

Permit

Submitted 5/7/10
by Chris Lopez
after his
Public Comment

ort of the Hazardous Waste Permit for Los Alamos National Laboratory to continue
ntinue to conduct cutting edge research and development for our nation.

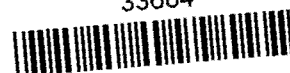

I am also in support of Open Burning activities in support of IED and counterterrorism training for our troops fighting wars in Afghanistan and Iraq.

The denial of the Open Burning permit by the New Mexico Environment Department is based on a very conservative risk assessment that showed a low risk to deer mice and earthworms. This issue is not enough to derail the important mission that LANL conducts to protect our troops from further harm from IEDs or the necessary training conducted for the Department of Defense regarding field identification of IEDs.

By my signature below, I am asking NMED to grant the Los Alamos National Laboratory a hazardous waste permit that includes the Open Burning provision. I also understand I can submit a more detailed and private citizen comment to: John Kieling at john.kieling@state.nm.us
