APPENDIX F

SITE PHOTOGRAPHS

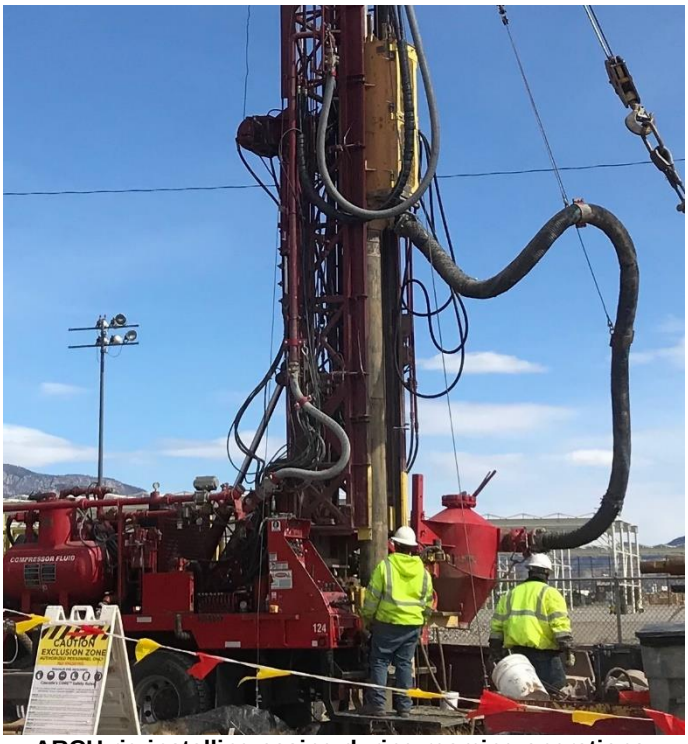
Cascade performing decontamination procedures on core barrels prior to drilling operations.

EA taking rinsate samples prior to drilling operations.

Soil being transferred from core barrel to core bag.

Core run in labeled core bags in labeled core boxes.

Core being photographed before UV scan.



Core being logged by field geologist.

Cuttings laid out for logging during ARCH drilling.

Dry ice used to keep cores within temperature parameters.

ARCH rig installing casing during reaming operations.

Well construction.

Swabbing of well prior to well development.

Core storage in refrigerated truck.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
Q	One or more quality control criteria failed.
M	Manual integrated compound.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.

GC VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-115294-1

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE
Client: EA Engineering, Science, and Technology
Project: Kirtland BFF Vadose Zone Coring
Report Number: 280-115294-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Revision 1 - 11/5/2018
Revision 1 was created to correct the QC association for 8260B, as the samples were linked to the wrong QC in the original reports. The narrative was also corrected in regards to flagging method blank detections and discrepancies. Only the Level 2 and Level 4 reports are affected, as these reports were sent before the EDDs were checked.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/10/2018 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5º C.

Samples P-S9-061018-102 and P-S9-071018-174 were received, but not documented on the chain of custody. Samples were labeled for GRO analysis and have been logged as such.

DI Terracores were received outside of the 48hr hold time. Samples were frozen upon receipt on 10/10/18 at 1312. As instructed by the client, the laboratory proceeded with analysis.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Samples V-S9-061018-102 (280-115294-2) and V-S9-071018-174 (280-115294-4) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/06/2018 and 10/07/2018 and analyzed on 10/15/2018.

DI Terracores were received outside of the 48hr hold time. Samples were frozen upon receipt on 10/10/18 at 1312. As instructed by the client, the laboratory proceeded with analysis.

2-Butanone (MEK) and Acetone were detected in method blank MB 280-433445/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and hve been flagged "J". However, because the method blank concentration for 2-Butanone (MEK) was less than ½ the reporting limit (LOQ), and because the associated samples were either non-detect or >10x the method blank concentration for Acetone, no corrective action was necessary,.

The continuing calibration verification (CCV) associated with batch 280-433403 recovered above the upper control limit for 2-Hexanone. All associated results have been flagged "Q". The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water
Sample TB-S9-091018-01 (280-115294-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 10/18/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 280-115294-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

EDB AND DBCP - Solid
Samples V-S9-061018-102 (280-115294-2) and V-S9-071018-174 (280-115294-4) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 10/16/2018 and 10/17/2018 and analyzed on 10/18/2018.

Ethylene Dibromide failed the recovery criteria low for the MS/MSD of sample V-S9-061018-102 (280-115294-2) in batch 280-434037. Associated results have been flagged "J1". Refer to the QC report for details.

Surrogate recovery for the following QC samples were outside the upper control limit of 130%: (CCV 280-434037/14) and (CCVRT 280-434037/1). Associated results have been flagged "Q". This associated samples did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

The continuing calibration verification (CCV) associated with batch 280-434037 recovered above the upper control limit for 1,2-Dibromoethane. Associated results have been flagged "Q". The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE PETROLEUM HYDROCARBONS - GRO (GC) - Solid
Samples P-S9-061018-102 (280-115294-3) and P-S9-071018-174 (280-115294-5) were analyzed for Volatile Petroleum Hydrocarbons (GC) in accordance with 8015D GRO. The samples were prepared on 10/06/2018 and 10/07/2018 and analyzed on 10/19/2018.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-434127/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water
Sample TB-S9-091018-01 (280-115294-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO) - Solid
Samples V-S9-061018-102 (280-115294-2) and V-S9-071018-174 (280-115294-4) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/12/2018 and analyzed on 10/14/2018 and 10/15/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-433046/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Samples V-S9-061018-102 (280-115294-2), P-S9-061018-102 (280-115294-3), V-S9-071018-174 (280-115294-4) and P-S9-071018-174 (280-115294-5) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/11/2018 and 10/22/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland BFF Vadose Zone Coring

TestAmerica Job ID: 280-115294-1

Laboratory: TestAmerica Denver

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
A2LA	DoD ELAP		2907.01	10-31-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

(1) Revised COC to include Sample ID for TPH-GRO -Pmoss 10/11/18

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	Preservation labels on samples match COC
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC VOA

Qualifier	Qualifier Description
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
M	Manual integrated compound.
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115297-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/10/2018 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5º C.

GASOLINE RANGE ORGANICS (GRO) - Solid
Samples P-S5-091018-210 (280-115297-1) and P-S5-091018-360 (280-115297-2) were analyzed for Gasoline Range Organics (GRO) in accordance with EPA SW-846 Method 8015D - GRO. The samples were analyzed on 10/23/2018.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-434576/9-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details. The detection was greater than 1/2 the LOQ. As instructed by the client, the data have been reported.

a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria low for P-S5-091018-360 (280-115297-2). Associated results have been flagged "Q". As instructed by the client, the data have been qualified and reported.

Gasoline Range Organics (GRO)-C6-C10 failed the recovery criteria low for the MS of sample P-S5-091018-210 (280-115297-1) in batch 280-434594. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water
Sample TB-S5-091018-01 (280-115297-3) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/12/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Samples P-S5-091018-210 (280-115297-1) and P-S5-091018-360 (280-115297-2) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/12/2018 and analyzed on 10/15/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-433046/1-A at a level that was above the method detection limit

Job ID: 280-115297-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been flagged. This is acceptable as the detection is less than 1/2 the LOQ. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples P-S5-091018-210 (280-115297-1) and P-S5-091018-360 (280-115297-2) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/11/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	Preservation labels on samples match COC
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
Q	One or more quality control criteria failed.

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115432-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - 11/27/2018
Revision 1 was created in order to correct the prep time for QC samples for solid 8260B. The narrative has also been updated. The Erp_ToolX_Lab Erpims EDD was also revised; however, the Equis EDD had not been posted yet, so no revision was required.

RECEIPT
The samples were received on 10/11/2018 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Sample V-S9-091018-252 (280-115432-2) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/09/2018 and analyzed on 10/22/2018.

Acetone, a common laboratory contaminant, was detected in method blank MB 280-434405/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

2-Butanone (MEK) was detected in method blank MB 280-434405/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details. <1/2 LOQ?

The continuing calibration verification (CCV) associated with batch 280-434424 recovered above the upper control limit for Chloroethane (+21.2%D). The associated results have been flagged "Q". The sample associated with this CCV was non-detect for the affected analyte;

Job ID: 280-115432-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water
Sample TB-S9-101018-01 (280-115432-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 10/24/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP
Sample V-S9-091018-252 (280-115432-2) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 10/16/2018 and analyzed on 10/18/2018.

The continuing calibration verification (CCV) associated with batch 280-434037 recovered above the upper control limit for 1,2-Dibromoethane. Associated results have been flagged "Q". The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported with NCM and flags. The following samples are associated: V-S9-091018-252 (280-115432-2), (CCV 280-434037/14) and (CCVRT 280-434037/1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solids
Sample P-S9-091018-252 (280-115432-3) was analyzed for Gasoline Range Organics (GRO)in accordance with 8015D GRO. The samples were prepared on 10/09/2018 and analyzed on 10/19/2018.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-434127/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection in the MB is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water
Sample TB-S9-101018-01 (280-115432-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Sample P-S9-091018-252 (280-115432-3) was analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/12/2018 and analyzed on 10/15/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-433046/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection in the MB is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Samples V-S9-091018-252 (280-115432-2) and P-S9-091018-252 (280-115432-3) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/17/2018 and 10/18/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page..

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
Q	One or more quality control criteria failed.

GC VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115488-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/12/2018 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Sample V-S9-111018-342 (280-115488-2) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/11/2018 and analyzed on 10/24/2018.

The following compounds were outside control limits in the continuing calibration verification (CCV) associated with batch 280-434702: Acetone (+26.5%D) and 2-Chloroethyl vinyl ether (-30.7%D). These compounds are not classified as Calibration Check Compounds (CCCs) in the reference method, and the laboratory defaults to in-house and/or project-specific criteria for evaluation. These compounds are considered "poor performers" therefore, the data have been reported.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water
Sample TB-S9-111018-01 (280-115488-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 10/25/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP
Sample V-S9-111018-342 (280-115488-2) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 10/16/2018 and analyzed on 10/18/2018.

The continuing calibration verification (CCV) associated with batch 280-434037 recovered above the upper control limit for 1,2-Dibromoethane on the secondary column. Associated results have been flagged "Q". This is reported from the primary column that is in control. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported with NCM and flags. The following samples are associated: V-S9-111018-342 (280-115488-2), (CCV 280-434037/14) and (CCVRT 280-434037/1)

Surrogate recovery for the following QC samples were outside the upper control limit of 130% on the secondary column: (CCV

Job ID: 280-115488-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

280-434037/14) and (CCVRT 280-434037/1). is reported from the primary column that is in control. This associated sample V-S9-111018-342 (280-115488-2) did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Sample P-S9-111018-342 (280-115488-3) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 10/11/2018 and analyzed on 10/19/2018.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-434127/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J1". Refer to the QC report for details. This is acceptable because the detection in the MB was less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S9-111018-01 (280-115488-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/25/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Sample P-S9-111018-342 (280-115488-3) was analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/17/2018 and analyzed on 10/19/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-433823/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J1". Refer to the QC report for details. This is acceptable because the detection in the MB was less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S9-111018-342 (280-115488-2) and P-S9-111018-342 (280-115488-3) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/22/2018 and 10/24/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115708-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/17/2018 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.6º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Sample V-S9-161018-415 (280-115708-2) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/16/2018 and analyzed on 10/29/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water
Sample TB-S9-161018-01 (280-115708-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/01/2018.

The following sample in analytical batch 280-435795 was analyzed outside of analytical holding time due to department capacity issues: TB-S9-161018-01 (280-115708-1). The client was notified, and instructed the laboratory to report the data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP
Sample V-S9-161018-415 (280-115708-2) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 10/29/2018 and analyzed on 11/01/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid
Sample P-S9-161018-415 (280-115708-3) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 10/16/2018 and analyzed on 10/30/2018.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-435575/2-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". The concentration in the blank was just above one-half the LOQ. The associated sample was less than the LOQ; therefore, the data have been reported. If the

Job ID: 280-115708-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S9-161018-01 (280-115708-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/26/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Sample P-S9-161018-415 (280-115708-3) was analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/23/2018 and analyzed on 10/25/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-434617/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J1". Refer to the QC report for details. This is acceptable, as the concentration in the MB is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S9-161018-415 (280-115708-2) and P-S9-161018-415 (280-115708-3) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/20/2018 and 10/22/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC VOA

Qualifier	Qualifier Description
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-115762-1

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115762-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/18/2018 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.3º C.

GASOLINE RANGE ORGANICS (GRO) - Solid
Samples P-S4-171018-040 (280-115762-1), P-S4-171018-110 (280-115762-2) and P-S4-171018-300 (280-115762-3) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 10/17/2018 and analyzed on 10/30/2018.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-435575/2-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". The concentration in the blank was just above one-half the LOQ. The associated samples were less than the LOQ; therefore, the data have been reported. If the associated samples reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water
Sample TB-S4-171018-01 (280-115762-4) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/31/2018.

The presence of the '4' qualifier indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Samples P-S4-171018-040 (280-115762-1), P-S4-171018-110 (280-115762-2) and P-S4-171018-300 (280-115762-3) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/23/2018 and analyzed on 10/25/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-434617/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J1". Refer to the QC report for details.

Job ID: 280-115762-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

This is acceptable, as the concentration in the MB is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples P-S4-171018-040 (280-115762-1), P-S4-171018-110 (280-115762-2) and P-S4-171018-300 (280-115762-3) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/23/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
D	The reported value is from a dilution.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.

GC VOA

Qualifier	Qualifier Description
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
Q	One or more quality control criteria failed.
D	The reported value is from a dilution.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115813-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/19/2018 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.2º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Samples V-S9-171018-470 (280-115813-3) and V-S9-171018-475 (280-115813-5) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/17/2018 and analyzed on 10/30/2018.

Sample V-S9-171018-475 (280-115813-5)[10X] required dilution prior to analysis due to the nature of the sample matrix. Associated results have been flagged "D". Elevated reporting limits (RLs) are provided.

Dibromofluoromethane (Surr) and Toluene-d8 (Surr) failed the surrogate recovery criteria low for V-S9-171018-475 (280-115813-5). Associated results have been flagged "Q". Because of the required dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

4-Bromofluorobenzene (Surr), Dibromofluoromethane (Surr) and Toluene-d8 (Surr) failed the surrogate recovery criteria high for V-S9-171018-470 (280-115813-3). Associated results have been flagged "Q". Evidence of matrix interference is present as evident in the chromatogram; therefore, re-extraction and/or re-analysis was not performed.

Naphthalene was detected in method blank MB 280-435215/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. Refer to the QC report for details. This is acceptable because the concentration in the method blank is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water
Sample TB-S9-181018-01 (280-115813-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/01/2018.

The surrogate spike for the original method blank MB 280-435843/6 was inadvertently omitted. The next sample was a trip blank which was copied as a secondary method blank, MB 280-435843/1010, with passing surrogates for reference. Both have been reported.

Job ID: 280-115813-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

1,1,2-Trichloroethane failed the recovery criteria high for LCS 280-435843/4 and LCSD 280-435843/5. All associated results have been flagged "Q". Refer to the QC report for details. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP

Samples V-S9-171018-470 (280-115813-3) and V-S9-171018-475 (280-115813-5) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 10/29/2018 and analyzed on 11/01/2018.

The surrogate recovery for the following sample was outside acceptance limits (high biased) on the primary column due to matrix interference: V-S9-171018-475 (280-115813-5). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control; therefore, the data have been reported from the in control column.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S9-171018-470 (280-115813-2) and P-S9-171018-475 (280-115813-4) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 10/17/2018 and analyzed on 10/30/2018.

Sample P-S9-171018-475 (280-115813-4)[10X] required dilution prior to analysis due to abundance of target analytes. Associated results have been flagged "D". Elevated reporting limits (RLs) are provided.

a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria high for P-S9-171018-475 (280-115813-4). Associated results have been flagged "Q". Refer to the QC report for details. Because of the required dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-435575/2-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". The concentration in the blank was just above one-half the LOQ. The associated samples were >10x the concentration in the method blank; therefore, the data have been reported. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S9-181018-01 (280-115813-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/31/2018.

It was noted that the trip blank had a detection greater than the LOQ. The laboratory noted that the method blank for this batch was non-detect and the LCS recovered within control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples P-S9-171018-470 (280-115813-2) and P-S9-171018-475 (280-115813-4) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/24/2018 and analyzed on 10/26/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-434808/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J1". Refer to the QC report for details. This is acceptable, as the concentration in the method blank is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Job ID: 280-115813-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Samples P-S9-171018-470 (280-115813-2), V-S9-171018-470 (280-115813-3), P-S9-171018-475 (280-115813-4) and V-S9-171018-475 (280-115813-5) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/23/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC VOA

Qualifier	Qualifier Description
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115886-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/20/2018 8:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.0º C.

VOLATILE PETROLEUM HYDROCARBONS (GC)
Samples P-S3-191018-020 (280-115886-1) and P-S3-191018-160 (280-115886-2) were analyzed for Volatile Petroleum Hydrocarbons (GC) in accordance with 8015D GRO. The samples were prepared on 10/19/2018 and analyzed on 10/30/2018.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blank MB 280-435575/2-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)
Sample TB-S3-191018-01 (280-115886-3) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/31/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Samples P-S3-191018-020 (280-115886-1) and P-S3-191018-160 (280-115886-2) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/24/2018 and analyzed on 10/26/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-434808/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Samples P-S3-191018-020 (280-115886-1) and P-S3-191018-160 (280-115886-2) were analyzed for percent solids in accordance with

Job ID: 280-115886-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

ASTM D2216-90. The samples were analyzed on 10/25/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
D	The reported value is from a dilution.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
Q	One or more quality control criteria failed.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
D	The reported value is from a dilution.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
M	Manual integrated compound.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
Q	One or more quality control criteria failed.
D	The reported value is from a dilution.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
M	Manual integrated compound.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
H	Sample was prepped or analyzed beyond the specified holding time
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115896-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/20/2018 8:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Soil

Samples V-S9-191018-490 (280-115896-2) and V-S9-191058-490 (280-115896-3) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/19/2018 and analyzed on 10/30/2018.

Samples V-S9-191018-490 (280-115896-2)[50X] and V-S9-191058-490 (280-115896-3)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information. Associated results have been flagged "Q". The data have been qualified and reported.

Naphthalene was detected in method blank MB 280-435215/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable because the detection in the method blank was less than one-half the LOQ.

Several analytes and surrogates failed the recovery criteria for the MS/MSD of sample V-S9-191018-490 (280-115896-2) in batch 280-435463. Also, Several analytes exceeded the RPD limit. Associated results have been flagged "J1" or "Q". Refer to the QC report for details. The recoveries are not considered reliable because the extract was diluted beyond the ability to reliably quantitate recoveries. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, the data have been reported.

Job ID: 280-115896-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

The MS and MSD % recoveries for the following analytes are not calculable (NC) in our LIMS because the detections were below the MDL: 1,2-Dichloropropane; 1,2,3-Trichloropropane; Acetone; Bromodichloromethane; 4-Methyl-2-Pentanone (MIBK); and 2-Hexanone. Due to a limitation of the LIMS, these are not able to be reported as 0%. These analytes are not reported in the MS/MSD, as this was causing errors in the EDD that prevented validation. Other analytes reported as NC did not cause errors, and are reported.

Internal standard responses were outside of acceptance limits for the following MSD of sample V-S9-191018-490 (280-115896-2). The sample shows evidence of matrix interference.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S9-191018-01 (280-115896-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/02/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP

Samples V-S9-191018-490 (280-115896-2) and V-S9-191058-490 (280-115896-3) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 10/29/2018 and 11/09/2018 and analyzed on 11/01/2018 and 11/16/2018.

The following sample was prepared outside of preparation holding time due to analyst oversight: V-S9-191058-490 (280-115896-3). As instructed by the client, the data have been qualified and reported.

Samples V-S9-191018-490 (280-115896-2)[200X] and V-S9-191058-490 (280-115896-3)[200X] required dilution prior to analysis due to abundance of target analytes. The reporting limits have been adjusted accordingly. As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided. Associated results have been flagged "Q". The data have been qualified and reported.

Ethylene Dibromide failed the recovery criteria low and exceeded the RPD limit for the MS/MSD of sample V-S9-191018-490 (280-115896-2) in batch 280-435949. Associated results have been flagged "J1". Also, 1,2-Dibromopropane failed the surrogate recovery criteria low for the MS/MSD of V-S9-191018-490MS (280-115896-2). Associated results have been flagged "Q". The recoveries are not considered reliable because the extract was diluted beyond the ability to reliably quantitate recoveries. In addition, the presence of the "4" qualifier indicates analytes where the concentration in the original sample is greater than four times the matrix spike concentration; therefore, control limits are not applicable. Refer to the QC report for details. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S9-191018-490 (280-115896-4) and P-S9-191058-490 (280-115896-5) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 10/19/2018 and analyzed on 11/02/2018.

Samples P-S9-191018-490 (280-115896-4)[200X] and P-S9-191058-490 (280-115896-5)[100X] required dilution prior to analysis. Associated results have been flagged "D". The reporting limits have been adjusted accordingly. The surrogate was effectively diluted out and any compound eluting out at the surrogate peak can be considered analyte. Associated results have been flagged "Q". The data have been qualified and reported.

Gasoline Range Organics (GRO)-C6-C10 was detected in method blanks MB 280-435575/2-A and MB 280-436088/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details. The detections in the method blanks were greater than one-half the LOQ; however, associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Gasoline Range Organics (GRO)-C6-C10 failed the recovery criteria high for the MS/MSD of sample P-S9-191018-490 (280-115896-4) in batch 280-436055. Associated results have been flagged "J1". Also, a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria

Job ID: 280-115896-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

low. Associated results have been flagged "Q". Refer to the QC report for details. The recoveries are not considered reliable because the extract was diluted beyond the ability to reliably quantitate recoveries. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S9-191018-01 (280-115896-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/31/2018.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples P-S9-191018-490 (280-115896-4) and P-S9-191058-490 (280-115896-5) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/24/2018 and analyzed on 10/26/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-434808/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable because the detection in the method blank was less than one-half the LOQ.

Diesel Range Organics [C10-C28] failed the recovery criteria low for the MS/MSD of sample P-S9-191018-490 (280-115896-4) in batch 280-435068. Associated results have been flagged "J1". Refer to the QC report for details. The presence of the "4" qualifier indicates analytes where the concentration in the original sample is greater than four times the matrix spike concentration; therefore, control limits are not applicable. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S9-191018-490 (280-115896-2), V-S9-191058-490 (280-115896-3), P-S9-191018-490 (280-115896-4) and P-S9-191058-490 (280-115896-5) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/25/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115951-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/23/2018 8:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.1° C.

Receipt Exceptions

The sample IDs, as well as sampling times, as given on the Chain of Custody do not match the information given on the container labels for samples 2, 3 and 4. As noted on the Chain of Custody, the sample IDs are as follows: "RB-S9-201018-01", with an additional note in the special instructions column as "RB_10_20_2018_01"; "RB-S9-201018-02", with an additional note in the special instructions column as "RB_10_20_2018_02; "SWB-S9-201018-01", with an additional note in the special instructions column as "SWB_10_20_2018_01". The times for samples 2, 3, and 4 are given as: 1610, 1630 and 1600 respectively on the Chain of Custody. As instructed by the client, the sample IDs and times were logged as follows:

Sample ID / Time:
RB-S9-201018-01 / 1610
RB-S9-201018-02/ 1630
SWB-S9-201018-01/ 1600

VOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples TB-S9-221018-01 (280-115951-1), RB-S9-201018-01 (280-115951-2), RB-S9-201018-02 (280-115951-3) and SWB-S9-201018-01 (280-115951-4) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/03/2018 and 11/06/2018.

The following samples in analytical batch 280-436409 were analyzed outside of analytical holding time due to backlog capacity issues: TB-S9-221018-01 (280-115951-1). The client was notified and instructed the laboratory to report the data.

Dibromofluoromethane (Surr) failed the surrogate recovery criteria high for TB-S9-221018-01 (280-115951-1). Associated results have been flagged "Q". Refer to the QC report for details. This sample did not contain any target analytes; therefore, re-analysis was not performed.

Methylene Chloride was detected in method blank MB 280-436409/4 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection was less than one-half the LOQ. The following sample is associated: TB-S9-221018-01

Job ID: 280-115951-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

(280-115951-1).

1,1,2-Trichloroethane and 1,2-Dichloropropane failed the recovery criteria high for LCS 280-436409/5 and LCSD 280-436409/6. All assoicated results have been flagged "Q". Refer to the QC report for details. These analytes were biased high in the LCS and LCSD and were not detected in the associated samples; therefore, the data have been reported. The following sample was impacted: TB-S9-221018-01 (280-115951-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP

Samples TB-S9-221018-01 (280-115951-1), RB-S9-201018-01 (280-115951-2), RB-S9-201018-02 (280-115951-3) and SWB-S9-201018-01 (280-115951-4) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/02/2018 and 11/05/2018 and analyzed on 11/05/2018 and 11/14/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)

Samples TB-S9-221018-01 (280-115951-1), RB-S9-201018-01 (280-115951-2), RB-S9-201018-02 (280-115951-3) and SWB-S9-201018-01 (280-115951-4) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/27/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples RB-S9-201018-01 (280-115951-2), RB-S9-201018-02 (280-115951-3) and SWB-S9-201018-01 (280-115951-4) were analyzed for Diesel Range Organics (DRO) in accordance with 8015D DRO. The samples were prepared on 10/24/2018 and analyzed on 10/26/2018.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 280-434673. A duplicate LCS (LCSD) was performed.

No LCS was performed for Motor Oil (C10-C28).

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
H	Sample was prepped or analyzed beyond the specified holding time
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-115956-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/23/2018 8:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.0º C and 3.1º C.

Receipt Exceptions

All five soil analysis indicated on COC for sample IDs V-S5-211018-417 and P-S5-211018-417. Only 8260, 8011 and Moisture containers were received for sample ID V-S5-211018-417 and DRO, GRO and Moisture containers for sample ID P-S5-211018-417. Samples have been logged as they historically have been, with methods 8260, 8011 and Moisture for the "V" sample and 8015 DRO, GRO and Moisture for the "P" sample. Confirming with client.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid

Sample V-S5-211018-417 (280-115956-2) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/21/2018 and analyzed on 11/02/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S5-221018-01 (280-115956-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/06/2018.

The following samples in analytical batch 280-436409 were analyzed outside of analytical holding time due to backlog capacity issues: TB-S5-221018-01 (280-115956-1). As instructed by the client, the data have been reported.

Methylene Chloride was detected in method blank MB 280-436409/4 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable because the detection was less than one-half the LOQ.

1,1,2-Trichloroethane and 1,2-Dichloropropane failed the recovery criteria high for LCS 280-436409/5 and LCSD 280-436409/6. All associated results have been flagged "Q". Refer to the QC report for details. These analytes were biased high in the LCS and LCSD and were not detected in the associated samples; therefore, the data have been reported. The following samples are impacted: TB-S5-221018-01 (280-115956-1), (LCS 280-436409/5) and (LCSD 280-436409/6).

Job ID: 280-115956-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP
Sample V-S5-211018-417 (280-115956-2) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 10/29/2018 and analyzed on 11/01/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid
Sample P-S5-211018-417 (280-115956-3) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/02/2018 and analyzed on 11/06/2018.

The following sample was analyzed outside of analytical holding time due to an instrument malfunction: P-S5-211018-417 (280-115956-3). The sample was loaded to run on the last day of the holding time but due to the instrument stopping the sample did not run. As instructed by the client, the data have been reported.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water
Sample TB-S5-221018-01 (280-115956-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/28/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Sample P-S5-211018-417 (280-115956-3) was analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 10/24/2018 and analyzed on 10/26/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-434808/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable since the detection is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Samples V-S5-211018-417 (280-115956-2) and P-S5-211018-417 (280-115956-3) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 10/31/2018 and 11/01/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
D	The reported value is from a dilution.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
D	The reported value is from a dilution.
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
M	Manual integrated compound.
Q	One or more quality control criteria failed.
D	The reported value is from a dilution.

General Chemistry

Qualifier	Qualifier Description
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-116044-1

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology
Project: Kirtland BFF Vadose Zone Coring
Report Number: 280-116044-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/24/2018; the samples arrived in good condition, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.9º C and 3.3º C.

One 125mL plastic bottle for soil for sample ID V-S5-231018-467 was noted as empty at receipt. Container was intact and sealed.

2 x 40mL VOA vials were submitted for sample TB-S5-231018-02 (280-116044-6). One was analyzed for GRO; however, the vial that was logged for VOCs 8260B was found broken in the box. As instructed by the client, the VOCs analysis was cancelled since the other vial had already been analyzed for GRO.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS) - Solid

Samples V-S5-231018-467 (280-116044-2), V-S5-231058-467 (280-116044-4), V-S5-231018-491 (280-116044-7) and V-S5-231018-506 (280-116044-9) were analyzed for volatile organic compounds (GC-MS) in accordance with 8260B. The samples were prepared on 10/23/2018 and analyzed on 11/05/2018 and 11/06/2018.

Sample V-S5-231018-491 (280-116044-7)[10X] required dilution prior to analysis. Associated results have been flagged "D". The reporting limits have been adjusted accordingly.

Acetone was detected in method blank MB 280-436362/1-A at a level exceeding the limit of quantitation. Acetone was detected in samples V-S5-231018-467 (280-116044-2), V-S5-231058-467 (280-116044-4), V-S5-231018-506 (280-116044-9) greater than the LOD but less than the LOQ.

Job ID: 280-116044-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

1,1-Dichloroethene exceeded the RPD limit for LCSD 280-436362/3-A. Associated results have been flagged "Q". The individual recoveries of both the LCS and LCSD met the acceptance criteria.

1,2-Dibromo-3-Chloropropane and Chloroethane exceeded the RPD limit for LCSD 280-436482/3-A. Associated results have been flagged "Q". The individual recoveries of both the LCS and LCSD met the acceptance criteria.

Toluene-d8 (Surr) failed the surrogate recovery criteria high for V-S5-231018-491 (280-116044-7). Associated results have been flagged "Q". This sample required a dilution due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC) - Water

Sample TB-S5-231018-01 (280-116044-1) was analyzed for volatile organic compounds (GC) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 11/06/2018.

Methylene Chloride was detected in method blank MB 280-436409/4 at a level that was above the detection limit but below ½ the limit of quantitation (LOQ). The value should be considered an estimate, and has been flagged.

1,1,2-Trichloroethane and 1,2-Dichloropropane failed the recovery criteria high for LCS 280-436409/5 and LCSD 280-436409/6. All associated results have been flagged "Q". These analytes were biased high in the LCS and LCSD and were not detected in the associated samples; therefore, the data have been reported.

Dibromofluoromethane (Surr) failed the surrogate recovery criteria high for TB-S5-231018-01 (280-116044-1). All associated results have been flagged "Q". Only one vial was provided for analysis and the only analyte associated with this surrogate was methylene chloride, therefore, re-analysis was not able to be performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GAS RANGE ORGANICS - Solid

Samples P-S5-231018-467 (280-116044-3), P-S5-231058-467 (280-116044-5), P-S5-231018-491 (280-116044-8) and P-S5-231018-506 (280-116044-10) were analyzed for gas range organics in accordance with 8015D GRO. The samples were prepared on 11/02/2018 and analyzed on 11/06/2018.

Sample P-S5-231018-491 (280-116044-8)[20X] required dilution prior to analysis. Associated results have been flagged "D". The reporting limits have been adjusted accordingly.

Gasoline Range Organics (GRO)-C6-C10 exceeded the RPD limit for the MSD of sample P-S5-231018-467 (280-116044-3) in batch 280-436343. Associated results have been flagged "J1". The individual recoveries of both the MS and MSD met the acceptance criteria.

a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria low for P-S5-231058-467 (280-116044-5). Re-extraction and re-analysis was performed with concurring results, indicating matrix interference. The re-analyses is reported because the original analyses also had a contaminated method blank.

a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria high for P-S5-231018-491 (280-116044-8). This sample required a dilution due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Samples TB-S5-231018-01 (280-116044-1) and TB-S5-231018-02 (280-116044-6) were analyzed for gasoline range organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/31/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 280-116044-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

EDB AND DBCP

Samples V-S5-231018-467 (280-116044-2), V-S5-231058-467 (280-116044-4), V-S5-231018-491 (280-116044-7) and V-S5-231018-506 (280-116044-9) were analyzed for EDB and DBCP in accordance with EPA SW-846 Method 8011. The samples were prepared on 10/29/2018 and analyzed on 11/02/2018 and 11/07/2018.

Sample V-S5-231018-491 (280-116044-7)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

1,2-Dibromopropane failed the surrogate recovery criteria low for V-S5-231018-491 (280-116044-7). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS

Samples P-S5-231018-467 (280-116044-3), P-S5-231058-467 (280-116044-5), P-S5-231018-491 (280-116044-8) and P-S5-231018-506 (280-116044-10) were analyzed for diesel range organics in accordance with 8015DRO. The samples were prepared on 10/31/2018 and analyzed on 11/12/2018 and 11/14/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-435639/1-A at a level that was above the detection limit but below ½ the limit of quantitation (LOQ). The value should be considered an estimate, and has been flagged.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S5-231018-467 (280-116044-2), P-S5-231018-467 (280-116044-3), V-S5-231058-467 (280-116044-4), P-S5-231058-467 (280-116044-5), V-S5-231018-491 (280-116044-7), P-S5-231018-491 (280-116044-8), V-S5-231018-506 (280-116044-9) and P-S5-231018-506 (280-116044-10) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 10/30/2018.

Percent Moisture exceeded the RPD limit for the duplicate of sample P-S5-231018-491DU (280-116044-8). The sample may not be homogeneous.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland BFF Vadose Zone Coring

TestAmerica Job ID: 280-116044-1

Laboratory: TestAmerica Denver

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
A2LA	DoD ELAP		2907.01	10-31-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	False	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
Q	One or more quality control criteria failed.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-116206-1

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-116206-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/26/2018 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.6° C.

Receipt Exceptions

One of Three Sodium Thiosulfate VOA vials for sample ID RB-S5-251018-01 was received broken at receipt. Sufficient volume remained to proceed with analysis.

Client requested to cancel sample TB-S5-251018-01 (280-116206-1) on 11/5/2018, indicating that trip blanks did not need to be analyzed with rinse blank samples.

VOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples RB-S5-251018-01 (280-116206-2) and RB-S5-251018-02 (280-116206-3) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/09/2018.

The following samples in analytical batch 280-436917 were analyzed outside of analytical holding time due to backlog capacity issues: RB-S5-251018-01 (280-116206-2) and RB-S5-251018-02 (280-116206-3). The client associated with job 280-116246-1 was notified and instructed the laboratory to report the results and narrate the anomaly.

following compounds were outside control limits in the continuing calibration verification (CCV) associated with batch 280-436917: Dichlorodifluoromethane at -24.4%D. This analyte is considered a poor performer and is allowed up to 30%D, therefore the data has been reported. The following samples are impacted: RB-S5-251018-01 (280-116206-2), RB-S5-251018-02 (280-116206-3) and (CCV 280-436917/2). Method 8260B

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP

Samples RB-S5-251018-01 (280-116206-2) and RB-S5-251018-02 (280-116206-3) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/06/2018 and analyzed on 11/19/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 280-116206-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

GASOLINE RANGE ORGANICS (GRO)

Samples RB-S5-251018-01 (280-116206-2) and RB-S5-251018-02 (280-116206-3) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 10/27/2018 and 11/07/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples RB-S5-251018-01 (280-116206-2) and RB-S5-251018-02 (280-116206-3) were analyzed for Diesel Range Organics (DRO) in accordance with 8015D DRO. The samples were prepared on 10/29/2018 and analyzed on 10/31/2018.

Due to analyst error, the RRO LCSD was concentrated and 30 mL of Elga water and 5 mL of 37% Potassium Hydroxide were added to the concentrated LCSD. In order to correct this error, the pH was then neutralized with 1:1 Sulfuric Acid. The sample was transfered into a separatory funnel and spun 3 times for 3 minutes each. The methylene chloride was collected, and was concentrated down to 1 mL. As the LCSD recovered within control limits, this appears to have had little if any effect.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 280-435316.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: EA Engineering, Science, and Technology

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	False	Refer to Job Narrative for details.
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
D	The reported value is from a dilution.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-116409-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - 12/13/2018
Revision 1 was created in order to add the missing Benzene 8260B result to sample V-S9-301018-501 (280-116409-4) and the missing MEK 8260B result to sample V-S9-301018-496 (280-116409-2).

RECEIPT
The samples were received on 11/1/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.1° C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Samples V-S9-301018-496 (280-116409-2) and V-S9-301018-501 (280-116409-4) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 10/30/2018 and 11/08/2018 and analyzed on 11/08/2018.

Surrogate recovery for the following samples was outside control limits: V-S9-301018-496 (280-116409-2) and V-S9-301018-501 (280-116409-4). Evidence of matrix interference is present as evident in the chromatogram; therefore, re-extraction and/or re-analysis was not performed

Naphthalene was detected in method blank MB 280-436847/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable because the detection was less than one-half the LOQ.

cis-1,3-Dichloropropene failed the recovery criteria high for LCSD 280-436841/3-A (31%D, limits 74-126%D). All associated results have

Job ID: 280-116409-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

been flagged "Q". Refer to the QC report for details. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The matrix spike duplicate (MSD) precision for preparation batch 280-436847 and analytical batch 280-436800 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) precision was within acceptance limits.

The continuing calibration verification (CCV) associated with batch 280-436800 recovered above the upper control limit for 2-Chloroethyl vinyl ether and Vinyl acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

2-Chloroethyl vinyl ether +70.4%D Vinyl acetate +20.1%D

The following compound was outside control limits in the continuing calibration verification (CCV) associated with batch 280-436800: Dichlorodifluoromethane (-22.3%D). Associated results have been flagged "Q". This compound is not classified as Calibration Check Compounds (CCCs) in the reference method, and the laboratory defaults to in-house and/or project-specific criteria for evaluation. The associated samples were non-detect for the affected analyte.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S9-311018-01 (280-116409-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/14/2018.

Toluene-d8 (Surr) failed the surrogate recovery criteria high for TB-S9-311018-01 (280-116409-1). Associated results have been flagged "Q". Refer to the QC report for details. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

1,1,2-Trichloroethane failed the recovery criteria high for LCS 280-437515/5. Associated results have been flagged "Q". Refer to the QC report for details. This is not indicative of a systematic control problem because this was a random marginal exceedance (ME). The data have been qualified and reported.

1,1,2-Trichloroethane 121%D (80-119)%D (ME 65-135%D).

The continuing calibration verification (CCV) associated with batch 280-437515 recovered above the upper control limit for < Dichlorodifluoromethane>. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Dichlorodifluoromethane +29.6%D

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Samples V-S9-301018-496 (280-116409-2) and V-S9-301018-501 (280-116409-4) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/09/2018 and analyzed on 11/15/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water

Sample TB-S9-311018-01 (280-116409-1) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared and analyzed on 11/13/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S9-301018-496 (280-116409-3) and P-S9-301018-501 (280-116409-5) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/02/2018 and analyzed on 11/06/2018.

Job ID: 280-116409-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Sample P-S9-301018-496 (280-116409-3)[10X] required dilution prior to analysis due to the abundance of target analytes. The reporting limits have been adjusted accordingly.

a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria high for P-S9-301018-496 (280-116409-3). Associated results have been flagged "Q". Refer to the QC report for details. Due to the required dilution, the surrogates were diluted beyond the ability to reliably calculate recoveries.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S9-311018-01 (280-116409-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/08/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples P-S9-301018-496 (280-116409-3) and P-S9-301018-501 (280-116409-5) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/07/2018 and analyzed on 11/13/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-436699/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable because the detection was less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S9-301018-496 (280-116409-2), P-S9-301018-496 (280-116409-3), V-S9-301018-501 (280-116409-4) and P-S9-301018-501 (280-116409-5) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/02/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-116535-1

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-116535-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 11/3/2018 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.6° C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Sample V-S4-021118-416 (280-116535-3) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/02/2018 and analyzed on 11/14/2018.

The continuing calibration verification (CCV) associated with batch 280-437516 recovered above the upper control limit for n-Butylbenzene (+20.5%D). Associated data have been flagged "Q". The bias was high and the samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water
Sample TB-S4-021118-01 (280-116535-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/15/2018.

The continuing calibration verification (CCV) associated with batch 280-437713 recovered above the upper control limit for Dichlorodifluoromethane (+26.9%D). Associated data have been flagged "Q". The bias was high and the samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid
Sample V-S4-021118-416 (280-116535-3) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/09/2018 and analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water
Sample TB-S4-021118-01 (280-116535-1) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on

Job ID: 280-116535-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

11/15/2018 and analyzed on 11/16/2018.

Compound 1,2-Dibromopropane eluted outside the retention time window on the Restex 502.2 Volatiles column and Restek Rtx-VRX (30) column for the following samples and CCV: (CCV 280-438082/31). This retention time shift was taken into account when reviewing the samples for target compounds.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S4-011118-366 (280-116535-2) and P-S4-021118-416 (280-116535-4) were analyzed for Gasoline Range Organics (GRO) in accordance with EPA SW-846 Method 8015D - GRO. The samples were analyzed on 11/15/2018.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S4-021118-01 (280-116535-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/14/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples P-S4-011118-366 (280-116535-2) and P-S4-021118-416 (280-116535-4) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/06/2018 and analyzed on 11/12/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-436526/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection was less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples P-S4-011118-366 (280-116535-2), V-S4-021118-416 (280-116535-3) and P-S4-021118-416 (280-116535-4) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/06/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology
Project: Kirtland BFF Vadose Zone Coring
Report Number: 280-116567-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/03/2018; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.6 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Client submitted a revised chain of custody requesting that the trip blank be cancelled. Both original and revised chains of custody are attached.

VOLATILE ORGANIC COMPOUNDS (GC)

Samples RB-S9-011118-01 (280-116567-2) and RB-S9-011118-02 (280-116567-3) were analyzed for volatile organic compounds (GC) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 11/15/2018.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Naphthalene were detected in method blank MB 280-437691/6 at levels that were above the detection limit but below ½ the limit of quantitation (LOQ). The values should be considered estimates, and have been flagged "J".

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)

Samples RB-S9-011118-01 (280-116567-2) and RB-S9-011118-02 (280-116567-3) were analyzed for gasoline range organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/15/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 280-116567-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

ETHYLENE DIBROMIDE

Samples RB-S9-011118-01 (280-116567-2) and RB-S9-011118-02 (280-116567-3) were analyzed for Ethylene Dibromide in accordance with 8011. The samples were prepared on 11/14/2018 and analyzed on 11/26/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS

Samples RB-S9-011118-01 (280-116567-2) and RB-S9-011118-02 (280-116567-3) were analyzed for Diesel Range Organics in accordance with 8015D DRO. The samples were prepared on 11/07/2018 and analyzed on 11/13/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
D	The reported value is from a dilution.

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology
Project: Kirtland BFF Vadose Zone Coring
Report Number: 280-116615-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - 12/30/2018
Revision 1 was created to add the missing Benzene and Toluene results for sample V-S4-051118-494 (280-116615-4).

RECEIPT
The samples were received on 11/06/2018; the samples arrived in good condition, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.2º C, 3.3º C and 4.6º C.

One of Two VOA vials for sample ID TB-S4-041118-01 was received containing a bubble greater than 6mm in diameter. Sufficient volume with no bubbles remained for analysis.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS) - Solid
Samples V-S4-041118-467 (280-116615-2) and V-S4-051118-494 (280-116615-4) were analyzed for volatile organic compounds (GC-MS) in accordance with 8260B. The samples were prepared on 11/04/2018 and 11/05/2018 and analyzed on 11/14/2018 and 11/19/2018.

The following compounds were outside control limits in the continuing calibration verification (CCV) associated with batch 280-437516: n-Butylbenzene. Associated results have been flagged "Q". This compound is not classified as Calibration Check Compounds (CCCs) in the reference method, and the laboratory defaults to in-house and/or project-specific criteria for evaluation. therefore, the data have been reported. The associated samples contained detections for the following analytes: n-Butylbenzene.

The continuing calibration verification (CCV) associated with batch 280-438179 recovered above the upper control limit for Dibromochloromethane, Carbon disulfide, trans-1,3-Dichloropropene and 1,2-Dichloroethane. The samples associated with this CCV

Job ID: 280-116615-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

were non-targets for the affected analytes; therefore, the data have been reported. In addition, this is the diluted analysis and these compounds were not targets.

The Dibromofluoromethane (Surr) recovery for the MB 280-438120/1-A associated with preparation batch 280-438120 and analytical batch 280-438179 was outside the upper control limits. Associated results have been flagged "Q". This surrogate is not associated to any targets since this is the diluted analysis for Toluene and Benzene only.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC) - Water

Sample TB-S4-041118-01 (280-116615-1) was analyzed for volatile organic compounds (GC) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 11/16/2018.

Methylene Chloride was detected in method blank MB 280-437861/4 at a level that was above the detection limit but below ½ the limit of quantitation (LOQ). The value should be considered an estimate, and has been flagged "J".

1,1,2-Trichloroethane failed the recovery criteria high for LCS 280-437861/5 and LCSD 280-437861/6. This analyte was biased high in the LCS and LCSD and was not detected in the associated samples; therefore, the data have been reported. Associated results have been flagged "Q".

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GAS RANGE ORGANICS - Solid

Samples P-S4-041118-467 (280-116615-3) and P-S4-051118-494 (280-116615-5) were analyzed for gas range organics in accordance with 8015D GRO. The samples were prepared on 11/04/2018 and 11/05/2018 and analyzed on 11/15/2018 and 11/16/2018.

Sample P-S4-051118-494 (280-116615-5)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria high for P-S4-051118-494 (280-116615-5). Associated results have been flagged "Q". Evidence of matrix interference is present; therefore, re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S4-041118-01 (280-116615-1) was analyzed for gasoline range organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Samples V-S4-041118-467 (280-116615-2) and V-S4-051118-494 (280-116615-4) were analyzed for EDB and DBCP in accordance with EPA SW-846 Method 8011. The samples were prepared on 11/09/2018 and analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ETHYLENE DIBROMIDE - Water

Sample TB-S4-041118-01 (280-116615-1) was analyzed for Ethylene Dibromide in accordance with 8011. The samples were prepared on 11/15/2018 and analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS

Samples P-S4-041118-467 (280-116615-3) and P-S4-051118-494 (280-116615-5) were analyzed for diesel range organics in accordance with 8015DRO. The samples were prepared on 11/07/2018 and analyzed on 11/13/2018.

Job ID: 280-116615-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Diesel Range Organics [C10-C28] was detected in method blank MB 280-436699/1-A at a level that was above the detection limit but below ½ the limit of quantitation (LOQ). The value should be considered an estimate, and has been flagged "J".

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S4-041118-467 (280-116615-2), P-S4-041118-467 (280-116615-3), V-S4-051118-494 (280-116615-4) and P-S4-051118-494 (280-116615-5) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 11/06/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

General Chemistry

Qualifier	Qualifier Description
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-116615-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - 11/30/2018
Revision 1 was created in order to report the surrogates for the MS and MSD for Motor Oil (C20-C38) 8015D.

RECEIPT
The samples were received on 11/6/2018 8:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.2º C, 3.3º C and 4.6º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid
Samples V-S4-051118-504 (280-116615-7) and V-S4-051158-504 (280-116615-9) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/05/2018 and analyzed on 11/14/2018.

Several analytes failed the recovery criteria high for the MS/MSD of sample V-S4-051118-504 (280-116615-7) in batch 280-437516. Several analytes exceeded the RPD limit. Associated results have been flagged "J1". Refer to the QC report for details. The acceptable LCS data indicate that the analytical system was operating within control.

The following compound was outside control limits in the continuing calibration verification (CCV) associated with batch 280-437516: n-Butylbenzene (+20.5%D). Associated results have been flagged "Q". This compound is not classified as Calibration Check Compounds (CCCs) in the reference method, and the laboratory defaults to in-house and/or project-specific criteria for evaluation. As instructed by the client, the data have been reported. The associated samples contained detections for this analyte.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water
Sample TB-S4-051118-01 (280-116615-6) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/16/2018.

Methylene Chloride was detected in method blank MB 280-437861/4 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection in the method blank is less than one-half the LOQ.

1,1,2-Trichloroethane failed the recovery criteria high for LCS 280-437861/5. 1,1,2-Trichloroethane failed the recovery criteria high for LCSD 280-437861/6. All associated results have been flagged "Q". Refer to the QC report for details. This analyte was biased high in the

Job ID: 280-116615-2 (Continued)

Laboratory: TestAmerica Denver (Continued)

LCS and LCSD, and was not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid
Samples V-S4-051118-504 (280-116615-7) and V-S4-051158-504 (280-116615-9) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/09/2018 and analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water
Sample TB-S4-051118-01 (280-116615-6) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/15/2018 and analyzed on 11/17/2018.

Compound 1,2-Dibromopropane eluted outside the retention time window on the Restex 502.2 Volatiles column and Restek Rtx-VRX (30) column for the following samples and CCV: (CCV 280-438082/31). This retention time shift was taken into account when reviewing the samples for target compounds.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid
Samples P-S4-051118-504 (280-116615-8) and P-S4-051158-504 (280-116615-10) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/05/2018 and analyzed on 11/15/2018 and 11/16/2018.

Gasoline Range Organics (GRO)-C6-C10 failed the recovery criteria low for the MS/MSD of sample P-S4-051118-504 (280-116615-8) in batch 280-437796. Associated results have been flagged "J1". Refer to the QC report for details. The acceptable LCS data indicate that the analytical system was operating within control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water
Sample TB-S4-051118-01 (280-116615-6) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Samples P-S4-051118-504 (280-116615-8) and P-S4-051158-504 (280-116615-10) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/07/2018 and analyzed on 11/13/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-436699/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection in the method blank is less than one-half the LOQ.

Motor Oil (C20-C38) exceeded the RPD limit for the MSD of sample P-S4-051118-504 (280-116615-8) in batch 280-437229. Associated results have been flagged "J1". Refer to the QC report for details. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Samples V-S4-051118-504 (280-116615-7), P-S4-051118-504 (280-116615-8), V-S4-051158-504 (280-116615-9) and P-S4-051158-504 (280-116615-10) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/06/2018.

Job ID: 280-116615-2 (Continued)

Laboratory: TestAmerica Denver (Continued)

Percent Moisture exceeded the RPD limit for the duplicate of sample V-S4-051118-504 (280-116615-7). Associated results have been flagged "J1". Refer to the QC report for details. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland BFF Vadose Zone Coring

TestAmerica Job ID: 280-116615-2

Laboratory: TestAmerica Denver

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
A2LA	DoD ELAP		2907.01	10-31-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-116615-3

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 11/6/2018 8:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.2º C, 3.3º C and 4.6º C.

GASOLINE RANGE ORGANICS (GRO) - Solid
Samples P-S3-051118-240 (280-116615-12) and P-S3-051118-360 (280-116615-13) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/04/2018 and 11/05/2018 and analyzed on 11/15/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water
Sample TB-S3-051118-01 (280-116615-11) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Samples P-S3-051118-240 (280-116615-12) and P-S3-051118-360 (280-116615-13) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/07/2018 and analyzed on 11/13/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-436699/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable since the detection in the method blank was less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Samples P-S3-051118-240 (280-116615-12) and P-S3-051118-360 (280-116615-13) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/06/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-116899-1

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology
Project: Kirtland BFF Vadose Zone Coring
Report Number: 280-116899-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 11/13/2018; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.1 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

The following samples were received at the laboratory after the 7 day holding time for extraction had expired: RB-S4-051118-01 (280-116899-1) and RB-S4-051118-02 (280-116899-2. Samples were collected on 11/5/2018, received at the laboratory on 11/13/2108, and extracted on 11/14/2018. As instructed by the client, the data have been reported.

VOLATILE ORGANIC COMPOUNDS (GC)
Samples RB-S4-051118-01 (280-116899-1) and RB-S4-051118-02 (280-116899-2) were analyzed for volatile organic compounds (GC) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 11/18/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)
Samples RB-S4-051118-01 (280-116899-1) and RB-S4-051118-02 (280-116899-2) were analyzed for gasoline range organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/17/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ETHYLENE DIBROMIDE

Job ID: 280-116899-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Samples RB-S4-051118-01 (280-116899-1) and RB-S4-051118-02 (280-116899-2) were analyzed for Ethylene Dibromide in accordance with 8011. The samples were prepared on 11/16/2018 and analyzed on 11/19/2018 and 11/20/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS

Samples RB-S4-051118-01 (280-116899-1) and RB-S4-051118-02 (280-116899-2) were analyzed for Diesel Range Organics in accordance with 8015D DRO. The samples were prepared on 11/14/2018 and analyzed on 11/20/2018.

The following samples were received at the laboratory after the 7 day holding time for extraction had expired: RB-S4-051118-01 (280-116899-1) and RB-S4-051118-02 (280-116899-2. Samples were collected on 11/5/2018, received at the laboratory on 11/13/2108, and extracted on 11/14/2018. As instructed by the client, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-116903-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/13/2018 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.1° C.

Receipt Exceptions

One of two Terracore vials for sample ID P-S2-08118-278 was received with a time given as 1118 on the corresponding label, and 1113 on the Chain of Custody. The sample has been logged per the chain of custody.

VOLATILE PETROLEUM HYDROCARBONS (GC)

Samples P-S2-061118-050 (280-116903-2), P-S2-061118-105 (280-116903-3) and P-S2-081118-278 (280-116903-4) were analyzed for Volatile Petroleum Hydrocarbons (GC) in accordance with 8015D GRO. The samples were prepared on 11/06/2018 and 11/08/2018 and analyzed on 11/15/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)

Sample TB-S2-061118-01 (280-116903-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/18/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 280-116903-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

DIESEL RANGE ORGANICS (DRO)

Samples P-S2-061118-050 (280-116903-2), P-S2-061118-105 (280-116903-3) and P-S2-081118-278 (280-116903-4) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/19/2018 and analyzed on 11/22/2018.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-438060/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection in the method blank was less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples P-S2-061118-050 (280-116903-2), P-S2-061118-105 (280-116903-3) and P-S2-081118-278 (280-116903-4) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/13/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
Q	One or more quality control criteria failed.

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
U	Undetected at the Limit of Detection.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
Q	One or more quality control criteria failed.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-117064-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/16/2018 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.1° C.

Receipt Exceptions

Samples 280-117064-2 and 280-117064-3 list a collection date of 11/13/18 at 1009. Containers were not received at the lab until 11/16 at 0910, and were received outside the 48 hour holding time for DI water terracores.

One of Two VOA vials were noted as containing a bubble greater than 6mm for the following samples and analysis: Sample ID TB-S2-151118 for methods 8260B, 8011 EDB and 8015D_GRO.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid

Samples V-S2-131118-338 (280-117064-2), V-S2-141118-404 (280-117064-4) and V-S2-151118-419 (280-117064-6) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/13/2018, 11/14/2018 and 11/15/2018 and analyzed on 11/23/2018.

2-Hexanone was detected in method blank MB 280-438586/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". This is considered acceptable because the detection was below one-half the LOQ.

Job ID: 280-117064-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Acetone, a common laboratory contaminant, was detected in method blank MB 280-438586/1-A at level exceeding the LOQ. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details. Samples V-S2-131118-338 (280-117064-2), V-S2-141118-404 (280-117064-4) had detections below the LOD; however, sample V-S2-151118-419 (280-117064-6) had a detection >LOQ but less than 10 times the concentration in the MB. The samples were not re-analyzed because the holding time had expired. As instructed by the client, the data have been qualified and reported.

The continuing calibration verification (CCV) associated with batch 280-438555 recovered above the upper control limit for Bromomethane (+21.6%D). The bias was high and the samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S2-151118-01 (280-117064-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/29/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Samples V-S2-131118-338 (280-117064-2), V-S2-141118-404 (280-117064-4) and V-S2-151118-419 (280-117064-6) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/27/2018 and analyzed on 12/08/2018.

Compound 1,2-Dibromo-3-Chloropropane, 1,2-Dibromopropane, 1,2,3-Trichloropropane, and 1,2-Dibromoethane eluted outside the retention time window on both analytical columns for the following sample: (ICV 280-439490/13). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water

Sample TB-S2-151118-01 (280-117064-1) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/23/2018 and analyzed on 11/30/2018.

Compound 1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: TB-S2-151118-01 (280-117064-1). This retention time shift was taken into account when reviewing the sample(s) for target compounds. All analytes were non-detect.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S2-131118-338 (280-117064-3), P-S2-141118-404 (280-117064-5) and P-S2-151118-419 (280-117064-7) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/13/2018, 11/14/2018 and 11/15/2018 and analyzed on 11/24/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S2-151118-01 (280-117064-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/26/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

samples P-S2-131118-338 (280-117064-3), P-S2-141118-404 (280-117064-5) and P-S2-151118-419 (280-117064-7) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/20/2018 and 11/28/2018 and analyzed on 11/21/2018 and 11/30/2018.

Job ID: 280-117064-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

o-Terphenyl (Surr) failed the surrogate recovery criteria low for P-S2-151118-419 (280-117064-7). Associated results have been flagged "Q". Refer to the QC report for details. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Diesel Range Organics [C10-C28] was detected in method blank MB 280-438213/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. and has been flagged "J". Refer to the QC report for details. The detection was greater than one-half the LOQ. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. The samples were re-extracted and reanalyzed; however, the method blank for the re-extraction batch, MB 280-438976/1-A, also had a detection greater than one-half the RL. As instructed by the client, the data have been qualified and reported. Sample P-S2-131118-338 (280-117064-3) is reported from the original batch as it was out of hold in the re-extraction batch. Samples P-S2-141118-404 (280-117064-5) and P-S2-151118-419 (280-117064-7) are reported from the re-extraction batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S2-131118-338 (280-117064-2), P-S2-131118-338 (280-117064-3), V-S2-141118-404 (280-117064-4), P-S2-141118-404 (280-117064-5), V-S2-151118-419 (280-117064-6) and P-S2-151118-419 (280-117064-7) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/16/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	False	Refer to Job Narrative for details.
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.

GC VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
Q	One or more quality control criteria failed.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-117130-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/17/2018 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.6º C and 3.8º C.

Receipt Exceptions

The chain of custody was somewhat unclear. The client provided a revised chain of custody. Both original and revised chains of custody are included in this report.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid

Samples V-S2-161118-510 (280-117130-2) and V-S2-161158-510 (280-117130-4) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/16/2018 and analyzed on 11/28/2018.

1,2,4-Trimethylbenzene was detected in method blank MB 280-439038/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". This is considered acceptable since the detection was less than one-half the LOQ.

Acetone, a common laboratory contaminant, was detected in method blank MB 280-439038/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details. The detection was greater than one-half the LOQ; however, as Acetone is a common laboratory contaminant, it is controlled to the LOQ instead of to one-half the LOQ.

Job ID: 280-117130-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Several analytes failed the recovery criteria low for the MS/MSD of sample V-S2-161118-510 (280-117130-2) in batch 280-439004. 1,1-Dichloroethene, Carbon disulfide, Methylene Chloride and Toluene exceeded the RPD limit. Associated results have been flagged "J1". Refer to the QC report for details. The data were checked for missed peaks, and the multi-analyte spike demonstrates that the samples were spiked correctly. Sample matrix interference is suspected. The acceptable LCS data indicate that the analytical system was operating within control.

The continuing calibration verification (CCV) associated with batch 280-439004 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane (-29.2%D). The failing compound is considered a poor performer and is allowed up to 30%D. Associated results have been flagged "Q". Report data with NCM and flags. The following samples are associated: V-S2-161118-510 (280-117130-2), V-S2-161158-510 (280-117130-4) and (CCV 280-439004/12).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S2-161118-02 (280-117130-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/30/2018.

The continuing calibration verification (CCV) associated with batch 280-439348 recovered above the upper control limit for Styrene (+21.0%D). Associated results have been flagged "Q". The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: TB-S2-161118-02 (280-117130-1) and (CCV 280-439348/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Samples V-S2-161118-510 (280-117130-2) and V-S2-161158-510 (280-117130-4) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/27/2018 and analyzed on 12/08/2018.

1,2-Dibromopropane failed the surrogate recovery criteria high for V-S2-161118-510MS (280-117130-2MS). Associated results have been flagged "Q". Refer to the QC report for details. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

In batch 440435, the 1,2-Dibromopropane surrogate recovery for the following samples was outside acceptance limits (high biased) on the confirmation column due to matrix interference: V-S2-161118-510 (280-117130-2) and V-S2-161158-510 (280-117130-4). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water

Sample TB-S2-161118-02 (280-117130-1) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/27/2018 and analyzed on 12/06/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S2-161118-510 (280-117130-3) and P-S2-161158-510 (280-117130-5) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/16/2018 and analyzed on 11/24/2018.

Gasoline Range Organics (GRO)-C6-C10 failed the recovery criteria low for the MS of sample P-S2-161118-510 (280-117130-3) in batch 280-438644. Gasoline Range Organics (GRO)-C6-C10 failed the recovery criteria high for the MSD. Gasoline Range Organics (GRO) -C6-C10 exceeded the RPD limit. Associated results have been flagged "J1". Refer to the QC report for details. Sample non-homogeneity is suspected. The acceptable LCS data indicate that the analytical system was operating within control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 280-117130-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S2-161118-02 (280-117130-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/29/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples P-S2-161118-510 (280-117130-3) and P-S2-161158-510 (280-117130-5) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/30/2018 and analyzed on 12/05/2018.

Per client request, samples were silica gel cleaned prior to analysis: P-S2-161118-510 (280-117130-3), P-S2-161118-510 (280-117130-3[MS]), P-S2-161118-510 (280-117130-3[MSD]), P-S2-161158-510 (280-117130-5), (LCS 280-439507/2-A), (LCS 280-439507/3-A) and (MB 280-439507/1-A).

Diesel Range Organics [C10-C28] was detected in method blank MB 280-439507/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S2-161118-510 (280-117130-2), P-S2-161118-510 (280-117130-3), V-S2-161158-510 (280-117130-4) and P-S2-161158-510 (280-117130-5) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/21/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
Q	One or more quality control criteria failed.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-117130-2

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-117130-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/17/2018 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.6º C and 3.8º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid

Samples V-S2-161118-474 (280-117130-6) and V-S2-161118-499 (280-117130-8) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/16/2018 and analyzed on 11/28/2018 and 11/30/2018.

1,2,4-Trimethylbenzene was detected in method blank MB 280-439038/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". This is considered acceptable since the detection was less than one-half the LOQ.

Acetone, a common laboratory contaminant, was detected in method blank MB 280-439038/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details. The detection was greater than one-half the LOQ; however, as Acetone is a common laboratory contaminant, it is controlled to the LOQ instead of to one-half the LOQ.

The continuing calibration verification (CCV) associated with batch 280-439004 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane (-29.2%D). The failing compound is considered a poor performer and is allowed up to 30%D. Associated results have been flagged "Q". Report data with NCM and flags. The following samples are associated: V-S2-161118-474

Job ID: 280-117130-2 (Continued)

Laboratory: TestAmerica Denver (Continued)

(280-117130-6) and (CCV 280-439004/12).

The initial calibration verification (ICV) result for batch 280-439476 was above the upper control limit for Dichlorodifluoromethane (+34.3%D). Associated results have been flagged "Q". The bias was high and sample results were non-detects; therefore, the data have been qualified and reported. The following sample is associated: V-S2-161118-499 (280-117130-8).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S2-161118-01 (280-117130-10) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 11/30/2018.

The continuing calibration verification (CCV) associated with batch 280-439348 recovered above the upper control limit for Styrene (+21.0%D). Associated results have been flagged "Q". The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: TB-S2-161118-01 (280-117130-10) and (CCV 280-439348/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Samples V-S2-161118-474 (280-117130-6) and V-S2-161118-499 (280-117130-8) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/27/2018 and analyzed on 12/08/2018.

Sample V-S2-161118-474 (280-117130-6)[200X] required dilution prior to analysis due to the nature of the sample matrix. As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided. Associated results have been flagged "Q".

In batch 440435, the 1,2-Dibromopropane surrogate recovery for the following samples was outside acceptance limits (high biased) on the confirmation column due to matrix interference: V-S2-161118-499 (280-117130-8). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water

Sample TB-S2-161118-01 (280-117130-10) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/27/2018 and analyzed on 12/06/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S2-161118-474 (280-117130-7) and P-S2-161118-499 (280-117130-9) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/16/2018 and analyzed on 11/24/2018.

a,a,a-Trifluorotoluene (Surr) failed the surrogate recovery criteria high for P-S2-161118-499 (280-117130-9). Refer to the QC report for details. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S2-161118-01 (280-117130-10) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/28/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Job ID: 280-117130-2 (Continued)

Laboratory: TestAmerica Denver (Continued)

Samples P-S2-161118-474 (280-117130-7) and P-S2-161118-499 (280-117130-9) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/30/2018 and analyzed on 12/05/2018.

Per client request, samples were silica gel cleaned prior to analysis: P-S2-161118-474 (280-117130-7), P-S2-161118-499 (280-117130-9), (LCS 280-439507/2-A), (LCS 280-439507/3-A), (MB 280-439507/1-A).

Diesel Range Organics [C10-C28] was detected in method blank MB 280-439507/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is acceptable because the detection is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S2-161118-474 (280-117130-6), P-S2-161118-474 (280-117130-7), V-S2-161118-499 (280-117130-8) and P-S2-161118-499 (280-117130-9) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/21/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland BFF Vadose Zone Coring

TestAmerica Job ID: 280-117130-2

Laboratory: TestAmerica Denver

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
A2LA	DoD ELAP		2907.01	10-31-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 280-117169-1

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-117169-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/20/2018 11:18 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples RB-S2-181118-01 (280-117169-1) and RB-S2-181118-02 (280-117169-2) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 12/01/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP

Samples RB-S2-181118-01 (280-117169-1) and RB-S2-181118-02 (280-117169-2) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/29/2018 and analyzed on 12/04/2018.

Compound 1,2-Dibromopropane, Ethylene Dibromide, 1,2-Dibromo-3-Chloropropane, and 1,2,3-Trichloropropane eluted outside the retention time window on the primary and secondary columns for the following sample: (LCSD 280-439245/2-A). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: (CCV 280-439714/39). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

Job ID: 280-117169-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)

Samples RB-S2-181118-01 (280-117169-1) and RB-S2-181118-02 (280-117169-2) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/28/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples RB-S2-181118-01 (280-117169-1) and RB-S2-181118-02 (280-117169-2) were analyzed for Diesel Range Organics (DRO) in accordance with 8015D DRO. The samples were prepared on 11/21/2018 and analyzed on 12/06/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
Q	One or more quality control criteria failed.

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

General Chemistry

Qualifier	Qualifier Description
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Denver

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-117172-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/20/2018 12:12 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid

Sample V-S3-191118-424 (280-117172-2) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/19/2018 and analyzed on 11/30/2018.

The initial calibration verification (ICV) result for batch 280-439476 was above the upper control limit for Dichlorodifluoromethane (+34.3%D). Associated results have been flagged "Q". The bias was high, and sample results were non-detect; therefore, the data have been qualified and reported.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S3-191118-01 (280-117172-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 12/01/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Job ID: 280-117172-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Sample V-S3-191118-424 (280-117172-2) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/27/2018 and analyzed on 12/08/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water

Sample TB-S3-191118-01 (280-117172-1) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/29/2018 and analyzed on 12/04/2018.

Compound 1,2-Dibromopropane, Ethylene Dibromide, 1,2-Dibromo-3-Chloropropane, and 1,2,3-Trichloropropane eluted outside the retention time window on the primary and secondary columns for the following sample: (LCSD 280-439245/2-A). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: TB-S3-191118-01 (280-117172-1). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: (CCV 280-439714/39). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Sample P-S3-191118-424 (280-117172-3) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/19/2018 and analyzed on 11/24/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S3-191118-01 (280-117172-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/28/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Sample P-S3-191118-424 (280-117172-3) was analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/30/2018 and analyzed on 12/05/2018.

Per client request, samples were silica gel cleaned prior to analysis: P-S3-191118-424 (280-117172-3), (LCS 280-439507/2-A), (LCS 280-439507/3-A), (MB 280-439507/1-A).

Diesel Range Organics [C10-C28] was detected in method blank MB 280-439507/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details. This is considered acceptable because the detection is less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S3-191118-424 (280-117172-2) and P-S3-191118-424 (280-117172-3) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/27/2018.

Percent Moisture exceeded the RPD limit for the duplicate of sample V-S3-191118-424DU (280-117172-2). Associated results have been flagged "J1". Refer to the QC report for details. The results for the sample and sample duplicate were both less than 10%; therefore, control limits do not apply.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
M	Manual integrated compound.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
U	Undetected at the Limit of Detection.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-117258-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/21/2018 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid

Samples V-S3-201118-459 (280-117258-2) and V-S3-201158-459 (280-117258-4) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/20/2018 and analyzed on 11/29/2018.

1,2,4-Trichlorobenzene exceeded the RPD limit for the MSD of sample V-S3-201118-459 (280-117258-2) in batch 280-439325. Associated results have been flagged "J1". Refer to the QC report for details. The MS and MSD each recovered within control limits.

The continuing calibration verification (CCV) associated with batch 280-439325 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane (-28.1%D). Associated results have been flagged "Q". The failing compound is considered a poor performer and is allowed up to 30%D. As such, the data have been qualified and reported. The following samples are associated: V-S3-201118-459 (280-117258-2), V-S3-201158-459 (280-117258-4) and (CCV 280-439325/2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S3-2018-01 (280-117258-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 12/01/2018.

Job ID: 280-117258-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

1,2-Dichloroethane-d4 (Surr) failed the surrogate recovery criteria high for TB-S3-2018-01 (280-117258-1). Associated results have been flagged "Q". Refer to the QC report for details. This sample did not contain any detections for target analytes associated to this surrogate; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Samples V-S3-201118-459 (280-117258-2) and V-S3-201158-459 (280-117258-4) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/27/2018 and analyzed on 12/08/2018.

Ethylene Dibromide failed the recovery criteria low for the MS/MSD of sample V-S3-201118-459 (280-117258-2) in batch 280-440435. Associated results have been flagged "J1". Refer to the QC report for details. Sample matrix interference and/or non-homogeneity are suspected. The acceptable LCS/LCSD data indicate that the analytical system was operating within control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water

Sample TB-S3-2018-01 (280-117258-1) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/29/2018 and analyzed on 12/04/2018.

Compound 1,2-Dibromopropane, Ethylene Dibromide, 1,2-Dibromo-3-Chloropropane, and 1,2,3-Trichloropropane eluted outside the retention time window on the primary and secondary columns for the following sample: (LCSD 280-439245/2-A). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: TB-S3-2018-01 (280-117258-1). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: (CCV 280-439714/39). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S3-201118-459 (280-117258-3) and P-S3-201158-459 (280-117258-5) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/20/2018 and analyzed on 11/24/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S3-2018-01 (280-117258-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/29/2018.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples P-S3-201118-459 (280-117258-3) and P-S3-201158-459 (280-117258-5) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/30/2018 and analyzed on 12/05/2018.

Per client request, samples were silica gel cleaned prior to analysis: P-S3-201118-459 (280-117258-3), P-S3-201118-459 (280-117258-3[MS]), P-S3-201118-459 (280-117258-3[MSD]), P-S3-201158-459 (280-117258-5), (LCS 280-439507/2-A), (LCS 280-439507/3-A) and (MB 280-439507/1-A)

Diesel Range Organics [C10-C28] was detected in method blank MB 280-439507/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". Refer to the QC report for details.

Job ID: 280-117258-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

This is considered acceptable as the detection was less than one-half the LOQ.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S3-201118-459 (280-117258-2), P-S3-201118-459 (280-117258-3), V-S3-201158-459 (280-117258-4) and P-S3-201158-459 (280-117258-5) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/27/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
Q	One or more quality control criteria failed.

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
U	Undetected at the Limit of Detection.
Q	One or more quality control criteria failed.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: EA Engineering, Science, and Technology

Project: Kirtland BFF Vadose Zone Coring

Report Number: 280-117265-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/21/2018 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.1° C.

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Solid

Samples V-S3-201118-477 (280-117265-2) and V-S3-201118-489 (280-117265-4) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were prepared on 11/20/2018 and analyzed on 12/03/2018 and 12/04/2018.

cis-1,3-Dichloropropene failed the recovery criteria high for LCS 280-439682/2-A. Associated results have been flagged "Q". Refer to the QC report for details. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

1,1,2,2-Tetrachloroethane exceeded the RPD limit for LCSD 280-439682/3-A. Associated results have been flagged "Q". Refer to the QC report for details. The LCS and LCSD each recovered within control for this analyte.

The continuing calibration verification (CCV) associated with batch 280-439624 recovered above the upper control limit for trans-1,3-Dichloropropene (+20.3%D). Associated results have been flagged "Q". The bias was high and the samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 280-117265-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

VOLATILE ORGANIC COMPOUNDS (GC/MS) - Water

Sample TB-S3-201118-02 (280-117265-1) was analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 12/01/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Solid

Samples V-S3-201118-477 (280-117265-2) and V-S3-201118-489 (280-117265-4) were analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 12/03/2018 and analyzed on 12/09/2018.

The continuing calibration verification (CCV) associated with batch 280-440502 recovered above the upper control limit for 1,2-Dibromopropane (surrogate). All associated results are flagged "Q". The samples associated with this CCV were within control for this surrogate; therefore, the data have been reported. (CCV 280-440502/50)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EDB AND DBCP - Water

Sample TB-S3-201118-02 (280-117265-1) was analyzed for EDB and DBCP in accordance with 8011. The samples were prepared on 11/29/2018 and analyzed on 12/04/2018.

Compound 1,2-Dibromopropane, Ethylene Dibromide, 1,2-Dibromo-3-Chloropropane, and 1,2,3-Trichloropropane eluted outside the retention time window on the primary and secondary columns for the following sample: (LCSD 280-439245/2-A). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: TB-S3-201118-02 (280-117265-1). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

1,2-Dibromopropane eluted outside the retention time window on the primary and secondary columns for the following sample: (CCV 280-439714/39). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Solid

Samples P-S3-201118-477 (280-117265-3) and P-S3-201118-489 (280-117265-5) were analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were prepared on 11/20/2018 and analyzed on 11/24/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO) - Water

Sample TB-S3-201118-02 (280-117265-1) was analyzed for Gasoline Range Organics (GRO) in accordance with 8015D GRO. The samples were analyzed on 11/29/2018.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples P-S3-201118-477 (280-117265-3) and P-S3-201118-489 (280-117265-5) were analyzed for Diesel Range Organics (DRO) in accordance with SW846 8015D. The samples were prepared on 11/30/2018 and analyzed on 12/05/2018.

Per client request, samples were silica gel cleaned prior to analysis: P-S3-201118-477 (280-117265-3), P-S3-201118-489 (280-117265-5), (LCS 280-439507/2-A), (LCS 280-439507/3-A), (MB 280-439507/1-A), (280-117258-A-3-F), (280-117258-A-3-G MS), (280-117258-A-3-I MS), (280-117258-A-3-H MSD) and (280-117258-A-3-J MSD).

Diesel Range Organics [C10-C28] was detected in method blank MB 280-439507/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Job ID: 280-117265-1 (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples V-S3-201118-477 (280-117265-2), P-S3-201118-477 (280-117265-3), V-S3-201118-489 (280-117265-4) and P-S3-201118-489 (280-117265-5) were analyzed for percent solids in accordance with ASTM D2216-90. The samples were analyzed on 11/27/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
