chloride concentration of 410 mg/L and a TDS concentration of 1,360 mg/L.

#### *4.3.3 Irrigation/Supply Well Results*

Groundwater analytical results for the sampled irrigation/supply wells are presented in Table 6. Analytical results are provided on Figures 6, 7, and 8. Analytical laboratory reports are included in Appendix C.

Nitrate concentrations were below the NMWQCC standard for nitrate in 11 of the 14 irrigation/supply well sample locations. In the northern portion, nitrate standard exceedances occurred at Bright Star Dairy well LRG-00953 and Dominguez wells LRG-00591-S and LRG-00590-S-6; nitrate was detected at concentrations of 12 mg/L in water samples collected from all three wells. None of the irrigation and supply wells sampled from the central and southern areas exceeded the standard for nitrate.

All irrigation/supply wells were above the NMWQCC standard for chloride and TDS. Chloride concentrations ranged from 350 mg/L at Big Sky well LRG-4116 to 1,000 mg/L at the Mountain View northern land application well LRG-00952. TDS concentrations ranged from 1,320 mg/L at Del Oro Dairy well LRG-5820 to 3,140 mg/L at Organ Dairy well LRG-458 S. Both chloride and TDS concentration ranges are similar to the concentrations observed in discharge plan and abatement plan monitoring wells, further indicating that chloride and TDS concentrations observed are regionally above standards.

## **5.0 DATA GAPS**

The downgradient extent of the nitrate plume in the southern portion of the perched aquifer is not defined. Concentrations of nitrate are significantly higher than the NMWQCC standard. Installation of a monitoring well southwest of well DAD-26 is recommended.

## **6.0 EXISTING CONDITION/BACKGROUND CONCENTRATION FOR CHLORIDE AND TDS**

Background or existing concentrations for chloride and TDS at the Dairies were evaluated in February 2016 (EA 2016). They were determined using upgradient well(s) in each portion of Doña Ana Dairies. The Stipulated Agreement requires that the chloride and TDS background concentration for the northern portion be recalculated using 3 and perhaps 4 suitable existing wells and that the upper confidence level (UCL) at 95% be used to estimate mean background concentrations. In addition, the Stipulated Agreement requires that the background will be recalculated for the northern, central, and southern portions every five years. Background conditions will be recalculated in the year 2021 in accordance with the stipulated agreement to the Stage 2 Abatement Plan.

The average background or existing concentration as established by the UCL for chloride and TDS is as follows:

- Northern portion - chloride 1,015 milligrams per liter (mg/L) and TDS 3,178 mg/L (EA 2016).
- Central portion - chloride 1,781 mg/L and TDS 5,328 mg/L (EA 2016).
- Southern portion - chloride 503 mg/L and TDS 2,552 mg/L (EA 2016).

Tables 4 and 5 present the wells that exceed existing conditions through the use of colored highlighting.

## **7.0 TREND ANALYSIS**

Analytical data (March 2009 to February 2018), collected from all AP and DP wells, were included in a statistical trend analysis using the Mann-Kendall test. Trend analysis can indicate whether concentrations of constituents such as nitrate, chloride and TDS are stable, increasing or decreasing at a particular well (Gilbert 1987). Concentration trend graphs for nitrate, chloride, and TDS are found in Appendices F and G, and the statistical trends analysis is provided in Appendix H.

Table 7 provides a summary of the trend analysis for the AP and DP wells. The following is a discussion of the trend analysis for each portion of the Dairy.

### **7.1 Northern Portion**

Trend analysis was conducted on 38 DP wells and 7 AP wells within the northern portion. Of the 45 wells sampled three wells had increasing trends for all the contaminants; Organ Dairy well 126-04 and AP wells DAD-11, and DAD-12. Stable or decreasing trends were present for all three constituents in 21 of the 45 wells.

Nitrate decreasing and increasing concentration trends are as follows:

- Decreasing Nitrate Trend: Northern Land Application Area well 70/86/340-01, Organ Dairy well 126-09, Dominguez 2 Dairy wells 42-02 and 42-08, Dominguez Dairy wells 624-02, 624-04, 624-05, and 624-07, Gonzalez Dairy wells 177-01, 177-02, 177-04, 177-05, and 177-06.
- Increasing Nitrate Trend: Northern Land Application Area well 86/340-01, Organ Dairy wells 126-04, 126-07, and 126-13, Mountain View Dairy wells 70-01 and 70-04, Bright Star Dairy wells 340-01 and 340-02, Dominguez 2 Dairy wells 42-03 and 42-06, Gonzalez Dairy well 177-07R, and AP wells DAD-02, DAD-11, DAD-12, DAD-13, and DAD-23.

Chloride decreasing and increasing concentration trends are as follows:

- Decreasing Chloride Trend: Northern Land Application Area well 86/340-01, Organ Dairy wells 126-07, 126-09, and 126-12, Mountain View Dairy well 70-02, Dominguez 2 Dairy wells 42-06, 42-07, 42-08, 42-11, and 42-13, Dominguez Dairy wells 624-02 and 624-07, Gonzalez Dairy well 177-02 and 177-04, and AP well DAD-01.
- Increasing Chloride Trend: Northern Land Application Area wells 70-03, Organ Dairy wells 126-04 and 126-05, Dominguez 2 Dairy wells 42-02 and 42-09, Gonzalez Dairy wells 177-01 and 177-05, and AP wells DAD-02, DAD-11, DAD-12, and DAD-14.

TDS decreasing and increasing concentration trends are as follows:

- Decreasing TDS Trend: Organ Dairy well 126-09, Dominguez 2 Dairy wells 42-03, 42-06, 42-08, 42-11, and 42-13, Dominguez Dairy wells 624-02, 624-05, and 624-07, Gonzalez Dairy well 177-02, and AP wells DAD-01 and DAD-02.
- Increasing TDS Trend: Northern Land Application Area well 70-03, Organ Dairy wells 126-04, 126-05, and 126-13, Mountain View Dairy well 70-, Bright Star Dairy well 340-01, Dominguez 2 Dairy well 42-02, Gonzalez Dairy wells 177-01, 177-05, 177-06, and 177-07R, and AP wells DAD-11 and DAD-12.

Upgradient Land Application Area well 70/86/340-01 had a decreasing nitrate trend and stable chloride and TDS trends. Upgradient well 86/340-01 was increasing for nitrate, decreasing for chloride, and stable for TDS. Nitrate, chloride, and TDS in these wells are expected to stabilize as land application has been phased out.

The Dominguez 2 eastern cross gradient wells 42-10, 42-11, 42-12, and AP eastern cross gradient wells DAD-01, and DAD-13 were stable for nitrate. The AP eastern cross gradient well DAD-13, however, showed an increasing nitrate trend. Dominguez Dairy 2 well 42-10 is below the standard for nitrate. The eastern cross gradient wells were all decreasing or stable for chloride and TDS with the exception of chloride and TDS in Dominguez 2 well 42-11 and AP

well DAD-01, which were all below existing conditions.

The western cross gradient well, Dominguez Dairy 2 well 42-02, has a decreasing trend for nitrate. The well has increasing trends for both chloride and TDS, but both are below existing conditions.

The downgradient wells for the northern area are AP wells DAD-02 and DAD-23. DAD-02 has increasing trends for both nitrate and chloride, and a decreasing trend for TDS. DAD-23 has an increasing trend for nitrate and is stable for chloride and TDS, but above standards.

## 7.2 Central Portion

A trend analysis was conducted on all 41 wells within the central portion. Decreasing or stable trends for all three constituents were present in 29 of the 41 wells analyzed. No wells in the central portion had increasing trends for all three contaminants (nitrate, chloride and TDS).

Sunset well 257-01 (located adjacent to the lagoon) had a stable trend for nitrate, chloride, and TDS. A decreasing to stable nitrate trend is present downgradient of the Buena Vista II lagoons, River Valley lagoons, and four of the five Big Sky lagoons. It is expected that similar trends will occur downgradient of all synthetically lined lagoons in the future. Additionally, the wells with increasing nitrate trends downgradient of Big Sky lagoons are not located along the margins of the abatement plan area but rather in the central portion of the plume.

The following summarizes trend statistics for the nitrate plume:

- Decreasing Nitrate Trend: Buena Vista Dairy well 74-01, 74-03, and 74-05, River Valley wells 167-01A, 167-03, and 167-06, Big Sky Dairy well 833-07, and Sunset Dairy Well 257-02, and AP wells DAD-04, DAD-19, and DAD-25.
- Increasing Nitrate Trend: River Valley Dairy well 167-04, Big Sky Dairy well 833-05, and AP wells DAD-05 and DAD-07.

The following summarizes trend statistics for the chloride plume:

- Decreasing Chloride Trend: Buena Vista II Dairy wells 74-02 and 74-03, River Valley wells 167-01A, 167-03, 167-04, 167-06, and 167-07, Big Sky Dairy wells 833-01, 833-05, 833-07, 833-09, and 833-10, Sunset Dairy well 257-03, and AP wells DAD-03, DAD-04, and DAD-25.
- Increasing Chloride Trend: Buena Vista II Dairy wells 74-01, 74-04, and 74-05, River Valley Dairy well 167-08, Big Sky Dairy well 833-02, Sunset Dairy well 257-02, and AP well DAD-15.

The following summarizes the trend statistics for TDS:

- Decreasing TDS Trend: Buena Vista II Dairy wells 74-02 and 74-03, River Valley Dairy wells 167-01A, 167-03, 167-04, 167-06, and 167-07, and AP wells DAD-03, DAD-04, DAD-19, and DAD-25.
- Increasing TDS Trend: Buena Vista II Dairy wells 74-01, 74-04 and 74-05, River Valley Dairy wells 167-05 and 167-08, Big Sky well 833-02, and Sunset Dairy well 257-02.

Upgradient well Buena Vista Dairy well 74-03 had decreasing trends for all three constituents.

Eastern cross gradient AP well DAD-07 had an increasing trend for nitrate and contains nitrate concentrations below standards. Eastern cross gradient AP well DAD-15 had an increasing chloride trend. Western cross gradient River Valley wells 167-01A, 167-05, and 167-08 were stable or decreasing for all constituents except for TDS in 167-05 and chloride and TDS in 167-08; concentrations for these analytes were increasing but below existing conditions. Western cross gradient wells 833-10 (Big Sky), DAD-04 (AP), and DAD-16 (AP) were stable or decreasing for all constituents.

Downgradient wells 257-02 (Sunset Dairy) and DAD-25 (AP) had decreasing trends for nitrate. Sunset Dairy well 257-02 had increasing trends for both chloride and TDS, but both chloride and TDS are below existing conditions. AP well DAD-25 had decreasing trends for chloride and TDS concentrations.

### **7.3 Southern Portion**

The southern portion statistical trend analysis was completed on all wells within the regional and perched aquifers. Of the 15 wells analyzed in the southern portion of the Dairies, eight had decreasing or stable concentrations of nitrate, chloride, and TDS.

Within the regional aquifer, increasing nitrate trends were observed in Del Oro Dairy well 692-05 and AP well DAD-10, but nitrate is below standards in both wells. Chloride and TDS trends are decreasing or stable in all wells except for abatement well DAD-10 where TDS has increasing trends; TDS is below existing conditions in this well.

In the perched aquifer, statistical trend analysis indicated four of the eight wells had stable or decreasing trends for all analytes. One abatement well, DAD-21, has increasing trends for all three constituents; nitrate was above standards, and chloride and TDS were above existing conditions. All Del Oro Dairy wells completed in the perched aquifer have stable or decreasing trends for all constituents. TDS was increasing in AP well DAD-09, but trends were stable for nitrate and chloride. AP well DAD-26 had increasing trends for chloride and is above existing conditions; nitrate and TDS are stable in this well.

## **8.0 GEOSTATISTICS**

A geostatistical analysis was completed to estimate analyte distribution and calculate contaminant plume area. Nitrate plumes were defined as areas where concentrations exceed the

NMWQCC nitrate standard of 10 mg/L. Chloride and TDS plumes were defined as areas exceeding the calculated background concentration.

Interpolation by kriging was applied to nitrate, chloride, and TDS concentrations from February 2018. Interpolation was based on analytical data from AP and DP wells. Isopleths were manually adjusted in areas where plume edges were not defined. Nitrate and TDS in the southern portion of the regional aquifer was not modeled because concentrations are below the standard and regional background levels, respectively.

Table 8 provides the calculated areas of plumes in the north, central, and south portions for 2016 through 2018. Distributions of contaminants modeled from 2018 data are displayed in Figures 10 through 17. Note that the contaminant plume geometries were statistically modeled, and as a result, concentration intervals in some cases have an offset from measured concentrations at individual monitoring locations.

The following is a discussion of the trend analysis for each portion of the Dairy.

- Northern portion - The cumulative sizes of the nitrate, chloride, and TDS plumes decreased or were stable between 2016 and 2018. Although the total size of the nitrate and chloride plumes decreased, the area with nitrate concentrations exceeding 70 mg/L and chloride concentrations exceeding 3,000 mg/L increased in size.
- Central portion - The cumulative areas of nitrate, chloride, and TDS plumes decreased in size in 2018. River Valley wells were not included in the modelling since the wells were not sampled during the most recent sampling event; based on historical results, modeling without River Valley wells resulted in a conservative nitrate plume size that is biased high.
- Southern portion (perched aquifer) – Nitrate, chloride, and TDS plumes increased in total size between 2016 and 2018. Because of the distribution of contamination, the modeled plume geometries in the perched aquifer required manual interpretation for large areas and are therefore limited in their ability to offer accurate comparisons from year to year. Del Oro well 692-05 was not sampled during the most recent sampling event; as a result, November/December 2017 concentrations for that well were used in the model.
- Southern portion (regional aquifer) - Nitrate, chloride, and TDS plumes decreased in size or were stable between 2016 and 2017. Nitrate was not present above the NMWQCC standard and TDS was not present above background levels in 2018.

## 9.0 CONCLUSIONS AND RECOMMENDATIONS

The groundwater monitoring event included the gauging of all accessible DP and AP wells and sampling of 25 AP wells and the DP wells that were accessible and contained sufficient water to sample. Based on the data collected, the following conclusions and recommendations are presented:

- The depth to groundwater at the site ranged from 11.55 to 132.89 ft btoc.
- On average, water levels have increased across all the areas since the November 2017 gauging event.
- The groundwater flow direction at the Dairies within the regional aquifer is southeast. The hydraulic gradient is 0.001 ft/ft.
- The perched aquifer at Del Oro Dairy has a groundwater flow direction toward the southwest.
- Nitrate was below the NMWQCC standards in 15 of the 25 groundwater samples collected from the AP wells.
- Chloride was above the NMWQCC standard in all monitoring wells sampled, except for well DAD-17, which had a chloride concentration of 54 mg/L.
- TDS was above the NMWQCC standard in all monitoring wells sampled, except for well DAD-17, which had a TDS concentration of 572 mg/L.
- Chloride and TDS remain above standards in wells upgradient of the northern, central, and southern portions of the plume at the Dairies. Chloride and TDS are regionally elevated above standards and not necessarily attributed to the Dairies.
- Trend analysis indicates that 21 of the 45 wells analyzed in the northern portion had decreasing or stable trends for nitrate, chloride, and TDS.
- Trend analysis indicates that 29 of the 41 wells analyzed in the central portion had decreasing or stable trends for nitrate, chloride, and TDS.
- Trend analysis indicates that 8 of the 15 wells analyzed in the southern portion had decreasing or stable trends for nitrate, chloride, and TDS.
- Between 2016 and 2018 in the northern portion, the size of the nitrate, chloride, and TDS plumes decreased or were stable.
- In the central portion, the areas of nitrate, chloride, and TDS plumes decreased in 2018 relative to 2016 plume sizes.

- In the perched aquifer of the southern portion, nitrate, chloride, and TDS plumes increased in size between 2016 and 2018.
- In the regional aquifer of the southern portion, nitrate, chloride, and TDS plumes decreased in size or were stable between 2016 and 2018.
- Installation of an additional monitoring well southwest of DAD-26 is recommended to delineate the southern nitrate plume in the perched aquifer.
- A Stage 2 Abatement Modification proposal to address increased nitrate concentrations at Del Oro Dairy, replacement or rehabilitation of AP well DAD-06, and the eastward migration of groundwater in the northern portion of the Dairies is currently under development.

Notes:

<sup>a</sup> Horizontal control to NM State Plane Coordinates Central NAD83 Grid Coordinates (in feet)

<sup>b</sup> Vertical Control to NAVD88 Datum in feet above mean sea level

<sup>c</sup> Measured in feet below the top of casing at survey point on north side of well

<sup>d</sup> Measured in feet

Wells were gauged on a different date by Magee and Associates Inc.

Wells were gauged on a different date by EnviroCompliance Inc.

Measured data were suspect and corrected to reflect appropriate trends in accordance with surrounding wells

**TABLE 2. SUMMARY OF MONITORING WELL GROUNDWATER FIELD PARAMETERS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

Monitoring Well	Date Measured	pH	SpC (uS/cm)	Temp (°C)	DO (mg/L)	ORP (mV)
DAD-26	28-Feb-2018	6.72	4,910	22.10	3.37	187.0
	28-Nov-2017	6.97	5,006	22.70	2.93	200.0
	28-Aug-2017	6.71	5,160	23.00	3.12	205.0
	9-Jun-2017	6.59	5,039	23.40	3.02	37.3
	10-Mar-2017	6.81	5,283	22.37	2.65	310.3
	6-Dec-2016	7.25	5,006	21.07	3.01	285.3
	8-Sep-2016	7.16	4,880	23.60	2.40	NM
	6-Jun-2016	6.70	4,273	23.39	1.77	270.3
	1-Mar-2016	7.30	3,959	21.09	1.36	245.7

**NOTES:**

\* = Well contains a pump; as a result, DO and ORP values are not representative of aquifer conditions.

°C = Degrees celsius

DO = Dissolved oxygen

mg/L = Milligrams per liter

mV = Millivolts

NM = Not measured

ORP = Oxidation-reduction potential

SpC = Specific conductance

Temp = Temperature

uS/cm = Microsiemens per centimeter

**TABLE 3. SUMMARY OF GROUNDWATER SAMPLE ANALYTICAL METHODS AND SAMPLING REQUIREMENTS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

Target Analytes	Analytical Method	Sample Container	Preservative	Holding Time
Nitrate as N	EPA 300.0	500 mL HDP	Cool to <6°C,	48 Hours
Nitrate + Nitrite as N	EPA 300.0	500 mL HDP	H <sub>2</sub> SO <sub>4</sub> to pH <2, Cool to <6°C	28 days
Total Kjeldhal Nitrogen	SM 4500 NORG C	500 mL HDP	H <sub>2</sub> SO <sub>4</sub> to pH <2, Cool to <6°C	28 Days
Chloride	EPA 300.0	500 mL HDP	Cool to <6°C	28 Days
Total Dissolved Solids	SM 2540 C MOD	500 mL HDP	Cool to <6°C	7 days

NOTES:  
 °C = Degree Celsius  
<sup>14</sup>N = Nitrogen 14  
<sup>15</sup>N = Nitrogen 15  
 CSIA = Compound-specific isotope analysis  
 EPA = U.S. Environmental Protection Agency  
 HDPE = High-density polyethylene  
 mL = milliliter  
 MOD = Modified  
 N = Nitrogen  
 SM= Standard method  
 VOA = Volatile organic analysis

**TABLE 7. SUMMARY OF TREND ANALYSES 2009 - 2018  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

Monitoring Well	Groundwater Concentration Trend			Comments
	Nitrate	Chloride	TDS	
<b>NORTHERN AREA</b>				
Northern Land Application Area (DP-340)				
70-03	Stable	Increasing	Increasing	Chloride and TDS are expected to stabilize since LAA was phased out.
70/86/340-01	Decreasing	Stable	Stable	Concentrations decreasing or stabilizing since LAA was phased out.
86/340-01	Increasing	Decreasing	Stable	Concentrations expected to decrease or stabilize since LAA was phased out.
Organ Dairy (Former Del Norte Dairy) (DP-126)				
126-04	Increasing	Increasing	Increasing	Chloride and TDS concentration below upgradient conditions. Nitrate is expected to stabilize over time now that lagoon is synthetically lined.
126-05	Stable	Increasing	Increasing	Well is not located along the margins of the abatement plan area. Nitrate is stable and chloride is below existing conditions. Chloride and TDS are expected to stabilize now that lagoon is synthetically lined.
126-07	Increasing	Decreasing	Stable	Well is not located along the margins of the abatement plan area. Nitrate is expected to stabilize now that lagoon is synthetically lined and LAA has been phased out.
126-09	Decreasing	Decreasing	Decreasing	
126-12	Stable	Decreasing	Stable	Nitrate is expected to decrease now that lagoon is synthetically lined and LAA has been phased out.
126-13	Increasing	Stable	Increasing	Well is not located along the margins of the abatement plan area. Chloride is below existing conditions. Concentrations of nitrate and TDS expected to stabilize now that lagoon is synthetically lined.
Mountain View Dairy (DP-70)				
70-01	Increasing	Stable	Increasing	Well is not located along the margins of the abatement plan area. Chloride is stable. Nitrate and TDS are expected to stabilize now that lagoon is synthetically lined. Chloride and TDS are below the existing conditions.
70-02	Stable	Decreasing	Stable	Well is not located along the margins of the abatement plan area. Chloride and TDS are below existing. Nitrate concentrations are expected to decrease now that lagoon is synthetically lined.
70-04	Increasing	Stable	Stable	Well is not located along the margins of the abatement plan area. Nitrate is expected to stabilize now that lagoon is synthetically lined.
Bright Star Dairy (DP-340)				
340-01	Increasing	Stable	Increasing	Well is located downgradient from former Buena Vista Dairy 1, concentrations are expected to decrease since the Dairy is no longer in use. TDS is below existing conditions.
340-02	Increasing	Stable	Stable	Well is located downgradient of lagoon. Concentrations are expected to stabilize now that the lagoon is synthetically lined.

**TABLE 7. SUMMARY OF TREND ANALYSES 2009 - 2018  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

Monitoring Well	Groundwater Concentration Trend			Comments
	Nitrate	Chloride	TDS	
<b>Dominguez 2 Dairy (DP-42)</b>				
42-02	Decreasing	Increasing	Increasing	TDS and Chloride concentration are below existing conditions. Concentrations are expected to stabilize now that lagoon is synthetically lined.
42-03	Increasing	Stable	Decreasing	Well located along the margin of the abatement area, will monitor well as part of performance assessment. Nitrate expected to decrease as chloride and TDS have since waste water lagoon and LAA have been removed. TDS and chloride are above existing conditions; however, they both have stable or decreasing trends.
42-06	Increasing	Decreasing	Decreasing	Chloride and TDS are decreasing. Nitrate is expected to stabilize now that lagoon is synthetically lined.
42-07	Stable	Decreasing	Stable	Has been dry since 2012.
42-08	Decreasing	Decreasing	Decreasing	
42-09	Stable	Increasing	Stable	Not sampled since December 2015 - Well was Destroyed.
42-10	Stable	Stable	Stable	Nitrate is below standards.
42-11	Stable	Decreasing	Decreasing	Nitrate is below standard. Chloride and TDS are below existing conditions.
42-12	Stable	Stable	Stable	Nitrate well below the standard. Chloride and TDS below existing conditions.
42-13	Stable	Decreasing	Decreasing	
<b>Dominguez Dairy (DP-624)</b>				
624-01	Stable	Stable	Stable	
624-02	Decreasing	Decreasing	Decreasing	
624-04	Decreasing	Stable	Stable	Well has been dry since 2011.
624-05	Decreasing	Stable	Decreasing	Well has been dry since 2013.
624-06	Stable	Stable	Stable	Well has been dry since 2013.
624-07	Decreasing	Decreasing	Decreasing	Well has been dry since 2011.
624-08	Stable	Stable	Stable	Well has been dry since 2011.
<b>Gonzalez Dairy (DP-177)</b>				
177-01	Decreasing	Increasing	Increasing	Above existing conditions for TDS and chloride.
177-02	Decreasing	Decreasing	Decreasing	
177-03A	Stable	Stable	Stable	
177-04	Decreasing	Decreasing	Stable	
177-05	Decreasing	Increasing	Increasing	Above existing conditions for TDS and chloride.
177-06	Decreasing	Stable	Increasing	Well has been dry since 2014.
177-07R	Increasing	Stable	Increasing	Nitrate and TDS are increasing.
<b>Abatement Plan Monitor Wells</b>				
DAD-01	Stable	Decreasing	Decreasing	
DAD-02	Increasing	Increasing	Decreasing	Chloride is below existing conditions.
DAD-11	Increasing	Increasing	Increasing	Vertical delineation well.
DAD-12	Increasing	Increasing	Increasing	Chloride and TDS increasing and above existing conditions.
DAD-13	Increasing	Stable	Stable	Nitrate is above standard. Chloride and TDS are below existing conditions. Is on edge of abatement plan area so will continue to monitor.
DAD-14	Stable	Increasing	Stable	Well located along the margin of the abatement area, will monitor well as part of performance assessment.
DAD-23	Increasing	Stable	Stable	Well located to the south-southeast of the abatement area, used as the southern plume delineation well. Nitrate above standard.

**APPENDIX A**  
**PLUGGING RECORDS**

# PLUGGING RECORD

**NOTE: A Well Plugging Plan of Operations shall be approved by the State Engineer prior to plugging - 19.27.4 NMAC**

### I. GENERAL / WELL OWNERSHIP:

State Engineer Well Number: LRG-16712 (257/260-01)

Well owner: Edward DeRuyter Phone No.: 575/233-3620

Mailing address: PO Box 167

City: Mesquite State: NM Zip code: 88048

### II. WELL PLUGGING INFORMATION:

- 1) Name of well drilling company that plugged well: Hargraves Drilling Co
- 2) New Mexico Well Driller License No.: 838 Expiration Date: 5/2019
- 3) Well plugging activities were supervised by the following well driller(s)/rig supervisor(s): Stan Hargraves
- 4) Date well plugging began: 2/2/2018 Date well plugging concluded: 2/2/2018
- 5) GPS Well Location: Latitude: 32°5'33.80"N deg, \_\_\_\_\_ min, \_\_\_\_\_ sec  
Longitude: 106°38'20.41"N deg, \_\_\_\_\_ min, \_\_\_\_\_ sec, WGS 84
- 6) Depth of well confirmed at initiation of plugging as: 17.4 ft below ground level (bgl),  
by the following manner: \_\_\_\_\_
- 7) Static water level measured at initiation of plugging: 10.8 ft bgl
- 8) Date well plugging plan of operations was approved by the State Engineer: 8/15/17
- 9) Were all plugging activities consistent with an approved plugging plan? Yes If not, please describe differences between the approved plugging plan and the well as it was plugged (attach additional pages as needed): \_\_\_\_\_

RECEIVED  
 2018 FEB 23 PM 2:16  
 STATE ENGINEER  
 LAS CRUCES

- 10) Log of Plugging Activities - Label vertical scale with depths, and indicate separate plugging intervals with horizontal lines as necessary to illustrate material or methodology changes. Attach additional pages if necessary.

For each interval plugged, describe within the following columns:

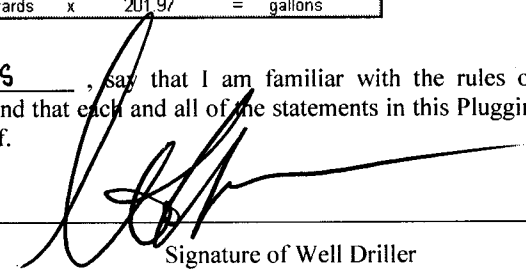

<u>Depth</u> (ft bgl)	<u>Plugging Material Used</u> (include any additives used)	<u>Volume of Material Placed</u> (gallons)	<u>Theoretical Volume of Borehole/ Casing</u> (gallons)	<u>Placement Method</u> (tremie pipe, other)	<u>Comments</u> ("casing perforated first", "open annular space also plugged", etc.)
	Bentonite Chips	100 lbs	100 lbs	Gravity	N/A

**Oxidation-Reduction Potential Trends**  
**Southern Area Discharge Plan Monitoring Wells**  
**Dona Ana Dairies, Dona Ana County, New Mexico**

**APPENDIX F**

**CONCENTRATION TRENDS BY AREA –  
ABATEMENT PLAN WELLS**

**NITRATE CONCENTRATION TRENDS  
 NORTHERN ABATEMENT PLAN MONITORING WELLS  
 DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS  
CENTRAL ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS  
SOUTHERN ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS  
NORTHERN ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS  
CENTRAL ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS  
SOUTHERN ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**TDS CONCENTRATION TRENDS  
NORTHERN ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**TDS CONCENTRATION TRENDS  
CENTRAL ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**TDS CONCENTRATION TRENDS  
SOUTHERN ABATEMENT PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**APPENDIX G**

**CONCENTRATION TRENDS BY AREA AND DAIRY-  
DISCHARGE PLAN WELLS**

**NITRATE CONCENTRATION TRENDS**  
**ALL NORTHERN AREA DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**NORTHERN LAND APPLICATION AREA, DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**ORGAN DAIRY (DEL NORTE DAIRY/DAYBREAK DAIRY) DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

NITRATE CONCENTRATION TRENDS  
MOUNTAIN VIEW DAIRY DISCHARGE PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO

**NITRATE CONCENTRATION TRENDS  
BRIGHT STAR DAIRY DISCHARGE PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**FORMER D&J DAIRY (DOMINGUEZ 2) DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS  
DOMINGUEZ DISCHARGE PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

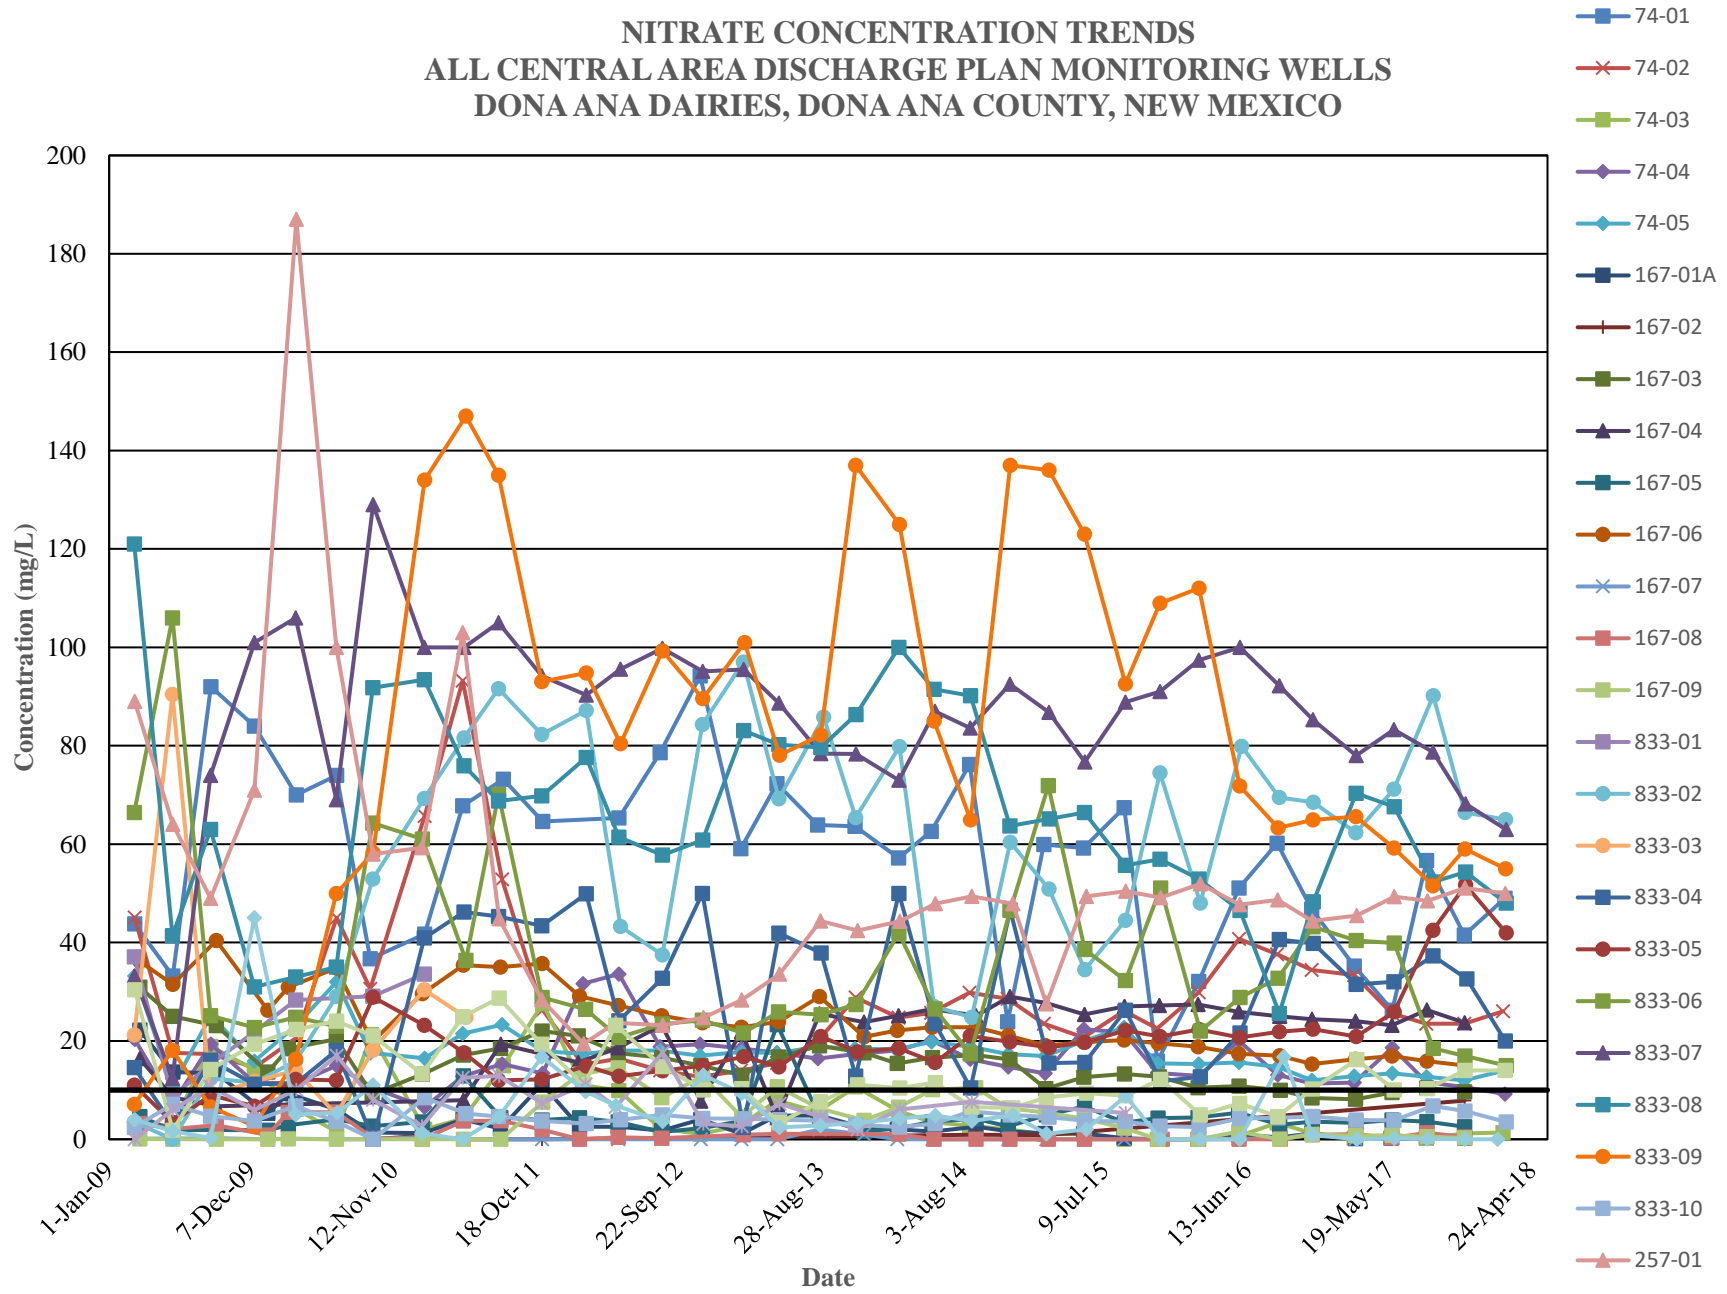

**NITRATE CONCENTRATION TRENDS  
GONZALEZ DISCHARGE PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**ALL CENTRAL AREA DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**BUENA VISTA DAIRY II DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**RIVER VALLEY DAIRY DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**BIG SKY DAIRY DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**SUNSET/DESERT LAND DAIRY DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**NITRATE CONCENTRATION TRENDS**  
**SOUTHERN AREA (DEL ORO DAIRY) DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS**  
**NORTHERN LAND APPLICATION AREA DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS**  
**ORGAN DAIRY (DEL NORTE DAIRY/DAYBREAD DAIRY) DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS**  
**MOUNTAIN VIEW DAIRY DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS  
BRIGHT STAR DAIRY DISCHARGE PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS**  
**FORMER D&J DAIRY (DOMINGUEZ 2) DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS  
DOMINGUEZ DISCHARGE PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

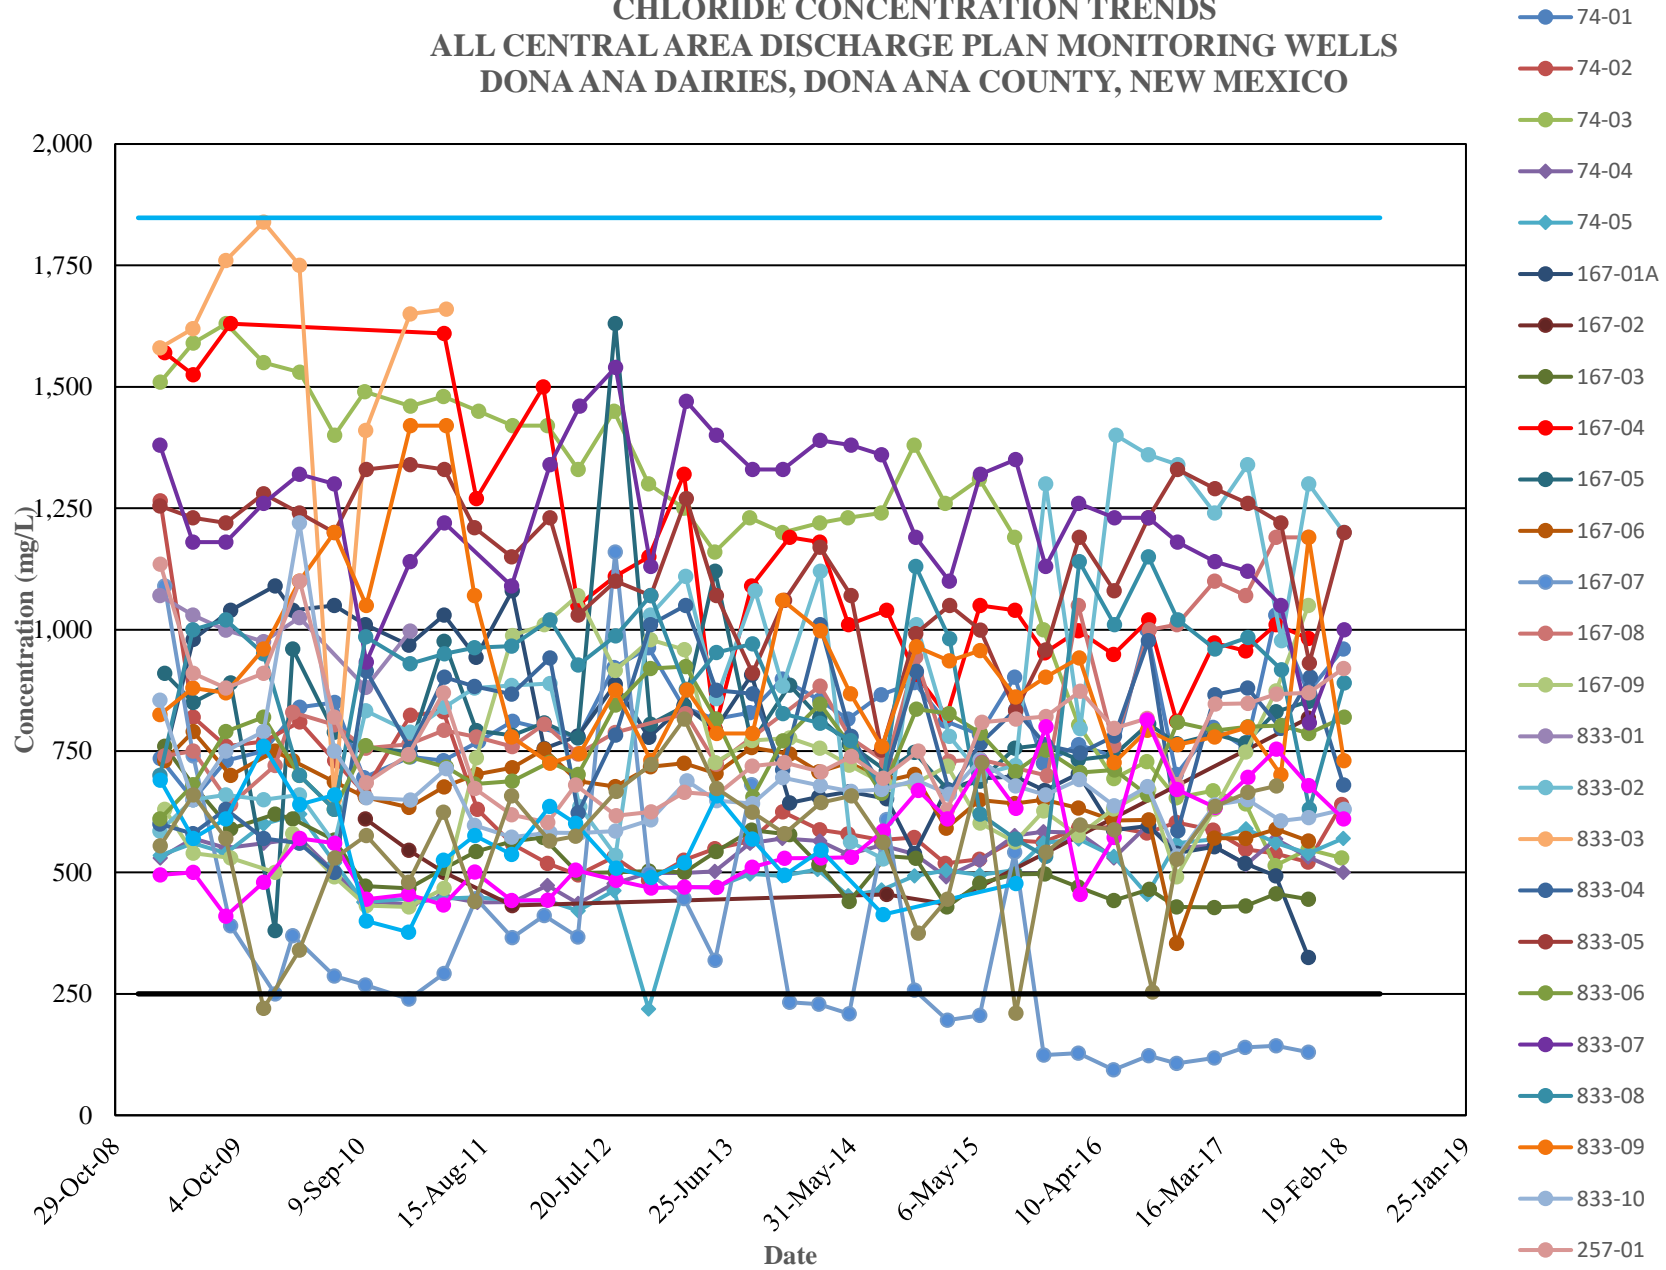

**CHLORIDE CONCENTRATION TRENDS  
GONZALEZ DISCHARGE PLAN MONITORING WELLS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS**  
**ALL CENTRAL AREA DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

**CHLORIDE CONCENTRATION TRENDS**  
**BUENA VISTA DAIRY II DISCHARGE PLAN MONITORING WELLS**  
**DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**
