CERTIFIED MAIL – RETURN RECEIPT REQUESTED

February 21, 2025

Matt Ballou, Owner
Double M Ranch Dairy
PO Box 65414
Lubbock, TX 79464

RE: Draft Discharge Permit Renewal for Closure, DP-703, Double M Ranch Dairy

Dear Matt Ballou:

The New Mexico Environment Department (NMED) hereby provides notice to you of the proposed approval of Ground Water Discharge Permit Renewal for Closure, DP-703, (copy enclosed), pursuant to 20.6.2.3108.H NMAC. NMED will publish notice to the public of the availability of the draft Discharge Permit in the near future and will forward a copy of that notice to you.

Prior to making a final ruling on the proposed Discharge Permit, NMED will allow 30 days from the date the public notice is published in the newspaper for any interested party, including the Discharge Permit applicant, i.e., yourself, to submit written comments and/or request a public hearing. Written comments and/or hearing requests for dairy facilities shall be postmarked on or before the end of the comment period, and submitted to the Ground Water Quality Bureau at the address below.

Pursuant to 20.6.2.3108.K NMAC, requests for a hearing shall set forth the reasons for a hearing. For a dairy facility Discharge Permit that includes additional conditions pursuant to 20.6.6.10.H NMAC, the request for hearing shall identify the conditions being disputed, and shall identify the specific reasons said conditions are being disputed. Hearing requests that do not meet the requirements of 20.6.2.3108.K NMAC and 20.6.6.15 NMAC are subject to denial by the Secretary. Hearings are presided over by the Secretary or a hearing officer appointed by the Secretary.

Please contact me at 505-819-1219 / amanda.otieno@env.nm.gov or acs.general@env.nm.gov with questions or concerns. Written comments and/or a written request for hearing must be received, or the draft Discharge Permit will become final. Thank you for your cooperation during the review process.

Sincerely,

Amanda Otieno

PART A GENERAL INFORMATION

A100 Introduction

- A. The New Mexico Environment Department (NMED) issues this Discharge Permit Renewal for Closure (Discharge Permit), DP-703, to Matt Ballou (Permittee) pursuant to the New Mexico Water Quality Act (WQA), NMSA 1978, §§ 74-6-1 through 74-6-17, and the New Mexico Ground and Surface Water Protection Regulations, 20.6.2 NMAC and the Supplemental Permitting Requirements for Dairies (Dairy Rule), 20.6.6 NMAC. NMED's purpose in issuing this Discharge Permit is to control the discharge of water contaminants from Double M Ranch (dairy facility) for the protection of groundwater and those segments of surface water gaining from groundwater inflow, for present and potential future use as domestic and agricultural water supply and other uses, and to protect public health by requiring controls on the presence and distribution of water contaminants associated with former dairy facility operations and permanent closure activities and by providing oversight of post-closure monitoring.
- B. Under prior authorization of DP-703, last issued January 15, 2020, the Permittee was authorized a maximum daily discharge volume of 65,000 gallons per day (gpd) of effluent from Double M Ranch. Pursuant to site conditions, the discharge may have contained water contaminants or toxic pollutants elevated above the standards of 20.6.2.3103 NMAC in compliance with the terms and conditions of the previous Discharge Permit.
- C. The dairy facility proposes to permanently cease discharging in **March 2025**. Even after cessation of active discharge, the discharge or leachate retains the potential to move directly or indirectly into groundwater of the State of New Mexico which has an existing concentration of 10,000 milligrams per liter (mg/L) or less of total dissolved solids (TDS) within the meaning of 20.6.2.3104 and 20.6.2.3101(A) NMAC.
- D. The Permittee is authorized to perform closure activities and post-closure monitoring pursuant to this Discharge Permit which contains requirements authorized or specified by the Dairy Rule on condition that the Permittee complies with the Dairy Rule and this Discharge Permit, which are enforceable by NMED.

A101 Terms of Permit Issuance

- A. **Permit Duration** - Pursuant to WQA 74-6-5(I) and 20.6.2.3109(H) NMAC, the term of a Discharge Permit is for the fixed term of **five years** from the effective date of the Discharge Permit. The obligation of the Permittee to implement facility closure and post-closure requirements survives the expiration of this Discharge Permit. If closure or post-closure activities specified herein have not been completed by the Permittee prior to the expiration of this Discharge Permit and/or the Permittee has not received from NMED a notice of Discharge Permit termination, the Permittee must request from NMED a renewal of this Discharge Permit as described in Item C below.

- B. **Permit Fees** - As a discharge permit associated with a dairy facility, the Permittee shall remit an annual permit fee payment equal to one-tenth of the applicable permit fee from table 1 of 20.6.2.3114 NMAC on the first occurrence of August 1 after the effective date of this Discharge Permit, and annually thereafter until expiration or termination of this Discharge Permit [20.6.6.9(A) NMAC].
- C. **Permit Renewal** - To renew this Discharge Permit, the Permittee shall submit, in accordance with 20.6.6.10 NMAC, an application and any associated fees for renewal at least one year before the discharge permit expiration date, unless permanent closure and cessation of all post-closure monitoring requirements has been approved by NMED before that date.
- D. **Transfer of Ownership** - This Discharge Permit is being issued to Matt Ballou (Permittee) as identified in **Section A100** above. In accordance with 20.6.6.8 NMAC, the Permittee, any listed owner(s) of record, and any [other] holder(s) of an expired discharge permit are responsible for complying with the conditions listed herein and the Dairy Rule. If during the duration of this Discharge Permit a change in the list of responsible parties is required, transfer of ownership shall be completed in accordance with 20.6.6.34 NMAC as described further in Item D of **Part C101** of this Discharge Permit.
- E. **Additional Conditions** - In addition to the requirements of 20.6.6 NMAC, the Permittee shall pursue closure of the dairy facility in compliance with the following conditions as authorized by 20.6.6.10(l) NMAC pursuant to 74-6-5 WQA. A hearing may be requested on additional conditions in accordance with 20.6.6.15 NMAC.

A102 Applicable Regulations

- A. **Scope** - This Discharge Permit applies solely for the regulation of process wastewater or stormwater generated as a result of former dairy facility operations and closure and post-closure monitoring activities and does not include regulation of domestic wastewater at the facility [20.6.6.20(Y) NMAC]. Domestic wastewater generated at the facility is treated or disposed of pursuant to 20.7.3 NMAC.
- B. The Permittee is requesting closure of a facility that meets the definition of “dairy facility.” 20.6.2.3000 through 20.6.2.3114 NMAC and Part 20.6.6 NMAC (Dairy Rule) apply to discharges specific to dairy facilities and their operations. Permanent closure of the dairy facility shall be managed in accordance with all applicable requirements of the Dairy Rule and this Discharge Permit.
- C. The discharge from the dairy facility is not subject to any of the exemptions of 20.6.2.3105 NMAC.
- D. Groundwater quality as observed in on-site monitoring wells is subject to the criteria of 20.6.2.3101 and 20.6.2.3103 NMAC unless otherwise specified in this Discharge Permit.
- E. Complying with the applicable requirements of 20.6.2 and 20.6.6 NMAC does not relieve a dairy facility’s owner, operator or Permittee from complying with the requirements of other applicable local, state and federal regulations or laws.

A103 Additional Information Requirements

- A. **No Further Action Required.** The Permittee has satisfied the requirements of 20.6.6.10 and 20.6.6.13 NMAC prior to the effective date of this Discharge Permit.

A104 Facility: Physical Description

- A. This dairy facility meets the definition of “existing facility.”
- B. This dairy facility is located at 1251-1299 Curry Rd E, approximately 3 miles east of Clovis, in Section 31, Township 3 North, Range 37 East, Curry County.
- C. On the effective date of this Discharge Permit [DATE], the dairy facility is comprised of the following wastewater system components as identified in the application and the administrative record: The operational system at the facility includes a manure solids separator, two combination impoundments, two stormwater impoundments, one land application area.
1. Wastewater Combination Wastewater impoundments:
 - a. **PWRS-1** – a clay lined retention impoundment used to store wastewater prior to land application. **PWRS-1** is located northeast of the milking parlor. Constructed in 1990, it has a storage capacity of 12.21 ac-ft, with a surface area of approximately 2.29 acres.
 - b. **PWRS-2** – a clay lined retention impoundment used to store wastewater prior to land application. **PWRS-2** is located northeast of the milking parlor. Constructed in 1990, it has a storage capacity of 11.48 ac-ft, with a surface area of approximately 1.88 acres.
 2. Stormwater impoundments:
 - a. **RCS-1** – an unlined retention impoundment used to receive stormwater for prior to transfer to PWRS-2. **RCS-1** is located on the northern boundary of the facility, just west of PWRS-1. Constructed in 1999 it has a storage capacity of 38.2 Ac-ft and an approximate surface area of 4.84 acres.
 - b. **RCS-2** – an unlined retention impoundment used to receive stormwater for prior to transfer to PWRS-2. **RCS-1** is located on the southern boundary of the facility, south of the corrals and southeast of LAA-A. Constructed in 1999 it has a storage capacity of 6.92 Ac-ft and an approximate surface area of 1.89 acres.
 3. Fields within the land application area:
 - a. **LAA-A** – covers 125 acres and is located along the western margin of the facility, west of the facility’s operational impoundments. LAA-A received wastewater discharge between October 1990 and September 2022. Wastewater was applied by a center pivot.

These system components are identified as potential sources of groundwater contamination and require closure as identified in this Discharge Permit. A summary of all wastewater system components authorized to release/receive discharge under prior issuance(s) of this Discharge Permit is provided in **Section A107**.

A105 Facility: Documented Hydrogeologic Conditions

- A. Groundwater most likely to be affected at this dairy facility is at a depth of approximately 392 feet and had a pre-discharge total dissolved solids concentration of approximately 264 milligrams per liter.
- B. There are no perennial surface waters existing within the bounds of the facility. The closest surface water system to the facility is an unnamed ephemeral playa lake approximately 1.5 miles east of the facility.

A106 Facility: Existing System Controls

- A. During operation, this dairy facility employed the following system controls pursuant to operational requirements as listed in prior issuance(s) of this Discharge Permit:
 - 1. **Impoundments: PWRS-1, PWRS-2, RCS-1, and RCS-2.**
 - 2. **Flow Meters:**
 - a. **Sump Meter** - located at parlor sump to measure the volume of wastewater discharged from the production area to the wastewater impoundment system.
 - b. **LAA-A Meter** - located on the south side of PWRS-2 to measure the volume of wastewater discharged to the land application area.
 - 3. **Manure Solids Separator:**
 - a. **Manure Solids Separator** – a two-cell concrete settling basin located approximately 1,200 feet northeast of the milking parlor.
 - 4. **Monitoring Wells** - The dairy facility used the following monitoring wells to supply data representative of groundwater quality:
 - a. **MW-1** - hydrologically downgradient of the impoundment system, PWRS-1, PWRS-2, and RCS-1, centrally located within the facility southeast of the impoundment system.
 - b. **MW-2** - hydrologically upgradient of all contamination sources at the dairy facility and located in the northwest corner of the facility.
 - c. **MW-3** - hydrologically downgradient of the land application area, located on the southwest corner of LAA-A.

These system controls shall require continued operation and maintenance during closure or post-closure activities and termination and removal as identified in this Discharge Permit.

- B. As of the effective date of this Discharge Permit, a total of 3 monitoring wells are documented at or near this dairy facility as identified in the application and/or the administrative record. All facility monitoring wells are subject either to closure or to post-closure monitoring as specified in **Section B102** and in **Table C1** of this Discharge Permit:

A107 Facility: Discharge Permit History and Prior Authorization

- A. The original Discharge Permit was issued on October 26, 1990, and subsequently renewed and/or modified on February 14, 1997, March 26, 2002, and October 23, 2006. DP-703, last issued on January 15, 2020, authorized the Permittee to discharge water contaminants as part of facility operations subject to the following requirements:
1. Discharge up to 65,000 gpd of wastewater from the production area. Wastewater flowed to a concrete sump and was pumped through passive two-cell concrete solids separator to a clay lined wastewater impoundment for storage. Wastewater was land applied by center pivot irrigation to up to 125 acres of irrigated cropland under cultivation.
 2. Utilize the following impoundments in accordance with Subsection B of 20.6.6.20 NMAC as follows:
 - a. **PWRS-1** - was authorized to receive wastewater for storage prior to land application. This impoundment **exists** and remains unclosed as of the effective date of this Discharge Permit.
 - b. **PWRS-2** - was authorized to receive wastewater for storage prior to land application. This impoundment **exists** and remains unclosed as of the effective date of this Discharge Permit.
 3. Apply wastewater to fields within the land application area in accordance with Subsections B, C and I of 20.6.6.21 NMAC. The land application area was comprised of the following fields for a total land application area of 125 acres:
 - a. **LAA-A** – This field received wastewater between October 26, 1990, and March 2025.

PART B FACILITY SPECIFIC REQUIREMENTS

B100 Authorization for Land Application During Closure

- A. Pursuant to 20.6.6.30(A) NMAC, the Permittee is hereby authorized to continue to apply wastewater, stormwater, and manure solids and compost to fields within the land application area after permanent cessation of discharge operations in accordance with B, C and I of 20.6.6.21 NMAC as follows: **LAA-A**. Authorization to discharge to this field is being solely granted for the purposes of completing closure measures as specified in 20.6.6.30 NMAC and shall be redacted upon NMED confirmation of completion of the required closure measures listed in **Table B1** and **Table B3** of this Discharge Permit.

B101 Facility: Conditions for Closure

- B. **Impoundment(s)** - The Permittee shall permanently close all impoundments or settling basins at the dairy facility as identified in **Section A104** above in accordance with 20.6.6 NMAC and the conditions summarized in **Table B1** below.

**Table B1
 Impoundments and Settling Basin(s) Closure Requirements**

Engineering and Surveying
a) None required.
Operations and Maintenance
<p>b) Within six months of the effective date of this Discharge Permit [DATE], empty and land apply all wastewater from the following impoundments in accordance with Table B2 of this Discharge Permit: PWRS-1 and PWRS-2. [20.6.6.30(A) NMAC]</p> <p>c) Upon emptying each impoundment and unless otherwise designated and approved by NMED for continued service as part of closure or post-closure maintenance (see Table C1 of this Discharge Permit), remove and properly dispose of all supporting infrastructure and any associated system controls used to supply or transfer wastewater or stormwater to/from the impoundments: PWRS-1, PWRS-2, RCS-1, and RCS-2.</p> <p>d) Complete removal of manure solids from the wastewater impoundments shall be achieved within two years of the effective date of this Discharge Permit [DATE], for PWRS-1 and PWRS-2. [20.6.6.30(e) NMAC] Manure solids shall be applied to the designated land application area, as authorized by this discharge permit.</p> <p>e) Using clean fill for which a borrow source is appropriated by, fill and re-grade all emptied impoundments, to blend into the surrounding pre-existing surface topography within two years of the effective date of this Discharge Permit [DATE] to prevent any subsequent ponding of stormwater in the area. [20.6.6.30(A) NMAC]</p> <p>f) Send photo documentation to NMED of the properly closed impoundments.</p> <p>g) Until all wastewater has been removed from impoundments and the feature filled and re-graded to reflect surrounding topography, maintain the feature such that:</p> <ul style="list-style-type: none"> • storage capacity preserves a minimum of two feet of freeboard at all times as required by 20.6.6.17(D) NMAC. [20.6.6.21(A) NMAC] • conditions which could affect the structural integrity of the feature or any associated feature liner are prevented. [20.6.6.20(P) NMAC] • any associated faulty pipe(s) or fixture(s) are repaired or replaced within 72 hours of discovery to mitigate or prevent an unauthorized discharge. [20.6.6.20(Q) NMAC]
Inspection and Monitoring
h) None.
Recordkeeping and Reporting
<p>i) Report any unauthorized discharges to NMED pursuant to 20.6.2.1203 NMAC.</p> <p>j) Unless otherwise specified in this Discharge Permit, continue to submit all required monitoring information quarterly as part of the Quarterly Monitoring Report in accordance with the general reporting schedule listed in Table C1 of this Discharge Permit.</p> <p>k) Until all wastewater is removed:</p> <ul style="list-style-type: none"> • notify NMED within 24 hours of discovery of any observed condition(s) that may impact the structural integrity of a berm or liner or that may result in an unauthorized discharge. [20.6.6.20(P) NMAC] • continue to report composite wastewater sample results to NMED annually as part of the Quarterly Monitoring Report due May 1. [20.6.6.25(C) NMAC]

**Table B1
 Impoundments and Settling Basin(s) Closure Requirements**

l) Maintain written records of any facility inspections performed during closure activities including repairs or replacements. Keep records at the facility or make them available to NMED upon request.
--

C. **Land Application Area Management** - The Permittee shall continue to manage all land application areas at the dairy facility in accordance with 20.6.6 NMAC and the conditions summarized in **Table B2** below.

**Table B2
 Land Application Area Management During Closure**

Engineering and Surveying
a) None required.
Operations and Maintenance All Land Application Areas
b) Land apply wastewater uniformly to all fields within the land application area as authorized in Section B100 and at a planned rate consistent with an approved NMP . [20.6.6.21(B) NMAC] c) Land apply wastewater only to field(s) within the land application area receiving fresh irrigation water. Wastewater is intended as sources of crop nutrients and shall not be used as a primary source to meet the water consumptive needs of a crop. d) Land apply manure solids and composted material to the land application area in accordance with an approved NMP . [20.6.6.20(S) NMAC]. Estimate the nitrogen content of the manure solids applied to each field of the land application area at 25 pounds/ton or use the actual nitrogen content values from a <u>composite sample collected annually of on-site manure solids</u> . [20.6.6.25(D) NMAC] e) As required, blend wastewater with fresh water using any of the methods provided in 20.6.6.21(D) NMAC. f) Utilize and maintain all backflow prevention methods or devices in compliance with 20.6.6.21(L) NMAC g) Minimize ponding within the land application area. [20.6.6.21(B) NMAC]
Inspection and Monitoring All Land Application Areas
h) As applicable, until all waste generated from the facility, as specified in Table B1 and B3 , are properly disposed of, continue the following monitoring requirements: <ul style="list-style-type: none"> • monitor and record via flow meter(s) the volume of wastewater distributed to the land application area to ensure compliance with an approved NMP [G and H of 20.6.6.21 NMAC]; • for each irrigation well, estimate the annual volume of fresh water applied to each field within the land application area [20.6.6.25(E) NMAC]; • collect a soil sample from each receiving field within the land application area annually in accordance with K and L of 20.6.6.25 NMAC. If a field has never before received wastewater but will begin receiving wastewater as part of an approved NMP, collect a soil sample immediately prior to initial application and annually thereafter; • annually collect a sample of irrigation water supplied from each well or a group of physically connected wells and analyze for nitrate as nitrogen and total Kjeldahl nitrogen, pursuant to 20.6.6.24(B) NMAC; • collect and analyze a composite sample of plant material representative of each type of crop harvested from each field in the land application area over the course of the year in accordance with 20.6.6.25(I) NMAC;

**Table B2
 Land Application Area Management During Closure**

<ul style="list-style-type: none"> • annually collect a composite sample to calculate actual nitrogen content values of on-site manure solids. Collect and analyze sample in accordance with the requirements listed in 20.6.6.25(D) NMAC; • maintain and submit inspection and maintenance records for each check valve device associated with the backflow prevention program in accordance with 20.6.6.21(M) NMAC; • maintain and submit land application data sheets (LADS) for each authorized field within the land application area in accordance with 20.6.6.25(G) NMAC; and • maintain and submit a log recording for all additional fertilizers applied to each field within the land application area during closure measures. <p>i) Repair or replace a malfunctioning check valve device within 30 days of discovery, and use of all wastewater supply lines associated with the check valve device shall cease until repair or replacement has been completed. [20.6.6.21(M) NMAC]</p>
Recordkeeping and Reporting All Land Application Areas
<p>j) Land application and closure activities shall be performed in a manner that is consistent with an approved NMP.</p> <p>k) To achieve compliance with applicable sections of 20.6.6.21 NMAC, the Permittee shall submit a revised NMP by May 1 of the first year this permit is in effect [DATE].</p> <p>l) As applicable, submit annual updates to the approved <u>NMP</u> to NMED as part of the <u>Quarterly Monitoring Report</u> due May 1. [20.6.6.21(I) NMAC]</p> <p>m) Unless otherwise specified in this Discharge Permit, continue to submit all required monitoring or recordkeeping information quarterly or as part of the next scheduled <u>Quarterly Monitoring Report</u> in accordance with the general reporting schedule listed in Table C1 of this Discharge Permit.</p> <p>n) Maintain an inspection log regarding maintenance of land application infrastructure. Provide log to NMED upon request. [20.6.6.21(K) NMAC]</p> <p>o) Per 20.6.6.25(H) NMAC, submit crop yield documentation and plant and harvest dates of each crop grown during closure measures to NMED.</p> <p>p) Per 20.6.6.25(J) NMAC, submit a nitrogen removal summary report to NMED.</p>

D. **Manure Solids and Compost** - The Permittee shall permanently remove from the surface of the dairy facility all residual manure solids and compost in accordance with 20.6.6.30 NMAC and the conditions summarized in **Table B3** below.

**Table B3
 Manure Solids and Compost Closure Requirements**

Engineering and Surveying
a) None.
Operations and Maintenance
b) Manure solids and compost shall be removed from surface areas at the dairy facility and applied to the designated land application area, as authorized by the approved NMP or transferred off-site for proper disposal as authorized by an approved Disposal Plan.
Inspection and Monitoring
c) None required.
Recordkeeping and Reporting

**Table B3
 Manure Solids and Compost Closure Requirements**

d) Provide to NMED a summary of completed closure measures according to the implementation schedule in the approved **NMP** and any associated monitoring and sampling data collected in the **Quarterly Monitoring Report** (see **Table C1** of this Discharge Permit).

E. **Monitoring Well(s)** – As part of closure, a Permittee may be required to either install one or more additional groundwater monitoring wells for post-closure monitoring per 20.6.6.30(A) and/or plug and abandon one or more existing groundwater monitoring wells per 20.6.6.30(C). The groundwater monitoring well system approved for closure of this dairy facility is detailed in **Table B4** below.

**Table B4
 Monitoring Well Requirements for Closure**

Engineering and Surveying
a) None required.
Operations and Maintenance
b) Operate and maintain the following existing facility groundwater monitoring wells in compliance with 20.6.6.23(A) NMAC and this section of this Discharge Permit: MW-1, MW-2, and MW-3.
c) Verify all facility monitoring wells are permanently identified in accordance with 20.6.6.23(C) NMAC.
Inspection and Monitoring
d) Continue to perform quarterly routine groundwater sampling of all wells in accordance with 20.6.6.23(F) NMAC to comply with the required monitoring reporting schedule listed in Table C1: MW-1, MW-2, and MW-3. Monitoring of these wells shall, at a minimum, continue until all closure measures as specified in Section B100 of this Discharge Permit have been completed and confirmation of closure completion has been received from NMED. Any post-closure monitoring requirements for the dairy facility are specified in Section B101 of this Discharge Permit.
e) Analyze collected groundwater sample(s) according to the methods listed in 20.6.6.24(B) and 20.6.2.3107.B NMAC. Pursuant to 20.6.6.24(B) NMAC, sample constituents that require analysis and reporting to NMED include: nitrate as nitrogen, total Kjeldahl nitrogen, chloride, sulfate and total dissolved solids. [20.6.6.23(G) NMAC]
f) Prior to the expiration date of this Discharge Permit, NMED shall have the option to perform one downhole inspection of each monitoring well identified in this Discharge Permit. NMED shall establish the inspection date and provide at least 60 days’ notice to the Permittee by certified mail. The Permittee shall have any existing dedicated pumps removed at least 48 hours prior to NMED inspection to allow adequate settling time of any sediment agitated as a result of pump removal. Should a facility not have existing dedicated pumps, but decide to install pumps in any of the monitoring wells, NMED shall be notified at least 90 days prior to pump installation so that a downhole well inspection can be scheduled prior to pump placement. [20.6.2.3107 NMAC]
Recordkeeping and Reporting
g) Provide to NMED a Well Abandonment Report within 60 days of completion of well plugging activities.
h) A Quarterly Monitoring Report shall continue to be filed with NMED in accordance with the general reporting schedule listed in Table C1 . Each Quarterly Monitoring Report shall contain, at a minimum, the following information: [20.6.6.23(G) NMAC]

**Table B4
 Monitoring Well Requirements for Closure**

<ul style="list-style-type: none"> • Facility map with location and number of each well in relation to the contamination source it is intended to monitor • Depth-to-shallowest groundwater measurements • Field parameter measurements and parameter stabilization log • Analytical results (including the laboratory quality assurance and quality control summary report) • Groundwater elevation contour maps utilizing elevation contours of 2 ft or less in accordance with Subsection L of 20.6.6.23 NMAC

F. **Stormwater Management** - During implementation of both closure measures and post-closure monitoring, the Permittee shall manage stormwater at the dairy facility in accordance with 20.6.6 NMAC and the conditions summarized in **Table B5** below.

**Table B5
 Stormwater Management During Closure and Post-Closure**

Engineering and Surveying
a) None.
Operations and Maintenance
b) All stormwater shall be emptied within one year of the effective date of this Discharge Permit [DATE] for RCS-1 and RCS-2 . c) Stormwater removed from the impoundment shall be pumped into the wastewater impoundments or applied to the designated land application area, as authorized by the this discharge permit. d) Implement stormwater management by: [20.6.2.3109 NMAC] <ul style="list-style-type: none"> • Maintain stormwater conveyance [20.6.6.20(H) NMAC] • Divert stormwater to minimize stormwater ponding and infiltration. [Subsection H of 20.6.6.20 NMAC] • Before removal is complete, maintain diversions for facility stormwater run-on and run-off to prevent ponding within areas used for manure and compost stockpiling [20.6.6.20(S) NMAC]
Inspection and Monitoring

Recordkeeping and Reporting
f) None required

B102 Facility: Conditions for Post-Closure Monitoring and Maintenance

A. Pursuant to 20.6.6.30(B), the Permittee may initiate post-closure monitoring and maintenance at a dairy facility following completion of and confirmation by NMED that the requirements of **Section B100** have been adequately met.

- B. **Groundwater Monitoring** - The Permittee is required to perform post-closure groundwater monitoring in accordance with 20.6.6.30(B) NMAC and **Table B6** below.

**Table B6
 Post-Closure Groundwater Monitoring Requirements**

Engineering and Surveying
a) None required.
Operations and Maintenance
b) Operate and maintain the following facility groundwater monitoring well(s) for post-closure monitoring in compliance with 20.6.6.23(A) NMAC and this section of this Discharge Permit: MW-1, MW-2, and MW-3.
Inspection and Monitoring
<p>c) Perform quarterly routine groundwater sampling of all post-closure monitoring wells in accordance with 20.6.6.23(F) NMAC to comply with the required monitoring reporting schedule listed in Table C1: MW-1, MW-2, and MW-3. Post-closure monitoring at a dairy facility shall continue until a minimum of eight consecutive groundwater sampling events confirm that the standards of 20.6.2.3103 NMAC are not exceeded and the total nitrogen concentration in groundwater is less than or equal to 10 mg/L. If monitoring results show failure of one or both of these conditions, the Permittee shall implement contingency requirements pursuant to 20.6.6.27 NMAC (Section B102).</p> <p>d) Analyze collected groundwater sample(s) according to the methods listed in 20.6.6.24(B) and 20.6.2.3107.B NMAC. Pursuant to Subsection B of 20.6.6.24 NMAC, sample constituents that require analysis and reporting to NMED include: nitrate as nitrogen, total Kjeldahl nitrogen, chloride, sulfate and total dissolved solids. [20.6.6.23(G) NMAC]</p> <p>e) Prior to the expiration date of this Discharge Permit, NMED shall have the option to perform one downhole inspection of each monitoring well identified in this Discharge Permit. NMED shall establish the inspection date and provide at least 60 days' notice to the Permittee by certified mail. The Permittee shall have any existing dedicated pumps removed at least 48 hours prior to NMED inspection to allow adequate settling time of any sediment agitated as a result of pump removal.</p> <p>Should a facility not have existing dedicated pumps, but decide to install pumps in any of the monitoring wells, NMED shall be notified at least 90 days prior to pump installation so that a downhole well inspection can be scheduled prior to pump placement. [20.6.2.3107 NMAC]</p>
Recordkeeping and Reporting
<p>f) A Quarterly Monitoring Report shall continue to be filed with NMED in accordance with the general reporting schedule listed in Table C1. Each Quarterly Monitoring Report shall contain, at a minimum, the following information: [20.6.6.23(G) NMAC]</p> <ul style="list-style-type: none"> • Facility map with location and number of each well in relation to the contamination source it is intended to monitor • Depth-to-shallowest groundwater measurements • Field parameter measurements and parameter stabilization log • Analytical results (including the laboratory quality assurance and quality control summary report) • Updated groundwater elevation contour maps utilizing elevation contours of 2 ft or less in accordance with 20.6.6.23(L) NMAC

- C. **Stormwater Management** - During implementation of post-closure monitoring, the Permittee shall continue to manage stormwater at the dairy facility in accordance with 20.6.6 NMAC and the conditions as summarized in **Table B5** presented in **Section B100** of this Discharge Permit.
- D. **Well Plugging and Abandonment** - Upon written notification by certified mail from NMED that post-closure monitoring at the facility as specified in **Table B6** of this Discharge Permit may cease, the Permittee shall abandon all remaining facility wells in accordance with the conditions specified in 20.6.6.30(C) NMAC and **Table B7** below.

Table B7
Post-Closure Well Plugging and Abandonment Requirements

Engineering and Surveying
a) None required.
Operations and Maintenance
b) Within ninety (90) days of receipt of written notification from NMED, the Permittee shall properly plug and abandon the following 3 existing monitoring well(s): MW-1, MW-2, and MW-3 . Wells shall be plugged and abandoned pursuant to 19.27.4 and 20.6.6.30(C) NMAC and in accordance with NMED's <i>Monitoring Well Construction and Abandonment Guidelines</i> and any other applicable local, state, and federal regulations. Documentation describing the plug and abandonment procedures, including photographic documentation, shall be presented in a Post-Closure Well Abandonment Report .
Inspection and Monitoring
c) None required.
Recordkeeping and Reporting
d) Provide to NMED a Post-Closure Well Abandonment Report within 60 days of completion of well plugging activities. The Post-Closure Well Abandonment Report shall provide information equivalent to the plugging record requirements of 19.27.4 NMAC. [20.6.6.30(C) NMAC]

B103 Facility: Contingency Plan

- A. In the event NMED or the Permittee identifies any failures of the Discharge Permit or system not specifically noted herein, NMED may require the Permittee to develop for NMED approval a contingency or corrective action plan and schedule to cope with the failure(s) [20.6.2.3107.A(10) NMAC].
- B. Facility conditions that may occur as part of closure or post-closure and will invariably require Permittee action under one or more contingency plans include:
 1. **Exceedance of groundwater quality standards** – Constituent concentration(s) in one or more groundwater samples collected from a monitoring well intended to monitor contamination sources at a dairy facility including impoundments exceed (1) one or more of the groundwater standards of 20.6.2.3103 NMAC and (2) reported constituent concentration(s) in one or more groundwater samples collected from the upgradient monitoring well for four consecutive quarters.
 2. **Ineffective groundwater monitoring well(s)** – One or more monitoring well(s) required

by 20.6.6.23 NMAC are (1) not located hydrologically downgradient of the contamination source(s) intended to monitor, (2) not completed pursuant to 20.6.6.23 NMAC or (3) contains insufficient water to monitor groundwater quality effectively.

3. **Spills, leaks, unauthorized discharge** - Any spill or release that is not authorized under this Discharge Permit.

If a contingency or corrective action plan is required, the Permittee shall comply with the requirements of Sections 20.6.2.1203, 20.6.6.27 and 20.6.6.29 NMAC, and shall submit to NMED all information or documentation required by the applicable portions of Sections 20.6.2.1203, 20.6.6.27 and 20.6.6.29 NMAC. The Permittee may be required to abate water pollution pursuant to Sections 20.6.2.4000 through 20.6.2.4115 NMAC, should the corrective action plan not result in compliance with the standards and requirements set forth in Section 20.6.2.4103 NMAC.

PART C GENERAL CONDITIONS

C100 Introduction

- A. The NMED has reviewed the permit application for the proposed closure and has determined that the provisions of the Dairy Rule and applicable groundwater quality standards will be met in accordance with this Discharge Permit. General conditions for all Discharge Permits issued by the Ground Water Quality Bureau pursuant to NMAC 20.6.2 as well as specific conditions as applied to the closure and post-closure of a dairy facility with use of a land application area pursuant to 20.6.6.30 NMAC are summarized on **Table C1**. Unless otherwise specified in Parts A or B of this Discharge Permit, both the conditions as listed in this part and the facility-specific conditions as listed in **Part B** of this Discharge Permit are mandated to achieve permanent closure of the facility.
- B. For closure, the Permittee shall comply with the requirements of 20.6.6.30 NMAC and shall submit to NMED all information or documentation required by the applicable portions of 20.6.6.30 NMAC.

**Table C1
 General Discharge Permit Conditions for Dairy Facility Closure**

Engineering and Surveying
a) None required
Operations and Maintenance
b) None required
Inspection and Monitoring
c) None required
Recordkeeping and Reporting
d) Records of any inspection(s), repairs and maintenance conducted on facility infrastructure as related the former wastewater management system shall be maintained at the dairy facility or be available for NMED review.

C101 Legal

- A. Nothing in this Discharge Permit shall be construed in any way as relieving the Permittee of the obligation to comply with all applicable federal, state, and local laws, regulations, permits or orders [20.6.2 NMAC].
- B. Any violation of the requirements and conditions of this Discharge Permit, including any failure to allow NMED staff to enter and inspect records or facilities, or any refusal or failure to provide NMED with records or information, may subject the Permittee to a civil enforcement action. Pursuant to WQA 74-6-10(A) and (B), such action may include a compliance order requiring compliance immediately or in a specified time, assessing a civil penalty, terminating the Discharge Permit, or any combination of the foregoing; or an action in district court seeking injunctive relief, civil penalties, or both. Pursuant to WQA 74-6-10(C) and 74-6-10.1, civil penalties of up to \$15,000 per day of noncompliance may be assessed for each violation of the WQA 74-6-5, the WQCC Regulations, or this Discharge Permit, and civil penalties of up to \$10,000 per day of noncompliance may be assessed for each violation of any other provision of the WQA, or any regulation, standard, or order adopted pursuant to such other provision. In any action to enforce this Discharge Permit, the Permittee waives any objection to the admissibility as evidence of any data generated pursuant to this Discharge Permit. [74-6-10 WQA, 74-6-10.1 WQA]
- C. Pursuant to WQA 74-6-10.2(A-F), criminal penalties shall be assessed for any person who knowingly violates or knowingly causes or allows another person to:
1. Make any false material statement, representation, certification or omission of material fact in an application, record, report, plan or other document filed, submitted or required to be maintained under the WQA;
 2. Falsify, tamper with or render inaccurate any monitoring device, method or record required to be maintained under the WQA; or
 3. Fail to monitor, sample or report as required by a permit issued pursuant to a state or federal law or regulation, is subject to felony charges and shall be sentenced in accordance with the

provisions of Section 31-18-15 NMSA 1978.

- D. Prior to the transfer of any ownership, control, or possession of this permitted facility or any portion thereof, the Permittee shall notify the proposed transferee in writing of the existence of this Discharge Permit and include a copy of this Discharge Permit with the notice in accordance with 20.6.2.3111 NMAC. The transferee(s) shall notify NMED, in writing, of the date of transfer of ownership and provide contact information for the new owner(s) pursuant to 20.6.6.12(B) NMAC. Notification of the transfer shall be submitted to NMED within 30 days of the ownership transfer date. [20.6.6.34 NMAC]
- E. Pursuant to WQA 74-6-5(o), the Permittee has a right to appeal the conditions and requirements as outlined in this Discharge Permit through filing a petition for review before the WQCC. Such petition shall be in writing to the WQCC within thirty (30) days of the receipt of this Discharge Permit. Unless a timely petition for review is made, the decision of NMED shall be final and not subject to judicial review.

C102 General Inspection and Entry Requirements

- A. Nothing in this Discharge Permit shall be construed as limiting in any way the inspection and entry authority of NMED under the WQA, the WQCC Regulations, or any other applicable law or regulation. [20.6.2.3107 NMAC, 74-6-9(B) & (E) WQA]
- B. The Permittee shall allow the Secretary or an authorized representative, upon the presentation of credentials, to: [20.6.2.3107.D NMAC, 74-6-9(B) & (E) WQA]
 - 1. Enter at regular business hours or at other reasonable times upon the Permittee's premises or other location where records must be kept under the conditions of this Discharge Permit, or under any federal or WQCC regulation.
 - 2. Inspect and copy, during regular business hours or at other reasonable times, any records required to be kept under the conditions of this Discharge Permit, or under any federal or WQCC regulation.
 - 3. Inspect, at regular business hours or at other reasonable times, any facility, equipment (including monitoring and control equipment or treatment works), practices or operations regulated or required under this Discharge Permit, or under any federal or WQCC regulation.
 - 4. Sample or monitor, at reasonable times for the purpose of assuring compliance with this Discharge Permit or as otherwise authorized by the WQA, any effluent, water contaminant, or receiving water at any location before or after discharge.

C103 General Record Keeping and Reporting Requirements

- A. The Permittee shall maintain a written record of the following:
 - 1. Amount of wastewater, effluent, leachate or other wastes discharged pursuant to this Discharge Permit. [20.6.2.3107.A NMAC]
 - 2. Operation, maintenance, and repair of all facilities/equipment used to treat, store or

dispose of wastewater; to measure flow rates, to monitor water quality, or to collect other data required by this Discharge Permit. Per 20.6.2.3107.A NMAC, this record shall include:

- a. Repair, replacement or calibration of any monitoring equipment; and
 - b. Repair or replacement of any equipment used in the Permittee's waste or wastewater treatment and disposal system.
3. Any spills, seeps, and/or leaks of effluent, and of leachate and/or process fluids not authorized by this Discharge Permit. [20.6.2.3107.A NMAC]
- B. The Permittee shall maintain at its facility a written record of all data and information related to field measurements, sampling, and analysis conducted pursuant to this Discharge Permit. The following information shall be recorded and shall be made available to NMED upon request:
1. The dates, exact place and times of sampling or field measurements;
 2. The name and job title of the individuals who performed each sample collection or field measurement;
 3. The date of the analysis of each sample;
 4. The name and address of the laboratory and the name and job title of the person that performed the analysis of each sample;
 5. The analytical technique or method used to analyze each sample or take each field measurement;
 6. The results of each analysis or field measurement, including raw data;
 7. The results of any split sampling, spikes or repeat sampling; and
 8. A description of the quality assurance (QA) and quality control (QC) procedures used.
- C. The Permittee shall furnish to NMED, within a reasonable time, any documents or other information which it may request to determine whether cause exists for terminating and/or renewing this Discharge Permit or to determine compliance with this Discharge Permit. The Permittee shall also furnish to NMED, upon request, copies of documents required to be kept by this Discharge Permit. [20.6.2.3107.D NMAC, 74-6-9(B) & (E) WQA]

Part D MISCELLANEOUS

D100 Supporting On-Line Documents

- A. Copies of the following documents can be downloaded from NMED's web site under Forms.

<https://www.env.nm.gov/forms/>

1. Notice of Intent to Discharge
1. Application for a New Discharge Permit (dairy facility only)

2. Application for Discharge Permit Renewal and/or Modification (dairy facility only)
3. Application for Discharge Permit Renewal for Closure (dairy facility only)
 - a.

D101 Definitions

- A. **“abatement plan”** means a description of any operational, monitoring, contingency and closure requirements and conditions for the prevention, investigation and abatement of water pollution, and includes Stage 1, Stage 2, or Stage 1 and 2 of the abatement plan, as approved by the secretary
- B. **“commission”** means:
 1. the New Mexico water quality control commission (WQCC), or
 2. NMED, when used in connection with any administrative and enforcement activity
- C. **“dairy facility”** means the production area and the land application area (if applicable), where the discharge and associated activities will or do take place
- D. **“Dairy rule”** means 20.6.6 NMAC, as amended
- E. **“NMED”, “agency”, or “division”** means the New Mexico Environment Department or a constituent agency designated by the **commission**
- F. **“discharge permit”** means a discharge plan approved by NMED
- G. **“discharge permit modification”** means a change to the requirements of a discharge permit that result from a change in the location of the discharge, a significant increase in the quantity of the discharge, a significant change in the quality of the discharge; or as required by the secretary
- H. **“discharge permit renewal”** means the re-issuance of a discharge permit for the same, previously permitted discharge
- I. **“discharge plan”** means a description of any operational, monitoring , contingency, and closure requirements and conditions for any discharge of effluent or leachate which may move directly or indirectly into groundwater
- J. **“discharge site”** means the entire site where the discharge and associated activities will take place
- K. **“discharge volume”** means the measured daily volume of wastewater actually discharged within the production area. This definition does not include the volume of wastewater discharged to a land application area (if applicable).
- L. **“disposal”** means to abandon, deposit, inter or otherwise discard a fluid as a final action after its use has been achieved

- M. **“existing dairy facility”** means a dairy facility that is currently discharging, or has previously discharged and has not been issued a notice from NMED verifying that closure and post-closure monitoring activities have been completed
- N. **“fluid”** means material or substance which flows or moves whether in a semisolid, liquid, sludge, gas, or any other form or state
- O. **“flow meter”** means a device used to measure the volume of water, wastewater or stormwater that passes a particular reference section in a unit of time
- P. **“freeboard”** means the vertical distance between the elevation at the lowest point of the top inside edge of the impoundment and the design high water elevation of the water level in the impoundment
- Q. **“groundwater”** means interstitial water which occurs in saturated earth material and which is capable of entering a well in sufficient amounts to be utilized as a water supply
- R. **“impoundment”** means any structure designed and used for storage or disposal by evaporation of wastewater, stormwater, or a combination of both wastewater and stormwater. A multiple-cell impoundment system having at least one shared berm or barrier whose smallest cells have a cumulative constructed capacity of 10 percent or less of the constructed capacity of the largest cell shall be considered a single impoundment for the purposes of the Dairy Rule. A wastewater or stormwater transfer sump or a solids settling separator is not an impoundment
- S. **“manure”** means an agricultural waste composed of excreta of animals, and residual bedding materials, waste feed or other materials that have contacted excreta from such animals
- T. **“maximum daily discharge volume”** means the total daily volume of wastewater (expressed in gallons per day) authorized for discharge by a discharge permit. This definition does not include the volume of wastewater discharged to a land application area (as applicable)
- U. **“owner of record”** means an owner of property according to the property records of the tax assessor in the county in which the discharge site is located at the time the application was deemed administratively complete
- V. **“Permittee”** means a person who is issued or receives by transfer a discharge permit for a dairy facility or, in the absence of a discharge permit, a person who makes or controls a discharge at a dairy facility.
- W. **“production area”** means that part of the animal feeding operation that includes the following: the animal confinement areas; the manure, residual solids and compost storage areas; the raw materials storage areas; and the wastewater and stormwater containment areas. The animal confinement areas include but are not limited to open lots, housed lots, feedlots, confinement barns, stall barns, free stall barns, milkrooms, milk centers, cowyards, barnyards, hospital pens and barns, and animal walkways. The manure, residual solids and compost storage areas include, but are not limited to, storage sheds, stockpiles, static piles,

and composting piles. The raw materials storage areas include, but are not limited, to feed silos, silage storage areas, feed storage barns, and liquid feed tanks. The wastewater and stormwater containment areas include, but are not limited to, settling separators, impoundments, sumps, run-off drainage channels, and areas within berms and diversions which prohibit uncontaminated stormwater from coming into contact with contaminants

- X. **“responsible person”** means a person who is required to submit a discharge permit or who submits a discharge permit
- Y. **“secretary”** or **“director”** means the secretary of the New Mexico Environment Department or the director of a constituent agency designated by the **commission**
- Z. **“spillway”** means a structure used for controlled releases from an impoundment designed to receive stormwater, in a manner that protects the structural integrity of the impoundment
- AA. **“stormwater”** means direct precipitation and run-off that comes into contact with water contaminants within the production area of a dairy facility
- BB. **“TDS”** means total dissolved solids as determined by the "calculation method" (sum of constituents), by the "residue on evaporation method at 180 degrees" of the "U.S. geological survey techniques of water resource investigations," or by conductivity, as the secretary may determine
- CC. **“toxic pollutant”** means a water contaminant or combination of water contaminants in concentration(s) which, upon exposure, ingestion, or assimilation either directly from the environment or indirectly by ingestion through food chains, will unreasonably threaten to injure human health, or the health of animals or plants which are commonly hatched, bred, cultivated or protected for use by man for food or economic benefit; as used in this definition injuries to health include death, histopathologic change, clinical symptoms of disease, behavioral abnormalities, genetic mutation, physiological malfunctions or physical deformations in such organisms or their offspring; in order to be considered a toxic pollutant a contaminant must be one or a combination of the potential toxic pollutants listed below and be at a concentration shown by scientific information currently available to the public to have potential for causing one or more of the effects listed above; any water contaminant or combination of the water contaminants in the list below creating a lifetime risk of more than one cancer per 100,000 exposed persons is a toxic pollutant. The list of **toxic pollutants** recognized by NMED can be found in 20.6.2.7.T NMAC.
- DD. **“unauthorized discharge”** means a release of wastewater, stormwater or other substances containing water contaminants not approved by a discharge permit
- EE. **“wastewater”** means water, that has come into contact with water contaminants as a result of being directly or indirectly used in the operations of a dairy facility including, but not limited to, the following: washing, cleaning, or flushing barns or other roof-covered production areas; washing of animals; spray-cooling of animals (except in open lots); and cooling or cleaning of feed mills and equipment. Wastewater does not include overflow from the drinking water system or stormwater unless overflow or stormwater that is collected is

comingled with wastewater, or it comes into contact with water contaminants as a result of being directly or indirectly used in dairy facility operations

- FF. **“wastes”** means sewage, industrial wastes, or any other liquid, gaseous or solid substance which will pollute any waters of the state

- GG. **“water”** means all water including water situated wholly or partly within or bordering upon the state, whether surface or subsurface, public or private, except private waters that do not combine with other surface or subsurface water

- HH. **“water contaminant”** means any substance that could alter if discharged or spilled the physical, chemical, biological or radiological qualities of water; **“water contaminant”** does not mean source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954

- II. **“water pollution”** means introducing or permitting the introduction into water, either directly or indirectly, of one or more water contaminants in such quantity and of such duration as may with reasonable probability injure human health, animal or plant life or property, or to unreasonably interfere with the public welfare or the use of property
