Appendix C-3
Footnotes to Tables C-3-1 and C-3-2

[a] Lab reports for Q2 2021 data are provided in Appendix D-2. Each report is bookmarked in the PDF using the lab report title referred to in this column.
[b] See individual lab reports for a description of lab qualifiers.
[c] The EPA MDL is equivalent to the DoD DL.
[d] The EPA RDL is equivalent to the DoD LOD.
[e] The EPA PQL is equivalent to the DoD LOQ.
[f] The project screening level equals the New Mexico Environment Department Vapor Intrusion Screening Level for Residential Soil Gas (2017).
< = less than
2Q2020 = second quarter, 2020
2Q2021 = second quarter, 2021
4Q2020 = fourth quarter, 2020
4Q2019 = fourth quarter, 2019
cas_rn = Chemical Abstract Service registry number
DL = detection lmit
DoD = Department of Defense
EPA = U.S. Environmental Protection Agency
FD = field duplicate
ft = foot/feet
GS = soil vapor
ID = identification
J = Qualifier denotes the analyte was positively identified, but the associated numerical value is estimated.
LOD = limit of detetion
LOQ = limit of quantitation
MDL = method detection limit
mg/m3 = milligrams per cubic meter
N (in "detect_flag" column) = no
N (in "fraction" column) = not applicable
N (in "sample_type_code" column)= normal
NS = not specificed
PQL = practical quantitation limit
Q2 = second quarter
RDL = report detection limit
U = Qualifier denotes the analyte was analyzed but not detected above the detection limit. The value associated with the U-qualifier is the LOD.
ug/m3 = micrograms per cubic meter
Y = yes
