# APPENDIX G. GCP-5 PERMIT

**CONSTRUCTION PERMIT NO: GCP-5**

| *Registration No.*<br>*(For NMED use only* |
|---|

**GENERAL PERMIT CATEGORY: Concrete Batch Plants**

**ISSUED BY: New Mexico Environment Department**

Date of Issuance 9/12/06

JIM NORTON, Director
Environmental Protection Division

Air Quality Permit No. GCP-5 for Concrete Batch Plants (Permit) is issued by the Air Quality Bureau (AQB) of the New Mexico Environment Department (Department) under Title 20 Chapter 2 Part 72 of the New Mexico Administrative Code. [20.2.72 NMAC – *Construction Permits*, Section 220 – *General Permits*] The Department issues general permits in order to register groups of sources that have similar operations, processes, and emissions and that are subject to the same or substantially similar requirements. [20.2.72.220.A(1) NMAC] General permits provide an additional permitting option for specific types of sources that can meet the predetermined permit requirements. [20.2.72.220.C(1) NMAC]

This Permit authorizes the owner or operator to construct, modify, and operate a Concrete Batch plant (Facility) in New Mexico (excluding Bernalillo County and Tribal lands) under the conditions set forth herein as long as all conditions of this Permit are continually met.

An owner or operator who registers for and receives approval to construct under this Permit, will have satisfied the State of New Mexico's requirement for obtaining an air quality permit prior to constructing, modifying, or operating a source of air pollutants. However, other federal, state, or local agencies may have additional requirements such as zoning restrictions.

All terms written with initial capital letters are defined in Section VII – *Acronyms and Definitions*, of this Permit. Regulatory authority, if applicable, is cited in brackets. Please refer to the guidance document for this Permit for details, descriptions, and registration instructions. Questions regarding eligibility for this Permit can be directed to the Air Quality Bureau of the Environment Department at (505) 827-1494, or visit the New Mexico Environment Department's Web Site at http://www.nmenv.state.nm.us/AQB.

## SECTION I. APPLICABILITY

### I.A. FACILITIES ALLOWED TO REGISTER UNDER THIS GENERAL CONSTRUCTION PERMIT.

The owner or operator may apply for registration of a Concrete Batch plant under this Permit if:

1. The Facility's purpose is to produce Concrete or Concrete products [SIC 3271, 3272 (with Department approval), or 3273];
2. The Facility can comply with all of the requirements of this Permit;
3. The Facility includes any combination of the following Emissions Units used in the production of concrete (and no others) within the Property Boundary:
   a. Permanent or temporary Facility that will have an actual production rate less than or equal to 2400 yards per day (YPD),
   b. Any combination of stockpiles or haul roads,
   c. Conveyers (belt, pneumatic, screw, etc.),
   d. Silos, bins, and hoppers,
   e. Mixers,
   f. Truck loading stations,
   g. Associated emission control systems (air pollution control devices),
   h. Natural gas, diesel, or propane fired heaters with a heat input rate of less than 25 MMBtu per hour that are used to heat water for the concrete mix,
   i. Internal combustion engines, including generators when grid power is not available,
   j. Systems for screening, handling, storing, and weighing aggregate,
   k. Systems for loading, transferring, and storing mineral filler,
   l. Sources exempt under 20.2.72.202 NMAC,
   m. Equipment for storing, measuring and dispensing cement dye, retardants, accelerants or other chemical admixtures,
   n. Truck washing stations,
   o. Wheel washing stations, or
   p. Other equipment typically found at concrete batch plants.

### I.B. EXCLUDED SOURCES

The following facilities cannot register for this Permit:

1. A Facility that does not meet the requirements in Subsection III.C - *Siting Restrictions*;
2. A facility subject to any federal New Source Performance Standard (NSPS) other than 40 CFR § 60 Subparts A and Kb;
3. A facility subject to a National Emissions Standard for Hazardous Air Pollutants (NESHAP) or Maximum Achievable Control Technology (MACT);
4. A Facility that operates in conjunction with another facility on the same property, except as allowed in Subsection III.E – *Co-Locations*;

5. A Facility subject to 20.2.72 NMAC, Sections 400 through 499 – *Permitting for Toxic Air Pollutants;*
6. A facility that processes slag, asbestos tailings or asbestos-containing waste materials; or
7. A facility that encapsulates and/or disposes of radionuclides or hazardous solid waste.

### I.C. PERMITTING ALTERNATIVES

1. The owner or operator of a Facility subject to 20.2.72 NMAC who does not choose to register or whose Facility fails to qualify for this Permit shall apply for a Construction Permit pursuant to 20.2.72 NMAC – *Construction Permits* and must receive such permit prior to construction.

### I.D. FACILITIES WITH BOTH A CONSTRUCTION PERMIT (PART 72) AND A GENERAL CONSTRUCTION PERMIT

1. A Facility that has a Construction Permit under 20.2.72 NMAC may also register for a GCP-5. Subparagraphs II.C.2.b and IV.C.1.i of this Permit contain specific requirements for Facilities that have both a GCP-5 and a Construction Permit.

### I.E. LARGE AND SMALL FACILITIES

1. Table I.E.1 shall govern the applicability of requirements in this GCP to Permitted Facilities based on daily production, which correlates directly with potential emissions. The permittee shall operate the Facility in accordance with one of the operating scenarios in the table. The Facility's initial operating size, when the GCP is granted by the Department, shall be based on information provided by the applicant on the registration form. [see II.C.5.a]

**TABLE I.E.1 REQUIREMENT APPLICABILITY**

| * Facility Size (YPD) | Requirements |
|---|---|
| Greater than 360 yards of concrete per calendar day. | Plants in this category are subject to all requirements in this GCP. |
| Less than or equal to 360 yards of concrete per calendar day. | Plants in this category are subject to all requirements in this GCP except: III.F.2.e, III.F.10.b, IV.A.1.b, IV.A.2, and IV.B.3.j |

* Some extremely small Facilities may emit less than 10 pounds per hour and less than 25 TPY of any single pollutant, and can therefore operate under a NOI instead of a GCP. Any Facility capable of loading more than13.9 TPH of cement or more than 2.9 TPH of fly-ash will exceed the 10 pound per hour limit. An applicant who thinks that his Facility may qualify for a NOI shall submit an NOI application to the Department.

## SECTION II. REGISTRATION PROCESS

### II.A. GENERAL

1. The applicant shall complete the current GCP-5 registration form provided by the Department, submit it to the Department, and provide a copy to the nearest Department Field

Office. [20.2.72.220.A(2)(b) NMAC] Field office locations are found on the Department's Website at http://www.nmenv.state.nm.us/NMED/field_op.html. Within thirty (30) days of receiving an application to register under this Permit, the Department shall review the application and shall grant or deny the registration. The owner or operator of a Facility approved for registration will receive a package containing a copy of the registration form, a copy of this GCP, and the approval letter.

2. Construction, operation or relocation of a Facility shall not begin until the owner or operator has received written authorization from the Department. The Department shall notify the owner or operator of approval or denial by certified mail. [20.2.72.200.E NMAC and 20.2.72.220.C(6)(a) NMAC]

### II.B. PUBLIC NOTIFICATION

1. The applicant shall provide public notice, including newspaper advertisement and posting at the Facility site, 15 days prior to submitting the registration form to the Department, in accordance with 20.2.72.220.C(2) NMAC. (See *GCP-5 Instructions and Guidance* for a public notice template.)

### II.C. REGISTRATION FORM

GCP-5 permit application forms, available from District offices and the Department's website, (http://www.nmenv.state.nm.us/aqb/index.html) shall be completed with the following information and attachments, and submitted to the address on the registration form.

1. General Information
   a. The Facility's site name and the contact person's name, address, phone number, e-mail address and fax number;
   b. The name of the company and the person(s) that own(s) and operate(s) the Facility;
   c. The date the application was notarized; and
   d. The primary four (4) digit Standard Industrial Classification (SIC) code. For concrete Facilities the SIC code will be one of the following:

      3271 Concrete Block and Brick,

      3272 Concrete Products, Except Block and Brick,

      3273 Ready-Mixed Concrete.

2. Initial Facility Status
   a. Whether the Facility is currently constructed and is operating in New Mexico;
   b. Whether the Facility currently has a Construction Permit(s), if so, the current permit number(s), and whether the existing permit(s) will remain active or not;
   c. Whether the application was submitted in response to a Notice of Violation; if so the NOV file number;
   d. Whether the Facility is an excluded source as described in Subsection I.B. – *Excluded Sources* of this Permit; and
   e. The type of material processed by the Facility.
3. Initial Facility Location
   a. The Section, Range, Township, county, and elevation;

b. The Universal Transverse Mercator (UTM) Easting and Northing coordinates (specify NAD-27 or NAD-83), zone, and latitude and longitude coordinates at the center of the Facility's Area of Operations;

c. The name and zip code of the nearest New Mexico town or tribal community;

d. The direction and distance from the Facility to the nearest town or tribal community;

e. The direction and distance from the perimeter of the Area of Operations to the nearest occupied structure;

f. Detailed written driving instructions to the Facility from the nearest town or tribal community;

g. The status of the land (e.g., Private, State, Federal, Tribal); and

h. The name, location, distance and direction from the Facility to any Class I Areas within three (3) miles of the perimeter of the Area of Operations.

4. Initial Operating Schedule

   a. The anticipated month and year that construction will start at this site; and

   b. The anticipated month and year that operation will start at this site.

5. Initial Facility Information

   a. The Facility's maximum proposed production rate, YPD and YPY;

   b. The area (in acres) to which public access is restricted;

   c. The area (in acres) of disturbed earth;

   d. The area (in acres) covered by storage piles and operations;

   e. The haul road length(s) and dust control measures;

   f. The equipment list, excluding engine driven vehicles, with the manufacturer and model number, (if the manufacturer and model number is not available - please indicate), equipment size or capacity, and the function or purpose of each piece of equipment;

   g. The manufacturer's maximum design capacity for each piece of equipment; and

   h. The manufacturer's recommended pressure drop across the Filter(s). If the manufacturer's recommendations are unavailable or are no longer relevant, include a statement that the Facility will use the results of a successful compliance test to establish normal operating range for the Filter(s).

6. Other Required Information and Attachments

   a. A process flow sheet and/or block diagram indicating individual equipment, emission points, unit numbers, and types of controls applied to those points;

   b. A plot plan drawn to scale, showing emission points denoted by unit number, Area of Operations, structures, tanks, fences, Restricted Area, and the Property Boundary of the property owned, leased or under direct control of the owner or operator;

   c. An appropriate legible map, such as a 7.5 minute United States Geological Survey (USGS) Topographic Quadrangle map, that shows the proposed location of the Facility;

   d. Documentation showing that the applicant has given the public notice described in Subsection II.B – *Public Notification*;

   e. A description of the methods by which public access to the Restricted Area is limited;

f. A preliminary operational plan defining the measures to be taken to mitigate source emissions during:

(1) Facility malfunctions, startup, shutdown, or scheduled maintenance as defined in 20.2.7 NMAC, and

(2) Weather conditions that would cause exceedence of the visible emission requirement in paragraph III.A.6. Reasonable measures to be employed include, but are not limited to, application of additional water to storage piles and haul roads.

g. The contact name, address, and date that a copy of the application was sent or delivered to a field office;

h. Certification by the Facility's owner, operator, or authorized representative before a notary public that all of the information included in the registration form is true and complete to the best of the signing individual's knowledge [20.2.72.203 A(12) NMAC]; and

i. A check or money order for the fees required by 20.2.75 NMAC. [payable to: NM Environment Department, AQB.]

## II.D. FEES

1. Permit and annual fees shall be determined pursuant to 20.2.75 NMAC – *Construction Permit Fees.*

2. A Facility that meets the definition of a Small Business [20.2.75.7.F NMAC] shall pay discounted fees [20.2.75.11.C NMAC]. A Facility that has total onsite engine capacity less than or equal to 180 hp (excluding mobile sources) and produces less than or equal to 130,000 YPY shall be considered to emit less than 50 TPY of any regulated air contaminant, and 75 TPY of all regulated air contaminants.

3. In the first year after the Department approves registration under this permit, the Facility's emissions shall be based on the proposed maximum production rate on the registration (subparagraph II.C.5.a). Each year thereafter, the Facility's emissions shall be determined by the annual production during the previous year. If the Facility's Small Business status changes, the next annual fee will change to reflect the new status. Regardless of Small Business status, the Facility may continue to operate under this GCP permit.

## II.E. MODELING

1. The Department has completed general air dispersion modeling for affected Facilities and has used the results to develop the requirements in this Permit. Therefore, air dispersion modeling is not required from the Applicant.

## II.F. REASONS THE DEPARTMENT MAY DENY A REGISTRATION

The Department may deny registration under this Permit if:

1. The registration form is not complete;

2. The Facility is not a source qualified to register for this General Permit;

3. The facility cannot continuously meet the terms and conditions of the Permit [20.2.72.220.C(3) NMAC]; or

4. Any criteria listed in 20.2.72.208 NMAC are applicable.

## SECTION III. FACILITY OPERATING REQUIREMENTS

### III.A. GENERAL TERMS AND CONDITIONS

1. The owner or operator shall operate the Facility using only the equipment described in the registration form or other equipment that has been reported to the department in accordance with Subsection IV.C – *Department Notification*, paragraphs 1.d and 1.e.
2. The owner or operator shall install, operate, and maintain the equipment in accordance with manufacturer's specifications and recommendations unless otherwise specified by a condition of this GCP.
3. The Facility shall use only gasoline, pipeline quality natural gas, liquefied petroleum gas (LPG)/propane, and/or #2 diesel fuel with a sulfur content equal to or less than 0.05 % by weight to fuel engines and heaters.
4. Facility production shall not exceed 2400 cubic yards of concrete per day.
5. A copy of the registration forms, this GCP, and the Department's approval letter, shall be maintained onsite and shall be made available to any representative of the Department upon request.
6. No visible emissions from the permitted Facility shall be observed crossing the perimeter of the Restricted Area for more than a total of five (5) minutes in any two (2) consecutive hours during Facility operation. Compliance with this condition shall be determined by fugitive emission test(s) conducted in accordance with 40 CFR § 60.11 and Reference Method 22 in 40 CFR § 60, Appendix A. During atmospheric conditions under which emissions cannot be controlled to meet the "no visible emission" requirement, the Facility shall either:
   a. cease operations, or
   b. execute the applicable measures set out in Subsection II.C. – *Registration Form*, paragraph 6.f, and perform the notification required in Subsection IV.C – *Department Notification*, paragraph 2.

### III.B. APPLICABLE REGULATIONS

1. The owner or operator registered under this Permit shall comply with any applicable portion of Title 20 of the New Mexico Administrative Code, Chapter 2, Air Quality. [20.2 NMAC]
2. The Department considers a Facility registered and operating under this Permit to be in compliance with the following state regulations as those regulations existed on the date of issuance of this Permit:
   a) 20.2.3 NMAC – *Ambient Air Quality Standards*
   b) 20.2.7 NMAC – *Excess Emissions During Malfunctions, Startup, Shutdown, or Scheduled Maintenance*
   c) 20.2.61 NMAC – *Smoke and Visible Air Emissions*
   d) 20.2.72 NMAC – *Construction Permits*
   e) 20.2.73 NMAC – *Notice of Intent and Emission Inventory Requirements*

f) 20.2.75 NMAC – *Construction Permit Fees*

3. The Department considers a Facility registered under and operating in compliance under this Permit to be in compliance with the federal Clean Air Act (CAA). [42 U.S.C. s/s 7401 et seq. (1970)]
4. The owner or operator shall be responsible for compliance with the current versions of any applicable state and federal regulations.

## III.C. Siting Restrictions

1. The Facility shall meet the following siting restrictions:

**Table III.C.1 Siting Restrictions**

| | Distance 'a' in this table shall be verified when the permitted Facility commences operation. Distance 'b' is continuously applicable during the permit period. | **Distance** |
|---|---|---|
| a. | Minimum distance from the perimeter of the Area of Operations to any Class I Area perimeter. | 4.82 km (3 miles) |
| b. | Minimum distance between any emission source of the permitted Facility and the perimeter of the Restricted Area, except where the haul road crosses the Restricted Area perimeter. | 13 meters (14 yards) |

## III.D. Relocation

1. The owner or operator shall notify the Department of any relocations in accordance with requirements in Subsection IV.C – *Department Notification*, subparagraphs 1.h and 1.i.
2. When operations cease at the site of a permitted Facility, prior to leaving the site, owners or operators should employ reasonable measures to reduce or avoid wind-blown particulate matter.

## III.E. Co-locations

1. A Facility registered under this permit may co-locate with a Hot Mix Asphalt and/or an Aggregate Processing Facility within the Property Boundary if:
   a. Such other source is permitted under 20.2.72 NMAC – *Construction Permits* or under a GCP;
   b. Each facility meets all requirements of its own permit; and
   c. No visible emissions from any co-located facility shall cross the perimeter of the Restricted Area per the requirement in paragraph III.A.6.
2. The daily production for co-located facilities shall not exceed the limits prescribed in Table III.E.1.

**Table III.E.1 Production Limitations**

| Facility/Source Type | Production |
|---|---|
| Aggregate Processing Facility | 7800 TPD |
| Hot Mix Asphalt Plant | 7800 TPD |
| Concrete Batch Plant | 2400 YPD |

3. For any co-located facilities, the minimum distance at the time of co-location from the perimeter of the Area of Operations to any existing state park, recreation area, schoolyard, private residence, office building, or other occupied structure shall be greater than ¼ mile.

## III.F. Emissions Restrictions and Conditions

1. Haul Roads and aggregate stockpiles shall be considered emission sources. Each stockpile shall be contained within a three walled bunker.
2. The Facility's truck-loading point shall control PM emissions by implementing the following controls and operational procedures to comply with paragraph III.A.6. All such control devices shall be maintained in working order. The Facility shall:
   a. Use only washed sand;
   b. Keep sand and aggregate piles controlled during hours of operation;
   c. Put at least 15% of the mix water into the trucks before adding dry batch ingredients;
   d. For truck mix Facilities, inject cementaceous materials through the central portion of a concentric boot surrounded by an aggregate curtain; and
   e. For truck mix Facilities, install and operate a commercially designed and manufactured negative-pressure canopy over the truck loading point. The canopy shall be designed-for and sized-to the permitted Facility and shall be operated such that it effectively controls truck-loading emissions during normal operations.
3. All displaced air from silos shall pass through a Filter before being vented to the atmosphere.
4. The design efficiency of Filters shall be no less than:

**Table III.F.1 Minimum Filter Efficiency**

| Filter Type | Filter Efficiency |
|---|---|
| Sock (allowed on silo(s) only) | 95.0% |
| Cartridge | 99.9% |
| Bag House/Fabric | 99.9% |

5. Filter fines shall be recycled via a closed loop system into a controlled silo.
6. The Facility's silo(s) and Filter(s) shall not exhibit visible emissions for more than a total of five (5) minutes in any consecutive two (2) hour period. [40 CFR § 60.92] Compliance with this condition shall be determined in accordance with procedures in Reference Method 22 in 40 CFR § 60, Appendix A.
7. No visible emissions from the Facility shall cross the perimeter of the Restricted Area per paragraph III.A.6.
8. Silos shall be equipped with audible and visual alarms, which activate prior to the silo being 95 percent full.

9. Haul roads shall, at a minimum, use basecourse and watering to control fugitive emissions.
10. If, at any time, the minimum distance from the perimeter of the Area of Operations to any state park, recreation area, schoolyard, private residence, office building, or other occupied structure is or becomes less than ¼ mile, haul road fugitive emissions shall be controlled by:
    a. surfactant, or by paving and sweeping traffic areas (within 25 meters of the area of operations perimeter), and
    b. use of wheel washing equipment at truck exit(s).
11. Haul roads greater than one (1) mile in length are not allowed by this GCP.
12. Central Mix Facilities shall install, operate and maintain the mixer and associated control equipment as per the manufacturer's specifications.
13. Prior to producing 1920 cubic YPD of concrete, the permittee shall install and maintain a cartridge filter or a baghouse on all silos.

### III.G. Other Emissions Limitations

1. The annual emissions from the permitted Facility, including fugitive sources of emissions, shall not exceed the emissions limitations in Table III.G.1 – *Total Annual Emission Limitations.* [20.2.70 NMAC]

**Table III.G.1 Total Annual Emission Limitations**

| Pollutant | Emissions Limitation |
|---|---|
| Nitrogen Oxides ($NO_x$) | 95 tons per year |
| Carbon Monoxide (CO) | 95 tons per year |
| Volatile Organic Compounds (VOCs) | 95 tons per year |
| Total Suspended Particulate (TSP) | 95 tons per year |
| Sulfur Dioxide ($SO_2$) | 50 tons per year |
| Any one (1) Hazardous Air Pollutant (HAP) | 8 tons per year |
| Sum of all Hazardous Air Pollutants (HAPs) | 23 tons per year |

For co-located plants, if the plant and the co-located source 1) belong to the same "major group" (i.e., which have the same first two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement; 2) are under the control of the same person (or persons under common control); and 3) are located on one or more contiguous or adjacent properties, then the total emissions from the co-located plant and source shall not exceed the emissions limitations in this table. [40 CFR 52.21(b)(6)] These limits ensure that the plant will not be a major source under 20.2.70 NMAC.

### III.H. Requirements for Stationary Combustion Equipment

1. This subsection does not apply to tailpipe emissions from engines used to propel vehicles on the property.
2. All combustion source emissions shall be vented vertically.
3. Emissions from stationary internal combustion engines and heaters shall not exhibit greater than 20% opacity. Compliance with this requirement shall be determined by opacity test

observations conducted in accordance with 20.2.61 NMAC and Reference Method 9 in 40 CFR § 60 Appendix A.

## SECTION IV. MONITORING, RECORDKEEPING AND NOTIFICATION REQUIREMENTS

### IV.A. MONITORING

1. The registered Facility shall monitor and record the loading activity status of silos and trucks and the pressure (inches of water) across the Filter(s) using a differential pressure gauge:
   a. Each time a silo is being filled;
   b. Each time a concrete truck is being filled;
2. The pressure and loading activity status shall be recorded by a CEMS or data-logger.
3. The records shall confirm that the Filter(s) are being employed per subparagraph III.F.2.e and paragraph III.F.3. The pressure data shall confirm whether the Filter(s) are operating within manufacturer's specifications, or, if manufacturers specifications are not available, within the operating parameters established by Method 22 during initial compliance tests. [Subsection IV.D – *Compliance Testing*, paragraph 9]

### IV.B. RECORDKEEPING

1. Compliance with recordkeeping requirements for this Permit shall be based on Department inspections of records and logs.
2. The owner or operator shall retain records for at least two (2) years after collection either on-site or at a local business office. [20.2.72.220.A(2) NMAC] The owner or operator shall make all records required by this permit available to Department personnel upon request.
3. The owner or operator shall collect and retain the following records:
   a. Actual hours of operation (e.g., beginning and end of operation) for each day of the operation;
   b. Monitoring required under Subsection IV.A- *Monitoring*;
   c. Weekly total production and the monthly rolling 12 month total production;
   d. Number of haul truck trips per day including materials delivery and product;
   e. Fuel delivery manifest that includes the, type of fuel, and number of gallons purchased;
   f. The quantity and frequency of water or surfactant application to haul roads;
   g. The frequency of haul road sweeping (if paved);
   h. Other haul road control measures (if used);
   i. Copies of the manufacturer's (or applicant's proposed) maintenance and operating requirements and records demonstrating conformance with said requirements; and
   j. Copies of documentation that substantiates compliance with the requirement in subparagraph III.F.2.e.

### IV.C. DEPARTMENT NOTIFICATION

1. The owner or operator shall notify the Air Quality Bureau in writing:

a. Within thirty (30) days after the actual date that operations ceased;

b. Within fifteen (15) days if the Facility is permitted as a small business and it no longer qualifies as such, either because its rolling 12 month total production exceeds the quantity in paragraph II.D.2, or because it fails to meet any other criteria defined in 20.2.75.7.F NMAC. This notification shall contain the permit number and "Change of Small Business Status" in the subject line.

c. Prior to making changes to the Facility that affect any information on the registration form [20.2.72.220.D NMAC] except as noted in subparagraphs e through i of this paragraph;

d. Prior to but no earlier than fifteen (15) days before any changes in equipment, using the GCP-5 *Substitution and Equipment Exchange* form or the *Reporting Additional Equipment* form. (Forms are available from the Department's Web Site);

e. Within fifteen (15) days after a change of the Facility ownership;

f. Within fifteen (15) days after a change of the contact person's name, address, phone number, e-mail address and/or fax number;

g. Within fifteen (15) days after the actual date of initial startup of the Facility;

h. Within fifteen (15) days prior to any relocation of the Facility in accordance with the Department's *Relocation Application* form. Relocated Facilities shall continue to meet all requirements of this Permit. Relocation shall not occur until the owner or operator has received written authorization from the Department [20.2.72.220.C.6(a) NMAC].

i. On the *Relocation Application* whether the Facility will continue to operate under GCP-5 or under a regular Construction Permit, and specify the applicable permit or registration number.

2. The owner or operator of a Facility that:

   a. produces excess emissions due to air pollution control equipment malfunctions (e.g. damaged/torn bags), or

   b. violates the visible emission requirement in paragraph III.A.6

   shall notify the Department within twenty-four (24) hours by telephone or fax. The owner or operator shall submit written notification to the Department within ten (10) days after the start of the next business day. All such notifications and actions shall be in accordance with the procedures in 20.2.7 NMAC – *Excess Emissions During Malfunction, Startup, Shutdown, or Scheduled Maintenance*. If the visible emission requirement in paragraph III.A.6 was exceeded due to weather conditions, the owner/operator shall document the weather parameters at the time and the measures taken to reduce or mitigate the emissions.

## IV.D. COMPLIANCE TESTING

1. The owner or operator shall perform initial compliance tests on each heater greater than 5 MMBtu and each combustion engine that has a site rating equal to or greater than 180 hp. The tests shall be conducted in accordance with EPA Reference Methods 1 through 4, Method 7E for NOx, Method 9 for opacity, and Method 10 for CO, contained in 40 CFR § 60, Appendix A; and with the requirements of Subpart A, *General Provisions*, 40CFR § 60.8(f). For NOx and CO, portable analyzer tests will be considered equivalent if Department guidelines (available from the Compliance section of AQB's website) are

followed; however, the Department reserves the right to request Method testing in specific cases. Alternative test methods may be used if approved by the Department. The results of the NOx tests shall be expressed as nitrogen dioxide ($NO_2$) using a molecular weight of 46 lb/lb mole in all calculations (each ppm of $NO/NO_2$ is equivalent to $1.194 \times 10^{-7}$ lb/SCF).

2. Additional compliance tests shall be conducted if it is deemed necessary by the Department to demonstrate that the Facility is in compliance with all the applicable regulations or permit conditions. Compliance test requirements from previous permits (if any) are still in effect, unless the tests have been satisfactorily completed.
3. If any equipment, required by this subsection to undergo initial compliance test(s), is added, changed out, or replaced at the permitted Facility, the owner or operator shall perform a compliance test on the new unit within 60 days of notification (IV.C.1.d), consistent with the requirements of this subsection, unless waived by the Department in writing.
4. The owner or operator shall conduct these tests within sixty (60) days of initial startup of the Facility.
5. The owner or operator shall allow a representative of the Department to be present at the test.
6. The owner or operator shall observe the following pre-testing and testing procedures:
   a. The owner or operator of the Facility shall provide, for the Department Enforcement Program Manager's approval, a written test protocol at least thirty (30) days prior to the anticipated pre-test meeting date.
      (1) The protocol shall describe the test methods or standard operating procedures to be used (including sampling locations), and shall describe data reduction procedures.
      (2) The owner or operator shall identify in the protocol any proposed variation from the established sampling and analytical procedures or from the conditions in this permit.
   b. The test protocol and compliance test report shall conform to the standard format specified by the Department. The current version of the format may be obtained from the Department's Web Site or from the Compliance section of AQB's website.
   c. The owner or operator shall provide the following performance test facilities for the Department:
      (1) Sampling ports necessary for any test methods specified by this Permit,
      (2) Safe sampling platforms,
      (3) Safe access to sampling platforms, and
      (4) Utilities for sampling and test equipment.
   d. Where necessary to prevent cyclonic flow in the stack, the owner or operator shall install flow straighteners in accordance with EPA Reference Method 1 in 40 CFR § 60, Appendix A.
7. During engine and heater compliance tests [Subsection IV.D, paragraph 1], the owner or operator shall monitor and record the Facility's hourly production rate. This information shall be included with the test report that is required to be furnished to the Department and shall be listed in tabular form or as part of the summary page of the test report.
8. Engine compliance tests [Subsection IV.D, paragraph 1] shall be conducted at 90 percent or greater of the engine's site rated capacity, as stated in the registration form of this Permit, and

at additional loads when requested by the Department. The load and the parameters used to calculate it shall be recorded to document operating conditions and shall be included with the test report to the Department.

9. Initial compliance tests on Filters shall demonstrate compliance with paragraph III.F.6, or shall establish an operating range in which there are no visible emissions per paragraph III.F.6. Results shall be furnished to the Department for use as a baseline data set during future compliance inspections as a comparison of Facility performance versus opacity.
10. The owner or operator shall submit one copy of the test protocol and compliance test results to the Enforcement Program Manager of the Department no later than forty five (45) days after the completion of the testing.

## SECTION V. CHANGES THAT PREVENT MEETING THE GENERAL PERMIT REQUIREMENTS

1. The owner or operator shall not change or add equipment that prevents the Facility from complying with the conditions of this permit.
2. Prior to making any modification that would result in the Facility not being able to meet the conditions of this permit; the owner or operator shall obtain a Regular Construction Permit under 20.2.72 NMAC from the Department. [ 20.2.72.220.D(2) NMAC]

## SECTION VI. RIGHTS OF THE ENVIRONMENT DEPARTMENT AND THE REGISTERED FACILITY

### VI.A. PROPERTY ACCESS AND RECORD REVIEW

1. The Department may access the Facility and the nearest operations office of the Facility during operational hours to inspect the equipment at the Facility and any records to ensure that the Facility has operated and continues to operate in compliance with the conditions of this permit. Operational hours shall include all times when employees are present and emissions may be occurring. [Air Quality Control Act, NMSA 1978. Section 74-2-5.1A]

### VI.B. CANCELLATION OF REGISTRATION

1. The Department may cancel registration under this Permit if the owner or operator of the Facility has not notified the Department within two (2) years of approved registration that the construction or modification has begun. The Department may also cancel the registration if construction work is suspended for one (1) year.
2. The Department shall cancel the registration if the owner or operator of the Facility ceases operation for five (5) years or more. [20.2.72.211.A NMAC]

### VI.C. REVOCATION OF REGISTRATION

1. The Department may revoke a registration under this Permit in writing:
   a. If the owner or operator of the Facility has knowingly and willfully misrepresented a fact on the registration form; or
   b. Pursuant to an Administrative Compliance Order or Court Order.

## VI.D. Appeals of Department Permitting Actions

1. Any party affected by the Department's approval, denial or revocation of a registration under this Permit may appeal to the Environmental Improvement Board (EIB) within thirty (30) days of the Department's decision pursuant to Subsections F through H of 20.2.72.207 NMAC and 20.2.72.220.C(5) NMAC.

## VI.E. Revision of the General Construction Permit

1. The Department may revise this Permit pursuant to 20.2.72.220.B NMAC. New Facilities are required to comply with the new GCP-5 transition schedule within the time frame stated in the new version.

## SECTION VII. ACRONYMS AND DEFINITIONS

### VII.A. ACRONYMS

| | |
|---|---|
| AC | Asphalt Concrete |
| APF | Aggregate Processing Facility |
| (AQB) | Air Quality Bureau |
| AQCR | Air Quality Control Regions |
| CO | Carbon monoxide |
| CBP | Concrete Batch Plant |
| CEMS | Continuous Emissions Monitoring System |
| CFR | Code of Federal Regulations |
| EIB | Environmental Improvement Board |
| GCP | General Construction Permit |
| HAP | Hazardous Air Pollutant |
| HMA | Hot Mix Asphalt |
| NAAQS | National Ambient Air Quality Standards [40 CFR Part 50] |
| NAIC | North American Industrial Classification |
| NESHAP | National Emission Standards for Hazardous Air Pollutants [40 CFR Part 61 and 63] |
| NMAAQS | New Mexico Ambient Air Quality Standards [20.2.3 NMAC] |
| NMAC | New Mexico Administrative Code |
| NMED | New Mexico Environment Department |
| NOI | Notice Of Intent |
| NOV | Notice Of Violation |
| $NO_x$ | Oxides of nitrogen |
| NSPS | New Source Performance Standards [40 CFR Part 60] |
| MACT | Maximum Achievable Control Technology |
| PM | Particulate Matter |
| $PM_{10}$ | Particulate Matter with an aerodynamic diameter of 10 microns or less |
| ppm | Parts Per Million |
| PSD | Prevention of Significant Deterioration [20.2.74 NMAC] |
| SCF | Standard Cubic Foot |
| SIC | Standard Industrial Classification |
| $SO_2$ | Sulfur Dioxide |
| TPH | Tons Per Hour |
| U.S. EPA | United States Environmental Protection Agency |
| VOC | Volatile organic compound |
| YPD | (cubic) Yards Per Day |
| YPH | (cubic) Yards Per Hour |
| YPY | (cubic) Yards Per Year |

## VII.B. DEFINITIONS

**"Area of Operations"** means the area within the Restricted Area which contains all Emissions Units and activities which may produce air contaminants, including Emissions Units and activities listed in Subsection I.A. – *Facilities Allowed to Register*, paragraph 3, all disturbed lands and all haul roads except the haul road between the Restricted Area and the Property Boundary. Disturbed lands include all active mining areas, stockpiles, and overburden removal areas used for operation of the Facility.

**"Aggregate Processing Facility "** means any facility or plant that utilizes any combination of equipment or machinery that is used to quarry, separate, screen, combine, or crush, any nonmetallic mineral.

**"Air Quality Control Region" (AQCR)** means an interstate or intrastate area designated by the U.S. Environmental Protection Agency (EPA) for the attainment and maintenance of National Ambient Air Quality Standards (NAAQS).

**"Asphalt"** means the bituminous substance used to bind aggregate together to make asphalt concrete (AC).

**"Concrete"** means a conglomerate of gravel, pebbles, sand, broken stone, blast-furnace slag or cinders, or fly-ash (termed the aggregate) embedded in a matrix of either mortar or cement mixed with water.

**"Concrete Batch Plant"** means any facility or plant used to manufacture concrete by mixing water, aggregate, and cement.

**"Department"** is the State of New Mexico Environment Department, Air Quality Bureau.

**"Emissions Units"** means any building, structure, equipment, facility, installation (including temporary installations), operation or stationary source, which emits or has the potential to emit any air pollutant subject to regulation under the Act.

**"Filter"** means the equipment used by the Facility to capture dust and particulate matter. As used in this GCP, the term Filter includes baghouses, fabric filters, sock filters, and cartridge filters.

**"Fugitive Emissions"** means those emissions, which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

**"Haul Road"** means any on-site road that is not accessible to the general public and is connected to the facility or the nearest public road.

**"Hazardous Air Pollutants"** are air pollutants that are designated as hazardous by the U.S. EPA in the Clean Air Act and listed in 40 CFR Part 61 Section 112b.

**"Hot Mix Asphalt Plant"** means any facility or plant that utilizes any combination of equipment or machinery to store, deliver, or manufacture Asphalt Concrete by mixing Asphalt and heated aggregate.

**"National Ambient Air Quality Standards"** means the primary (health based) and secondary (welfare-based) federal ambient air quality standards promulgated by the U.S. EPA pursuant to Section 112 of the federal Clean Air Act.

**"NSPS" (New Source Performance Standards)** means the regulatory requirements, guidelines and emission limitations promulgated by the U.S. EPA pursuant to Section 111 of the Federal Clean Air Act and 40 CFR Part 60.

**"Opacity"** means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

**"Owner or Operator"** is any person who owns or operates a process or process equipment at the source for which coverage under the Permit has been granted.

**"Property Boundary"** means the outside edge of the property, which includes all the equipment, registered under this Permit. The property may consist of one or more continuous and adjacent properties if they are owned, leased, or under direct control of the owner or operator.

**"Ready Mix Plant** or "Redi Mix" or "central mix" means a plant that combines and mixes **Concrete** ingredients with water in a drum at the Facility, before loading the mix into a truck for transport to the point of use.

**"Restricted Area"** means the area to which public access is restricted.

**"Stack Emissions"** means emissions that are released to the atmosphere from a capture system through a stack or other point source discharge on the Facility.

**"Transit Mix Plant"** means a plant where Concrete ingredients are put into trucks and mixed by rotation of the drum on the way to the job-site.

# General Construction Permit GCP-5

## Multi-Form for Concrete Batch Plants

(Locating outside of Bernalillo County and Tribal Communities)

Use this form for any combination of the following permitting activities: **Initial registration** of a facility for a GCP-5 permit, GCP-5 facility **relocations**, GCP-5 **substitution of equipment** notification, and reporting of **additional equipment** for GCP-5 facilities.

### Acknowledgements (Mark all that apply):

☒ **I am submitting this form for an initial GCP-5 registration.**

☐ **I am submitting this form for relocation.** A complete form is required for all relocations including the Equipment List.

☐ **I am submitting this form for equipment substitutions, removals, or additions.** Sections I, VII, VIII and IX.1 are required in addition to the certification form on page 10. Applicable provisions of the GCP-5 may require compliance tests for equipment installed following this notification. Include other sections if information is changing that should be reported in those sections.

☐ **I acknowledge that a pre-application meeting is available to me upon request.**

☐ **I have sent a copy of this application to the nearest Department Field Office (required for initial registrations only).**

☐ **Public notice was posted prior to submitting this form to NMED.**

☐ **I have published the public notice required by Condition II.B.1 of GCP-5 (required for initial registrations only).**

☐ **This facility qualifies to receive assistance from the Small Business Environmental Assistance program (SBEAP) and qualifies for 50% of the current application and permit fees.** To see if you qualify for SBEAP assistance and a fee reduction go to https://www.env.nm.gov/air-quality/small-biz-criteria/

☐ **This facility qualifies to receive assistance from the Small Business Environmental Assistance Program (SBEAP) but does not qualify for 50% of the current application and permit fees.** To see if you qualify for SBEAP assistance go to https://www.env.nm.gov/air-quality/small-biz-criteria/

☒ **I have enclosed a check for the required fee: ☒ initial registration fee: $4,260 prior to 1/1/2021 or $4,320 beginning 1/1/2021; OR ☐ relocation fee $426 prior to 1/1/2021 or $432 beginning 1/1/2021.** There is an annual fee in addition to the registration fee: www.env.nm.gov/air-quality/permit-fees-2/

For facilities qualifying as a "small business" under 20.2.75.7.F NMAC, these fees are or $2,130 and $213 respectively prior to 1/1/2021 or $2,160 and $216 respectively beginning 1/1/2021, provided that NMED has a Small Business Certification Form from your company on file. This form can be found at: https://www.env.nm.gov/air-quality/frequently-requested-forms/
**Provide your Check Number:** _____ **and Amount:** _____.

**This facility is a ☒ Truck Mix ☐ Central Mix ☐ Other (specify):**

| I | Company Information | | |
|---|---|---|---|
| 1 | a) Company name: Roswell Ready Mix | | b) Date application notarized: 6/16 /2021 |
| 2 | a) Facility name: Delaware Basin Concrete Plant | b) 4-digit SIC code: 3273 | c) 6-digit NAICS code: **327320** |
| 3 | Company mailing address: 4100 S. Lea St. Roswell, NM 88203 | | This facility is: ☐ Stationary ☒ Portable |

| | | | |
|---|---|---|---|
| 4 | Permit # (unless this is a new facility): | | AI # (unless this is a new facility): |
| 5 | a) Contact person: Danny Carr | | b) Title: General Manager |
| 6 | a) Phone No: 575-408-0715 | b) Fax No: | c) e-mail: dcarr@nmreadymix.com |
| 7 | Will this facility operate in conjunction with other air regulated parties on the same property? ☒ No ☐ Yes<br>If yes, what is the name and permit number (if known) of the other facility? | | |
| 8 | a) If you have hired a consultant, provide name and contact info: | | |
| 9 | a) Phone No: | b) Fax No: | c) e-mail: |

## II Applicability

| | | |
|---|---|---|
| 1 | Is your facility listed under a NESHAP or MACT? | ☒No ☐Yes |
| 2 | Will your facility process radioactive materials? | ☒No ☐Yes |
| 3 | Will your facility process materials that include any listed Hazardous Air Pollutants (HAPs)? | ☒No ☐Yes |
| 4 | Will your facility process asbestos tailings, or asbestos containing waste materials? | ☒No ☐Yes |
| 5 | Is your facility subject to 20.2.72 NMAC, Subpart IV, *Permitting for Toxic Air Pollutants?* | ☒No ☐Yes |
| 6 | Will this facility be located less than three (3) miles from a Class I (Wilderness) area? See AQB Modeling website for a map of Class I areas at: http://www.env.nm.gov/aqb/modeling/class1areas.html | ☒No ☐Yes |
| 7 | Will this facility use any fuels other than natural gas, liquefied petroleum gas (LPG)/propane, gasoline, and # 2 diesel fuel with a sulfur content greater than 0.05% by weight? | ☒No ☐Yes |
| If you answered ***Yes*** to any of questions 1-7, your facility **does not** qualify for this general construction permit. You need to submit an application for a regular permit under 20 NMAC 2.72 *Construction Permits*. | | |
| 8 | Will your facility meet the location requirements as described in Sections III.C. and III.E. of this general construction permit? | ☐No ☒Yes |
| 9 | Is your facility's primary purpose to produce concrete and concrete products per Condition I.A.1 of this general construction permit? | ☐No ☒Yes |
| 10 | Is your facility's production rate less than or equal to 2400 yards of concrete per day (YPD) as required by Condition III.A.4. of this General Construction Permit? | ☐No ☒Yes |
| 11 | Does your facility include any combination of the Emissions Units listed in Section I.A.3. of the general construction permit, and no others? | ☐No ☒Yes |
| 12 | Can your facility comply with all of the applicable state and federal regulations listed in Section III.B. of the general construction permit? | ☐No ☒Yes |
| 13 | Will the perimeter of the Area of Operations of your facility be located more than one-quarter mile (1/4) from an existing recreation area, private residence, office building, school, or other occupied structure? OR, if your facility does not meet this setback, will the haul road fugitive emissions meet the control requirements as described in Condition III.F.10? | ☐No ☒Yes |
| 14 | If you plan to co-locate this facility with an asphalt facility or a crushing facility, will your facility comply with the location requirements as described in Section III.E – *Co-Locations* of this general construction permit? If this facility is not co-located, check "Yes". | ☐No ☒Yes |
| 15 | Will the minimum distance between any emission source of the permitted Facility and the perimeter of the Restricted Area (except where the haul road crosses the Restricted Area perimeter) be at least 13 meters (14 yards)? | ☐No ☒Yes |
| 16 | Will the haul road control measures meet or exceed the requirements as described in Section III.F of this general construction permit? | ☐No ☒Yes |
| If you answered ***NO*** to any of questions 8-18, your facility **does not** qualify for the general construction permit. You need to submit an application for an individual permit under 20. 2.72 NMAC *Construction Permits*. | | |

## III Current Facility Status

| | | | |
|---|---|---|---|
| 1 | Has this facility previously been issued a general construction permit? ☒Yes ☐No | If yes, the registration No. is:GCP5-1514 | |
| 2 | Has this facility already been constructed? XYes No | If yes, is it currently operating in New Mexico? ☐Yes ☒No | |
| 3 | Does this facility have a 20.2.72.200.A (or B) NMAC construction permit or a 20.2.73 NMAC Notice of Intent (NOI)? ☐Yes ☒No | | If yes, the permit (or NOI) #, and whether the permit will remain active or not: |
| 4 | Is this application in response to a Notice of Violation (NOV)? ☐Yes ☒No If so, provide current permit #: | If yes, NOV date: | NOV Tracking No. |
| 5 | This Facility is submitting this application as a Small Business and will operate under the small business product limitation in the GCP, Section II.D.2 – *Fees*. ☐Yes ☒No | | |

| | |
|---|---|
| 6 | This Facility will operate as a Small Business under Condition II.D. I understand additional reporting requirements are necessary prior to operating over the HP and TPY limits set in condition II.D.2, and as required in Condition IV.C.1.b. ☐Yes ☒No |

## IV Facility Location Information

Please use Montana's Graphical Locater to convert Lat/Long to UTM systems, found at: http://rcn.montana.edu/resources/converter.aspx

| | | | | | |
|---|---|---|---|---|---|
| 1 | a) Section: 7 | b) Range: 34E | c) Township: 24S | d) County: Lea | e) Elevation (ft): 3599 |
| 2 | a) UTM Zone: ☐12 or ☒13 | b) UTME (to nearest 0.01 km): 640185 | | c) UTMN (to nearest 0.01 km): 3566686 | |
| | d) Specify which datum is used: | ☐ NAD 27 | ☒ NAD 83 | ☐ WGS 83 | |
| AND | a) Latitude (decimal degrees): 32.22806 | b) Longitude (decimal degrees): -103.51224 | | | |
| 3 | Name and zip code of nearest New Mexico town and/or tribal community: Jal NM, 88252 | | | | |
| 4 | Detailed Driving Instructions including direction and distance from nearest NM town and/or tribal community (attach a road map if necessary). If there is no street address, provide public road mileage marker: From 3rd St and NM 128, Drive 20.4 miles W on NM 128 to Delaware Basin Rd. Turn N and drive 1.25 miles to haul road on W to the area of operations. | | | | |
| 5 | The facility is 20.5 (distance) miles West (direction) of Jal, NM (nearest town). | | | | |
| 6 | Direction and distance to the nearest occupied structure from the perimeter of the Area of Operations: More than 3.5 miles<br><br>On Attachment C (page 6) required map, indicate (circle) all residences within ¼ mile of area of operations. | | | | |
| 7 | Land Status of Facility (check one): ☒ Private ☐ Indian/Pueblo ☐ Government ☐ BLM ☐ Forest Service ☐ Military | | | | |
| 8 | Name and county of the nearest Class I Area and its direction from the facility: Carlsbad Caverns 267° | | | | |
| 9 | Shortest distance from the facility to the boundary of the nearest Class I Area (to the nearest 1 km): 89 km | | | | |

## V Initial Operating Schedule

| | |
|---|---|
| 1 | Month and year of anticipated construction of the new or modified facility: June 2021 |
| 2 | Month and year of anticipated completion date at this proposed site: June 2022 |

## VI Other Facility Information

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| 1 | Maximum proposed production | 350 | yards/day | 2 | Total miles of haul road (one way) | .25 | miles |
| 3 | Maximum proposed production | 30000 | yards/year | 4 | Estimated Number of Haul truck trips/day (round trip) | 6 | trips/day |
| 5 | Area of disturbed earth | 5 | acres | 6 | Area of storage pile & operations | 5 | acres |

7 a) **Restricted Area**: Provide a written description of the method(s) to be used to restrict public access to the restricted area. Method(s) used to delineate the Restricted Area: The location is fenced on the South along NM 128 and on the East along Delaware Basin Rd. "NO TRESPASSING" signs are posted near the haul road entrance on the east side of the facility. The operation is very remote to the general public.

"**Restricted Area**" is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department, such as rugged physical terrain with steep grade that would require special equipment to traverse. If a large property is completely enclosed by fencing, a restricted area within the property may be identified with signage only. Public roads cannot be part of a Restricted Area.

| | |
|---|---|
| 8 | Describe the control measures that will be used on haul roads to meet the fugitive emission requirements described in Section III.F. of this General Construction Permit:<br>Water |
| 9 | Provide the manufacturer's recommended pressure drop across the filter(s), as required by Condition II.C.5.h:<br>12-20 psi |
| 10 | Provide a preliminary operational plan(s) defining the measures to mitigate source emissions during:<br>1) Facility malfunctions, start up, shutdown, scheduled maintenance as defined in 20.2.7 NMAC, and<br>2) weather conditions that would cause an exceedance of the visible emission requirement in Section III.A.6. of the permit.<br><br>During malfunctions, start up, shutdown, scheduled maintenances, and weather exceedances the plant will shut down until it can operate without exceedances. |

## VII Process Equipment Information, including silos (use additional sheets if necessary)

| Unit Number (match attachments) | Component Description (or unit's function). Also enter all silos and control devices. | Manufacturer | Manufacture Date | Model Number | Equipment Size, Capacity or Maximum Process Rate | Manufacturers Emission Factors for Regulated Air Pollutants (for engines or generators). For control devices, enter efficiency. | Date of most recent Compliance Test in New Mexico (or "None") |
|---|---|---|---|---|---|---|---|
| | **Concrete Plant** | | | | | | |
| 01 | FEED BIN | **CEMCO** | 1994 | 150 | 150 YPH | | |
| 02 | CONVEYOR BELT | **CEMCO** | 1994 | 150 | 150 YPH | | |
| 03 | AGGREGATE BIN | **CEMCO** | 1994 | 150 | 15 CY | | |
| 04 | SAND BIN | **CEMCO** | 1994 | 150 | 10 CY | | |
| 05 | CONVEYOR BELT | **CEMCO** | 1994 | 150 | 150 YPH | | |
| 06 | CBP | **CUMMINS** | 1994 | | 150 YPH | | |
| 07 | DIESEL GENERATOR FOR HYDRAULIC PUMP | **CUMMINS** | 1994 | JDXL | 37-75 kW/100HP MAX | N/A < 185 HP | |
| S1 | FLY ASH | **CEMCO** | 1994 | 150 | 150 YPH | | |
| S2 | CEMENT | **CEMCO** | 1994 | 150 | 150 YPH | | |
| S2a | BAGHOUSE | **CEMCO** | 1994 | 150 | 150 YPH | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |

[1] To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.

## VIII Storage Tank Information (Note: this data will be used to determine 40 CFR 60 Subpart Kb applicability) (Use additional sheets if necessary)

| Tank No. | Materials Stored | Date Installed (MM/DD/YY) | Capacity (bbl) | Capacity ($M^3$) | Diameter (M) | Height (M) | True Vapor Pressure (kPa) | Annual Through-puts (gal) | Annual Turnovers |
|---|---|---|---|---|---|---|---|---|---|
| S1 | FLY ASH | JUNE 2021 | 50 TONS | | 4 | 14 | | | |
| S2 | CEMENT | JUNE 2021 | 75 TONS | | | | | | |
| T1 | PROPANE | JUNE 2021 | 250 GAL | | 4' | 4' | 9.2psig @ 60°F | 600 | 2.4 |
| T2 | DIESEL | JUNE 2021 | 150 GAL | | 4' | 4' | 0.009psig @ 70°F | 2000 | 13.3 |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |

## IX Required Attachments

**The following Attachments are required. Please label each document and verify you have provided the requested information by checking the checkboxes below. A complete application shall include:**

**Attachment # 1 Process Flow Sheet:** For **initial** registration applications and for all **substitutions**, removals, and **additions** of equipment applications; include a process flow sheet and/or block diagram indicating:

- ☒ All regulated equipment (Numbering or naming system should cross reference with Attachment #2)
- ☒ All emission points
- ☒ Types of control (if any) applied to those points.

**Attachment # 2 Facility Layout Map:** Provide a satellite photo or commercial scale map) showing the proposed **layout** of the Facility and the surrounding area including at least 0.25-mile (but not greater than 0.5 mile) distance from the Restricted Area **in all directions**. The map shall also include (show) the following:

- ☒ Include the label "Facility Layout Map" and the name of the facility
- ☒ A graphical scale
- ☒ An indicator showing which direction is north
- ☒ The UTM coordinates (or Longitudinal coordinate system on both axis)
- ☒ All emissions units, structures, tanks
- ☒ The access haul roads from the Area of Operations to the perimeter of the Property Boundary. Label the length.
- ☒ Any relevant topographic features of the area
- ☒ Any co-located particulate sources
- ☒ Facility Property Boundary
- ☒ The perimeter of the Restricted Area (fence line). For the complete definition, refer to the 'Definitions' at the end of the GCP permit). If more than one type of barrier is used, identify the types and locations of each barrier that will be used to restrict access from the public.
- ☒ The perimeter of the Area of Operations (see 'Definitions' at the end of the GCP permit).
- ☒ If it will fit on this map, identify the Property Boundary owned, leased, or under direct control of the applicant and/or owner or operator (refer to the Definitions at the end of the GCP permit). If it will not fit on this map, show Property Boundary on the Facility Location Map.

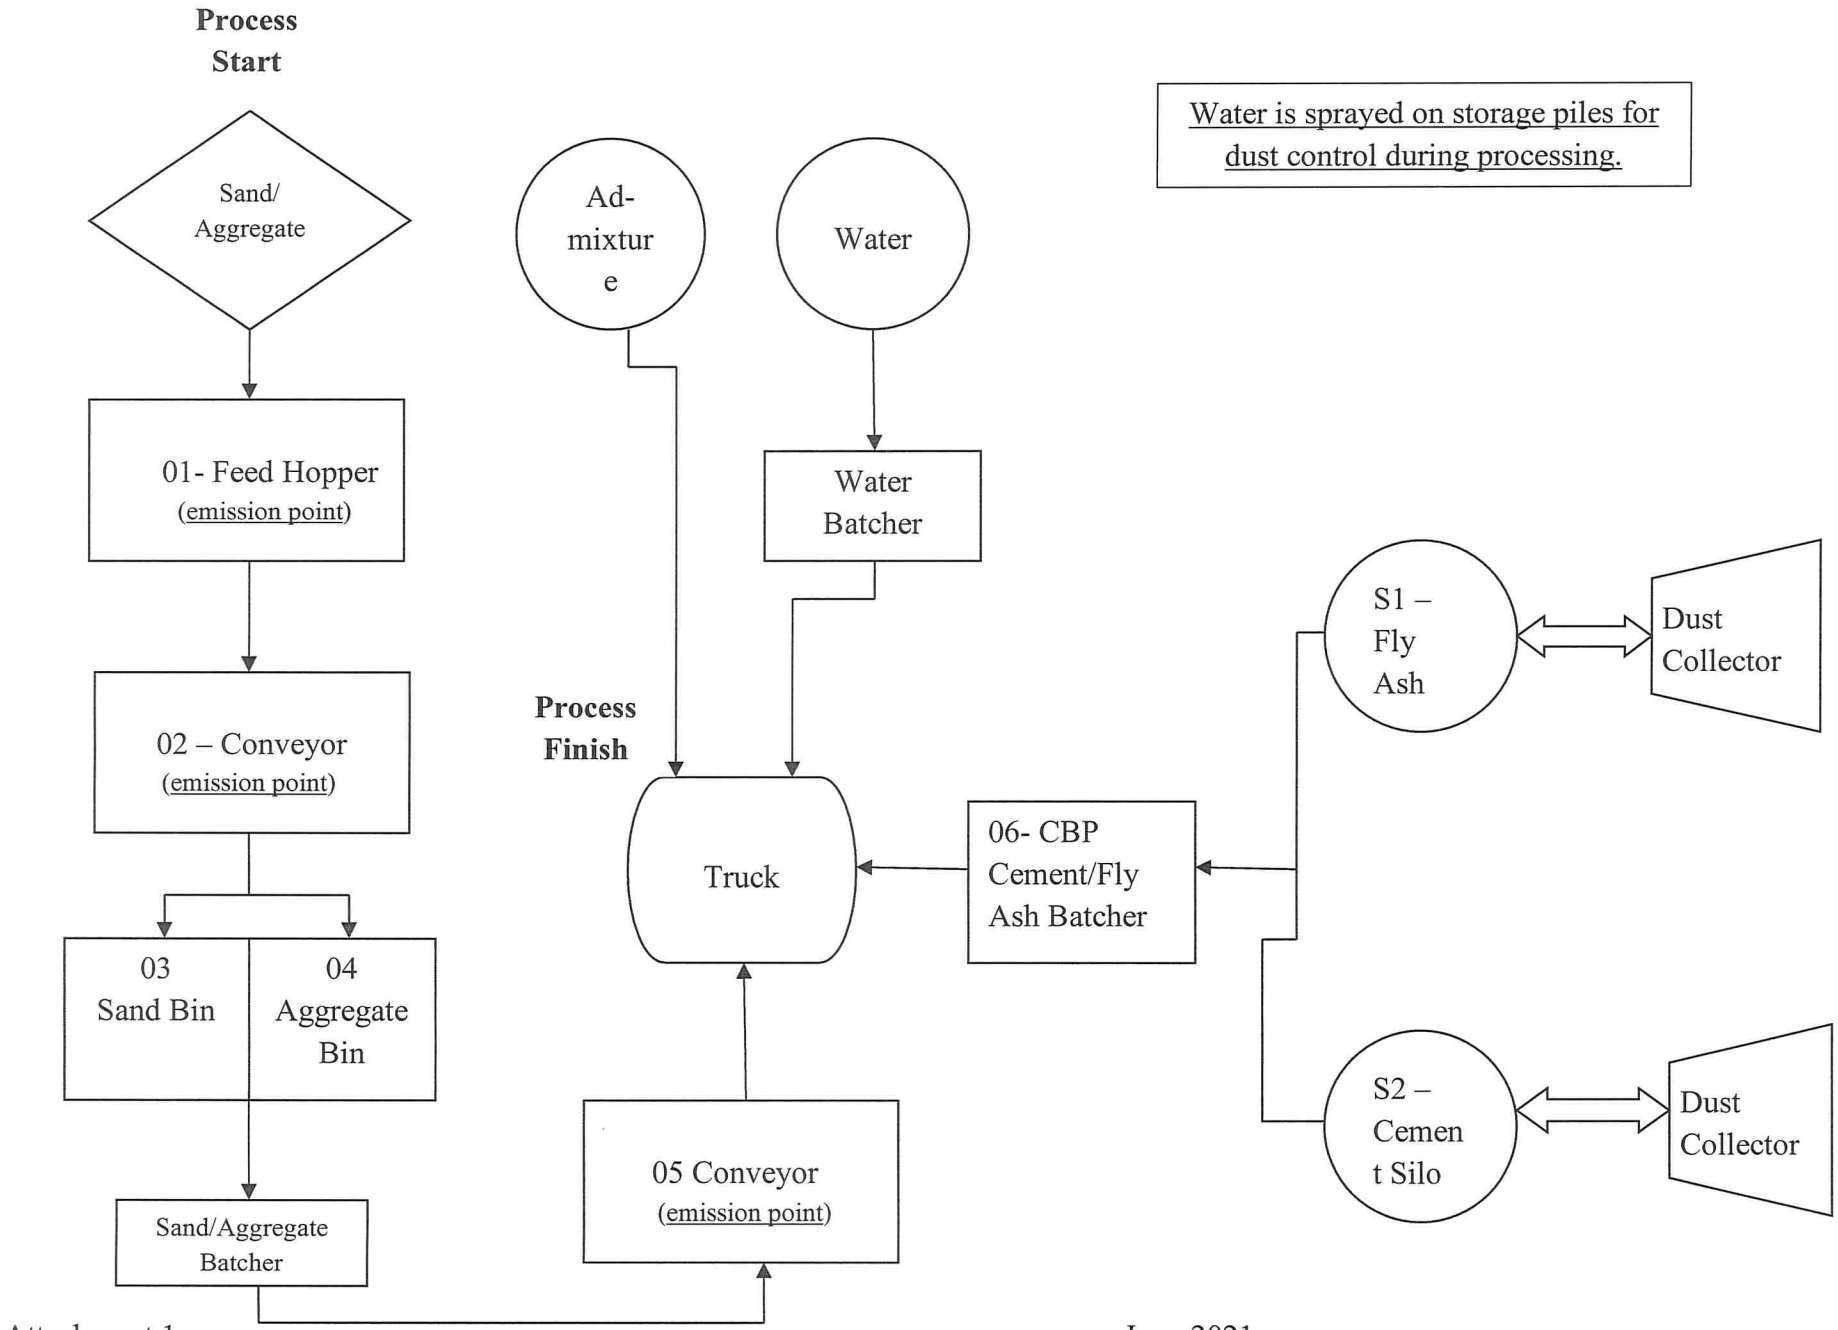
**Attachment # 3 Facility Location Map:** Provide a satellite photo at least 7 miles on each side or commercial scale map such as a 7.5-minute United States Geological Survey (USGS) topographic quadrangle, with the facility shown at or near the center showing the proposed **location** of the Facility. The map shall also include the following:

- ☒ Include the label "Facility Location Map" and the name of the facility.
- ☒ A minimum radius around the plant of 5 km (3.1 miles), showing any Class I area(s)
- ☒ A graphical scale
- ☒ An indicator showing which direction is north
- ☒ The UTM coordinates (or Longitudinal coordinate system on both axis)
- ☒ Any relevant topographic features of the area

**Attachment # 4 Public Notice:** Documentation that **public notice** has been initiated

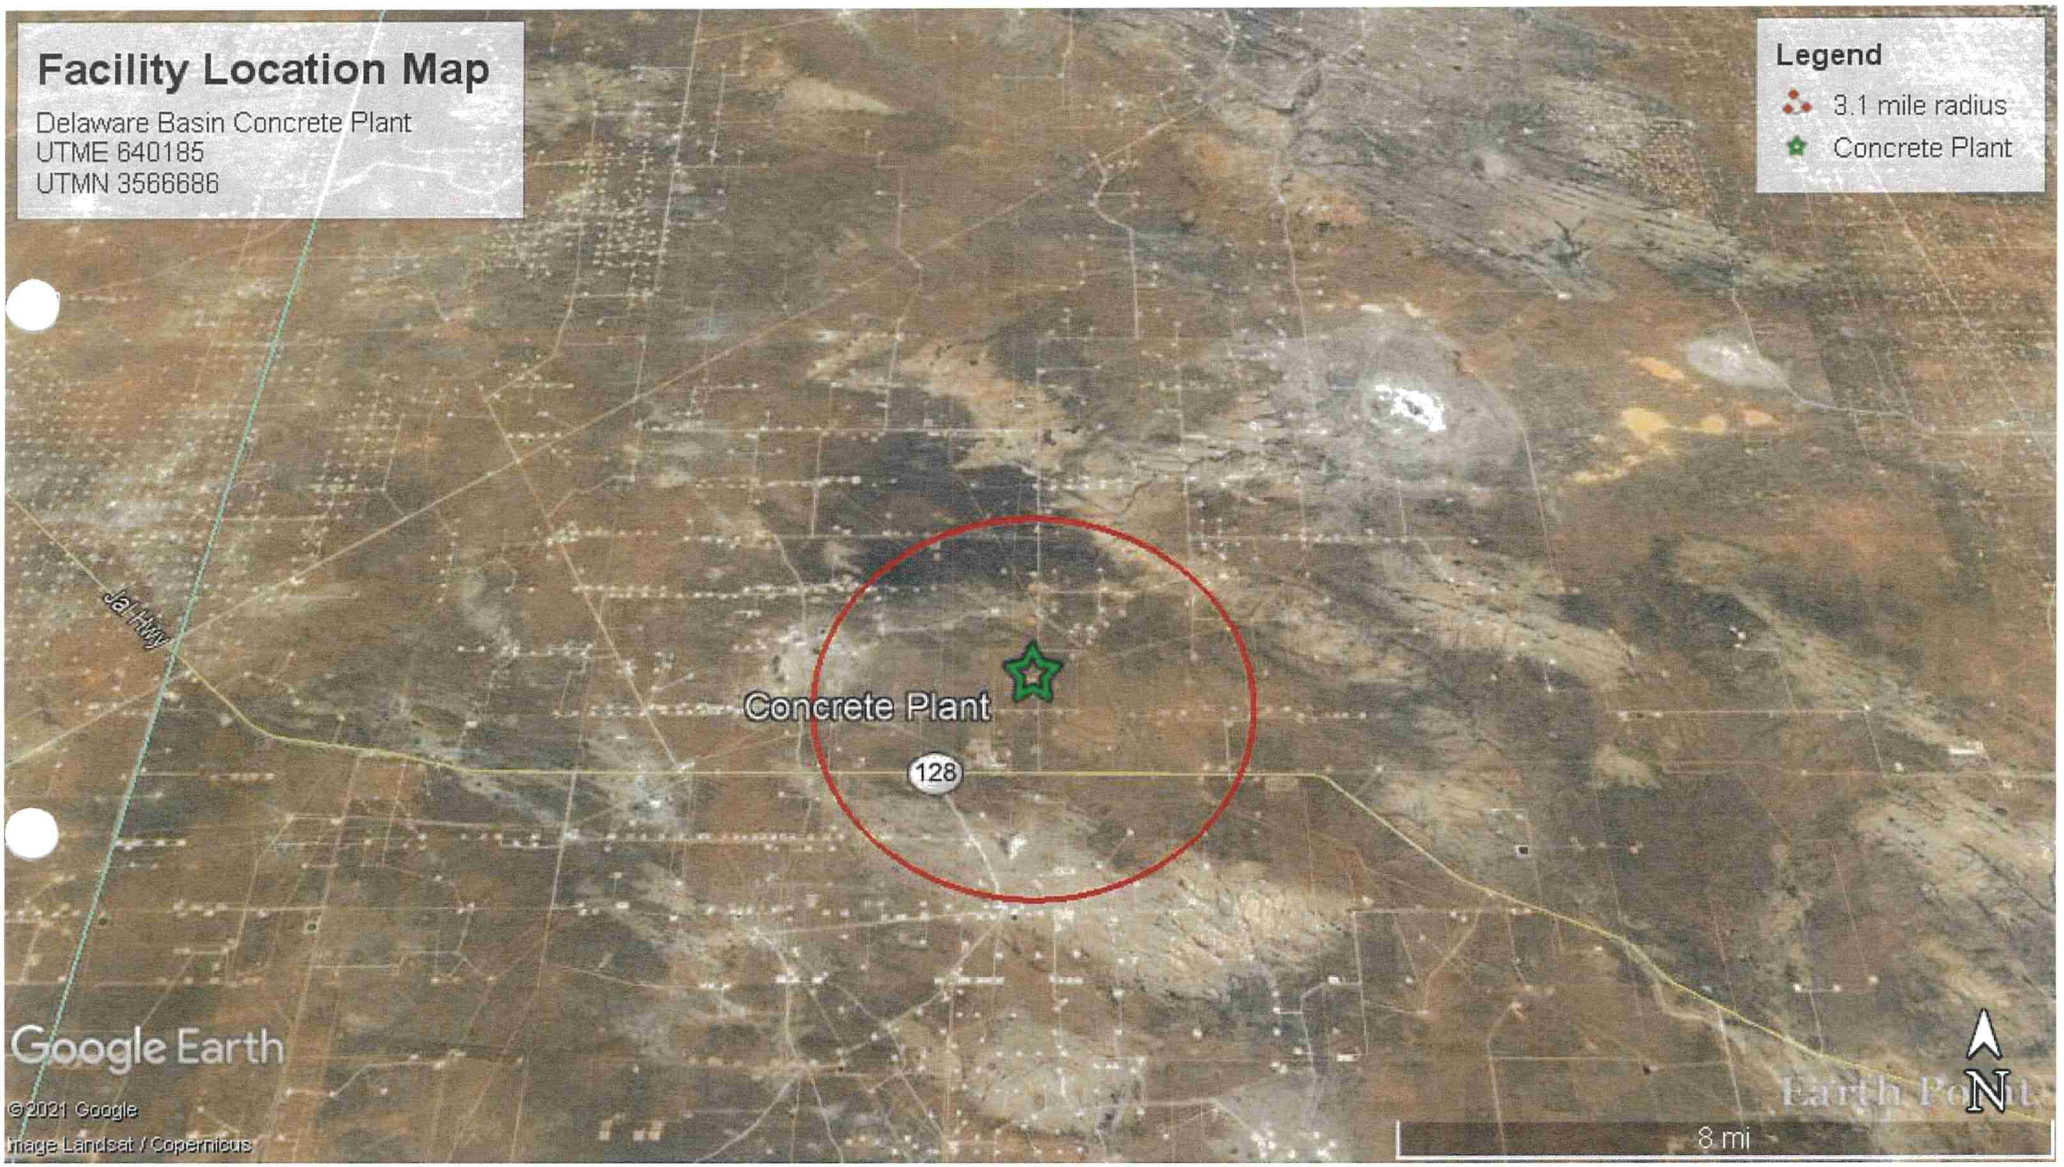
1) ☒ Include the General Posting of Notice-Certification (find the Posting Certification in Part X of this registration form), including location of posted notice, along with the posted sample; date of posting, and name of person posting the notice. **This posting is required for both initial applications and relocation applications.** Additionally, provide a verbal description the posting location. The posting at the facility **must be readable by the public from the nearest public road without trespassing on private property**. Do not post it behind a locked gate or on the haul road inside private property.

**A newspaper ad is not required for relocation applications**



**2a)** ☐ For initial GCP applications, include an original or copy of the actual newspaper advertisement. The original or copy of the advertisement must include the header showing the date and newspaper or publication title.

**OR**



**2b)** ☒ For initial GCP applications, include an affidavit from the newspaper or publication stating that the advertisements were published. The affidavit must include the date of the advertisements' publication, and a legible photocopy of the entire ad.

**Attachment #5 Certification:**

☒ Certification by the Facility's owner or operator, or authorized representative before a notary public that all of the information included in the registration form is true and complete to the best of his or her knowledge (find the Certification in Part XI of this registration form).

# NOTICE

**Roswell Ready Mix** announces its intent to apply to the New Mexico Environment Department for an air quality permit to construct a General Construction Permit, **GCP-5_XXXX (Concrete Batch Plant)**. The name of this facility is **Delaware Basin Concrete Plant**. The expected date of the submittal of our application for an air quality permit to the Air Quality Bureau is **6/18/2021.** This notice is a requirement according to New Mexico air quality regulations.

The exact location of the facility is **UTM Zone 13, UTM Easting 640185, UTM Northing 3566686**. The approximate location of this site is **20.5** miles **West** of **Jal, New Mexico**, in **Lea** county.
Air emissions of any regulated air contaminant will be less than or equal to **[do not change TPY provided]**:

| | Tons per year (TPY) |
|---|---|
| 1. Total Suspended Particulates | 95 |
| 2. Nitrogen Oxides ($NO_x$) | 95 |
| 3. Carbon Monoxide (CO) | 95 |
| 4. Volatile Organic Compounds (VOC) | 95 |
| 5. Sulfur Dioxide ($SO_2$) | 50 |
| 6. Any one (1) Hazardous Air Pollutant (HAP) | 8 |
| 7. Sum of all Hazardous Air Pollutants (HAPs) | 23 |

The standard operating schedule of this facility will be **during daylight hours only.**
The owner and/or operator of the Plant is:
**Roswell Ready Mix**
**4100 S. Lea**
**Roswell, NM 88203**
If you have any questions or comments about construction or operation of above facility, and want your comments to be made as a part of the permit review process, you must submit your comments in writing to the address below:

Permits Programs Manager
New Mexico Environment Department
Air Quality Bureau
525 Camino de los Marquez, Suite 1
Santa Fe, New Mexico, 87505
(505) 476-4300

Other comments and questions may be submitted verbally.
Please refer to the company name and site name, as used in this notice or send a copy of this notice along with your comments, since the Department may not have received the permit application at the time of this notice.
Este es un aviso de la Agencia de Calidad de Aire del Departamento de Medio Ambiente de Nuevo México, acerca de las emisiones producidas por un establecimiento en esta área. Si usted desea información en español, por favor de comunicarse con la oficina de Calidad de Aire al teléfono 505-476-5557.

**Notice of Non-Discrimination**

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non- discrimination programs, policies or procedures, you may contact: Kristine Pintado, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit our website at https://www.env.nm.gov/NMED/EJ/index.html to learn how and where to file a complaint of discrimination.

*NOTICE IS POSTED ON A READY MIX SIGN RIGHT NEXT TO THE ENTRANCE OF PROPERTY*

# NOTICE

**Roswell Ready Mix** announces its intent to apply to the New Mexico Environment Department for an air quality permit to construct a General Construction Permit, **GCP-5_XXXX (Concrete Batch Plant)**. The name of this facility is **Delaware Basin Concrete Plant**. The expected date of the submittal of our application for an air quality permit to the Air Quality Bureau is **6/18/2021.** This notice is a requirement according to New Mexico air quality regulations.

The exact location of the facility is **UTM Zone 13, UTM Easting 640185, UTM Northing 3566686**. The approximate location of this site is **20.5** miles **West** of **Jal, New Mexico**, in **Lea** county.
Air emissions of any regulated air contaminant will be less than or equal to **[do not change TPY provided]**:

| | Tons per year (TPY) |
|---|---|
| 1. Total Suspended Particulates | 95 |
| 2. Nitrogen Oxides ($NO_x$) | 95 |
| 3. Carbon Monoxide (CO) | 95 |
| 4. Volatile Orgamc Compounds (VOC) | 95 |
| 5. Sulfur Dioxide ($SO_2$) | 50 |
| 6. Any one (1) Hazardous Air Pollutant (HAP) | 8 |
| 7. Sum of all Hazardous Air Pollutants (HAPs) | 23 |

The standard operating schedule of this facility will be **during daylight hours only.**
The owner and/or operator of the Plant is:
**Roswell Ready Mix**
**4100 S. Lea**
**Roswell, NM 88203**
If you have any questions or comments about construction or operation of above facility, and want your comments to be made as a part of the permit review process, you must submit your comments in writing to the address below:

# APPENDIX I. AP-42 CHAPTER 13.2.4

## 13.2.4 Aggregate Handling And Storage Piles

### 13.2.4.1 General

Inherent in operations that use minerals in aggregate form is the maintenance of outdoor storage piles. Storage piles are usually left uncovered, partially because of the need for frequent material transfer into or out of storage.

Dust emissions occur at several points in the storage cycle, such as material loading onto the pile, disturbances by strong wind currents, and loadout from the pile. The movement of trucks and loading equipment in the storage pile area is also a substantial source of dust.

### 13.2.4.2 Emissions And Correction Parameters

The quantity of dust emissions from aggregate storage operations varies with the volume of aggregate passing through the storage cycle. Emissions also depend on 3 parameters of the condition of a particular storage pile: age of the pile, moisture content, and proportion of aggregate fines.

When freshly processed aggregate is loaded onto a storage pile, the potential for dust emissions is at a maximum. Fines are easily disaggregated and released to the atmosphere upon exposure to air currents, either from aggregate transfer itself or from high winds. As the aggregate pile weathers, however, potential for dust emissions is greatly reduced. Moisture causes aggregation and cementation of fines to the surfaces of larger particles. Any significant rainfall soaks the interior of the pile, and then the drying process is very slow.

Silt (particles equal to or less than 75 micrometers [μm] in diameter) content is determined by measuring the portion of dry aggregate material that passes through a 200-mesh screen, using ASTM-C-136 method.[1] Table 13.2.4-1 summarizes measured silt and moisture values for industrial aggregate materials.

Table 13.2.4-1. TYPICAL SILT AND MOISTURE CONTENTS OF MATERIALS AT VARIOUS INDUSTRIES[a]

| Industry | No. Of Facilities | Material | Silt Content (%) | | | Moisture Content (%) | | |
|---|---|---|---|---|---|---|---|---|
| | | | No. Of Samples | Range | Mean | No. Of Samples | Range | Mean |
| Iron and steel production | 9 | Pellet ore | 13 | 1.3 - 13 | 4.3 | 11 | 0.64 - 4.0 | 2.2 |

13.2.4.3 Predictive Emission Factor Equations

Total dust emissions from aggregate storage piles result from several distinct source activities within the storage cycle:

1. Loading of aggregate onto storage piles (batch or continuous drop operations).
2. Equipment traffic in storage area.
3. Wind erosion of pile surfaces and ground areas around piles.
4. Loadout of aggregate for shipment or for return to the process stream (batch or continuous drop operations).

Either adding aggregate material to a storage pile or removing it usually involves dropping the material onto a receiving surface. Truck dumping on the pile or loading out from the pile to a truck with a front-end loader are examples of batch drop operations. Adding material to the pile by a conveyor stacker is an example of a continuous drop operation.

The quantity of particulate emissions generated by either type of drop operation, per kilogram (kg) (ton) of material transferred, may be estimated, with a rating of A, using the following empirical expression:[11]

$$E = k(0.0016) \frac{\left(\frac{U}{2.2}\right)^{1.3}}{\left(\frac{M}{2}\right)^{1.4}} \text{ (kg/megagram [Mg])} \quad (1)$$

$$E = k(0.0032) \frac{\left(\frac{U}{5}\right)^{1.3}}{\left(\frac{M}{2}\right)^{1.4}} \text{ (pound [lb]/ton)}$$

where:

E = emission factor
k = particle size multiplier (dimensionless)
U = mean wind speed, meters per second (m/s) (miles per hour [mph])
M = material moisture content (%)

The particle size multiplier in the equation, k, varies with aerodynamic particle size range, as follows:

| Aerodynamic Particle Size Multiplier (k) For Equation 1 | | | | |
|---|---|---|---|---|
| < 30 µm | < 15 µm | < 10 µm | < 5 µm | < 2.5 µm |
| 0.74 | 0.48 | 0.35 | 0.20 | 0.053[a] |

[a] Multiplier for < 2.5 µm taken from Reference 14.

The equation retains the assigned quality rating if applied within the ranges of source conditions that were tested in developing the equation, as follows. Note that silt content is included, even though silt content does not appear as a correction parameter in the equation. While it is reasonable to expect that silt content and emission factors are interrelated, no significant correlation between the 2 was found during the derivation of the equation, probably because most tests with high silt contents were conducted under lower winds, and vice versa. It is recommended that estimates from the equation be reduced 1 quality rating level if the silt content used in a particular application falls outside the range given:

| Ranges Of Source Conditions For Equation 1 | | | |
|---|---|---|---|
| Silt Content (%) | Moisture Content (%) | Wind Speed | |
| | | m/s | mph |
| 0.44 - 19 | 0.25 - 4.8 | 0.6 - 6.7 | 1.3 - 15 |

To retain the quality rating of the equation when it is applied to a specific facility, reliable correction parameters must be determined for specific sources of interest. The field and laboratory procedures for aggregate sampling are given in Reference 3. In the event that site-specific values for

correction parameters cannot be obtained, the appropriate mean from Table 13.2.4-1 may be used, but the quality rating of the equation is reduced by 1 letter.

For emissions from equipment traffic (trucks, front-end loaders, dozers, etc.) traveling between or on piles, it is recommended that the equations for vehicle traffic on unpaved surfaces be used (see Section 13.2.2). For vehicle travel between storage piles, the silt value(s) for the areas among the piles (which may differ from the silt values for the stored materials) should be used.

Worst-case emissions from storage pile areas occur under dry, windy conditions. Worst-case emissions from materials-handling operations may be calculated by substituting into the equation appropriate values for aggregate material moisture content and for anticipated wind speeds during the worst case averaging period, usually 24 hours. The treatment of dry conditions for Section 13.2.2, vehicle traffic, "Unpaved Roads", follows the methodology described in that section centering on parameter p. A separate set of nonclimatic correction parameters and source extent values corresponding to higher than normal storage pile activity also may be justified for the worst-case averaging period.

### 13.2.4.4 Controls[12-13]

Watering and the use of chemical wetting agents are the principal means for control of aggregate storage pile emissions. Enclosure or covering of inactive piles to reduce wind erosion can also reduce emissions. Watering is useful mainly to reduce emissions from vehicle traffic in the storage pile area. Watering of the storage piles themselves typically has only a very temporary slight effect on total emissions. A much more effective technique is to apply chemical agents (such as surfactants) that permit more extensive wetting. Continuous chemical treating of material loaded onto piles, coupled with watering or treatment of roadways, can reduce total particulate emissions from aggregate storage operations by up to 90 percent.[12]

# APPENDIX J. PUBLIC NOTICE FOR GCP-5 PERMIT #9285

# NOTICE

**Roswell Ready Mix** announces its intent to apply to the New Mexico Environment Department for an air quality permit to construct a General Construction Permit, **GCP-5_XXXX (Concrete Batch Plant)**. The name of this facility is **Delaware Basin Concrete Plant**. The expected date of the submittal of our application for an air quality permit to the Air Quality Bureau is **6/18/2021.** This notice is a requirement according to New Mexico air quality regulations.

The exact location of the facility is **UTM Zone 13, UTM Easting 640185, UTM Northing 3566686**. The approximate location of this site is **20.5** miles **West** of **Jal, New Mexico**, in **Lea** county.
Air emissions of any regulated air contaminant will be less than or equal to **[do not change TPY provided]**:

| | Tons per year (TPY) |
|---|---|
| 1. Total Suspended Particulates | 95 |
| 2. Nitrogen Oxides ($NO_x$) | 95 |
| 3. Carbon Monoxide (CO) | 95 |
| 4. Volatile Organic Compounds (VOC) | 95 |
| 5. Sulfur Dioxide ($SO_2$) | 50 |
| 6. Any one (1) Hazardous Air Pollutant (HAP) | 8 |
| 7. Sum of all Hazardous Air Pollutants (HAPs) | 23 |

The standard operating schedule of this facility will be **during daylight hours only.**
The owner and/or operator of the Plant is:
**Roswell Ready Mix**
**4100 S. Lea**
**Roswell, NM 88203**
If you have any questions or comments about construction or operation of above facility, and want your comments to be made as a part of the permit review process, you must submit your comments in writing to the address below:

Permits Programs Manager
New Mexico Environment Department
Air Quality Bureau
525 Camino de los Marquez, Suite 1
Santa Fe, New Mexico, 87505
(505) 476-4300

Other comments and questions may be submitted verbally.
Please refer to the company name and site name, as used in this notice or send a copy of this notice along with your comments, since the Department may not have received the permit application at the time of this notice.
Este es un aviso de la Agencia de Calidad de Aire del Departamento de Medio Ambiente de Nuevo México, acerca de las emisiones producidas por un establecimiento en esta área. Si usted desea información en español, por favor de comunicarse con la oficina de Calidad de Aire al teléfono 505-476-5557.

**Notice of Non-Discrimination**

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non- discrimination programs, policies or procedures, you may contact: Kristine Pintado, Non-Discrimination Coordinator, New Mexico Environment Department, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Non-Discrimination Coordinator identified above or visit our website at https://www.env.nm.gov/NMED/EJ/index.html to learn how and where to file a complaint of discrimination.

# APPENDIX K. GCP-O&G PERMIT # 7899

**Acknowledgements Section - Leo Thorsness Facility**

**Construction Status** Existing Permitted (or NOI) Facility

☑ I acknowledge that a pre-application meeting is available to me upon request.

☑ For new registrations or modifications, a check for the registration fee will be sent to the Department for ten fee points for GCP-O&G or $500 for NOIs. We cannot begin processing your action until the full fee is received by the Department. You will receive an email when your action is assigned for review.

☑ There is an annual fee for GCP-O&G in addition to the registration fee: www.env.nm.gov/air-quality/permit-fees-2/ (No annual fee for NOIs. (Facilities qualifying as a 'small business' under 20.2.75.7.F NMAC qualify for reduced fees, provided that NMED has a Small Business Certification Form from your company on file. This form can be found at: www.env.nm.gov/aqb/sbap/Small_Business_Forms.html)

☑ There are required attachments in addition to inputting data in the program. I will include the required attachments.

**1.** Is the facility located in Bernalillo County, on tribal lands, or in a nonattainment area?
○ Yes ◉ No

**2.** Is the facility's SIC code 1311, 1321, 4619, 4612 or 4922? (Other SIC codes may be approved provided that all the equipment at the facility is allowed in the GCP-Oil & Gas Permit. Non-Oil and Gas NOIs should use the paper Universal Application.
◉ Yes ○ No

**GCP-O&G Acknowledgements and Applicability**

Do not use Portal for administrative changes identified in the GCP O&G Permit Condition C101.A. Please use the Permitting Administrative Multiform to submit these requests to the department by mail. www.env.nm.gov/air-quality/air-quality-permit-applications-forms-and-related-information/

☑ The emissions specified in this Registration Form will establish the emission limits in the GCP-Oil and Gas.

**1.** This is a GCP-Oil and Gas Registration Form for an existing facility currently operating under GCP-1 or GCP-4? (No fee required)
◉ No ○ Yes

**2.** Does the regulated equipment under this GCP-Oil and Gas Registration include any combination of Allowable Equipment listed in Table 104 of the GCP Oil & Gas Permit, and no others?
◉ Yes ○ No

**3.** Will the regulated equipment as specified in this GCP-Oil and Gas Registration emit less than the total emissions in Table 106 of the GCP-Oil and Gas permit?
◉ Yes ○ No

**4.** Does all equipment comply with the stack parameter requirements as established in the GCP-Oil and Gas Permit?
◉ Yes ○ No

**5.** Equipment shall be at least 100 meters (m) from any stack to terrain that is five (5) or more meters above the top of the stack. Will the equipment at the facility meet this terrain requirement?
◉ Yes ○ No

**6.** Is the facility at least 150 m from any source that emits over 25 tons/year of NOx? This is the distance between the two nearest stacks that emit NOx at each of the facilities. Not the facility boundaries or the center to center distances.
◉ Yes ○ No

**7.** Is the facility at least 3 miles from any Class I area? This is the distance from the nearest facility boundary to the nearest boundary of the Class I area.
◉ Yes ○ No

**For Department use only:**

# Electronic Permitting Application

**Use this application for NOI and GCP-Oil and Gas Permits.**

Use this application for: the initial application, modifications, revisions and when converting from another permit type. Please fill out all sections so that they have check marks and attach all required documents for review. Coordination with AQB is encouraged for first time users. Please use the Request NMED Support button if you would like to set up a walk through.

## Section 1 - Facility Information

### Section 1-A: Company Information - Leo Thorsness Facility

**Last modified by Ikard, Kristin on 10-APR-23.**

| | | | | | | |
|---|---|---|---|---|---|---|
| 1 | **Facility Name:** Leo Thorsness Facility | | | | AI # (if known): 38504 | Updating permit #: |
| a | SIC Code: 1311 - Crude petroleum and natural gas<br>NAICS Code: 21112 - Crude Petroleum Extraction<br>Facility Type: 146 - Oil & Gas  Secondary Facility Type: 272 - O&G-Production Facility | | | | Reset Selections | |

Add a New Regulated Source

[1] Unit numbers must correspond to unit numbers in the previous permit unless a complete cross reference table of all units in both permits is provided.

[2] Specify dates required to determine regulatory applicability. If only year or month is known use 01/01/yyyy or mm/01/yyyy.

[3] To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.

## Table 2C - Emissions Reduction Equipment

☐ **This Table was intentionally left blank.**

In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device regardless if the applicant takes credit for the reduction in emissions. **Also include reductions from process equipment in this table. Entering process equipment in this table is for data entry purposes only, the process vs control analysis will be used to determine process or control status for VRUs.** Only list control equipment for TAPs if the TAPs maximum uncontrolled emissions rate is over its respective threshold as listed in 20.2.72 NMAC, Subpart V, Tables A and B.

| Edit | Reduction Equipment Unit No. | Reduction Equipment Description | Date Installed (mm/dd/yyyy). | Reduced Pollutants | Reducing Emissions for Unit Numbers | Efficiency (% Reduction by Weight) | Method used to estimate reduction | Reduction Type | Complete |

Add Reduction Equipment for Unit [Select one] Add

How to complete the table: In the drop down, select regulated sources from Table 2A where emissions are reduced and click "Add." Then add reduced pollutants and associated reduction devices for each. If a pollutant has emissions reduced by more than one device please add a line for each device and label them as primary, secondary, tertiary. Click "Edit" to update reduced pollutants and devices for each regulated source.

Comments (4000 character maximum)

**List each reduction device and all sources they serve, e.g. FL-1: Oil tanks 1-4, loading, VRU downtime. FL-2: compressor and sales downtime. For NOIs, indicate the enforceability behind each device or clarify if it is voluntary and no credit is being claimed for the reduction, e.g., FL-1: Oil tanks 1-8 (OOOOa). FL-1: Loading (voluntary, no emissions reduction credit claimed.)**

ENG-2, ENG-5, ENG-6: NSCR; NOx, CO, VOC
GEN-1: NSCR; NOx, CO, VOC (EPA-certified so no control % shown)
FL-1 LP: OT-1 ¿ OT-6, PWT-1 ¿ PWT-6, PP-1, OLOAD-1; VOC
FL-1 HP: Stranded Gas; VOC
VRU: there is an electric VRU off the tanks but no control is shown

## *Table 2-D: Maximum Emissions* (under normal operating conditions)

**This Table was intentionally left blank because it would be identical to Table 2-E.**

Maximum Emissions are the emissions at maximum capacity and prior to (in the absence of) pollution control, emission-reducing process equipment, or any other emission reduction. Calculate the hourly emissions using the worst case hourly emissions for each pollutant. For each pollutant, calculate the annual emissions as if the facility were operating at maximum plant capacity without pollution controls for 8760 hours per year, unless otherwise approved by the Department. List Hazardous Air Pollutants (HAP) & Toxic Air Pollutants (TAPs) in Table 2-I. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41).

## Table 2-E: Requested Allowable Emissions

Unit & stack numbering must be consistent throughout the application package. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41). Facility totals are a summation of all the emissions entered for equipment in this table plus total tpy SSM emissions from Table 2F.

**GCP-O&G:** Combustion emissions from malfunction events are not allowed under this permit.

**NOI:** Malfunction emissions are not allowed under a Notice of Intent.

## Table 2-F: Startup, Shutdown, and Routine Maintenance (SSM) Emissions

☐ **This table is intentionally left blank as all SSM emissions at this facility do not require an increase in Requested Allowables greater than those listed in Table 2-E.**

All applications for facilities that have emissions during routine our predictable startup, shutdown or scheduled maintenance (SSM)2, including NOI applications, must include in this table the Maximum Emissions during routine or predictable startup, shutdown and scheduled maintenance (20.2.7 NMAC, 20.2.72.203.A.3 NMAC, 20.2.73.200.D.2 NMAC). Provide emissions calculations for all SSM emissions reported in this table. Refer to the guidance "Startup, Shutdown, Maintenance Emissions in Permits" (www.env.nm.gov/air-quality/permitting-section-procedures-and-guidance/) for more detailed instructions. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41).

## Table 2-I: Stack Exit and Fugitive Emission Rates for HAPs and TAPs

☐ **By marking this table as intentionally left blank, you certify that the Total and individual HAPs for this facility are less than 1 ton per year.**

Data may not be provided for subject items (SIs) that are not complete. Please edit the SI in Table 2-A before providing information here.

**GCPs:** Report the potential emission rate for each HAP from each HAP emitting emission unit listed in Table 2A. For each emission unit, HAPs shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41). Emissions less than 0.0001 lb/hr or 0.0001 tpy and emission units that do not emit HAPs shall be omitted from the table. Each facility-wide Individual HAP total and the facility-wide Total HAPs is the sum of all HAP sources entered in the Table. Use the HAP nomenclature as it appears in Section 112 (b) of the 1990 CAA. Include tank-flashing emission estimates of HAP in this table.

**NOIs:** Report the individual and/or Total HAPs for each piece of equipment in Table 2A, only if the facility total for that pollutant is greater than or equal to 1 tpy.

| Edit | Unit No. | Total HAPs | | Formaldehyde HAP | | Benzene HAP | | Toluene; (Methyl benzene) HAP | | Xylenes (total); (Xylol) HAP | | | | | | | | | | Complete |

# Leo Thorsness Facility - Process Flow Sheet

# GCP-Oil and Gas AQB ePermitting Portal Registration Form
# Section 1- (ePermitting Portal submittals)

☒ I understand that I must submit the hard copy check with the required Payment Form for all AQB ePermitting Portal submittals. The 30-day review period will not begin until the check is received. (Does not apply if you are converting from a GCP-1 or GCP-4.) Form available: www.env.nm.gov/air-quality/aqb-epermitting-portal/

☒ I will upload this form to submit via the Portal. I understand that certain pages may be deleted by following instructions on this form, to avoid repeating information I entered directly into the Portal or uploaded separately.

☒ Attach only the electronic copy of the permit with the Department response, do not mail a paper copy. (If box is not checked, a paper copy of the permit will be sent with your response letter.)

**Facility Name or Facility Type Change for Modifications**
Fill out this section if requesting a change to the facility name or facility type that appears in the ePermitting Portal. These items cannot be updated through the Portal and will be corrected as part of the review of your permit. Check the appropriate box(es) and provide complete information in the table.

☒ **Not applicable**

☐ 1. Changing facility name. (Punctuation and special characters not allowed. Use “No123” instead of #123)

☐ 2. Changing facility type.

| | | | |

# Section 3
## Registration Summary

---

**Registration Summary:** The purpose of this submittal is to replace one engine (C-2) and update with new gas and liquid analyses. The representative sample is from a geographically nearby well from the same producing formation (within 25 miles) and was collected at a higher pressure than this facility's tanks' upstream pressure. This permitted facility produces within +/- 3 degrees of the API gravity at the stock tanks compared to the representative sample.

**Written description of the routine operations of the facility:** The full well stream enters the facility and passes through inlet separation where liquids and gas are separated by mechanical processes. Remaining fluids are piped through additional separation (HT-1, HT-2) where separated oil is directed to storage tanks (OT-1 - OT-6). The natural gas from the separators and heater treaters is sent to a series of compressors (ENG-2, ENG-5, ENG-6) and then to sales via pipeline. Produced water from the heater treaters is directed to onsite storage tanks (PWT-1 - PWT-6) until they can be transported offsite. Oil and produced water are loaded and trucked offsite (OLOAD-1, PWLOAD-1) (HR). Vapors produced in the storage tanks are directed to the low pressure flare (FL-1 LP) for combustion. Stranded gas from the separators and heater treaters is controlled by a high pressure flare (FL-1 HP). One generator provides power to the facility (GEN-1). Pneumatic pumps (PP-1) on site are controlled by a standard flare (FL-1 LP). There are also emissions from fugitives (FUG).

**Routine or predictable emissions during Startup, Shutdown and Maintenance (SSM):** 10 TPY VOC have been included for SSM emissions in this registration.

Overview: The facility has included 10 TPY SSM emissions.

☐ No SSM emissions are expected from routine operations.

☒ Applicant requests up to 10 tpy of VOC SSM emissions.

☒ No other activities (e.g. VRU downtime, stranded gas etc.) are considered SSM activities.

☐ Applicant requests site specific VOC SSM and those emission calculations are included in Section 5 and entered in Table 2F

Provide an overview:

☐ Applicant requests site specific combustion SSM and those emission calculations are included in Section 5 and entered in Table 2F.

Provide an overview:

**Malfunction Emissions (M):** Provide an overview of how malfunction emissions are accounted for in this Registration. The permit does not authorize combustion emissions for malfunctions. The permit does not authorize emissions from SSM and Malfunction to be combined as 10 TPY VOC. However, they may be permitted separately. In the allowable emissions table in Section 2, these two events are separate line items and must be kept separate.

Overview: 10 TPY VOC have been included for malfunction emissions in this registration.

☐ No Malfunction emissions are requested for this permit.

**Allowable Operations:** Check the appropriate box below:

☒ Facility operates continuously (8760 hours per year)

☐ The following regulated equipment will operate less than 8760 hours per year. Add additional rows as necessary. These units are subject to Condition A108.C of the Permit.

**Table A – Equipment Operating Less Than 8760 hours per year**

**☐ Table is blank because I completed this information in the ePermitting Portal for each piece of equipment.**

| Unit # | Requested Annual Operating Hours |
|---|---|
| | |

**Verification of Compliance with Stack Parameter Requirements:**

www.env.nm.gov/air-quality/air-quality-oil-and-gas-gcp-application-forms/

**Portal Submittals:** Applications submitted via the ePermitting Portal are required to use the Oil and Gas Stack Calculator.
**Hardcopy submittals** may voluntarily use the stack calculator.

Click "Print" in the stack calculator and attach the generated PDF results. If the stack calculator was completed and results attached, complete the information in this box and then go to Section 4. You may delete the items below this box until Section 4.

Check the box for each type of equipment at this facility & represented in the attached stack calculator results:
☒ Engine(s)
☐ Turbine(s)
☒ Flares(s)
☐ Enclosed Combustion Device (s)
☒ Heater(s)
☐ Reboiler(s)

☒ I attached the results from the current version of the Oil and Gas Stack Calculator from the AQB web page and the results indicate compliance with the stack parameters for all of my engines, turbines, flares, enclosed combustion devices, heaters or reboilers.

1. Does the flare gas contain 6% $H_2S$ or less by volume (pre-combustion)?

☒ Yes (done with section 3)
☐ No.

2. Explain in detail how assist gas will be added to reduce the gas composition to 6%$H_2S$ or less by volume:

# Section 5

## Emissions Calculation Forms

The Department has developed the Air Emissions Calculation Tool (AECT), which is required to be used in the GCP-Oil and Gas Registration. If the AECT, for a piece of equipment is under development, provide alternate calculations. The AECT must be submitted as a "live" interactive PDF. **Do not include alternative calculations unless there is an issue being resolved with the AECT. This will delay review of the application.** The AECT and this Registration Form may be updated as needed.

**Tank Emissions Calculations**: Provide the method used to estimate tank-flashing emissions, the input and output summary from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis. If Pro-Max or Hysis is used, all relevant input parameters shall be reported, including separator pressure, gas throughput, and all other relevant parameters necessary for flashing calculation. **The inputs must match the gas analyses information submitted. Inputs that don't match may be grounds for denial of the application submittal.**

**SSM Calculations**: In this Section, provide emissions calculations for Startup, Shutdown, and Routine Maintenance (SSM) emissions listed in the Table 2, and the rational for why the others are reported as zero (or left blank).

**Control Devices:** Report all control devices and list each pollutant controlled by the control device. Indicate in this section if you chose to not take credit for the reduction in emission rates. Only uncontrolled emission rates can be considered to determine applicability unless the state or federal acts require the control. This information is necessary to determine if federally enforceable conditions are necessary for the control device, and if the control device produces its own regulated pollutants or increases emission rates of other pollutants.

**Calculation Details:** The AECT is required for all emission calculations. If the AECT is not functioning, alternative calculations may be submitted only for the portions of the AECT with issues being resolved. Utilize this section to explain in detail, on an equipment-by-equipment basis, why alternative calculations are necessary.

**Explain here:**

**Equipment Forms Submitted in this Section (add additional rows as necessary):**

| Equipment Type | Quantity | Check Box to Indicate Units that are Controlled | Enter Control Device Type and Pollutant Controlled |
|---|---|---|---|
| **Engine** | **3** | ☒ | **NSCR: NOx, CO and VOC** |
| **Turbine** | | ☐ | |
| **Tanks** | **12** | ☒ | **FL-1 LP: VOC** |
| **Generator** | **1** | ☒ | **NSCR: NOx, CO and VOC (EPA-Certified)** |
| **VRU** | | ☐ | **One VRU off the tanks but not shown as control device** |
| **VRT** | | ☐ | |
| **ULPS** | | ☐ | |
| **Glycol Dehydrator** | | ☐ | |
| **Flare** | **1** | ☐ | **FL-1 LP: OT-1 – OT-6, PWT-1 – PWT-6, PP-1, OLOAD-1; VOC**<br>**FL-1 HP: Stranded Gas; VOC** |
| **Amine Unit** | | ☐ | |
| **Cryogenic Unit** | | ☐ | |
| **Fugitive Emissions** | **1** | ☐ | |

| | | | |
|---|---|---|---|
| **Heater** | **2** | ☐ | |
| **Truck Loading** | **2** | ☐ | **FL-1 LP: OLOAD-1; VOC** |
| **Enclosed Combustion Device (ECD)** | | ☐ | |
| **Thermal Oxidizer (TO)** | | ☐ | |
| **Pneumatic Pumps** | **6** | ☐ | **FL-1 LP: PP-1 VOC** |
| **Other** | | ☐ | |

**For each scenario below, if there are more than one emissions unit, control device, or gas combustion scenario. Please copy and paste each applicable section and label the unit number(s) if the scenarios vary.**

**Vapor Recovery Tower, Ultra Low-Pressure Separator, or Flash Tower Located Upstream of Storage Vessels:** If the facility contains one of the following units located upstream of the storage vessels and is used to flash and capture flashing emissions, check the appropriate box.
Unit number:
☐ Vapor Recovery Tower and VRU Compressor
☐ ULPS and VRU Compressor
☐ Flash Tower and VRU Compressor

**Vapor Recovery Unit (VRU) located upstream of Storage Vessels:** Check the box below if the facility is using a VRU to capture flashing emissions prior to any storage vessels to limit the PTE of the storage vessels to below applicability thresholds of NSPS OOOO or NSPS OOOOa. A process vs control determination should be prepared for this type of VRU application.
Unit number:
☐ VRU capturing emissions prior to any storage vessel and routing directly to the sales pipeline

**Vapor Recovery Unit (VRU) attached to Storage Vessels:** Check the box below if this facility is using a VRU to reduce storage vessel emissions to limit the PTE to below NSPS OOOO or NSPS OOOOa applicability thresholds:
Unit number:
☐ VRU controlling Storage Vessel emissions and the facility is subject to the requirements under NSPS OOOO, 40 CFR 60.5411
☐ VRU controlling Storage Vessel emissions and the facility is subject to the requirements under NSPS OOOOa, 40 CFR 60.5411a

**Gas Combustion Scenarios:** Read through the scenarios below and check the boxes next to any appropriate facility operating scenarios. Flares shall assume a destruction efficiency of 95%, unless the facility is subject to requirements for flares under 40 CFR 60.18, or a higher destruction efficiency (up to 98%) is supported by a manufacturer specification sheet (MSS) for that unit. If so, include the MSS.

A flare, vapor combustion unit (VCU), enclosed combustion device (ECD), thermal oxidizer (TO):
Unit number: FL-1 LP controls tanks and oil loading, FL-1 HP controls stranded gas
☒ Controls storage vessels in accordance with 40 CFR 60, Subpart OOOO or OOOOa. **OT-1 – OT-6**
☒ Provides a federally enforceable control for the storage vessels to limit the PTE to below applicability thresholds of 40 CFR 60, Subpart OOOO or OOOOa. **PWT-1 – PWT-6**
☐ Controls the glycol dehydrator
☐ Controls the amine unit
☒ Controls truck loading
☐ Operates only during maintenance events, such as VRU downtime, check one below:
  ☐ The emissions during VRU downtime are represented as uncontrolled VOC emissions from the compressor
  ☐ The combustion emissions during VRU downtime are represented as controlled emissions from the combustion device

☐ Controls the facility during plant turnaround

**Amine Unit:** Provide the following information for each amine unit.

| | |
|---|---|
| Design Capacity in MMscf/day | |
| Rich Amine Flowrate in gal/min | |
| Lean Amine Flowrate in gal/min | |
| Mole Loading $H_2S$ | |
| Sour Gas Input in MMscf/day | |

**Glycol Dehydration Unit(s):** Provide the following information for each glycol dehydration unit:
Please include an extended gas analysis in Section 6 of this application.

| **Unit #** | **Glycol Pump Circulation Rate** |
|---|---|
| | |

**Voluntary Monitoring in Accordance with §40 CFR 60.5416(a):** Check the box(s) to implement a program that meets the requirements of 40 CFR 60.5416(a). This monitoring program will be conducted in lieu of the monitoring requirements established in the GCP-Oil and Gas for individual equipment. Ceasing to implement this alternative monitoring must be reported in an updated Registration Form to the Department.

☒ Condition A205.B Control Device Options, Requirements, and Inspections for Tanks
☒ Condition A206.B Truck Loading Control Device Inspection
☒ Condition A206.C Vapor Balancing During Truck Loading
☐ Condition A209.A Vapor Recovery Unit or Department-approved Equivalent
☐ Condition A210.B Amine Unit Control Device Inspection

**Fugitive $H_2S$ Screening Threshold and Monitoring in accordance with Condition A212:** Check the box that applies.

☒ Condition A212.A does not apply because the facility is below the fugitive $H_2S$ screening threshold in Condition A212, or

☐ Condition A212.A applies. Because the facility is above the fugitive $H_2S$ screening threshold in Condition A212, or the facility is voluntarily complying with Condition A212.A, and Condition A212.A applies

# Section 6

## Information Used to Determine Emissions

Check the box for each type of information submitted. This documentation is required, if applicable to the facility.

**Failure to include applicable supporting documentation may result in application denial.**

☒ Specifications for control equipment, including control efficiency specifications and sufficient engineering data for verification of control equipment operation, including design drawings, test reports, and design parameters that affect normal operation.

☒ Engine or Generator Manufacturer specifications

☒ Catalyst Manufacturer specifications (If a catalyst is being utilized to reduce emissions, the catalyst manufacturer emission factors must be used in all emission calculations. A 25% safety factor may be applied to each pollutant.

☒ NSPS JJJJ emission factors **may not** be utilized in lieu of catalyst manufacture specifications when a catalyst is installed, and the catalysts manufacturer achieves higher control efficiency.

☒ Flare Manufacturer specifications

☒ Oil/Liquid Analysis: This data is required to match the inputs in all applicable emission calculations. For facilities that have not been constructed and a representative analysis is used it cannot be older than 1 year. For existing facilities, the gas analyses required by Condition A201.A (must be 1 year old or less).

☐ Gas Analysis (must be 1 year old or less) This data is required to match the inputs in all applicable emission calculations.

☒ Extended Gas Analysis (must be 1 year old or less) This data is required to match the inputs in all applicable emission calculations.

☒ If requesting to use a representative gas sample, include a discussion of why the sample is representative for this facility and an explanation of how it is representative (e.g., same reservoir, same similar API gravity, similar composition).

☐ If test data are used, to support emissions calculations or to establish allowable emission limits, include a copy of the complete test report. If the test data are for an emissions unit other than the one being permitted, the emission units must be identical. Test data may not be used if any difference in operating conditions of the unit being permitted and the unit represented in the test report significantly effect emission rates.

☐ Fuel specifications sheet.

☐ If computer models are used to estimate emissions, include an input summary and a detailed report, and a disk containing the input file used to run the model.

☒ For tank-flashing emissions, include a discussion of the method used to estimate tank-flashing emissions, accuracy of the model, the **input and output** summary from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis.

**Representative Gas Analysis Justification:**

Representative sample is from a geographically nearby well, from the same producing formation (within 25 miles) and was collected at a higher pressure than the permitted tanks' upstream pressure. The permitted facility will also produce within +/- 3 degrees of API gravity at the stock tanks compared to the representative sample.

Representative sample analyses are input in the process simulation software, i.e. ProMax, with conservative process flow conditions for flash calculations at the stock tanks. The resulting pounds of VOC per barrel of production at the tanks are used to calculate emission from both oil and water tanks.

# Section 8A

## Applicable State & Federal Regulations

---

**Provide a discussion demonstrating compliance with each applicable state & federal regulation**. All input cells should be filled in, even if the response is 'No' or 'N/A'.

In the "Justification" column, identify the criteria that are critical to the applicability determination, numbering each. For each unit listed in the "Applies to Unit No(s)" column, after each listed unit, include the lowest level citation of the applicable regulation. For each unit, list the information necessary to verify the applicability of the regulation, including date of manufacture, date of construction, size (hp), and combustion type. Doing so will provide the applicability criteria for each unit.

---

### Applicable State Regulations:

| State Regulation Citation | Title | Federally Enforceable | Overview of Regulation | Unit(s) or Facility | Applies? (Yes or No) | **Justification:** Identify the applicability criteria, numbering each (i.e. 1. Post 7/23/84, 2. 75 $m^3$, 3. VOL) |
|---|---|---|---|---|---|---|
| 20.2.1 NMAC | General Provisions | Yes | General Provisions apply to Notice of Intent, Construction, and Title V permit applications. | Facility | Yes | General provisions apply to this facility. |
| 20.2.3 NMAC | Ambient Air Quality Standards NMAAQS | Yes | 20.2.3 NMAC is a State Implementation Plan (SIP) approved regulation that limits the maximum allowable concentration of Sulfur Compounds, Carbon Monoxide, and Nitrogen Dioxide. | Facility | Yes | 20 NMAC 2.3 specifies maximum allowable concentrations of various regulated air pollutants in the atmosphere. This application includes a demonstration of meeting the NAAQS requirements specified in 20 NMAC 2.3. This facility meets the requirements of this regulation. |
| 20.2.7 NMAC | Excess Emissions | Yes | If your entire facility or individual pieces of equipment are subject to emissions limits in a permit or numerical emissions standards in a federal or state regulation, this applies. | Facility | Yes | Applies to this facility as it operates under this state permit and federal rules. |
| 20.2.38 NMAC | Hydrocarbon Storage Facility | No | Use the regulation link then cut & paste applicable sections.<br>20.2.38 NMAC does **not** establish practically enforceable limits that can be used for PTE or PER calculations. | OT-1-6 | Yes | **20.2.38.109 –** all tank vapors are controlled by a closed vent system and flare.<br>**20.2.38.110 –** tanks are not located within municipality.<br>**20.2.38.111 –** tanks are not located within 5 miles of a municipality with a population greater than 20,000.<br>**20.2.38.112 -** all tank vapors are controlled by a closed vent system and flare.<br>**20.2.38.113 –** tanks are not located within 5 miles of a municipality with a |

| 20.2.78 NMAC | Emission Standards for HAPS | Yes | This facility emits hazardous air pollutants which are subject to the requirements of 40 CFR Part 61, as amended on the date of certification. | N/A | No | N/A |
| 20.2.82 NMAC | MACT Standards for source categories of HAPS | Yes | This regulation applies to all sources emitting hazardous air pollutants, which are subject to the requirements of 40 CFR Part 63, as amended on the date of certification. | ENG-2, ENG-5, ENG-6, GEN-1 | Yes | The engines and generator are subject to MACT ZZZZ and is therefore subject to 20.2.82.8. |

## Applicable Federal Regulations (This is not an exhaustive list; add applicable regulations such as NSPS GG and KKKK):

| Federal Regulation Citation | Title | Overview of Regulation | Units(s) or Facility | Applies? (Yes or No) | **Justification:** Identify the applicability criteria, numbering each (i.e. 1. Post 7/23/84, 2. 75 m3, 3. VOL) |
|---|---|---|---|---|---|
| 40 CFR 50 | National Primary and Secondary Ambient Air Quality Standards (NAAQS) | Applicable requirement per GCP-O&G Condition A103. Any national ambient air quality standard. | Facility | Yes | Facility complies with NAAQS standards by operating under a SIP approved state permit. |
| 40 CFR 60, Subpart A | General Provisions | Applies if any other NSPS subpart applies. | ENG-2, ENG-5, ENG-6, GEN-1, FUG-1, OT-1-6, PP-1 | Yes | The units listed are subject to NSPS standards and Subpart A applies. |
| 40 CFR 60, Subpart OOOO | Standards of Performance for Crude Oil and Natural Gas Production, Transmission and Distribution for which Construction, Modification or Reconstruction Commenced After August 23, 2011, and on or before September 18, 2015 | If there is a standard or other requirement, then the facility is an "affected facility." Currently there are standards for: gas wells (60.5375); centrifugal compressors (60.5380); reciprocating compressors (60.5385): controllers (60.5390); storage vessels (60.5395); equipment leaks (60.5400); sweetening units (60.5405).<br><br>**If standards apply, list the unit number(s) and regulatory citation of the standard that applies to that unit (e.g. Centrifugal Compressors 1a-3a are subject to the standards at** | N/A | No | Facility was constructed after September 18, 2015; therefore, this subpart does not apply. |

| Federal Regulation Citation | Title | Overview of Regulation | Units(s) or Facility | Applies? (Yes or No) | **Justification:** Identify the applicability criteria, numbering each (i.e. 1. Post 7/23/84, 2. 75 m3, 3. VOL) |
|---|---|---|---|---|---|
| | | **60.5380(a)(1) and (2) since we use a control device to reduce emissions)** | | | |
| 40 CFR 60, Subpart OOOOa | Standards of Performance for Crude Oil and Natural Gas Facilities for which Construction, Modification or Reconstruction Commenced After September 18, 2015 | If there is a standard or other requirement, then the facility is an "affected facility." Currently there are standards for: gas wells (60.5375a); centrifugal compressors (60.5380a); reciprocating compressors (60.5385a): controllers (60.5390a); storage vessels (60.5395a); fugitive emissions at well sites and compressor stations (60.5397a); equipment leaks at gas plants (60.5400a); sweetening units (60.5405a). | FUG-1, OT-1-6, PP-1 | Yes | The rule applies to "affected" facilities that are constructed, modified, or reconstructed after September 18, 2015: storage vessels (60.5395a); fugitive emissions (60.5397a); reciprocating compressors (60.5385a) and pneumatic pumps.<br><br>Matador will comply with the applicable control requirements under 60.5395a(b). Fugitive equipment components are subject to LDAR requirements. Matador will conduct routine fugitive leak monitoring using optical gas imaging (OGI) or EPA Method 21.<br><br>The oil tanks at this well site are subject to §60.5395a based date of construction and VOC emissions during initial production.<br><br>The pneumatic pumps at this well site are subject to §60.5393a. The pumps reduce emissions by sending natural gas to FL-1 LP. |
| 40 CFR 60, Subpart IIII | Standards of performance for Stationary Compression Ignition Internal Combustion Engines | See 40 CFR 60.4200(a) 1 through 4 to determine applicable category and state engine size, fuel type, and date of manufacture. | N/A | No | No compression ignition engines are located on site; therefore, this subpart does not apply. |
| 40 CFR 60, Subpart JJJJ | Standards of Performance for Stationary Spark Ignition Internal Combustion Engines | See 40 CFR 60.4230(a), 1 through 5 to determine applicable category and state engine size, fuel type, and date of manufacture. | ENG-2, ENG-5, ENG-6, GEN-1 | Yes | The engine is subject to JJJJ based on engine size and manufacture date.<br><br>40 CFR 60.4230(a)(4)(iii): ENG-2, ENG-5, ENG-6, and GEN-1 are "new" engines (manufacture date after July 1, 2008) with a horsepower less than 500. |
| 40 CFR 63, Subpart A | General Provisions | Applies if any other subpart applies. | ENG-2, ENG-5, ENG-6, GEN-1 | Yes | The engine is subject to the work practice standards of NESHAP Subpart ZZZZ with no requirements. |

| Federal Regulation Citation | Title | Overview of Regulation | Units(s) or Facility | Applies? (Yes or No) | **Justification:** Identify the applicability criteria, numbering each (i.e. 1. Post 7/23/84, 2. 75 m3, 3. VOL) |
|---|---|---|---|---|---|
| 40 CFR 63, Subpart HH | NESHAP for Glycol Dehydrators | See 40 CFR 63, Subpart HH | N/A | No | No dehydration units are located on site; therefore, this subpart does not apply. |
| 40 CFR 63, Subpart ZZZZ | NESHAP for Stationary Reciprocating Internal Combustion Engines (**RICE MACT**) | Facilities are subject to this subpart if they own or operate a stationary RICE, except if the stationary RICE is being tested at a stationary RICE test cell/stand. | ENG-2, ENG-5, ENG-6, GEN-1 | Yes | 40 CFR 63.6589(c): The engine is subject as an area source of HAP emissions.<br><br>40 CFR 63.6590(c)(1): The engines and generator will comply with ZZZZ by complying with 40 CFR 60 Subpart JJJJ. |

# Section 8B
# Compliance Test History and Disclosure Form

---

To evaluate the requirement for compliance tests, you must submit a compliance test history. The table below provides an example.

---

## Compliance Test History Table

| Unit No. | Test Description | Test Date |
|---|---|---|
| N/A | N/A | N/A |
| | | |

# Air Permit Application
# Compliance History Disclosure Form

Pursuant to Subsection 74-2-7(S) of the New Mexico Air Quality Control Act ("AQCA"), NMSA §§ 74-2-1 to -17, the New Mexico Environment Department ("Department") may deny any permit application or revoke any permit issued pursuant to the AQCA if, within ten years immediately preceding the date of submission of the permit application, the applicant met any one of the criteria outlined below. In order for the Department to deem an air permit application administratively complete or issue an air permit for those permits without an administrative completeness determination process, the applicant must complete this Compliance History Disclosure Form as specified in Subsection 74-2-7(P). An existing permit holder (permit issued prior to June 18, 2021) shall provide this Compliance History Disclosure Form to the Department upon request.

| **Permittee/Applicant Company Name** | | **Expected Application Submittal Date** |
|---|---|---|
| Matador Production Company | | April 2023 |
| **Permittee/Company Contact** | **Phone** | **Email** |
| Kha Mach | 972-371-5200 | kha.mach@matadorresources.com |

| | **Within the 10 years preceding the expected date of submittal of the application, has the permittee or applicant:** | |
|---|---|---|
| 1 | Knowingly misrepresented a material fact in an application for a permit? | ☐ Yes ☒ No |
| 2 | Refused to disclose information required by the provisions of the New Mexico Air Quality Control Act? | ☐ Yes ☒ No |
| 3 | Been convicted of a felony related to environmental crime in any court of any state or the United States? | ☐ Yes ☒ No |
| 4 | Been convicted of a crime defined by state or federal statute as involving or being in restraint of trade, price fixing, bribery, or fraud in any court of any state or the United States? | ☐ Yes ☒ No |
| 5a | Constructed or operated any facility for which a permit was sought, including the current facility, without the required air quality permit(s) under 20.2.70 NMAC, 20.2.72 NMAC, 20.2.74 NMAC, 20.2.79 NMAC, or 20.2.84 NMAC? | ☒ Yes ☐ No |
| 5b | If "No" to question 5a, go to question 6.<br>If "Yes" to question 5a, state whether each facility that was constructed or operated without the required air quality permit met at least one of the following exceptions:<br><br>a. The unpermitted facility was discovered after acquisition during a timely environmental audit that was authorized by the Department; or<br><br>b. The operator of the facility estimated that the facility's emissions would not require an air permit, **and** the operator applied for an air permit within 30 calendar days of discovering that an air permit was required for the facility. | ☐ Yes ☒ No |
| 6 | Had any permit revoked or permanently suspended for cause under the environmental laws of any state or the United States? | ☐ Yes ☒ No |
| 7 | For each "yes" answer, please provide an explanation and documentation.<br><br>As NMED is aware, Matador is currently in an enforcement action and settlement negotiation with NMED and U.S. EPA relating to alleged violations of the Clean Air Act and New Mexico Air Quality Control Act, including alleged permit violations. In the course of that action, the company has disclosed information about its historic permitting and operations at New Mexico facilities. | |

| | |
|---|---|
| | Since NMED and U.S. EPA's inspection of the company's facilities in 2019, Matador has invested significant resources to re-evaluate and, as needed, update its air permits. As a result of those efforts, Matador is not aware of current noncompliance with NMED permit regulations. Furthermore, as an additional measure, in the draft consent decree under negotiation with NMED and U.S. EPA, the company would systematically evaluate its permitting of facilities in New Mexico.<br><br>By providing the information requested by this form, Matador does not waive, and expressly reserves, all objections, rights, and defenses. |

# APPENDIX L. NOI # 9357

**Construction Status** Existing Permitted (or NOI) Facility

☑ I acknowledge that a pre-application meeting is available to me upon request.

☑ For new registrations or modifications, a payment for the registration fee will be submitted to the Department for ten fee points for GCP-O&G or $500 for NOIs. We cannot begin processing your action until the full fee is received by the Department in the form of a check or an online ePayment. You will receive an automated email when your action is assigned for review.

☑ There is an annual fee for GCP-O&G in addition to the registration fee: www.env.nm.gov/air-quality/permit-fees-2/ (No annual fee for NOIs. (Facilities qualifying as a 'small business' under 20.2.75.7.F NMAC qualify for reduced fees, provided that NMED has a Small Business Certification Form from your company on file. This form can be found at: www.env.nm.gov/aqb/sbap/Small_Business_Forms.html)

☑ There are required attachments in addition to inputting data in the program. I will include the required attachments.

Is the facility located in Bernalillo County, on tribal lands, or in a nonattainment area?
○ Yes ◉ No

Is the facility's SIC code 1311, 1321, 4619, 4612 or 4922? (Other SIC codes may be approved provided that all the equipment at the facility is allowed in the GCP-Oil & Gas Permit. Non-Oil and Gas NOIs should use the paper Universal Application.
◉ Yes ○ No

Add a New Regulated Source

[1] Unit numbers must correspond to unit numbers in the previous permit unless a complete cross reference table of all units in both permits is provided.

[2] Specify dates required to determine regulatory applicability. If only year or month is known use 01/01/yyyy or mm/01/yyyy.

[3] To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.

## Table 2C - Emissions Reduction Equipment

☐ **This Table was intentionally left blank.**

In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device regardless if the applicant takes credit for the reduction in emissions. **Also include reductions from process equipment in this table. Entering process equipment in this table is for data entry purposes only, the process vs control analysis will be used to determine process or control status for VRUs.** Only list control equipment for TAPs if the TAPs maximum uncontrolled emissions rate is over its respective threshold as listed in 20.2.72 NMAC, Subpart V, Tables A and B.

| Edit | Reduction Equipment Unit No. | Reduction Equipment Description | Date Installed (mm/dd/yyyy). | Reduced Pollutants | Reducing Emissions for Unit Numbers | Efficiency (% Reduction by Weight) | Method used to estimate reduction | Reduction Type | Complete |

Add Reduction Equipment for Unit [Select one] Add

How to complete the table: In the drop down, select regulated sources from Table 2A where emissions are reduced and click "Add." Then add reduced pollutants and associated reduction devices for each. If a pollutant has emissions reduced by more than one device please add a line for each device and label them as primary, secondary, tertiary. Click "Edit" to update reduced pollutants and devices for each regulated source.

Comments (4000 character maximum)

**List each reduction device and all sources they serve, e.g. FL-1: Oil tanks 1-4, loading, VRU downtime. FL-2: compressor and sales downtime. For NOIs, indicate the enforceability behind each device or clarify if it is voluntary and no credit is being claimed for the reduction, e.g., FL-1: Oil tanks 1-8 (OOOOa). FL-1: Loading (voluntary, no emissions reduction credit claimed.)**

CAT-1: LPC-1 (JJJJ, ZZZZ)
ECD-1: Oil Tanks 1-3 (OOOOa); Produced Water Tanks 1-3 (voluntary, no emission reduction credit claimed)
FL-1: stranded gas during pipeline downtime (voluntary, no emission reduction credit claimed)

## *Table 2-D: Maximum Emissions* (under normal operating conditions)

**This Table was intentionally left blank because it would be identical to Table 2-E.**

Maximum Emissions are the emissions at maximum capacity and prior to (in the absence of) pollution control, emission-reducing process equipment, or any other emission reduction. Calculate the hourly emissions using the worst case hourly emissions for each pollutant. For each pollutant, calculate the annual emissions as if the facility were operating at maximum plant capacity without pollution controls for 8760 hours per year, unless otherwise approved by the Department. List Hazardous Air Pollutants (HAP) & Toxic Air Pollutants (TAPs) in Table 2-I. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41).

**[1] Condensable Particulate Matter: Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source.**

**Comments** (2000 character maximum)

## Table 2-E: Requested Allowable Emissions

Unit & stack numbering must be consistent throughout the application package. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41). Facility totals are a summation of all the emissions entered for equipment in this table plus total tpy SSM emissions from Table 2F.
**GCP-O&G:** Combustion emissions from malfunction events are not allowed under this permit.

**NOI:** Malfunction emissions are not allowed under a Notice of Intent.

## Table 2-F: Startup, Shutdown, and Routine Maintenance (SSM) Emissions

☐ **This table is intentionally left blank as all SSM emissions at this facility do not require an increase in Requested Allowables greater than those listed in Table 2-E.**

All applications for facilities that have emissions during routine our predictable startup, shutdown or scheduled maintenance (SSM)2, including NOI applications, must include in this table the Maximum Emissions during routine or predictable startup, shutdown and scheduled maintenance (20.2.7 NMAC, 20.2.72.203.A.3 NMAC, 20.2.73.200.D.2 NMAC). Provide emissions calculations for all SSM emissions reported in this table. Refer to the guidance "Startup, Shutdown, Maintenance Emissions in Permits" (www.env.nm.gov/air-quality/permitting-section-procedures-and-guidance/) for more detailed instructions. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41).

## Table 2-I: Stack Exit and Fugitive Emission Rates for HAPs and TAPs

☐ **By marking this table as intentionally left blank, you certify that the Total and individual HAPs for this facility are less than 1 ton per year.**

Data may not be provided for subject items (SIs) that are not complete. Please edit the SI in Table 2-A before providing information here.

**GCPs:** Report the potential emission rate for each HAP from each HAP emitting emission unit listed in Table 2A. For each emission unit, HAPs shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41). Emissions less than 0.0001 lb/hr or 0.0001 tpy and emission units that do not emit HAPs shall be omitted from the table. Each facility-wide Individual HAP total and the facility-wide Total HAPs is the sum of all HAP sources entered in the Table. Use the HAP nomenclature as it appears in Section 112 (b) of the 1990 CAA. Include tank-flashing emission estimates of HAP in this table.

**NOIs:** Report the individual and/or Total HAPs for each piece of equipment in Table 2A, only if the facility total for that pollutant is greater than or equal to 1 tpy.

| Edit | Unit No. | Total HAPs | | Benzene HAP | | Hexane HAP | | Toluene; (Methyl benzene) HAP | | | | | | | | | | | | | | | | | | | | Complete |

**AQB ePermitting Portal**

# Abbreviated Application (Notice of Intent)

☒ 1. I understand that I must submit the hard copy check and required Payment Information Form for all AQB ePermitting Portal Submittals before it will be assigned, and the 30-day review period begins.

☒ 2. I understand the AQB ePermitting Portal is a new program and I will use the Request NMED Support function in the Portal to: request help, report issues (bugs), and to provide my constructive feedback for improving the Portal.

# Section 1

## Facility Name or Facility Type Change for Modifications

Fill out this section if requesting a change to the facility name or facility type that appears in the ePermitting Portal. These items cannot be updated through the Portal and will be corrected as part of the review of your permit.

Check the appropriate box(es) and provide complete information in the table.

☒ 1. Changing facility name. (Punctuation and special characters not allowed. Use “No123” instead of #123)
☐ 2. Changing facility type.

[1] Unit numbers must correspond to unit numbers in the previous permit unless a complete cross reference table of all units in both permits is provided.

[2] Specify dates required to determine regulatory applicability. If only year or month is known use 01/01/yyyy or mm/01/yyyy.

[3] To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.

## Table 2C - Emissions Reduction Equipment

☐ **This Table was intentionally left blank.**

In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device regardless if the applicant takes credit for the reduction in emissions. **Also include reductions from process equipment in this table. Entering process equipment in this table is for data entry purposes only, the process vs control analysis will be used to determine process or control status for VRUs.** Only list control equipment for TAPs if the TAPs maximum uncontrolled emissions rate is over its respective threshold as listed in 20.2.72 NMAC, Subpart V, Tables A and B.

| Reduction Equipment Unit No. | Reduction Equipment Description | Date Installed (mm/dd/yyyy). | Reduced Pollutants | Reducing Emissions for Unit Numbers | Efficiency (% Reduction by Weight) | Method used to estimate reduction | Reduction Type |
|---|---|---|---|---|---|---|---|
| CAT-1 | NSCR (Non-Selective Catalytic Reduction) | | Carbon Monoxide | LPC-1_4072 | 81 | Design calculation | PRIMARY |

| ECD-1 | ECD/VCU | | Volatile Organic Compounds (VOC) | TK-2_0213 | 98 | Design calculation | PRIMARY |
| ECD-1 | ECD/VCU | | Total HAP | TK-3_0194 | 98 | Design calculation | PRIMARY |
| ECD-1 | ECD/VCU | | Volatile Organic Compounds (VOC) | TK-3_0194 | 98 | Design calculation | PRIMARY |

How to complete the table: In the drop down, select regulated sources from Table 2A where emissions are reduced and click "Add." Then add reduced pollutants and associated reduction devices for each. If a pollutant has emissions reduced by more than one device please add a line for each device and label them as primary, secondary, tertiary. Click "Edit" to update reduced pollutants and devices for each regulated source.

Comments (4000 character maximum)

**List each reduction device and all sources they serve, e.g. FL-1: Oil tanks 1-4, loading, VRU downtime. FL-2: compressor and sales downtime. For NOIs, indicate the enforceability behind each device or clarify if it is voluntary and no credit is being claimed for the reduction, e.g., FL-1: Oil tanks 1-8 (OOOOa). FL-1: Loading (voluntary, no emissions reduction credit claimed.)**

CAT-1: LPC-1 (JJJJ, ZZZZ)
ECD-1: Oil Tanks 1-3 (OOOOa); Produced Water Tanks 1-3 (voluntary, no emission reduction credit claimed)
FL-1: stranded gas during pipeline downtime (voluntary, no emission reduction credit claimed)

## Table 2-D: Maximum Emissions (under normal operating conditions)

**This Table was intentionally left blank because it would be identical to Table 2-E.**

Maximum Emissions are the emissions at maximum capacity and prior to (in the absence of) pollution control, emission-reducing process equipment, or any other emission reduction. Calculate the hourly emissions using the worst case hourly emissions for each pollutant. For each pollutant, calculate the annual emissions as if the facility were operating at maximum plant capacity without pollution controls for 8760 hours per year, unless otherwise approved by the Department. List Hazardous Air Pollutants (HAP) & Toxic Air Pollutants (TAPs) in Table 2-I. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41).

Comments (2000 character maximum)

## Table 2-E: Requested Allowable Emissions

Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41). Facility totals are a summation of all the emissions entered for equipment in this table plus total tpy SSM emissions from Table 2F.
**GCP-O&G:** Combustion emissions from malfunction events are not allowed under this permit.

**NOI:** Malfunction emissions are not allowed under a Notice of Intent.

## Table 2-F: Startup, Shutdown, and Routine Maintenance (SSM) Emissions

**This table is intentionally left blank as all SSM emissions at this facility do not require an increase in Requested Allowables greater than those listed in Table 2-E.**

All applications for facilities that have emissions during routine our predictable startup, shutdown or scheduled maintenance (SSM)[2], including NOI applications, must include in this table the Maximum Emissions during routine or predictable startup, shutdown and scheduled maintenance (20.2.7 NMAC, 20.2.72.203.A.3 NMAC, 20.2.73.200.D.2 NMAC). Provide emissions calculations for all SSM emissions reported in this table. Refer to the guidance "Startup, Shutdown, Maintenance Emissions in Permits" ( www.env.nm.gov/air-quality/permitting-section-procedures-and-guidance/) for more detailed instructions. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41).

**[1] Condensable Particulate Matter: Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source.**

**[2]For instance, if the short term steady-state Table 2-E emissions are 5 lb/hr and the SSM rate is 12 lb/hr, enter 7 lb/hr in the table below. If the annual steady-state Table 2-E emissions are 21.9 TPY, and the number of scheduled SSM events result in annual emissions of 31.9 TPY, enter 10.0 TPY in the table below.**

Comments (2000 character maximum)

## Table 2-I: Stack Exit and Fugitive Emission Rates for HAPs and TAPs

☐ **By marking this table as intentionally left blank, you certify that the Total and individual HAPs for this facility are less than 1 ton per year.**

Data may not be provided for subject items (SIs) that are not complete. Please edit the SI in Table 2-A before providing information here.

**GCPs:** Report the potential emission rate for each HAP from each HAP emitting emission unit listed in Table 2A. For each emission unit, HAPs shall be expressed to at least 2 decimal points (e.g. 0.41 or 1.41). Emissions less than 0.0001 lb/hr or 0.0001 tpy and emission units that do not emit HAPs shall be omitted from the table. Each facility-wide Individual HAP total and the facility-wide Total HAPs is the sum of all HAP sources entered in the Table. Use the HAP nomenclature as it appears in Section 112 (b) of the 1990 CAA. Include tank-flashing emission estimates of HAP in this table.

**NOIs:** Report the individual and/or Total HAPs for each piece of equipment in Table 2A, only if the facility total for that pollutant is greater than or equal to 1 tpy.

| Unit No. | Total HAPs | | Benzene HAP | | Hexane HAP | | Toluene; (Methyl benzene) HAP | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

# Section 3
## Application Summary and Routine Operations

---

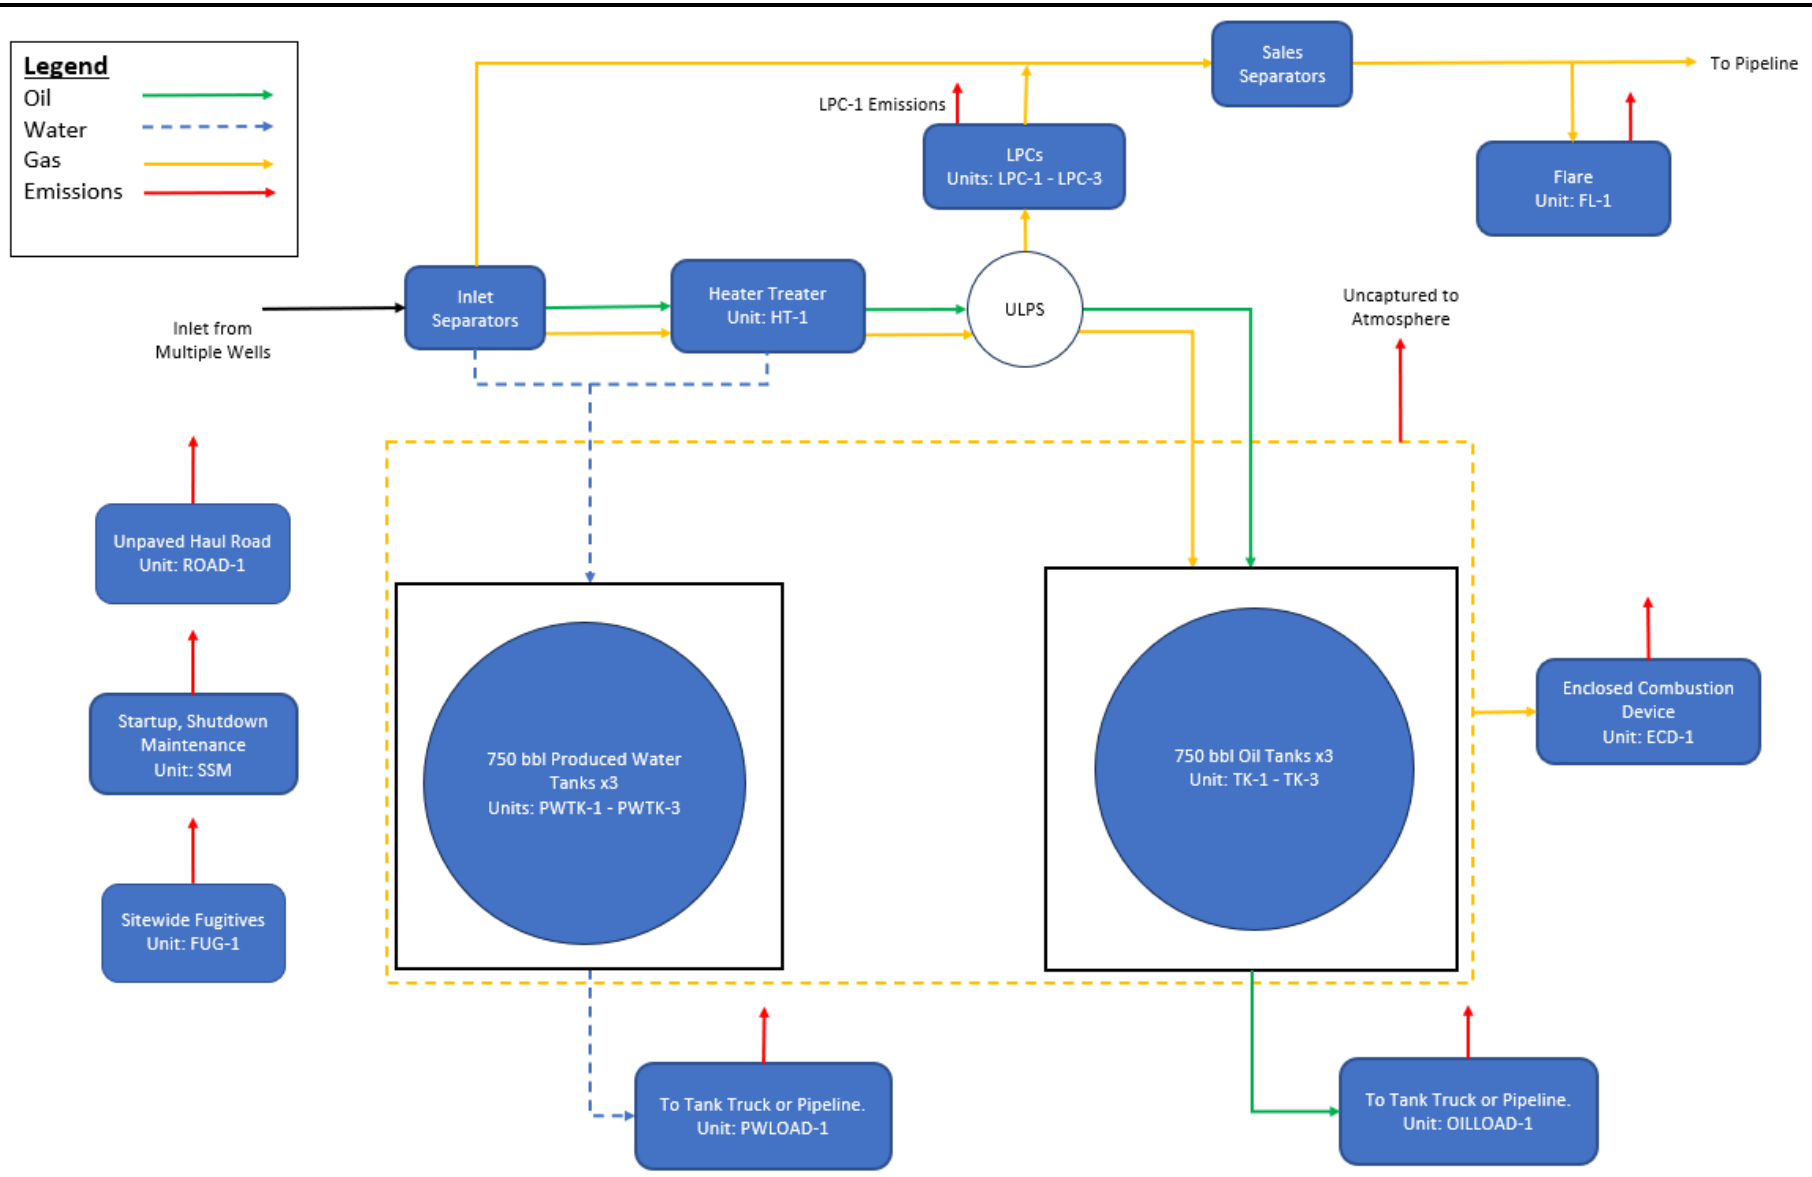
**NOI Summary:** Devon Energy Production Company, L.P. (Devon) owns and operates Broadside 12 Facility 2 (Facility), which is located 20.7 miles west-northwest of Jal in Lea County, New Mexico, under an Oil and Gas General Construction Permit (GCP-O&G). Three (3) 750 bbl oil tanks, three (3) 750 bbl water tanks, one (1) heater treater, one (1) ultra-low-pressure separator (ULPS), one (1) 92 hp natural gas fired low pressure compressor (LPC), two (2) electric LPCs, one (1) flare, and crude and water loading operations are currently authorized under GCP-O&G No. 9357.

Devon is adding one (1) enclosed combustor (ECD), routing water and oil tank emissions to one header controlled by the ECD, and updating production levels with updated representative analyses and transition from a GCP-O&G to a Notice of Intent (NOI).

To authorize the change in equipment and modifications to production at this Facility, Devon is submitting this initial NOI application, which has been prepared in accordance with the requirements set forth in NMAC 20.2.73.

**Process Summary**: Crude oil, natural gas, and produced water are piped to the Facility from producing wells in the surrounding oil field. Production liquid flows from the wells through inlet separators, then oil is processed in the heater treater (Units HT-1). Gas from the inlet separator is further processed through the sales separators and sent to the pipeline or the emergency flare (Unit No. FL-1) during periods of pipeline unavailability. However, because there are no state or federal requirements to control stranded gas, a VOC reduction credit is not taken in this application.

Water from the inlet separators and heater treaters flows into the water storage tanks (Units PWTK-1 - PWTK-3) and is later transferred offsite via pipeline or loading rack (Unit PWLOAD) if the pipeline is unavailable. The water storage tank vapors are routed to the combustor (Unit ECD-1) through the tank header. However, because there are no state or federal requirements to control the water tanks, a VOC reduction credit is not taken in this application.



Oil and entrained gas from the heater treaters is processed further through a ULPS (Unit ULPS-1) before flowing to the oil storage tanks (Units TK-1 – TK-3) and is later transferred offsite via pipeline or loading rack (Unit OILLOAD) during periods of pipeline unavailability. The oil storage tank vapors are routed to the combustor through the tank header.

Gas from the ULPS is sent to the marketing sales gas line using the LPCs (Unit LPC-1 – LPC-3). Because the ULPS/LPC is a part of the process and separates gas just like all of the other separation equipment but at near atmospheric pressure, there is less gas entrained in the oil when it flows to the oil tanks. When the LPC is down for maintenance, gas from the ULPS flows to the tanks and is controlled by the ECD with the rest of the oil tank vapors.

The site was constructed after September 18, 2015, and has not been modified by OOOOb definition since December 6, 2022. The potential volatile organic compound (VOC) emission rate for each of the oil storage tanks is greater than 6 tons per year (TPY). Therefore, the oil storage tanks are subject to New Source Performance Standard (NSPS) Subpart OOOOa. Devon complies with the requirement to reduce emissions from each oil storage tank by 95% by operating a combustor. Approximately 98% of the vapors from the oil storage tanks will be captured and sent to the combustor with a minimum 98% destruction efficiency.

**Routine or predictable emissions during Startup, Shutdown, and Maintenance (SSM):** Check the appropriate SSM box below. SSM emissions from production sites could include but are not limited to VOC venting of compressor blowdowns, pigging, maintenance downtime of VRU, or site-specific combustion SSM emissions.

☐ No SSM emissions are expected from routine operations.
☒ Applicant requests up to 10 tpy of VOC SSM emissions.
☒ Applicant requests site specific VOC SSM and those emissions are included in Section 4.
Provide an overview: Uncontrolled VOC from stranded gas sent to the flare when the pipeline is unavailable.
☒ Applicant requests site specific combustion SSM and those emissions are included in Section 4.
Provide an overview: Combustion of stranded gas sent to the flare when the pipeline is unavailable.

**Date: October 2024**

**Section 3**

# Section 4
## All Calculations and Emissions Summary

---

### *Air Emissions Calculation Tool (AECT)*

The AECT is required to be used with this NOI Quick Form. If the AECT for a piece of equipment is under development, provide calculations. www.env.nm.gov/air-quality/air-emissions-calculation-tool-aect/

### *NOI representations must demonstrate enforceability of any reductions claimed to reduce the Potential Emission Rate (PER) or Potential to Emit (PTE).*

PER definition in NMAC 20.2.73.7 NMAC: "Potential emission rate" means the emission rate of a source at its maximum capacity to emit a regulated air contaminant under its physical and operational design, provided any physical or operational limitation on the capacity of the source to emit a regulated air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its physical and operational design only if the limitation or the effect it would have on emissions is enforceable by the department pursuant to the Air Quality Control Act or the federal act."

PTE definition in NMAC 20.2.73.7 NMAC: "Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design; any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is federally enforceable; the potential to emit for nitrogen dioxide shall be based on total oxides of nitrogen.

### *20.2.50 NMAC (Part 50)*

The Oil and Gas Sector – Ozone Precursor Pollutants regulation 20.2.50 NMAC (Part 50) establishes emission standards for volatile organic compounds (VOC) and oxides of nitrogen (NOx) for oil and gas production, processing, compression, and transmission sources. The reductions required by Part 50 may be included in PER calculations. However, the reductions required by Part 50 **may not** be included in PTE calculations. Part 50 is not federally enforceable, but it does establish limitations that are enforceable pursuant to the New Mexico Air Quality Control Act. The Title V Operating Permit applicability in 20.2.70 NMAC is based on PTE. When determining Title V major source threshold status, calculations at NOI-only facilities cannot claim reductions required by Part 50.

### *Tank Emissions Calculations*

The information provided to the AQB shall include a discussion of the method used to estimate tank-flashing emissions, accuracy of the model, the input and output summary from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis. If Pro-Max or Hysis is used, all relevant input parameters shall be reported, including separator pressure, gas throughput, and all other relevant parameters necessary for flashing calculation. For each crude oil storage tank, identify if the tanks are in series or in parallel.

For tank and loading emission calculations, the annual throughput used for calculations is not required to be the daily throughput times 365 days. The annual throughput of the facility used for calculations must be consistent throughout the application, and a brief rationale should be included in the note sections on the appropriate pages of the AECT.

For tanks subject to federal regulations that require controls (i.e., NSPS OOOO or NSPS OOOOa), applicants may represent tank controls as two scenarios to provide flexibility. Some facilities will have a vapor recovery unit (VRU) installed initially but may later replace the VRU with a flare due to changes in production levels. Representing **both** scenarios in the NOI application will allow the company to replace the VRU with a flare without submitting a revision to the NOI to the Department. To be eligible for this flexibility, both the VRU and flare must be compliant with the federal regulations that require the control of the tanks. Represent both scenarios using the AECT and include comments to explain the requested flexibility.

Represent the worst-case scenario when filling out the emission tables in the Portal. Provide a process flow diagram and a written process description for each scenario. Represent both scenarios using the AECT and include comments to explain the requested flexibility.

### *Heater Calculations:*

Heaters, heated separators, and heater treaters may be represented as a combined maximum heat input, provided that each individual unit is rated less than 100 MMBTU/hr each. This will allow applicants flexibility in the number and size of units installed, while still demonstrating that the facility will comply with NOI limits. To utilize this flexibility, represent the requested total heat input for all these units in the AECT.

### *Engines*

Engine options may be represented in an NOI to provide flexibility. No more than 4 options are allowed and not more than 4 engines may be included. The engines may be in any combination that meets all state and federal regulations. When representing engine options, a table is required that specifically lists: the engine(s) in each option, the emissions for each engine, and a worst-case emission row which is the highest PER for each pollutant from all the engines in each option.

The composite row is entered in the Portal Tables. E.g. ENG-1*; use the comments box to explain the scenario represented. During minor source emissions inventory reporting you will be required to add and report on the individual engines that operated during that reporting year through AEIR.

Unless information is the same for all options:

- Enter “see list” for model and serial number, leave the manufacture date blank, add any regulations that apply to any engine in the option (2A).
- Do not enter anything in the reduction devices table (2C) but list federal controls for each engine in the comments box.
- Use the worse-case stack parameters between all the engine options (2H).
- Leave the fuel usage (2J) blank.

Engine specificity represented in the NOI must be sufficient to determine the emissions from the engine. Engines shall not be installed which do not meet the specificity provided in the NOI. Fill out a separate page in the AECT for each type of engine, the facility totals in the AECT will not be representative of what is requested in the PER Table.

Engine representations must include either:

- the enforceability and applicable parameters (e.g., 100 to 500 hp; JJJJ applicable engine manufactured after 1/1/2011);
- the manufacturer specification sheet (including installed catalysts) to support emission calculations;
- use AP-42 emission factors, or
- use uncontrolled emission factors.

### *SSM Calculations:*

The applicant must select one of the boxes in Section 2: SSM Summary. If applicant is submitting site specific calculations, include in this section.

### *Control Devices:*

In accordance with 20.2.73.200.B(7) NMAC, report all control devices and list each pollutant controlled by the control device in the Potential Emission Rate Table.

Voluntary flaring of emissions that are not federally enforceable (such as maintenance or loading emissions) should be represented **both** as flared emissions, and as uncombusted emissions. This is necessary to demonstrate that the products of combustion from flaring the emissions do not exceed the applicability threshold for a permit under 20.2.72.200.A(1) NMAC; and that the VOC emissions (if they are not flared) will not cause the site to be defined as a Title V Major Source under 20.2.70.7.4.R NMAC.

**Table 1: Check the equipment entered from the AECT Form Submitted in this Section:**

| Check box if present at facility | Equipment Type | Quantity |
|---|---|---|
| ☒ | **Engine(s)** | **1** |
| ☒ | **Heater(s)** | **1** |
| ☒ | **Haul Road** | **1** |
| ☒ | **Fugitives** | **1** |
| ☒ | **Tanks** | **6** |
| ☒ | **Flare(s)** | **1** |
| ☒ | **Loading** | **2** |
| ☒ | **ECD** | **1** |
| ☐ | **Thermal Oxidizer** | |
| ☐ | **VRU** | |
| ☒ | **ULPS/LPC** | **3** |

**Information Used to Determine Emissions**

**Check the box for each type of information submitted**:

☒ If manufacturer data are used, include specifications for emissions units and control equipment, including control efficiencies specifications and sufficient engineering data for verification of control equipment operation.

☒ For tank emissions, include a discussion of the method used to estimate tank-flashing emissions, accuracy of the model, the input and output summary from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis.

☒ If requesting to use a representative gas sample, include a discussion of why the sample is representative for this facility and an explanation of how it is representative (e.g., same reservoir, same similar API gravity, similar composition).

**A site-specific sample is not available. The sample was pulled from the same reservoir as the Facility and is considered to be a representative analysis.**

# Section 6

## Applicable State & Federal Regulations

---

**Provide a discussion demonstrating compliance with applicable state & federal regulation**. All input cells should be filled in, even if the response is 'No' or 'N/A'.

In the "Justification" column, identify the criteria that are critical to the applicability determination, numbering each. For each unit subject to a state or federal regulation, after each listed unit, include the lowest level citation of the applicable regulation. For each unit, list the information necessary to verify the applicability of the regulation, including date of manufacture, date of construction, size (hp), and combustion type. Doing so will provide the applicability criteria for each unit.

---

**Example of a Table for Applicable State Regulations:**

| STATE REGU-LATIONS CITATION | Title | Federally Enforce-able | Applicability Information: Identify the applicability criteria, numbering each (i.e. 1. Post 7/23/84, 2. 75 $m^3$, 3. VOL) | Applicant's Justification of Applicability | Applicant Identifies if Applies to Entire Facility or Unit No(s) |
|---|---|---|---|---|---|
| 20.2.38 NMAC | Hydrocarbon Storage Facility | No | **Use the regulation link (left) then cut & paste applicable sections.** Note: for 20.2.38.112 NMAC, 65,000 gallons is 1547.62 barrels. | The facility includes a "New Tank Battery" since the tanks were constructed after January 1, 1975. 20.2.38.112, New Tank Battery – More Than 65,000 Gallons Capacity is potentially applicable. Since the total capacity of the crude oil tanks (Unit TK-1 - TK-3) is greater than 65,000 gallons, the Facility is subject to 20.2.38.112. The Facility meets the requirements of 20.2.38.112C by operating a ULPS where gas is sent to sales via electric and natural gas driven LPCs. In addition, the tank emissions are controlled by a combustor (Unit ECD-1). | TK-1 – TK-3 |
| 20.2.50 NMAC | Oil and Gas Sector – Ozone Precursor Pollutants | No | This regulation establishes emission standards for volatile organic compounds (VOC) and oxides of | Include the construction status of applicable units as "New", "Existing", "Relocation of Existing", or | Check the box for the subparts that are applicable: ☐ 113 – Engines and Turbines |

| STATE REGU-LATIONS CITATION | Title | Federally Enforce-able | Applicability Information: Identify the applicability criteria, numbering each (i.e. 1. Post 7/23/84, 2. 75 $m^3$, 3. Notice of Intent No. 9134
Agency Interest No. 39913 - PRN20210001
Broadside 1H Battery
AIRS No. 35-025-2037

Dear Mr. Yotter:

This letter acknowledges the receipt of your Air Quality Bureau Notice of Intent (NOI) form dated February 16, 2021 for an Oil & Gas facility in New Mexico. The notice was received by the Department on February 25, 2021.

Construction or modification may commence 21.2 mi W NW of Jal in Lea County at latitude and longitude decimal degrees: 32.225803, -103.527072, as represented in the notice.

Based on the information provided in the submitted NOI, the Department has determined that the potential emission rate (PER) of any regulated air pollutant from this facility for which there is a National or New Mexico Ambient Air Quality Standard is less than ten (10) pounds per hour and twenty-five (25) tons per year. Therefore, in accordance with Title 20, Chapter 2, Part 72 of the New Mexico Administrative Code (20.2.72 NMAC), an air quality permit is not required, and construction may commence. Because the potential emission rate is greater than ten (10) tons per year, this facility is subject to 20.2.73 NMAC. The submitted forms will serve as the Notice of Intent in accordance with 20.2.73.200.A. NMAC.

In addition to 20.2.73 NMAC, this facility may be subject to additional state and federal regulations *such as* those found in Table 1. **The review of an NOI does not constitute a determination of regulatory applicability, regardless of statements of anticipated applicability made in the forms.** It is the permittee's responsibility to determine applicability and to comply with all applicable regulations.

**Table 1: Other Regulations**

| Citation | Title |
|---|---|
| 20.2.38 NMAC | Hydrocarbon Storage Facilities |
| 20.2.61 NMAC | Smoke and Visible Emissions |
| 20.2.70 NMAC | Operating Permits |
| 40 CFR 60 Subpart IIII | Standards of Performance for Stationary Compression Ignition Internal Combustion Engines |
| 40 CFR 60 Subpart JJJJ | Standards of Performance for Stationary Spark Ignition Internal Combustion Engines |
| 40 CFR 60 Subpart Ka | Standards of Performance for Storage Vessels for Petroleum Liquids for Which Construction, Reconstruction, or Modification Commenced After May 18, 1978, and Prior to July 23, 1984 |
| 40 CFR 60 Subpart Kb | Standards of Performance for Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) For Which Construction, Reconstruction, or Modification Commenced After July 23, 1984 |
| 40 CFR 60 Subpart OOOO | Standards of Performance for Crude Oil and Natural Gas Production, Transmissions and Distribution for which Construction, Modification or Reconstruction Commenced After August 23, 2011 and on or before September 18, 2015 |
| 40 CFR 60 Subpart OOOOa | Standards of Performance for Crude Oil and Natural Gas Facilities for which Construction, Modification or Reconstruction Commenced After September 18, 2015 |
| 40 CFR 63 Subpart HH | National Emission Standards for Hazardous Air Pollutants from Oil and Natural Gas Production Facilities |
| 40 CFR 63 Subpart ZZZZ | National Emissions Standards for Hazardous Air Pollutants (NESHAP) for Stationary Reciprocating Internal Combustion Engines |

**Note**: Some New Mexico state regulations are not federally enforceable (e.g., 20.2.35 and 20.2.38 NMAC) and while these regulations can be used for determining the PER, they cannot be used in determining facility-wide potential to emit (PTE) unless included in a federally enforceable permit, such as a 20.2.72 NMAC permit. Applicability of 20.2.70 NMAC (Title V) and 20.2.74 NMAC (PSD) is based on PTE and it is the permittee's responsibility to determine applicability of these regulations. Note that this determination could result in additional permitting requirements under 20.2.70 NMAC and/or 20.2.74 NMAC and, thus, applicability of these regulations should be considered.

This NOI determination was based upon the information provided in the NOI forms. The sources, when constructed, will be subject to inspection.

Before any asbestos demolition or renovation work, you shall determine whether 40 CFR 61 Subpart M, National Emission Standard for Asbestos applies.

Any changes in the method of operation or addition of more units at the site may constitute a modification, which requires the Department's prior review for construction and/or operation.

In the event of any change in ownership or operator of this facility, the new owner or operator shall notify the Department in writing within thirty (30) days of that change.

If you have any questions, please call me in Santa Fe at 505-476-4329.

Sincerely,

Joseph Mashburn

Enclosure: Instructions to access the Industry/Consultant Feedback Questionnaire online.

**Minor Source Emission Inventory in 2020**

P.S. The NM Environment Department – Air Quality Bureau (Bureau) will conduct a Minor Source Emissions Inventory (per 20.2.73.300 NMAC) for calendar year 2020. This inventory will apply to all sources with air quality construction permits (20.2.72 NMAC), including General Construction Permits (GCPs). It will also apply to Notices of Intent (NOIs) sources (20.2.73 NMAC). Facility-wide emissions during the calendar year 2020 must be calculated and reported to the Bureau during the period of January 1 through April 1, 2021, using the online reporting tool specified by the Bureau.

We encourage you to sign up for the Minor Source Emissions Inventory bulletins at: https://public.govdelivery.com/accounts/NMED/subscriber/new to receive updates and guidance on the implementation of this requirement.

**RE: Notice of Intent to Construct**
**Broadside 1H Battery**
**Devon Energy Production Company, L.P.**

Dear Sir or Madam:

Devon Energy Production Company, L.P. (Devon) plans to construct Broadside 1H Battery (Facility), which will be located approximately 21.2 miles west-northwest of Jal in Lea County, New Mexico. The Facility will consist of four (4) oil tanks, two (2) water tanks, one (1) gunbarrel, one (1) heater treater, one (1) emergency flare, one (1) combustor, one (1) 203 hp combustion engine, and crude and water loading operations. The site will be an oil and gas production facility.

To authorize construction and operation of this Facility, Devon is submitting this Notice of Intent (NOI) to Construct application, which has been prepared in accordance with the requirements set forth in NMAC 20.2.73.

If you have any questions or comments, please feel free to contact me at (405) 228-7270.

Sincerely,

*Aaron Yotter*

# NOI Oil and Gas Quick Application

**Use this application only for oil and gas facilities registering under 20.2.73 NMAC**

Submit the entire application on a single CD (no copies of the CD are needed). Hard copies of Page 1 and 2, and Section 7 of this application are required.

**This application is being submitted as** (check all that apply)**:**

☐ **Updating** an existing registered facility. Provide NOI (or NPR/Permit) number:

☐ **Updating** an application currently under NMED review. Include this page and all pages that are being updated (no fee required).

**Construction Status:** ☐ Not Constructed ☐ Existing Permitted (or NOI) Facility ☒ Existing Non-permitted (or NOI) Facility

☒ **Acknowledgement that facilities with the following equipment may not use this application form and should use the Universal Application form:** glycol dehydrators, non-NMED deration method, and applications using emission calculation tools other than the Air Emission Calculation Tool (AECT) for regulated equipment.

☒ **Acknowledgement that this application contains the required AECT, which is required to be used to determine emissions from equipment:** https://www.env.nm.gov/air-quality/air-quality-oil-and-gas-noi-application-form/

**Acknowledgements:** ☐ I acknowledge that a pre-application meeting is available to me upon request

☒ $500 NOI Filing Fee enclosed ☒ Check No.: in the amount of $500

## Section 1-B: Single Source Determination and Source Status

| | |
|---|---|
| 1 | Is this facility a single source as defined in 20.2.73 NMAC? ☑ **Yes** ☐ **No** |
| 2 | Is this facility a Title V or PSD Source? Checking the "NO" box acknowledges and certifies that the Potential To Emit and the Potential Emission Rate of any regulated air contaminant is less than 100 tons per year. ☐ **Yes** ☑ **No** |

## Section 1-C: Facility Location Information

| | | |
|---|---|---|
| 1 | UTM Zone: ☐ 12 or ☒ 13 | County: Lea |
| 2 | Datum: ☐ NAD 27 ☒ NAD 83 ☐ WGS 84 | Elevation (ft): 3603 |
| a | UTM E (in meters, to nearest 10 meters): 638790 | UTM N (in meters, to nearest 10 meters): 3566420 |
| b | Latitude (deg., min., sec.): 32° 13' 32.89" | Longitude (deg., min., sec.): 103° 31' 37.46" |
| 3 | The facility is: 21.2 (distance) miles west-northwest (direction) of Jal (nearest town), zip code of nearest town 88252 | |
| 4 | Status of land (check one): ☒ Private ☐ Indian/Pueblo ☐ Federal BLM ☐ Federal Forest Service ☐ State Land | |
| 5 | Will this facility operate in conjunction with other air regulated parties on the same property? ☐ **Yes** ☑ **No**<br>If yes, what is the name and permit number (if known) of the other facility? | |

## Section 1-D: Other Facility Information

| | | | |
|---|---|---|---|
| 1 | Are there any current Notice of Violations (NOV), compliance orders, or any other compliance or enforcement issues related to this facility? ☐ **Yes** ☑ **No** If yes, specify: | | |
| a | If yes, NOV date or description of issue: | | NOV Tracking No: |
| b | Is this application in response to any issue listed in this section? ☐ **Yes** ☒ **No**<br>If Yes, provide the information below: | | |
| c | Document Title: | Date: | Requirement # (or page # and paragraph #): |

# Section 1-E – Submittal Requirements

Each 20.2.73 NMAC (**NOI**) application package shall consist of the following:

### Hard Copy Submittal Requirements:

1) Hard copies of Pages 1-2, and the signed Certification Page are required.
2) The entire NOI application should be submitted electronically on compact disk (CD).

### Electronic Submittal Requirements [in addition to the required hard copy]:

1) A single Microsoft Office compatible file format (Word) and PDF document of this application.
2) A single version of the Air Emissions Calculation Tool (AECT).
3) The electronic file names shall be a maximum of 25 characters long (including spaces, if any). The format of the electronic Application shall be in the format: "NOI-Facility Name".

# Section 2
## Application Summary and Routine Operations

The **Application Summary** shall include a brief description of the application. In case of a revision or modification to a facility, please describe the proposed changes from the original NOI. If this facility is to be co-located with another facility, provide details of the other facility including permit or NOI number(s).

**Routine or predictable emissions during Startup, Shutdown, and Maintenance (SSM):** Check the appropriate SSM box below. SSM emissions expected from production sites is VOC venting of compressor blowdowns, pigging, or maintenance downtime of VRU, and site-specific combustion SSM emissions.

**Application Summary:**
Devon Energy Production Company, L.P. (Devon) plans to modify and operate Broadside 1H Battery (Facility), which is located approximately 21.2 miles west-northwest of Jal in Lea County, New Mexico. The Facility will consist of four (4) oil tanks, two (2) water tanks, one (1) gunbarrel, one (1) heater treater, one (1) emergency flare, one (1) combustor, one (1) 203 hp natural gas-fired combustion engine, one (1) electric compressor engine, and crude and water loading operations. The combustion engine will have a manufacture date of January 1, 2011 or later; therefore, the engine will be subject to NSPS Subpart JJJJ.

To authorize the modification and operation of this Facility, Devon is submitting this Notice of Intent (NOI) to Construct application, which has been prepared in accordance with the requirements set forth in NMAC 20.2.73.

**Facility Type:**
A narrative is not required if the facility can be described by one of the check boxes below:
☒ The facility is an oil and gas production facility.
☐ The facility is a tank battery.
☐ The facility is a natural gas compressor station.
☐ Other (describe) _____

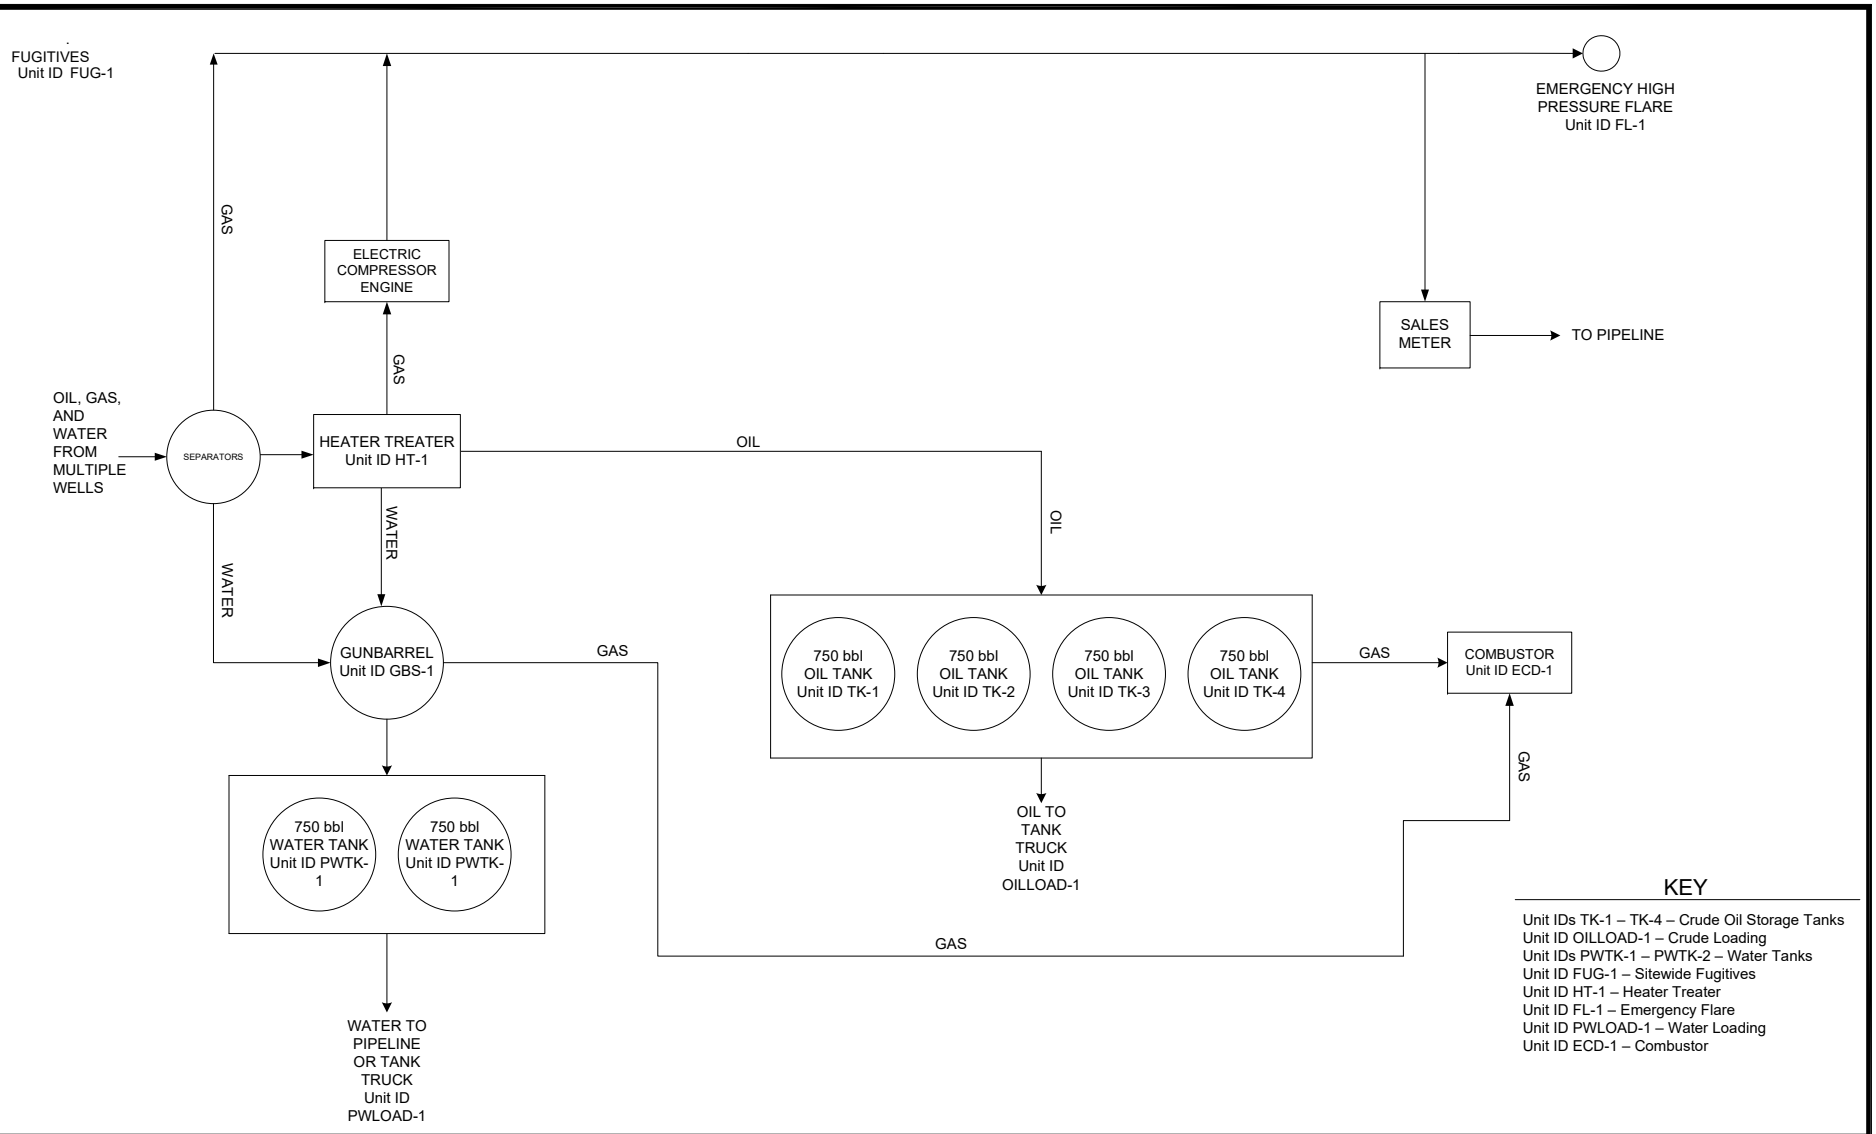
The operating schedule using this application to qualify under 20.2.73 NMAC is 24 hours per day and 8760 hours per year.

**SSM Summary:**
Check the applicable box below:
☐ No SSM emissions are expected from routine operations.
☐ Applicant requests up to 10 tpy of VOC SSM emissions.
☒ Applicant requests site specific VOC SSM and those emissions are included in Section 4.
☐ Applicant requests site specific combustion SSM and those emissions are included in Section 4.

# Section 3
## Process Flow Sheet

---

A **process flow sheet** including all equipment, emission points, and types of control applied to those points. All units should be labeled and the unit numbering system should be consistent throughout this application. Identify all sources of emissions with a vertical arrow. Label each of the different material streams (crude oil, gas, NGL, and produced water).



---

A Process Flow Sheet is included in this section.

Crude oil, natural gas, and produced water are piped to the Facility from producing wells in the surrounding oil field. Production fluid flows from the wells through separators, then oil is processed in the heater treater (Unit ID HT-1). Oil from the heater treater is sent to the oil storage tanks (Unit IDs TK-1 through TK-4). The oil is later transferred offsite via the loading rack (Unit ID OILLOAD-1). Gas from the separators and heater treater is captured in an electric compressor engine and sent to the sales line. Water from the separators and heater treater flows through the gunbarrel (Unit ID GBS-1), then into the water storage tanks (Unit IDs PWTK-1, PWTK-2) and is later transferred offsite via the loading rack (Unit PWLOAD-1) or pipeline. The water storage tanks vent to atmosphere. The oil tanks are controlled by the combustor (Unit ID ECD-1). The gunbarrel is also controlled by the combustor (Unit ID ECD-1). However, because there are no state or federal requirements to control the gunbarrel, a VOC reduction credit is not taken in this application.

The potential volatile organic compound (VOC) emission rate for each of the oil storage tanks is greater than 6 tons per year. Therefore, the oil storage tanks are subject to New Source Performance Standard (NSPS) Subpart OOOOa. Devon complies with the requirement to reduce emissions from the oil storage tanks by 95% by operating a combustor (Unit ID ECD-1). Approximately 98% of the vapors from the oil storage tanks are captured and sent to the combustor.

One combustion engine (Unit ID ENG 1) could be installed. An emergency flare (Unit ID FL-1) is also located at the Facility.

## All Calculations and Emissions Summary

---

**The Department has developed the Air Emission Calculation Tool Form (AECT), which is required to be used in the NOI Oil and Gas Quick Application.** If the AECT for a piece of equipment is under development, provide calculations.

**The AECT can be accessed at the following link:**
https://www.env.nm.gov/air-quality/air-quality-oil-and-gas-noi-application-form/

**Tank Emissions Calculations**: The information provided to the AQB shall include a discussion of the method used to estimate tank-flashing emissions, accuracy of the model, the input and output summary from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis. If Pro-Max or Hysis is used, all relevant input parameters shall be reported, including separator pressure, gas throughput, and all other relevant parameters necessary for flashing calculation. For each crude oil storage tank, identify if the tanks are in series or in parallel.

For tank and loading emission calculations, the annual throughput used for calculations is not required to be the daily throughput times 365 days. The annual throughput of the facility used for calculations must be consistent throughout the application, and a brief rationale should be included in the notes sections on the appropriate pages of the AECT.

For tanks subject to federal regulations that require controls (i.e., NSPS OOOO or NSPS OOOOa), applicants may represent tank controls as two scenarios to provide flexibility. Some facilities will have a vapor recovery unit (VRU) installed initially but may later replace the VRU with a flare due to changes in production levels. Representing **both** scenarios in the NOI application will allow the company to replace the VRU with a flare without submitting a revision to the NOI to the Department. To be eligible for this flexibility, both the VRU and flare must be compliant with the federal regulations that require the control of the tanks. Represent both scenarios using the AECT and include comments to explain the requested flexibility.

**Heater Calculations**: Heaters, heated separators, and heater treaters may be represented as a combined maximum heat input, provided that each individual unit is rated less than 100 MMBTU/hr each. This will allow applicants flexibility in the number and size of units installed, while still providing demonstration that the facility will comply with NOI limits. To utilize this flexibility, represent the requested total heat input for all these units in the AECT.

**SSM Calculations**: The applicant must select one of the boxes in Section 2: SSM Summary. If applicant is submitting site specific calculations, include in this section.

**Control Devices:** In accordance with 20.2.73.200.B(7) NMAC, report all control devices and list each pollutant controlled by the control device in the Potential Emission Rate Table.

Voluntary flaring of emissions that are not federally enforceable (such as maintenance or loading emissions) should be represented **both** as flared emissions, and as uncombusted emissions. This is necessary to demonstrate that the products of combustion from flaring the emissions do not exceed the applicability threshold for a permit under 20.2.72.200.A(1) NMAC; and that the VOC emissions (if they are not flared) will not cause the site to be defined as a Title V Major Source under 20.2.70.7.4.R NMAC.

---

**Table 1: Check the equipment entered from the AECT Form Submitted in this Section:**

| Check box if present at facility | Equipment Type | Quantity |
|---|---|---|
| ☒ | **Engine(s)** | **1** |
| ☒ | **Heater(s)** | **1** |
| ☒ | **Haul Road** | **1** |
| ☒ | **Fugitives** | **1** |
| ☒ | **Tanks** | **6** |
| ☒ | **Flare(s)** | **1** |
| ☒ | **Loading** | **2** |

| Check box if present at facility | Equipment Type | Quantity |
|---|---|---|
| ☒ | ECD | 1 |
| ☐ | Thermal Oxidizer | |
| ☐ | VRU | |
| ☒ | Other | Gunbarrel |

**Information Used to Determine Emissions**
**Check the box for each type of information submitted**:

☐ If manufacturer data are used, include specifications for emissions units and control equipment, including control efficiencies specifications and sufficient engineering data for verification of control equipment operation.
☐ For tank emissions, include a discussion of the method used to estimate tank-flashing emissions, accuracy of the model, the input and output summary from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis.
☒ If requesting to use a representative gas sample, include a discussion of why the sample is representative for this facility and an explanation of how it is representative (e.g., same reservoir, same similar API gravity, similar composition).

The samples are from a nearby site that pulls from the same reservoir as the Broadside 1H Battery wells.

## Table 2: Potential Emission Rate

Enter the maximum lb/hr and ton/yr emission rate from each piece of regulated equipment. Only federally enforceable requirements may be used to reduce the PER of a source. For each unit number, include equipment type (e.g. ENG-1 for engine, HTR-1 for heater, and TANK-1, for storage tank). The basis for the federally enforceable reduction must be included in Section 6.

☒ The emissions in this table are identical to the *Total Allowable NOI Emissions From All Facility Equipment* table from the AECT and are not repeated below. (For any equipment using a federally enforceable control device to reduce the PER, list the unit number/description and control device in this table.)

# AIR EMISSIONS CALCULATION TOOL

## Instructions for Completing the Equipment Calculation Forms

1. Click the **Start Button** below to reset the form to begin data entry.

2. The ***Air Emissions Calculation Tool*** initially loads with the **Core Data Information Form.** Once all information is entered on this form, the necessary equipment calculation pages will be created based on the information entered on the Core Data Information Form. The customized ***Air Emissions Calculation Tool*** should now be saved to your computer before entering any other information on the equipment calculation pages. **Warning,** every time you click on the **Start Button b**elow, the ***Air Emissions Calculation Tool*** will reset and all data entered will be lost.

3. Green/Blue colored information boxes require users to enter the required information for the subject facility. Default values may be changed if not appropriate for the facility.

4. Yellow colored boxes represent calculated values based on user information entered and may not be changed.

5. Yellow boxes with green/blue cross-hatching represent calculated values based on user information entered, however users may input data in these boxes, if necessary.

Start

# Core Data Information

**Mandatory** - All appropriate Data Must Be Entered For All Boxes Below. This Data Will Automatically Create All Required Equipment Forms And Populate This Data In All Emissions Calculation Forms.

| | | | | | |
|---|---|---|---|---|---|
| Date Field | Feb 4, 2021 | | | Permit/NOI/NPR Number | |
| Company Name: | Devon Energy Production Company, L.P. | | | Select Application Type | NOI |
| Facility Name: | Broadside 1H Battery | | | AI# if Known | |
| Max. Facility Gas Production | 5,000 | (Mscf/d) | 208.33 | (Mscf/h) | Elevation (ft.) 3,603 |
| Max. Facility Oil Production | 2,000 | (BOPD) | 83.33 | (BOPH) | |
| Max. Facility Produced Water | 5,000 | (BWPD) | 208.33 | (BWPH) | Sour Gas Streams at This Site? NO |

Enter The Quantity Of All Air Emissions Sources Located At The Facility
(Leave Blank For Each Equipment Type That Is Not Present)

| Equipment | Quantity | Equipment | Quantity |

Emission factors for natural gas and field gas internal combustion engines may be based on AP-42, Tables 3.2-1, 3.2-2 or 3.2-3 or NSPS JJJJ emission standards or manufacturer specifications based on engine applicability.

## NOx Sample Calculation Using AP-42 Emission Factors for a 500-HP 4-Stroke Rich Burn Engine

pph = NOx Emission Factor (EF) lb/MMBtu * Heat Value Btu/scf/1020 Btu/scf * Maximum Heat Input (MMBtu/hr) * Allowable HP * 1/1000000 MMBtu/Btu
= 2.21 lb/MMBtu * 1020 Btu/scf/1020Btu/scf * 7500 MMBtu/hr *500 hp * 1/1000000 MMBtu/Btu
=8.29 lb/hr

tpy =NOx Emission Factor (EF) lb/MMBtu * Heat Value Btu/scf/1020 Btu/scf * Maximum Heat Input (MMBtu/hr) * Allowable HP * 1/1000000 MMBtu/Btu * 8760 hrs/yr * 1/2000 tons/lbs
= 2.21 lb/MMBtu * 1020 Btu/scf/1020 Btu/scf * 0.5 MMBtu/hr * 1/1020 Btu/scf * 1000000/1 Btu/MMBtu * 8760 hrs/yr * 1ton/2000lbs
= 36.31 tpy

AP-42 $SO_2$ emissions based on 100% conversion of fuel sulfur to $SO_2$ and assumes sulfur content in natural gas of 2,000 grains/$10^6$ scf. The SO2 emission factor is converted to other natural gas sulfur contents by multiplying the $SO_2$ emission factor by the ratio of the site-specific sulfur content (grains/$10^6$ scf) to 2,000 grains/$10^6$ scf. For all other engines not using AP-42, The $SO_2$ emissions are based on grains S/scf. Fuel Heat values for Diesel = 0.137 MMBtu/gal; LPG = 0.0905 MMBtu/gal and Gasoline = 0.13 MMBtu/gal per AP-42 Appendix A, pg 5 & 6. SO2 emissions for all diesel engines not using AP-42, equals Gal Diesel/hr * diesel wt (lb)/gal * 15 ppm S * 64 lb SO2/32 lb S, where diesel weighs 7.1089 lb/gal.

## NOx Sample Calculation Using NSPS JJJJ Emission Factors for a July 1, 2010 500-HP 4-Stroke Rich Burn Engine

pph = NOx Emission Factor (EF) g/hp-hr * 1/453.6 lbs/grams * Allowable HP
= 1 g/hp-hr * 1/453.6 lbs/grams * 500 hp
= 1.1 lb/hr

tpy =NOx Emission Factor (EF) g/hp-hr * 1/453.6 lbs/grams * Allowable HP * 8760 hrs/yr * 1/2000 tons/lbs
= 1 g/hp-hr * 1/453.6 lbs/grams * 500 hp * 8760 hrs/yr * 1ton/2000lbs
= 4.82 tpy

Technical Disclaimer
This document is intended to help you accurately determine stationary compressor engine emissions. It does not supersede or replace any state or federal law, rule, or regulation. This guidance reflects the current understanding of how these units work and how they generate emissions, how they are monitored or tested, and what data are available for emissions determination, may change over time as the AQB continue scientific studies and as new information becomes available. The AQB welcome any data, information, or feedback that may improve our understanding of stationary compressor engine emissions and thereby further improve determinations within the emissions inventory. The calculation methods represented are intended as an emissions calculation aid; alternate calculation methods may be equally acceptable if they are based upon, and adequately demonstrate, sound engineering assumptions or data. If you have a question regarding the acceptability of a given emissions determination method, contact the Permitting Section at 505-476-4300.

# Calculation Tool for Heaters, Heated Separators & Heater Treater Emissions (Uncontrolled) for Oil & Gas Production Sites (Only for units rated <100 MMBTU/Hr)

All emission factors based on AP-42, Table 1.4-1, Table 1.4-2 and Table 1.4-3 (July 1998)
https://www3.epa.gov/ttn/chief/ap42/ch01/final/c01s04.pdf

Emission factors for natural gas combustion in boilers and furnaces are presented in AP42, Tables 1.4-1, 1.4-2, 1.4-3, and 1.4-4. The Tables present emission factors on a volume basis (lb/$10^6$ scf). To convert to an energy basis (lb/MMBtu), divide by a heating value of 1,020 MMBtu/$10^6$ scf. The emission factors may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value.

NOx Sample Calculation

pph = AP 42 NOx Emission Factor (EF) * site fuel heat value Btu/scf/1020 Btu/scf * Maximum Heat Input (MMBtu/hr) * 1/site fuel heat Value Btu/scf * 1000000/1Btu/MMBtu
= 100 lb/1000000 scf * 2000 Btu/scf/1020 Btu/scf * 0.5 MMBtu/hr * 1/2000 Btu/scf * 1000000/1Btu/MMBtu
=0.096 lb/hr

tpy = AP 42 NOx Emission Factor (EF) * site fuel heat value Btu/scf/1020 Btu/scf * Maximum Heat Input (MMBtu/hr) * 1/site fuel heat value Btu/scf * 1000000/1 Btu/MMBtu * 8760 hrs/yr * 1ton/2000 lbs
= 100 lb/1000000 scf * 2000 Btu/scf/1020 Btu/scf * 0.5 MMBtu/hr * 1/2000 Btu/scf * 1000000/1 Btu/MMBtu * 8760 hrs/yr * 1ton/2000lbs
= 0.42 tpy

$SO_2$ emissions based on 100% conversion of fuel sulfur to $SO_2$ and assumes sulfur content in natural gas of 2,000 grains/$10^6$ scf. The $SO_2$ emission factor is converted to other natural gas sulfur contents by multiplying the $SO_2$ emission factor by the ratio of the site-specific sulfur content (grains/$10^6$ scf) to 2,000 grains/$10^6$ scf.

Technical Disclaimer
This document is intended to help you accurately determine heaters, heated separators & heater treaters emissions. It does not supersede or replace any state or federal law, rule, or regulation. This guidance reflects the current understanding of how these combustion units work and how they generate emissions, how they are monitored or tested, and what data are available for emissions determination, may change over time as the AQB continue scientific studies and as new information becomes available. The AQB welcome any data, information, or feedback that may improve our understanding of heaters, heated separators & heater treaters emissions and thereby further improve determinations within the emissions inventory. The calculation methods represented are intended as an emissions calculation aid; alternate calculation methods may be equally acceptable if they are based upon, and adequately demonstrate, sound engineering assumptions or data. If you have a question regarding the acceptability of a given emissions determination method, contact the Permitting Section at 505-476-4300.

# Calculation Tool for Tanks Flashing & Working & Standing Emissions for Oil & Gas Production Sites

All flash emissions based on flash calculation methodology selected;

1) The appropriate ECD, flare, TO, VCU or VRU form must also be completed.
2) Manufacturer documentation required to support % control selected. If using a VRU/LPC, calculations assume VRU/ULPC with a 100% control efficiency, but with 5% downtime;
3) Information included in calculation tool must be based on representative oil and gas analysis which must be submitted with application;
4) GOR and Vasquez-Beggs sample calculations outlined below; E & P Tanks, ProMax, HYSYS & VMG Sim flash emissions require submittal of computer simulation model emissions calculations print-outs;
5) Working & Standing emissions based on AP-42 Chpt. 7, tanks 4.09d computer simulation or ProMax, or VMG computer simulation models.

Sample Calculations

**GOR Methodology**

VOC pph = GOR (scf/bbl) * Facility Oil Throughput (BOPD) * 1/24 (Hours/Day * 1/Universal Gas Constant 385 scf/lb-mole @ 70$^{O}$F, 1 atm) * Molecular Weight of Tank Vapors (lb/lb-mol)
= 40 (scf/bbl) * 1000 (BOPD)*1/24 (hrs/day) *1/385 scf/lb-mol * 50 lb/lb-mol
= 216.45 lbs/hr

VOC tpy = GOR (scf/bbl) * Facility Oil Throughput (BOPD) * 1/24 (Hours/Day * 1/Universal Gas Constant 385 scf/lb-mole @ 70$^{O}$F, 1 atm) * Molecular Weight of Tank Vapors (lb/lb-mol) * 8760 hr/yr * 1/2000 lbs/ton
= 40 (scf/bbl) * 1000 (BOPD)*1/24 (hrs/day) *1/385 scf/lb-mol * 50 lb/lb-mol * 8760 hr/yr * 1/2000 lbs/ton
= 948.05 tpy

**Vasquez-Beggs Methodology**

| INPUTS | | | Constraints | | | |

Footnote: * All emission factors based on AP-42, 5.2-4 Equation 1 or AP-42 Table 5.2-5 (July 2008); See next page for calculation notes. You may elect to represent the controlled emissions at the loading rack or at the control device or tanks by selecting the appropriate drop-down options under *Truck Loading VOC Control Method*.

# Calculation Tool for Emissions From Loading Petroleum Liquid

Emissions based on AP-42, 5.2-4 Equation 1 (July 2008) or AP-42, Table 5.2-5

https://www3.epa.gov/ttn/chief/ap42/ch05/final/c05s02.pdf

**AP-42 5.2-4 Equation 1**

Emissions from loading petroleum liquid can be estimated (with a probable error of ±30 percent)[4] using the following expression:

Equation 1 $L_L = 12.46 * SPM/T$

where:

$L_L$ = loading loss, pounds per 1000 gallons (lb/$10^3$ gal) of liquid loaded;

S = a saturation factor (see Table 5.2-1 reproduced below))

P = true vapor pressure of liquid loaded, pounds per square inch absolute (psia) (see Section 7.1, "Organic Liquid Storage Tanks")

M = molecular weight of vapors, pounds per pound-mole (lb/lb-mole) (see Section 7.1, "Organic Liquid Storage Tanks")

T = temperature of bulk liquid loaded, °R (°F + 460)

VOC pph = (12.46*0.6*7.0 (psia)*50 (lb/lb-mole)/550°R)/1000 (gal) * 8400 (gal/hr)
= 39.96 lb/hr

VOC tpy = (12.46*0.6*4.5 (psia)*50 (lb/lb-mole)/525°R)/1000 * 1533000 (gal/yr) * 1/2000 (ton/lbs)
= 2.46 tpy

**Table 5.2-1. SATURATION (S) FACTORS FOR CALCULATING PETROLEUM LIQUID LOADING LOSSES**

| Cargo Carrier | Mode of Operation | S Factor |
|---|---|---|
| Tank trucks and rail tank cars | Submerged loading of a clean cargo tank | 0.5 |
| | Submerged loading: dedicated normal service | 0.6 |
| | Submerged loading: dedicated vapor balance service | 1.0 |
| | Splash loading of a clean cargo tank | 1.45 |
| | Splash loading: dedicated normal service | 1.45 |
| | Splash loading: dedicated vapor balance service | 1.0 |
| Marine vessels[a] | Submerged loading: ships | 0.2 |
| | Submerged loading: barges | 0.5 |

[a] For products other than gasoline and crude oil. For marine loading of gasoline, use factors from Table 5.2-2. For marine Loading of crude oil, use Equations 2 and 3 and Table 5.2-3.

**AP-42 Table 5.2-5**

VOC pph = (2lb/1000 (gal) * ((100-15)/100) * 8400 (gal/hr) = 16.8 pph

VOC tpy = (2lb/1000 (gal) * ((100-15)/100) * 100 (BOPD) * 42 (gal/bbl) * 365 (days/yr) * 1/2000 (ton/lb) = 1.53 tpy

**Table 5.2-5 TOTAL UNCONTROLLED ORGANIC EMISSION FACTORS FOR PETROLEUM LIQUID RAIL TANK CARS AND TANK TRUCKS**

| Emission Source | Mode of Operation | Crude Oil (lb/1000 gal transferred)[b] |
|---|---|---|
| Loading Operations[c] | | |
| | Submerged loading: dedicated normal service | 2 |
| | Submerged loading: dedicated vapor balance service | 3 |
| | Splash loading: dedicated normal service | 5 |
| | Splash loading: dedicated vapor balance service | 3 |

a Reference 2. ……VOC factors for crude oil can be assumed to be 15% lower than the total organic factors, to account for the methane and ethane content of crude oil evaporative emissions. All other products should be assumed to have VOC factors equal to total organics; b The example crude oil has an RVP of 34 kPa (5 psia); c Loading emission factors are calculated using Equation 1 for a dispensed product temperature of 16°C (60°F). In the absence of specific inputs for Equations 1 , the typical evaporative emission factors presented in Tables 5.2-5 should be used. It should be noted that, although the crude oil used to calculate the emission values presented in this tables has an RVP of 5, the RVP of crude oils can range from less than 1 up to 10. In areas where loading and transportation sources are major factors affecting air quality, it is advisable to obtain the necessary parameters and to calculate emission estimates using Equations 1.

1) The appropriate ECD, flare, TO, VCU or VRU form must also be completed.

2) Manufacturer documentation required to support % control selected. If using a VRU/LPC, calculations assume VRU/ULPC with a 100% control efficiency, but with 5% downtime;

3) Information included in calculation tool must be based on representative oil and gas analysis which must be submitted with application;

^) Vapor balancing emissions to tanks must be represented at the tanks;

## Startup, Shutdown & Maintenance and Malfunction

- ○ No SSM emissions are expected from routine operations.
- ○ Request up to 10 tpy of VOC SSM emissions.
- ◉ Request site specific VOC & H2S SSM and enter information below.
- ○ Request site specific VOC & H2S SSM plus 10 tpy VOC and enter information below.
- ○ Request site specific combustion SSM and those emissions are included in Section 4 (attach calculations.)
- ○ Request 10 tpy VOC Malfunction emissions for GCP-O&G, GCP-6 or NSR permitting actions only.

Notes

## Planned SSM Emissions

The venting emissions calculations herein should only be used when only gas (no liquids) is present in the unit. The calculation of the vented gas is based on the volume of the unit and assumes the unit is saturated with vapor at the pressure and temperature of the unit before venting occurs. If liquids are also present in the gas, please enter the calculated amounts in the SSM Other row only and submit separate calculations, since the calculations on this form do not account for the evaporation of liquids that may be present in the unit.

Calculations are based on the Ideal gas law: P(V) = n(R)(T)

VOC result = (((Pressure of Gas Inside the Unit Before Venting) * (Actual Volume of the Vented Unit)) / (Frequency of events) * (Molecular Weight) * VOC wt%)/(Ideal Gas Constant) * (Temperature of Gas Inside the Unit Before Venting)

Where the Ideal Gas Constant = 10.73159 ($ft^3$*psia)/R*lb-mol

For SSM combustion emissions, attach separate calculations.

# Calculation Tool for Tanks Flashing & Working & Standing Emissions for Oil & Gas Production Sites

All flash emissions based on flash calculation methodology selected ;

1) The appropriate ECD, flare, TO, VCU or VRU form must also be completed.
2) Manufacturer documentation required to support % control selected. Assumes VRU/ULPC with a 100% control efficieny, but with 5% downtime;
3) Information included in calculation tool must be based on representative oil and gas analysis which must be submitted with application;
4) GOR and Vasquez-Beggs sample calculations outlined below; E & P Tanks, ProMax, HYSYS & VMG Sim flash emissions require submittal of computer simulation model emissions calculations print-outs;
5) Working & Standing emissions based on AP-42 Chpt. 7, tanks 4.09d computer simulation or ProMax, or VMG computer simulation models.

Sample Calculations

**GWR Methodology**

VOC pph = GWR (scf/bbl) * Facility Water Throughput (BOPD) * 1/24 (Hours/Day * 1/Universal Gas Constant 385 scf/lb-mole @ 70$^{O}$F, 1 atm) * Molecular Weight of Tank Vapors (lb/lb-mol) * Percent Oil in Water
= 40 (scf/bbl) * 1000 (BOPD)*1/24 (hrs/day) *1/385 scf/lb-mol * 50 lb/lb-mol * 1/100
= 2.16 lbs/hr

VOC tpy = GWR (scf/bbl) * Facility Water Throughput (BOPD) * 1/24 (Hours/Day * 1/Universal Gas Constant 385 scf/lb-mole @ 70$^{O}$F, 1 atm) * Molecular Weight of Tank Vapors (lb/lb-mol) * 8760 hr/yr * 1/2000 lbs/ton * Percent Oil in Water
= 40 (scf/bbl) * 1000 (BOPD)*1/24 (hrs/day) *1/385 scf/lb-mol * 50 lb/lb-mol * 8760 hr/yr * 1/2000 lbs/ton * 1/100
= 9.48 tpy

**Vasquez-Beggs Methodology**

| INPUTS | | | Constraints | | | |
|---|---|---|---|---|---|---|
| API Gravity | | API | 16 | <API> | 58 | $^{0}$API |
| Separator Pressure (psig) | | P | 50 | <P+Patm> | 5250 | psia |
| Separator Temp. ($^{0}$F) | | Ti | 70 | <Ti> | 295 | $^{0}$F |
| Separator Gas Gravity at Initial Condition | | SGi | 0.56 | <SGi> | 1.18 | MW/28.97 |
| Barrels of Water/Day (BOPD) | 2,500 | Q | None | <Q> | None | BOPD |
| Tank Gas MW | | MW | 18 | <MW> | 125 | lb/lb-mole |
| VOC Fraction of Tank Gas | | VOC | 0.5 | <VOC> | 1.00 | Fraction |
| Atmospheric Pressure (psia) | | Patm | 20 | <Rs> | 2070 | scf/bbl |

| Constants | | | |
|---|---|---|---|
| | $^{0}$API Gravity | | |
| $^{0}$APTI | <30 | ≥30 | Given$^{0}$API |
| C1 | 0.0362 | 0.0178 | |
| C2 | 1.0937 | 1.187 | |
| C3 | 25.724 | 23.931 | |

SGx = Dissolved gas gravity at Separator pressure = SGi [1.0+0.00005912*API*Ti*Log(Pi/114.7)]

Rs = (C1 * SGx * Pi^C2) exp ((C3 * API) / (Ti + 460)) for P + Patm

THC = Rs * Q * MW * 1/385 scf/lb-mole * 365 D/Yr * 1 ton/2000 lbs

VOC = THC * Frac. of C3+ in the Stock Tank Vapor

Technical Disclaimer
This document is intended to help you accurately determine produced water storage tank flash, working and standing emissions. It does not supersede or replace any state or federal law, rule, or regulation. This guidance reflects the current understanding of how these units work and how they generate emissions, how they are monitored or tested, and what data are available for emissions determination, may change over time as the AQB continue scientific studies and as new information becomes available. The AQB welcome any data, information, or feedback that may improve our understanding of produced water storage tank flash, working and standing emissions and thereby further improve determinations within the emissions inventory. The calculation methods represented are intended as an emissions calculation aid; alternate calculation methods may be equally acceptable if they are based upon, and adequately demonstrate, sound engineering assumptions or data. If you have a question regarding the acceptability of a given emissions determination method, contact the Permitting Section at 505-476-4300.

- ( ) Submerged Loading Dedicated Normal Service
- ( ) Submerged Loading Vapor Balance Service
- ( ) Splash Loading Dedicated Normal Service
- ( ) Splash Loading Vapor Balance Service

Notes:Under normal operation all water is piped offsite. To account for periods when the water pipeline is unavailable, approximately 328,500 barrels of water can be trucked offsite per year.

***Total VOC Emissions From Loading Produced Water Liquids Based On % Oil in Water Selected Above***

| Pollutant | Uncontrolled Emissions (pph) | Uncontrolled Emissions (tpy) |
|---|---|---|
| VOC | 1.51 | 0.46 |

Footnote: * All emission factors based on AP-42, 5.2-4 Equation 1 or AP-42 Table 5.2-5 (July 2008); See reverse side for calculation notes

# Calculation Tool for Emissions From Loading Produced Water Liquids

Emissions based on AP-42, 5.2-4 Equation 1 (July 2008) or AP-42, Table 5.2-5

https://www3.epa.gov/ttn/chief/ap42/ch05/final/c05s02.pdf

**AP-42 5.2-4 Equation 1**

Emissions from loading produced water liquids can be estimated (with a probable error of ±30 percent)[4] using the following expression:

Equation 1 $L_L = 12.46 * SPM/T$

where:

$L_L$ = loading loss, pounds per 1000 gallons (lb/$10^3$ gal) of liquid loaded (assumes 1% oil in water)

S = a saturation factor (see Table 5.2-1 reproduced below))

P = true vapor pressure of liquid loaded, pounds per square inch absolute (psia) (see Section 7.1, "Organic Liquid Storage Tanks")

M = molecular weight of vapors, pounds per pound-mole (lb/lb-mole) (see Section 7.1, "Organic Liquid Storage Tanks")

T = temperature of bulk liquid loaded, °R (°F + 460)

VOC pph = (12.46*0.6*7.0 (psia)*50 (lb/lb-mole)/550°R)/1000 (gal) * 8400 (gal/hr) * 0.01 (1% oil in water)
= 39.96 lb/hr

VOC tpy = (12.46*0.6*4.5 (psia)*50 (lb/lb-mole)/525°R)/1000 * 1533000 (gal/hr) * 1/2000 (ton/lbs) * 0.01 (1% oil in water)
= 2.46 tpy

**Table 5.2-1. SATURATION (S) FACTORS FOR CALCULATING PETROLEUM LIQUID LOADING LOSSES**

| Cargo Carrier | Mode of Operation | S Factor |
|---|---|---|
| Tank trucks and rail tank cars | Submerged loading of a clean cargo tank | 0.5 |
| | Submerged loading: dedicated normal service | 0.6 |
| | Submerged loading: dedicated vapor balance service | 1.0 |
| | Splash loading of a clean cargo tank | 1.45 |
| | Splash loading: dedicated normal service | 1.45 |
| | Splash loading: dedicated vapor balance service | 1.0 |
| Marine vessels[a] | Submerged loading: ships | 0.2 |
| | Submerged loading: barges | 0.5 |

[a] For products other than gasoline and crude oil. For marine loading of gasoline, use factors from Table 5.2-2. For marine Loading of crude oil, use Equations 2 and 3 and Table 5.2-3.

**AP-42 Table 5.2-5** (assumes 1% oil in water)

VOC pph= (2lb/1000 (gal) * ((100-15)/100) * 8400 (gal/hr) * 0.01 (1% oil in water) = 0.168 pph

VOC tpy = (2lb/1000 (gal) * ((100-15)/100) * 100 (BOPD) * 42 (gal/bbl) * 365 (days/yr) * 1/2000 (ton/lb) * 0.01 (1% oil in water) = 0.0153 tpy

**Table 5.2-5 TOTAL UNCONTROLLED ORGANIC EMISSION FACTORS FOR PETROLEUM LIQUID RAIL TANK CARS AND TANK TRUCKS**

| Emission Source | Mode of Operation | Crude Oil (lb/1000 gal transferred)[b] |
|---|---|---|
| Loading Operations[c] | | |
| | Submerged loading: dedicated normal service | 2 |
| | Submerged loading: dedicated vapor balance service | 3 |
| | Splash loading: dedicated normal service | 5 |
| | Splash loading: dedicated vapor balance service | 3 |

a Reference 2. ……VOC factors for crude oil can be assumed to be 15% lower than the total organic factors, to account for the methane and ethane content of crude oil evaporative emissions. All other products should be assumed to have VOC factors equal to total organics; b The example crude oil has an RVP of 34 kPa (5 psia); c Loading emission factors are calculated using Equation 1 for a dispensed product temperature of 16°C (60°F). In the absence of specific inputs for Equations 1 , the typical evaporative emission factors presented in Tables 5.2-5 should be used. It should be noted that, although the crude oil used to calculate the emission values presented in this tables has an RVP of 5, the RVP of crude oils can range from less than 1 up to 10. In areas where loading and transportation sources are major factors affecting air quality, it is advisable to obtain the necessary parameters and to calculate emission estimates using Equations 1.

See reverse side for calculation notes.

1) Based on representative gas analysis which must be submitted with application; 2) Assumes pilot gas has a negligible amount of VOC & 0.25 grains H2S/100scf; *) Emission factors for NOx, CO & VOC based on AP-42, Table 13.5-1, (Dec. 2015) or TCEQ RG-360A/11 (February 2012); #) Assumes $H_2S$ is converted to $SO_2$ at selected control efficiency; SO2 emissions based on mass balance; +) Assumes $H_2S$ Destruction Efficiency equals flare destruction efficiency;

# Calculation Tool for Flare Emissions for Oil & Gas Production Sites

All emission factors based on AP-42, Emission factors for NOx, CO & VOC, Table 13.5-1, (December 2016); https://www3.epa.gov/ttn/chief/ap42/ch13/final/C13S05_12-13-16.pdf or https://www.tceq.texas.gov/assets/public/comm_exec/pubs/rg/rg360/rg36011/rg-360a.pdf

1) Information included in calculation tool must be based on representative gas analysis which must be submitted with application;
2) Assumes pilot gas used has a negligible amount of VOC's and 0.25 grains H2S/100 scf;
3) $SO_2$ calculations assumes $H_2S$ is converted to $SO_2$ at selected control efficiency; $SO_2$ emissions based on mass balance;
4) $H_2S$ calculations assume $H_2S$ Destruction Efficiency equals flare destruction efficiency;

Sample Calculations

NOx pph = hourly gas routed to flare (MMBtu/hr) * NOx Emission factor (lbs/MMBtu)
= 1(MMBtu/hr) * 0.068 (lbs/MMBtu)
= 0.068 lbs/hr

NOx tpy = annual gas routed to flare (MMBtu/yr) * NOx Emission factor (lbs/MMBtu) * 1/lbs/ton)
= 1000 (MMBtu/yr) * 0.068 (lb/MMBtu) * 1/2000 (lbs/ton)
= 0.034 tpy

$SO_2$ pph= Hourly Gas Stream to flare (MMScf/hr) * 1000000/1 (scf/MMScf) * Field Gas mol Fraction of $H_2S$ (mol $H_2S$/lb-mol)/100 * 1/Universal Gas Constant 385 scf/lb-mole @ 60$^{O}$F, 1 atm * Conversion Rate of $H_2S$ to $SO_2$ lb-mol $SO_2$/lb-mol $H_2S$ * Molecular Weight of Sulfur Dioxide (64 lb $SO_2$/lb-mol $SO_2$)
= 1 MMScf/hr * 1000000/1 (Scf/MMScf) * 0.1 mol $H_2S$* 1/385 scf/lb-mole * 0.95 lb-mol $SO_2$/lb-mol $H_2S$ * 64 lb/lb-mol

Residual

$H_2S$ pph= Hourly Gas Stream to flare (MMScf/hr) * 1000000/1 (scf/MMScf) * Field Gas mol Fraction of $H_2S$ (mol $H_2S$/lb-mol)/100 * 1/Universal Gas Constant 385 scf/lb-mole @ 60$^{O}$F, 1 atm * (100-(Flare Control Efficiency))/100) * Molecular Weight of Hydrogen Sulfide (34 lb $H_2S$/lb-mol $H_2S$)
= 1 MMScf/hr * 1000000/1 (Scf/MMScf) * 0.1 mol $H_2S$* 1/385 scf/lb-mole * (100-95%/100) * 34 lb/lb-mol

| Flare, Vapor Combustion Devices & Enclosed Combustion Devices Emission Factors | | | | |

Technical Disclaimer

This document is intended to help you accurately determine flares, enclosed combustion devices and vapor combustion units emissions. It does not supersede or replace any state or federal law, rule, or regulation. This guidance reflects the current understanding of how these combustion units work and how they generate emissions, how they are monitored or tested, and what data are available for emissions determination, may change over time as the AQB continue scientific studies and as new information becomes available. The AQB welcome any data, information, or feedback that may improve our understanding of flares, enclosed combustion devices and vapor combustion units emissions and thereby further improve determinations within the emissions inventory. The calculation methods represented are intended as an emissions calculation aid; alternate calculation methods may be equally acceptable if they are based upon, and adequately demonstrate, sound engineering assumptions or data. If you have a question regarding the acceptability of a given emissions determination method, contact the Permitting Section at 505-476-4300.

Based on: *1995 Protocol for Equipment Leak Emission Estimates*, Table 2.4 Version Date: 6/23/16; See next page for calculation notes.

# Calculation Tool for Fugitive Emissions Oil & Gas Production

Protocol for Equipment Leak Emission Estimates (EPA-453/R-95-017), Table 2-4;
available at the EPA Web site at https://www3.epa.gov/ttn/chief/efdocs/equiplks.pdf

a) Service categories are defined as follows:

1) Gas/vapor - material in a gaseous state at operating conditions;

2) Light liquid - material in a liquid state in which the sum of the concentration of individual constituents with a vapor pressure over 0.3 kilopascals (kPa) at 200C is greater than or equal to 20 weight percent;

3) Heavy liquid - not in gas/vapor service or light liquid service.

4) Water/Oil emission factors apply to water streams in oil service with a water content greater than 50%, from the point of origin to the point where the water content reaches 99%. For water streams with a water content greater than 99%, the emission rate is considered negligible.

b) These factors are for total organic compound emission rates (including non-VOC's such as methane and ethane) and apply to light crude, heavy crude, gas plant, gas production, and off shore facilities. "NA" indicates that not enough data were available to develop the indicated emission factor.

c) The "other" equipment type was derived from compressors, diaphragms, drains, dump arms, hatches, instruments, meters, pressure relief valves, polished rods, relief valves, and vents. This "other" equipment type should be applied for any equipment type other than connectors, flanges, open-ended lines, pumps, or valves.

d) Note that the average factors generally determine total hydrocarbon emissions. Therefore, you may need to multiply the calculated emission rates by the stream's weight percentage of VOC compounds to determine total VOC emissions. Please attach a copy of the appropriate gas and oil analysis with the stream's weight percentage of VOC compounds identified.

VOC Sample Calculation
For 10 Valves in Gas Service with a gas stream weight percentage of 25% VOC

Emission Factor (EF) lb/hr=0.0045 kg/hr * 2.2046 lbs/kg
Gas Valves Uncontrolled Emissions

pph EF (Valves in Gas Service) * Number of Valves in Gas Service & VOC wt%
0.0099207 lb/hr * 10 valves = 0.099207 lb/hr * 25%/100

tpy EF (Valves in Gas Service) * Number of Valves in Gas Service * 8760 hrs/yr * 1ton/2000 lbs
0.0099207 lb/hr * 10 valves * 8760 hrs/yr * 1/2000 ton/lbs = 0.4345 tons/yr * 25%/100

Total Uncontrolled Fugitive Emissions for all Service types in Gas Service

pph (Uncontrolled pph Emissions for Valves + Pump Seals + Connectors + Flanges + Open Ends + Other) * VOC wt%/100

tpy (Uncontrolled tpy Emissions for Valves + Pump Seals + Connectors + Flanges + Open Ends + Other) * VOC wt%/100

**All emission factors based on AP-42,** AP-42 13.2.2-4; November 2006
https://www3.epa.gov/ttn/chief/ap42/ch13/final/c13s0202.pdf

Emissions from vehicles traveling on unpaved surfaces at industrial sites (based on 8760 Hours/year) can be estimated using the following expression:

AP-42 13.2.2-4; Equation 1a: $$E = k\,(s/12)^a (W/3)^b$$

where k, a, b, c and d are empirical constants (Reference 6) given below and

E = size-specific emission factor (lb/VMT)

s = surface material silt content (%)

W = mean vehicle weight (tons)

M = surface material moisture content (%)

A red-outlined cell indicates that the facility exceeds the allowable emission limits for that pollutant for the requested permitting action and the application cannot be approved as proposed.

**Subject:** RE: Notice of Intent - AECT Tool

Hi Alicia,

After looking at the coding in the form, yes that issue of depicting a red box for TOTAL HAPs over 10 lb/hr is a glitch in the AECT and can be ignored at this time. There is no lb/hr limit for TOTAL HAPS or VOC's for NOI applications. The problem has been fixed and will be included in a future AECT update. Thanks for bringing this to my attention. It is suggested that you make a note of that issue in your submittal and you may attach a copy of this email as well to the application.

If you have any questions, please feel free to contact me. I can be reached by email at Richard.Poley@state.nm.us or please call me in Santa Fe (Tues. or Thurs.) at (505) 476-4308 or in Rio Rancho (Mon. or Wed.) at (505) 771-5993. I am out of the office on Fridays.

Thanks,

*Rick Poley*

Hi Alicia,

What version of the AECT are you using? The latest official version is 8/10/2018.

If you have any questions, please feel free to contact me. I can be reached by email at Richard.Poley@state.nm.us or please call me in Santa Fe (Tues. or Thurs.) at (505) 476-4308 or in Rio Rancho (Mon. or Wed.) at (505) 771-5993. I am out of the office on Fridays.

Thanks,

**Subject:** [EXT] Notice of Intent - AECT Tool

Rick,

We are trying to complete an NOI for our client and we are getting a red box around our total lb/hr HAPs in the AECT tool. Our total lb/hr HAPs is slightly over 10 lb/hr. We are not aware of a lb/hr limit for total HAPs under an NOI and were unable to find anything in the rule pertaining to a lb/hr limit. Is this a possible glitch in the AECT tool or is there some applicability information we have not found?

Thank you,

## Haul Road

**Facility:** **Broadside 1H Battery**

***Unpaved Haul Road***

| Parameter | Value | Unit |
|---|---|---|
| Empty Vehicle Weight[1] | 16 | ton |
| Truck Capacity | 180 | bbl |
| | 7,560 | gallons |
| Load Size[2] | 26.8 | ton |
| Loaded Vehicle Weight[3] | 42.8 | ton |
| Mean Vehicle Weight[4] | 29.4 | ton |
| Hourly Water Loadout | 540 | bbl/hr |
| Hourly Oil Loadout | 540 | bbl/hr |
| Hourly Water + Oil Loadout | 1,080 | bbl/hr |
| | 45,360 | gal/hr |
| Annual Water Loadout | 328,500 | bbl/yr |
| Annual Oil Loadout | 310,250 | bbl/yr |
| Annual Water + Oil Loadout | 638,750 | bbl/yr |
| | 26,827,500 | gal/yr |
| Turnovers | 6.0 | per hour |
| | 3,549 | per year |
| Max Vehicles Per Hour | 6 | VPH |
| Vehicles Per Day[5] | 10 | VPD |
| Vehicles Per Year | 3,549 | VPY |
| Segment Length | 0.20 | mile |
| Trips per Segment | 1 | - |
| Effective Segment Length[6] | 0.2 | mile |
| Trips per Hour[7] | 0.42 | - |
| Wet Days[8] | 70 | day |
| Surface Silt Content[9] | 4.8 | % |
| Credit for Base Course | 0.00% | |

[1] Empty vehicle weight includes driver and occupants and full fuel load.

[2] Include cargo, transported materials, etc. (7.1 lb/gal RVP5 *7560 gal truck/ 2000lb/ton)

[3] Loaded vehicle weight = Empty + Load Size

[4] Mean Vehicle weight = (Loaded Weight + Empty Weight) / 2

[5] Vehicles per day = (Turnovers/year) / (365 days/year)

[6] Effective segment length = trips per segment * segment length

[7] Trips per hour = Vehicles per day * Segments per trip ÷ Hours of Operation per Day

[8] Wet days is the NM default allowed by NMED without additional justification

[9] Surface silt content based on AP-42 Section 13.2.2.3

| | Calculation Parameters[1] | | | | | | | | | | | | Hourly Emission Factors | | | Annual Emission Factors | | |

***Unpaved Road Emissions***

| Calculation Inputs | | | | | | | | | Haul Road Emissions | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Route | Annual Operation | Segment Length | Trips per Segment | Number of Trucks | | Effective Segment Length | Max VMT/hr | Average VMT/yr[4] | $PM_{30}$ | | $PM_{10}$ | | $PM_{2.5}$ | |
| | hr | mi | | trucks/hr | trucks/yr | mi | mi/hr | mi/yr | lb/hr | tpy | lb/hr | tpy | lb/hr | tpy |
| Haul Trucks | 8,760 | 0.20 | 1 | 6 | 3549 | 0.20 | 1.20 | 710 | 8.65 | 2.1 | 2.20 | 0.53 | 0.22 | 0.053 |
| **Totals** | | | | | | | | | **8.65** | **2.1** | **2.20** | **0.53** | **0.22** | **0.053** |

[1] Surface silt = % of 75 micron diameter and smaller particles

[2] E = k x (s/12)^a x (W/3)^b x (1-0.6) (AP-42 page 13.2.2-4 Equation 1a, November 2006)

E= Size Specific Emission Factor (lb/VMT)

s = surface material silt content (%)

k, a, b = constants from AP-42 Table 13.2.2-2

W = Weighted Mean Vehicle Weight from Haul Road Inputs (tons)

60% for base course

[3] $PM_{30}$ emission factor in equation is assumed as a surrogate for TSP emissions

[4] VMT/hr = Vehicle Miles Travelled per hour= Trips per hour * Segment Length

[5] Wet Day Emission Factor = E * (365 - Wet Days)/365. Wet days value is the NM default allowed by NMED without additional justification.

# PROMAX REPORT - OIL TANKS - ANNUAL

| Project information | |
|---|---|
| File Name | 20210125_Broadside 1H_Promax |
| Company | Devon Energy |
| City, State | {"Roswell, NM","Roswell, NM","Roswell, NM"} |
| Equation of State | {"Peng-Robinson","Peng-Robinson","Peng-Robinson"} |
| Description | DEET Emissions Report |

| Stream Selection for Tank Losses Stencil | |
|---|---|
| Name of Property Stencil | Oil Tank Losses |
| Name of Process Stream | Tank Inlet[Oil Tanks] |

| Loading Information | | |
|---|---|---|
| Mode of Operation | Submerged Loading of a Clean Cargo Tank | |
| Cargo Carrier | Tank Truck or Rail Tank Car | |
| Saturation Factor | 0.6 | |
| VOCs [C3+] | 100 | *Note: VOC weight percent has been conservatively adjusted based on agency guidance* |

| Tank Information | |
|---|---|
| Shell Height [ft] | 24 |
| Diameter [ft] | 15.5 |
| Maximum Fill Percent [%] | 90 |
| Number of Tanks | 4 |
| Average Fill Percent [%] | 50 |
| Total Tank Volume [bbl] | 3226.3 |
| Net Throughput [bbl/yr] | 310250 |
| Max Liquid Surface Temperature [°F] | 75.6836 |
| Average Liquid Surface Temperature [°F] | 66.4265 |
| MW | 40.8187 |
| Turnovers (per year) | 120.728 |
| **Paint Characteristics** | |
| Shell Color | Tan |
| Shell Paint Condition | Average |
| Roof Color | Tan |
| Roof Condition | Average |
| **Roof Characteristics** | |
| Type | Dome |
| Dome Radius [ft] | |
| Slope [ft/ft] | -- |
| **Breather Vent Settings** | |
| Vacuum Settings [psig] | -0.0300000 |
| Pressure Settings [psig] | 0.0300000 |

| Meteorological Data | |
|---|---|
| Location | Roswell, NM |
| Ambient Pressure [psia] | 12.88 |
| Min Ambient Temperature [°F] | 47.6 |
| Max Ambient Temperature [°F] | 75.8 |
| Solar Insolation [BTU/ft2*day] | 1722 |
| Wind Speed [mph] | 8.7 |

| Emission Summary | | | | | | | |
|---|---|---|---|---|---|---|---|
| Item | | Flash Gas | W/B Losses | Loading Losses | Heater Treater Gas | ULPS Gas | |
| | | % | % | % | % | % | |
| Capture Effeciency | | 98 | 98 | 0 | 0 | 0 | |
| Percent to Flare | | -- | -- | -- | 0 | 0 | |

| Emission Summary | | | | | | | |

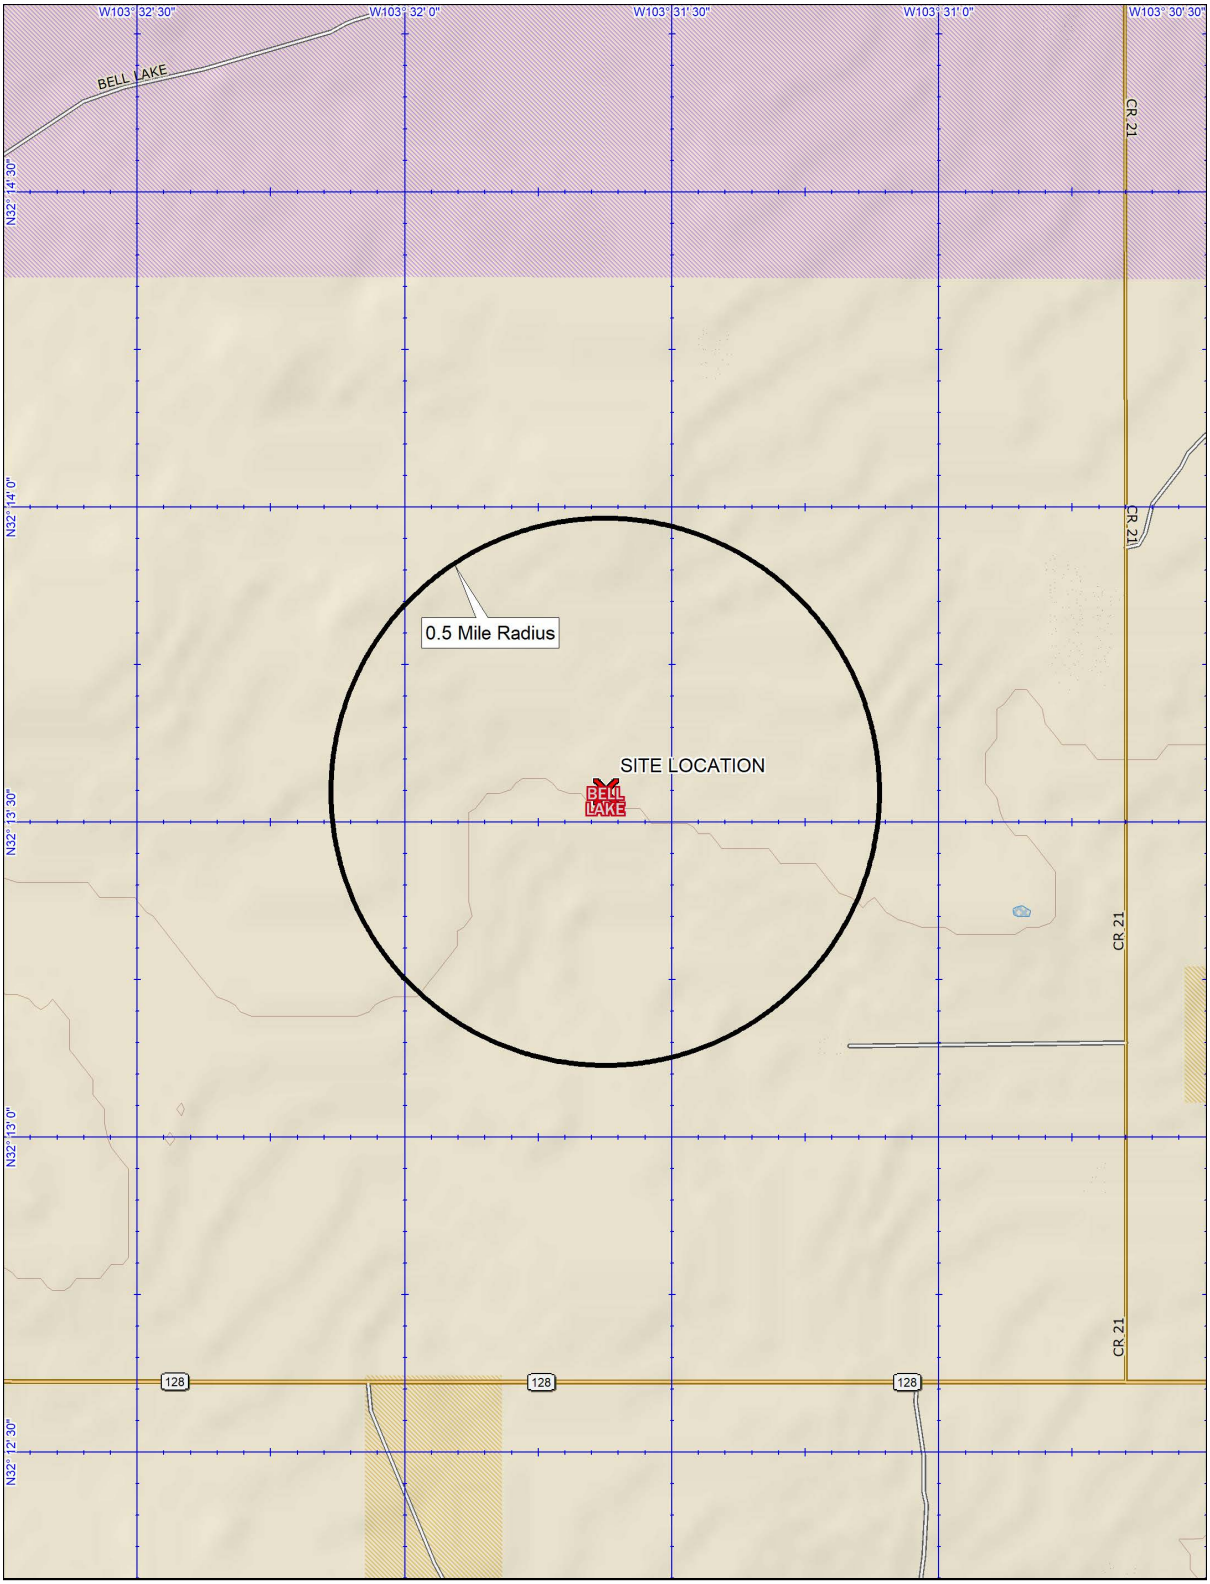
## Map(s)



---

**A map** such as a 7.5 minute topographic quadrangle showing the exact location of the source. The map shall also include the following:

| | |
|---|---|
| The UTM or Longitudinal coordinate system on both axes | An indicator showing which direction is north |
| A minimum radius around the plant of 0.8km (0.5 miles) | Access and haul roads |
| Topographic features of the area | Facility property boundaries |
| The name of the map | The area which will be restricted to public access |
| A graphical scale | |

---

An area map is included in this section.

## Applicable State & Federal Regulations

---

**Provide a discussion demonstrating compliance with applicable state & federal regulation**. All input cells should be filled in, even if the response is 'No' or 'N/A'.

In the "Justification" column, identify the criteria that are critical to the applicability determination, numbering each. For each unit subject to a state or federal regulation, after each listed unit, include the lowest level citation of the applicable regulation. For each unit, list the information necessary to verify the applicability of the regulation, including date of manufacture, date of construction, size (hp), and combustion type. Doing so will provide the applicability criteria for each unit.

---

**Example of a Table for Applicable State Regulations:**

| STATE REGU-LATIONS CITATION | Title | Federally Enforce-able | Applicability Information: Identify the applicability criteria, numbering each (i.e. 1. Post 7/23/84, 2. 75 $m^3$, 3. VOL) | Applicant's Justification of Applicability | Applicant Identifies if Applies to Entire Facility or Unit No(s) |
|---|---|---|---|---|---|
| 20.2.38 NMAC | Hydrocarbon Storage Facility | No | **Use the regulation link (left) then cut & paste applicable sections.** Note: for 20.2.38.112 NMAC, 65,000 gallons is 1547.62 barrels. | The facility includes a "New Tank Battery" since the tanks were constructed after January 1, 1975. 20.2.38.112, New Tank Battery – More Than 65,000 Gallons Capacity is potentially applicable. Since the total capacity of the crude oil tanks (Unit ID TK-1 through TK-4) is greater than 65,000 gallons, the Facility is subject to 20NMAC2.38.112. The Facility is also subject to 20.2.38.109 due to the storage tank capacity and throughput. The Facility meets the requirements of 20.2.38.112.C. and 20.2.38.109.B by venting tank emissions to a combustor (Unit ID ECD-1) | TK-1 through TK-4 |
| 20.2.61.109 NMAC | Smoke & Visible Emissions | No | Engines and heaters are Stationary Combustion Equipment. Specify units subject to this regulation. | The combustor, combustion engine, and heater treater are Stationary Combustion Equipment. Devon will maintain compliance with the regulation by operating the combustion units according to manufacturer's recommendations to ensure complete combustion. | ECD-1, ENG 1, HT-1 |
| 20.2.73 NMAC | NOI & Emissions Inventory Requirements | No | **NOI:** 20.2.73.200 NMAC applies (requiring a NOI application) | This document serves as the Notice of Intent application requesting approval by the NM AQB to install the proposed equipment at this site. Therefore, Devon is in | FACILITY |

| | | | | | |
|---|---|---|---|---|---|
| | | | | compliance with NMAC 20.2.73.200.<br>Emissions Inventory Reporting: 20.2.73.300 NMAC applies. All Title V major sources meet the applicability requirements of 20.2.73.300 NMAC.<br>Site is not a Title V site. Devon will submit an Emissions Inventory Report if requested. | |
| 20.2.77 NMAC | New Source Performance | Yes | This is a stationary source which is subject to the requirements of 40 CFR Part 60, as amended through 2017.<br>Applies if any subpart applies. | The combustion engine (Unit ID ENG 1) is subject to NSPS JJJJ and is therefore subject to 20.2.77.9. The fugitives (Unit ID FUG-1), oil tanks (Unit ID TK-1 through TK-4), and combustor (ECD-1) are subject to NSPS OOOOa and are therefore subject to 20.2.77.9. | ENG 1, FUG-1, TK-1 through TK-4, ECD-1 |
| 20.2.78 NMAC | Emission Standards for HAPS | Yes | This facility emits hazardous air pollutants which are subject to the requirements of 40 CFR Part 61, as amended through 2017.<br>Applies in any subpart applies | | N/A |
| 20.2.82 NMAC | MACT Standards for source categories of HAPS | Yes | This regulation applies to all sources emitting hazardous air polluta4nts, which are subject to the requirements of 40 CFR Part 63, as amended through 2017.<br>Applies in any subpart applies | The combustion engine (Unit ID ENG 1) is subject to MACT ZZZZ and is therefore subject to 20.2.82.8. | ENG 1 |

**Example of a Table for Applicable Federal Regulations (This is not an exhaustive list):**

| **FEDERAL REGULATIONS CITATION** | **Title** | **JUSTIFICATION:** | **Applicant's Justification of Applicability** | **Identify if applies to Entire Facility or Unit No(s)** |
|---|---|---|---|---|
| 40 CFR 50 | NAAQS | Defined as applicable at 20.2.70.7.E.11, Any national ambient air quality standard | The combustion engine (Unit ID ENG 1), combustor (Unit ID ECD-1), and heater treater (Unit ID HT-1) are small combustion sources. The emission levels are such that no exceedances of the NAAQS are expected. | ENG 1, HT-1, ECD-1 |

| FEDERAL REGULATIONS CITATION | Title | JUSTIFICATION: | Applicant's Justification of Applicability | Identify if applies to Entire Facility or Unit No(s) |
|---|---|---|---|---|
| NSPS 40 CFR 60, Subpart A | General Provisions | Applies if any other NSPS subpart applies. | The combustion engine (Unit ID ENG 1) is subject to NSPS JJJJ. The fugitives (Unit ID FUG-1), oil tanks (Unit ID TK-1 through TK-4), and combustor (Unit ID ECD-1) are subject to NSPS OOOOa. | ENG 1, FUG-1, TK-1 through TK-4, ECD-1 |
| NSPS 40 CFR Part 60 Subpart OOOO | Standards of Performance for Crude Oil and Natural Gas Production, Transmission, and Distribution | If there is a standard or other requirement, then the facility is an "affected facility." Currently there are standards for: gas wells (60.5375); centrifugal compressors (60.5380); reciprocating compressors (60.5385): controllers (60.5390); storage vessels (60.5395); equipment leaks (60.5400); sweetening units (60.5405).<br><br>**If standards apply, list the unit number(s) and regulatory citation of the standard that applies to that unit (e.g. Centrifugal Compressors 1a-3a are subject to the standards at 60.5380(a)(1) and (2) since we use a control device to reduce emissions)** | ☐ **Check this box if VRU is controlling Storage Vessel emissions and the facility is subject to the requirements under 60.5411(b) and (c)** | N/A |

| FEDERAL REGULATIONS CITATION | Title | JUSTIFICATION: | Applicant's Justification of Applicability | Identify if applies to Entire Facility or Unit No(s) |
|---|---|---|---|---|
| NSPS<br>40 CFR Part<br>60 Subpart<br>OOOOa | Standards of Performance for Crude Oil and Natural Gas Facilities for which Construction, Modification or Reconstruction Commenced After September 18, 2015 | If there is a standard or other requirement, then the facility is an "affected facility." Currently there are standards for: gas wells (60.5375a); centrifugal compressors (60.5380a); reciprocating compressors (60.5385a): controllers (60.5390a); storage vessels (60.5395a); fugitive emissions at well sites and compressor stations (60.5397a); equipment leaks at gas plants (60.5400a); sweetening units (60.5405a).<br><br>**If standards apply, list the unit number(s) and regulatory citation of the standard that applies to that unit (e.g. Centrifugal Compressors 1a-3a are subject to the standards at 60.5380(a)(1) and (2) since we use a control device to reduce emissions)** | ☐ **Check this box if VRU is controlling Storage Vessel emissions and the facility is subject to the requirements under 60.5411a(b) and (c)**<br><br>The oil storage tanks at this location are subject to NSPS Subpart OOOOa because the oil tanks are affected facilities with VOC emissions greater than 6 tons per year per tank (60.5365a(e)). Devon will meet the 95% control requirement (60.5395a(a)(2)) by operating a combustor that meets the requirements of 60.5412a(d)(3). Devon will also comply with the applicable control requirements under 60.5395a(b).<br>Fugitive equipment components are subject to LDAR requirements. Devon will conduct routine fugitive leak monitoring using optical gas imaging (OGI) or EPA Method 21. | TK-1 through TK-4, ECD-1, FUG-1 |

Title 40: Protection of Environment
PART 60—STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES (CONTINUED)
Subpart JJJJ—Standards of Performance for Stationary Spark Ignition Internal Combustion Engines

TABLE 1 TO SUBPART JJJJ OF PART 60—$NO_X$, CO, AND VOC EMISSION STANDARDS FOR STATIONARY NON-EMERGENCY SI ENGINES ≥100 HP (EXCEPT GASOLINE AND RICH BURN LPG), STATIONARY SI LANDFILL/DIGESTER GAS ENGINES, AND STATIONARY EMERGENCY ENGINES >25 HP

| Engine type and fuel | Maximum engine power | Manufacture date | Emission standards[a] | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | g/HP-hr | | | ppmvd at 15% $O_2$ | | |
| | | | $NO_X$ | CO | VOC[d] | $NO_X$ | CO | VOC[d] |
| Non-Emergency SI Natural Gas[b] and Non-Emergency SI Lean Burn LPG[b] | 100≤HP<500 | 7/1/2008 | 2.0 | 4.0 | 1.0 | 160 | 540 | 86 |
| | | 1/1/2011 | 1.0 | 2.0 | 0.7 | 82 | 270 | 60 |
| Non-Emergency SI Lean Burn Natural Gas and LPG | 500≤HP<1,350 | 1/1/2008 | 2.0 | 4.0 | 1.0 | 160 | 540 | 86 |
| | | 7/1/2010 | 1.0 | 2.0 | 0.7 | 82 | 270 | 60 |
| Non-Emergency SI Natural Gas and Non-Emergency SI Lean Burn LPG (except lean burn 500≤HP<1,350) | HP≥500 | 7/1/2007 | 2.0 | 4.0 | 1.0 | 160 | 540 | 86 |
| | HP≥500 | 7/1/2010 | 1.0 | 2.0 | 0.7 | 82 | 270 | 60 |
| Landfill/Digester Gas (except lean burn 500≤HP<1,350) | HP<500 | 7/1/2008 | 3.0 | 5.0 | 1.0 | 220 | 610 | 80 |
| | | 1/1/2011 | 2.0 | 5.0 | 1.0 | 150 | 610 | 80 |
| | HP≥500 | 7/1/2007 | 3.0 | 5.0 | 1.0 | 220 | 610 | 80 |
| | | 7/1/2010 | 2.0 | 5.0 | 1.0 | 150 | 610 | 80 |
| Landfill/Digester Gas Lean Burn | 500≤HP<1,350 | 1/1/2008 | 3.0 | 5.0 | 1.0 | 220 | 610 | 80 |
| | | 7/1/2010 | 2.0 | 5.0 | 1.0 | 150 | 610 | 80 |
| Emergency | 25<HP<130 | 1/1/2009 | [c]10 | 387 | N/A | N/A | N/A | N/A |
| | HP≥130 | | 2.0 | 4.0 | 1.0 | 160 | 540 | 86 |

[a]Owners and operators of stationary non-certified SI engines may choose to comply with the emission standards in units of either g/HP-hr or ppmvd at 15 percent $O_2$.

[b]Owners and operators of new or reconstructed non-emergency lean burn SI stationary engines with a site rating of greater than or equal to 250 brake HP located at a major source that are meeting the requirements of 40 CFR part 63, subpart ZZZZ, Table 2a do not have to comply with the CO emission standards of Table 1 of this subpart.

[c]The emission standards applicable to emergency engines between 25 HP and 130 HP are in terms of $NO_X$ + HC.

[d]For purposes of this subpart, when calculating emissions of volatile organic compounds, emissions of formaldehyde should not be included.

[76 FR 37975, June 28, 2011]
