Terracon Project No. 66127029

Dear Ms. Roybal:

Terracon Consultants, Inc. (Terracon) is pleased to submit this Minimum Site Assessment (MSA) report for the above referenced site. This investigation was performed in accordance with Terracon's Proposal Number P6612-0260 dated October 26, 2012 and your authorization to proceed dated October 29, 2012.

We appreciate the opportunity to perform these services for you. Please contact Mark Hillier at (505) 797-4287 if you have questions regarding the information provided in the report.

Sincerely,
Terracon Consultants, Inc.

Terracon Project No. 66127029

March 12, 2013

EXECUTIVE SUMMARY

The Former Fairview Station (the Site) is located at 1626 N. Riverside Drive, Española, Rio Arriba County, New Mexico. The Site was initially developed as a gas station in the 1970s. At that time, two underground storage tanks (USTs) were apparently installed at the site; however, the location of the USTs and associated dispensers could not be confirmed. According to New Mexico Environment Department (NMED) Petroleum Storage Tank Bureau (PSTB) records, these USTs were removed from the site and were replaced with one 10,000-gallon gasoline and two 8,000-gallon gasoline USTs in August 1989. The USTs were located in the north-central portion of the site and the four associated dispensers were located southwest of the UST hold. This UST system was removed from the site in July 2012 and stained soils and petroleum odors were observed during the removal. Based on the results of soil samples collected during the UST removal, the NMED PSTB confirmed a release on August 6, 2012.

Terracon subcontracted the installation of soil borings and monitoring wells as part of this Minimum Site Assessment (MSA) on January 31 and February 1, 2013. Five soil borings were advanced on the site to depths ranging from 25 feet to 30 feet below grade surface (bgs) by a New Mexico licensed water well driller. Soil boring B-1, advanced in the northeast corner of the UST hold, soil boring B-2, advanced adjacent to the former location of the northeast dispenser, and soil boring B-3, advanced south of the dispenser islands, were converted to permanent groundwater monitoring wells MW-1, MW-2 and MW-3, respectively. The general lithology observed during soil boring advancement consisted of interbedded sand and clay.

Soil samples were collected from each soil boring from the interval exhibiting the highest field evidence of environmental impact. One groundwater sample was collected from monitoring well MW-1; however, groundwater samples were not collected from monitoring wells MW-2 or MW-3 based on the presence of phase-separate hydrocarbons (PSH) in these two monitoring wells.

The soil and groundwater samples collected from the borings and monitoring well were submitted for laboratory analysis for total petroleum hydrocarbons (TPH), benzene, toluene, ethyl benzene, total xylenes (BTEX) and methyl tert-butyl ether (MTBE), 1,2-Dibromoethane (EDB), 1,2-Dichloroethane (EDC), polycyclic aromatic hydrocarbons (PAHs) and/or total lead. Based on the results of laboratory analyses, the soils in the vicinity of soil borings B-1, B-2, B-3 and B-4 have been affected by a release of unleaded gasoline and exhibit concentrations of BTEX, MTBE and/or naphthalene at concentrations exceeding NMED Tier 1 Soil Concentrations Protective of Groundwater dated March 13, 2000. In addition, a groundwater sample collected from monitoring well MW-1 exhibited concentrations of BTEX, MTBE, EDC,

naphthalene and 1-methylnaphthalene exceeding Water Quality Control Commission standards dated March 13, 2000.

Based on the results of this MSA, Terracon recommends the completion of a compliance determination for the current site owner, the installation of additional monitoring wells to delineate the horizontal and vertical extent of groundwater exceeding WQCC standards, interim removal of PSH from the on-site monitoring wells, and an evaluation of the affected aquifer for the recoverability of PSH.

1.0 CHRONOLOGY OF EVENTS

- 1970s – Site initially developed with the Fairview Station operating two USTs.
- December 1, 1988 – The two original USTs are removed from the site with no releases reported. The Fairview Station is temporarily closed pending installation of replacement USTs.
- August 7, 1989 – Two 8,000-gallon gasoline USTs and one 10,000-gallon gasoline UST and four dispensers are installed at the site.
- July 5, 2012 – The three on-site USTs and associated piping and dispensers are removed. Field observations indicate a release has occurred.
- August 6, 2012 – The NMED PSTB issues a release confirmation letter to Mr. José C. Roybal, the site owner.
- November 16, 2012 - Terracon submits a MSA Work Plan to the PSTB.
- December 13, 2012 – NMED PSTB approves MSA Work Plan.
- January 31, 2012 – Terracon mobilizes to the site to conduct MSA field activities.
- March 8, 2012 – Terracon submits this MSA to the NMED PSTB.

2.0 BACKGROUND

2.1 Site Description

Site Name	Fairview Station, Facility ID#: 28779
Site Location/Address	1626 N. Riverside Drive, Española, Rio Arriba County, New Mexico
General Site Description	An approximate 0.5-acre tract of land developed with an approximate 600 square-foot (SF) former gas station building

A topographic map depicting the site location is included as Exhibit 1, and a site diagram is included as Exhibit 3 of Appendix B.

2.2 Description of UST System

The original UST system was reportedly removed from the site in December 1988 and releases were not reported at the time of the UST system removal. According to the PSTB database, five USTs have been removed from the site. Based on this information and the documented removal of three USTs in 2012, two USTs are assumed to have originally been in use at the site.

One 10,000-gallon gasoline and two 8,000-gallon gasoline USTs were installed in the north-central portion of the site in August 1989 and were removed in July 2012. Four dispensers associated with the USTs were located southwest of the UST tank basin. It is our understanding, based upon an NMED PSTB Inspection Report for the site dated July 5, 2012, that the USTs were constructed of steel and were equipped with cathodic protection. The associated piping was constructed of fiberglass. The dispensers were connected using steel flexes with cathodic protection. The USTs and piping system were reportedly free of holes or other visible damage at the time of removal.

2.3 Site Geology and Hydrogeology

2.3.1 Local Geology

Based on our review of the *Preliminary Geologic Map of San Juan Pueblo Quadrangle*, prepared by Daniel J. Koning and Kim Manley (August 2003), the site is located on Younger Quaternary Alluvium. A portion of the geologic map is included as Exhibit 2 in Appendix B. This formation consists of sand, silt and mud, silty sand, gravelly sand, and sandy gravel that underlie modern valley floors. Beds are mostly planar to lenticular to channel-shaped, and laminated to very thin- to thick-bedded. Gravel is commonly clast-supported, poorly sorted, rounded to subangular, and generally consists of pebbles and cobbles. Sand is very fine- to very coarse-grained, subangular to subrounded, and poorly to well sorted. Texture and composition of sediment depends on source area drainage. Weakly consolidated to loose, but silt and mud beds may be moderately consolidated. Basal contact not generally exposed, but drilling and seismic data also indicate that this unit overlies older (perhaps Pleistocene-age) sandy gravels deposited by the ancestral Rio Grande.

Based on stratigraphy encountered during on-site drilling, the shallow geology of the site consists of:

- Well-graded sand from the surface to approximately five feet bgs;
- Clay with some silt from approximately five feet bgs to approximately 20 feet bgs;
- Well-graded sand with some gravel from 20 feet bgs to the terminus of the borings at 28 feet bgs.

2.3.2 Local Hydrogeology

Based on Terracon's review of a document titled *General Geology and Ground Water Conditions in the Truchas-Española-Velarde Area of Rio Arriba County, New Mexico*, by R. L. Borton with the OSE (1974), the Rio Grande appears to be a gaining stream in the vicinity of the site with a general gradient direction toward the west in the vicinity of the site. In addition, groundwater elevation data collected from the three monitoring wells installed at the site indicates that the gradient at the site is relatively flat with a gradient toward the west of approximately 0.004 ft./ft.

The water-bearing stratum at the site appears to Quaternary alluvium consisting of a silty to gravelly sand unit overlain by silt and clay. Based on the low moisture content of overlying soils and static water levels measured subsequent to monitoring well installation, this sand stratum appears to be confined on site.

PSH was detected in each of the three on-site monitoring wells at thicknesses ranging from 0.34 feet to 5.45 feet. A correction factor of 0.729, commonly accepted as the density of gasoline, was used for the purpose of correcting the static groundwater elevation in these wells. The actual density of the PSH observed in the wells has not been evaluated and differences in density from the assumed value would affect the calculated groundwater gradient direction. Static groundwater levels (corrected for PSH thickness) were measured at depths of approximately 14 feet bgs on February 27, 2013.

2.4 Standard of Care

Terracon's services were performed in a manner consistent with generally accepted practices of the profession undertaken in similar studies in the same geographical area during the same time period. Terracon makes no warranties, either express or implied, regarding the findings, conclusions or recommendations. Please note that Terracon does not warrant the work of laboratories, regulatory agencies or other third parties supplying information used in the preparation of the report. These services were performed in accordance with the scope of work agreed with you, our client, as set forth in our proposal and were not intended to be in strict conformance with ASTM E1903-97.

2.5 Additional Scope Limitations

Findings, conclusions and recommendations resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, non-detectable or not present during these services, and we cannot represent that the site contains no hazardous substances, toxic materials, petroleum products, or other latent conditions beyond those identified during this MSA. Subsurface conditions may vary from those encountered at specific borings or during other surveys, tests, assessments, investigations or exploratory services; the data, interpretations, findings, and our recommendations are based solely upon data obtained at the time and within the scope of these services.

2.6 Reliance

This report has been prepared for the exclusive use of Ms. Lucille Roybal, P.E. and the NMED PSTB, and any authorization for use or reliance by any other party (except a governmental entity having jurisdiction over the site) is prohibited without the express written authorization of

Ms. Lucille Roybal, P.E. and Terracon. Any unauthorized distribution or reuse is at the client's sole risk. Notwithstanding the foregoing, reliance by authorized parties will be subject to the terms, conditions and limitations stated in the proposal, MSA report, and Terracon's Terms and Conditions. The limitation of liability defined in the terms and conditions is the aggregate limit of Terracon's liability to the client and all relying parties unless otherwise agreed in writing.

3.0 SITE INVESTIGATION

3.1 Water Well Survey

Terracon conducted a review of water supply wells within a 1,000 foot radius of the site based on information obtained from the New Mexico Office of the State Engineer (OSE) website. Based on our review of the OSE database, one well with log information and four wells without well log information were identified within 1,000 feet of the site. Three of the wells without log information (RG 93769 POD 1-3) correspond to the monitoring wells installed at the site as part of this MSA. The closest well, RG 10466 S, is located approximately 300 feet south of the site and is designated as a subdivision well. Based on this designation, well RG 10466 S may meet the qualifications as a public supply well. A map depicting the locations of the two off-site water wells located within a 1,000-foot radius of the site is provided as Exhibit 10 in Appendix B.

The City of Española obtains potable water from four groundwater wells located in the northeast portion of the city. These public supply wells are located on the west side of the Rio Grande. One of these wells, RG 03067 S15, is located within a one-mile radius of the site. The city provides potable water to the community through a network of supply pipes. Terracon conducted a review of public supply wells within a one-mile radius of the site based on information obtained from the New Mexico Office of the State Engineer (OSE) website. Based on the OSE database information, 51 water wells are located within a one-mile radius of the site. Of these 51 water wells, one well (RG 03067 S15) is a public supply well for the City of Española, two wells are designated as water wells for multiple domestic households (RG 76868 and RG 52608) and one well, (RG 01466) is designated as a water well for a subdivision. An additional well (RG 84054) does not have a designated use in the OSE database. These five water wells may meet the qualifications as a public supply well. The designations for the remaining water wells do not correspond to potential public supply well designations. A map depicting the locations of the three potential public supply wells within a one-mile radius of the site is provided as Exhibit 11 in Appendix B. Information obtained from the OSE database for all wells within a one-mile radius of the site follows Exhibit 11.

Based on the absence of a current delineation of the groundwater impacted by the on-site release, it is currently unknown if the identified water wells have been affected by the on-site release. However, based on the distances of at least 300 feet from the site to the well locations and their respective locations hydrogeologically cross- to up-gradient positions relative to the site, it is Terracon's opinion that the likelihood that the identified wells have been affected is low.

3.2 Receptor Survey

Terracon conducted a visual assessment of properties within a 1,000-foot radius of the site for indications of potential sensitive receptors. With the exception of potentially affected buried utility conduits, sensitive receptors were not identified. A map depicting the locations of buried utilities adjoining the site is provided as Exhibit 4 in Appendix B and a map depicting the land use within 1,000-feet of the site is provided as Exhibit 12 in Appendix B.

3.3 Surface Waters

Surface water bodies were not identified within a 500-foot radius of the site. The nearest surface water body is an unnamed tributary of the Rio Grande approximately 1,300 feet west of the site.

3.4 Soil Assessment

Terracon's field activities were conducted on January 31, 2013 and February 1, 2013. Buried utilities were located in accordance with state regulations prior to drilling activities. In addition, well permits were obtained from the OSE prior to monitor well installation. In accordance with the approved Work Plan, soil boring B-1 was advanced in the northeast portion of the former UST hold, soil boring B-2 was advanced adjacent to the former location of the northeast dispenser, soil boring B-3 was advanced approximately 20 feet south of the southern dispensers, soil boring B-4 was advanced along the northern site boundary, and soil boring B-5 was advanced approximately 10 feet southeast of the on-site building. Exhibit 3 is a site diagram that indicates the approximate locations of the soil borings in relation to the pertinent structures and general site boundaries.

Drilling services were performed by a State of New Mexico licensed Well Driller using a truck-mounted hollow stem auger (HAS) rig under the supervision of a Terracon field environmental professional. Soil samples were collected using five-foot core barrels. Drilling equipment was cleaned using an Alconox® wash and potable water rinse prior to beginning the project and before beginning each soil boring. Sampling equipment was cleaned using an Alconox® wash and potable water rinse prior to the beginning of the project and before collecting each soil sample.

Soil samples were collected continuously and observed to document soil lithology, color, moisture content and sensory evidence of impairment. The soil samples were field-screened using a photoionization detector (PID) to indicate the presence of volatile organic compounds (VOCs).

The general soil lithology encountered during sample collection consisted of the following:

- Well-graded sand from the surface to approximately five feet bgs;
- Clay with some silt from approximately five feet bgs to approximately 20 feet bgs;
- Well-graded sand with some gravel from 20 feet bgs to the termini of the borings at 28 feet bgs.

Detailed lithologic descriptions are presented on the soil boring logs included in Appendix C. A cross-section depicting the soils encountered at the site is included as Exhibit 6 in Appendix B.

3.4.1 Soil Extent of Contamination

Terracon's soil sampling program involved submitting one soil sample from each soil boring for laboratory analysis of TPH using EPA SW-846 method #8015B, and BTEX, MTBE, EDB and EDC using EPA SW-846 method #8260B. The soil samples were preserved in the field using methanol kits supplied by the analytical laboratory. Based on the results of TPH analyses, the soil sample collected from soil boring B-4, exhibiting the highest gasoline range organics (GRO) and diesel range organics (GRO) TPH result was additionally analyzed for PAHs using EPA SW-846 method #8270C and for lead using EPA SW-846 method #6010B. The soil samples were generally collected from the zone exhibiting the highest PID reading. Soil sample intervals for each boring are presented in the table of soil sample analytical results (Table 1) in Appendix E and on the lithologic boring logs included in Appendix C.

The soil samples were collected and placed in laboratory prepared glassware, sealed with custody tape and placed on ice in a cooler which was secured with a custody seal. The sample coolers and completed chain-of-custody forms were relinquished to Hall Environmental Analysis Laboratory in Albuquerque, New Mexico for analysis.

The soil samples collected from soil borings B-1, B-2, B-3 and B-4 exhibited concentrations of BTEX exceeding the Tier 1 Soil Concentrations Protective of Groundwater (SCPGs). In addition, the soil samples collected from soil borings B-2, B-3 and B-4 exhibited concentrations of MTBE exceeding the applicable Tier 1 SCPG and the soil sample collected from soil boring B-4 exhibited a naphthalene concentration exceeding the applicable Tier 1 SCPG. In addition, the detection limits for EDB and EDC were above the applicable Tier 1 SCPGs in each of the samples analyzed and the detection limit for MTBE and benzene for the soil sample collected from soil boring B-5 were above the applicable Tier 1 SCPGs. Based on the absence of detections of additional PAH constituents exceeding the Tier 1 SCPGs in the soil sample collected from soil boring B-4, which exhibited the highest TPH DRO concentration, significant releases of diesel do not appear to have been occurred at the site. Based on the absence of an elevated lead concentration in the soil sample collected from soil boring B-4, which exhibited the highest TPH GRO concentration, significant releases of leaded gasoline do not appear to have occurred at the site. Soil sample laboratory results are summarized in Table 1 included in Appendix E. The executed chain-of-custody form and laboratory data sheets are provided in Appendix F. A soil concentration map is provided as Exhibit 7 in Appendix B.

In addition to the samples collected for analysis of petroleum related constituents, one soil sample was collected from soil boring B-5 from 18-19 feet bgs for analysis of fraction organic carbon. This soil sample exhibited a fraction organic carbon content of less than 0.10%.

Based on the results of soil analyses, the extent of soil contamination exceeding Tier 1 SCPGs has not been fully delineated.

3.5 Groundwater Assessment

Subsequent to advancement, soil borings B-1, B-2 and B-3 were converted to permanent two-inch diameter monitoring wells. The monitoring wells were completed using the following methodology:

- Installation of 15 feet of 2-inch diameter, 0.010-inch machine slotted PVC well screen with a threaded bottom cap;
- Installation of 13 feet of 2-inch diameter, threaded, flush joint PVC riser pipe to the surface;
- Addition of a pre-sieved 10/20-grade annular silica sand pack from the bottom of the boring to approximately 2 feet above the top of the well screen;
- Addition of 2 feet of hydrated bentonite seal above the sand pack filter zone;
- Addition of a slurry mixture of powdered bentonite and Portland cement to the near surface;
- Installation of an 8-inch diameter, circular, bolt-down, steel, monitoring well cover with locking well cap inset in a flush-mount, concrete well pad.

A New Mexico licensed land surveyor was contracted to survey the top of casing of the three monitoring wells horizontally and vertically. The horizontal data was provided in New Mexico State Plane coordinates to an accuracy of 0.001 foot and the vertical data was provided in elevation above mean sea level to an accuracy of 0.01 foot. The west side of the top of casings was surveyed at each well location. The surveyor's report is provided in Appendix B. Monitoring well construction details are presented on the soil boring logs for these monitoring wells and are included in Appendix C. The depth to groundwater measurements and PSH thickness data are presented in Table 3 in Appendix E.

Subsequent to installation, each monitoring well was gauged with an interface meter to evaluate the presence of PSH. PSH was identified in monitoring wells MW-2 and MW-3 and based on the presence of PSH; these monitoring wells were not developed. Monitoring well MW-1 developed by surging and removing groundwater with a new, disposable, polyethylene bailer until the groundwater was relatively free of fine-grained sediment. Approximately 25 gallons of groundwater were removed from monitoring well MW-1 during development activities. This development water was discharged in an impervious surface on the site and allowed to evaporate in accordance with NMED PSTB guidance.

On February 4, 2013, monitoring well MW-1 was purged by removing three well volumes of water with a new disposable bailer prior to sampling. Subsequent to purging, a groundwater sample was collected from monitoring well MW-1 using a new disposable polyethylene bailer. Subsequent to sufficient recharge, one groundwater sample was collected from each monitoring well utilizing a new, disposable, polyethylene bailer. The groundwater sample was collected and placed in laboratory prepared glassware, sealed with custody tape and placed on ice in a cooler which was secured with a custody seal. The sample cooler and completed chain-of-custody form were relinquished to Hall Environmental Analysis Laboratory in Albuquerque, New Mexico for analysis.

On February 1, 2013, approximately 4.5 gallons of PSH was removed from monitoring well MW-2 and approximately 0.5 gallon of PSH was removed from monitoring well MW-3. On February 4, 2013, approximately five gallons of PSH was removed from monitoring well MW-2 and approximately two gallons of PSH was removed from monitoring well MW-3. The PSH was placed in a 55-gallon drum, which was labeled and staged on site.

3.5.1 Groundwater Extent of Contamination

Based on the results of laboratory analyses, the groundwater sample collected from monitoring well MW-1 exhibited concentrations of BTEX, MTBE, EDC, naphthalene and 1-methylnaphthalene exceeding New Mexico Water Quality Control Commission (WQCC) standards. In addition, the detection limit for EDB was above the WQCC standard. Groundwater sample laboratory results are summarized in Table 2 included in Appendix E. The executed chain-of-custody form and laboratory data sheets are provided in Appendix F. A groundwater concentration map is provided as Exhibit 8 in Appendix B.

Based on depth to groundwater data and PSH thickness data collected from the three on-site monitoring wells and the top of casing elevation data provided by the land surveyor, the groundwater flow direction at the site was calculated to flow toward the west-northwest at a gradient of 0.004 ft./ft. A correction factor of 0.729, commonly accepted as the density of gasoline, was used for the purpose of correcting the static groundwater elevation in these wells. The actual density of the PSH observed in the wells has not been evaluated and differences in density from the assumed value would affect the calculated groundwater gradient direction. Static groundwater levels (corrected for PSH thickness) were measured at depths of approximately 14 feet bgs on February 27, 2013. A groundwater gradient map is provided as Exhibit 4 in Appendix B.

Based on the WQCC standard exceedances in the groundwater sample collected from monitoring well MW-1 and the presence of PSH in monitoring wells MW-2 and MW-3, the extent of groundwater contamination exceeding WQCC standards has not been defined.

4.0 AMENDMENTS / UNANTICIPATED SITE CONDITIONS

Unanticipated site conditions, beyond the presence of PSH, were not encountered during Terracon's assessment activities. PSH detected in monitoring wells MW-2 and MW-3 was removed by hand bailing as detailed in Section 3.5 above.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Five soil borings (B-1, B-2, B-3, B-4 and B-5) were advanced at the Fairview Station facility located at 1626 N. Riverside Drive in Española, Rio Arriba County, New Mexico. Soil borings B-1, B-2 and B-3 were converted to permanent two-inch diameter monitoring wells MW-1, MW-2 and MW-3, respectively.

Based on the results of Terracon's assessment activities, Terracon concludes the following:

- The on-site soils in the vicinity of soil borings B-1, B-2, B-3 and B-4 have been impacted by a release of unleaded gasoline and exhibit concentrations of BTEX, MTBE and/or naphthalene at concentrations exceeding Tier 1 SCPGs.
- The depth to groundwater at the site is approximately 15 feet bgs with a gradient of 0.004 ft./ft. toward the west-northwest.
- A groundwater sample collected from monitoring well MW-1 exhibited concentrations of BTEX, MTBE, EDC, naphthalene and 1-methylnaphthalene exceeding WQCC standards.
- Approximately 0.34 foot of PSH was encountered in monitoring well MW-1 subsequent to sampling, approximately 5.45 feet of PSH was encountered in monitoring well MW-2, and approximately 2.89 feet of PSH was encountered in monitoring well MW-3 during gauging activities on February 27, 2013.
- Based on the results of Terracon's receptor survey, buried utilities adjoining the site may be affected by the release. Land use within a 1,000-foot radius of the site is primarily commercial and residential with areas of institutional, agricultural and undeveloped land.

Based on the results of this MSA, Terracon recommends the following:

- The completion of a compliance determination for the current site owner
- The installation of additional monitoring wells to delineate the horizontal and vertical extent of groundwater exhibiting WQCC standard exceedances
- Interim removal of PSH from the on-site monitoring wells
- An evaluation of the affected aquifer for the recoverability of PSH

6.0 STATEMENT OF FAMILIARITY

This report was prepared by Mr. Mark R. Hillier, P.G. and was reviewed by Mr. Daniel F. Schneider, C.H.M.M, whom is personally familiar with the information submitted in this report and the attached documents and attests that it is true and complete.

Attachments 1 and 2 are part of 14 Day Report. Update and resubmit as appropriate.

1.	Most recent UST system test results.	☐
2.	Vapor screening results for utilities.	☐
3.	Estimation of NAPL present: Estimated thickness vs measured thickness of NAPL. Include calculation brief for estimated thickness.	☐
4.	Monitoring well construction digram.	☑
5.	Representative soil boring logs: cross-section(s) showing the stratigraphy of the site and the extent of contamination.	☑
6.	Historical groundwater monitoring data for all the monitoring wells. Include any data collected from temporary wells or borings.	☐
7.	Contaminant concentration and depth to groundwater vs. time graphs for wells with four or more sampling events.	☐

ADDITIONAL ATTACHMENTS:

	Laboratory analytical report(s) not previously submitted to the department.

NEW MEXICO RBDM	INVESTIGATION REPORT	FORM NO. 1
SITE ID: 4657	**FACILITY ID: 28779**	
SUBMITTAL DATE: 12-Mar-13	**PREPARED BY: Mark R. Hillier - Terracon Consultants,**	

EXECUTIVE SUMMARY

Facility name:	*Fairview Station*
Facility address:	*1626 N. Riverside Drive*
	Espanola, Rio Arriba County, New Mexico
Status of UST system facility:	☐ Active ☑ Inactive
Ground surface condition:	*Partially paved*
Estimated volume and type of product(s) released:	*Unknown volume of unleaded gasoline*
Has any vapor impacts been identified?	☑ No ☐ On-site ☐ Off-site
If yes (check all that apply):	☐ Utility corridor ☐ Subsurface structures ☐ Above surface structures
Is soil contaminated?	☐ No ☑ On-site ☐ Off-site
Is there any contaminant-saturated soil?	☐ No ☑ On-site ☐ Off-site
Is groundwater contaminated?	☐ No ☑ On-site ☐ Off-site
Has the source of release been identified?	☑ Yes ☐ No
Has NAPL ever been detected?	☑ Yes ☐ No
Was NAPL removed?	☑ Yes ☐ No *Approx. 12 Gallons*
Was NAPL detected in the most recent sampling event?	☑ Yes ☐ No
Has surface water been contaminated by the release?	☐ Yes ☑ No ☐ Unknown ☐ Suspected
Shallowest depth to groundwater (ft bgs.):	*14.15 (static elevation corrected for PSH)*
Average depth to groundwater (ft bgs.):	*14.44 (static elevations corrected for PSH)*
Has a drinking water supply well been contaminated by this release?	☐ Yes ☐ No ☑ Unknown ☐ Suspected
If yes	☐ Drinking ☐ Irrigation ☐ Other

RECOMMENDATIONS

- ☐ Collect additional soil data
- ☑ Collect additional groundwater data
- ☑ Continue NAPL removal
- ☐ Perform interim remedial action
- ☐ GW monitoing
- ☐ Perform a tier 1 evaluation

ADDITIONAL NOTES

NEW MEXICO RBDM	INVESTIGATION REPORT	FORM NO. 2

SITE ID: 4657	FACILITY ID: 28779
SUBMITTAL DATE: 12-Mar-13	PREPARED BY: Mark R. Hillier - Terracon Consultant

NAPL INFORMATION

Has NAPL been found at the site?	☑ Yes ☐ No
(Note if No, proceed to the next report form)	
Date NAPL first reported at the site (if known):	***31-Jan-13***
Type(s) of NAPL released:	***Gasoline***
Estimated quantity of NAPL present (attach calculation brief):	***Unknown***
List the monitoring wells currently containing NAPL:	***MW-1, MW-2 and MW-3***
Has NAPL removal been initiated?	☑ Yes ☐ No
If Yes, specify method of removal (bailer, pump, etc.)?	***Bailer***
If No, cite reason:	
Frequency of removal (weekly, monthly, etc.):	***Conducted at time of well installation and sampling only***
Total number of recovery events to date:	***2***
Total amount of water recovered:	***Approximately 10 gallons removed with PSH***
Water disposal method:	***Staged on-site***
Total amount of NAPL recovered:	***Approximately 12 gallons***
NAPL disposal method:	***Staged on-site in DOT approved 55-gallon drum***
Date of latest NAPL report submittal:	***no previous reports submitted***

ADDITIONAL NOTES

NEW MEXICO RBDM	INVESTIGATION REPORT	FORM NO. 3

SITE ID: 4657	FACILITY ID: 28779
SUBMITTAL DATE: 12-Mar-13	PREPARED BY: Mark R. Hillier - Terracon Consultan

SITE STRATIGRAPHY AND HYDROGEOLOGY

STRATIGRAPHY OF THE SITE

Depth [feet]	Unified soil classification	Type of soil
0-5	*SW*	*Sand, well-graded, brown, moist*
5-19	*CL*	*Clay, silty, brown moist*
19-28	*SW*	*Sand, well-graded, brown, wet*

Predominant soil type: *Interbedded clay, sand and silt*

Depth [feet]	Type of bedrock & geological formation (discuss rock properties and features)
	Bedrock was not encountered above the terminus of the on-site soil borings at 28 ft. bgs

HYDROGEOLOGY OF THE SATURATED ZONE

Type of contaminated aquifer(s)? ☑ Confined ☐ Unconfined ☐ Perched

Underlying predominant aquifer name:	*Tesuque Formation*
TDS of contaminated aquifer(s) [mg/L]	*Unknown*
Describe groundwater level fluctuations:	*Unknown based on one sampling event*
Average depth to static water level:	*14.44 ft. bgs based on PSH corrections*
Average static water elevation relative to MSL [ft]	*5608.47*
Flow direction:	*West-northwest*
Hydraulic gradient (i) [ft/ft]:	*0.004*
Hydraulic conductivity (K) [cm/day]:	*Unknown*

Hydraulic conductivity test method:

☐ Grain size/Sieve analysis ☐ Slug test ☐ Pumping test; Duration (hrs):

☐ Other (*specify and attach literature as appropriate*)

Darcy velocity (K x i) [cm/year]:

Annual precipitation (average for last 10 years) [cm/year]: *9.88 per Western Regional Climate Center, 2013*

UNSATURATED ZONE CHARACTERISTICS

	Values/range			Method
Dry bulk density [g/cm^3]		☐ Estimated	☐ Measured	
Estimated porosity (θ) [cm^3/cm^3]:		☐ Estimated	☐ Measured	
Water content in volumetric units [cm^3/cm^3]:		☐ Estimated	☐ Measured	
Fractional organic carbon content [g-C/g-soil]:	*<0.10%*	☐ Estimated	☑ Measured	*Walkley-Black*

NEW MEXICO RBDM	INVESTIGATION REPORT	[redacted]

SITE ID: 4657	FACILITY ID: 28779
SUBMITTAL DATE: 12-Mar-13	PREPARED BY: Mark R. Hillier - Terracon Consultants, Inc.

ADDITIONAL NOTES	

NEW MEXICO RBDM	INVESTIGATION REPORT	FORM NO. 7

SITE ID: 4657	FACILITY ID: 28779
SUBMITTAL DATE: 12-Mar-13	PREPARED BY: Mark R. Hillier - Terracon Consultants, Inc.

CONCLUSIONS AND RECOMMENDATIONS

1.	*Has NAPL been removed?*
	Yes. On February 1, 2013, approximately 4.5 gallons of PSH was removed from monitoring well MW-2 and approximately 0.5 gallon of PSH was removed from monitoring well MW-3. On February 4, 2013, approximately five gallons of PSH was removed from monitoring well MW-2 and approximately two gallons of PSH was removed from monitoring well MW-3. The PSH was placed in a 55-gallon drum, which was labeled and staged on site.
2.	*Has the site (soil and aquifer) been adequately investigated and characterized?*
	No. The horizontal and vertical extent of soil and groundwater impact have not been fully delineated.
3.	*Has the source soil(s) been delineated spatially and vertically, on-site and off-site? Are the available soil data collected within the last 5 years?*
	No
4.	*Has groundwater plume been delineated in all directions?*
	No
5.	*Have all relevant COCs (based on the product released) been analyzed for in soil and groundwater?*
	Yes
6.	*Have the recommended laboratory methods been used and required QA/QC met?*
	Yes

NEW MEXICO RBDM	INVESTIGATION REPORT	FORM NO. 7
SITE ID: 4657	FACILITY ID: 28779	
SUBMITTAL DATE: 12-Mar-13	PREPARED BY: Mark R. Hillier - Terracon Consultants, Inc.	

CONCLUSIONS AND RECOMMENDATIONS

7.	*Is the plume stable or shrinking, based on the concentration trend plots?*
	Unknown based on one sampling event
8.	*Are the groundwater contaminant concentrations in all monitoring wells below the applicable standards for the 8 consecutive quarters (4 consecutive quarters for wells with clear decreasing concentration trends)?*
	No
9.	*Is a waiver petition required for alternative groundwater protection standards? If the answer to Question No.8 is yes, no waiver petition is required and groundwater protection pathway need not be included in any risk-based evaluation of the site.*
	Yes
10.	*Other relevant information*
11.	*Is a tier 1 risk-based evaluation of the site necessary?*
	yes, subsequent to remediation
12.	*Is groundwater monitoring recommended?*
	yes, subsequent to remediation

REGISTERED PROFESSIONAL SURVEYOR

SKETCH NO. 13012

SURVEY NO. 13012

HORIZONTAL DATUM IS NEW MEXICO STATE PLANE COORDINATES CENTRAL ZONE (3002). VALUES FOR CONTROL POINT 1 WERE OBTAIN FROM A FOUR (4) HOUR STATIC OBSERVATION USING A TOPCON GR-3 GLOBAL POSITIONING SYSTEM (GPS). THE OBSERVATIONS WERE SUBMITTED TO NGS AND THE FOLLOWING VALUES WERE RETURNED IN AN NGS OPUS SOLUTION REPORT.

POINT DESIGNATION	NORTHING	EASTING	ELEVATION
CONTROL POINT 1	1825340.421	1695422.675	5623.39
MONITOR WELL 1	1825409.173	1695426.257	5622.71
MONITOR WELL 2	1825386.590	1695381.991	5622.99
MONITOR WELL 3	1825337.298	1695379.440	5623.02

ELEVATIONS WERE TAKEN AT THE TOP OF A 2 INCH PVC PIPE ON THE EXTREME WEST EDGE. ELEVATIONS ARE NAD 83

I, LARRY L. STERLING, A REGISTERED NEW MEXICO PROFESSIONAL SURVEYOR, REGISTRATION NO. 11010, CERTIFY THAT I CONDUCTED THIS SURVEY IN THE FIELD ON FEBRUARY 22, 2013 AND THAT THE DATA AND SKETCH PROVIDED HEREON ARE TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF.

RE: Permits to Drill Monitoring Wells, OSE File No. RG-93769 (PODs 1 thru 3), Jose Roybal, Rio Arriba County

Greetings,

Please find enclosed your original copies of Permits to Drill Monitoring Wells which have been **approved**. Please refer to the specific conditions of approval attached to the permits. These permits for groundwater remediation are of indeterminate length and will not automatically expire. Sampling and testing restrictions pertain to water quantity considerations and not the proposed use of the well for monitoring of contaminants over the life of the permit.

If you are aggrieved by this decision, you should so advise this office in writing before the expiration of thirty (30) days after receipt of this letter and request that the previous action be set aside and that a date for a hearing be set by the State Engineer. Request for hearing may be filed by facsimile, provided the original request is mailed and received within 24 hours of the facsimile. The applicant must indicate the date and time of transmission of the facsimile and also provide a cover letter confirming that the original will be mailed within 24 hours.

Please refer to the file number in any future dealings with this Office. If you have additional questions or further information is required, please do not hesitate to contact the District 6 office at (505) 827-6120 in Santa Fe.

Sincerely,

Antonio G. Trujillo
Water Rights Division
District 6, Santa Fe

NEW MEXICO OFFICE OF THE STATE ENGINEER

APPLICATION FOR PERMIT TO DRILL A WELL WITH NO CONSUMPTIVE USE OF WATER

(check applicable box):

For fees, see State Engineer website: http://www.ose.state.nm.us/

Purpose:	☐ Pollution Control And / Or Recovery	☐ Geo-Thermal
☐ Exploratory	☐ Construction Site De-Watering	☐ Other (Describe):
☒ Monitoring	☐ Mineral De-Watering	

A separate permit will be required to apply water to beneficial use.

☐ Temporary Request - Requested Start Date: Requested End Date:

Plugging Plan of Operations Submitted? ☐ Yes ☒ No

1. APPLICANT(S)

Name: Lucille Roybal	Name: Jose C. Roybal
Contact or Agent: Lucille Roybal check here if Agent ☐	Contact or Agent: Jose C. Roybal check here if Agent ☐

OFFICE OF STATE ENGINEER
SANTA FE, NEW MEXICO
2012 DEC 18 AM 11:20

FOR OSE INTERNAL USE — Application for Permit, Form wr-07, Rev 8/25/11

File Number:	Trn Number:
Trans Description (optional):	
Sub-Basin:	
PCW/LOG Due Date:	

2. WELL(S) Describe the well(s) applicable to this application.

Location Required: Coordinate location must be reported in NM State Plane (NAD 83), UTM (NAD 83), or Latitude/Longitude (Lat/Long - WGS84)

☐ NM State Plane (NAD83) (Feet)
☐ NM West Zone
☐ NM East Zone
☐ NM Central Zone

☐ UTM (NAD83) (Meters)
☐ Zone 12N
☐ Zone 13N

☒ Lat/Long (WGS84) (to the nearest 1/10th of second)

Well Number (if known):	X or Easting or Latitude:	Y or Northing or Longitude:	Optional: Complete boxes labeled "Other" below with PLSS (Public Land Survey System, i.e. Quarters, Section, Township, Range); Hydrographic Survey Map & Tract; Lot, Block & Subdivision; OR Land Grant Name if known.
MW-1	36°01'0.22"	106°03'50.25"	
MW-2	36°0'59.91"	106°03'50.19"	
MW-3	36°0'59.65"	106°03'50.14"	

NOTE: If more well locations need to be described, complete form WR-08 (Attachment 1 – POD Descriptions)
Additional well descriptions are attached: ☐ Yes ☒ No If yes, how many

Other description relating well to common landmarks, streets, or other: The wells will be located on the property at the southeast corner of North Riverside Drive (NM SR 68) and Calle Ranchitos, Espanola, NM. The site was occupied by a gas station.

Well is on land owned by: Jose C. Roybal

Well Information: NOTE: If more than one (1) well needs to be described, provide attachment. Attached? ☐ Yes ☒ No
If yes, how many _____ All 3 wells will have the same construction

Approximate depth of well (feet): 40	Outside diameter of well casing (inches): 2
Driller Name: Enviro-Drill	Driller License Number: WD-1186

3. ADDITIONAL STATEMENTS OR EXPLANATIONS

Three wells will be installed to evaluate potential releases to groundwater from a historical on-site gas station. The wells will be monitored for a period of at least one year.

FOR OSE INTERNAL USE

Application for Permit, Form wr-07

File Number:	Trn Number:

4. SPECIFIC REQUIREMENTS: The applicant must include the following, as applicable to each well type. Please check the appropriate boxes, to indicate the information has been included and/or attached to this application:

Exploratory: ☐ Include a description of any proposed pump test, if applicable.	**Pollution Control and/or Recovery:** ☐ Include a plan for pollution control/recovery, that includes the following: ☐ A description of the need for the pollution control or recovery operation. ☐ The estimated maximum period of time for completion of the operation. ☐ The annual diversion amount. ☐ The annual consumptive use amount. ☐ The maximum amount of water to be diverted and injected for the duration of the operation. ☐ The method and place of discharge.	**Construction De-Watering:** ☐ Include a description of the proposed dewatering operation, ☐ The estimated duration of the operation, ☐ The maximum amount of water to be diverted, ☐ A description of the need for the dewatering operation, and, ☐ A description of how the diverted water will be disposed of.	**Mine De-Watering:** ☐ Include a plan for pollution control/recovery, that includes the following: ☐ A description of the need for mine dewatering. ☐ The estimated maximum period of time for completion of the operation. ☐ The source(s) of the water to be diverted. ☐ The geohydrologic characteristics of the aquifer(s). ☐ The maximum amount of water to be diverted per annum. ☐ The maximum amount of water to be diverted for the duration of the operation. ☐ The quality of the water. ☐ The method of measurement of water diverted. ☐ The recharge of water to the aquifer. ☐ Description of the estimated area of hydrologic effect of the project. ☐ The method and place of discharge. ☐ An estimation of the effects on surface water rights and underground water rights from the mine dewatering project. ☐ A description of the methods employed to estimate effects on surface water rights and underground water rights. ☐ Information on existing wells, rivers, springs, and wetlands within the area of hydrologic effect.
Monitoring: ☐ Include the reason for the monitoring well, and, ☐ The duration of the planned monitoring.	☐ The method of measurement of water produced and discharged. ☐ The source of water to be injected. ☐ The method of measurement of water injected. ☐ The characteristics of the aquifer. ☐ The method of determining the resulting annual consumptive use of water and depletion from any related stream system. ☐ Proof of any permit required from the New Mexico Environment Department. ☐ An access agreement if the applicant is not the owner of the land on which the pollution plume control or recovery well is to be located.	**Geo-Thermal:** ☐ Include a description of the geothermal heat exchange project, ☐ The amount of water to be diverted and re-injected for the project, ☐ The time frame for constructing the geothermal heat exchange project, and, ☐ The duration of the project. ☐ Preliminary surveys, design data, and additional information shall be included to provide all essential facts relating to the request.	

ACKNOWLEDGEMENT

I, We (name of applicant(s)), Jose C Roybal, Lucille Roybal

Permittee: Jose and Lucille Roybal
2312 via Seville CT NW
Albuquerque, NM 87104

Permit Number: RG-93769, PODs 1-3

Application File Date: January 4, 2013

CONDITIONS OF APPROVAL
RG-93769 – PODS 1-3

1. The well is to be drilled by a driller licensed as a water well driller in the State of New Mexico in accordance with *Section 72-12-12 NMSA*.

2. Except for one test period, not to exceed 72 hours, the well shall not be pumped or equipped without first obtaining a valid permit to use said well.

3. This application is approved for drilling of exploratory well RG-93769 POD 1-3 pursuant to a NMED required groundwater monitoring well network. Failure to submit well logs within one year from the date of approval herein shall result in cancellation or expiration of this permit. These wells may not be used for any other purpose without authorization of a permit.

4. The permittee shall consider the surface drainage, access for maintenance and repair, and proximity of the well site to other water wells in the area prior to drilling. All wells drilled under this permit must be located at least 50 feet away from wells of other ownership. The permittee shall comply with federal, state, and local regulations concerning setbacks from structures and property lines.

5. No water shall be appropriated and beneficially used under this permit.

6. The well driller shall submit, within 20 days of drilling and pump-testing, to the State Engineer Office, Water Rights Division District VI, Santa Fe, New Mexico, logs of all holes drilled and all holes to be filled, and any test data results within 20 days of testing.

7. If artesian water is encountered, all rules and regulations pertaining to the drilling or casing of artesian wells shall be complied with.

8. All wells drilled under this permit shall be maintained in a manner acceptable to the State Engineer so as to prevent groundwater contamination or other safety hazards.

Witness my hand and seal this **4TH day of January, 2013.**

RE: Facility #28779 OrderNo.: 1302043

Dear Mark Hillier:

Hall Environmental Analysis Laboratory received 6 sample(s) on 2/1/2013 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman

Laboratory Manager

RE: Fairview Station OrderNo.: 1302100

Dear Mark Hillier:

Hall Environmental Analysis Laboratory received 1 sample(s) on 2/4/2013 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. All samples are reported as received unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman

Laboratory Manager

If necessary, samples submitted to Hall Environmental may be subcontracted to other accredited laboratories. This serves as notice of this possibility. Any sub-contracted data will be clearly notated on the analytical report.

APPENDIX G

Health and Safety Plan

SAFETY AND HEALTH PLAN
PETROLEUM HYDROCARBON CONTAMINATION ANTICIPATED

PROJECT NAME: Former Fuel Station

LOCATION: 1626 North Riverside Drive, Espanola, New Mexico

TERRACON PROJECT NUMBER: 66127029

START DATE: January 31, 2013

1.0 APPLICABILITY

This Safety and Health Plan (Plan) will be used exclusively for Terracon projects involving:

- UST Removals (UST Addendum required)
- Intrusive Investigations
- Remedial Assessments
- Site Remediation
- Spill Control/Emergency Response

where petroleum hydrocarbons (gasoline, diesel fuel, waste oils, fuel oils, petroleum based hydraulic fluids, etc.) are the only known contaminants of concern. If contaminants other than petroleum hydrocarbons are known or suspected, the Project Manager will contact the Corporate Safety and Health Manager to arrange for development of a site and contaminant-specific Safety and Health Plan.

Subcontractors engaged in project activity at this site will comply applicable provisions of the Occupational Safety and Health Act of 1970, the safety and health requirements set forth in Occupational Safety and Health Administration regulation 29 CFR 1910.120, where applicable, and any applicable state, city or local safety codes. Each subcontractor will be responsible for supplying a Competent Person to oversee drilling work at this project site. The drilling subcontractor has primary responsibility for utilizing equipment and work practices necessary to protect the safety of the subcontractor's employees engaged in this project.

The subcontractor will maintain an orderly and safe work area around drilling/excavation equipment to minimize the potential for accidents. In addition, the subcontractor shall provide whatever safety barricades or warning devices are deemed necessary by Terracon to prevent accidents or injury to field personnel and the general public.

Subcontractors engaged on this project site may utilize this site Safety and Health Plan for their employees, or each subcontractor may develop and utilize their own site Safety and Health Plan provided the provisions of the subcontractor's site Safety and Health Plan are at least as stringent as the requirements contained in this Plan. Decisions regarding equivalence of safety and health requirements shall be made by Terracon Project Manager and Corporate Safety and Health Manager. Adoption of this Site Safety and Health Plan by subcontract employers shall not relieve any site subcontractor for the responsibility for the health and safety of its employees.

2.0 SAFETY AND HEALTH ADMINISTRATION

The Project Manager is ultimately responsible for seeing that work on this project is performed in accordance with the safety and health provisions contained in this Plan. The designated Site Safety and Health Officer (SSO) will monitor compliance with this Plan during field activities. All field team members engaged in project activities will be required to sign the "Acknowledgment of Instruction" form included with this Plan. The SSO will maintain a copy of this Plan on site for the duration of project activities.

Terracon and subcontractor task leaders will be responsible for:

- Providing subordinate personnel a copy of this Plan, and briefing them on its content.
- Enforcing the applicable provisions of this Plan.
- Inspecting and maintaining equipment in compliance with applicable federal, state or local safety regulations.
- Enforcement of corrective actions.
- Investigation of accidents or injuries.

The following individuals will be responsible for implementation and enforcement of the Plan:

TITLE	NAME	PHONE
Project Manager:	Mark R. Hillier	505-797-4287
Terracon Safety and Health Manager:	Gary K. Bradley, CSP, CHMM	913-599-6886
Site Safety and Health Officer:	Mark R. Hillier	505-797-4287
Terracon Task Leader(s):	Julie A. Smith	505-205-7077
Subcontractor Task Leader:	Rodney Hammer	505-857-9876

If hazardous conditions develop during the course of project activity, the SSO in conjunction with the Terracon Corporate Safety and Health Manager, will coordinate actions required to safeguard site personnel and members of the general public. Additional safety measures will be verbally communicated to all project personnel, recorded in writing and appended to this Plan.

3.0 MEDICAL SURVEILLANCE REQUIREMENTS

All Terracon personnel participating in this project shall be enrolled in a health monitoring program in accordance with the provisions of OSHA 29 CFR 1910.120 and 1910.134. Each project participant shall be certified by a Doctor of Medicine as fit for respirator and semi-

permeable/impermeable protective equipment use. All personnel shall have received an environmental physical examination within one year prior to the start of project activities.

4.0 EMPLOYEE TRAINING REQUIREMENTS

All Terracon personnel must have completed 40 hour Hazardous Waste Operations Training and at least three days of supervised field activity per the requirements of OSHA 29 CFR 1910.120. In addition, a current 8-hour annual refresher training certificate will be required for all personnel. Training certificates for all project personnel will be maintained by the Corporate Safety and Health Manager and/or the SSO at the project command center.

Prior to the start of site activities, the SSO will conduct a pre-project safety and health briefing for all project participants. The personnel responsible for project safety and health will be addressed, as will site history, scope of work, site control measures, emergency procedures and site communications. The briefing will address site contaminants, air monitoring protocols, action levels for upgrade/downgrade of personal protective equipment and level of personal protective equipment to be employed for each project task.

Safety and health briefings will be presented by the SSO at the start of each work day. In addition to a general review of the proposed daily activity and safety requirements, the results of previous air monitoring and any procedural changes will be addressed.

5.0 RESPIRATORY PROTECTION PROGRAM

The purpose of the Terracon respiratory protection program is to prevent personnel exposure to airborne contaminants in excess of established permissible exposure limits/threshold limit values. All respirators employed by Terracon personnel will be NIOSH approved. Cartridges and filters for air purifying respirators will be appropriate for the contaminant(s) of concern. Cartridge/filter selection will be made by the Terracon Corporate Safety and Health Manager. Project personnel required to wear respiratory protection will be medically cleared for respirator use, trained and successfully fit tested in accordance with OSHA 29 CFR 1910.134. Personnel required to wear supplied air respirators will demonstrate competence in donning/doffing and inspecting the equipment prior to job assignment. All project tasks requiring the use of supplied air respirators will require properly equipped backup personnel ("buddy system").

At a minimum, air purifying respirator cartridges will be changed daily prior to use. More frequent change of respirator cartridges will be based on the results of site air monitoring. Under no circumstances will air purifying respirators be used in areas deficient in oxygen (<19.5%), in areas classified as immediately dangerous to life and health (IDLH) or in areas where contaminants have not been characterized.

Respirators will be inspected and required fit checks will be performed prior to use, and any necessary repairs will be made before proceeding to the project site. Respirators will be sanitized daily after use.

6.0 SITE HISTORY/SCOPE OF SERVICES

Preliminary information obtained from the client indicates that this project site may be contaminated with petroleum hydrocarbons. The personal protective equipment and direct reading air monitoring protocols specified below are designed to prevent personnel exposure to contamination in excess of permissible exposure limits.

6.1 Scope of Services

X Soil/Groundwater Sampling

X Soil Boring (Drill Rig)

___ Remedial System Installation

___ Other (_____)

___ Soil Boring (Hand Auger)

___ UST Removal *(requires tank removal addendum*)

X Monitoring Well Installation

7.0 HAZARD ASSESSMENT

7.1 Chemical Hazards

Soils/groundwater at this project site may be contaminated with petroleum hydrocarbons. Benzene is the most significant health hazard contained in petroleum blends and typically comprises less than 1% of regular grade gasoline. Specific health hazard information on petroleum compounds and their most health-significant volatile fractions are provided below. Additional health-hazard information may be found in the chemical product information sheets attached to this Plan. Personnel engaged in monitoring well sampling are advised that organic vapors from contaminated groundwater can collect in wells and be displaced by bailers. Personnel are advised to approach monitoring wells from the upwind side, remove the cap and allow the well to vent momentarily prior to sampling. Keep breathing zone to the upwind side of wells during bailing activities.

BENZENE

Permissible Exposure Limit
1 ppm OSHA PEL
5 ppm OSHA 10 min Ceiling
0.5 ppm OSHA Action Level

Benzene is a central nervous system depressant and an eye and skin irritant. Poisoning may cause hemorrhages and immunosuppression. A relationship has been discovered between benzene exposure and leukemia. Benzene is regulated as an occupational carcinogen. Acute exposure may cause dizziness, excitation, weakness, headache, giddiness, breathlessness and chest constriction.

TOLUENE

Permissible Exposure Limit

50 ppm ACGIH TLV
(Skin Absorbable)

Toluene is an eye, skin and mucous membrane irritant and a central nervous system depressant. Poisoning may affect the liver and kidneys. Prolonged exposure may affect the heart and blood. The ingestion of alcoholic beverages may enhance the toxic effects of toluene. Symptoms of exposure include respiratory tract irritation, headache, dizziness and eye irritation. Toluene may be absorbed to the bloodstream via skin contact.

ETHYL BENZENE

Permissible Exposure Limit
100 ppm OSHA PEL

Ethyl benzene is a skin, eye and mucous membrane irritant. It is moderately toxic by ingestion and slightly toxic by skin absorption. Ethyl benzene is a central nervous system depressant. Poisoning may affect the liver. Symptoms of exposure may include a sense of chest constriction and nervous disorders. Skin contact may result in first and second degree burns. The odor can be detected at 140 ppm ant irritation occurs at 200 ppm.

XYLENE

Permissible Exposure Limit
100 ppm OSHA PEL

Xylene is a mild eye and mucous membrane irritant, primary skin irritant and a central nervous system depressant. Ingestion causes severe gastrointestinal upset and creates an aspiration hazard. Chronic inhalation results in symptoms that resemble acute poisoning, but are more severe systemically.

GASOLINE

Permissible Exposure Limit
300 ppm ACGIH TLV

Gasoline is irritating to the skin, eyes and mucous membranes. Dermatitis may result from prolonged contact with the liquid. Gasoline acts as a central nervous system depressant. Exposure may cause staggering gait, slurred speech and mental confusion. Gasoline exposure may affect the liver, kidneys and spleen. Absorption of alkyl lead antiknock compounds contained in many gasolines poses an additional health concern, especially where there is prolonged skin contact.

DIESEL FUEL (No. 2-D)

Permissible Exposure Limit
400 ppm OSHA PEL (As petroleum distillates/naphtha)

Diesel fuel is a skin and mucous membrane irritant and a central nervous system depressant. Poisoning may affect the liver and kidneys. Skin contact may result in drying and cracking of the skin.

FUEL OIL (No. 6)

Permissible Exposure Limit
400 ppm OSHA PEL (as petroleum distillates/naphtha)
0.2 mg/m^3 OSHA PEL (Coal Tar Pitch Volatiles, "PNA's")

Fuel oil No. 6, or "Bunker Fuel", may be irritating to the eyes and skin. Poisoning may affect the liver, kidneys and digestive system. This substance is likely to contain polynuclear aromatic hydrocarbons (PNA's), some of which are considered carcinogenic. PNA's present a skin contact hazard. Avoid skin contact with potentially contaminated site materials.

7.2 Physical Hazards

Activities to be performed on site may involve drilling equipment and materials. Personnel should be aware that as personal protective equipment increases, dexterity and visibility may be impacted and performing some tasks may be more difficult. Tape all loose protective clothing to avoid entanglement in rotating equipment. Before drilling proceeds, underground utilities must be located and marked. Other drilling safety precautions to be observed during this assessment include the following:

- All personnel working around drill rigs will be familiarized with emergency shut-down procedures and the position of "kill" switches.
- No loose fitting clothing, jewelry or unsecured long hair is permitted near the rig.
- Keep hands and feet away from all moving parts while drilling is in progress. Shovel auger cuttings with long handled shovel. *DO NOT* use hands or feet.
- Daily inspection of all ropes, cables and moving parts is mandatory.
- A first aid kit and fire extinguisher will be immediately available at all times.
- All drill crews shall consist of at least two persons.
- No drilling is permitted during impeding electrical storms, tornadoes or when rain creates a hazardous work environment.
- A minimum horizontal and vertical clearance distance of **10 feet** must be maintained between the drill rig and overhead power lines; use spotters to help rig operator maneuver the vehicle when near overhead power lines.

  Other physical hazards which may be present on this project site include:

- Back injuries due to improper lifting - Use proper lifting techniques. Lift with the legs, not the back. Keep loads close to the body and avoid twisting. Loads heavier than 50 pounds (lbs) require a second person or mechanical device for lifting. Use mechanical devices such as drum dollies, hand trucks, and tool hoists (for lifting augers) to lift or move heavy loads whenever possible.

- Ergonomic Stress - Lift carefully with load close to body with the legs taking most of the weight. Get help with lifts greater than 40 lbs. When working with a heavy tool or object, keep legs under the load and do not overreach or twist to the side. Reposition body to be more square to the load and work. Push loads, rather than pull, whenever feasible. Do not persist with lifting when the load is too heavy. Use a mechanical lifting aid or have a coworker assist with the lift. Rotate repetitive tasks to avoid soft-tissue fatigue.

- Falls From Elevated Surfaces - Protect employees from falling off surfaces that have a side or an edge that is 6 ft or more above a lower level. Provide a safety harness and shock-absorbing lifeline or adequate fall protection where applicable. Employees must wear them when working 6 ft or higher above the platform or main work deck. Install either a guardrail system or fall arrest system that conforms to 29 CFR 1926.502 (d) and is approved by the American National Standards Institute.

- Fire and Explosion - Make ABC fire extinguishers accessible in the work area. Store flammables in Underwriter's Laboratory and Occupational Safety and Health Administration (OSHA) approved metal safety cans equipped with spark arrestors. Store flammable containers more than 50 ft from possible ignition sources. Keep exhaust equipment powered by internal combustion engines well away from flammables and combustibles. Secure hot work permits/approvals before welding or cutting. Store and use compressed gases in a safe manner. Never refuel equipment (e.g., generators) while it is in operation or hot enough to ignite fuel vapors. Conspicuously mark operations that pose fire hazards "No Smoking" or "Open Flames." Remove trash, weeds, and unnecessary combustibles from the Exclusion Zone (EZ). Transfer of potentially flammable liquids will be conducted with intrinsically safe pumping equipment. Drums will be bonded and grounded prior to transfer of potentially flammable liquids.

- Vehicles - Obey all site traffic signs and speed limits. Seat belts must be functional and in use during operation of any site vehicles (including rentals). Operator shall regularly inspect the vehicle for defective parts, such as brakes, controls, motor, chassis and drives. Always be aware and stay alert to traffic around the work area.

- Inclement Weather – The project may be shutdown by the SSO during the following inclement weather conditions: poor visibility; precipitation severe enough to impair safe movement or travel; lightning in the immediate area; steady winds in excess of 40 mph; or, other conditions as determined by the SSO or Corporate Safety and Health Manager. Work will resume when the conditions are deemed safe by the SSO.

- Noise - Wear hearing protection when speech becomes difficult to understand at a distance of 10 ft and while standing within 20 to 25 ft from heavy equipment, pneumatic power tools, steam cleaners, and other equipment in operation that can generate more than 85 decibels (A-weighted scale) (dBA).

- Slips, Trips, and Falls - Clear work area of obstructions and debris before setting up. Alter work areas as necessary to provide a safe, reasonably level area. All walking and working surfaces shall continually be inspected and maintained to be free of slip, trip, and fall hazards. Keep platforms, stairs, and immediate work areas clear. Do not allow oil, grease, or excessive mud to accumulate in these areas. Eliminate slip, trip, and fall hazards or identify them clearly with caution tape, barricades, or equivalent means. Store loose or light material and debris in designated areas or containers. Secure tools, materials, and equipment subject to displacement or falling.

- Traffic Control - If site activities interrupt the normal flow of pedestrian or vehicular traffic, barricades and warning signs which comply with the Manual on Uniform Traffic Control Devices and/or State or local ordinances will be erected around affected equipment. Safety orange work vests will be worn by personnel working within 10 feet of any active roadway. All borings or partially completed groundwater monitoring wells will be adequately covered and/or barricaded if left unattended for any period of time.

8.0 SITE CONTROL

An Exclusion Zone, Contaminant Reduction Zone and a Support Zone will be established whenever project activities require Level C or Level B personal protective equipment. Defined access and egress points will be established and personnel will enter only through those points.

As permitted by site topography, the area within a 50 foot radius of a drill rig and 100 foot radius of UST removal excavation shall be considered the Exclusion Zone. Only those personnel designated by the Project Manager/SSO are allowed to enter the Exclusion Zone. Where practical, or where their use will prevent public injury, temporary signs or barricade fencing will be established to define the Exclusion Zone. ABSOLUTELY NO SMOKING WILL BE PERMITTED WITHIN THE EXCLUSION OR CONTAMINANT REDUCTION ZONES ON ANY PETROLEUM CONTAMINATED SITE.

If unauthorized personnel attempt to enter the exclusion zone, the SSO will verbally inform the individual(s) to leave the project site. If unauthorized individuals refuse to leave the Exclusion Zone or are considered in danger or pose danger to project personnel, the SSO will cease project activities (i.e., shut down drill rigs, excavation equipment, etc.) and notify the client representative or the local police of the situation. Site activities will not resume until unauthorized personnel have left the project site.

9.0 AIR MONITORING AND SITE ACTION LEVELS

This air monitoring protocol is designed to prevent personnel exposure to airborne contaminants in excess of established permissible exposure limits. The results of field air monitoring will be used to determine the continued adequacy of initial personal protective equipment.

Air monitoring equipment required for petroleum contaminated sites will include the following:

- **Photoionization Detector**

Task Leader(s) will be knowledgeable in the operation of the photoionization detector. A manual on the operation of the PID and the appropriate calibration kit will be mobilized to the project site with the instrument. Photoionization detectors will be calibrated under field conditions *each day* prior to use. Task Leaders are instructed to consult the manufacturer's specifications for appropriate calibration gas and calibration techniques.

A photoionization detector (PID) will be used to determine approximate hydrocarbon vapor concentrations in the BREATHING ZONE of site personnel. Continuous breathing zone air monitoring will be conducted during initial phases of intrusive activities (i.e., boring, excavation). If PID readings are less than 10 ppm, monitoring may be conducted at intervals of 10 minutes. If initial PID readings exceed 10 ppm, or if hydrocarbon odors become evident upon during auger advancement, continuous breathing zone air monitoring will be conducted..

If sustained PID readings in the breathing zone exceed 25 ppm, personnel will upgrade to respiratory protection as outlined below. Personnel will remain in air purifying respirators until the photoionization detector readings in the breathing zone have fallen and stabilized below 25 ppm.

9.1 Site Action Levels

Instrument	Level D/D Mod	Level C	Site Evacuation
PID	**< 25 ppm**	**> 25 ppm**	**> 300 ppm**

The Action Levels indicated above are for air in the breathing zone and NOT applicable to vapor above containerized soil samples. The Action Levels are established to prevent exposure to airborne petroleum hydrocarbon vapors in excess of established exposure limits. Although the Action Levels indicated for Site Evacuation are within the protective capacity of the respirator cartridges specified below, personnel will evacuate to the UPWIND side of the site if the continuous breathing zone vapor concentrations exceed these limits. The SSO will contact the Corporate Safety and Health Manager for discussion and re-evaluation of personal protective equipment and air monitoring requirements if airborne contamination exceeds Site Evacuation Action Levels. In the event that site evacuation is required, a modification of this safety and health plan will be issued with contingencies for combustible gas monitoring and upgrading to Level B personal protective equipment.

THIS PLAN IS NOT VALID FOR LEVEL B SITE ACTIVITIES.

10.0 PERSONAL PROTECTIVE EQUIPMENT REQUIREMENTS

The air monitoring regimen identified above will allow initial project activity to begin in **LEVEL D** personal protective equipment to include:

- **Hard Hat**
- **Chemically Protective Safety Boots (Hazmax, other as approved by S&H Mgr.)**

- **Nitrile, Neoprene Rubber or Silver Shield Outer Gloves**
- **Nitrile or Latex Inner Liners**
- **Safety Eye Wear (ANSI Z-87 approved)**
- **Hearing Protection (if within 10 feet of drill rigs, concrete coring or other equipment which impairs normal conversation at < 5 feet.)**

If petroleum saturated soils and potential splashing conditions develop during the course of the assessment, personnel will upgrade to **LEVEL D MODIFIED** personal protective equipment. Level D Modified personal protective equipment ensemble consists of the above, plus:

- **Polylaminated Tyvek Coveralls**
- **Tape Sleeves/Legs to Gloves and Boots**

If air monitoring exceeds Action Level specified for upgrade to **LEVEL C** personal protective equipment, personnel will don:

- **Full Face Air Purifying Respirator**
- **Equipped with Combination Organic Vapor/Acid Gas/HEPA Cartridges**

11.0 DECONTAMINATION

Equipment decontamination is necessary on all petroleum hydrocarbon sites. Personnel decontamination for projects below personal protective Level C will consist of washing off safety footwear, proper cleaning or disposal of outer and inner gloves and thorough washing of face, arms and hands. A full body shower will be required as soon as possible upon leaving the project site. For projects involving Level C personal protective equipment, a decontamination station will be established and the following procedures enforced.

11.1 Personal Decontamination

Personnel will establish a decontamination station on the interface of the Exclusion Zone. A Contaminant Reduction Zone will be established and will extend 10 feet beyond from the decontamination station.

- Two Wash Tubs
- Scrub Brush
- Plastic Bags
- Water and Alconox Detergent

The wash tub on the exclusion zone side of the site will contain a solution of water and Alconox detergent; the second wash tub will contain clean rinse water. Personnel decontamination will

consist primarily of detergent washing and rinsing of reusable exterior protective gear. Coveralls will be removed by turning the clothing inside out.

Personnel may not leave the contaminant reduction zone without proceeding through the decontamination sequence described below. Decontamination station will consist of:

- Wash work gloves, boots and polylaminated protective coveralls,
- Rinse work gloves, boots and coveralls,
- Remove tape at wrists and ankles,
- Remove protective coveralls,
- Remove respirator
- Dispose of spent cartridges; wash and rinse respirator
- Remove outer gloves
- Remove inner gloves

Expendable personal protective equipment will be placed in plastic trash bags, sealed and disposed of per client agreement. Decontamination solutions will be containerized or disposed of as arranged by Project Manager.

11.2 Equipment Decontamination

Decontamination of equipment will be performed to limit the migration of contaminants off-site. All equipment will be cleaned prior to site entry to remove grease, oil and encrusted soil.

Decontamination of large equipment will consist of physically removing gross contamination with shovels, brushes etc. followed by detergent and water high pressure wash with a clean water rinse. The Project Manager is responsible for determining if decontamination solutions must be containerized. If so, a decontamination sump or polyethylene sheeting and fluid containers will be mobilized and established in the decontamination area. Decontamination of hand samplers and similar small equipment will be performed at a designated location within the Contaminant Reduction Zone. Decontamination of such equipment will consist of detergent solution wash and clean water rinse.

12.0 SITE COMMUNICATIONS

Communication between personnel within the Exclusion Zone will be via verbal communication or hand signals. Visual contact between members of task teams should be possible throughout the course of project activities. Contact with the SSO will be through direct verbal communication. The following hand signals will be used by personnel wherever respiratory protection and/or equipment noise limit verbal communication.

Signal	Meaning
Thumbs Up	OK, all is well
Grab throat with both hands	Can't breathe
Shake head, thumbs down	NO, negative
Point right (when facing equipment operator)	Move/steer left
Point left when facing equipment operator)	Move/steer right
Grab partner's wrist	Leave area immediately

13.0 EMERGENCY RESPONSE PROCEDURES

The Project Manager is responsible for obtaining and recording the following emergency information prior to site mobilization:

Location of Nearest Telephone:

Nearest Hospital/Clinic: Espanola Hospital Phone: 505-753-7111

Estimated Drive Time: 8 minutes

Directions From Site: (ATTACH SITE DIAGRAM) Riverside south to Fairview west to Hwy 285 south to Spruce St. west to hospital

Ambulance:	**911**
Fire Department:	**911**
Police:	**911**
Poison Control Center:	**1-800-222-1222**
Project Manager:	**Mark Hillier 505-797-4287**
Safety and Health Manager:	**(913) 599-6886**
Client Contact:	**Mark Hillier 505-797-4287**

13.1 Personal Injury

The SSO and at least one other individual on site will be appropriately trained to administer first aid. A certificate issued by the American Red Cross, National Safety Council or equivalent will be considered acceptable.

For minor injuries, such as cuts, burns, exhaustion, heat cramps, insect stings, etc., the affected employee will be removed to an uncontaminated area. The SSO or other designated employee trained in first aid procedures will administer appropriate first aid. If the injury warrants additional

medical attention, the affected employee will be properly decontaminated and transported to the nearest hospital or emergency medical facility.

For more serious injuries the Site Safety Officer or designee will summon an ambulance to the project site. No attempt will be made by Terracon personnel to move the victim, without the aid and/or instructions of qualified medical personnel.

Where air monitoring indicates the absence of toxic gases or vapors, the ambulance will be directed to the affected employee. If site conditions warrant and as time permits, the wheels of the ambulance will be decontaminated with high pressure wash. The SSO or designee will accompany the ambulance to the medical facility, and provide guidance concerning additional decontamination which may be required for the injured employee, ambulance or attendants.

Whenever an injury occurs on sites with contamination requiring personal protective equipment greater than Level D modified, a minimum of two employees will don appropriate equipment and proceed to the victim. An ambulance will be called immediately. If the extent of injuries permit, the injured employee will be removed to fresh air. Appropriate first aid will be administered.

If rescuer(s) assess that the victim cannot be removed without a stretcher or other specialized equipment, the victim will be removed at the earliest possible moment by appropriately attired Terracon personnel with the direction and/or assistance of qualified medical response personnel. The injured employee will be immediately decontaminated and transported to the nearest medical facility. A crew member designated by the SSO will inform the ambulance crew of contaminants of concern and provide assistance with additional decontamination if required.

13.2 Evacuation and Shutdown Procedures

The SSO will establish and notify site personnel of emergency "rally" points. In the event of a site emergency, personnel will immediately exit the site and assemble at the designated rally point. Evacuation routes will be dependent on site topography and wind conditions. The routes will be selected and presented by the SSO daily prior to site activity.

If emergency evacuation becomes necessary, the SSO will sound the emergency alarm (e.g. support vehicle horn or compressed air horn). Personnel will safely shutdown all electrical and mechanical equipment and quickly proceed to closest designated rally point. The SSO will then account for each crew member on site.

In the event that a Terracon employee does not report to the designated rally point within 5 minutes of the evacuation alarm, the SSO will perform an immediate assessment of site conditions. If site conditions do not pose an immediate hazard to life or health, the SSO will initiate search and rescue efforts utilizing two crew members attired in appropriate personal protective equipment.

14.0 HEAT STRESS

14.1 Level D/D Modified PPE

Whenever ambient temperature exceeds 70 degrees F and personal protective equipment requirements are Level D or Level D modified, the following heat stress monitoring and preventive measures will be implemented.

At least one gallon of water will be available for each field employee during each day of site activity. The designated Site Safety Officer and one designee will observe personnel for signs of heat stress (excessive perspiration, flushed skin, nausea, etc.).

If such signs are observed, affected workers will be required to leave the contaminant zone, loosen protective clothing and rest. During the rest period affected personnel will drink at least one 8 oz. glass of cool water. Pulse will be checked at the beginning of the rest period. Personnel will not return to work until pulse rate is less than 90.

14.2 Level C, B or A PPE

In addition to the above precautions, the following procedures will be implemented whenever the ambient temperature exceed 70 degrees F and personal protective equipment requirements are Level C or above. Ambient temperature will be measured with a dry bulb thermometer and percent cloud cover will be estimated:

1.0 = No Clouds
0.75 = 25% Clouds
0.5 = 50% Clouds
0.25 = 75% Clouds
0.0 = 100% Clouds).

Calculate the adjusted temperature using the following formula:

ADJUSTED TEMPERATURE = 13(% CLOUD COVER) + DRY TEMPERATURE

Rest regimens and physiological monitoring (oral temperature and radial pulse) will be implemented at frequencies dependent upon adjusted temperature.

Adjusted Temperature	Rest Period/Monitoring Frequency
90+	After 15 minutes
87.5-90	After 30 minutes
82.5-87.4	After 60 minutes
77.5-82.5	After 90 minutes
70.5-77.4	After 120 minutes

Employees will return to work only after oral temperature is below 99.7 degrees F and pulse rate < 90. Fluid replacement will be encouraged during each rest period. The use of stimulants and alcoholic beverages in off hours will be discouraged.

15.0 COLD STRESS

Persons working outdoors in low temperatures, especially at or below freezing are subject to cold stress. Exposure to extreme cold for a short time can cause severe injury to the surface of

the body or result in profound generalized cooling which, in extreme cases, can lead to coma and death. Areas of the body which have high surface area, such as fingers, toes and ears are most susceptible.

Protective clothing generally does not provide protection against cold stress. In many instances it may increase susceptibility due to excessive perspiration which can rapidly cool the body when exposed to cold, windy conditions. The greatest incremental increase in wind chill occurs when a wind of 5 mph increases to 10 mph. And, because water conducts heat approximately 240 times faster than air, the body will cool rapidly when chemical protective equipment is removed if undergarments are saturated with perspiration.

Whenever ambient temperatures are expected to be below freezing, Terracon personnel will consult the cold stress section of the Terracon Safety and Health Policy and Procedures Manual to re-familiarize themselves with signs, symptoms and treatment of cold injuries. Thermal boot, glove and hard hat liners will be mandatory for all personnel conducting field activities in ambient temperatures below freezing.

SAFETY AND HEALTH Plan
for
PETROLEUM HYDROCARBON CONTAMINATION

TERRACON

Date: January 31, 2013

Rev: 12/05

ACKNOWLEDGMENT OF INSTRUCTION

All Terracon personnel are required to sign the following acknowledgment of instruction form prior to conducting project activities. This acknowledgment is not a waiver. It is the primary method used in compiling environmental experience and contaminant exposure records for Terracon personnel. Upon written request, a copy of your environmental work record will be provided by the Corporate Safety and Health Manager.

I understand that this project involves the investigation of a project site with potential petroleum hydrocarbon contamination. I have read this Safety and Health Plan and have received instructions for safe work practices, personal protective equipment and air monitoring requirements. I further understand that if I encounter unanticipated contamination I am to leave the site and immediately notify the Project Manager and Corporate Safety and Health Manager of conditions discovered.
