From: Ronnie Crossland, Region 6 Regional Incident Commander (RIC)

Date: 8/25/2015

Reporting Period: 8/24/2015 0700 – 8/24/2015 1900

1. Introduction

1.1 Description of Threat

Region 8 reported approximately three million gallons of mine waste water was released into Cement Creek and the Animas River. The primary environmental concern is the pulse of contaminated water containing sediment and metals flowing as an orange-colored discharge downstream through Durango, Colorado, and into New Mexico and Utah.

1.2 Preliminary Removal Assessment/Removal Site Inspection Results

Water monitoring and sampling is ongoing at public water supply intakes and private wells and field pH levels and other water quality parameters are being monitored.

2. Current Activities

Headquarters has established a joint website at www.epa.gov/goldkingmine.

Created a new general public call-in number for Regions 6, 8, and 9: (844) 607-9700.

2.1 Operations Section

EPA continues to discuss the short and long term criteria with NMED, as proposed in their submission.

Morningstar Update: Farmington began the surveying process for increasing the feed lines. This will allow the pump to operate for an extended period of time without pumping its feed tanks dry. Construction is estimated to take 1 to 2 days.

Lower Valley Water System requested sampling on their finished water for August 28 and 31, 2015. EPA is working with the water system to schedule the sampling.

EPA attended the NMED led Water Fair on August 24, 2015 and will attend on August 25.

EPA has sent NMED validated data for the following:

- Surface Water Sampling Analytical Data from August 6-14, 2015
- Surface Water Monitoring Data from August 6-14, 2015
- Intake Sediment Sampling Analytical Data from August 10-14, 2015
- Irrigation Ditch Sediment Sampling Analytical Data from August 13-14, 2015
- Private Well Data from August 10-14, 2015 and August 19, 2015
