Ms. Nancy McDuffie  
New Mexico Environment Department  
Ground Water Quality Bureau  
Remediation Oversight Section  
121 Tijeras Avenue NE, Suite 1000  
Albuquerque, NM 87102-3421

Dear Ms. McDuffie:

On behalf of Doña Ana Dairies, Inc., EA Engineering, Science, and Technology, Inc., PBC is submitting this Quarterly Groundwater Monitoring Report for Doña Ana Dairies located in Mesquite, Vado, and Anthony, New Mexico. The report discusses the quarterly groundwater sampling event conducted to fulfill requirements of the Stage 2 Abatement Plan for Doña Ana Dairies.

Please let me know if you have any questions regarding the information provided in this report.

Sincerely,

A handwritten signature in black ink that appears to read "Gina Mullen".

## **1.0 INTRODUCTION**

On behalf of Doña Ana Dairies (Dairies), EA Engineering, Science, and Technology, Inc., PBC (EA) has prepared this Quarterly Monitoring Report for Doña Ana Dairies located south of Las Cruces, New Mexico (Figure 1). The report was completed in accordance with the *Stage 2 Abatement Plan* and the *Sampling and Analysis Plan, Doña Ana Dairies, Doña Ana County, New Mexico* dated November 7, 2013 and August 11, 2008, respectively, and the Conceptual Work Plan (CWP) dated February 1, 2008. All were prepared to satisfy requirements stated in the New Mexico Administrative Code (NMAC), Title 20, 6.2 §4106 through §4110. The Sampling and Analysis Plan was approved by the New Mexico Environment Department (NMED) Ground Water Quality Bureau (GWQB) on September 25, 2008. On March 25, 2015, the stipulated agreement to additional requirements to the Dona Ana Dairies Stage 2 Abatement Plan was agreed upon by NMED, Dona Ana Dairies, and the Rio Valle Concerned Citizens. On April 10, 2015 the Stage 2 Abatement Plan was approved by NMED by Final Order.

### **1.1 Objective and Monitoring Scope**

The objective of this monitoring program is to satisfy the requirements set forth in the Stage 2 Abatement Plan and the Stipulated Agreement and to satisfy the requirements set forth in NMAC 20.6.2 §4110.

The following work was performed to meet the objective of the monitoring program, and included:

- On May 15 and May 16, 2017, representatives from D&H Petroleum and Environmental Services, Inc. (D&H) gauged discharge plan (DP) and abatement plan (AP) monitoring wells with the exception of Anthony Waste Water Treatment Plant wells. Anthony Waste Water Treatment Plant wells were gauged on May 19, 2017.
- From May 17 through June 12, 2017, D&H representatives collected groundwater samples from all AP and DP wells that contained sufficient water. AP well DAD-06 was the only AP well that was dry. The sampling campaign lasted about four weeks. The samples were analyzed for nitrate, chloride, total dissolved solids (TDS), and total Kjeldhal nitrogen (TKN). Field parameters including specific conductance, pH, temperature, oxidation reduction potential (ORP), and dissolved oxygen were monitored and recorded during sampling.
- From May 26 through June 12, 2017, D&H representatives collected groundwater samples from 14 operating irrigation and supply well locations. The samples were analyzed for nitrate, chloride, TDS, and TKN. Field parameters including specific conductance, pH, temperature, ORP, and dissolved oxygen were monitored and recorded during sampling.
- The most recent groundwater gauging and analytical results were compiled into this Quarterly Groundwater Monitoring Report.

## **1.2 Background**

In correspondence dated April 7, 2006, NMED required a Stage 1 Abatement Plan for 13 dairies in Doña Ana County, based on analytical results from DP monitoring of on-site compliance monitoring wells that showed concentrations of nitrate, chloride and TDS exceeding ground water standards promulgated in New Mexico Water Quality Control Commission (NMWQCC) Regulations (20 NMAC 6.2 §3103). On October 30, 2006, the Dairies notified NMED that they had reached an agreement to work as a group and submit a joint response to NMED's request (Doña Ana Dairies, 2006).

On December 11, 2006, on behalf of the Doña Ana Dairies, Golder Associates (Golder) submitted a Stage 1 and 2 Abatement Plan Proposal to address impacts to groundwater in the area of the Dairies (Golder 2006). The first major deliverable in the Abatement Plan Proposal was an Existing Data Report (EDR) to bring together in one document historical data and practices of the constituent dairies.

The EDR, submitted on February 1, 2008, (Golder 2008a) was intended to satisfy the Dairies commitment for compilation and submission of existing data identified in the Doña Ana Dairies response (2006) to the NMED requirement for Stage I Abatement Plans. Section 9 of the EDR outlined data gaps identified during the preparation of the report, as well as the actions recommended. To facilitate the discussion of the path forward after the submittal of the EDR and concurrent with the EDR submission, a conceptual work plan (CWP) was prepared. (Golder 2008b).

On July 15, 2008, the Dairies, Golder and NMED met (Golder 2008c). During that meeting, plume maps presented in the EDR (Golder 2008a), new monitoring data, and knowledge of well locations and groundwater chemistry results at adjacent DP-regulated facilities were used to identify data gaps with respect to ground water flow direction and plume delineation. The agreed upon data gaps yielded well locations (including contingency locations) recorded in the meeting minutes (Golder 2008c) and depicted in the Sampling and Analysis Plan (SAP) dated August 8, 2008 (Golder 2008d). The SAP outlined the details of the field operations to be implemented for completion of data gaps, such that a Site Investigation Report (§4106.C.6) and Stage 2 Abatement Plan (§4106.D) could be prepared.

Groundwater gauging was conducted concurrent to discussions with NMED at the Dairies for four quarters, February 2008, June 2008, September 2008, and December 2008, to determine the current and historical site groundwater gradient.

In May 2009, field work was conducted as outlined in the SAP and ten (10) AP monitoring wells (DAD-01 through DAD-10) were installed. In July 2009, the Site Investigation Report was submitted to the NMED.

On February 9, 2012, the Final Site Investigation Report was submitted to NMED. The report summarized field activities that occurred from October 10 through October 14, 2011, and November 10 through 18, 2011, during which eleven soil borings were advanced at the site and converted into monitoring wells DAD-12 through DAD-14, DAD-16 through DAD-22, and DP well 177-03A.

On August 16, 2012, soil boring/monitoring well DAD-15 was installed and on August 20, 2012, well DAD-15 was sampled. An addendum to the Final Site Investigation Report was submitted to NMED on September 7, 2012, which summarized DAD-15 field activities.

A Stage 2 Abatement Plan was submitted to NMED on March 13, 2013. Based on an NMED response in August 2013, a Revision to the Stage 2 Abatement Plan was submitted on November 7, 2013.

On March 25, 2015, the stipulated agreement to additional requirements to the Dona Ana Dairies Stage 2 Abatement Plan was agreed to by NMED, Dona Ana Dairies, and the Rio Valle Concerned Citizens. On April 10, 2015 the Stage 2 Abatement Plan with the stipulated agreement was approved by NMED by Final Order.

EA began implementation of the Stage 2 Abatement Plan and stipulated agreement as directed by the Final Order in December 2015. In order to meet objectives, four monitoring wells were installed (DAD-23 through DAD-26) and Del Oro Dairy discharge plan (DP) well 692-01 was plugged and abandoned. Details on implementation of these tasks are included *Stage 2 Implementation and Quarterly Groundwater Monitoring Report*, July 2016.

In accordance with the Stage 2 Abatement Plan and stipulated agreement, a baseline compound specific isotope analysis (CSIA) for nitrogen 14 and nitrogen 15 ( $^{15}\text{N}/^{14}\text{N}$  [ $\delta^{15}\text{N}$ ]) and total organic carbon (TOC) was completed for 16 wells in spring of 2016. Additionally, background concentrations were recalculated for the contaminants of concern. Results of these analyses are presented in the *Stage 2 Implementation and Quarterly Groundwater Monitoring Report*, July 2016. These tasks will be completed every five years and are scheduled to occur in spring of 2021.

Contaminant concentration trend analysis as well as geospatial analysis to evaluate changes in plume behavior are required on an annual basis and were last provided in the 2017 Annual Report (EA 2017). Irrigation and supply wells are required to be sampled annually. Results of that sampling are presented and discussed in this quarterly monitoring report. Concentration graphs of DP wells are also presented in this quarterly monitoring report as part of the annual performance assessment.

## 2.0 GROUNDWATER MONITORING ACTIVITIES

Groundwater monitoring activities conducted by D&H included gauging DP and AP monitoring wells as well as Anthony Waste Water Treatment Plant monitoring wells. Groundwater samples were collected from DP and AP monitoring wells as well as irrigation and supply wells. Groundwater samples were analyzed for nitrate, chloride, TDS, and TKN. The resulting data from this groundwater monitoring event are compiled and presented herein.

### 2.1 Well Gauging

From May 15 through May 16, 2017, representatives from D&H gauged the DP and AP with an electronic water level indicator. Anthony Waste Water Treatment Plant monitoring wells were gauged on May 19, 2017. Due to a declining water table, several wells were dry or contained insufficient water for sampling. Table 1 provides a summary of the groundwater gauging data collected from the monitoring network. Locations of monitoring wells are shown on Figures 2, 3, 4, and 5. Well gauging field forms are available in Appendix A.

### 2.2 Groundwater Sampling

From June 06 through June 12, 2017, D&H sampled all AP monitoring wells with sufficient water. Well DAD-06 was dry and could not be sampled. Groundwater sampling was accomplished with disposable bailers. Three well casing volumes were purged unless the well contained insufficient water.

D&H sampled the DP wells from May 17 through June 05, 2017. Prior to sampling, the DP wells were purged of three well casing volumes, if practicable, by (1) hand-bailing with new disposable bailers and twine, (2) pumping with a submersible pump and new polyethylene tubing, or (3) pumping with a dedicated pump and tubing.

The wells were sampled from clean to dirty to the extent possible to minimize cross-contamination potential. All non-dedicated or disposable equipment was decontaminated between wells with an Alconox™ solution to further ensure sample quality. All meters were calibrated and/or checked with standards in accordance with manufacturer's specifications prior to daily use. Purge water was ground discharged.

When sufficient water was available, field parameters including specific conductance, pH, temperature, ORP, and dissolved oxygen were monitored using a YSI 556 MPS and recorded on field forms. Dissolved oxygen and ORP were only measured in the first set of readings. Field parameters from August 2015 to present are summarized in Table 2. The sampling field forms are presented in Appendix A.

All groundwater samples were collected immediately after purging. Sampling was either accomplished by carefully pouring groundwater from the bailer into the sample containers or by pumping groundwater through polyethylene tubing into the sample container. Sample containers were provided by Xenco Laboratories. Container size, type, sample preservatives, analytical methods, and holding times are specified in Table 3. All samples were preserved in accordance with method requirements, labeled, then immediately cooled to <6°C with ice and delivered

under chain-of-custody to TraceAnalysis in El Paso, Texas. All analytical laboratory reports are provided in Appendix B.

### **2.3 Irrigation/Supply Well Groundwater Sampling**

Fifteen irrigation/supply locations were sampled in May and June 2017. Samples were analyzed for nitrate, chloride, TDS, and TKN. Irrigation/supply wells were sampled by collecting a grab aliquot from a faucet or tank located nearest to the pump outlet. The wells were operational at the time of sampling; therefore, no purging was necessary.

Two of the samples were collected from irrigation wells. One is located at the Mountain View Land Application Area (LRG-0457) and one at the Dominguez Dairy pecan orchard (LRG-00590-S-6). The irrigation well (LRG-314495-POD1) adjacent to AP well DAD-08 was scheduled to be sampled; however, the irrigation well has not been operational for three years.

Twelve of the samples are from dairy supply wells located near their respective milking parlors. The supply wells at Bright Star Dairy, Dominguez Dairy, Desert Land Dairy, and Del Oro Dairy were sampled from their holding tanks using new disposable bailers, from taps located on the tank, or from valves located on lines going into the tank. At Del Oro Dairy three supply wells pumped water into the holding tank; therefore, the groundwater sample collected was a composite sample.

### 3.0 GROUNDWATER MONITORING RESULTS

#### 3.1 Hydraulic Gradient and Direction of Groundwater Flow

This quarter, groundwater was present beneath the site at depths ranging from 12.47 feet below top-of-casing (ft btoc) in Sunset Dairy well 257/260-01 to 133.90 ft btoc in Dominguez #2 well 42-12. Groundwater was encountered at shallower depths near the Mesquite Drain and at greater depths near I-10 where the topographic elevation increases.

AP monitoring well DAD-25 may have been completed in a perched aquifer. Groundwater elevations have consistently measured approximately 10 feet higher than groundwater elevations in surrounding wells; as a result, this groundwater elevation has not been used in contouring for the central potentiometric surface map.

Potentiometric surface maps were completed using the monitoring well gauging data for the northern, central, and southern portions of the Dairies. Groundwater elevation data are provided in Table 1 and potentiometric surface maps are provided as Figures 2, 3, 4, and 5. Hydrographs were completed for select monitoring wells and are provided in Appendix C. On average, groundwater levels decreased in all areas since the previous monitoring event. Relative to the previous monitoring event, the average groundwater level decreased by 0.53 ft in the northern area, 1.44 ft the central area, and 1.06 ft in the southern area. Long term decreases in water levels have resulted in many wells becoming dry.

The groundwater flow direction in northern and central portions of the regional aquifer was to the southeast; flow in the southern portion of the regional aquifer was to the south-southwest. Groundwater flow in the southern portion of the perched aquifer is to the southwest. The hydraulic gradient across the Dairies is approximately 0.001 ft/ft.

#### 3.2 Groundwater Field Parameters

Field parameters from the most recent monitoring event including specific conductance, pH, temperature, ORP, and dissolved oxygen were recorded on the sampling field forms (Appendix A) and are summarized in Table 2. Specific conductance, dissolved oxygen, and ORP trends for select wells are presented in Appendix D. Though dissolved oxygen and ORP measurements from wells containing a dedicated pump were recorded, these measurements are not considered representative of aquifer conditions because they are highly variable.

#### 3.3 Groundwater Analytical Results

##### 3.3.1 Abatement Plan Well Results

Groundwater analyte concentrations were above the NMWQCC standard for nitrate (10 mg/L) in 17 of the 25 AP monitoring wells sampled. The AP wells that had nitrate concentrations above standards are DAD-01, DAD-02, DAD-08, DAD-09, DAD-10, DAD-11 (vertical delineation well), DAD-12, DAD-13, DAD-14, DAD-18 (vertical delineation well), DAD-19 (vertical delineation well), DAD-20, DAD-21, DAD-22, DAD-23, DAD-25, and DAD-26. Both chloride and TDS concentrations exceeded their respective NMWQCC standards in all AP wells sampled, with the exception of well DAD-17. Chloride remained below the standard of 250 mg/L with a

concentration of 84.2 mg/L, and TDS remained below the standard of 1,000 mg/L with a concentration of 970 mg/L at well DAD-17.

Nitrate concentrations decreased in AP wells DAD-02, DAD-03, DAD-04, DAD-05, DAD-08, DAD-11, DAD-12, DAD-14, DAD-16, DAD-19, DAD-22, DAD-25, and DAD-26. The largest decrease was observed in DAD-25 which decreased from 22.5 mg/L in March 2017 to 10.1 mg/L. Nitrate concentrations increased or remained the same in all the other AP wells. AP well DAD-01 rose to above standards for the first time since 2015 at 17.0 mg/L, well DAD-18 rose to above standards for the first time since 2015 at 10.4 mg/L. The largest increases were seen in wells DAD-01, which rose from 7.90 mg/L in March 2017 to 17.0 mg/L in June 2017, and DAD-09, which rose from 55.4 mg/L to 66.8 mg/L. Nitrate concentrations in the AP wells ranged from 0.133 mg/L in well DAD-04 to 71.3 mg/L in well DAD-21 for this sampling event.

Chloride concentrations in the AP wells range from 84.2 mg/L in well DAD-17 to 1,670 mg/L in well DAD-08 for this event, and TDS ranged from 970 mg/L in well DAD-17 to 5,150 mg/L in well DAD-08.

Table 4 and Figures 6 through 9 present the analytical results for AP monitoring wells. Analytical laboratory reports are provided in Appendix B. Nitrate, chloride, and TDS concentration trends for select AP wells are presented by area in Appendix E. Concentration trends for select DP wells are presented in Appendix F as part of the annual performance assessment.

### *3.3.2 Results by Areas at the Dairies*

DP groundwater analytical results are summarized in Table 5. Nitrate, chloride, and TDS concentration trends for the AP wells by area are presented in Appendix E. These data were combined with the analytical data collected from the sampled AP monitoring wells and are plotted on Figures 6, 7, 8, and 9. Analytical laboratory reports are included in Appendix B. The following discussions summarize the results by area at the Dairies.

#### *Northern Portion*

The northern nitrate plume downgradient well DAD-23 was above NMWQCC nitrate (10 mg/L) for the second consecutive event at a concentration of 14.9 mg/L. Down gradient well DAD-02 remained above standards at a concentration of 11.3 mg/L. AP well DAD-02 has been fluctuating near the 10 mg/L standard since spring 2015. Upgradient wells 86/340-01 and 70/86/340-01 (Northern Land Application wells) had above standard nitrate concentrations of 13.4 and 20.3 mg/L, respectively. Eastern cross-gradient wells 42-10, 42-11, 42-12 had nitrate concentrations below the standard. Eastern cross-gradient AP well DAD-01 was above standards for the first time since 2015 at a concentration of 17.0 mg/L. Eastern cross-gradient well DAD-13 remained above standards at a concentration of 16.0 mg/L. The western delineating cross-gradient well Dominguez 624-05 had a nitrate concentration of 6.72 mg/L in February 2013; however, the well has remained dry since that time. Day Break (Dominguez #2) well 42-02 is approximately 1,000 feet east of Dominguez 624-05 and is the nearest well. Concentrations in Dominguez #2 well 42-02 has been just above NMWQCC standards for the last four events; in June 2017, the nitrate concentration in the sample collected from this well was 11.0 mg/L. The highest nitrate concentration in the northern portion was observed in Bright

Star Dairy well 340-02 with a concentration of 101 mg/L.

The chloride and TDS concentrations were above standards in all wells sampled within the northern portion except for Organ Dairy well 126-09 which had concentrations below the chloride and TDS standards with concentrations of 67.1 mg/L and 640 mg/L, respectively. The highest concentrations of chloride and TDS were observed at Northern Land Application area well 70-03 with concentrations of 3,330 mg/L and 8,370 mg/L, respectively.

#### *Central Portion*

The highest nitrate concentration in the central portion was observed in Big Sky Dairy well 833-07 with a concentration of 83.3 mg/L. The upgradient extent of the nitrate plume is defined in the central portion by Buena Vista Dairy II well 74-03 which was below NMWQCC standards for nitrate with a concentration of 0.941 mg/L. Sunset Dairy well 257-02 has historically defined the downgradient extent of the plume, however, the nitrate concentration has been at or above the standard for the last three sampling events; during the last sampling event nitrate was detected at a concentration of 10.0 mg/L. AP well DAD-25 is downgradient and slightly to the east in the central portion. The nitrate concentration in DAD-25 remains above standard at 10.1 mg/L. However, this well is thought to be completed in a perched aquifer. The eastern cross-gradient extent of the plume is defined by wells DAD-07 and DAD-15, and the western extent is defined by wells DAD-04, DAD-16, 167-02, 167-03, 167-05, 167-08, and 833-10; nitrate concentrations remain below standards in these wells.

Chloride and TDS concentrations were above standards in all wells within the central portion, except for River Valley well 167-07 and AP well DAD-17. Chloride was below standards in both River Valley well 167-07 and DAD-17 at 140 mg/L and 84.2 mg/L. TDS concentrations remained below standards in DAD-17 at 970 mg/L. The highest chloride and TDS concentrations were observed at well DAD-08 at 1,670 mg/L and 5,140 mg/L, respectively. Well DAD-08 is located east of Sunset Dairy, adjacent to an irrigation well that is no longer in use.

#### *Southern Portion*

Nitrate is present within both the regional and perched aquifers in the southern portion of the Dairies. All of the wells in the regional aquifer are below the NMWQCC standard with the exception of AP well DAD-10. Well DAD-10 was above the standard for nitrate with a concentration of 15.5 mg/L for June 2017. The nitrate concentration in well DAD-10 was 8.40 mg/L in March 2017.

Nitrate is above the standard in all the monitoring wells in the perched aquifer with the exception of Del Oro well 692-02 with an anomalously low concentration of 2.82 mg/L. The well with the highest nitrate concentration in the shallow perched aquifer is AP well DAD-21 with a concentration of 71.3 mg/L. The nitrate concentrations in AP wells DAD-09, DAD-20, DAD-21, DAD-22, and DAD-26 remained above the standard for this event at 66.8 mg/L, 30.6 mg/L, 71.3 mg/L, 22.2 mg/L and 60.5 mg/L, respectively.

Chloride and TDS concentrations are above NMWQCC standards in all wells sampled within the southern portion of the dairies. Chloride concentrations in the regional aquifer ranged from 408

mg/L in DP well 692-09 to 570 mg/L in Del Oro Dairy well 692-07. TDS in the regional aquifer ranged from 1,300 mg/L in Del Oro Dairy well 692-08 to 1,790 mg/L in AP well DAD-10. Upgradient well Del Oro well 692-08 had a chloride concentration of 413 mg/L and a TDS concentration of 1,300 mg/L.

Chloride concentrations in the perched aquifer ranged from 421 mg/L in Del Oro well 692-02 to 1,090 mg/L in well AP well DAD-26. TDS in the perched aquifer ranged from 1,640 mg/L in Del Oro well 692-02 to 3,360 mg/L in AP well DAD-21.

### *3.3.3 Irrigation/Supply Well Results*

Groundwater analytical results for the sampled irrigation/supply wells are presented in Table 6. Analytical results are provided on Figures 6, 7, and 8. Analytical laboratory reports are included in Appendix B.

Nitrate concentrations were below the NMWQCC standard for nitrate in 13 of the 15 irrigation/supply well sample locations. In the northern portion, nitrate standard exceedances occurred at Bright Star Dairy well LRG-00953 and Dominguez supply well LRG-00591-S; nitrate was detected at concentrations of 12.3 and 25.0 mg/L, respectively. Gonzalez well LRG-05351-S was above standards in May 2016, but decreased to below standards for the most recent sampling event with a concentration of 1.12 mg/L. The Dominguez Dairy irrigation well LRG-00590-S-6 was above standards in March 2016, but also decreased to below standards for this event with a concentration of 6.67 mg/L. None of the irrigation and supply wells sampled from the central and southern areas exceeded the standard for nitrate.

All irrigation/supply wells were above the NMWQCC standard for chloride and TDS. Chloride concentrations ranged from 328 to 1,030 mg/L. TDS concentrations ranged from 1,170 to 3,160 mg/L. Both chloride and TDS concentration ranges are similar to the concentrations observed in discharge plan and abatement plan monitoring wells, further indicating that chloride and TDS concentrations observed are regionally above standards.

## **4.0 CONCLUSION AND RECOMMENDATIONS**

The groundwater monitoring event included the gauging of all DP and AP wells and sampling of all wells that contained sufficient water to sample. Based on the data collected, the following conclusions and recommendations are presented:

- Depth to groundwater ranged from 12.47 ft btoc to 133.90 ft btoc.
- On average, water levels in the northern, central, and southern portions have decreased when compared to the previous monitoring event.
- The groundwater flow direction in the northern and central portions of the Dairies is toward the southeast. Groundwater flow direction in the southern portion of the regional aquifer is to the south-southwest. The hydraulic gradient in the regional aquifer is 0.001 ft/ft.
- The perched aquifer at Del Oro Dairy has a groundwater flow direction toward the southwest.
- Nitrate was below the NMWQCC standards in 8 of the 25 groundwater samples collected from the AP wells.
- Chloride was above the NMWQCC standard in all but three monitoring wells: Organ Dairy well 126-09, River Valley well 167-07, and DAD-17 at concentrations ranging from 67.1 mg/L to 140 mg/L.
- TDS was above the NMWQCC standard in all monitoring wells sampled except for Organ Dairy well 126-09 and AP well DAD-17 which had a TDS concentrations of 640 mg/L and 970 mg/L, respectively.
- Chloride and TDS remain above standards in wells upgradient of the northern, central, and southern portions of the plume at the Dairies.
- Nitrate was below the NMWQCC standard at all irrigation and supply well sampling locations with the exception of Bright Star Dairy supply well LRG-00953 and Dominguez Dairy #1 supply well LRG-00591-S which were above standards for nitrate.
- All the irrigation and supply wells were above standards for chloride and TDS at concentrations similar to those found in the AP and DP monitoring wells.

Notes:

<sup>a</sup> Horizontal control to NM State Plane Coordinates Central NAD83 Grid Coordinates (in feet)

<sup>b</sup> Vertical Control to NAVD88 Datum in feet above mean sea level

<sup>c</sup> Measured in feet below the top of casing at survey point on north side of well

<sup>d</sup> Measured in feet

Wells were gauged on a different date by Magee and Associates Inc.

Wells were gauged on a different date by EnviroCompliance Inc.

Measured data were suspect and corrected to reflect appropriate trends in accordance with surrounding wells

NOTES:

\* = Well contains a pump; as a result, DO and ORP values are not representative of aquifer conditions.

°C = Degrees celsius

DO = Dissolved oxygen

mg/L = Milligrams per liter

mV = Millivolts

NM = Not measured

ORP = Oxidation-reduction potential

SpC = Specific conductance

Temp = Temperature

uS/cm = Microsiemens per centimeter

**TABLE 3. SUMMARY OF GROUNDWATER SAMPLE ANALYTICAL METHODS AND SAMPLING REQUIREMENTS  
DONA ANA DAIRIES, DONA ANA COUNTY, NEW MEXICO**

Target Analytes	Analytical Method	Sample Container	Preservative	Holding Time
Nitrate - N	EPA 300.0	250 mL HDPE Bottle	Cool to <6°C,	48 Hours
Total Kjeldhal Nitrogen	SM 4500 NORG C	250 mL HDPE Bottle	H <sub>2</sub> SO <sub>4</sub> to pH <2, Cool to <6°C	28 Days
Chloride	EPA 300.0	250 mL HDPE Bottle	Cool to <6°C	28 Days
Total Dissolved Solids	SM 2540 C MOD	250 mL HDPE Bottle	Cool to <6°C	28 Days
Total Organic Carbon	EPA 415.1	2 - 40 mL Glass VOA Vial	H <sub>2</sub> SO <sub>4</sub> to pH <2, Cool to <6°C	28 Days
CSIA - <sup>15</sup> N/ <sup>14</sup> N	<sup>15</sup> N/ <sup>14</sup> N ( $\delta^{15}\text{N}$ )	1 - 1 liter Plastic Poly Bottle	Cool to <6°C	-
NOTES:				
<sup>°</sup> C = Degree Celsius				
<sup>14</sup> N = Nitrogen 14				
<sup>15</sup> N = Nitrogen 15				
CSIA = Compound-specific isotope analysis				
EPA = U.S. Environmental Protection Agency				
HDPE = High-density polyethylene				
mL = milliliter				
MOD = Modified				
N = Nitrogen				
SM= Standard method				
VOA = Volatile organic analysis
